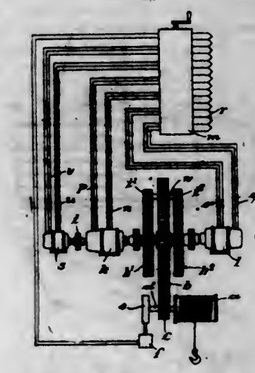
1. The method of straightening cylindrical articles which comprises rolling such articles under substantially continuous pressure between a fixed member and a uni-directionally movable member.

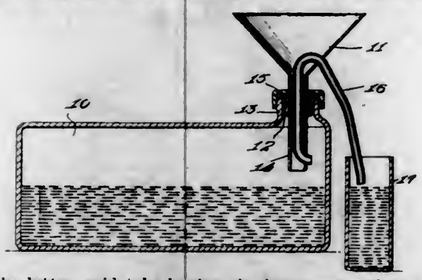


1,810,820. INDUCTION FURNACE. NEVILLE RYLAND DAVIS, Sale, and MAURICE JAMES MARCHBANKS and JOHN HEYWOOD LUDLOW, Manchester, England, assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed May 7, 1930, Serial No. 450,343, and in Great Britain May 8, 1929. 8 Claims. (Cl. 13—27.)

1. In an induction furnace having a crucible, and an energising coil surrounding it, means for supporting said coil including annular top and bottom members, a plurality of relatively thin metal members extending radially and longitudinally between the top and bottom members,

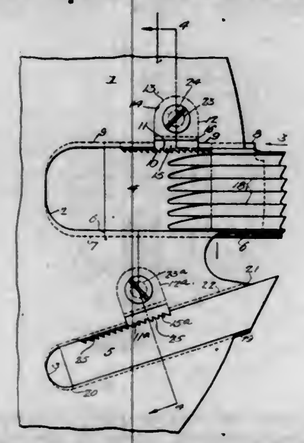
each of said thin metal members having a recess in its inner edge, and electric-insulating material in said recesses for supporting the energizing coil.

1,810,821. ELECTRICALLY OPERATED WINDLASS. RICHARD ECK, Dresden, Germany, assignor of one-half to Friedrich Adolf Richard Göbel, Dresden, Germany. Filed July 20, 1927, Serial No. 207,251, and in Germany July 2, 1927. 1 Claim. (Cl. 172—152.)



In a device of the class described, a windlass, a balancing gearing operatively coupled to said windlass, an asynchronous motor operatively coupled to said balancing gearing, a second asynchronous motor also operatively coupled to said balancing gearing, means for controlling said motors whereby both of the same are first caused to run at full speed in such directions with relation to each other that the windlass remains at rest under the action of the balancing gearing thereon, said control means being operable to retard the rotary motion of one of said motors to zero, then to reverse the same and thereafter to accelerate it in the opposite direction to cause the windlass to move a load thereon, said retarding movement of said motor being accomplished by the application to the same of a counter current, and an auxiliary motor coupled to the last named of said motors to counteract the drop of the rotary speed of the same during the retarding movement thereof aforesaid.

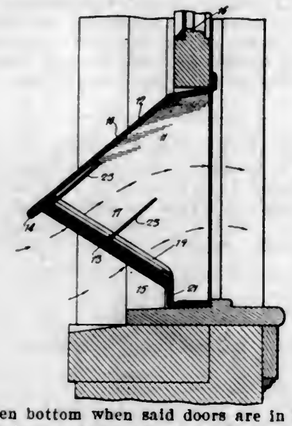
1,810,822. FUNNEL. JOHN E. ERICKSON, East Grand Forks, Minn. Filed Apr. 19, 1929. Serial No. 356,561. 1 Claim. (Cl. 226—33.)



An overfilling overflow device comprising a filling element having an enlarged entrance end, a tubular discharge

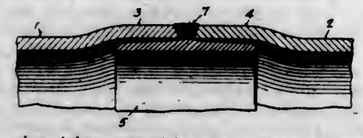
portion for the filling element being of corresponding width throughout its length, a discharge tube projected through the enlarged entrance end of the filling neck and depending centrally of the longitudinal axis of the tubular discharge portion and having a bore equavilent to that

of the latter, said tube having the innermost end thereof projected through the wall of the tubular discharge portion and at right angles to the bore thereof, and the outermost end of the discharge tube being disposed outwardly and beyond the entrance end of the device.



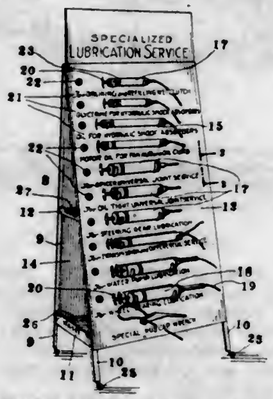
1,810,823. CIRCULAR SAW. SAMUEL T. FREAS, Trenton, N. J., and CHARLES A. GEHR, Wissinoming, Pa., assignors to Henry Disston & Sons, Incorporated, Tacony, Pa., a Corporation of Pennsylvania. Filed June 13, 1930. Serial No. 460,968. 1 Claim. (Cl. 143—149.)

The combination in a body of a circular saw having an elongated recess in its periphery, of a tooth adapted to the recess, and having a tongue and groove connection with one wall of the recess, said tooth having a series of retaining teeth at one edge, one wall of the recess having a notch extending entirely through the body of the saw; a shallow recess on one side of the body extending to said notch; an angular plate, the body portion of the said plate being adapted to the recess and flush with the side of the saw, the other portion of the plate being located in the notch of the recess for the tooth and extending to the opposite side of the saw; teeth on the said portion of the plate extending the full width of the tooth and engaging the retaining teeth of the tooth; and means for securing the angular plate within the recess of the body of the saw.



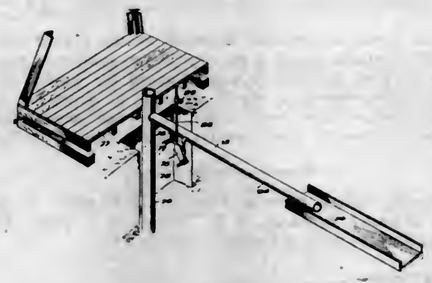
1,810,824. AIR REGULATOR FOR WINDOW VENTILATORS. VICTOR W. I. FREDERICK, Brooklyn, N. Y. Filed Mar. 25, 1930. Serial No. 438,816. 3 Claims. (Cl. 98—99.)

1. In combination with a window ventilator of substantially V-shaped configuration having an inclined screen bottom wall, an air regulator including a frame supported upon said screen bottom wall, and doors hinged to said frame for shutting off the entrance of air through



said screen bottom when said doors are in a closed position, and for regulating the flow of air therethrough by opening either or both of said doors.

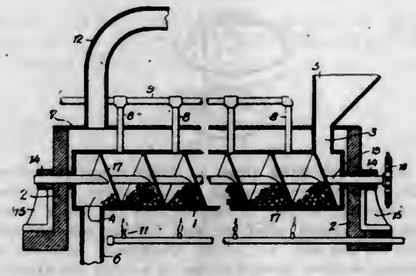
1,810,825. WELDED PIPE JOINT AND METHOD OF MAKING SAME. RUDOLPH FUBAER, Wauwatosa, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Sept. 6, 1929. Serial No. 390,747. 8 Claims. (Cl. 113—112.)



1. A pipe joint comprising two pipe sections to be joined having their adjacent ends belled, a chill ring arranged within the annular space provided by said belled ends, said chill ring being tapered outwardly to provide beveled surfaces against which the end edges only of the pipe sections are abutted to thereby space the ends of said pipe sections and center the chill ring with respect thereto, and welding metal deposited in the space between the ends of said pipe sections and joining said sections and chill ring.

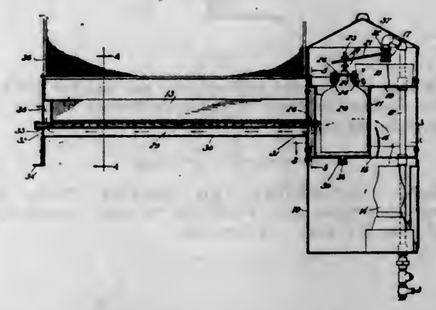
1,810,826. GREASE SERVICE RACK. LEIL L. GRAY, Minneapolis, Minn. Filed Jan. 20, 1931. Serial No. 509,916. 11 Claims. (Cl. 35—12.)

1. A specialized lubricating service rack including a series of pump supports, for receiving a series of pumps containing different fluids, a corresponding series of dispensing pumps mounted upon said supports, a series of indicia upon said rack in juxtaposition to said series of pump supports, respectively, each indicating a particular part of the automobile requiring a specialized lubrication or service and a series of identification marks upon said pumps, and a corresponding series of identification marks upon said rack in juxtaposition to said pump supports, for identifying each with its particular support and nence with the particular legend denoting the part of the automobile to which said pump is properly applicable.



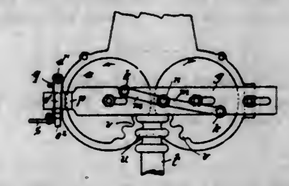
1,810,827. WELL CUTTING SAMPLER. OSCAR HATCHER and EARL L. BYERS, Tulsa, Okla., assignors to Gypsy Oil Company, Tulsa, Okla., a Corporation of Oklahoma. Filed Nov. 18, 1929. Serial No. 408,054. 9 Claims. (Cl. 73—21.)

1. In apparatus for obtaining samples of cuttings in mud laden fluids used in rotary well drilling, the combination of a main conduit for the fluid, a casing forming a trap, said casing having an unrestricted opening at one end, a removable closure for said opening, connections for delivering flushing fluid to the casing, and a branch pipe connecting said conduit and casing.



5. An apparatus for obtaining samples of cuttings in mud-laden fluids used in rotary well drilling, comprising a conduit for the fluid connected to the outlet from the well casing and having an opening in its under side, a tubular member attached to said conduit about its opening and extending downwardly therefrom, and a closure on the lower end of said tubular member.

1,810,828. METHOD OF CARBONIZING COAL. CHARLES HAYES, Paris, France, assignor to Coal Carbonization Company, a Corporation of Delaware. Filed May 16, 1927. Serial No. 191,877. 3 Claims. (Cl. 202—28.)

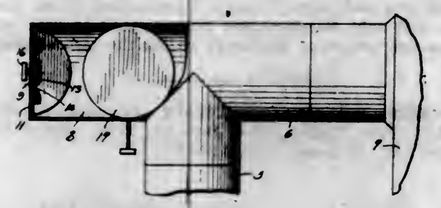


1. The process of carbonizing coal which comprises forming a body of coal in a stationary horizontal retort on the bottom thereof, in quantity insufficient to fill said retort so that there is a free space in said retort above said body of coal, carbonizing said body of coal in said retort while transferring said body of coal along said retort on said bottom by alternately advancing said body of coal along said retort a distance that is materially shorter than half the length of said retort and retracting said body of coal a distance that is less than the first said distance, heat being applied to said coal from the bottom of the retort during the carbonization.

1,810,829. WATERING FOUNTAIN. JONATHAN HAYNES, La Cygne, Kans. Filed June 21, 1928. Serial No. 287,132. 7 Claims. (Cl. 119—73.)

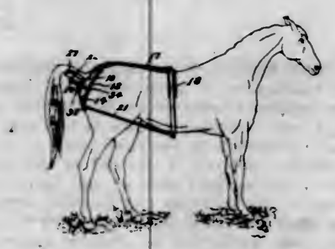
1. A watering fountain of the character described comprising, in combination, a water supply; a chamber; a float in the chamber of such size as to limit the capacity thereof to a small volume; a valve in the supply pipe automatically controlled by the float; and an elongated watering trough connected at one end to the casing to communicate with the float chamber and having its bottom adjacent to the water level in the float chamber so that only a small amount of water is exposed to contamination and fresh water will be admitted automatically when small quantities are consumed.

1,810,830. AUTOMATIC RAILWAY CAR COUPLING. CARL HELLWIG, Cali, Colombia. Filed Dec. 29, 1930, Serial No. 505,897, and in Germany Sept. 17, 1929. 2 Claims. (Cl. 213—186.)



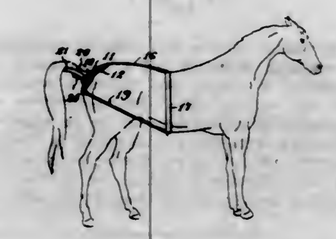
1. An automatic railway car coupling comprising two rotatable coupling members and a cooperating coupling member adapted to engage said rotatable coupling members when the car on which the cooperating coupling member is mounted approaches the car on which said rotatable coupling members are mounted, a locking bar, links connecting the last named members with said locking bar and a latch adapted to engage and lock said locking bar in coupling position of the coupling members.

1,810,831. VENTILATING STOVEPIPE. JOHN F. JEWART, Blasdell, N. Y. Filed Apr. 10, 1930. Serial No. 443,148. 1 Claim. (Cl. 126—312.)



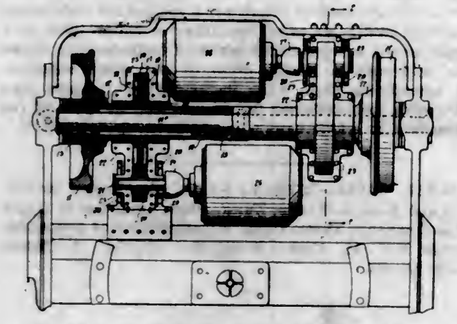
A stove pipe ventilator comprising a body portion embodying a pipe to be connected with a stove pipe, a closure for closing one end of the body portion, a bar extending across one end of the body portion, said closure embodying a pair of sections connected with the bar, a shaft

extending through the bar, a cross bar on the inner end of the shaft and adapted to engage the sections to move



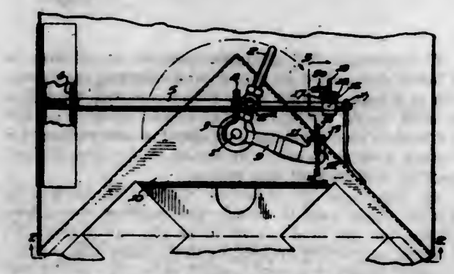
the closure to its closed position, and the said bar having curved portions adjacent to the ends thereof to exert a pressure on the closure.

1,810,832. ADJUSTABLE TAIL HOLDER. FRANK B. JUDY, Cynthiana, Ky. Filed Aug. 15, 1930. Serial No. 475,590. 5 Claims. (Cl. 54—78.)



1. An adjustable tail holder comprising side frames rigidly held spaced apart, said side frames having integral ears, each ear being provided with a row of perforations, a tail supporting pad pivoted at one end to said side frames, and a pin carried by said pad remote from the pivot of the pad and selectively receivable in the perforations of said ears to maintain the pad at any desired angular inclination relatively to said side frames.

1,810,833. ADJUSTABLE TAIL HOLDER. FRANK B. JUDY, Cynthiana, Ky. Filed Oct. 21, 1930. Serial No. 490,288. 6 Claims. (Cl. 54—78.)



1. A tail holder for simultaneously lifting and adjusting a defective tail after an operation comprising side frames adapted to be mounted on an animal's buttocks, a pad for supporting the tail, and means operatively connecting the pad to the side frames and adapted to secure the pad in raised, lowered and transversely inclined positions relatively to the side frames.

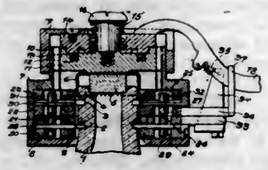
1,810,834. ROLLER-BEARING FREE WHEEL DRIVE. WILLIAM C. KLEIN, Allentown, Pa. Filed Dec. 3, 1930. Serial No. 499,820. 7 Claims. (Cl. 105—113.)

1. A device of the class described having a fixed axle, a pair of wheels mounted for rotation on said axle, housings carrying said wheels and arranged for coaxial differential movement, a motor, gearing to drive one of said housings from said motor, a second motor, and means to drive the other housing from the second motor.

1,810,835. BACK CHECK FOR GAS METERS. DAVID N. LAMBERT, Brooklyn, N. Y. Filed Oct. 8, 1930. Serial No. 487,316. 9 Claims. (Cl. 73—1.)

1. In a meter comprising meter mechanism having a member movable therewith, a back stop pawl normally clear of the path of said member, and a gravity controlled element set during reverse movement of said member to move said pawl into the path of said member to stop it.

1,810,836. BOTTLE RACK. HARRY W. LAURENSTEIN, Ashland, Pa. Filed June 4, 1929. Serial No. 368,366. 1 Claim. (Cl. 248—65.)

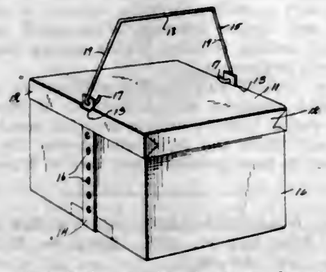


A rack constructed from a single piece of material forming a bottom member, an upper member, and a member connecting the bottom member and the upper member together in spaced relation, said bottom member being adapted to support an article positioned thereon, and said upper member being adapted to confine the article in supported position on the bottom member, said bottom and upper members having flanges which extend laterally with respect to said connecting member to engage opposite sides of a suitable support, and said connecting members having holes to receive fastening elements to secure the rack to said support.

1,810,837. METHOD OF APPLYING TEMPORARY WRAPPERS. HARRY MACELHONE, Binghamton, N. Y. Filed Apr. 6, 1931. Serial No. 528,053. 1 Claim. (Cl. 107—54.)

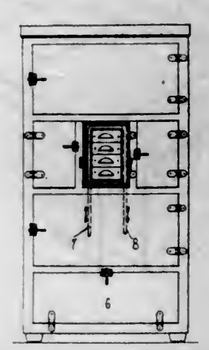
A method of the character herein described comprising the steps of placing a substantially flat blank having a substantially arcuate body portion and bottom tab on a rigid mould, and manually pressing the blank into the mould whereby simultaneously to line the bottom, and sides of the mould to form a wrapper for material to be placed therein.

1,810,838. BOTTLE CAPPING MACHINE. JOSEF MARIAN, Vienna, Austria. Filed Mar. 19, 1931, Serial No. 523,810, and in Austria Mar. 18, 1930. 9 Claims. (Cl. 226—86.)



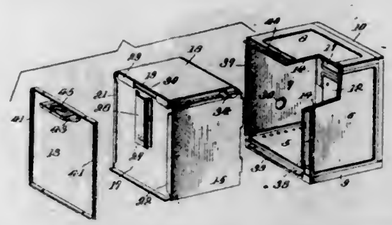
1. A device for sealing bottles or the like by means of caps, comprising a casing adapted to be fitted over the mouth of a bottle, a die mounted in the upper part of the casing and movable axially thereof, cap clamping cheeks mounted in the lower part of said casing and guided for rectilinear radial movement with respect to the axis of said casing, means for actuating said die and cheeks, and means carried by the casing for clamping the latter on the neck of a bottle.

1,810,839. MANUFACTURE OF DIRECT DYEING DISAZO-DYESTUFFS. CARL METTLER, Basel, Switzerland, assignor to the Firm of J. R. Geigy S. A., Basel, Switzerland. Filed Oct. 23, 1929, Serial No. 401,978, and in Germany Nov. 15, 1928. 3 Claims. (Cl. 260—77.)



1. A process for the manufacture of direct dyeing disazo-dyestuffs, consisting in tetrazotizing 3 : 3'-diamino-4 : 4'-dihydroxy-diphenylsulphones and coupling the tetrazo-product with two molecular proportions of arylated 2-amino-5-naphthol-7-sulphonic acids.

1,810,840. CARRYING HANDLE. TAYLOR L. MILLER, Silverton, Tex. Filed Apr. 15, 1930. Serial No. 444,529. 2 Claims. (Cl. 229—52.)

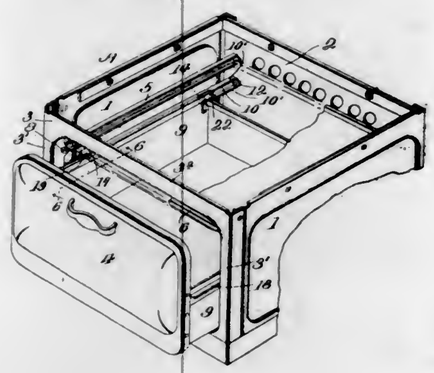


1. A carrying device of the character described comprising in combination with a receptacle having a slotted lid, a U shaped flat strap adapted to substantially surround the receptacle, said strap having longitudinally spaced apertures therethrough, and a bail removably engaging selected apertures in said strap.

1,810,841. ELECTRIC REFRIGERATOR. HUGO MOCK, New York, N. Y. Filed Dec. 7, 1929. Serial No. 412,551. 6 Claims. (Cl. 62—99.)

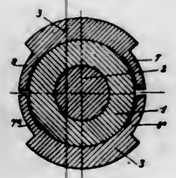
1. In an electric refrigerator, a refrigerating coil and enclosure in the center thereof, and a series of refrigerating chambers circumferentially abutting and surrounding said central refrigerating coil, said chambers being entirely disconnected from each other.

1,810,842. INSULATED RANGE. HENRY MOECKER, Jr., Flossmoor, Ill., assignor to American Stove Company, St. Louis, Mo., a Corporation of New Jersey. Filed Sept. 19, 1929. Serial No. 393,757. 11 Claims. (Cl. 126—39.)



1. An improved range construction, comprising an oven housing having a removable wall, a lining for said housing slidable into the same when said wall is removed, an outlet flue formed as a part of said lining, and said removable housing oven wall having a flue outlet adapted for communication with the oven lining flue, for the purpose described.

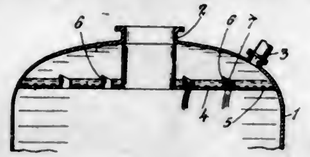
1,810,843. SERVICE DRAWER FOR RANGES. HENRY MOECKER, Jr., Flossmoor, and THEODORE THOMPSON, Harvey, Ill., assignors to American Stove Company, St. Louis, Mo., a Corporation of New Jersey. Filed Oct. 25, 1929. Serial No. 402,484. 4 Claims. (Cl. 126—41.)



1. A service drawer for ranges comprising a housing having a drawer opening, a drawer located within the opening, longitudinally extending track portions supported by the side walls of the housing, fixed wheels located at the front ends of the track portions, said drawer having the outer sides of its side walls provided with longitudinal

flanges extending outwardly therefrom and located between the said tracks, the inner ends of the drawer

carrying wheels adapted to engage the said track portion whereby the drawer can be moved backward and forward and at all times be supported by the said wheels.

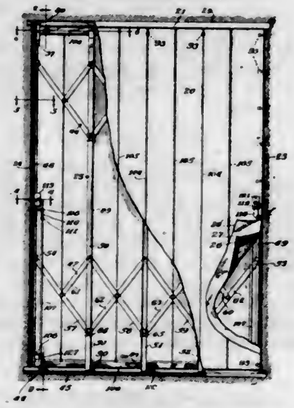


1,810,844. MAGNETO-ELECTRIC MACHINE. EMILE MOREL, Domene, France. Filed Nov. 7, 1928, Serial No. 317,829, and in France and Germany Nov. 9, 1927. 3 Claims. (Cl. 171—209.)

1. A magneto electric machine of the inductor type having an inductor comprising a magnetic ring of steel of high coercive force and remanence, a mounting core passing through said ring for rotating it, a plurality of polar masses of soft magnetic material attached to and in magnetic contact with the periphery of said ring so as to be magnetically connected therewith, and prolongations upon said polar masses, said prolongations being spaced a short distance from said ring and partly embracing it, the extremities of the prolongations on adjacent polar masses being a small distance apart in the neighbourhood of the neutral polarities of the said ring.

1,810,845. TOP SCREEN FOR WOOD PULP DIGESTERS OR THE LIKE. EINAR MORTERUD, Torderod, near Moss, Norway. Filed Mar. 19, 1930. Serial No. 437,093. 3 Claims. (Cl. 92—7.)

2. In a wood pulp digester or the like a screen or sieve near the top thereof for distributing liquid evenly over the cross sectional area of the vessel, holes for the passage of liquid distributed over the area of said sieve



and tubes passing through said screen or sieve and extending a certain distance above the level thereof so as to provide auxiliary passages for the liquid.

1,810,846. PROCESS OF MAKING DIALKYL BARBITURIC ACIDS AND 1-PHENYL- 2,3 DIMETHYL-4-DIMETHYLAMINO - 5 - PYRAZOLONE. FRITZ MÜLLER, Basel, Switzerland, assignor to Chemical Works formerly Sandoz, Basel, Switzerland. Filed Nov. 20, 1928, Serial No. 320,763, and in Switzerland Dec. 3, 1927. 3 Claims. (Cl. 260—33.)

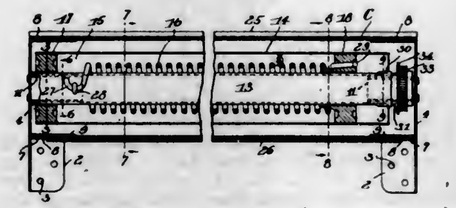
1. A process for the preparation of compounds of 5,5-disubstituted barbituric acids and 1-phenyl-2,3-dimethyl-4-dialkylamino-5-pyrazolones, consisting in the interaction of alkali metal salts of 5,5-disubstituted barbituric acids and strong mineral acid salts of 1-phenyl-2,3-dimethyl-4-dialkylamino-5-pyrazolones, the latter being used in form of a saturated aqueous solution forming solvent for the double decomposition.

1,810,847. FOLDABLE CURTAIN. CARL H. NORDELL and PEDER E. ERLINDER, Chicago, Ill., assignors to Folding Products Corporation, Chicago, Ill., a Corporation of Illinois. Filed Aug. 23, 1928. Serial No. 301,528. 18 Claims. (Cl. 20—20.)

2. In a foldable curtain, the combination of an extensible supporting means having a transverse end frame member, with a flexible covering secured to said frame member, said flexible covering being bowed out beyond said frame member to effect flexible sealing contact with an adjacent member.

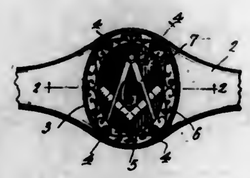
6. In a foldable curtain, the combination of a pair of extensible members with a plurality of stiles carried thereby, and a foldable flexible covering secured to the ends of said stiles and tensioned between the points of attachment to form predetermined lines of flexure.

1,810,848. ROLLING SCREEN. ALVIN F. NYE, Rochester, N. Y. Filed May 11, 1928. Serial No. 277,044. 15 Claims. (Cl. 156—39.)



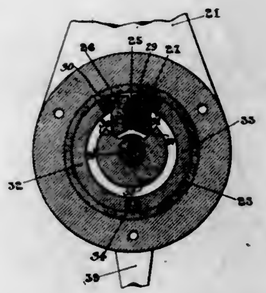
2. In a construction including supporting means provided with a groove, and a rolling screen having an edge

normally engaged in said groove, the combination with said groove of guiding members extending obliquely out-



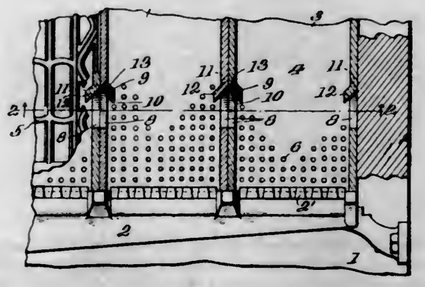
wardly from the sides of said groove to assist in replacing the edge of the screen which has become disengaged from the groove.

1,810,849. ROLLER SCREEN MOUNTING. ALVIN F. NYE, Rochester, N. Y. Filed July 22, 1929. Serial No. 380,014. 7 Claims. (Cl. 156—39.)



1. In a roller screen mounting, the combination with end brackets having inwardly projecting hubs thereon, of a tubular core piece slidable telescopically on the hubs, a screen roller shell enclosing the core piece and supported thereon for relative movement and forming a chamber, and a spring in the chamber reacting between the core piece and shell.

1,810,850. FINGER RING AND THE LIKE. HENRY W. PETERS, Boston, Mass. Filed May 11, 1929. Serial No. 362,362. 3 Claims. (Cl. 63—15.)

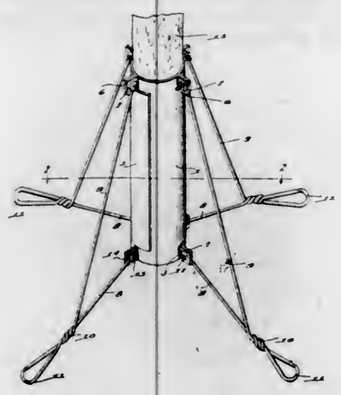


1. An article of jewelry including a base, a box integral therewith and having an open face for the reception of a setting, a retaining element fitted snugly within the open face of the box and bearing upon the setting, and means integral with the box and engaging and flush with the outer surface of the retaining means for holding the retaining means and the setting within the box.

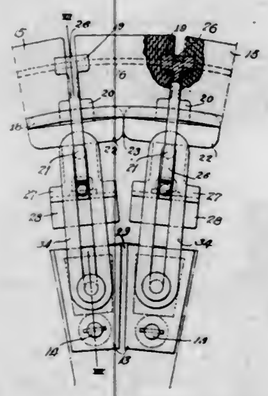
1,810,851. ROTATABLE TRANSMISSION IRREVERSIBLE IN BOTH DIRECTIONS. RAYMOND PETIT, Paris, France, assignor to Société Anonyme Francaise Dite: Bricard, Ancienne Maison Sterlin, Paris, France. Filed Apr. 28, 1928, Serial No. 273,533, and in France Mar. 29, 1928. 2 Claims. (Cl. 192—8.)

1. An unlocking mechanism for application to an irreversible gear comprising a primary member, a plurality of locking segments, a plurality of levers adapted to act respectively upon the said locking segments each lever having two arms, a secondary member acting upon the outside of the levers, while the primary member is adapted to act on the inside thereof, and a member operated from the outside and adapted to rigidly connect the primary and secondary members.

1,810,852. RADIANT HEATER. MINARD A. POSSONS, Cleveland, Ohio, assignor to American Stove Company, St. Louis, Mo., a Corporation of New Jersey. Filed May 12, 1930. Serial No. 451,723. 4 Claims. (Cl. 126—92.)



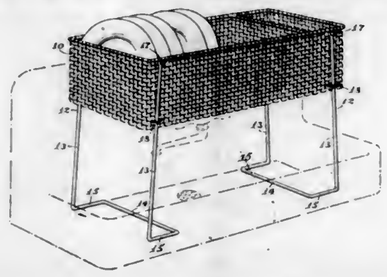
1. A radiant element for radiant heaters comprising an oblong body having a solid back and solid walls and a foraminated front and an open bottom, each side wall of said element being provided with a flash opening, the upper wall of each opening having portions inclined in opposite directions, one of the inclined walls of each of said openings being extended inwardly into said hollow element.



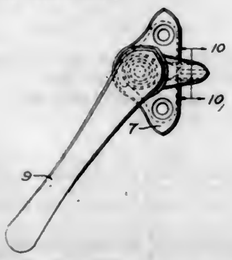
1,810,853. CHRISTMAS TREE STAND. JOSIAH B. RAY and JESSE A. RAY, Decatur, Ind. Filed July 24, 1930. Serial No. 470,482. 3 Claims. (Cl. 248—88.)

1. A tree holder comprising a plurality of curved plates disposed in overlapping relation, each of said plates having

a plurality of ears, means passing through the ears of adjacent plates for securing them together, and a plurality of legs, each of said legs having a portion secured to one of said ears and another portion secured to another of said ears.



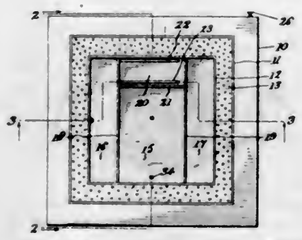
1,810,854. ELASTIC WHEEL WITH FLEXIBLE RIM. EMILE RIMAILHO, Paris, France. Filed May 13, 1927, Serial No. 191,200, and in France May 25, 1926. 3 Claims. (Cl. 152—29.)



1. In an elastic wheel, the combination of an internal rigid circular element, an external flexible rim, elastic members subjected to tension connecting the said rigid circular element with the said flexible rim, this rim being constituted by at least one circular flexible strip, bearing pieces carried by the strips and to which are attached the said elastic members, these bearing pieces being provided with stops disposed upon the circumference so as to maintain the said pieces apart, india rubber blocks pressed between these pieces and acting as interposed elastic elements and as removable tread segments.

1,810,855. DRAIN DEVICE. JEANNETTE ROCKMORE, New York, N. Y. Filed Aug. 30, 1930. Serial No. 479,053. 6 Claims. (Cl. 141—11.

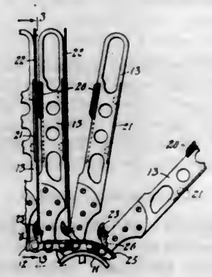
5. A device of the class described comprising a basket, studs on said basket, U-shaped elements pivotally connected with said studs, retainers on the basket which cooperate with the side members of said elements to releasably retain said elements disposed in relation to the basket to serve as the legs therefor, said elements being releasable from said retainers to engage said studs for disposition in relation to the basket to serve as handles therefor.



1,810,856. WINDOW CASEMENT LOCK. WILLIAM SCHNELL, Detroit, Mich., assignor to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 20, 1929. Serial No. 415,469. 5 Claims. (Cl. 292—202.)

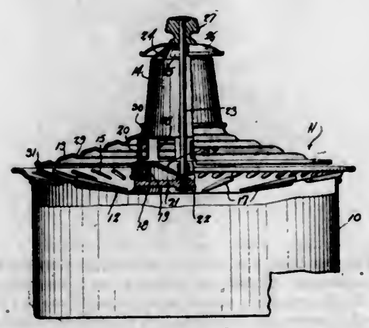
1. A lock for two relatively movable members comprising in combination an integral die-cast handle and locking leg arranged to be movably mounted on one of said members for inter-engaging the said movable members by a sliding cam action, and a reinforcement insert having a trough-like portion cast within the said handle and locking leg portion and having a portion projecting through to the outside of the locking leg portion to present a wearing surface during the sliding cam action of the inter-engaging members.

1,810,857. COOLED DEVELOPMENT APPARATUS. WILFORD G. THOMPSON and JAMES E. JORDAN, El Paso, Tex. Filed Mar. 17, 1930. Serial No. 436,586. 2 Claims. (Cl. 95—89.)



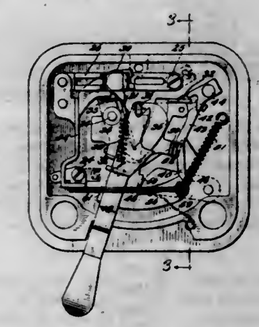
1. In a developing apparatus, a cabinet, a tank in the upper portion of the cabinet exposed through the upper portion of said cabinet, a receptacle within and spaced from the bottom and sides of the tank and having intersecting partitions dividing the interior space of the receptacle into a plurality of compartments all opening substantially through the upper part of the cabinet, a refrigerating coil in one of the compartments, a refrigerating unit contained in the lower portion of the cabinet and connected to said coil, a cooling coil in said compartment connecting with the source of wash water supply and with an adjacent compartment for wash water, and a fixing bath contained in a third compartment.

1,810,858. PROCESSES FOR THE DECOMPOSITION OF CRUDE PHOSPHATE. THEODOR THORSSELL and AUGUST KRISTENSSON, Cassel, Germany. Filed Nov. 11, 1929, Serial No. 406,504, and in Germany Nov. 28, 1928. 2 Claims. (Cl. 71—7.)



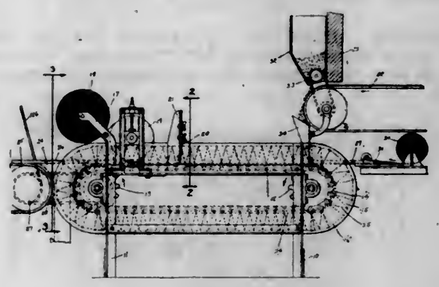
1. In a process for the decomposition of crude phosphate with an acid and potassium sulphate with precipitation of gypsum containing double potassium-calcium salts, the recovery of the potash from the said double salts, comprising the steps of washing with water the gypsum containing the said double salts, agitating with water, containing nitric acid, and washing again with water, as set forth.

1,810,859. CONVEYER. JOHN H. THURMER, Brooklyn, N. Y. Filed Mar. 31, 1930. Serial No. 440,502. 9 Claims. (Cl. 198—134.)



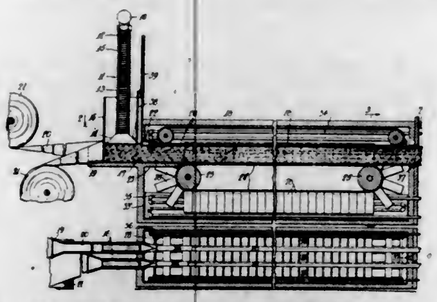
2. A conveyer comprising a linked belt, alternate links having bifurcations at their inner and outer sides, rigid arms projecting from the bifurcations at the outer sides of said links, and material engaging members pivotally mounted in the bifurcations at the inner sides of said links.

1,810,860. POT AND PAN COVER. MARIA V. TREMBLAY, Willimantic, Conn. Filed Jan. 19, 1931. Serial No. 509,785. 9 Claims. (Cl. 53—1.)



1. In a cover for pots, pans and the like, a double wall construction having a central passage therethrough and the outer edges of the walls being spaced to permit air to enter between the walls and flow upwardly through the central passage, a vertical stack surrounding the central passage and supported on one of the cover walls, the other cover wall being supported on the stack and said stack having openings therein permitting flow of air from between the covers to the central passage.

1,810,861. CIRCUIT BREAKER. EMIL H. W. ULLRICH, New York, N. Y., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Apr. 30, 1928. Serial No. 274,086. 11 Claims. (Cl. 200—116.)

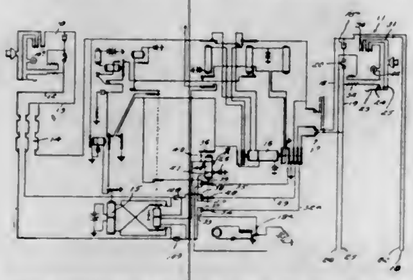


1. In an automatic circuit breaker, a spring-stressed operating lever manually movable between a single open circuit and a closed-circuit position, a spring-stressed element engaging the lever to move it to open-circuit position, a detent normally holding said element in fixed location enabling said lever to occupy either of its positions, and a thermostatically controlled means acting on overload to open the circuit independently of the said operating lever and to free said detent.

1,810,862. DENSITY CONTROL AND DELIVERY OF ICE CREAM OR THE LIKE. CLARENCE W. VOGT, Louisville, Ky., assignor to Vogt Instant Freezers, Inc., Louisville, Ky., a Corporation of Delaware. Filed Oct. 27, 1927. Serial No. 229,180. 12 Claims. (Cl. 107—1.)

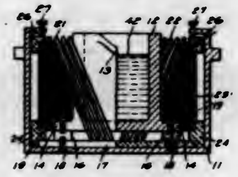
11. The process of forming a continuous bar of a plastic comestible, including delivering the comestible to a moving wrapper of channel shape, reducing the comestible to predetermined thickness without increasing the density by preventing advancement of excess material with said wrapper, and thereafter compacting the comestible to a lesser predetermined thickness and uniform density.

1,810,863. APPARATUS FOR CONTINUOUSLY HARDENING PLASTIC MATERIALS. CLARENCE W. VOGT, Louisville, Ky., assignor to Vogt Instant Freezers Incorporated, Louisville, Ky., a Corporation of Delaware. Filed Apr. 23, 1930. Serial No. 446,474. 16 Claims. (Cl. 62—114.)



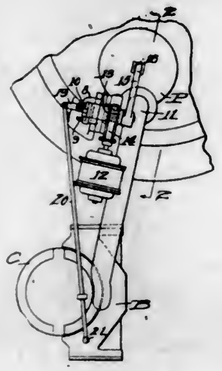
1. An apparatus for reducing the temperature of a substance comprising a heat conducting element containing a congealable liquid, a container for a body of liquid refrigerant, means for immersing said element into said refrigerant and for advancing said element into heat transferring relationship with said substance.

1,810,864. PROCESS FOR THE PRODUCTION OF FOOD PRODUCT BRICKS. CLARENCE W. VOGT, Louisville, Ky., assignor to Vogt Instant Freezers Incorporated, Louisville, Ky., a Corporation of Delaware. Original application filed Oct. 25, 1929, Serial No. 402,339. Divided and this application filed Jan. 9, 1931. Serial No. 507,629. 36 Claims. (Cl. 62—174.)



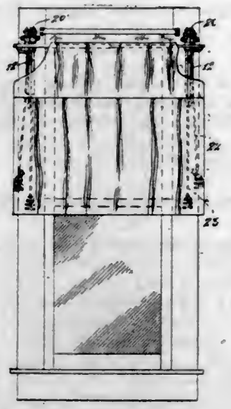
1. The process of forming a solid body of an edible product, including enclosing the product in a wrapper, applying refrigerant to the top, bottom and lateral sides of the wrapper to solidify the material therein, and continuously advancing the material during such solidification.

1,810,865. AUTOMATIC TELEPHONE SYSTEM. HAROLD LYNWOOD WARWICK, Fort Worth, Tex. Filed May 9, 1928. Serial No. 276,857. 14 Claims. (Cl. 179—18.)



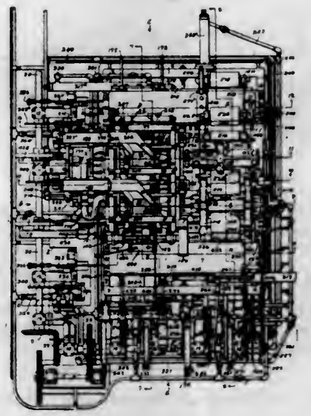
2. The combination with an automatic telephone system including the usual ringing apparatus and a talking circuit including means producing a series of current impulses at the called station upon operation of the dial switch of the calling station after the talking circuit is established, of recording apparatus including a plurality of elements advanced to recording position by said current impulses, means operative after a predetermined number of operations of the ringing apparatus establishing the talking circuit and then consecutively connecting the elements of the recording apparatus thereto, and means connecting said recording apparatus for operation by said ringing means whereby the sequence of operations may be completed through said ringing means when a recording operation is abandoned while partially completed.

1,810,866. INDUCTION FURNACE. CLIFTON S. WILLIAMS, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 14, 1929. Serial No. 385,791. 7 Claims. (Cl. 13—26.)



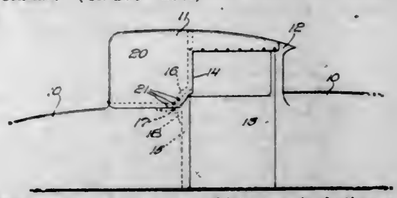
1. In an electric induction furnace, in combination, a crucible and a two-part energizing coil for said crucible, the longitudinal axes of the two parts of the coil being symmetrically and oppositely inclined angularly with respect to the longitudinal axis of the crucible and intersecting the same above the bottom of the crucible.

1,810,867. CASTING PUMP OPERATING MEANS. HENRY A. WISE WOOD, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Original application filed Aug. 28, 1925, Serial No. 53,182. Divided and this application filed May 1, 1929, Serial No. 359,565. Renewed Apr. 16, 1931. 6 Claims. (Cl. 22—2.)



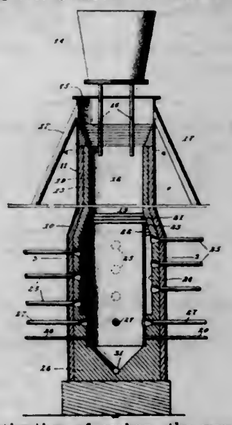
1. The combination with a stereotype casting box and power-operated means for opening and closing it, of a pump for introducing metal into the mold, power-operated means for operating the pump, an electric switch for starting the said last named power-operating means, and means whereby when the pump has performed a complete cycle of operations to fill the mold with a charge of metal the power-operated means will be shut off automatically.

1,810,868. CURTAIN HOLDING DEVICE. WILLIAM ZURY, Homestead, Pa. Filed Dec. 10, 1930. Serial No. 501,390. 2 Claims. (Cl. 156—27.)



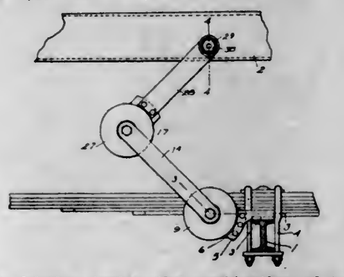
1. A curtain supporting apparatus comprising extensible means vertically disposed upon opposite sides of a window opening, telescopically associated sections forming the extensible means, reversely curved rod members carried by some of the sections, braking elements carried by the rod members for engagement with the sections to retain same in adjusted position, and pulls having operative connection with the rod members for regulating the position of the apparatus.

1,810,869. MACHINE FOR MAKING INLAID FLOOR COVERINGS. GILBERT V. ANDERSON, Philadelphia, Pa., assignor to Congoleum-Nairn Inc., Philadelphia, Pa., a Corporation of New York. Filed Sept. 6, 1927. Serial No. 217,794. 89 Claims. (Cl. 154—23.)



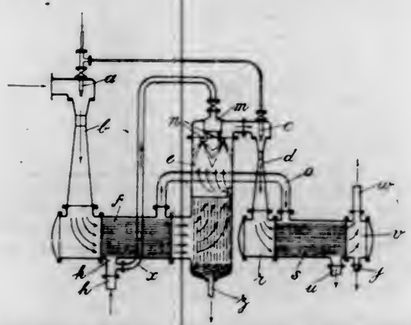
20. In a machine for making molded inlaid linoleum, the combination of a mold structure; a wall on said mold structure defining a chamber adapted to form a unit of the body portion of said linoleum, said chamber being open at its top; means for automatically dropping granular material into said unit forming chamber; a plunger within said chamber; and means for moving said plunger within said chamber to regulate the capacity of said chamber.

1,810,870. COVER FASTENER AND THE LIKE. ALEXANDER CARLSON and ERIC W. ERICSON, Detroit, Mich., assignors to Dietrich Incorporated, a Corporation of Michigan. Filed June 27, 1929. Serial No. 374,221. 12 Claims. (Cl. 296—107.)



1. For use in securing a vehicle top including a cam surface; a snap fastener comprising a male and a female member, means carried by one of said members and slidable therein upon engagement with said surface, to bear against and detach the other of said members.

1,810,871. ACTIVATION OF CARBON. RAYMOND G. DAVIS, Marshall, Tex., and MARSHALL T. SANDERS, Wilmington, Del., assignors to Darco Corporation, Wilmington, Del., a Corporation of Delaware. Filed Sept. 17, 1928. Serial No. 306,375. 8 Claims. (Cl. 252—3.)

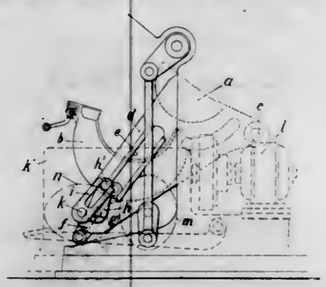


1. In the activation of carbon, the process which comprises preheating carbon to a temperature approaching but not above 800° C. by contacting it with hot combustion gases containing CO_2, removing the preheated carbon from said contact and then heating the carbon to a higher temperature in an atmosphere of steam substantially free of CO_2.

1,810,872. FRICTION DEVICE. HUGH C. LORD, Erie, Pa. Filed Nov. 13, 1925. Serial No. 68,795. 29 Claims. (Cl. 188—130.)

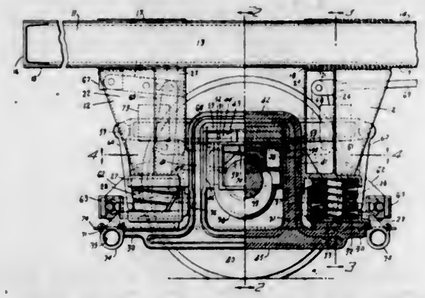
1. In a friction device, the combination of two relatively movable members; a rubbing plate having a broken surface on one member; and a rubber friction pad abutting on the other member and acting on said surface.

1,810,873. MULTISTAGE STEAM-JET EJECTOR. JAMES SIM, Glasgow, Scotland, assignor to G. & J. Weir, Limited, Glasgow, Scotland. Filed Apr. 12, 1930, Serial No. 443,837, and in Great Britain May 16, 1929. 6 Claims. (Cl. 230—104.)



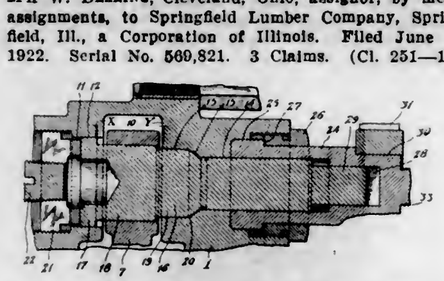
1. A multi-stage steam-jet ejector arrangement for use in a steam power plant, involving a surface-inter-condenser and a direct-contact-inter-condenser, these two inter-condensers being in series with the surface-inter-condenser nearest to the first-stage steam jet, the arrangement being such that the cooling water used in the said surface-inter-condenser is thereafter delivered into the feed system of the plant.

1,810,874. TENDER FRAME. CHARLES W. WERST, Philadelphia, Pa., and ELMER E. HICKEN, Collingswood, N. J. Filed Apr. 17, 1930. Serial No. 445,040. 6 Claims. (Cl. 105—415.)



1. The combination in a frame for a tender of a locomotive, consisting of two series of rolled members, one series extending longitudinally and continuously throughout the length of the frame, and the other series extending transversely, and being slotted for the passage of the longitudinal members, which are located intermediate of the sides of the frame, and notched at each end to fit against the side longitudinal members.

1,810,875. DRIVING GEAR OF MACHINES FOR CASTING STEREOTYPE PLATES. CARL WINKLER, Bern, Switzerland, assignor to Winkler Matera & Stereo A. G., Glarus, Switzerland, a Corporation of Switzerland. Filed Sept. 17, 1929, Serial No. 393,276, and in Germany Sept. 17, 1928. 3 Claims. (Cl. 22—2.)



1. A driving gear for opening and closing the mold of machines for casting stereotype plates, comprising in combination a shaft, mechanism connected with said shaft for raising and lowering the mold-bed, a crank, carrying a crank pin, fixed on said shaft, a driving crank connected with said first crank and turning about an axis eccentric to said first shaft and arranged at such an angular position in regard to said first crank that at the moment of opening the mould a larger angular movement of said driving crank produces a smaller angular movement of said first crank.

1,810,876. RAILWAY CAR. CHAMP CARRY, WILLIAM H. MUSSEY, and MARTIN P. BLOMBERG, Chicago, Ill., assignors to Pullman Car & Manufacturing Corporation, Chicago, Ill., a Corporation of Illinois. Filed Jan. 2, 1931. Serial No. 506,110. 16 Claims. (Cl. 105—222.)

1. In a railway car, the combination with pedestals disposed longitudinally of the car, of journal boxes between the pedestals, a wheel and axle assembly movable transversely of the car with respect to said pedestals and supporting the journal boxes, hangers pivotally hung from said boxes for yieldably supporting said pedestals, and crossbars connecting said hangers.

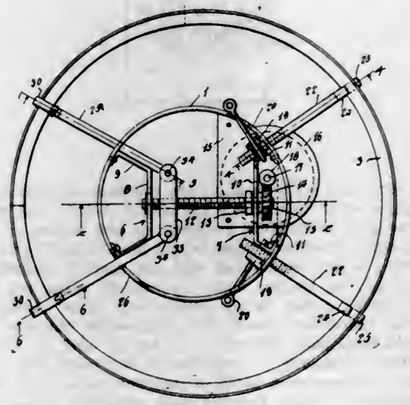
1,810,877. SELF SEALING VALVE CONTROL. JOSEPH W. DEARING, Cleveland, Ohio, assignor, by mesne assignments, to Springfield Lumber Company, Springfield, Ill., a Corporation of Illinois. Filed June 21, 1922. Serial No. 569,821. 3 Claims. (Cl. 251—18.)

1. The method of sealing a valve casing which consists in fitting a rotatable metal valve actuating member in a bearing formed in said casing with a modicum of clearance in excess of that required for said bearing at a place exposed to the action of corrosive elements in order purposely to allow a measure of corrosion to occur at the most exposed portion of said clearance space and to act as a sealing agent effective to prevent leakage along said bearing.

1,810,878. PROCESS OF PRODUCING AN ARTIFICIAL FUEL. GLENN W. TRAER, Chicago, Ill., assignor to Northern Lignite Coal Company, Chicago, Ill., a Corporation of Delaware. Filed June 15, 1925. Serial No. 37,384. 5 Claims. (Cl. 202—9.)

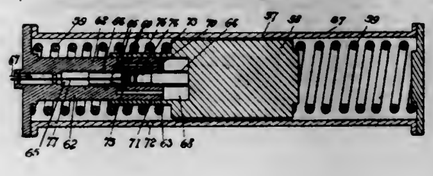
1. A process of producing a non-coking fuel from a coking coal which comprises in subjecting the coking coal to a temperature above its incipient volatilization temperature and below its fusion temperature and maintaining the temperature of the coal between these temperatures until emission of volatiles characteristic of that temperature range substantially ceases.

1,810,879. ENGINE SUPPORT. CHARLES R. UEBELMESSER and WILLIAM WENDERHOLD, New York, N. Y., assignors to Elizabeth M. Uebelmesser, New York, N. Y. Filed Feb. 7, 1928. Serial No. 252,456. 6 Claims. (Cl. 180—57.)



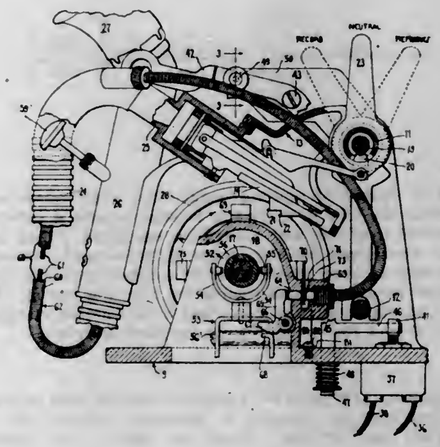
1. In a device of the character described, an engine having a crank case and cylinder, rods between said crank case and cylinder, said crank case having means for supporting the same from an axle housing, and a link having ball and socket joints at opposite ends, one end of the link adapted to be attached to an automobile frame and the other end to one of said rods between said crank case and cylinder.

1,810,880. ROOFING AND WEATHERPROOFING MATERIAL. ALBERT C. FISCHER, Chicago, Ill., assignor to The Philip Carey Manufacturing Company, a Corporation of Ohio. Original application filed Sept. 6, 1921, Serial No. 498,861. Divided and this application filed Sept. 10, 1927. Serial No. 218,863. 6 Claims. (Cl. 87—17.)



1. A building material comprising a vehicle carrying a normally non-adhesive substance of jelly-like consistency and adapted to be rendered adhesive by contact with a bituminous waterproofing material.

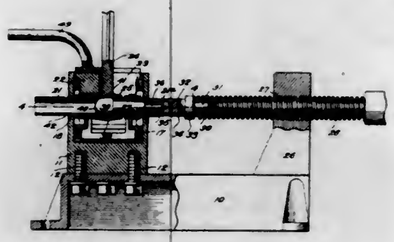
1,810,881. TIRE RIM BREAKING MACHINE. ALBERT S. GRAY, Wenatchee, Wash., assignor of one-half to John David Certain, Wenatchee, Wash. Filed Aug. 14, 1930. Serial No. 475,336. 5 Claims. (Cl. 157—1.)



1. A tire rim breaking machine, comprising a circular casing, a pair of arms extending through the wall and radially of the casing, means for adjusting said arms radially of and securing them to the casing, a second pair of arms within and extending radially from the casing through the wall thereof, a connecting body between the adjacent ends of the last mentioned pair of arms, said arms being formed at their outer ends to engage and support a tire rim, a horizontally disposed screw member threadably extended through said body, a gear carried by said screw, an electric motor carried by said casing and having a worm connected with said gear, and switch control means for said motor.

1,810,882. CONVEYING OF MATERIAL. HANS HEYMANN and ERNST LEHR, Darmstadt, Germany, assignors to the Firm: Carl Schenck, Eisengresserei und Maschinenfabrik Darmstadt G. m. b. H., Darmstadt, Germany. Original application filed Oct. 27, 1925, Serial No. 65,160, and in Germany Oct. 31, 1924. Divided and this application filed Jan. 22, 1927. Serial No. 162,808. 9 Claims. (Cl. 198—220.)

1. A conveying device comprising a conveying trough, supported for vibratory movement in the longitudinal direction, an oscillatable mass resiliently connected with and arranged for free vibratory movement relative to and in the same direction as said trough, and means for causing said mass to vibrate freely in such a manner that its linear displacement is of variable magnitude.



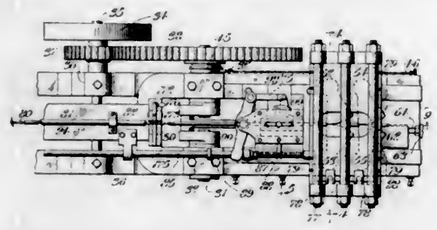
1,810,883. PHONOGRAPH. ARTHUR A. JOHNSON, Bridgeport, Conn., assignor to Dictaphone Corporation, Bridgeport, Conn., a Corporation of New York. Filed Oct. 19, 1927. Serial No. 227,123. 18 Claims. (Cl. 192—116.5.)

1. In a dictation machine, the combination of machine driven means; rotating machine driving means; a start-

and-stop device to intermittently connect the driving and driven means; and means operatively related to the driving means to permit operation of the start-and-stop device when the driving means rotates, and prevent operation when the driving means is stationary.

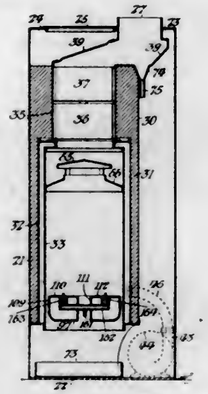
1,810,884. MACHINE FOR REMOVING AND REPLACING PISTON WRIST PINS. EARL O. MINOR, New York, N. Y. Filed May 21, 1930. Serial No. 454,427. 5 Claims. (Cl. 29—88.2.)

1. In a wrist pin removing and replacing machine, a piston holder having openings therein and adapted to receive a piston, a reinforcing member adapted to be inserted within the piston to engage the walls thereof, a wrist pin carrier mounted for longitudinal movement, means to move the carrier, and means supported by the carrier and located in advance of a wrist pin mounted upon said carrier to engage and force an old wrist pin from the piston and provide a pilot for the carrier mounted wrist pin.



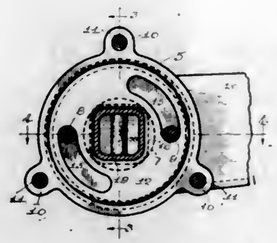
1,810,885. METHOD OF TAPERING METAL TUBES. GEORGE E. NEUBERTH, Newark, N. J. Filed Oct. 31, 1927. Serial No. 229,887. 6 Claims. (Cl. 80—62.)

6. A method of tapering metal tubes which comprises, feeding the tube in successive increments over a tapered mandrel from the large toward the small end, rolling the tube successively down the taper of the mandrel, and rolling back up upon the tube but at a circumferentially displayed position without feeding the tube, the feeding and turning thus occurring singly and in alternation at opposite ends of the rolling for the purposes described.



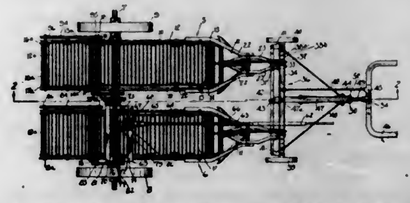
1,810,886. METHOD OF AND APPARATUS FOR WORKING METAL. GEORGE E. NEUBERTH, Newark, N. J. Filed Apr. 9, 1929. Serial No. 353,717. 59 Claims. (Cl. 80—1.)

57. In apparatus for reducing metal stock in successive increments of length, in combination, a frame in which reducing devices are mounted gripping jaws for feeding the stock forward, a reciprocable mounting box for said jaws, and means actuated by the reciprocatory action between said frame and feed jaws for causing the jaws to



intermittently grip the stock and feed it in successive increments to the reducing devices between the actions of the latter upon the stock.

1,810,887. GAS WATER HEATER. ALOYSIUS T. SPONAR, Conshohocken, Pa., assignor to John Wood Manufacturing Company, Conshohocken, Pa., a Corporation of Pennsylvania. Filed Aug. 9, 1929. Serial No. 384,631. 4 Claims. (Cl. 122—17.)



1. In a gas water heater; the combination with a rectangular outer casing; of a cylindrical shell in said casing inclosing a combustion chamber; a gas burner in said combustion chamber; a gas supply conduit leading to said burner; means controlling said gas conduit including a valve and an electric motor operatively connected with said valve; a flue casing within said outer casing and spaced therefrom above said combustion chamber and in communication therewith; a heater unit, of cellular structure including a congeries of flue tubes and water spaces between them fitted in said flue casing and spaced therefrom; a pump between said cylindrical casing and rectangular casing having a water inlet conduit leading through said rectangular casing to said pump; a water discharge conduit leading from said pump to the water spaces in said heater unit; a heater outlet conduit leading from said heater unit through said rectangular casing; an electric motor operatively connected with said pump; and a thermostat exterior to said rectangular casing constructed and arranged to control both of said electric motors in coordinate relation.

1,810,888. HINGE. WALTER M. HANSON, Grand Rapids, Mich., assignor to American Seating Company, Grand Rapids, Mich., a Corporation of New Jersey. Filed Nov. 3, 1930. Serial No. 492,940. 8 Claims. (Cl. 155—86.)

1. In a device of the class described, a pair of discs provided with peripheral bearing flanges, a pair of cupped members secured together adjacent their rims and forming a housing and bearing surface for said bearing flanges, and an axially disposed shaft associated with said discs for rotating them within said housing.

1,810,889. AGRICULTURAL IMPLEMENT. SHELDON S. SPIRE, Syracuse, N. Y., assignor to Syracuse Chilled Plow Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Mar. 31, 1930. Serial No. 440,314. 4 Claims. (Cl. 55—51.)

1. A two-row potato digger comprising a wheel supported axle, a first and a second digging unit mounted on said axle for independent pivotal movement with respect to each other, each unit having an elevator, a jack shaft mounted on the first unit, means for driving said jack shaft, driving connections between said jack shaft and the elevator of said second unit, said latter connections including a double sprocket journaled on said axle, a driving chain connection from said double sprocket to a sprocket on said jack shaft and a driving chain connection from said double sprocket to the elevator of said second unit.

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office

Vol. 407—No. 4 TUESDAY, JUNE 23, 1931 Price—$10 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual index, $11.50; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Notices of Cancellation

U. S. PATENT OFFICE, *Washington, June 4, 1931.*

The National Gum Co., Inc., its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of the United Drug Company, Greenleaf, Leon, and Forsyth Streets, Boston, Mass., to effect the cancellation of the trade-mark registration of The National Gum Co., Inc., of 44 Spring Street, Newark, N. J., No. 220,985, dated November 23, 1926, and the notice of such proceeding sent by registered mail to the said The National Gum Co., Inc., at the said address having been returned by the post-office as undeliverable, notice is hereby given that unless said The National Gum Co., Inc., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

M. J. MOORE,
Assistant Commissioner.

U. S. PATENT OFFICE, *Washington, June 4, 1931.*

American Pozzolana Company, its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of The Master Builders Company, of Cleveland, Ohio, to effect the cancellation of the trade-mark registration of the American Pozzolana Company, of 210 Penway Building, Indianapolis, Ind., No. 130,612, dated May 4, 1920, and the notice of such proceeding sent by registered mail to the said American Pozzolana Company at the said address having been returned by the post-office as undeliverable, notice is hereby given that unless said American Pozzolana Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

M. J. MOORE,
Assistant Commissioner.

Vacation Notice

U. S. COURT OF CUSTOMS AND PATENT APPEALS,
Friday, June 5, 1931.

It is ordered that the vacation period of this court, in so far as it affects the postponement by stipulation of the filing of appellants' and appellees' briefs in customs appeals, as provided in paragraph 8 of Rule XIX, and in so far as it affects the postponement of the printing of records and the filing of appellants' and appellees' briefs in patent appeals, as provided in paragraph 1 of Rule XXVI and in paragraphs 3 and 4 of Rule XXVII, shall commence on the 6th day of June, 1931.

Adjudicated Patents

(C. C. A. Ohio.) Deutsch et al. patent, No. 1,635,115, for apparatus for cleaning containers and the like, claims 7, 8, 9, 13, 14, 15, and 16 *Held* not infringed, and claim 19 *Held* valid and infringed. *Merit Oil Equipment Co. v. Fry Equipment Corporation,* 48 F.(2d) 488.

(C. C. A. Mo.) Collins reissue patent, No. 17,207, for waterproof plastic, claims 1, 2, 10–15 *Held* valid and infringed, and claims 7, 8, and 9 *Held* not infringed. *Kansas City Southern Ry. Co. v. Silica Products Co.,* 48 F.(2d) 503.

Changes in Classification

Order No. 3,194, June 9, 1931, directs:

In *class 62, Refrigeration* (Division 44), establish the following subclass and definition:

169.1 Supports.

169.1. SUPPORTS. This subclass includes inventions directed to supporting means for the various feature elements of refrigeration apparatus.

Note.—For supports for rotary ice boxes and receptacles see this class, subclasses 49, 59, and 77.

Note.—For supports for elevator refrigerators see this class, subclass 71.

Note.—For supports for ice tanks see this class, subclass 157.

Note.—For supports for the pumps and motors see class 248, SUPPORTS, and the appropriate pump and motor classes.

Note.—For supports in the nature of racks and cabinets, not involving refrigeration structure see classes 211, SUPPORTS, RACKS, and 312, SUPPORTS, CABINET STRUCTURES.

The patents contained in this subclass have been taken for the most part from class 62, Refrigeration, subclass 95, Refrigerators, Indirectly cooled.

In *class 62, Refrigeration* (Division 44), in subclass 95, Refrigerators, Indirectly cooled, insert in the second line of the definition, after the word "liquid," the following:

or other holdover or heat conducting means.

Condition of Applications Under Examination at Close of Business June 6, 1931

(Total number of applications awaiting action, excluding Trade-Mark Division, 93,859; Trade-Mark Division, 1227. Oldest new case, Oct. 6, 1930; oldest amended, Oct. 6, 1930. The dates given are 1930 except where † indicates 1931.)

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

In re Spencer

No. 2,622. Decided March 25, 1931

1. Application—Claims—Multiplicity.

"The practice of filing unnecessary duplicates of claims, differentiated from each other by only the slightest change of language and with no material advantage to the applicant, can not be too strongly condemned and is more often an indication of the inability of the pleader to properly state his case than of anything else."

2. Patentability—Thermostatic Bimetallic Device.

Certain claims for a thermostatic bimetallic device *Held* patentable.

Hatfield, *J.*, and Lenroot, *J.*, concurring and dissenting.

Appeal from the Patent Office. Modified.

Mr. Leroi J. Williams, *Mr. Robert L. Kahn*, *Mr. Samuel Ostrolenk*, *Mr. Delos G. Haynes*, and *Mr. C. Bonifant Hamilton* for Spencer.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

Graham, *P. J.*:

[1] Appellant filed his application in the Patent Office for an improvement in thermostats. Attached to his application were a multitude of claims which unnecessarily and vexatiously clouded the issue. The Examiner and the Board of Appeals both referred to this unnecessary duplication, and had it in mind while making allowance of certain claims to the appellant. The practice of filing unnecessary duplicates of claims, differentiated from each other by only the slightest change of language and with no material advantage to the applicant, can not be too strongly condemned and is more often an indication of the inability of the pleader to properly state his case than of anything else. However, by abandonment and otherwise there are finally presented for our consideration eight claims which are as follows:

22. A thermo-responsive controlling device comprising a pair of spaced supports and an initially stressed and curved bimetallic member resiliently secured between the supports.

30. A thermo-responsive device consisting of a flexible bimetallic bow-shaped strip, and discrete means disposed at opposite ends thereof and adapted to initially stress and curve said strip, at least one of said means being resilient.

37. A thermostatic device comprising a bimetallic thermostatic member, resilient discrete means operatively connected to one end thereof and maintained in a flexed condition in such a manner that upon change in temperature of said member, said means and said member are caused to suddenly change their respective shapes.

38. A thermostatic device comprising an initially curved bimetallic strip and means cooperating with the opposite ends thereof, adapted first to resist the tendency of said strip to change its curvature in response to strains within said strip due to temperature changes, and then to aid said strip in assuming its new shape in response to the strains induced therein by temperature changes, said strip delineating a simple curve at the beginning and end of its movement, but a compound curve at intermediate portions of its movements.

40. A thermostatic device comprising a flexible bimetallic strip means cooperating with the ends thereof to cause said strip to have the shape of a simple curve at positions of stable equilibrium and to assume the shape of a compound curve at positions of unstable equilibrium.

43. A thermostat comprising a bimetallic element, supporting means associated with the opposite ends of said element, the supporting means comprising a resilient element, both of said elements being initially maintained in flexed condition, a stationary contact member, and a movable contact member connected with said second element, one of said elements having a compound curve as it approaches an axis of pressure and then abruptly changing curvature for a quick separation of said contact members.

45. A thermostat comprising a bimetallic element, supporting means associated with the opposite ends of said element, the supporting means cooperating with at least one end of said strip comprising a resilient element, both of said elements being initially maintained in flexed condition, a stationary contact member, and a movable contact member connected with said second element, said elements tending to increasingly stress and flex themselves as they approach a condition of instability and then to abruptly reverse their curvature for a quick separation of said contact members.

54. A thermostat comprising a bimetallic element, a resilient mounting engaging the ends of said strip at points spaced apart a distance less than the distance between the same points of the strip when it is straight, so that the strip has two positions of stable equilibrium and one position of unstable equilibrium.

These claims were rejected by the Board of Appeals, which cited as pertinent references a German patent, No. 319,620, of March 12, 1920, and a United States patent to Schwimmer, No. 1,523,351, of January 13, 1925.

It is said by the appellant, and not denied by the Solicitor of the Patent Office, that the Schwimmer patent is not a proper reference in this matter, inasmuch as appellant's application, being a divisional one, and referring to his application Serial No. 565,244 of June 1, 1922, antedates said Schwimmer patent. Under the rules of the Patent Office, (rules 41 and 42), the subject matter of such divisional application must have been included in such original application. The application of the appellant having been filed prior to the issuance of the Schwimmer patent, said patent can not be cited here as a reference showing the prior art. *Bates* v. *Coe*, 98 U. S. 31, 15 O. G. 337; *Gray Tel. Pay Sta.* v. *Baird*, 174 Fed. 417; *Johns-Pratt Co.* v. *Freeman*, 201 Fed. 356, aff. in *Freeman* v. *Johns-Pratt Co.*, 204 Fed. 288. We shall therefore disregard this reference in considering the matter.

Appellant's device consists of a bimetallic thermostatic strip in the form of a hollow rectangle having a curved and resilient spring steel member extending across the said hollow longitudinally, and rigidly connected to the opposite ends of the said thermostatic strip by rivets. This spring steel strip is so curved as to give laterally, when strain is placed upon it. The object of the invention, as explained in the application, specification and drawings, is to provide a thermostatic strip which, when heated by an electric current to a certain degree, will open the electrical contacts with a sudden or snapping movement, thus preventing arcing and the destruction of the contact points.

Both tribunals in the Patent Office found that the invention had been anticipated by the aforesaid German patent and it is to that point we shall refer ourselves. The German patent shows a thermostatic strip which is more easily understood from the following excerpt from the specification:

a is a strip of spring tempered sheeting, bent twice at right angles. Upon the center piece which is slightly bent upwards, there is welded or soldered on a second plate strip

b, the latter consisting of a metal with small expansion co-efficient. The center part is therefore a bi-metallic strip or a Breguet spring. Upon heating it tends to stretch and finally to bend through downward. The plate strip *a* with its ends is rigidly connected with an insulating piece *c*. The spring force of the vertical arms of the plate strip *a* opposes the stretching of the center part. The arising forces and counter forces which are always in equilibrium, attain their maximum value if the spring is stretched in a straight line. At such moment the equilibrium or balance is an unstable one and there suffices the smallest further increase in temperature to bring about a sudden strong bending of the center part, inasmuch as the forces which were heretofore opposed are now acting in the same direction. This peculiarity of the arrangement is taken advantage of, in accordance with the invention, in order to bring about a sudden interruption of the current.

The appellant contends that his device and idea is not anticipated by said German patent, and he invokes the rule that the said reference being to a foreign patent, its disclosure must be so clear and definite as to enable any mechanic skilled in the art to construct the patented invention certainly, directly and without the necessity of any experiment. That this is the law must be conceded. *In re Gillam*, 17 C. C. P. A. (Patents) 877, 37 F.(2d) 959, 395 O. G. 1135; *In re Crowell*, 17 C. C. P. A. (Patents) 1009, 39 F.(2d) 681, 397 O. G. 3; *Selectasine Patents Co.* v. *Prest-O-Graph Co.*, 267 Fed. 840; *Permutit Co.* v. *Harvey Laundry Co.*, 274 Fed. 937; *Warren Bros.* v. *Owosso*, 166 Fed. 309.

The question as to whether the German patent involved is sufficiently explicit so that anyone skilled in the art might so construct it that it would anticipate the appellant's device, is one of some difficulty. Incorporated in the record are the affidavits of scientists of note who assert that they have experimented with devices constructed as shown in the specification of the German patent, and that it will not operate in the way set out in the appellant's application, and in the way in which it is conceded his device will operate. All of these affiants unite in stating that a device constructed as shown by the German specification will separate the contact points slowly, and will not snap suddenly into position unless constructed with vertical members of such thickness as to practically constitute rigid members. The principal controversy in this respect is as to the exact conception of the German applicant, it being contended on the part of the appellant here that the German applicant had a conception of a device in which the thermostatic strip would, by the influence of the heat, change from an upward bowed form to a straight line, and then would break the contact by bowing in the other direction. In this respect it is demonstrated by the scientists who have filed affidavits here, and is admitted by the Board of Appeals in its written decision, that in order to have such a thermostatic strip suddenly change its position with a snap, it must do so as the result of compound curves induced by the action of the heat, and not as the result of having assumed first a straightened position and then a curve opposite to its first curved form. The Board of Appeals, however, is of the opinion, in spite of this fact, that it is within the scope of knowledge of anyone skilled in the art to so construct the vertical side supports of this thermostatic strip that such compound curving and consequent sudden change of position will result.

As we have said, the case is one of much difficulty. It is quite apparent the appellant here has a device which will perform a very useful and desirable process. It is not clear that the German applicant had either a mental conception of the same thing, or of a device with which it might be brought about. It is true that in the German application it is stated that a sudden change of position in the thermostatic strip is the end to be accomplished, but it is equally true that the concept which he seems to have had would not have brought about such a result. The construction of the devices, also, is not the same. Hence, it is one of those cases, in our opinion, where the applicant is entitled to the benefit of the doubt, and should be allowed to have any protection which the Patent Office may give him.

Claims 22, 30 and 54 are so general as to read upon the said German application, and hence are not properly allowable. Claims 37 and 45 do not contain the element of a device which will cause a compound curve of the thermostatic strip while operating, but depend for their force and effect upon an abrupt reversal of curvature of the strip. It is argued by the Solicitor for the Patent Office that such recital is of the function of the device and is therefore not patentable under *In re Hammond, jr.*, 17 C. C. P. A. (Patents) 803, 37 F.(2d) 760, 394 O. G. 275. The same argument is offered as to claims 38, 40 and 43, in which claims the element of a device causing a compound curve is recited. We agree with this contention as to said claims 37 and 45. Nothing is therein stated which will confine the device to any particular form and hence these claims, omitting the functional features, may also be read upon the German reference.

Claims 38, 40 and 43 are, in our opinion, allowable. The recitation therein of the compound curve created in the thermostatic strip, in view of the device disclosed in the specification and drawings, cannot properly be said to be the recital of a function but rather to be a recital in aid of the related description of the device itself. Claims 38, 40 and 43 will therefore be allowed and patent will issue thereon. The decision of the Board of Appeals is, in all other respects, affirmed.

Modified.

HATFIELD, *J.*, concurring and dissenting:

I concur in the majority opinion so far as it affirms the decision of the Board of Appeals holding that claims 22, 30, 37, 45, and 54 are not patentable.

I am of opinion, that claims 38, 40, and 43, so far as they may be differentiated from the prior art, are functional in character and that, therefore, the decision of the Board of Appeals, rejecting those claims, should be affirmed.

LENROOT, *J.*, concurs in the above concurring and dissenting opinion.

U. S. Court of Customs and Patent Appeals

ST. JOHN AND GRAY *v.* SCHULZE

No. 2,596. Decided March 25, 1931

1. INTERFERENCE—PRIORITY—REDUCTION TO PRACTICE—COMMERCIAL INSTALLATION NOT NECESSARY.

"The counts of the interference call for a process of producing useful mineral oil by a certain process of distillation. Schulze successfully produced by his process the useful mineral oil which he sought to produce and he clearly taught the art of its production. It was not necessary for him in order to be entitled to priority of the counts involved to install a commercial plant and prove by such installation that his process would be a commercial success."

2. SAME—SAME—SAME.

Evidence reviewed and *Held* to establish that S, who was the first to conceive the invention was also the first to reduce it to practice and priority was properly awarded to him.

APPEAL from the Patent Office. Affirmed.

Messrs. Emery, Booth, Varney & Whittemore, Mr. Lucius E. Varney, Mr. Nichol M. Sandoe, Mr. M. Whittemore, and *Mr. A. M. Holcombe* for St. John.

Messrs. Steward & McKay and *Mr. Roy F. Steward* for Schulze.

BLAND, *J.*:

This is an appeal by St. John and Gray from concurring decisions of the Patent Office tribunals, awarding priority of invention to appellee Schulze.

The invention in issue is a process for producing useful mineral oil distillates, particularly lubricating oils, by distilling certain oil materials under very high vacuum, that is to say, at a very low absolute pressure and under non-oxidizing conditions. The three counts in issue follow:

1. The process of producing useful mineral oil distillates which comprises distilling, under an absolute pressure not exceeding 25 millimeters mercury, mineral oil material containing substantially no constituents as volatile as gasoline.

2. In the manufacture of lubricating oils, the process which comprises distilling a lubricant-containing mineral oil material at an absolute pressure not substantially exceeding 15 mm. of mercury and under non-oxidizing conditions.

3. In the manufacture of lubricating oils, the process which comprises distilling a lubricant-containing mineral oil material at an absolute pressure not substantially exceeding 10 mm. of mercury and under non-oxidizing conditions.

The junior party Schulze filed his application on on March 18, 1922, which matured into Patent No. 1,448,709 on March 13, 1923.

The senior party, St. John and Gray, filed a joint application on April 21, 1919.

St. John and Gray took no testimony and are therefore restricted to their filing date (April 21, 1919.)

In October, 1924, a year and a half after Schulze had obtained his patent and two years after the Schulze process had gone into commercial use on a large scale, St. John and Gray, whose application was still pending in the Patent Office, claimed the invention in the issues, and an interference was instituted which involved the three counts above quoted and which were taken from the Schulze patent.

There seems to be no controversy here, as far as the issue is presented to us, but that both parties, after St. John and Gray had filed an amended application copying numerous claims of the Schulze patent, claimed, in their applications, the same invention as described in the issues of the counts. While the issue that St. John and Gray could not make the counts had been contested before the Primary Examiner and the Law Examiner, as well as before the Board of Appeals, the Examiner of Interferences and the Board of Appeals found it unnecessary to go into this phase of the matter inasmuch as Schulze was found by the board to be the prior inventor.

The evidence is voluminous. The record shows that Schulze is a petroleum technologist and had been connected with practical oil refining since 1910. Soon after the United States entered the World War, he resigned to go into military service as an enlisted man. A few months after enlisting in the Army, he was assigned to work at the Bureau of Standards under Winslow H. Herschel, who was in charge of the oil section of automotive power division where his work consisted of analytical examination of mineral oils, together with research work for the lubricating division of the Aircraft Production Board of the United States Army.

In August, 1918, Herschel assigned him to the line of work which eventually led to the invention here at issue. One Van Klooster in the bureau was at the time running some vacuum distillations in an effort to get some high grade lubricating oil fractions for use by Bingham in standardizing a viscosimeter. On August 8, 1918, Van Klooster resigned his position at the bureau. Herschel assigned Schulze to take up Van Klooster's work, since the oil fractions so far obtained were wholly unsatisfactory.

Schulze inspected the apparatus which Van Klooster had been using as well as the lubricating oil distillates which had been obtained. He found the oils to be cloudy and unstable and containing cracked products, and determined that it would not be possible by the methods then used to obtain the character of oil desired.

He was familiar with the so-called vacuum process of distillation of oils as was then practiced and employed in refining work, which process was carried on by never getting below 100 millimeters of mercury as a minimum and in laboratory distillations never getting below 40 to 50 millimeters. He believed that success could be obtained by distillations at a lower absolute pressure than had previously been employed and then had in mind employing an absolute pressure of 25 millimeters or less.

With the assistance of a glass blower in the Bureau of Standards, Schulze set up a small glass distilling apparatus, the joints of which were sealed with care in order to exclude the air. The apparatus was designed to operate with or without steam. It is described in the record as a—

glass distilling flask of 1-liter capacity connected to a Liebig condenser, and two separatory funnels one above the other to provide a two-chamber receiver for condensate coming from the condenser.

The same was set up and ready for operation by September 19, 1918, as is shown by the sketch of the apparatus in the record, known as Exhibit 1.

During the remainder of the year 1918, Schulze conducted numerous distillations with this appara-

tus at pressures below 25 millimeters absolute. Notes were kept showing the results under different pressures. Various types of materials were worked upon. Excellent lubricating distillates were obtained by this process as the result of numerous attempts.

All of his work during his 1918 service at the Bureau of Standards is corroborated fully by other competent witnesses, some of whom were employed in the Bureau of Standards and some of whom were not.

In December, 1918, Schulze was mustered out of the service, which severed his relation with the Bureau of Standards. During the first part of January, 1919, after passing the necessary Civil Service examination, Schulze again was connected with the Bureau of Standards where he worked under one Stratford. Stratford insisted upon his efforts being employed toward the production of oil by a distillation method at 40 to 50 millimeters and that he use a distilling apparatus which had been designed by Stratford and which was of metal. The result was not satisfactory. Stratford soon left the bureau, and by May, 1919, Schulze, with the assistance of one Reynolds, succeeded in getting the apparatus in such shape that he could run distillates at from 14 to 20 millimeters, and by June, the apparatus had been revamped to a point where he could operate consistently at 5 to 6 millimeters absolute, with the result that the desired oil was produced.

On about April 1, 1920, in the Bureau of Standards, Exhibit 6 was constructed, and many tests were made on many different kinds of materials with the result that oil of high grade was produced at pressures varying from 5 to 6 millimeters absolute to as low as 1.5 to 2 millimeters absolute. This apparatus was made of metal and so tightened as to exclude the air and was of 2 quart capacity.

From the latter part of 1918 Schulze had endeavored to interest numerous persons in commercially producing lubricating oil by his method. It is conceded that those familiar with the art at that time in the commercial production of lubricating oil had no faith or confidence in producing the same by the Schulze method. The vacuum method was known to the art but under pressures of from 100 to 200 millimeters absolute which did not give satisfactory results. The record contains long and detailed statements of his efforts to interest others in distilling oil on a large scale by his method. It is conceded that he, the appellee, was not financially able to install a plant which was large enough to produce oil on a large commercial basis and did not attempt to do so. The Bureau of Standards refused to permit the construction of a still of 50 barrel capacity since it did not require that kind of still in order to illustrate the operation of his process or in order to obtain the oil which was needed for the purposes above stated.

In 1920, the Bureau of Standards sent Schulze as a representative or delegate to the Independent Oil Men's Association at Denver where he explained his process and produced samples of oil made thereby.

In February, 1921, he secured help in the installation of his process on a commercial scale, and, at Burnham, Ill., began supervising the erection of a unit of 50 barrels capacity. It was put into commercial operation September 30, 1921, and proved to be a complete success and cost about $30,000.00. The plant was soon enlarged. New units of large capacity were built there and elsewhere. A large number of refining companies of large production have taken licenses under the Schulze plan, and the production of lubricating oils by this process, in this country and other countries, has now grown to be very large.

The exact method used by Schulze in 1918 was later exclusively adopted by the bureau for the distillation of oils.

The Examiner of Interferences held that the production of oil by the first two sets of apparatus closely approached reduction to practice, but that since it was clear that appellee did reduce to practice in 1920 and was diligent, he should be awarded priority, regardless of whether his 1918 work was or was not a reduction to practice.

The Board of Appeals held that appellee's work in 1918 was a reduction to practice and also held that from the time of the 1918 operation until a commercial plant was built and the application for a patent filed, that Schulze was diligent in every respect.

In this court it is urged by appellant that Schulze's work and accomplishments up to the installation of the commercial plant in 1920 did not amount to reduction to practice for the reason that it was not demonstrated that the process could be successful in producing oil on a commercial scale and that the record did not show a state of facts warranting the conclusion that Schulze was diligent from or immediately prior to the time appellant entered the field until his actual reduction to practice which the appellant concedes is the installation of the commercial plant.

We agree with the decision of the Board of Appeals in each of its findings, but since we conclude that Schulze reduced to practice in 1918, it is not necessary to discuss in detail the subject of his diligence. We agree with the statement of the Board of Appeals as follows:

> • • • There appears to be no question but that Schulze knew definitely what he was attempting to do and that when he did it there was no difficulty in reproducing the operation and in obtaining the desired oils. This is true both for the glass still and the iron still. Appellant contends that while he was successful with the small stills unexpected difficulties might have arisen with a larger commercial plant and that without such plant there was no actual reduction to practice. Some instances are cited of difficulties that might have arisen with the different conditions in the larger plant.
>
> We are convinced that the operations both with the one liter and the two liter stills were actual reductions to practice. The fact that difficulties might arise with the large commercial apparatus is not believed to be material. We are concerned with a method of producing oil and not with some particular apparatus for doing so. The method as carried out at the bureau was an absolute success for the purpose intended, that is, producing an oil for use in a viscosimeter and there is no question but that the oil produced was highly successful for lubricating purposes and the method carried out was an improvement over certain existing methods. Appellant has contended that Schulze was an analyst and that his work was merely analysis. The fact that he was employed as an analyst is not material as the production of oil in the manner described was purely a manufacturing operation.

[1] The counts of the interference call for a process of producing useful mineral oil by a certain process of distillation. Schulze successfully produced by his process the useful mineral oil which he sought to produce and he clearly taught the art of its production. It was not necessary for him in order to be entitled to priority of the counts involved to install a commercial plant and prove by such installation that his process would be a commercial success. The Examiner of Interferences, referring to one of the later operations by appellee on a later device aptly said:

> There was no apparent reason for supposing that equally satisfactory results could not be obtained on a larger scale and it can therefore be said that the success of the process had been adequately demonstrated.

This suggestion, we think, applies with equal force to the work of appellee in 1918.

The contention of appellant here was substantially the contention of appellant in *Harrison* v. *Cadwell*, 17 C. C. P. A. (Patents) 1024, 5 Pat. Quarterly 91, 39 F.(2d) 704, 398 O. G. 177. There it was contended that the laboratory vulcanization of rubber and rubber articles was not a reduction to practice of the process of vulcanization called for by the counts since it was not demonstrated that it would be successful commercially. Following the decision of the Supreme Court of the United States in *Corona Cord Tire Co.* v. *Dovan Chemical Co.* 276 U. S. 358, 370 O. G. 1011, this court said:

> • • • These tests were sufficient to prove conclusively the character of vulcanization attained. If laboratory test and laboratory costruction of inventions were to be rejected in cases of this kind, it would seem to us that it would lead to very grave consequences for future inventions. It may be that there are in the field of invention certain articles in which laboratory tests and laboratory manufacturing would hardly be regarded as a reduction to practice, but we do not think vulcanization of rubber can be placed in that class.
>
> • • • True enough, those who contemplate great expenditures in manufacturing establishments and equipment of times apply many different tests in order to determine the commercial expediency of wholesale manufacture, but because this is a practice among careful and responsible manufacturers, it does not follow that such a practice is the measure by which the patent tribunals should determine the question of reduction to practice in a case like that at bar.

See also *Wietzel* v. *Lacy*, 17 C. C. P. A. (Patents) 943, 39 F.(2d) 672, 5 Pat. Quarterly 86, 396 O. G. 523.

Appellants argue with great earnestness that there are technical difficulties with Schulze's "experimental work" in 1918 which "failed to show would not be prohibitive in a commercial apparatus" and call attention to the fact that in high vacuum distillation of petroleum there is a phenomenon known in the art as "puking" or "spewing", which in the language of the layman has reference to a large mass of froth and foam which may form in the still and completely fill the vapor space and thus cause unvaporized oil to be carried over into the distillates.

Schulze's record of his 1918 apparatus, Exhibit 1, states "Oil started foaming, heated the side and neck of flask to prevent 'puking'." It is urged that overcoming this difficulty in this manner was not suggesting the means of overcoming it in a commercial apparatus. The appellee made no answer to this argument in his brief and the Examiner of Interferences and the Board of Appeals do not mention it in their decisions.

In the addition to the record which is submitted on stipulation, the Examiner in considering a claim in the St. John and Gray application said:

> Claims 6 to 9 are rejected for lack of invention; it is old to superheat the vapors in a distillation process to prevent spewing, as see—

and here cites two references.

We do not think the "spewing" question is in any way determinative of the issues here. The method of controlling "spewing" was probably old in the art but if new, Schulze explained how he overcame the difficulty. He has asked no patent on his method or apparatus for overcoming it. His method calls for a process of producing oil which he described in detail and reduced to practice by producing oil in the manner called for by the claims.

[2] We, therefore, conclude that in order for Schulze to have reduced to practice his prior conception of the process of producing lubricating oil, it was not necessary to produce it on a commercial scale and that in his production of the same in 1918, he had demonstrated that his process would produce such oil when larger stills more suited to the needs of commerce were used. Certainly there was nothing connected with his operations in 1918 to leave him or anyone as familiar as himself with the subject matter in doubt as to the possibility of producing the same under commercial conditions.

The decision of the Board of Appeals is affirmed.

Costs of additional record to be taxed against appellant.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE RUTLEDGE

No. 2,630. Decided March 25, 1931

1. DESIGNS—ANTICIPATION—MECHANICAL PATENTS MAY BE.

   "The references are all for mechanical or product patents, but it is well settled, we think, that a patent upon an article may constitute anticipation of a design. *Bradley* v. *Eccles*, 126 Fed. 945; *Roberts* v. *Bennett*, 136 Fed. 193."

2. SAME—PATENTABILITY—STOCKING.

   Designs for a stocking *Held* unpatentable over the prior art.

APPEAL from the Patent Office. Affirmed.

Messrs. Paul, Paul & Moore and *Mr. J. T. Newton* for Rutledge.

Mr. T. A. Hostetler for the Commissioner of Patents.

GARRETT, *J.*:

Appellant applied for a patent for a design for stockings. The application was denied by the Examiner upon three grounds:

First, that the design, or shape, of the stocking was believed to have a mechanical function as its chief purpose, viz, to make the ankle seem slender; second, it was thought that the stockings when on display on the counter are folded in such a manner as that the ordinary observer would not see the full design and hence there would be lacking "the effect upon the eye", an essential of patentability under design patent law; and, third, upon prior art

as shown in patents to Lawson, 1,467,549, Bosworth, 1,476,042, and Landenberger, 1,111,658.

The Board of Appeals disagreed with the Examiner as to the existence or applicability of the two first grounds, but affirmed his rejection upon the references cited, and applicant has appealed to this court.

The design is thus described in the opinion of the Board of Appeals:

> The design is formed by distinctive texture or color comprising an upwardly extending straight sided band or stripe at the middle of the back to just above the height of the ankle where it tapers to a point by straight inclined sides. A row of dots somewhat simulating stitching extends upwardly on each side of the back midseam.

Lawson shows a stripe, or portion, extending from near the top of the heel part of a stocking upwardly in an inclined line to a given point and thence vertically to the top of the stocking, but states that it may be stopped at a designated point corresponding closely to the point where appellant fixes the apex of his pointed design. The general formation of appellant's "heel and high splice" is substantially the same as that of the Lawson patent, excepting the pointed effect. Bosworth shows a pointed effect differing somewhat from that of appellant; Landenberger in one or more of his figures shows an even nearer approach to appellant's pointed effect.

[1] The references are all for mechanical or product patents, but it is well settled, we think, that a patent upon an article may constitute anticipation of a design. *Bradley* v. *Eccles*, 126 Fed. 945; *Roberts* v. *Bennett*, 136 Fed. 193.

[2] It seems to us that the variance between appellant's figure and those shown in the art cited is so slight as that patentable invention cannot be held to inhere in the former. *Mygatt et al.* v. *Schaffer*, 218 Fed. 827, 835. *Atlantic Works* v. *Brady*, 107 U. S. 192, 200, 23 O. G. 1330.

In the brief for appellant our attention is directed to a design in a patent, which, however, is not in the record, that has been granted another since this case was appealed, which is alleged closely to simulate the design of appellant, and it is argued that the granting of this patent is entitled to consideration in determining the patentability of appellant's production, in that, at least, it indicates a lack of concurrence upon the subject matter by the Patent Office tribunals, and tends to create a doubt of which appellant seeks the benefit under the familiar rule that doubt will be resolved in an applicant's favor.

It is sufficient to say that even if the patent were regularly a part of the record and we had the right to consider it we should not feel at liberty to turn our decision upon it. *In re Fischer*, 18 C. C. P. A. (Patents) ——, —— F.(2d) ——.

Commercial success is alleged. This is a factor to be considered in cases of doubt, but, as was said by us in *In re Kirke*, 17 C. C. P. A. (Patents) 1121, 1125, 40 F.(2d) 765, 398 O. G. 353, and as has been said, in substance, by this and other courts in numerous cases:

> Certainly it [commercial success] ought not to be adverted to where it is obvious that the claimant has disclosed no invention.

The case of *Franc-Strohmenger & Cowan, Inc.*, v. *Arthur Siegman, Inc.*, 25 F.(2d) 108, is also in point on the question of commercial success.

We feel that there was no error on the part of the Board in rejecting the claims on the prior art and its decision is, therefore, affirmed.

Affirmed.

Patent Suits

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922.]

971,838, W. M. Fulton, Process of making tubular metal walls, D. C. Mass., Doc. E 2852, *The Fulton Co.* v. *Clifford Mfg. Co.* Dismissed without prejudice Apr. 2, 1928.

1,018,502, Just and Hanaman, Incandescent body for electric lamps; 1,180,159, I. Langmuir, Incandescent electric lamp, appeal filed June 26, 1929, C. C. A., 3d Cir., Doc. 4182, *Santa Fe Electric Co., Inc., et al.* v. *General Electric Co.*

1,025,822, W. H. Millspaugh, Paper making machine; 1,163,251, same, Paper making, D. C. Mass., Doc. E 3079, *The Guardian Trust Co. et al.* v. *Crocker Burbank & Co., Inc.* Dismissed without prejudice Feb. 3, 1930.

1,029,042, W. E. Beede, Electrical measuring instrument, D. C. Mass., Doc. E 2498, *The Sterling Mfg. Co.* v. *Lundquist Tool & Mfg. Co.* Dismissed without prejudice Jan. 2, 1930.

1,089,405, W. S. Ferguson, Reinforced concrete dock or pier, D. C., E. D. Mich., S. Div., Doc. 4889, *The Dock & Terminal Engineering Co. et al.* v. *Nicholson Universal Steamship Co.* Dismissed Apr. 23, 1931.

1,129,849, H. D. Colman, Method of treating warp threads preparatory for weaving, D. C. Mass., Doc. E 2692, *Barber-Colman Co.* v. *J. Withnell.* Dismissed without prejudice Jan. 2, 1930.

1,142,361, G. Ornstein, Process of antisepticizing water, D. C., W. D. N. Y., Doc. E 1309–G, *Electro Bleaching Gas Co. et al.* v. *Y. M. C. A.* Discontinued Apr. 17, 1931.

1,163,251. (See 1,025,822.) 1,180,159. (See 1,018,502.)

1,233,107, R. M. Myers, Road building machine; 1,470,157, J. L. Fike, Stone spreader; 1,581,784, M. M. Butler, Device for spreading asphaltic concrete; 1,605,094, same, Rock-spreading machine, filed Apr. 14, 1931, D. C., N. D. Ohio, E. Div., Doc. E 3733, *The Burch Corp.* v. *Galion Iron Works & Mfg. Co.*

1,247,335, H. W. Russ, Wood heel turning machine, D. C. Mass., Doc. E 2838, *United Shoe Machinery Corp.* v. *Globe Leather Co. et al.* Decree for plaintiff May 24, 1929.

1,257,498. (See Re. 14,651.) 1,259,917. (See 1,718,177.)

1,287,934, Farnsworth and Allen, Welded pipe joint, appeal filed Apr. 20, 1931, C. C. A., 10th Cir., Doc. 473, *Patent Specialties Corp.* v. *H. C. Price (Welding Engineering Co.) et al.*

1,302,733. (See Re. 14,651.)

1,320,354, J. H. Adams, Oil converting apparatus; 1,320,727, same, Apparatus for the conversion of liquids, fluids and oils; 1,327,263, same, Process for the conversion of liquids, fluids and oils, D. C., S. D. Tex. (Houston), Doc. E 307, *The Texas Co.* v. *Houston Oil Co. of Texas.* Dismissed Apr. 9, 1931.

1,320,727. (See 1,320,354.) 1,327,263. (See 1,320,354.)

1,326,520. (See Re. 14,651.)

1,337,333, H. S. Simpson, Foundry mixer; 1,508,031, same, Foundry sand mixer; 1,615,525, same, Automatic device for operating and closing discharge doors on mixers; 1,771,398, A. C. Christensen, Door operating mechanism for mixing machines, filed Apr. 21, 1931, D. C., S. D. Ohio, W. Div., Doc. 296, *National Engineering Co. et al.* v. *The International Clay Machinery Co. et al.*

1,350,677, 1,357,360, H. H. Spoenenburg, Rail anchor; 1,511,546, H. G. Warr, same, D. C. Mass., Doc. E 3084, *The P. & M. Co.* v. *Continental Rwy. Supply Corp. et al.* Dismissed Oct. 16, 1929.

1,356,314, L. G. Sabbag, Permutation lock, D. C. Mass., Doc. E 2721, *H. Siskind* v. *Arcade Mfg. Co. et al.* Dismissed without prejudice Jan. 2, 1930.

1,357,360. (See 1,350,677.)

1,365,896, T. I. Duffy, Disk wheel for vehicles, D. C., E. D. Mich., S. Div., Doc. 2444, *G. H. Forsyth* v. *Motor Wheel Corp.* Dismissed Apr. 20, 1931.

1,379,224. (See 1,630,812.) 1,381,728. (See 1,504,697.)

1,395,893, C. E. Beck, Steering wheel and method of forming same, C. C. A., 6th Cir., Doc. 5497, *The Beck-Frost Corp.* v. *Ford Motor Co.* Claims 14 and 18 held not infringed, claims 20 to 25, inclusive, held invalid Nov. 13, 1930.

1,406,335, G. Boulton, Lining trimming machine; 1,578,375, E. Sehl, Cutting machine, D. C. Mass., Doc. E 2958, *United Shoe Machinery Corp.* v. *N. W. Mathey.* Dismissed Dec. 16, 1930.

1,434,356, H. T. Doulett, Eyeleting machine, D. C. Mass., Doc. E 2803, *United Shoe Machinery Corp.* v. *L. Muther et al.* Consent decree for plaintiff against Peerless Machinery Co.

1,458,168, G. J. Day, Oven thermometer, D. C., W. D. N. Y., Doc. 125, *G. J. Day (The Day Indicator Co.)* v. *Brown & Bigelow.* Dismissed (notice Apr. 21, 1931).

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,632,767, E. J. Bloom, Chassis lubrication, decided May 28, 1931, claim 2.

Pat. 1,684,732, William Harrison, Manufacture of carbohydrate derivatives, decided June 2, 1931, claim 3.

Pat. 1,728,223, A. W. Winship, Wardrobe hatbox, decided Moy 14, 1931, count 5.

Pat. 1,758,894, A. H. Schaffert, Window structure, decided June 1, 1931, claims 1, 2, 3, and 7.

Disclaimers

Re. No. 17,413.—*Arthur T. Kathner,* Mount Lebanon, Pa. ANNEALING AND HEAT-TREATING FURNACE. Patent dated August 20, 1929. Disclaimer filed June 5, 1931, by the patentee, exclusive licensee, *The Duraloy Company,* approving.

Hereby does disclaim from the scope of claims 15 and 17 of the said Reissue Letters Patent No. 17,413, any and all furnaces except metal sheet treating furnaces in which the furnace causes a gradual and prolonged cooling of the metal sheet in the furnace.

Des. 73,995.—*Thomas W. Behan,* Binghamton, N. Y. A COMBINED CASING AND FRAME FOR A WASHING MACHINE. Patent dated December 6, 1927. Disclaimer filed June 6, 1931, by the assignee, *Nineteen Hundred Corporation.*

Hereby enters this disclaimer to the claim in said Letters Patent.

1,725,398.—*Arthur T. Kathner,* New Cumberland, W. Va. METAL-TREATING FURNACE. Patent dated August 20, 1929. Disclaimer filed June 5, 1931, by the patentee, exclusive licensee, *The Duraloy Company,* approving.

Hereby does disclaim from the scope of claim 8 of the said Patent No. 1,725,398, any and all furnaces except sheet metal treating furnaces in which heat insulating material is employed in a portion of the cooling zone adjacent to the heating zone to retard the dissipation of heat from the sheet metal and gases in such portion of the cooling zone.

Your petitioner further does hereby disclaim from the scope of claim 4 of the said Patent No. 1,725,398 any and all processes of heat treating metal except sheet metal treating processes in which the control of the time, rate, and uniformity of cooling of the metal in the cooling zone is accomplished in part by slowly dissipating heat from the entering end of the cooling zone to the discharging end thereof while maintaining narrow temperature variations in any given transverse section of the cooling zone.

Your petitioner hereby further does disclaim from the scope of claims 5 and 6 of the said Patent No. 1,725,398 any and all methods of heat treating metal except sheet metal treating methods in which the time, rate and uniformity of cooling of the sheet metal is controlled in part by retarding the dissipation of heat from the sheet metal for a portion of the length of the cooling zone adjacent to the heating zone.

Your petitioner further hereby does disclaim from the scope of claim 7 of the said Patent No. 1,725,398 any and all furnaces except sheet metal treating furnaces having conveyors which space the sheet metal apart from the walls of the cooling chamber and employing heat insulating material below the sheet metal and/or in a wall or walls of a portion of the cooling chamber to retard dissipation of heat from gases in the portion of the cooling chamber adjacent to the heating chamber.

Your petitioner further hereby does disclaim from the scope of claim 9 of the said Patent No. 1,725,398 any and all furnaces for heat treating metal except sheet metal treating furnaces which have a restricted passage therein and are adapted to cause a gradual and prolonged cooling of the metal by heated gases passing through the restricted passage, about the metal and out the exit end of the furnace.

1,750,417.—*Leslie N. McClellan, Phillip A. Kinzie, John L. Savage,* and *Charles M. Day,* Denver, Colo. PRESSURE-ACTUATED CONTROL VALVE. Patent dated March 11, 1930. Disclaimer filed May 25, 1931, by the assignee, *Universal Hydraulic Corporation.*

Hereby enters this disclaimer to the subject matter comprising claim 5, which claim 5 reads as follows:

"5. A fluid receiving and controlling valve, including a valve body arranged to be connected to a fluid conveying conduit, said valve being arranged to receive flowing fluid at one end and to control its discharge from the opposite end, a valve seat arranged in said body, a movable plunger adapted for cooperation with said seat, a fixed valve element within said body and having a conical head at one end and adapted to telescopically receive said movable plunger at its opposite end, said valve element providing an annular waterway within said body, a piston movable with said plunger, a fixed tubular member within said valve element, a fixed diaphragm carried by the end of said tubular member and arranged to fit within said plunger, said valve member, plunger, piston and diaphragm providing three tandem pressure chambers adapted to receive pressure fluid from said conduit, and means for controlling the relative pressures in all of said chambers."

1,787,186.—*Jean A. H. Barkeij,* Los Angeles, Calif. INLET MANIFOLD FOR STRAIGHT-EIGHT INTERNAL-COMBUSTION ENGINES. Patent dated December 30, 1930. Disclaimer filed June 3, 1931, by the patentee.

Hereby enters this disclaimer to that part of the claim in said specification, and to the subject matter of each of the claims of said Letters Patent, except when said engine is combined with the crankpin arrangement as shown in Fig. 4, in which crankpins 1, 2, 3, 4 are in one plane and crankpins 5, 6, 7, 8 are in the other plane, perpendicular to said first plane. Or in other words all the claims are restricted to the scope of the sixth object. This disclaimer is made in view of the specification of Automotor Journal of February 29, 1908, pages 269–271, inclusive.

TRADE-MARKS

OFFICIAL GAZETTE, JUNE 23, 1931

[VOL. 407. No. 4]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for " under the ten-year proviso " are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

Raw or Partly-Prepared Materials

Ser. No. 299,855. PALMER LIME & CEMENT COMPANY, New York, N. Y. Filed May 2, 1930.

CHALLENGE

For Limestone.
Claims use since May 29, 1909.

Ser. No. 309,788. FRED RUEPING LEATHER CO., Fond Du Lac, Wis. Filed Jan. 9, 1931.

XL-TAN

No claim is made to the exclusive appropriation of the word "Tan" apart from the mark as shown.
For Leather.
Claims use since Dec. 18, 1930.

Ser. No. 314,136. AMERICAN HIDE AND LEATHER COMPANY, Boston, Mass. Filed May 4, 1931.

OUTING ELK

The word "Elk" is disclaimed apart from the mark as shown on the drawing.
For Side Leather.
Claims use since Mar. 9, 1930.

CLASS 2

Receptacles

Ser. No. 313,361. THE HOOVER COMPANY, North Canton, Ohio. Filed Apr. 16, 1931.

FILTAIRE

For Dust Filtering and Collecting Bags Formed of Fibrous Material for Suction Cleaners.
Claims use since Nov. 1, 1930.

CLASS 3

Baggage, Animal Equipments, Portfolios, and Pocketbooks

Ser. No. 310,729. MAJESTIC LEATHER GOODS CO., INC., New York, N. Y. Filed Feb. 4, 1931.

MAJESTIC-ROBE

The use of the word "Robe" is disclaimed apart from the mark as shown on the drawing.
For Travelling Bags, Luggage for Men and Women, Comprising Oxford Bags, Club Bags, Gladstone Bags, Railroad Bags, Pullman Bags, Kit Bags, Suit Cases, Satchels, Grips, Dressing Cases, Hat Boxes, and Hand Wardrobe Trunks.
Claims use since Dec. 1, 1930.

Ser. No. 313,658. GEMSCO, INC., New York, N. Y. Filed Apr. 22, 1931.

Sportsman

For Riding Equipment and Accessories—Namely, Spurs, Spur Chains and Spur Straps.
Claims use since March, 1929.

CLASS 4

Abrasive, Detergent, and Polishing Materials

Ser. No. 281,074. THE CARBORUNDUM COMPANY, Niagara Falls, N. Y. Filed Mar. 21, 1929.

The trade-mark consists of the color green applied to the steel center of the abrasive wheel, as indicated by the lining shown in the drawing. The representation of the abrasive wheel per se is disclaimed.
For Steel Center Abrasive Wheels.
Claims use since 1913.

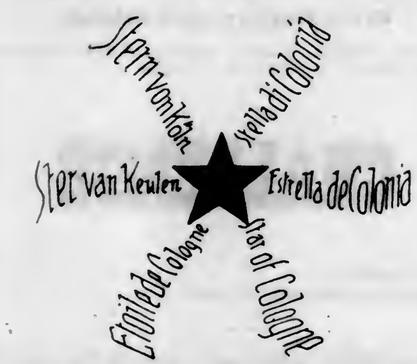
Ser. No. 308,828. THE HEWITT BROS. SOAP COMPANY, Dayton, Ohio. Filed Dec. 10, 1930.

EZY-DAY

For Soap in Granular Form.
Claims use since Sept. 10, 1930.

Ser. No. 309,434. T. M. E. JOHNSON, doing business as Johnson Company, Mulberry, Kans. Filed Dec. 29, 1930.

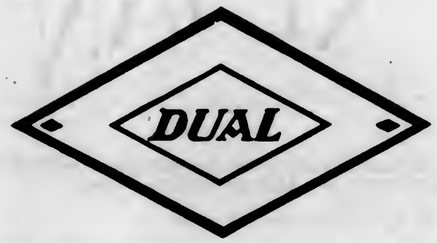
Win-a-Way



For Floor, Furniture, Woodwork, Automobile and Linoleum Polishes and Waterproofing Finish Renewers Comprising Polishes Having Water Repelling Ingredients for Automobiles and Painted or Varnished Surfaces.
Claims use since November, 1930.

Ser. No. 310,307. J. A. SEXAUER MFG. CO., INC., New York, N. Y. Filed Jan. 23, 1931.

Mule Kick



For Closet Bowl Cleaner and Porcelain Cleaner and Polish.
Claims use on closet bowl cleaner since Feb. 19, 1929; on porcelain cleaner and polish since May 6, 1929.

Ser. No. 311,018. PAUL PETER MÜLHENS, doing business as Eau de Cologne- & Parfümerie-Fabrik "Glockengasse No. 4711" Gegenüber der Pferdepost von Ferd Mülhens, Cologne, Germany. Filed Feb. 12, 1931.

For Soaps, including Toilet Soaps and Shaving Sticks.
Claims use since Mar. 7, 1891.

Ser. No. 311,784. THE ITECO COMPANY, Portland, Oreg. Filed Mar. 5, 1931.

For Denture Polish—Namely, a Polish for Artificial Plates and Teeth.
Claims use since Dec. 20, 1930.

Ser. No. 313,752. THE OMEGA CHEMICAL COMPANY, New York, N. Y. Filed Apr. 24, 1931.

Cadum

The lining is for shading only.
For Toilet Soap.
Claims use since 1913.

Ser. No. 313,798. REX PRODUCTS & MANUFACTURING COMPANY, Detroit, Mich. Filed Apr. 25, 1931.

TRIAD

For Soap Powders with Water Softening Properties.
Claims use since Apr. 3, 1931.

Ser. No. 313,801. RONUK, LIMITED, Portslade, England. Filed Apr. 25, 1931.

RONUK

For Boot Polish.
Claims use since January, 1896.

Ser. No. 314,157. THOMAS F. GAMAGE, doing business as De Gama Chemical Co., San Francisco, Calif. Filed May 4, 1931.

Milptopal

For Soap.
Claims use since Apr. 18, 1931.

CLASS 5

Adhesives

Ser. No. 313,689. WEBB PRODUCTS COMPANY, INC., San Bernardino, Calif. Filed Apr. 22, 1931.

For Household Glue, China and Glass Cement, Waterproof Cement, Fabric Special Cement, Leather and Shoe Cement, Plastic Filler, and Fabric Special Waterproof Cement, All of These Goods Being Adhesive Cements.
Claims use since Sept. 1, 1928.

Ser. No. 313,835. EASTMAN KODAK COMPANY, Rochester, N. Y. Filed Apr. 27, 1931. Under section 5b of the act of 1905 as amended in 1920.

Eastman

For Lantern Slide Binders and Mounting Tape Both in the Nature of Adhesive Tape and Adhesive Photographic Paste.
Claims use since 1910 on lantern slide binders, since 1912 on mounting tape, and since 1925 on photographic paste.

Ser. No. 313,967. PACIFIC BONE COAL & FERTILIZING CO., San Francisco, Calif. Filed Apr. 29, 1931.

LUSTRA GLUE

No claim is made to the word "Glue."
For Glue.
Claims use since Apr. 10, 1931.

CLASS 6

Chemicals, Medicines, and Pharmaceutical Preparations

Ser. No. 301,225. PIERRE ZIZINE, Paris, France. Filed May 24, 1930.

PEPTODIASE

For Liquid Preparation for Dyspepsia, Indigestion, and Gastro-Intestinal Troubles.
Claims use since Mar. 2, 1915.

Ser. No. 301,534. VIVINY PERFUMERS, INC., New Haven, Conn. Filed May 28, 1930.

For Astringents, Astringent Cerates, Bleach Creams, Beauty Creams, Cold Creams, Cleansing Creams, Obesity Creams, Refreshing Creams, Obesity Astringents, Dry Rouges, Liquid Rouges, Face Bleaches, Face Packs, Eyebrow and Eyelash Grower, Pomades, Face Powders, Talcum Powders, Sachets, Hair Salves, Hair Elixirs, Hair Tonics, Hair Oils, Shampoos, Hair Dyes, Bath Salts, Lip Sticks, Incease, Tooth Powders, Dentifrices, Tooth Pastes, Nail Powders, Nail Creams, Nail Bleaches, Foot Powders, Bay Rum, Perfumes, and Toilet Waters.
Claims use since May 24, 1930.

Ser. No. 303,077. JOHANN A. WÜLFING, Berlin, Germany. Filed July 2, 1930.

Complamin

For a Preparation for Internal Use in the Form of Tablets for Use in the Treatment of Influenza, Catarrh of the Upper Respiratory Tract, Neuralgia, Rheumatism, Gout, Dysmenorrhea, and Lumbago.

Claims use since July, 1929.

Ser. No. 304,664. LESTER H. MILES, Los Angeles, Calif. Filed Aug. 15, 1930.

AFTRSHAV CREAM

No claim is made to the words "Aftrshav Cream" apart from the mark shown. The portrait shown in the mark is fanciful, and no claim is made thereto apart from the mark shown. The lining on the drawing is for shading only.

For Face Creams.

Claims use since Aug. 5, 1930.

Ser. No. 306,649. HEADLEY EMULSIFIED PRODUCTS COMPANY, Philadelphia, Pa. Filed Oct. 11, 1930.

In the drawing the larger rectangular field is of black and is shown to accord with the convention prescribed by the Patent Office for indicating that color and the smaller rectangular field of scroll shape is of orange color, as is indicated by the convention prescribed by the Patent Office for indicating that color. No claim is made to the name Headley apart from the rest of the mark.

For Asphalt Emulsions for Waterproofing, Dampproofing, General Protective Coating, Protection Against Corrosion by Gases, Acids, Alkalies, Lime, Salt Water, and Soils.

Claims use since Nov. 1, 1929.

Ser. No. 307,490. HERCULES GLUE COMPANY, doing business as Colloidal Products Corporation, San Francisco, Calif. Filed Nov. 3, 1930.

For Chemical Spreader for Insecticides and the Like.

Claims use since February, 1929.

Ser. No. 309,171. PHILIP MUELLER, Minneapolis, Minn. Filed Dec. 19, 1930.

VIGRO

For Tonic for Eliminating Impurities in the Blood.

Claims use since Sept. 5, 1930.

Ser. No. 309,302. E. BILHUBER, INC., Jersey City, N. J. Filed Dec. 24, 1930.

Phyllicin

For Medicinal Preparation for the Treatment of the Cardiovascular System and the Kidneys.

Claims use since Dec. 10, 1930.

Ser. No. 309,921. CLOROX CHEMICAL CO., Oakland, Calif. Filed Jan. 14, 1931.

The trade-mark comprises the indicia arranged upon a bottle for containing the goods, as illustrated in the drawing. No claim is made for the representation of the bottle per se. The lining on the drawing is for shading only.

For Bleaching, Cleansing, Antiseptic, and Germicidal Compounds.

Claims use since Sept. 13, 1930.

Ser. No. 310,460. THOMAS A. KRIDOS, Brooklyn, N. Y. Filed Jan. 27, 1931.

THE KRIDOS

No claim is made for the words "The Kridos" apart from the mark shown in the drawing.

For Preparations for Use in the Treatment of the Hair and Scalp.

Claims use since November, 1918.

Ser. No. 311,102. NÄHRMITTELFABRIK JULIUS PENNER A.-G., Berlin-Schoneberg, Germany. Filed Feb. 16, 1931.

NIPASOL

For Medicated Bandages and Preservatives for Foodstuffs Against Decomposition or Change Caused by Micro-Organisms.

Claims use since Nov. 18, 1930.

Ser. No. 311,103. NÄHRMITTELFABRIK JULIUS PENNER A.-G., Berlin-Schoneberg, Germany. Filed Feb. 16, 1931.

NIPAGIN

For Medicated Plasters, Medicated Bandages, Animal and Vegetable Exterminating Preparations, Disinfectants, Chemical Products for Antiseptic and Preservative Uses, Fire Extinguisher Preparations, Antiseptic Dental Paste, and Preservatives for Tooth Fillings.

Claims use since Apr. 29, 1929.

Ser. No. 311,125. ALBERT BERNARD, doing business as A. F. Johns Co., New York, N. Y. Filed Feb. 17, 1931.

For Hair Tonics.

Claims use since Jan. 11, 1931.

Ser. No. 311,679. GABILLA, INCORPORATED, New York, N. Y. Filed Mar. 3, 1931.

GABILLA

For Perfume, Toilet Water, Face Powder, Liquid Powder, Sachet Powder, Dusting Powder, Compacts, Rouges, Lip Sticks, Bath Salts, Brilliantine, Eyebrow Pencils, Eye Shadow, Mascara, Toilet Cream, Face Cream, Liquid Cream, Lotions for the Hair, and Tonics for the Hair.

Claims use since 1910.

Ser. No. 311,718. THE CHIC-TONE COMPANY, INC., Angola, Ind. Filed Mar. 4, 1931.

Applicant is the owner of registered Trade-Mark No. 250,039. No claim is made to the word "Inhalant" apart from the mark shown in the drawing.

For Medicine for General Colds, Roup, Pneumonia, Infections Bronchitis, and Respiratory Diseases in Poultry.

Claims use since August, 1928.

Ser. No. 311,898. W. A. SUNDAY, Jr., doing business as The Sheba Company, Los Angeles, Calif. Filed Mar. 7, 1931.

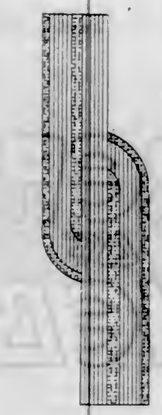
CREAM OF SHEBA

No claim is made to the word "Cream" apart from the mark as shown in the drawing.

For Bleach Astringent Cream.

Claims use since Dec. 16, 1930.

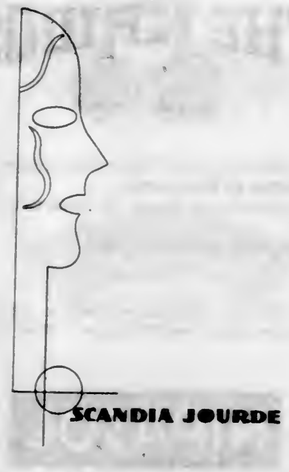
Ser. No. 312,141. DY-O-LA DYE CO., Burlington, Vt. Filed Mar. 14, 1931.



The exclusive use of the descriptive word "Tints" being disclaimed apart from the mark shown.
For Tints.
Claims use since Oct. 1, 1930.

Ser. No. 312,760. KELCO COMPANY, San Diego, Calif. Filed Mar. 31, 1931.

VITADINE



For Kelp and Kelp Preparations for Use in the Treatment of Goiter and Other Deficiency Diseases and Ailments.
Claims use since June 1, 1930.

Ser. No. 313,052. THE NORWICH PHARMACAL COMPANY, Norwich, N. Y. Filed Apr. 7, 1931.

The lining on the drawing denotes the colors red and yellow.
For Mineral Oil Used as an Internal Lubricant and for Constipation.
Claims use since Oct. 20, 1930.

Ser. No. 313,208. SCANDIA-JOURDE CORP., New York, N. Y. Filed Apr. 10, 1931.

For Cold Creams, Skin Lotions, Astringents, Lotion for the Stimulation of the Circulation, Tonic for the Skin Around the Eyes, Foundation Lotion for the Skin, and Cream Used to Correct a Shiny Skin.
Claims use since April, 1930.

Ser. No. 313,688. J. E. WEBB, doing business as K. D. Chemical Co., St. Petersburg, Fla., and Philadelphia, Pa. Filed Apr. 22, 1931.

PYRO-MAGNA

For Dental Cream.
Claims use since Sept. 1, 1930.

Ser. No. 313,691. JOHN WILTON BARLOW, New York, N. Y. Filed Apr. 22, 1931.

CON

For Medicinal Treatment for Consumption.
Claims use since Jan. 1, 1931.

Ser. No. 313,753. RADIATOR SPECIALTY COMPANY, Charlotte, N. C. Filed Apr. 24, 1931.

KWIXEAL

For Composition for Stopping Leaks in All Hot Water Circulating Systems Such as Automobile Radiators, Boilers, Steam and Hot Water Radiators, Cylinder Blocks, and Pumps.
Claims use since Mar. 7, 1931.

Ser. No. 313,896. WM. A. WAHL, St. Louis, Mo. Filed Apr. 27, 1931.

JUSO

For Medicines Used as a Tonic and Blood Purifier and to Regulate the Liver and Bowels, Used as a Medicine in Gall Bladder Trouble, Diabetes, Catarrh, Headache, Indigestion, and Disordered Kidneys.
Claims use since Jan. 1, 1930.

Ser. No. 313,974. PITMAN-MOORE COMPANY, Indianapolis, Ind. Filed Apr. 29, 1931.

T. A. C.

For Medicine for Treating Round Worms in Fowls.
Claims use since 1924.

Ser. No. 314,037. BOND ELECTRIC CORPORATION, Jersey City, N. J. Filed May 1, 1931.

FLOZON

For Anti-Freeze Products.
Claims use since Apr. 1, 1931.

Ser. No. 314,053. FEROLEUM PRODUCTS, INC., Irvington, N. J. Filed May 1, 1931.

FEROLEUM

For Liquid Coating Material to be Used by Itself or as an Ingredient for Paints and the Like for Preventing Rust and Corrosion of Metals and Rot or Decay of Wood, for Preserving Metallic and Wooden Structures and Articles, and for Waterproofing Textile Fabrics.
Claims use since February, 1930.

Ser. No. 314,076. RYAN, SCULLY & COMPANY, Philadelphia, Pa. Filed May 1, 1931.

CARBAIR

For Granular Mixtures for the Reduction of Oxygen in Heat Treating Processes.
Claims use since Apr. 20, 1931.

Ser. No. 314,139. BREWER & COMPANY, INC., Worcester, Mass. Filed May 4, 1931.

COPRAL

For General Tonic.
Claims use since Dec. 9, 1928.

Ser. No. 314,214. SCHERING & GLATZ, INC., Bloomfield, N. J. Filed May 5, 1931.

NEOTROPIN

For Urinary Antiseptic.
Claims use since Apr. 10, 1931.

Ser. No. 314,216. BENJAMIN D. SMITH, doing business as American Manufacturing Company, Utica, N. Y. Filed May 5, 1931.

Kro-Nox

For Preparation for Preventing Birds and Animals from Destroying Corn.
Claims use since Mar. 22, 1930.

Ser. No. 314,221. ABBOTT LABORATORIES, North Chicago, Ill. Filed May 6, 1931.

COPRON

For Liver Extract Indicated in Hemoglobin Deficiencies.
Claims use since Mar. 20, 1931.

Ser. No. 314,222. ALKA-SEPTOL, INCORPORATED, Beacon, N. Y. Filed May 6, 1931.

For Antiseptic Compound.
Claims use since Apr. 14, 1931.

Ser. No. 314,228. GEORGE BOARDMAN, doing business as Vermel Company, Sioux Falls, S. Dak. Filed May 6, 1931.

Vermel

For Insecticide.
Claims use since Apr. 15, 1931.

Ser. No. 314,233. DEKTOL CORPORATION, Kansas City, Mo. Filed May 6, 1931.

Dektol

For Antiseptic Liquid Mouth Wash for the Mouth, Teeth, and Gums.
Claims use since Jan. 1, 1931.

Ser. No. 314,284. THE H. B. CO., Jersey City, N. J. Filed May 7, 1931.

H-B

For Cough Drops.
Claims use since Feb. 23, 1917.

Ser. No. 314,294. ROBERT J. PIERCE, INC., New York, N. Y. Filed May 7, 1931.

Pierlac

For Vaginal Jelly.
Claims use since Apr. 25, 1930.

Ser. No. 314,346. SINASPRA CORPORATION, Columbus, Ohio. Filed May 8, 1931.

Sinaspra

For Nasal Spray.
Claims use since May 15, 1930.

Ser. No. 314,370. KALINE WATER COMPANY, INC., Wilmington, Del., and Washington, D. C. Filed May 9, 1931.

DISO-HYDRIC

For Alkaline Medicinal Water, Artificially Prepared for the Purpose of Restoring and Maintaining a Normal or Alkaline Balance, Indicated in Such Acid Conditions Where Alkalinization is Desired, Maintaining a Normal Dehydration Embracing in Its Properties an Alternative Action.
Claims use since Mar. 1, 1931.

Ser. No. 314,432. HERMANN STEIN, doing business as Hair Research Laboratories, New York, N. Y. Filed May 11, 1931.

ALBYNO

For Preparations for Treating Hair to Remove Stains Therefrom.
Claims use since July 1, 1930.

CLASS 7

Cordage

Ser. No. 314,646. HAZARD WIRE ROPE COMPANY, Wilkes-Barre, Pa. Filed May 16, 1931.

LAYSET

For Wire Rope.
Claims use since June 14, 1930.

CLASS 10

Fertilizers

Ser. No. 314,343. ROBERTS COMPANY, Burlingame, Calif. Filed May 8, 1931.

Irox

For Soil Conditioner and Snail Control, in Granulated Form.
Claims use since Dec. 4, 1930.

CLASS 12

Construction Materials

Ser. No. 299,754. PALMER LIME & CEMENT COMPANY, New York, N. Y. Filed Apr. 30, 1930.

BIG-YIELD

For Lime for Building Purposes.
Claims use since Jan. 15, 1927.

Ser. No. 309,803. CHICAGO MILL AND LUMBER CORPORATION, Chicago, Ill. Filed Jan. 10, 1931.

For Rough and Finished Lumber.
Claims use since 1900.

Ser. No. 311,945. AMERICAN BITUMULS COMPANY, Wilmington, Del., and Oakland, Calif. Filed Mar. 10, 1931.

AERO-MULS

For Asphalt, Pavement Materials, Asphaltic Binders, Asphaltic Emulsions, and Compounds.
Claims use since Jan. 22, 1931.

Ser. No. 311,946. AMERICAN BITUMULS COMPANY, Wilmington, Del., and Oakland, Calif. Filed Mar. 10, 1931.

ZERO-MULS

For Asphalt, Pavement Materials, Asphaltic Binders, Asphaltic Emulsions, and Compounds.
Claims use since Jan. 22, 1931.

Ser. No. 313,316. WHEELER LUMBER BRIDGE & SUPPLY COMPANY, Des Moines, Iowa. Filed Apr. 12, 1931.

WHEELER W SPECIAL

The word "Special" is disclaimed apart from the other features of the mark shown.
For Lumber.
Claims use since Jan. 5, 1931.

Ser. No. 313,505. THE GLENN L. MARTIN COMPANY, Baltimore and Middle River, Baltimore, Md. Filed Apr. 18, 1931.

"INSOLO"

For Compounds for Sealing the Joints of Fuel Tanks and Their Accessories.
Claims use since Apr. 6, 1931.

Ser. No. 313,684. EDWARD B. SICKLE, doing business as Paint Products Laboratories, Chicago, Ill. Filed Apr. 22, 1931.

STRUCTURAL STIKUM

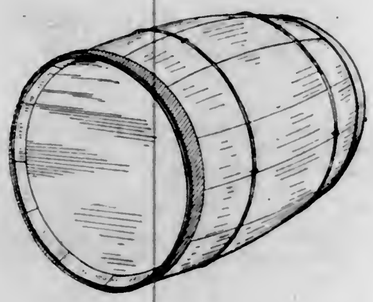
No claim is made to the word "Structural" apart from the mark as shown.
For Plastic Composition Material.
Claims use since Mar. 1, 1930.

Ser. No. 314,410. HEZ K. JOHNSON, Chillicothe, Mo. Filed May 11, 1931.

Mo-Roc-A

For Rock Asphalt.
Claims use since Feb. 1, 1930.

CLASS 13



Hardware and Plumbing and Steam-Fitting Supplies

Ser. No. 308,286. BOBRICK MANUFACTURING CORPORATION, Los Angeles, Calif. Filed Nov. 25, 1930.

SOP-O-ZON

For Liquid Soap Dispensers.
Claims use since June 15, 1910.

Ser. No. 312,697. THE COLORADO FUEL AND IRON COMPANY, Denver, Colo. Filed Mar. 30, 1931.

The mark consists of a brown band. The band encircles an end of a keg or barrel containing the nails. The drawing is ruled to indicate the color brown. The representation of the barrel per se is disclaimed.

For Nails.

Claims use since Feb. 23, 1931.

Ser. No. 313,206. THE OSCAR C. RIXSON CO., Chicago, Ill. Filed Apr. 10, 1931.

RXN

For Builders' Hardware—Namely, Hinges, Casement and Transom Operators, Door Checks, Door Holders, Door and Casement Pivots, Casement Holders, Stays, and Parts Thereof.

Claims use since Mar. 31, 1931.

Ser. No. 314,143. BRITISH ROPES LIMITED, London, England. Filed May 4, 1931.

VALLIUM

For Barbed Wire Fencing and Wire Netting and Fencing.

Claims use since Nov. 20, 1929.

Ser. No. 314,150. THE COLORADO FUEL AND IRON COMPANY, Denver, Colo. Filed May 4, 1931.

C

For Spikes and Bolts.

Claims use since Jan. 1, 1923, on spikes and since Jan. 1, 1907, on bolts.

Ser. No. 314,422. IRA I. NELSON, doing business as The Stack Heater Company, Boston, Mass. Filed May 11, 1931.

4 IN 1

For Relief Valves.

Claims use since Mar. 9, 1931.

CLASS 14

Metals and Metal Castings and Forgings

Ser. No. 307,086. BETTER BEARINGS CORPORATION, Salt Lake City, Utah. Filed Oct. 23, 1930.

CU-LEAD-ITE

No claim being made to the word "Lead" apart from the mark as shown in the drawing.

For Castings Made of Bronze, Alloys of Lead, Copper, Tin, and Iron, Lead, Copper, and Tin, Copper, Aluminum, Tin, and Iron and Other Similar Metals Formed or Forged Into Castings.

Claims use since Apr. 1, 1930.

CLASS 16

Paints and Painters' Materials

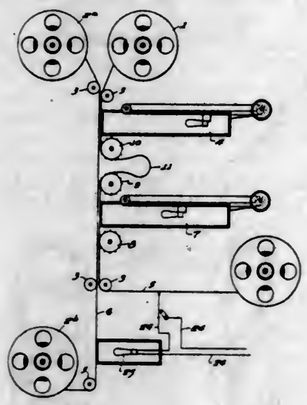
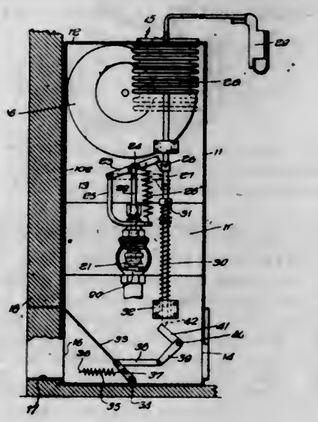
REISSUES



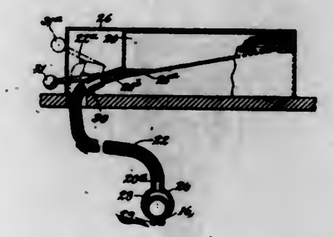
JUNE 23, 1931

18,107. STRUCTURAL UNIT. DEWEY H. BITNEY, Albion, Mich., assignor to Union Steel Products Company, Albion, Mich. Original No. 1,706,558, dated Mar. 26, 1929, Serial No. 212,244, filed Aug. 11, 1927. Application for reissue filed Aug. 1, 1930. Serial No. 472,429. 6 Claims. (Cl. 72—122.)



6. A reinforce bar support comprising a corrugated longitudinal supporting rod disposed with its corrugations in a vertical plane, the corrugations being comparatively shallow relative to the length of the rod and constituting seats with which the elements to be supported may be selectively engaged, and supporting feet for said rod fixedly secured thereto in spaced relation.

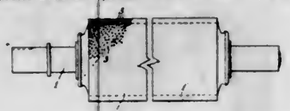
18,108. TALKING MOTION PICTURES AND METHOD OF OBLITERATING STIPULATED PORTION OR PORTIONS THEREFOR. LEE DE FOREST, New York, N. Y., assignor, by mesne assignments, to General Talking Pictures Corporation, a Corporation of Delaware. Original No. 1,695,415, dated Dec. 18, 1928, Serial No. 713,887, filed May 17, 1924. Application for reissue filed Dec. 16, 1930. Serial No. 502,843. 11 Claims. (Cl. 95—75.)



1. The method of preventing the production of ground noises from positive photographic films having sound records separated by unexposed portions, which comprises subjecting the positive film to light exposure at the unexposed portions corresponding to the silent portions of the negative to blacken those portions of the film when developed.

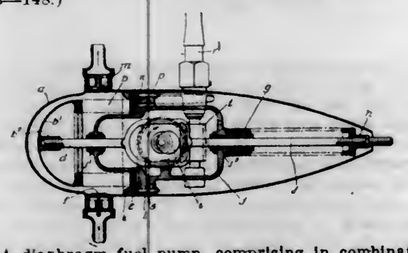
18,109. HEATING AND VENTILATING APPARATUS. GERALD E. OTIS, Moline, Ill., assignor to The Herman Nelson Corporation, Moline, Ill., a Corporation of Illinois. Original No. 1,753,157, dated Apr. 1, 1930, Serial No. 337,367, filed Feb. 4, 1929. Application for reissue filed May 8, 1931. Serial No. 536,048. 11 Claims. (Cl. 236—38.)

1. In an apparatus of the character described, the combination with a housing having a recirculating inlet for indoor air and an inlet for outdoor air, and an outlet through which said air is discharged into an indoor compartment; heating means arranged within said housing, and coordinated regulating mechanism for controlling said heating means, said indoor air inlet, and said outdoor air inlet, said means being adapted within its complete range of operations to progressively and in the following order restrict the heat output of the heating means, and to progressively restrict the ingress of recirculated air and to resultantly increase the admission of outdoor air into said housing.



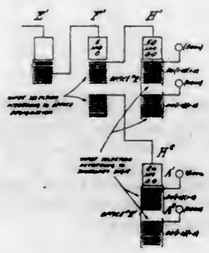
18,110. CAR HEATER. SERGIUS VERNET, Brooklyn, N. Y. Original No. 1,705,550, dated Mar. 19, 1929, Serial No. 200,328, filed June 21, 1927. Reissue No. 17,431, dated Sept. 10, 1929, Serial No. 380,738, filed July 24, 1929. This application for reissue filed July 17, 1930. Serial No. 468,718. 18 Claims. (Cl. 237—12.3.)

1. A vapor pressure heating system for a vehicle having an engine, comprising a vapor generator for absorbing heat from the exhaust gases of the engine, a condenser radiator, conducting means operatively connecting the



generator and the radiator for the flow of vaporized fluid from the generator to the radiator and the return of condensate from the radiator to the generator, and means for trapping varying amounts of fluid to vary the quantity of fluid actively in circulation, the return of condensate to the generator being modified by said means only when the amount of trapped fluid is being changed.

18,111. ROLL. FREDERICK R. WOODWARD, Newton, Mass., assignor to Stowe & Woodward Company, Newton Upper Falls, Mass., a Corporation of Massachusetts. Original No. 1,787,890, dated Jan. 6, 1931, Serial No. 413,483, filed Dec. 12, 1929. Application for reissue filed May 2, 1931. Serial No. 534,683. 8 Claims. (Cl. 92—49.)



1. A roll comprising pieces of rock forming a portion of the active surface of the roll; and a binder of material other than said rock for holding said pieces in the desired position.

18,112. DIAPHRAGM FUEL PUMP. JEAN LOUIS LÉON ALEXANDRE ALBERT MOULET, Boulogne-sur-Seine, France, assignor to Stewart-Warner Corporation, Chicago, Ill., a Corporation of Virginia. Original No. 1,597,689, dated Aug. 31, 1926, Serial No. 244,126, filed July 9, 1918, and in France June 4, 1917. Application for reissue filed Apr. 10, 1930. Serial No. 443,204. 16 Claims. (Cl. 103—148.)

1. A diaphragm fuel pump, comprising in combination, an outer envelope, an inlet valve on said envelope adapted to be connected to a fuel supply, an outlet valve on said envelope adapted to be connected to the constant level fuel tank of a carbureter, an inner collapsible and extensible envelope forming a liquid-tight joint with the outer envelope, a sliding rod secured to the inner collapsible envelope, an eccentric cam adapted to positively move said rod in the direction corresponding to suction to draw fuel from the fuel supply past the inlet valve, means for operating said cam, and elastic means adapted to return the inner collapsible envelope in the opposite direction.

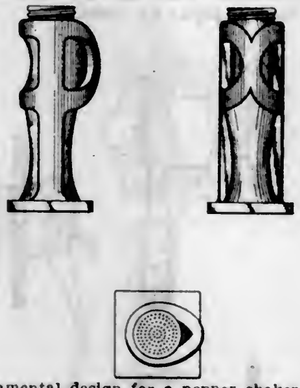
18,113. MULTIOFFICE AUTOMATIC TELEPHONE SYSTEM. MICHAEL SCHWARTZ, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Original application filed Feb. 8, 1924, Serial No. 691,327. Renewed Oct. 24, 1927. Original No. 1,674,134, dated June 19, 1928. Application for reissue filed June 18, 1930. Serial No. 462,115. 72 Claims. (Cl. 179—18.)

1. In a multi-office telephone system wherein telephone numbers consist respectively of an office designation and a numerical designation, a train of automatic switches for connecting a calling and called line, a director comprising registering apparatus and sending apparatus controlled by said registering apparatus to produce series of impulses for operating said switches, two sets of wipers in one of said switches, and means in said director controlled in accordance with the office designations of called numbers for controlling the selection of either set of wipers.

DESIGNS

JUNE 23, 1931

84,452. ICE-CREAM CONTAINER. JAMES L. BALTON, Baltimore, Md. Filed Oct. 27, 1930. Serial No. 37,402. Term of patent 14 years.



The ornamental design for an ice-cream container, as shown and described.

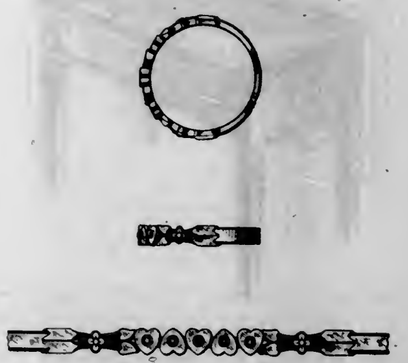
84,453. SALT SHAKER. HARVEY M. BARR, New York, N. Y. Filed Apr. 7, 1931. Serial No. 39,392. Term of patent 7 years.

The ornamental design for a salt shaker, as shown.

84,454. PEPPER SHAKER. HARVEY M. BARR, New York, N. Y. Filed Apr. 7, 1931. Serial No. 39,393. Term of patent 7 years.

The ornamental design for a pepper shaker, as shown.

84,455. COSMETIC JAR. JOSEPH J. BAUMAN, Chicago, Ill. Filed Apr. 1, 1931. Serial No. 39,329. Term of patent 3½ years.

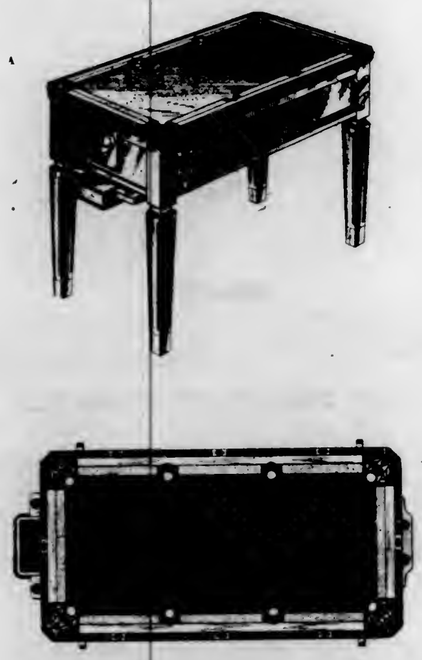


The ornamental design for a cosmetic jar as shown.

84,456. FLASH LIGHT HEAD. LOUIS A. BEAN, Denver, Colo., assignor to Ivan L. Bean, Denver, Colo. Filed Mar. 14, 1930. Serial No. 34,861. Term of patent 7 years.

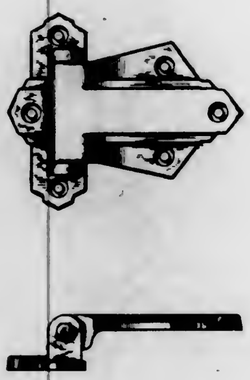
The ornamental design for a flashlight head, as shown.

84,457. FINGER RING OR SIMILAR ARTICLE. JACOB BERLINGER, Brooklyn, N. Y. Filed Apr. 3, 1931. Serial No. 39,360. Term of patent 14 years.



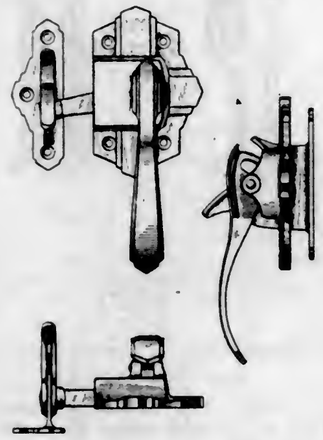
The ornamental design for a finger ring or similar article, substantially as shown.

84,458. WATER CLOSET BOWL. GEORGE BRAIN, Tiffin, Ohio, assignor to Standard Sanitary Manufacturing Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Mar. 25, 1931. Serial No. 39,238. Term of patent 14 years.



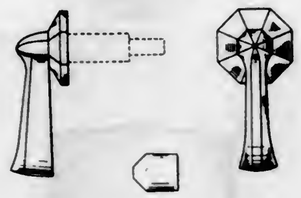
The ornamental design for a water closet bowl, as shown.

84,459. POOL TABLE. ISAAC H. BURNSTINE, Chicago, Ill. Filed May 1, 1931. Serial No. 39,680. Term of patent 14 years.



The ornamental design for a pool table as shown.

84,460. HINGE. EDWARD BURTON, Rockford, Ill., assignor to National Lock Co., Rockford, Ill., a Corporation of Delaware. Filed Apr. 20, 1931. Serial No. 39,561. Term of patent 7 years.



The ornamental design for a hinge as shown.

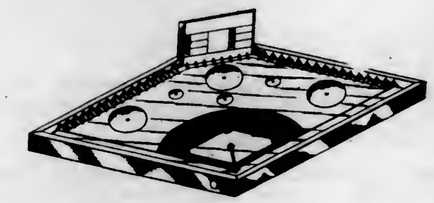
84,461. LATCH. EDWARD BURTON, Rockford, Ill., assignor to National Lock Co., Rockford, Ill., a Corporation of Delaware. Filed Apr. 20, 1931. Serial No. 39,562. Term of patent 3½ years.

The ornamental design for a latch, as shown.

84,462. HANDLE FOR FLUSH TANKS OR THE LIKE. HERBERT D. CLEMMONS, Sturgis, Mich., assignor to Scovill Manufacturing Company, Sturgis, Mich. Filed Mar. 27, 1931. Serial No. 39,270. Term of patent 14 years.

The ornamental design for a handle for flush tanks or the like, as shown.

84,463. CIGAR LIGHTER. JOSEPH H. COHEN, Bridgeport, Conn. Filed Apr. 11, 1931. Serial No. 39,445. Term of patent 14 years.

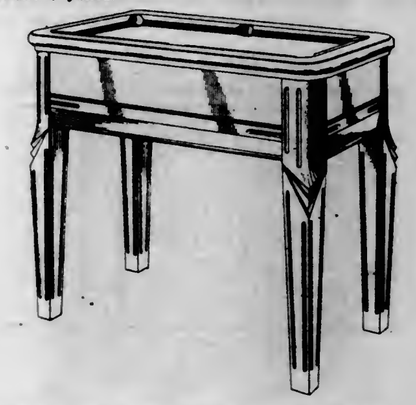


The ornamental design for a cigar lighter, as shown.

84,464. CIGAR LIGHTER. JOSEPH H. COHEN, Bridgeport, Conn. Filed Apr. 11, 1931. Serial No. 39,446. Term of patent 14 years.

The ornamental design for a cigar lighter, as shown.

84,465. BASEBALL GAME BOARD. BURDETTE R. COLBION, Maywood, Ill. Filed Mar. 16, 1931. Serial No. 39,105. Term of patent 7 years.



The ornamental design for a baseball game board as shown.

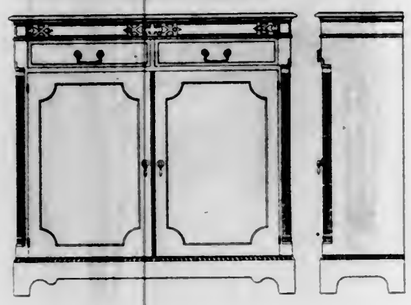
84,466. ROOM HEATER. CLAUDE M. DIBBLE, Joliet, Ill., assignor to Moore Brothers Company, Joliet, Ill., a Corporation of Illinois. Filed Sept. 27, 1930. Serial No. 37,077. Term of patent 7 years.

The ornamental design for a room heater as shown and described.

84,467. POOL TABLE. WILLIAM G. EBERHART, Chicago, Ill. Filed May 1, 1931. Serial No. 39,673. Term of patent 7 years.

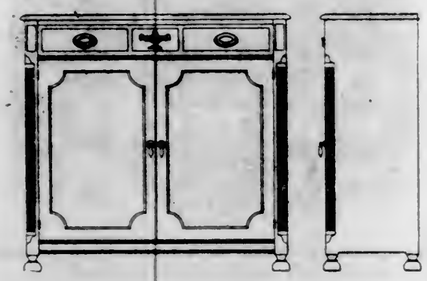
The ornamental design for a pool table, as shown.

84,468. TEXTILE FABRIC OR SIMILAR ARTICLE. GUSTAVE M. FAUSER, Ardsley on Hudson, N. Y., assignor to Atkinson, Wade & Co., Inc., New York, N. Y., a Corporation of New York. Filed Mar. 20, 1931. Serial No. 39,173. Term of patent 3½ years.



The ornamental design for a textile fabric or similar article, substantially as shown and described.

84,469. BOTTLE. JOHN E. FOWLER, Rosslyn, Va. Filed Apr. 23, 1931. Serial No. 39,604. Term of patent 14 years.

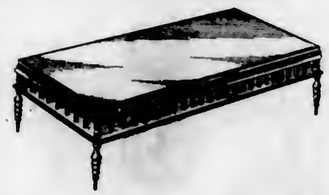


The ornamental design for a bottle substantially as shown.

84,470. HUMIDIFIER CABINET. WILLIAM A. FRENCH, Minneapolis, Minn. Filed Apr. 16, 1931. Serial No. 39,501. Term of patent 3½ years.

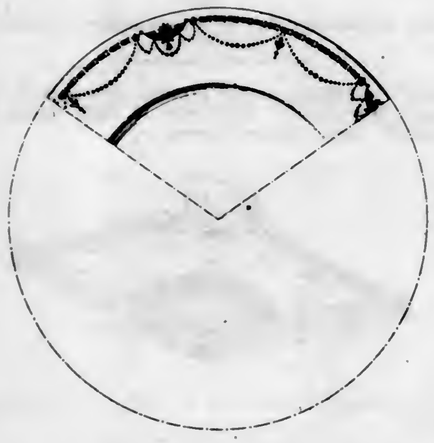
The ornamental design for a humidifier cabinet, as shown.

84,471. HUMIDIFIER CABINET. WILLIAM A. FRENCH, Minneapolis, Minn. Filed Apr. 16, 1931. Serial No. 39,502. Term of patent 3½ years.



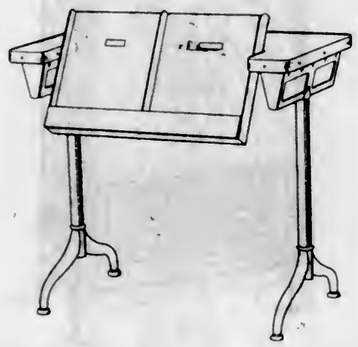
The ornamental design for a humidifier cabinet, as shown.

84,472. TABLE LIGHTER. HENRY J. GOLDBLATT, Chicago, Ill., assignor to Vidrio Products Corporation, Chicago, Ill., a Corporation of Illinois. Filed Mar. 23, 1931. Serial No. 39,203. Term of patent 7 years.



The ornamental design for a table lighter as shown and described.

84,473. TABLE. JULIUS O. GULBRANSON, Richmond, Va. Filed Apr. 13, 1931. Serial No. 39,459. Term of patent 7 years.



The ornamental design for a table, as shown.

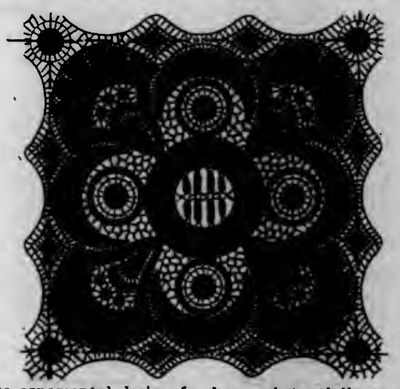
84,474. PLATE. EDWIN HALE, Wheeling, W. Va., assignor to Warwick China Company, Wheeling, W. Va. Filed May 4, 1931. Serial No. 39,706. Term of patent 3½ years.

The ornamental design for a plate, as shown and described.

84,475. DISPLAY TABLE. WALTER M. HANSON, Grand Rapids, Mich., assignor to American Seating Company, Grand Rapids, Mich., a Corporation of New Jersey. Filed Apr. 3, 1931. Serial No. 39,354. Term of patent 3½ years.

The ornamental design for a display table, substantially as shown.

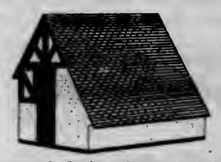
84,476. BOTTLE. THOMAS S. HARRIS, Lowell, Mass., assignor to The Ayer Company, Lowell, Mass., a Corporation of Massachusetts. Filed Apr. 18, 1931. Serial No. 39,543. Term of patent 14 years.



The ornamental design for a bottle substantially as shown and described.

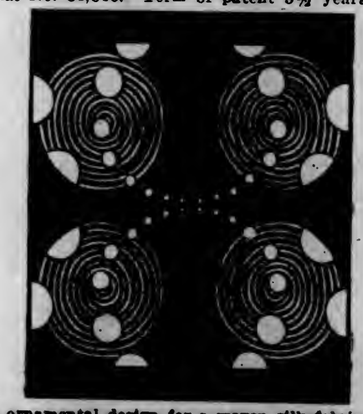
84,477. GAME BOARD. MAX M. HIRTENSTEIN, Jamaica, N. Y. Filed Feb. 20, 1931. Serial No. 38,741. Term of patent 7 years.

The ornamental design for a game board as shown.

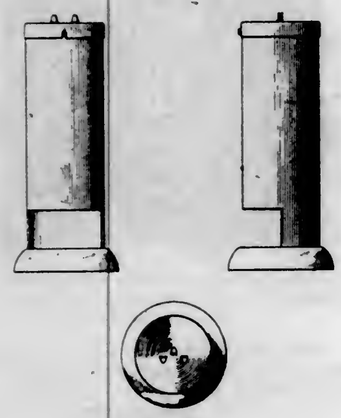


84,478. LACE. HAGE W. HUCKNALL, Elyria, Ohio, assignor to The American Lace Mfg. Co., Elyria, Ohio, a Corporation of Ohio. Filed Apr. 25, 1931. Serial No. 39,623. Term of patent 3½ years.

The ornamental design for lace, substantially as shown and described.

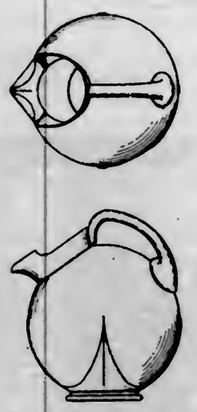


84,479. BUILDING. SEWARD B. JACKSON, Chatham, N. J. Filed Jan. 16, 1931. Serial No. 38,329. Term of patent 7 years.



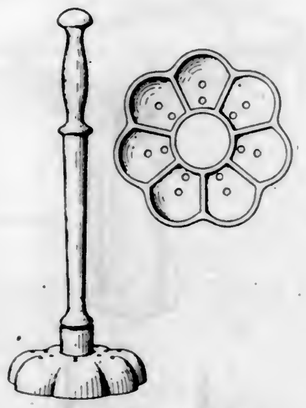
The ornamental design for a building, as shown.

84,480. WOVEN SILK FABRIC OR SIMILAR ARTICLE. GEORGE KATEB, New York, N. Y. Filed Feb. 27, 1931. Serial No. 38,846. Term of patent 3½ years.



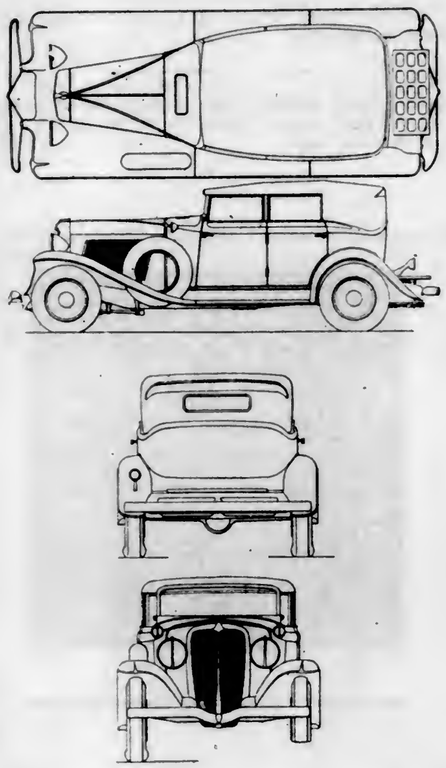
The ornamental design for a woven silk fabric or similar article, as shown and described.

84,481. DISPLAY STAND. MELVILLE KEIM, Chicago, Ill., assignor to The Apex Products Corporation, Chicago, Ill., a Corporation of Illinois. Filed July 8, 1929. Serial No. 31,966. Term of patent 14 years.



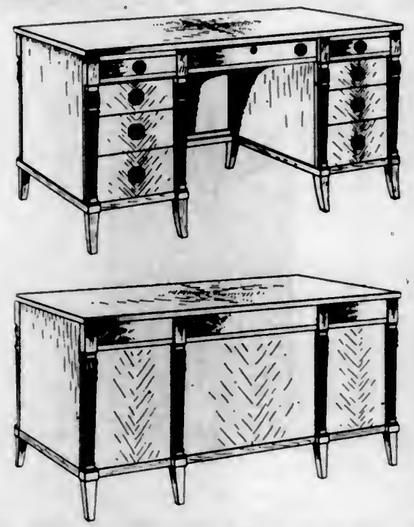
The ornamental design for a display stand, as shown.

84,482. WATER JUG OR SIMILAR ARTICLE. JESS CLAIR KELLY, Cambridge, Ohio. Filed Apr. 21, 1931. Serial No. 39,585. Term of patent 7 years.



The ornamental design for a water jug or similar article, as shown.

84,483. WASHING APPLIANCE. MAUDE T. KELLEY, Mount Vernon, N. Y. Filed May 1, 1931. Serial No. 39,685. Term of patent 14 years.



The ornamental design for a washing appliance, as shown.

84,484. AUTOMOBILE. ALAN H. LEAMY, Auburn, Ind., assignor to Auburn Automobile Company, Auburn, Ind., a Corporation of Indiana. Filed Apr. 24, 1931. Serial No. 39,614. Term of patent 7 years.

The ornamental design for an automobile substantially as shown.

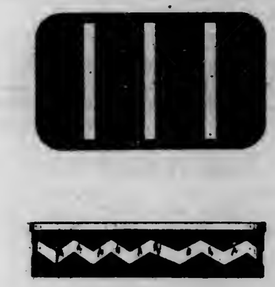
84,485. DESK. JOSEPH R. MCCARGAR, Grand Rapids, Mich. Filed May 4, 1931. Serial No. 39,710. Term of patent 7 years.

The ornamental design for a desk, as shown.

84,486. TABLE. RALPH K. MERRILL, Grand Rapids, Mich., assignor to American Seating Company, Grand Rapids, Mich., a Corporation of New Jersey. Filed Mar. 19, 1931. Serial No. 39,159. Term of patent 7 years.

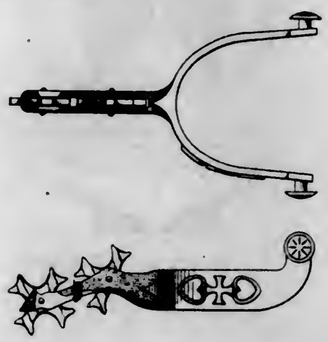
The ornamental design for a table, substantially as shown.

84,487. SCHOOL DESK. RALPH K. MERRILL, Grand Rapids, Mich., assignor to American Seating Company, Grand Rapids, Mich., a Corporation of New Jersey. Filed Mar. 19, 1931. Serial No. 39,160. Term of patent 7 years.



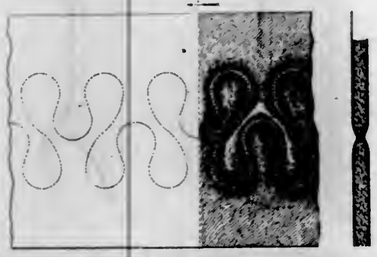
The ornamental design for a school desk, substantially as shown.

84,488. TABLE. ERVING B. MORGAN, Grand Rapids, Mich., assignor to American Seating Company, Grand Rapids, Mich., a Corporation of New Jersey. Filed Mar. 12, 1931. Serial No. 39,048. Term of patent 7 years.



The ornamental design for a table, substantially as shown.

84,489. RUBBER SOAP DISH. ALBERT L. MURRAY, Auburn, Ind. Filed Mar. 16, 1931. Serial No. 39,107. Term of patent 3½ years.

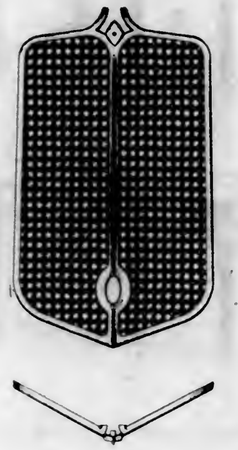


The ornamental design for a rubber soap dish, as shown.

84,490. RIDING SPUR. GILBERT J. ORMISTON, Judson, N. Dak. Filed Apr. 13, 1931. Serial No. 39,458. Term of patent 7 years.

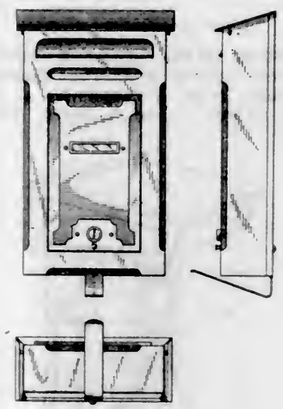
The ornamental design for a riding spur, substantially as shown.

84,491. MATTRESS BORDER. HUGO PERLESZ, Chicago, Ill., assignor to Burton-Dixie Corporation, Chicago, Ill., a Corporation of Illinois. Filed Mar. 23, 1931. Serial No. 39,217. Term of patent 14 years.



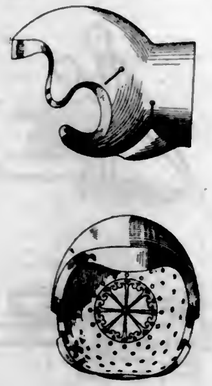
The ornamental design for a mattress border, as shown and described.

84,492. RADIATOR GUARD. BENJAMIN PUTTERMAN, Brooklyn, N. Y., assignor to Yankee Metal Products Corp., a Corporation of New York. Filed Apr. 20, 1931. Serial No. 39,573. Term of patent 7 years.



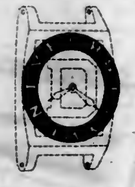
The ornamental design for a radiator guard, substantially as shown and described.

84,493. RADIATOR GUARD. BENJAMIN PUTTERMAN, Brooklyn, N. Y., assignor to Yankee Metal Products Corp., a Corporation of New York. Filed Apr. 20, 1931. Serial No. 39,574. Term of patent 7 years.



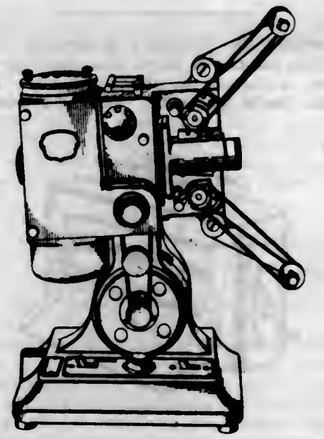
The ornamental design for a radiator guard, substantially as shown.

84,494. MAIL BOX. GEORGE H. REIMER, Fulton, Ill., assignor to Patent Novelty Company, Fulton, Ill., a Corporation of Illinois. Filed Apr. 27, 1931. Serial No. 39,635. Term of patent 7 years.



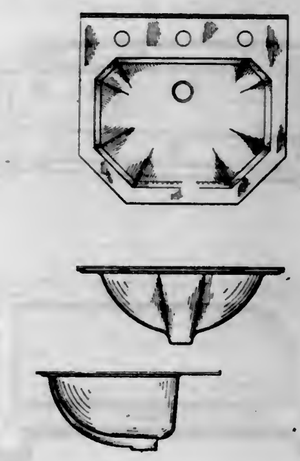
The ornamental design for a mail box, as shown.

84,495. HOOD FOR A HAIR DRIER OR ARTICLE OF SIMILAR NATURE. PETER SANTURELLO, Columbus, Ohio. Filed Jan. 27, 1931. Serial No. 38,460. Term of patent 14 years.



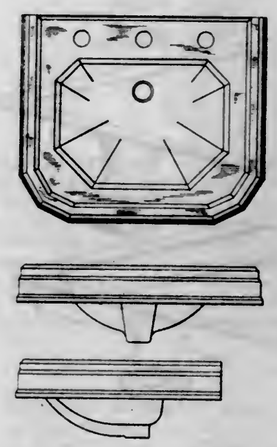
The ornamental design for a hood for a hair drier or article of similar nature, as shown.

84,496. WATCHCASE. WILLIAM SCHEIBEL, New York, N. Y., assignor to Bulova Watch Company, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 21, 1930. Serial No. 37,338. Term of patent 14 years.



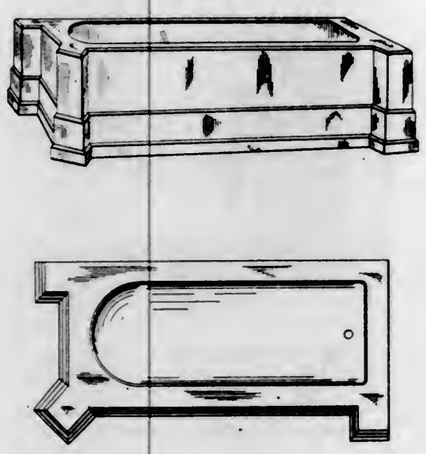
The ornamental design for a watchcase, as shown and described.

84,497. CASING FOR A CINEMATOGRAPH. ABRAHAM SHAPIRO, Chicago, Ill., assignor to Universal Stamping & Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 11, 1931. Serial No. 38,620. Term of patent 14 years.



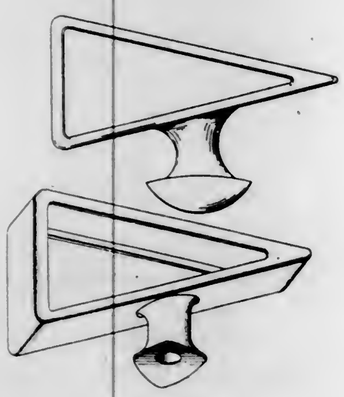
The ornamental design for a casing for a cinematograph as shown and described.

84,498. LAVATORY. CARMI J. STEELE, Los Angeles, Calif., assignor of one-third to Roy C. Troeger and one-third to Wallace R. Coates, Los Angeles, Calif. Filed Apr. 2, 1931. Serial No. 39,346. Term of patent 3½ years.



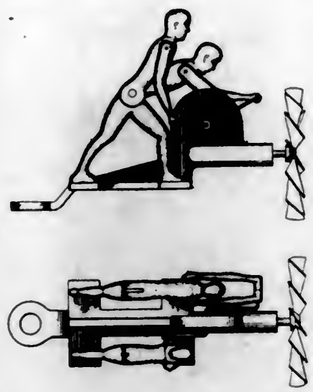
The ornamental design for a lavatory, as shown.

84,499. LAVATORY. CARMI J. STEELE, Los Angeles, Calif., assignor of one-third to Roy C. Troeger and one-third to Wallace R. Coates, Los Angeles, Calif. Filed Apr. 2, 1931. Serial No. 39,347. Term of patent 3½ years.



The ornamental design for a lavatory, as shown.

84,500. BATHTUB. CARMI J. STEELE, Los Angeles, Calif., assignor of one-third to Roy C. Troeger and one-third to Wallace R. Coates, Los Angeles, Calif. Filed Apr. 2, 1931. Serial No. 39,348. Term of patent 3½ years.

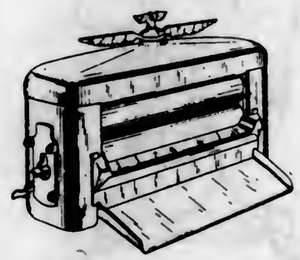


The ornamental design for a bathtub, as shown.

84,501. LAMP CASING. JOHN TEMPLETON, Detroit, Mich. Filed Feb. 13, 1930. Serial No. 34,530. Term of patent 7 years.

The ornamental design for a lamp casing, as shown.

84,502. RADIATOR CAP ORNAMENT. WILLIAM B. VANDEGRIFT, Minneapolis, and SIGFRED O. BYSTROM, St. Paul, Minn. Filed Apr. 18, 1931. Serial No. 39,554. Term of patent 7 years.

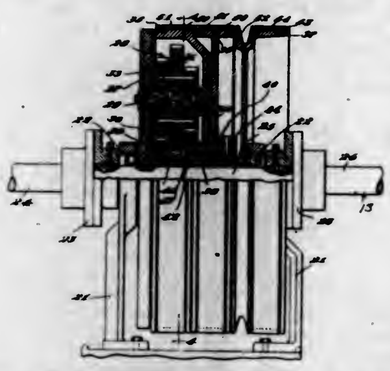


The ornamental design for a radiator cap ornament as shown.

84,503. WRINGER. WALTER L. KAUFFMAN, 2d, Youngstown, Ohio, assignor to Lovell Manufacturing Company, Erie, Pa., a Corporation of Pennsylvania. Filed Feb. 17, 1931. Serial No. 38,704. Term of patent 14 years.

The ornamental design for a wringer, as shown and described.

84,504. WRINGER. WALTER L. KAUFFMAN, 2d, Youngstown, Ohio, assignor to Lovell Manufacturing Company, Erie, Pa., a Corporation of Pennsylvania. Filed Feb. 17, 1931. Serial No. 38,705. Term of patent 14 years.



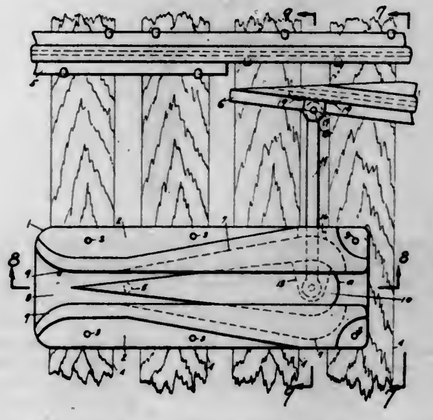
The ornamental design for a wringer, as shown and described.

PATENTS

GRANTED JUNE 23, 1931

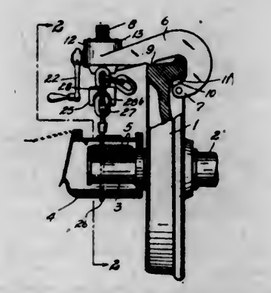
1,810,890. ACTUATING APPARATUS FOR THEATER CURTAINS AND THE LIKE. EARLE F. ALLEN, Cambridge, Mass., assignor to Allen-Drew Co., Cambridge, Mass., a Corporation of Massachusetts. Filed Apr. 2, 1929. Serial No. 351,842. 7 Claims. (Cl. 254—141.)

1. Actuating apparatus for raising, lowering or holding in position theatre curtains or like articles comprising a power driven rotary shaft, a plurality of units carried by the shaft and including means normally free from turning therewith, connections from each said unit to the article to be actuated and means operable upon each said unit for holding the normally free means of the unit against rotation upon said shaft whereby the article is stationary and for causing the same to be rotated by the shaft either in the same or the opposite direction as the shaft rotates in one direction whereby the article is raised or lowered at the will of the operator.



1,810,891. BUILDING CONSTRUCTION. ALBERT F. BEMIS, Newton, Mass., assignor to Bemis Industries, Inc., Boston, Mass., a Corporation of Delaware. Filed Nov. 20, 1926. Serial No. 149,766. 11 Claims. (Cl. 72—30.)

1. A wall construction comprising a row of parallel studs, a layer of slabs upon each side of the row, said slabs having intermediate grooves in interfitting engagement with certain of the studs, and having marginal portions cut away to engage studs at their edges.

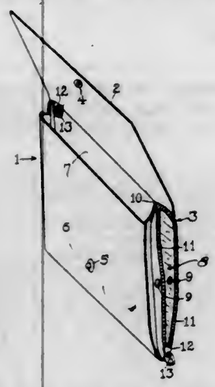


1,810,892. AUTOMATIC RAIL SWITCH OPERATING DEVICE. JOHN BOYKO, Detroit, Mich., assignor of one-half to Nikolas Stepankow, Detroit, Mich. Filed Dec. 7, 1928. Serial No. 324,358. 5 Claims. (Cl. 246—269.)

1. A railway switch operating device adapted for automatically opening and closing a railway switch and used in combination with a track vehicle operating bar, comprising a hollow track casing having means for rigidly attaching same to the track ties between the double track rails, a V-shaped switch block pivotally mounted within said hollow track casing by a pivot positioned near the pointed end thereof, said switch block being capable of swinging sidewise within said hollow casing when engaged by a single track vehicle operating bar, a switch point operating bar having one end pivotally attached to

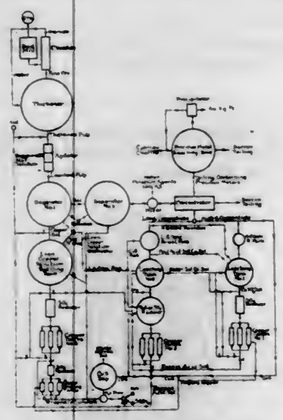
the movable end of said switch block, and means mounted on the opposite end of said operating bar for attaching same to a railway switch point.

1,810,893. JOURNAL BOX JACK. THOMAS CARDWELL, St. Louis, Mo. Filed Apr. 2, 1928. Serial No. 266,524. 7 Claims. (Cl. 254—34.)



1. A journal box suspension jack comprising a hanger member adapted to bear against the tread of a car wheel and having an integral hooked inner end portion adapted to embrace the flanged edge of the rim of said wheel at the top thereof, a dog pivoted on the hooked portion of said hanger in position to bear against the inner periphery of said rim, a vertically movable lifting screw mounted on the outer end of said hanger, and a flexible member carried by said screw for suspending the journal box therefrom.

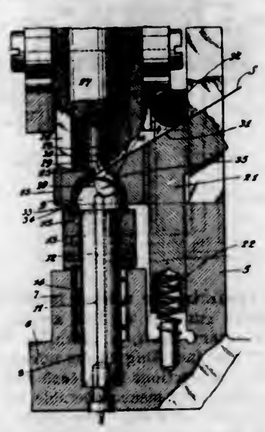
1,810,894. COMBINED HAND BAG AND CONCEALED MUFF. ABRAHAM COTLER and CARL F. W. FORSSBERG, Brooklyn, N. Y.; said Forssberg assignor to said Cotler. Filed June 25, 1929. Serial No. 373,677. 5 Claims. (Cl. 2—66.)



1. A combined hand bag and concealed muff including a bag having a front and back wall, a muff structure built into the back wall so that the ends of the muff structure

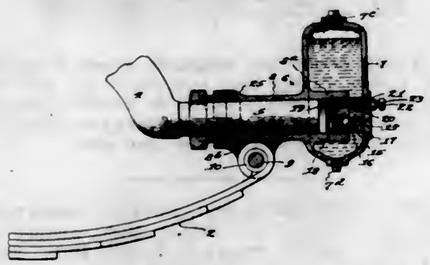
are open at the ends of the back wall independently of the opening of the bag proper, co-operating closure means

arranged at the ends of said muff structure, and concealable means for closing said closure means, and thereby closing the ends of said muff structure at will.



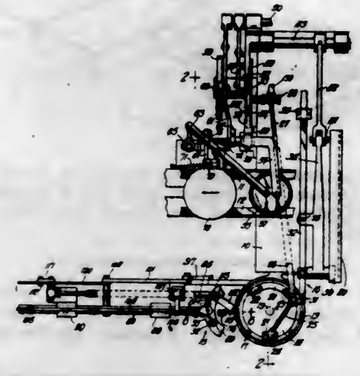
1,810,895. COPPER EXTRACTION PROCESS. WILLIAM E. GREENAWALT, Denver, Colo. Filed Feb. 14, 1927. Serial No. 167,999. 8 Claims. (Cl. 204—15.)

1. A process of treating mixed oxide and sulphide copper ore comprising, leaching the ore with an acid solution to extract the copper in its oxide combinations, chemically precipitating the copper from the resulting solution, subjecting the leached residue to flotation or gravity concentration to separate a sulphide concentrate, roasting the concentrate to make a portion of the copper water soluble and a portion acid soluble, leaching the roasted concentrate to extract the water soluble copper, electrolyzing the resulting copper solution to deposit the copper and regenerate acid, then leaching the concentrate to extract the acid soluble copper, separately electrolyzing the resulting copper solution containing salts of iron to deposit the copper and regenerate acid and ferric iron, reducing the ferric iron formed by the electrolysis to the ferrous condition with the chemically precipitated copper, and again electrolyzing the solution.



7. A copper extraction process comprising, treating copper ore to separate a sulphide copper concentrate, roasting the concentrate to make a portion of the copper water soluble and a portion acid soluble, leaching the roasted concentrate to extract a portion of the copper as a relatively pure and relatively rich copper solution, then leaching the roasted concentrate to extract the remaining copper as a relatively impure copper solution containing salts of iron, precipitating the copper from the relatively pure and relatively rich copper solution in one electrolytic circuit, precipitating the copper from the relatively impure copper solution containing salts of iron in another electrolytic circuit to deposit the copper and regenerate acid and ferric iron, reducing the ferric iron so formed with concentrated copper sulphide, and again electrolyzing the solution.

1,810,896. METHOD AND MEANS FOR ASSEMBLING THE PARTS OF ARTIFICIAL EYES. LEO J. GRUBMAN, Belle Harbor, Long Island, N. Y., assignor to Margon Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 12, 1927, Serial No. 167,634. Renewed Feb. 12, 1930. 19 Claims. (Cl. 18—1.)

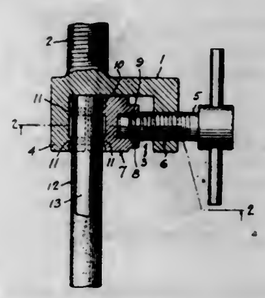


1. In a method of assembling the parts of an artificial eye, first arranging two semispherical shell members one within the other and with their edges disposed in the same plane, then moving said members relative to each other to dispose the walls thereof in concentric contacting engagement and simultaneously turning the edge of the outer shell member inwardly and clinching the same upon the edge of the inner member.

1,810,897. CHASSIS SPRING CONTROL. ERLE K. BAKER, Chicago, Ill. Filed Apr. 18, 1928. Serial No. 271,015. 12 Claims. (Cl. 267—32.)

1. A chassis spring control embodying therein a barrel element, a fluid reservoir connected thereto, a plunger element positioned in said barrel element the one being longitudinally movable with respect to the other, one of said elements being carried by a fixed part of an automobile and the other being connected to the end of the spring which as it flexes causes relative longitudinal movement between said elements alternately withdrawing and returning fluid to said reservoir.

1,810,898. SHEET FEEDING MECHANISM. ARTHUR W. BELL, Chicago, Ill., assignor, by mesne assignments, to Kraft-Phenix Cheese Corporation, Chicago, Ill., a Corporation of Delaware. Filed May 26, 1928. Serial No. 280,701. 14 Claims. (Cl. 271—30.)

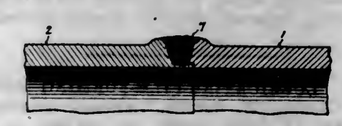


1. In a sheet feeding device of the class described, the combination of a support for a stack of sheets to be fed, a movable device having means for picking up the top sheet of a stack of sheets on said support, operative to carry said sheet to one side of said stack and to there deposit said sheet, and means carried by said movable device for preliminarily moving said top sheet relative to the next lower sheet so as to reduce the adhesion between said top and next lower sheet, thereby to assist said device to pick up said top sheet.

1,810,899. WINDOW SHADE. CARL NORMAN BOEHM, Washington, N. J., assignor to Woodweb Shade Manufacturers, Inc., Washington, N. J., a Corporation of New Jersey. Filed Mar. 25, 1929. Serial No. 349,584. 9 Claims. (Cl. 156—16.)

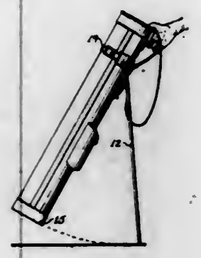
9. In a device of the class described, a plurality of thin, flat, guide rods secured at their upper and lower ends and having arcuate portions extending therebetween, a shade comprising transverse, flexibly united members and guide engaging members secured to certain of said transverse members, adjacent guide engaging members being separated from each other by more than two transverse members, said guide engaging members having openings through which said guide rods are threaded, whereby the shade is restrained against lateral movement, the width of said openings being slightly in excess of that of said rods.

1,810,900. WELDROD CHUCK FOR ELECTRIC ARC WELDING. HENRY R. BORMANN and ALFONS STEINHART, Milwaukee, Wis., assignors to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Sept. 3, 1929. Serial No. 390,028. 5 Claims. (Cl. 219—8.)



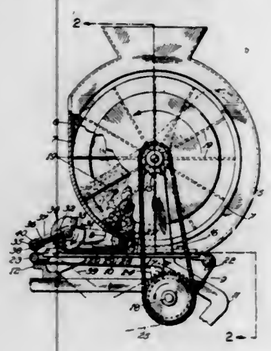
1. A weldrod holder comprising a body portion having a recess therein, one side wall of the recess having arcuate cutting edges adapted to conform with a portion of the periphery of the weldrod, a slidably mounted clamping member disposed in said recess and provided with arcuate cutting edges in complementary relation to the arcuate cutting edges of said recess, and means for radially actuating said clamping member to permit the insertion and removal of the weldrod.

1,810,901. WELDROD HOLDER FOR ELECTRIC ARC WELDING. HENRY R. BORMANN and ALFONS STEINHART, Milwaukee, Wis., assignors to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Sept. 16, 1929. Serial No. 392,896. 6 Claims. (Cl. 219—8.)



1. A device of the class described comprising a clamping mechanism adapted to retain a weldrod in proper welding relation, means for applying pressure to said clamping mechanism to cause the same to firmly grip the weldrod, and abrading means effective upon the actuation of said pressure applying means for removing foreign material from the contacting surface of the weldrod.

1,810,902. ELECTRIC ARC WELDING OF PIPE JOINTS. HOWARD J. BURNISH, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Nov. 18, 1929. Serial No. 407,978. 5 Claims. (Cl. 219—10.)

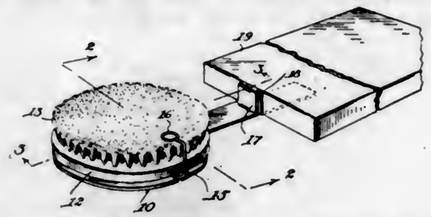


1. A pipe joint comprising two sections of pipe having their meeting ends interlocked, raised beads at the outer circumference of said ends to define a welding groove therebetween, and welding metal deposited between said beads and ends and fused with and joining said interlocked ends to form an integral tubular structure.

1,810,903. GOLF CLUB BAG SUPPORT. PHIL I. CAMPBELL, Wichita, Kans., assignor of one-fourth to Frank C. Brosius, Wichita, Kans. Filed May 3, 1929. Serial No. 360,106. 1 Claim. (Cl. 150—1.5.)

In a device of the class described; a pair of members connected by an intermediate link; each having an outer loop as belt receiving elements; each member having a pair of spaced apart ear elements, one element projecting further than the other and having a slot; a cross rod passing the paired slots, clamp means locating said rod to project a desired distance towards the opposite ear; a rod leg hinged to each set of ears; and a finger ring on the cross rod for effecting movements of said rod within the paired slots for the purposes specified.

1,810,904. ROTARY TOBACCO FEED FOR CIGAR MACHINES. HJALMAR ERIK CARLSON, Brooklyn, N. Y., assignor to International Cigar Machinery Company, a Corporation of New Jersey. Filed Sept. 8, 1928. Serial No. 304,682. 8 Claims. (Cl. 131—39.)

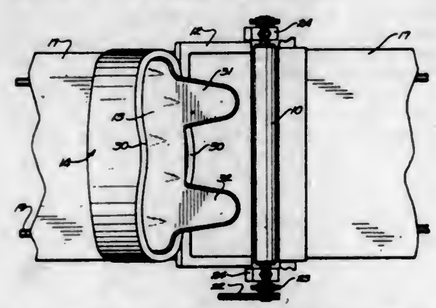


1. The combination with means for forwarding a sheet of tobacco, of means for tumbling a mass of tobacco over and over above said forwarding means, and means for feeding tobacco down from the bottom of the tumbling means to said forwarding means, said tumbling means including a hopper having oppositely disposed rotating sidewalls.

1,810,905. LUBRICATING-FILM-FORMING COMPOSITION. DONALD W. CARTER, Cleveland Heights, Ohio. Filed May 17, 1926. Serial No. 109,784. 2 Claims. (Cl. 87—9.)

1. A composition of the character described including in substantially equal proportions a lubricating material composed of one half commercial lard oil and one half commercial petroleum oil, oxide of zinc and commercial whiting and a binder material of the family in which lime is found.

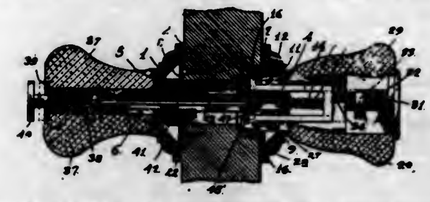
1,810,906. GOLF TEE AND PRACTICE MAT. WILLIAM E. CARTER, Anderson, Ind. Filed Aug. 12, 1929. Serial No. 385,200. 9 Claims. (Cl. 273—33.)



1. Golf apparatus comprising a base plate, a turn table mounted thereon on a vertical axis, and a ball-support closely overlying the upper face of said turn table at the edge thereof.

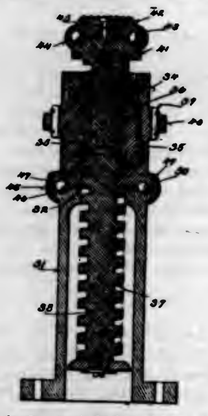
1,810,907. PITOT TUBE CONNECTION OR ROD METER. EDWARD S. COLE, New York, N. Y. Filed Apr. 5, 1926. Serial No. 99,797. 7 Claims. (Cl. 73—167.)

1. In a device of the class specified comprising a rod or bar having longitudinal grooves formed in the surface thereof and pressure tubes parallel to the longitudinal axis of the said rod, said tubes occupying, and being secured in the said longitudinal grooves.



1,810,908. METHOD AND APPARATUS FOR PRODUCING SHEET GLASS. JOHN L. DRAKE, Toledo, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 24, 1928. Serial No. 328,072. 16 Claims. (Cl. 49—33.)

15. In combination in apparatus for producing sheet glass, an inclined receiver, a pair of sheet forming rolls arranged at one end of the receiver, an elongated receptacle containing a mass of molten glass and adapted, when tilted, to deliver the glass upon the receiver in stream form, one side wall of the receiver being provided with an upstanding lip at substantially the longitudinal center there of so that when the receptacle is tilted the glass will flow therefrom first adjacent its opposite ends and subsequently from the center over said lip.



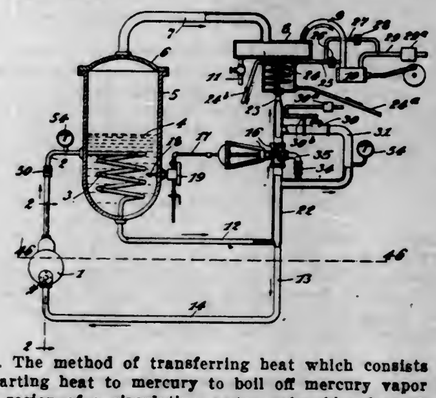
1,810,909. DOORKNOB LOCKING DEVICE. ELLING ELLINGSON, San Francisco, Calif. Filed Mar. 5, 1929. Serial No. 344,513. 15 Claims. (Cl. 70—91.)

1. A locking device comprising a knob stem extending through a door and adapted to be partially rotated to actuate latch mechanism mounted within the door; a bearing plate secured upon one side of the door; a bushing rotatably mounted within the bearing plate and engaging one end of the knob stem; a locking member slidably mounted in connection with the bushing and movable into locking engagement with the bushing and bearing plate to lock said bushing against rotation when said member is in a locking position, said locking member being disengaged from the stem when in a locking position and being movable into actuating engagement with the stem when said

member is moved to an unlocking position; means mounted in connection with the locking member for normally moving the same to a locking position; a knob secured to the bushing; and key actuated means mounted within the outer end of the knob for moving the locking member to unlocking position.

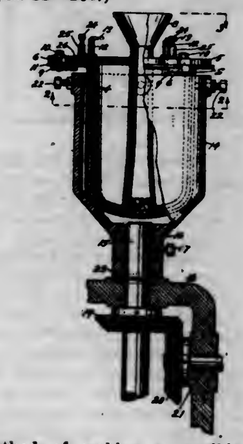
1,810,910. ANTIFRICTIONAL MEANS FOR SCREWS. ALVA RAY ESMOND, Union Grove, Wis. Filed Nov. 18, 1927. Serial No. 234,110. 1 Claim. (Cl. 254—98.)

In a lifting jack, a tubular base member having a restricted apertured upper portion, a rotatable nut member mounted on the base and in operative relation therewith, a lifting screw threaded into the nut and extending into the base, the threads of said nut and said screw having opposed flat faces with semi-annular channel portions, ball members movable through said channel portions, said nut having a passageway with a downwardly extending upper end leading from one of the channel portions and having an upwardly extending lower end opening into said channel portions whereby the balls from said channel portions will enter the downwardly extending upper end from the channel portions and into the channel portions from the upwardly extending lower end, a ratchet on the nut, and means cooperating with the ratchet for imparting movement to the nut for raising and lowering the screw.



1,810,911. GLASS MELTING FURNACE AND PROCESS FOR PRODUCING MOLTEN GLASS. ENOCH T. FERNGREN, Toledo, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 1, 1926. Serial No. 91,331. 18 Claims. (Cl. 49—54.)

4. In a tank furnace containing molten glass, a rotatable member, means for cooling said member, means for raising and lowering the member relative to the molten glass, means preventing the member from drifting longitudinally of the furnace, means for rotating the member to impart a backward flow movement upon the surface of said molten glass, the surface of said member being so shaped to cause the backward moving surface glass to



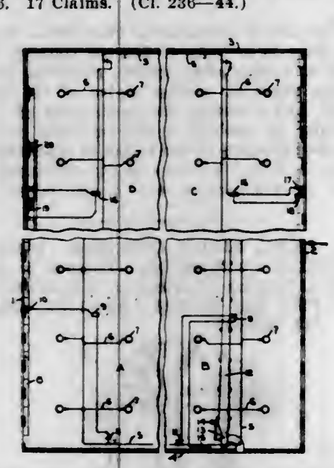
creep towards the side walls of said furnace, and means for removing the backward moving glass from said tank furnace.

1,810,912. METHOD OF HEAT TRANSFER AT HIGH TEMPERATURES. CROSBY FIELD, Brooklyn, N. Y., assignor to Chemical Machinery Corporation, a Corporation of New York. Original application filed Apr. 17, 1922, Serial No. 553,640. Divided and this application filed Feb. 5, 1927. Serial No. 166,072. 5 Claims. (Cl. 126—370.)

2. The method of transferring heat which consists in imparting heat to mercury to boil off mercury vapor in one region of a circulating system, absorbing heat from the mercury vapor at another region of the system to condense it; and governing the temperature of condensation by boiling off amounts of mercury vapor in excess of the condensing capacity of the region of condensation and maintaining a desired pressure in the circulating system by venting the necessary amounts of said vapor.

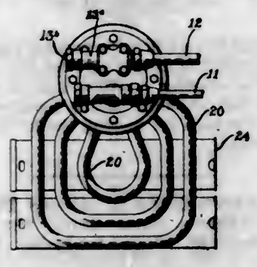
1,810,913. METAL LINING CRUCIBLE. WILFORD JUDSON HAWKINS, Claiborne, Md., assignor to American Machine & Foundry Company, a Corporation of New Jersey. Filed May 1, 1929. Serial No. 359,665. 8 Claims. (Cl. 22—203.)

1. The method of making a crucible comprising an outer shell and a thick inner lining held together by their



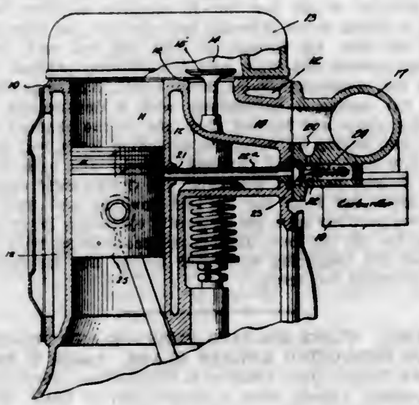
cohesion throughout their contacting surfaces, which consists in introducing a core within the shell, whirling the core and shell and directing molten metal for the lining through the core to the inner side of the crown of the shell to enable the centrifugal force developed by the whirling shell to spread the molten metal over the inner surface of the shell.

1,810,914. ARTICLE ATTACHING DEVICE. KATHERYNE L. JOHNSTON, Chicago, Ill. Filed Mar. 30, 1929. Serial No. 351,149. 10 Claims. (Cl. 24—103.)



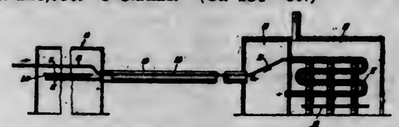
1. An article attaching device comprising a stem portion and a curved engaging member angularly disposed with respect to said stem portion, said engaging member having an end to penetrate material and successively pass through a pair of apertures in an article, the curve of said member being of a diameter substantially the distance between the centers of said apertures.

1,810,915. METHOD AND APPARATUS FOR HUMIDIFYING AND COOLING THE AIR OF INCLOSURES. ALFRED F. KARLSON, North Leominster, Mass., assignor to Parks-Cramer Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 11, 1927. Serial No. 232,696. 17 Claims. (Cl. 236—44.)



3. Apparatus for maintaining relative humidity at a predetermined standard in the air of an inclosure when said air is subject to variable increases in temperature due to heat liberated therein from uncontrollable sources, comprising humidifying means acting when in operation to discharge and vaporise water within said inclosure, ventilating means operative to determine the exchange of air between the interior and exterior of said inclosure, means sensitive to and actuated by variations of the humidity and temperature of the air within said inclosure acting to control the humidifying means and the ventilating means to maintain an exchange of air with a maximum supply of moisture when the temperature of the air of the inclosure is above a predetermined temperature and thereby produce a maximum cooling of the air of the inclosure, to effect discontinuance of the operation only of the humidifying means in response to humidity within said inclosure in excess of said predetermined standard of humidity while maintaining said air exchange and to effect discontinuance only of said exchange of air in response to humidity within said inclosure in deficiency of said standard while maintaining said maximum supply of moisture.

1,810,916. REFRIGERATING APPARATUS. JESSE G. KING, Dayton, Ohio, assignor, by mesne assignments, to Frigidaire Corporation, a Corporation of Delaware. Filed Sept. 28, 1927. Serial No. 222,673. 1 Claim. (Cl. 62—126.)

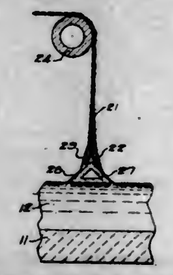


Refrigerating apparatus comprising in combination a refrigerator cabinet having a cooling compartment; a door forming a closure for the front of said compartment; and a refrigerating element including an elongated header forming a reservoir for liquid refrigerant extending substantially the entire width of the compartment, an elongated casing for supporting an ice-making container transverse to the header and having an opening facing the door, and a plurality of sets of ducts for circulating refrigerant connected to the header and thermally connected to the sides of the casing, each set including a plurality of loops disposed one outside of the other in a vertical plane transverse to the axis of the header.

1,810,917. INTERNAL COMBUSTION ENGINE. OSCAR C. KREIS, Detroit, Mich., assignor to Continental Motors Corporation, Detroit, Mich., a Corporation of Virginia. Filed Mar. 5, 1928. Serial No. 259,019. 21 Claims. (Cl. 123—75.)

1. In an internal combustion engine, a cylinder, a conduit for supplying a vaporized hydrocarbon to the cylinder, a second conduit communicating with the first said conduit and with the cylinder independently of the first said conduit for removing therefrom unvaporised portions of the hydrocarbon, and a check valve controlling the said second conduit.

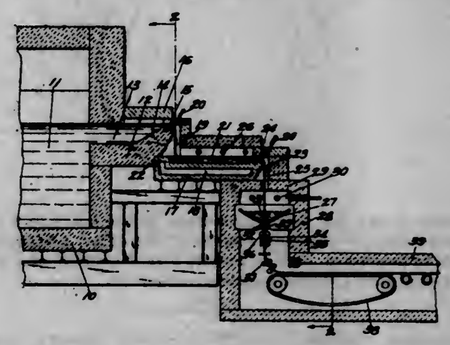
1,810,918. MANUFACTURE OF CARBON BLACK. GEORGE CHARLES LEWIS, New Dorp, N. Y., assignor to Columbian Carbon Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 14, 1928. Serial No. 246,750. 5 Claims. (Cl. 134—60.)



1. The process of manufacturing carbon black, which includes heating a hydrocarbon gas to a temperature at which chemical change is effected, but without substantial liberation of free carbon, substantially reducing the pressure and increasing the volume of the heated gas to thereby cool the gas by its expansion, further cooling the same but not to a temperature at which ingredients of the heated gas condense or separate out, burning the gaseous mixture and impinging the flame on a cooling plate.

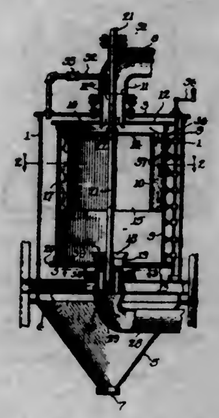
1,810,919. LOOSE LEAF BINDER. ADOLPH G. LOTTER, Milwaukee, Wis., assignor to Stationers Loose Leaf Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 4, 1929. Serial No. 404,678. 9 Claims. (Cl. 129—23.)

1. In a loose leaf binder, a pair of binder heads, a post member having extensible connection to one head and adapted to be passed into the other, means for applying tension to said post member, a slide bar concealed within said other binder head for readily detachably connecting the same with the post member, and means for positively preventing the detachment of the slide bar from the post member when tension is applied to the post member.



1,810,920. SHEET GLASS APPARATUS. LEOPOLD MAMBOURG, Lancaster, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed June 21, 1926. Serial No. 117,302. 22 Claims. (Cl. 49—17.)

1. In sheet glass apparatus, a receptacle containing a mass of molten glass, stationary means arranged above the glass, and means for drawing a plurality of films of glass over said stationary means and in contact therewith.

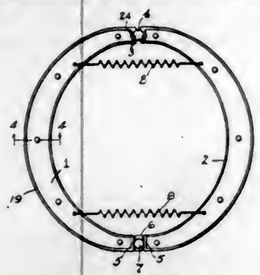


1,810,921. SHEET GLASS FLOWING APPARATUS. LEOPOLD MAMBOURG, Lancaster, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a Corporation of Ohio. Substitute for application Serial No. 1,759, filed Jan. 12, 1925. This application filed Aug. 26, 1926. Serial No. 131,785. 6 Claims. (Cl. 49—17.)

1. In sheet glass apparatus, a furnace containing a mass of molten glass and having an outlet at one end thereof, a table arranged in a lower horizontal plane than the outlet end of the furnace and adapted to receive the molten glass therefrom, said table having an overflow lip at one end, a trough arranged below the overflow lip of said table and adapted to receive the molten glass therefrom, said trough comprising a plurality of closely associated pipes

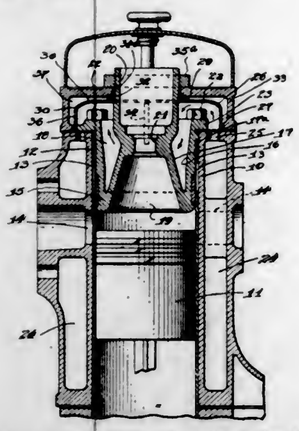
constituting the side walls thereof, means for circulating a temperature control medium through said pipes, means for maintaining the glass at a constantly high temperature from the furnace to the trough, said glass flowing from the trough in stream form, and means for absorbing heat from the stream as it leaves the trough to form a sheet.

1,810,922. CENTRIFUGAL SEPARATING APPARATUS. HARRY L. MILLS, Harvey, Ill., assignor to Centrifugal Separation Company, a Corporation of Illinois. Filed May 28, 1928. Serial No. 281,073. 7 Claims. (Cl. 183—77.)



3. An apparatus of the class described having a rotor provided with an axially extending passage with imperforate longitudinal walls and having an ejector outlet in the outer wall at the far end of said passage, said rotor being enclosed in a mechanically closed casing provided with means for collecting and permitting the removal of the separated material in a dry condition.

1,810,923. MANUFACTURE OF PRESSED BRAKE SHOES. LOUIS P. MOORES, Cleveland, Ohio, assignor to The Columbia Axle Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 31, 1927. Serial No. 216,617. 1 Claim. (Cl. 29—148.)

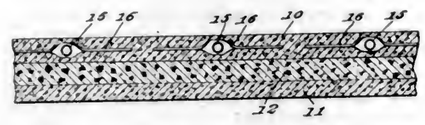


In a method of making two piece steel pressed brake shoes, the steps which consist in forming arcuate plates

having a width tapering from a maximum at the center to a minimum at the ends, bending said plates into channel members having continuous flanges of unequal width, and

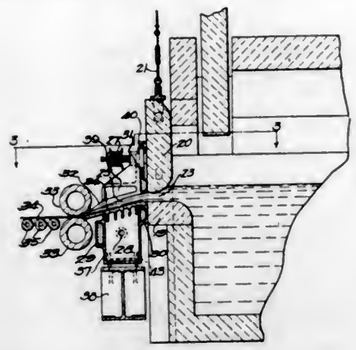
having a flat cam engaging surface at one end and a recessed flat pin engaging surface at the other, assembling two of said strips back to back to form a member of I section and then integrally uniting said strips.

1,810,924. SLEEVE VALVE ENGINE. ARCHIE MACPHAIL NIVEN, Detroit, Mich., assignor to Continental Motors Corporation, Detroit, Mich., a Corporation of Virginia. Filed Nov. 16, 1927. Serial No. 233,549. 21 Claims. (Cl. 123—173.)



1. An internal combustion engine of the sleeve valve type comprising in combination, a water jacketed cylinder, a piston operable therein, a water jacketed cylinder head forming a sleeve pocket with the cylinder and provided with a barrel portion, a cylinder head cover through which said barrel extends, a sealing ring between the barrel and cover, and a member intermediate the cylinder head cover and cylinder head having an opening received by the barrel, said member constructed and arranged to support the sealing ring and to form a water deflecting passage in conjunction with the cylinder head packet for directing water from the cylinder jacket to flow generally downwardly into and across the cylinder head.

1,810,925. CAN CONSTRUCTION. PETER OFTEDAHL, San Francisco, Calif., assignor to Elfrida M. Oftedahl, San Francisco, Calif. Filed May 1, 1929. Serial No. 359,492. 7 Claims. (Cl. 220—49.)

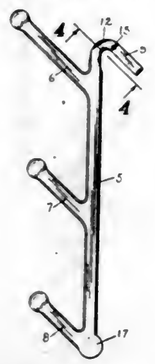


2. A can comprising a body formed from a sheet metal blank having edges crimped into interlocking relation forming a seam, said body having a peripheral groove formed adjacent the top of the body and notches formed in the edges of the blank at the ends of the groove; a wire mounted within the groove, the ends of the wire being hooked into the notches and being secured between the edges of the blank and one of said ends extending outwardly at the end of the seam to be engaged and wound upon a key to sever the can along the groove; and a cover secured upon the top of the can and enclosing the wire within the groove.

1,810,926. SKATING RINK FLOOR. WILLIAM C. PALSON, Manchester, Mass., assignor of one-half to Arthur C. Walworth, Newton, Mass. Filed Jan. 22, 1929. Serial No. 334,270. 5 Claims. (Cl. 62—12.)

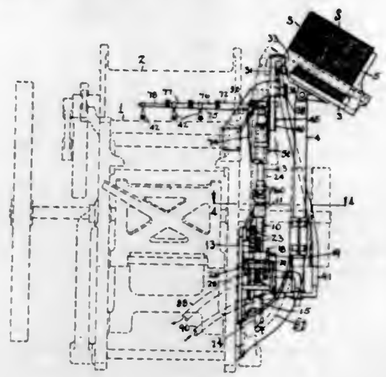
2. A skating rink floor having therein a cooling system comprising widely separated conduits for a cooling fluid, and heat absorbing elements of sheet material connected to said conduits and extending therefrom to points substantially midway between conduits and having relatively large portions of their plane surfaces parallel to the surface of said floor, said conduits being spaced apart a distance materially greater than their diameter.

1,810,927. SHEET GLASS APPARATUS. INGVALD O. PEDERSEN, Pittsburgh, Pa., assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 29, 1926. Serial No. 144,930. 14 Claims. (Cl. 49—33.)



1. In sheet glass apparatus, a continuous tank furnace for supplying a stream of molten glass to sheet forming means, including a bowed lower front wall, and a flow block for retarding the flow movement of the central portion of the stream more than the border portions as said stream flows from the tank.

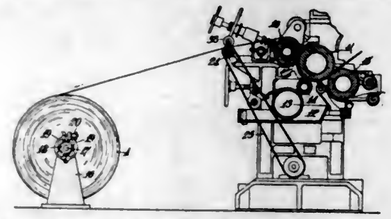
1,810,928. CLOTHES HOOK FOR LOCKERS. GEORGE B. PICKOP, New Haven, Conn., assignor to Malleable Iron Fittings Company, Branford, Conn. Filed Jan. 6, 1927. Serial No. 159,354. 2 Claims. (Cl. 248—22.)



1. A clothes hanger for lockers or the like, comprising a body portion, a clothes supporting member secured thereon, and means formed on said body portion at the upper end thereof adapted to engage an opening in a locker wall

to support the clothes hanger, said means comprising a downwardly and rearwardly extending arm, said arm being rectangularly shaped and wider than and spaced from

the body portion and lying in a plane at right angles to the general plane of the hanger, and a relatively narrow neck connecting said arm to the body portion.

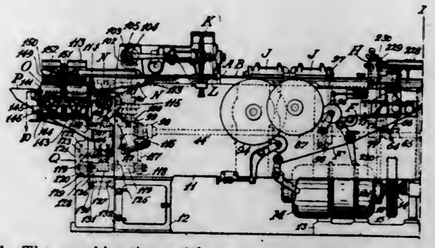


1,810,929. SHEET FEEDING MECHANISM FOR PRINTING PRESSES. CHARLES F. ROOT, Cleveland, Ohio, assignor to The Chandler and Price Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 3, 1927. Serial No. 172,346. Renewed Nov. 13, 1930. 59 Claims. (Cl. 101—287.)

1. In mechanism of the character described, the combination of a support oscillatory about and reciprocable longitudinally of an approximately vertical axis; a guide member wholly independent of and normally occupying a fixed position relatively to said support; a horizontally extending member movably attached to said guide member and carrying a sheet engaging and moving device; and connections including a universal joint between said support and said carrying member, whereby oscillatory and reciprocatory movement of the former is imparted to the latter.

1,810,930. PAPER CORRUGATING MACHINE. KARL SIEG, Brooklawn, N. J., assignor to Samuel M. Langston Co., Camden, N. J., a Corporation of New Jersey. Filed Oct. 24, 1928. Serial No. 314,587. 10 Claims. (154—30.)

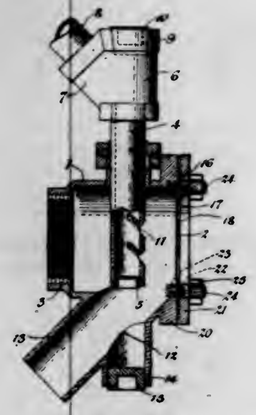
2. A machine for making corrugated paper, including a pair of intermeshing corrugating rolls, means for supporting a supply roll of paper to be corrugated, a feed roll engaging the paper between the supply roll and the corrugating roll, a friction brake on the supply roll, a slip friction drive on the feed roll, and means for adjusting the friction of the drive of the feed roll so that it is slightly less than the friction of the brake of the supply roll.



1,810,931. ELECTRIC SWITCH. HOWARD A. SPAHR, Milwaukee, Wis. Filed Oct. 10, 1927. Serial No. 225,221. 4 Claims. (Cl. 200—72.)

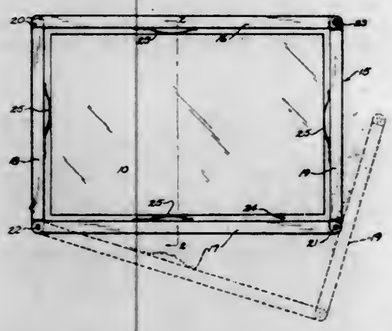
1. An electric switch comprising a two-part casing, one of said parts having a threaded aperture, screws carried by the other of said parts and extending into said threaded aperture, said second mentioned part of the casing having a threaded portion through which the threaded portion of the screw may be passed, said screw having a shank of reduced diameter from the external diameter of the threaded part, whereby the screw is prevented from inadvertently dropping from the second mentioned portion thereof, and switch mechanism carried within said casing.

1,810,932. CIGARETTE MACHINE DRIVE. JOHN A. STEIN, New York, N. Y., assignor to American Machine & Foundry Company, a Corporation of New Jersey. Filed May 9, 1927. Serial No. 189,923. 9 Claims. (Cl. 131—43.)



1. The combination with cigarette making mechanism, of a constant speed source of motion, a main shaft for driving said mechanism, speed varying gearing and a clutch connecting said source with said shaft, and controlling means including operating connections to said clutch and said gearing for causing said shaft to start only at subnormal speed and devices for accelerating said spred after starting.

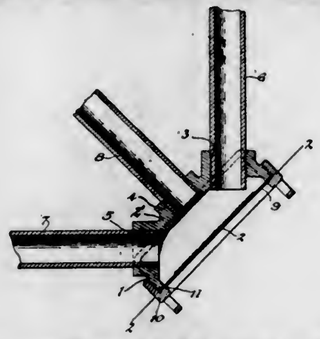
1,810,933. APPARATUS FOR SCREENING PASTES. IRVING T. THORNTON, Buffalo, N. Y., assignor to National Aniline & Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 26, 1929. Serial No. 388,528. 10 Claims. (Cl. 209—273.)



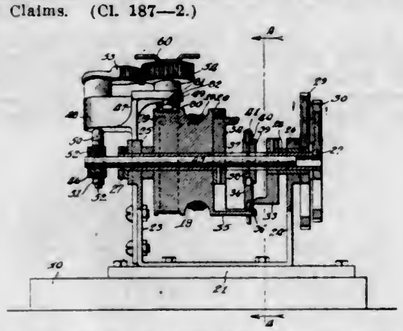
1. An apparatus of the character described comprising a casing having a plurality of threaded studs projecting from one end thereof and being tapped to receive a bolt,

an annular plate having openings therein aligned with the studs and tapped bore to adapt it to fit over the end of the casing, a screen clamped between the plate and casing end, nuts threaded on the ends of the studs and a bolt threaded into the tapped bore of the casing

to clamp the screen in position, means for introducing material to be screened into the casing, means for directing the material to be screened against the screen under a velocity head, means for removing run-off material and means for equalizing air pressures on the inside and outside of the casing.



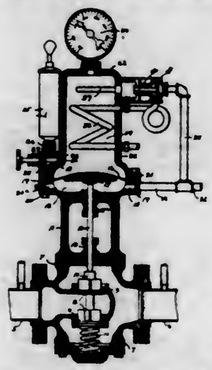
1,810,934. APPARATUS FOR USE IN THE MANUFACTURE OF LAMINATED GLASS. GEORGE B. WATKINS, Toledo, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 7, 1928. Serial No. 324,456. 6 Claims. (Cl. 49—81.)



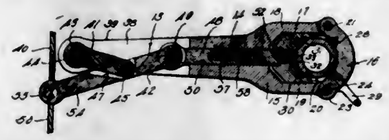
1. Means for holding a plurality of superposed sheets of material to be joined against relative movement with respect to one another during such joining, including a frame for receiving the assembled sheets therein, and means carried by the frame and adapted to engage the edges of said sheets.

1,810,935. APPARATUS FOR SCREENING LIQUID MATERIALS. ROBERT O. WOOD and BYRON L. WEST, Hamburg, N. Y., assignors to National Aniline & Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 26, 1929. Serial No. 388,527. 7 Claims. (Cl. 209—273.)

1. An apparatus of the character described comprising a screening chamber having a foraminous member therein, means for projecting a stream of material to be screened directly against the foraminous member, means for conveying away run-off material which collects in the chamber and means for equalizing air pressure on the two sides of the foraminous member.

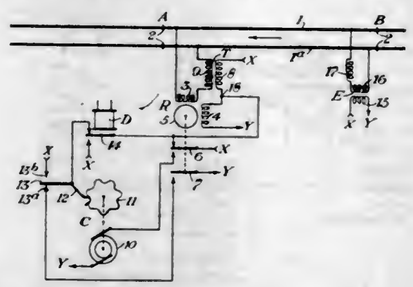


1,810,936. HOISTING APPARATUS. CARL ZETTERLUND, Chicago, Ill. Filed Nov. 5, 1928. Serial No. 317,170. 10 Claims. (Cl. 187—2.)



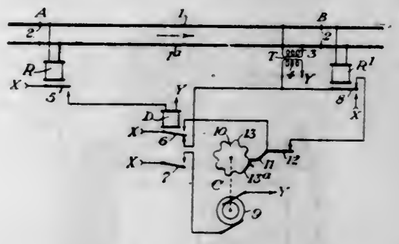
4. In a hoist of the type described, the combination with elevator platforms, a suspensory cable therefor, drum means for actuating said cable, a pair of oppositely rotating shafts, a clutch dog for each shaft, and a clutch element pivotally carried in driving relation on said drum means for alternately engaging said clutch dogs.

1,810,937. DIFFERENTIAL REGULATOR FOR VALVES. DOUGLAS H. ANNIN, Glendale, Calif., assignor to Neilan, Schumacher & Company, Los Angeles, Calif. Filed July 7, 1930. Serial No. 465,961. 8 Claims. (Cl. 236—26.)



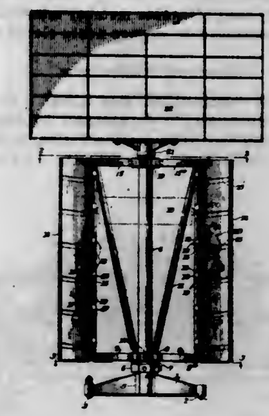
7. Means for maintaining a constant pressure in a fluid, comprising a valve for controlling the pressure of said fluid, a pressure responsive member, means for causing the fluid the pressure of which is to be maintained to act on one side of said member, means for causing an opposing fluid to act on the opposite side of said member at pressure substantially equal to that which is to be maintained in the first mentioned fluid, whereby the said member is moved differentially by the said fluids, connections between said member and the valve for positioning the latter in accordance with the position of said member, and means under control of the said opposing fluid for maintaining the temperature of said opposing fluid substantially constant.

1,810,938. TONGS. LAWRENCE F. BAASH, Los Angeles, and WILLIAM H. MAXWELL, Beverly Hills, Calif. Filed Mar. 18, 1930. Serial No. 436,694. 9 Claims. (Cl. 81—53.)



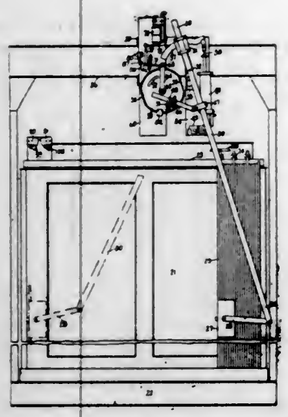
1. Tongs of the character described including, a pipe encircling head, a gripping element slidably carried in the head, a handle projecting from the head, and means for operating the gripping element including, two pivotally connected links, one link pivoted at the outer end of the handle, the other link connected with the element, and an operating lever arm on one link projecting from the outer end of the handle for connection with tong operating member.

1,810,939. RAILWAY TRAFFIC CONTROLLING APPARATUS. GEORGE W. BAUGHMAN, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed June 18, 1930. Serial No. 461,967. 3 Claims. (Cl. 246—34.)



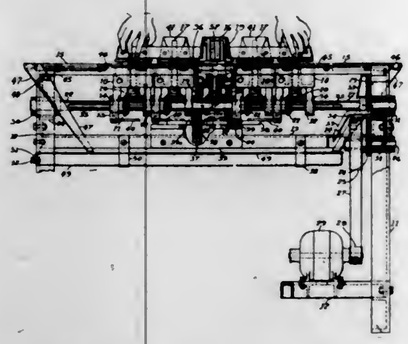
1. In combination, a section of railway track, a source of alternating track circuit current connected across the rails at one end of said section, a track relay having two windings one of which is connected across the rails at the other end of said section, a train control transformer the secondary of which is interposed between the said one winding of said relay and one of the track rails, a circuit extending from the first terminal of a source of alternating current through the primary of said transformer and the second winding of said relay to the second terminal of said source, means operating when said track relay is closed to connect the junction of said primary and said second relay winding with the first terminal of said source whereby the primary is then on short circuit, and means operating when said track relay is open to alternately connect said junction with the two terminals of said source whereby the primary and the second relay winding are alternately energized and each is on short circuit while the other is energized.

1,810,940. RAILWAY TRAFFIC CONTROLLING APPARATUS. GEORGE W. BAUGHMAN, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed June 18, 1930. Serial No. 461,968. 1 Claim. (Cl. 246—34.)



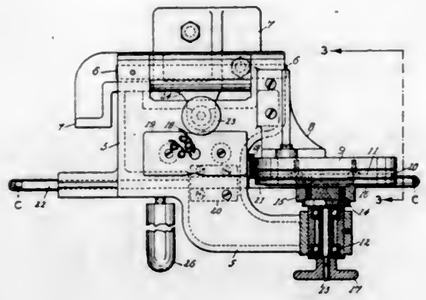
In combination, a section of railway track, a track circuit for said section including a source of alternating current and a track relay; a coder comprising a motor, a cam driven by said motor, and a contact operated by said cam for periodically interrupting the supply of current from said source to the track rails; and means for setting said coder into operation when said track relay becomes deenergized, said cam having a special tooth which is longer than the others whereby once during each revolution of the cam current will be supplied to the track rails for a longer period of time than normal, so that if the length of each normal tooth is insufficient to pick up the track relay when a shunt is removed from the rails the relay will pick up when said contact is operated by the special tooth.

1,810,941. STORAGE RACK. ULRIK I. T. BLOMBERG, Enskede-Stockholm, Sweden, assignor to Ditto, Incorporated, Chicago, Ill., a Corporation of West Virginia. Filed July 28, 1928. Serial No. 296,026. 7 Claims. (Cl. 211—44.)



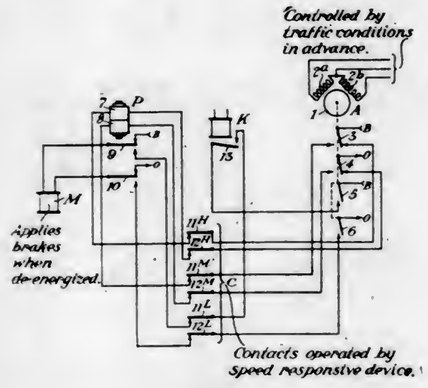
6. In a storage rack, in combination, a vertical spindle, a pair of collars encircling said spindle at regions spaced along said spindle, a plurality of radial arms connected to each of said collars, said radial arms connected to each of said collars being made up of metal strips of truncated V-shaped conformation, the bases of said V-shaped conformations being secured to their corresponding collars, adjacent legs of adjacent strips converging toward one another away from said spindle, and elongated box members disposed parallel with said spindle, said box members being secured to extremities of said radial arms.

1,810,942. CLOSURE OPERATING MECHANISM. THOMAS BRADY, East Orange, New Jersey, assignor to Otis Elevator Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 4, 1929. Serial No. 411,468. 11 Claims. (Cl. 187—52.)



1. In combination with a closure; a closure operator adapted to move said closure to closed position; means for restraining said closure operator from moving said closure comprising, a rotatable member operable upon movement of said closure, and means adapted to engage said rotatable member to prevent movement of said closure to closed position by said closure operator; means adapted to be operated to free said rotatable member from said engaging means to permit said closure to be moved to closed position by said closure operator, said last mentioned means being momentarily operated; a latch adapted to maintain said engaging means out of cooperative relation with said rotatable member to permit continued movement of said closure by said closure operator upon cessation of operation of said momentarily operated means; and means carried by said rotatable member adapted to release said latching means as said closure nears closed position.

1,810,943. PAN GREASING MACHINE. WILHELM B. BRONANDER, Montclair, N. J., assignor to American Machine & Foundry Company, a Corporation of New Jersey. Filed Oct. 4, 1929. Serial No. 397,331. 11 Claims. (Cl. 91—38.)

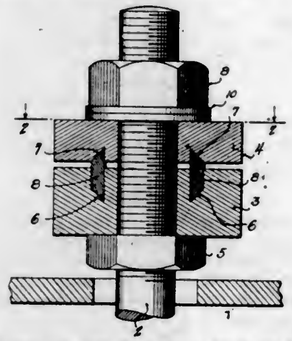


1. In a pan greasing machine, the combination with a plurality of spaced pan greasing units, of lever means for simultaneously adjusting each of said units relative to the others to fit groups of variously spaced pans.

1,810,944. HOT AND COLD CIGARETTE ROD SEALER. WILHELM B. BRONANDER, Montclair, N. J., assignor to American Machine & Foundry Company, a Corporation of New Jersey. Filed Apr. 30, 1930. Serial No. 448,667. 9 Claims. (Cl. 131—143.)

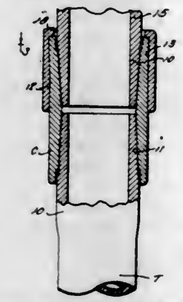
1. The combination with means for applying heat to the freshly pasted traveling seam of a cigarette rod, of mechanism for immediately thereafter applying pressure and cooling said seam, whereby sweating of the cigarette rod is avoided.

1,810,945. RAILWAY TRAFFIC CONTROLLING APPARATUS. HAROLD W. BRYAN, South Hills, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Nov. 17, 1930. Serial No. 496,091. 5 Claims. (Cl. 246—63.)



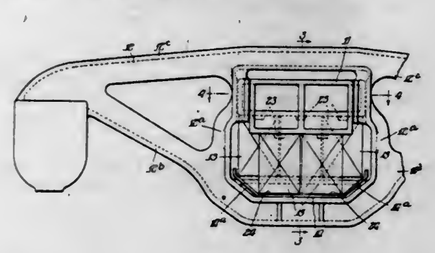
1. Train carried speed controlling apparatus comprising a main relay controlled from the trackway and energized in normal or reverse direction according as traffic conditions in advance permit of high speed or require medium speed, a speed responsive device having a high speed contact and a medium speed contact, a slow-releasing pilot relay having two windings, a circuit for the first winding of said pilot relay including a normal contact of said main relay and the high speed contact of said speed responsive device, a circuit for the second winding of said pilot relay including a reverse contact of said main relay and the medium speed contact of said speed responsive device, a brake controling magnet acting when deenergized to cause an automatic application of the brakes, and a circuit for said magnet controlled by a front contact of said pilot relay.

1,810,946. NONCORROSIVE SOLUTIONS. WILLIAM S. CALCOTT, Penns Grove, N. J., and HERBERT W. WALKER, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 7, 1929. Serial No. 391,106. 16 Claims. (Cl. 23—239.)



2. A composition of matter, which when added to water and water-alcohol mixtures renders said liquids substantially non-corrosive toward ferrous materials, comprising at least one substance from the group of hydroxyl-containing compounds consisting of mono-hydric alcohols and polyhydric alcohols together with a small amount of a water soluble derivative of an amino carboxylic acid.

1,810,947. CUTTING HEAD FOR SHAPERS. JOHN P. COELING, Sheboygan, Wis. Filed July 11, 1929. Serial No. 377,394. 1 Claim. (Cl. 144—231.)



A cutter head for use with wood working shapers comprising upper and lower similar circular collars of substantially the same diameter and adapted to be fitted on a shaper spindle, said collars having opposed knife receiving slots in their confronting faces, the slots in the lower collar being substantially deeper than the slots in the upper collar, a knife fitted in each pair of vertically alined slots and embedded for a substantial portion of its extent in the direction parallel to the axis of the spindle in the lower collar so that a substantial portion of the knife lies within the confines of the periphery of the lower collar, each slot of the lower collar, at least, terminating at one end inwardly of the periphery of the collar, the periphery of the lower collar being smooth except for the projecting end of the knife and being entirely exposed whereby stock may be presented to the entire cutting edge of the knife while positioned to ride on the smooth periphery of the lower collar, and means coacting with the collars to force them into clamping engagement with the knife.

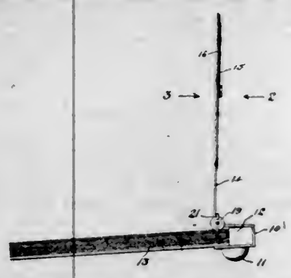
1,810,948. COLLAR, TUBING, AND CASING PROTECTOR. NORMAN L. DORN and WILLIAM A. CLARK, Long Beach, Calif. Filed May 13, 1930. Serial No. 452,019. 7 Claims. (Cl. 255—28.)

4. In combination, a length of tubing having a tapered screw-threaded portion, a collar having a tapered screw-threaded opening receiving the said portion of tubing, and a protector having a smooth tapered opening tightly receiving the end portion of the collar which has been expanded by cooperation between the threaded portion of the tubing and the tapered threaded opening in the collar, and an inwardly projecting flange at the largest end of the protector opening engaging an end of the collar.

1,810,949. TRUCK CONSTRUCTION. HARRY C. DREIBUSS and GEORGE S. CHILES, St. Louis, Mo., assignors to Scullin Steel Co., St. Louis, Mo., a Corporation of Delaware. Filed Nov. 14, 1927. Serial No. 233,042. 21 Claims. (Cl. 105—197.)

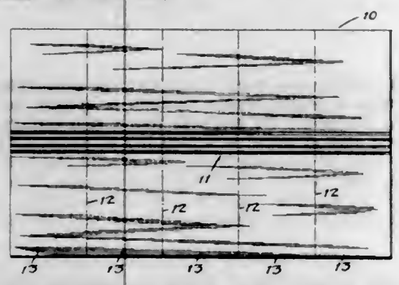
1. A railway car truck comprising, in combination, a side frame, a bolster, and a plurality of springs for supporting the bolster for said side frame, said springs having their axes arranged in a plurality of planes arranged transversely of said side frame, one of said planes including the longitudinal center line of said side frame, the springs having their axes in said last mentioned plane being at a higher level than the springs in said other planes.

1,810,950. INSULATOR. ALBERT C. EARHART, Cleveland Heights, Ohio. Filed Apr. 5, 1930. Serial No. 441,773. 8 Claims. (Cl. 173—314.)



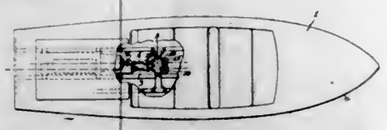
1. In an insulator, means adapted to have one end thereof attached to a support, the other end thereof being enlarged, a rubber insulating member having a cavity formed therein, said cavity having a restricted neck portion, said enlarged end being received in said cavity and yieldably held therein, and means associated with said insulating member for securing a conductor thereto.

1,810,951. GAME PROMPTER. NATHAN EISENBERG, Philadelphia, Pa. Filed Dec. 30, 1930. Serial No. 505,534. 3 Claims. (Cl. 281—15.)



1. A game prompter comprising a channel member of resilient material, a cover upstanding from said channel

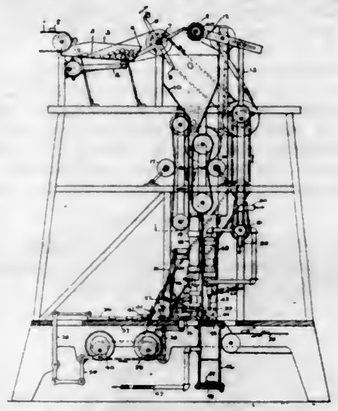
member and carrying prompting indicia, means to clamp the cover at an angular position relative to the channel



member, and a tablet clamped by the channel member and serving as an easel foot to maintain the cover member in upstanding position.

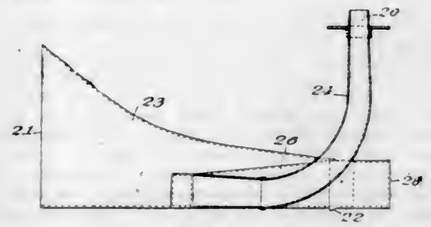
1,810,952. BOOK COVER. HENRY N. FELEY, East Orange, N. J. Filed Feb. 16, 1928. Serial No. 254,696. 3 Claims. (Cl. 281—29.)

3. A filler blank for a book cover, comprising a substantially rectangular sheet of stiff material having four parallel grooves cut across said sheet at approximately the central portion thereof, said grooves being cut entirely across said blank and leaving only a thin web of material so as to permit of said blank being handled in one piece.



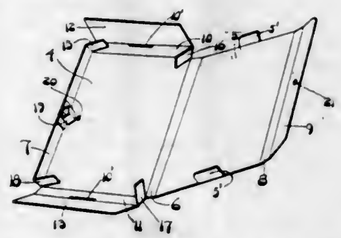
1,810,953. MOTOR BOAT LAYOUT. FRANK O. FERNSTRUM, Detroit, Mich., assignor to Gray Marine Motor Co., Detroit, Mich., a Corporation of Michigan. Filed May 31, 1930. Serial No. 458,350. 2 Claims. (Cl. 115—34.)

1. In a boat hull, a single motor mounted therein, a seating compartment entirely forward of said motor, a propeller shaft journalled in the center plane of said hull, a propeller on said shaft, said motor being geared to said propeller shaft and offset laterally from said plane in a position to balance the starting torque reaction of said propeller.



1,810,954. PRUNE PITTER. THOMAS W. W. FORREST, Fresno, Calif., assignor to Sun-Maid Raisin Growers of California, Fresno, Calif., a Cooperative Association of California. Filed Feb. 15, 1928. Serial No. 254,457. 13 Claims. (Cl. 146—17.)

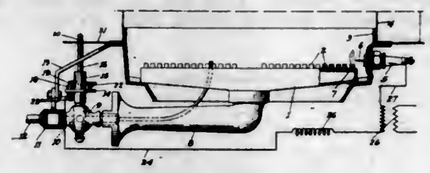
1. A holder arranged and adapted to hold a drupaceous fruit body, a soft rubber member, means for presenting said holder against one side of said member with one end of the fruit thereagainst, and means operative against the opposite end of the fruit for pushing the end of the



pit of the fruit through said member and suction means active on the opposite side of said member arranged to draw the pit therethrough.

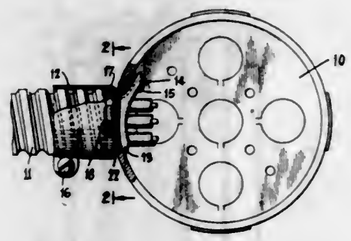
1,810,955. SOUND REPRODUCING MACHINE. WILLIAM THOMAS FORSE, London, England, assignor to Columbia Phonograph Company, Inc., Bridgeport, Conn., a Corporation of New York. Filed Dec. 23, 1926, Serial No. 156,599, and in Great Britain Feb. 26, 1926. 8 Claims. (Cl. 181—27.)

8. In a sound amplifier, a forwardly curved tube providing an inlet section, a pair of tubes communicating with said inlet section to receive sound therefrom, said tubes running rearwardly at each side of said inlet section and having their rear ends reversedly bent in the plane of their major portion with their rear ends projecting forwardly, and independent outlet sections connected with said ends of said intermediate sections, said outlet sections running forwardly of said intermediate sections and curving laterally toward each other to close the space between the outlet ends.



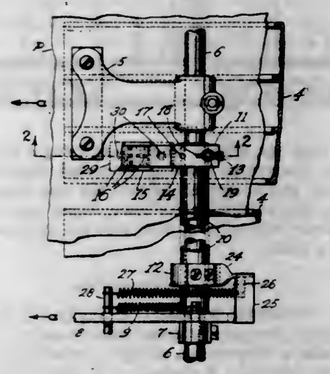
1,810,956. FOLDING BOX. WILLIAM P. FRANKENSTEIN, Cincinnati, Ohio. Filed Aug. 22, 1930. Serial No. 477,056. 1 Claim. (Cl. 229—43.)

A folding box comprising a top, a bottom, ends, sides and closure flaps formed integrally from a blank of sheet



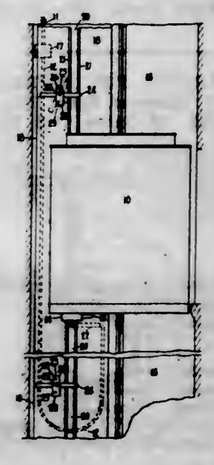
material, members of a snap fastener in the flap and bottom, and means between the top and bottom, forming a part of the box and constituting a support permitting pressure on the fastener member of the flap and the box top to lock the box closed by snapping the fastener element together.

1,810,957. GAS IGNITION MEANS FOR GAS FURNACE BURNERS. RICHARD E. FRASER, Stockton, Calif., assignor to Fraser Furnace Company, Stockton, Calif., a Corporation of California. Filed Mar. 25, 1929. Serial No. 349,610. 1 Claim. (Cl. 200—53.)



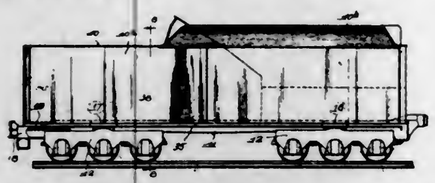
A combination gas valve and electric switch including a valve member, a turnable plug therein, a disc rigid with the plug, a contact pin upstanding from the disc in offset relation to the plug, a vertical socket member resting on the disc, a stem formed with said member to turnably seat in the disc centrally thereof, said socket being adapted to receive an operating rod in nonturnable but removable relation, and an arm formed with the socket and projecting radially therefrom to engage the contact pin.

1,810,958. ARMORED CABLE CONNECTER FITTING. JAMES M. G. FULLMAN, Sewickley, Pa., assignor to National Electric Products Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 17, 1930. Serial No. 428,882. 10 Claims. (Cl. 247—25.)



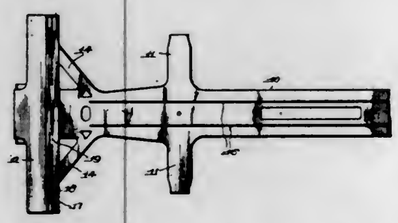
1. A connecter fitting having a body portion, a clamping portion to clamp upon an inserted armored cable and a portion adapted to extend through a box wall, said connecter fitting also being provided at a point in the body portion which is without the box wall when the fitting is in assembled relation thereto with an inspection aperture disposed and related to provide for the inspection of the end of an insulating bushing, which bushing is within the armored cable and which bushing has its end which is to be inspectable projecting over the terminating end of the armored cable and disposed within the connecter fitting.

1,810,959. MARKING DEVICE FOR WRAPPING MACHINES. HENRY E. GOERKE, Floral Park, N. Y., assignor to American Machine & Foundry Company, a Corporation of New Jersey. Filed Oct. 19, 1927. Serial No. 227,126. 4 Claims. (Cl. 164—87.)



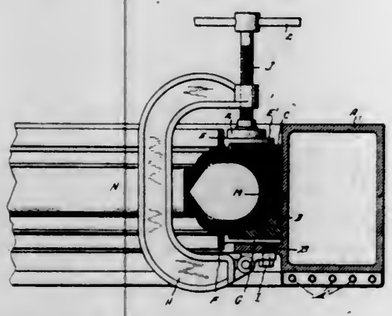
1. The combination with a paper clamping device for paper feeding mechanism, of mechanism for moving said device into and out of clamping position, and means controlled by said mechanism for marking paper fed by the paper feeding mechanism.

1,810,960. ELEVATOR CONSTRUCTION. HARRY EDWARD HALL, Englewood, N. J., assignor to Otis Elevator Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 22, 1930. Serial No. 490,427. 10 Claims. (Cl. 187—1.)



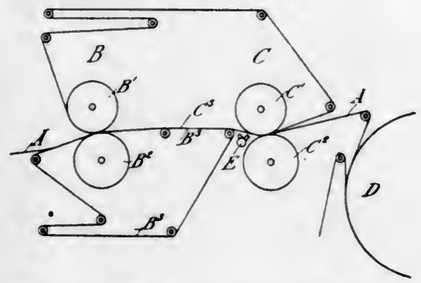
1. In an elevator installation, a hatchway, a body adapted to travel up and down the hatchway, a flexible member attached to said body and depending therefrom into the hatchway, a chute for said flexible member, and means for preventing egress from the chute of any portion of said member within the chute.

1,810,961. TENDER FRAME STRUCTURE. CLARENCE B. HARBISON, Lima, Ohio, assignor to The Ohio Steel Foundry Company, Lima, Ohio, a Corporation of Ohio. Filed Jan. 27, 1928. Serial No. 249,823. 5 Claims. (Cl. 105—236.)



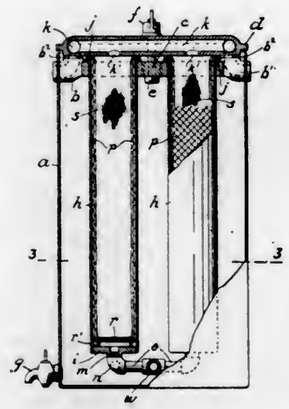
1. In a tank car, a main frame comprising a lingitudinal center sill, transverse bolsters connected therewith, and tank bottom plates secured to said sill and bolsters in a continuous line adjacent their lower edges, and extending laterally therefrom to form with said sill and bolsters the bottom of a tank.

1,810,962. TENDER FRAME. CLARENCE B. HARBISON, Lima, Ohio, assignor to Ohio Steel Foundry Company, Lima, Ohio, a Corporation of Ohio. Filed July 11, 1928. Serial No. 291,719. 4 Claims. (Cl. 105—236.)



1. In combination with a tank, a single piece tender frame casting comprising a longitudinally disposed main beam, bolsters, and an end frame member including a transversely disposed tank supporting portion extending substantially the width of said tank, said main beams, bolsters and end frame member affording the sole support for a tank.

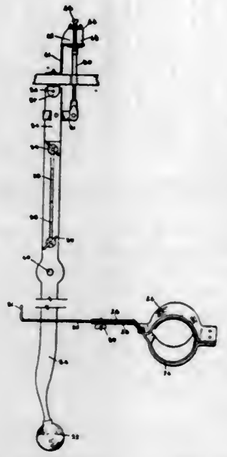
1,810,963. APPARATUS FOR RETREADING TIRES. JAMES C. HEINTZ, Lakewood, Ohio. Filed June 23, 1928. Serial No. 287,665. 17 Claims. (Cl. 18—18.)



5. A tire retreading apparatus comprising a heating chamber and a matrix comprising a plurality of tread forming sections of such size and shape as to receive only the tread portion of a tire therein, a flexible bag adapted to be arranged within the tire and inflatable to force the tread portion of the tire against said matrix, separate side wall holding members engaging the opposite side walls of the tire to hold the same against distortion as a result of internal pressure, said side wall holding members engaging only a portion of the side walls and leaving a considerable space between their edges and the beads of the tire so as to permit the tire to bulge as a result of internal pressure, said side wall holding members being spaced from the matrix so as to maintain the same below vulcanizing temperature and having a plurality of projections thereon extending over said matrix and preventing movement of the holding rings toward each other.

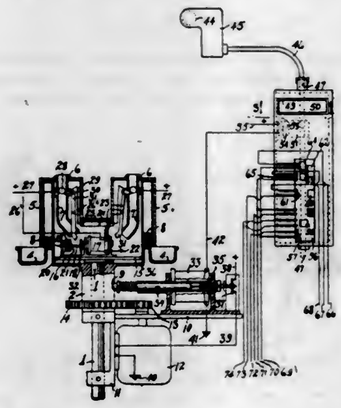
1,810,964. ARRANGEMENT OF WET PRESSES ON PAPER AND BOARD MAKING MACHINERY. WALTHER HELLER, Heidenheim-on-the-Brenz, Germany, assignor to J. M. Voith, Heidenheim-on-the-Brenz, Germany, a Corporation of Germany. Filed Aug. 10, 1929, Serial No. 384,919, and in Germany May 24, 1928. 4 Claims. (Cl. 92—49.)

1. In a wet press for paper making machines, horizontally spaced sets of press rolls between which the paper is adapted to be moved in substantially a horizontal plane, the upper roll in one set and the lower roll in the other set having a hard finished surface whereby the opposite surfaces of the paper sheet are smoothly pressed without reversal thereof.



1,810,965. FILTER. ALFRED HOPKINS, Philadelphia, Pa., assignor to Hopkins-Tull Machinery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 9, 1929. Serial No. 353,844. 1 Claim. (Cl. 210—184.)

A filter comprising a casing, a plate supported across the upper part thereof, members secured to the casing and plate and through which liquid to be filtered is adapted to respectively inflow and outflow, a casing head above said plate provided with a passage communicating with the flow passages in said members, filter containers aligning with holes in said plate and depending from and supported by said plate, a filter bag within each container, and means for outflow of unfiltered liquid from the passage in said plate through said holes to the respective filter containers.

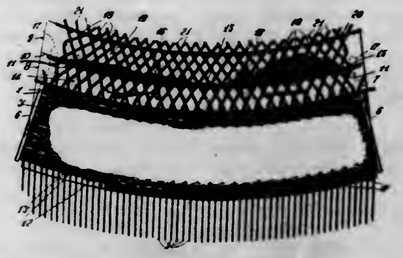


CARNEGIE LIBRARY OF ATLANTA

1,810,966. SIGNAL FOR TURNING CORNERS. LOUIS HORSTMAN, Sterling, Nebr. Filed Feb. 10, 1930. Serial No. 427,337. 2 Claims. (Cl. 74—39.)

1. Operating mechanism for a turning signal for automobiles in which a pivoted signal arm is movable to operative and inoperative positions and displays turning indicia in its operative position, said operating mechanism including a hand lever adapted for attachment to the footboard of the automobile, an extensibly adjustable guide member adapted for attachment at its extremities to the steering post and to a side wall respectively of the automobile, a connection between said lever and the signal arm for moving the signal arm to operative or inoperative position in response to the movements of said lever, and means for adjustably altering the length of said lever.

1,810,967. ZONING AND FARE COLLECTING SYSTEM. JOHN W. HULME, Jackson Heights, N. Y. Original application filed Jan. 21, 1927, Serial No. 162,581. Divided and this application filed Oct. 23, 1929. Serial No. 401,741. 21 Claims. (Cl. 194—6.)

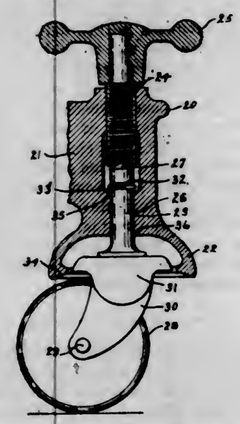


1. In a zoning system the combination with a restricted entrance-way and a restricted exit, barriers in said ways, means actuated by a coin for releasing the barriers of the entrance-way and delivering a token, and means controlled by the token representing the relative position of the exit way with respect to the point of travel at which delivery of the token was effected for releasing the barriers of the exit way.

1,810,968. AUTOMOBILE SIGNALING DEVICE. FRANK J. JAROS and EDWARD T. JAROS, Chicago, Ill. Filed Dec. 30, 1927. Serial No. 243,500. 2 Claims. (Cl. 200—11.)

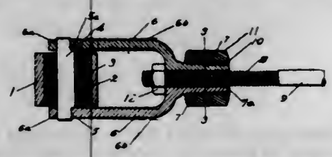
1. A manually operated signaling switch adapted to alternately close one of two circuits, comprising a casing, a shaft rotatably mounted within said casing, a contact member mounted upon the end of said shaft and provided with two contact arms, two circuit terminal posts within said casing, connected respectively to alternative circuits, and a central terminal post connected to a source of electric current, whereby rotation of said shaft in opposite directions serves to alternately close the circuit between said central terminal post and one of said circuit terminal posts, said contact arms and posts constructed and arranged to prevent the simultaneous closing of the circuit between said central terminal post and both of said circuit terminal posts and a base plate provided with upturned flanges for restricting movement of said contact arms, substantially as described.

1,810,969. METHOD OF MAKING COMBINED CLOSELY WOVEN AND FITCH WORK FABRIC. LEWIS LARSEN, Menominee, Mich., assignor to Heywood-Wakefield Company, Boston, Mass., a Corporation of Massachusetts. Filed Dec. 28, 1928. Serial No. 328,894. 8 Claims. (Cl. 147—48.)



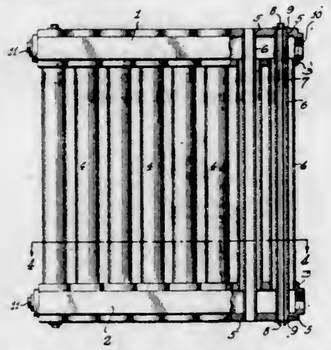
1. The method of making a fabric of the kind described which consists in providing a piece of substantially close woven stake and strand fabric material having stake portions projecting beyond one edge thereof, then placing said material upon a templet having stake guiding means thereon, deflecting the projecting stake portions substantially in the plane of the material and engaging them with the desired guiding means and then fitching in strands upon said deflected projecting stake portions along the desired line thereon to form a combined close woven stake and strand and fitched fabric.

1,810,970. FURNITURE FRAMING AND METHOD OF MAKING THE SAME. LEWIS LARSEN, Menominee, Mich., assignor to Heywood-Wakefield Company, Boston, Mass., a Corporation of Massachusetts. Filed June 17, 1929. Serial No. 371,338. 1 Claim. (Cl. 144—309.)



The method of making a furniture frame member or the like which consists in providing a thin walled metal tube, inserting a plurality of wooden dowel members therein in endwise spaced relation at least in part and then bending the composite structure at a zone containing such a dowel member.

1,810,971. ADJUSTABLE CASTER. RALPH L. LEE, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Aug. 6, 1923. Serial No. 655,916. 5 Claims. (Cl. 16—19.)



1. Supporting mechanism comprising, in combination, an article to be supported including a foot member; a caster having a stem portion journalled in said foot member, said stem portion and foot member adapted to be relatively slidable; and means including a screw threaded into said foot member and in alignment with the caster stem and provided at its lower end with a step bearing portion for receiving the caster stem for producing relative endwise movement between the step bearing and the foot member.

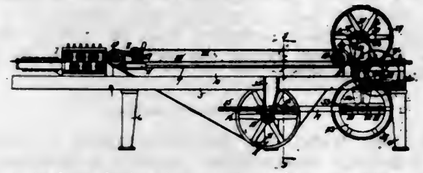
1,810,972. CLEVIS. HUGH C. LORD, Erie, Pa. Filed Oct. 13, 1924. Serial No. 743,307. 7 Claims. (Cl. 287—100.)

1. In a clevis mechanism, the combination of a joint comprising an outer and inner joint member; a rubber bushing between said members, the contacting surfaces of the bushing and members being fixed relatively to each other and receiving oscillatory movement by distortion of the rubber; and a split clevis locked relatively with and contacting the inner joint member, the clevis having sufficient clearance relatively to the outer member to prevent contact under normal axial thrusts.

1,810,973. RADIATOR. JOHN B. LUKOMSKI, Detroit, Mich. Filed May 5, 1930. Serial No. 449,755. 2 Claims. (Cl. 257—142.)

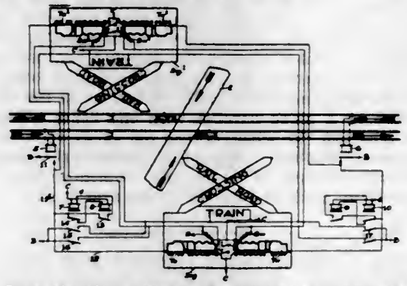
1. A radiator comprising a pair of headers, outer tubes joined to confronting walls of said headers and establishing communication between the headers, inner tubes passed through said outer tubes and headers and secured in the outwardly facing walls thereof, said inner tubes being open to the atmosphere at both ends, inlet means in one of the headers, outlet means in the other header, tie rods passing through certain of said inner tubes, and means on said rods clamping said headers against the ends of said outer tubes.

1,810,974. PNEUMATIC DISPATCH CARRIER. DANIEL J. MACMILLAN, Brooklyn, N. Y. Filed Apr. 4, 1930. Serial No. 441,485. 4 Claims. (Cl. 116—133.)



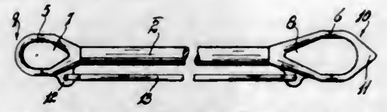
1. A dispatch carrier, comprising a rigid inner tube of comparatively thin walls, a pair of comparatively narrow rings arranged to turn on the inner tube and provided with numerals on their periphery, a pair of outer tubes of thicker material than the inner tubes, one mounted between the end of the carrier and the said rings at each end portion and secured to the inner tube, one of the outer tubes having a mark arranged to register with the numerals on the rings, a closure for one end of the tube, a bumper ring mounted on each said outer tube at the end portion, and a split ring of very thin spring metal placed between each said number ring and the inner tube to provide friction to retain the number ring in adjusted positions.

1,810,975. ROTARY DRAW WORKS HAVING DUAL ROTARY MACHINE DRIVE. ARTHUR E. MARTOIS, Los Angeles, Calif. Filed Jan. 12, 1929. Serial No. 332,135. 16 Claims. (Cl. 255—19.)



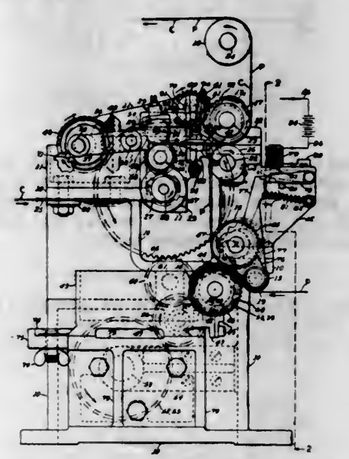
1. In combination: a derrick structure having a base; a plurality of draw works uprights secured to said base at their lower ends and to the derrick at their upper ends; a rotatable drum rotatably supported by certain of said uprights; a line-shaft mounted on certain of said uprights above said drum; drum-drive means connected to said line-shaft and said drum; a jack-member rotatably supported by certain of said uprights near said base; means mounted on said jack-member for driving a rotary machine; a counter-shaft rotatably supported in a lower plane than said line-shaft; high-speed drive-means connected to said jack-member and said counter-shaft; low-speed drive-means connected to said jack-member and said counter-shaft; means connected to said line-shaft and said counter-shaft whereby one of said shafts operates the other of said shafts; and means for operating said counter-shaft.

1,810,976. STRIP STRAIGHTENING AND CUTTING MACHINE. GEORGE F. MATTESON, Rockyhill, Conn., assignor to The F. B. Shuster Company, New Haven, Conn., a Corporation of Connecticut. Filed Sept. 28, 1928. Serial No. 308,977. 14 Claims. (Cl. 153—32.)



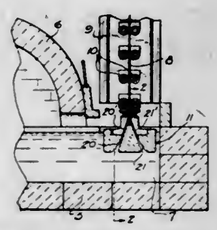
1. A feeding device for metal working machines, said device including an endless, flexible actuator, guides for said actuator, said actuator including a gripper interposed in the length of said actuator and located and movable in line with and wholly between said guides, means for effecting a reciprocating movement of said actuator, and means on said gripper for automatically gripping a piece of stock when the gripper is moved in one direction but to release said stock when the gripper is moved in an opposite direction.

1,810,977. HIGHWAY CROSSING SIGNAL. JAMES C. MOCK, Detroit, Mich. Filed Feb. 26, 1930. Serial No. 431,616. 8 Claims. (Cl. 246—130.)



1. In a signalling system for highway crossings where a highway crosses a railroad track, a signal including illuminable pictorial representations of trains facing in opposite directions, circuits for selectively illuminating said representations, and control means for said circuits, automatically responsive to traffic conditions, to illuminate that representation corresponding to actual approaching danger.

1,810,978. WELDLESS ELEVATOR LINK. GEORGE W. MOORE, Long Beach, Calif. Original application filed Nov. 18, 1927, Serial No. 234,228. Divided and this application filed Sept. 23, 1929. Serial No. 394,671. 4 Claims. (Cl. 59—84.)

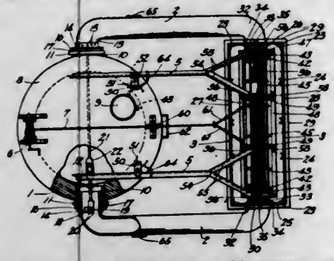


1. A weldless elevator link for oil well elevators formed of a single piece of metal, said link comprising a straight central section, enlarged ends on said piece, eyes cut in said enlarged ends, a loop on said link on both ends thereof and a hand grasp secured to said loops.

1,810,979. CIGARETTE CORK TIPPER. PETER MARTIN NEJEDLY, Brooklyn, N. Y., assignor to American Machine & Foundry Company, a Corporation of New Jersey. Filed Feb. 7, 1930. Serial No. 426,756. 16 Claims. (Cl. 131—39.)

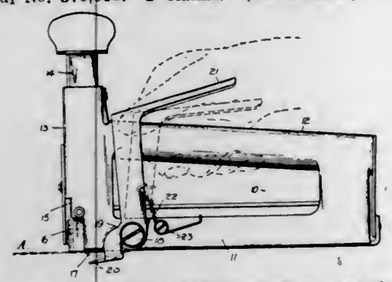
1. In a machine for applying covering material to separated portions of a continuous strip of material, the combination with means for continuously feeding the strip of material and applying adhesive to separated portions thereof, of means for intermittently feeding a continuous strip of covering material, a continuously rotating knife for cutting strips of covering material while it is stationary, and mechanism for applying the severed strips to the adhesive portions of the material.

1,810,980. METHOD AND APPARATUS FOR FORMING SHEET GLASS. WILLIAM E. NOBBE, Toledo, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 28, 1928. Serial No. 250,127. 12 Claims. (Cl. 49—17.)



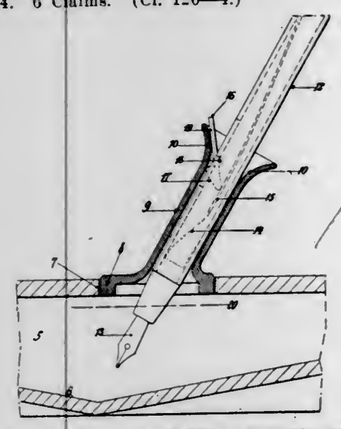
6. The method of forming sheet glass which consists in drawing a plurality of streams of molten glass upwardly from a molten bath, uniting said streams at their upper ends and while they are still in a substantially vertical position to form a single sheet, and in continuously forcing glass upwardly into the stream sources under hydrostatic pressure.

1,810,981. ADJUSTABLE SCREEN INTAKE. OLIVER E. NOBLE, Oklahoma City, Okla. Filed Sept. 6, 1929. Serial No. 390,830. 5 Claims. (Cl. 61—17.)



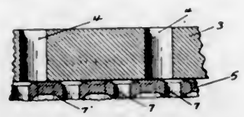
1. In a device, as described, the combination with a closed topped intake well disposed in a water reser-

voir, said well having opposite side intake openings, a pair of parallel pipe members one end of each pivotally mounted in one of said openings, their free end portions curved inwardly toward each other, of a screen supported therebetween, an open bottomed skimmer box disposed



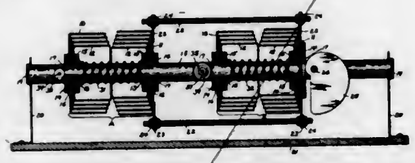
upon said free end portions about said screen, means within said skimmer box for regulating the flow of water to said screen, means for clamping said pipe members in said openings, and strut means for holding said skimmer box and screen rigidly at a desired height.

1,810,982. ATTACHMENT FOR STAPLING MACHINES. LOU OBSTFELD, Brooklyn, N. Y. Filed June 11, 1929. Serial No. 370,052. 2 Claims. (Cl. 1—46.5.)



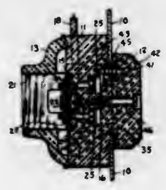
1. In a stapling device having an upright staple driving arrangement, a lateral base portion and hand grip spaced thereover, the combination of gripping means mounted on the device and having a jaw portion operating under the base, and a lever projecting over the hand grip whereby the stapling device may be held and gripping means operated in the same hand.

1,810,983. WRITING IMPLEMENT. JAMES O'SHAUGHNESSY, Tuckahoe, N. Y. Filed Feb. 19, 1931. Serial No. 516,874. 6 Claims. (Cl. 120—4.)



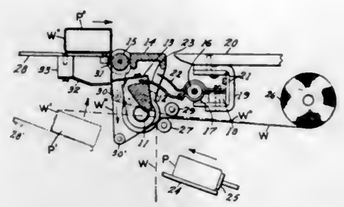
1. In combination, a self filling fountain pen having a lever for actuating the self filling mechanism of said pen, an inkstand and means on the latter adapted to operate said lever when the pen is inserted into the inkstand to fill the pen.

1,810,984. PRESSING APPARATUS. VANNEY A. RAY, San Francisco, Calif., assignor of one-third to Daniel P. Kelleher. Filed Mar. 24, 1930. Serial No. 438,404. 4 Claims. (Cl. 68—9.)



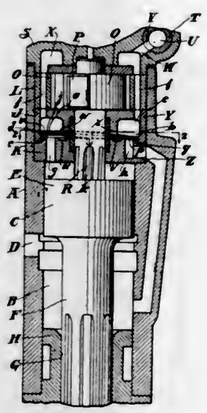
3. A covering plate formed to fit over the face of a steaming and pressing machine head comprising a thin metal sheet finely perforated over its working surface and having burrs around the perforations on the outer surface of the sheet.

1,810,985. GANG OR MULTIPLE-UNIT VARIABLE ELECTRIC CONDENSER. HOWARD F. REICHENBACH, Wolcott, Conn., assignor to Chase Companies, Inc., Waterbury, Conn., a Corporation. Filed Feb. 10, 1928. Serial No. 253,333. 8 Claims. (Cl. 175—41.5.)



8. A gang or multiple-unit variable electric condenser, comprising a plurality of condenser-units, each consisting of a pair of complementary members, each having a plurality of vanes offsetting toward the vanes of its complementary member; means for coupling one member of one unit to a member of an adjoining-unit; a rotary cam for imparting concurrent bodily movement to the coupled members in a plane parallel with the vanes thereof so as to telescope the same between the vanes of their complementary members; whereby a differential movement-ratio may be imparted to the said coupled-members by a substantially uniform rotation of the said cam.

1,810,986. CONVENIENCE OUTLET FOR ELECTRIC APPLIANCES. EDWIN A. RUTENBER, Milwaukee, Wis., assignor to A. J. Lindemann & Hoverson Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed May 15, 1928. Serial No. 277,969. 6 Claims. (Cl. 200—133.)

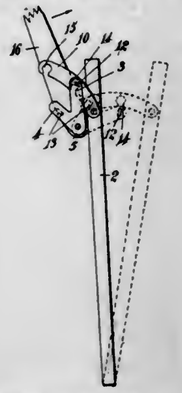


1. A convenience outlet adapted to be used with electrical apparatus comprising a base having line terminals and a fuse socket on one face thereof, outlet contacts on another face thereof, a removable outlet cap adapted to secure said base to a support and a key member protruding from said last named face adapted to engage said support in interlocking relation.

1,810,987. KNIFE HEATER FOR WRAPPING MACHINES. FRANK REINHOLD SCHMITT, Queens Village, N. Y., assignor to American Machine & Foundry Company, a Corporation of New Jersey. Filed Jan. 24, 1930. Serial No. 423,106. 20 Claims. (Cl. 146—43.)

1. The combination with a knife acting on a plastic coated material, of mechanism for moving said knife in and out of cutting position, and means for establishing in the path of said knife a heated zone, whereby said knife is kept practically free of plastic material.

1,810,988. VALVE MECHANISM FOR ROCK DRILLS. FRED M. SLATER, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Jan. 12, 1929. Serial No. 331,961. 9 Claims. (Cl. 121—19.)

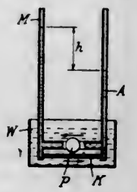


1. In a fluid actuated rock drill, the combination of a cylinder and a piston, an exhaust port in the cylinder controlled by the piston, a valve chamber, inlet passages leading from the valve chamber to the cylinder, an oscillatory plate valve in the valve chamber controlling the inlet passages, and means in the valve chamber cooperating with the valve to cut off the flow of pressure fluid to both ends of the cylinder during a portion of each opening movement of the valve.

1,810,989. MEANS FOR TREATING SOLIDIFIED CARBON DIOXIDE. ORVALL SMILEY, Indianapolis, Ind. Filed Feb. 12, 1930. Serial No. 427,997. 5 Claims. (Cl. 23—239.)

1. Means for treating solidified carbon dioxide for retarding evaporation thereof, comprising commingling with the mass of solidified substance a dividing element.

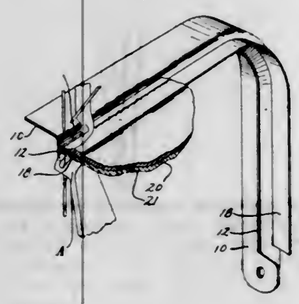
1,810,990. LEVER MECHANISM. HUGH BOGART TARBOX, Toronto, Ontario, Canada. Filed Dec. 9, 1927. Serial No. 238,788. 2 Claims. (Cl. 74—110.)



1. A lever mechanism comprising two unitedly rotatable lever arms arranged one in advance of the other, the leading arm being longer than the following arm and provided with a projecting key, a pivoted link having a recess into which the key enters and from which it recedes for causing a partial forward movement of the link during the forward rotation of the lever arms, the other lever arm engaging the link and completing its forward movement when the key recedes from the recess.

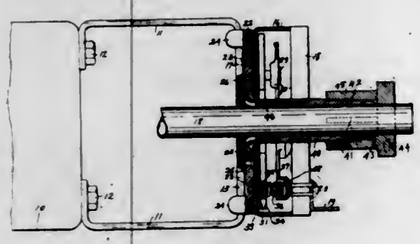
1,810,991. BINDING FOR LINOLEUM TOPS. ANTHONY VANDERVELD, Grand Rapids, Mich., assignor to Grand Rapids Store Equipment Corporation, Grand Rapids, Mich., a Corporation of Michigan. Filed Sept. 17, 1930. Serial No. 482,456. 4 Claims. (Cl. 45—31.)

1. In a construction of the class described, a horizontal supporting frame having spaced apart upwardly extending bosses thereon, a sheet metal plate located over the supporting frame resting on and secured to said bosses, a linoleum cover over said plate, and a binding strip of metal around the edges of said plate and linoleum and engaging thereagainst, said binding strip having parts extending therefrom underneath the plate, over said frame and between said bosses engaging with said frame to secure the strip against disconnection.



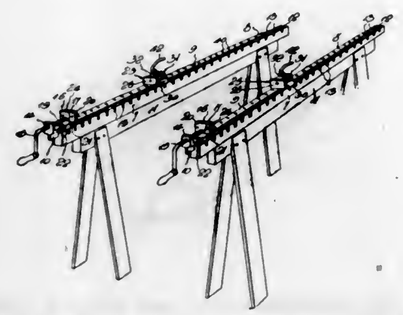
1,810,992. METHOD AND MEANS FOR DETERMINING THE VISCOSITY OF LIQUID SUBSTANCES. RICHARD VON DALLWITZ-WEGNER, Heidelberg, Germany. Filed Dec. 22, 1926, Serial No. 156,416, and in Germany Jan. 7, 1926. 7 Claims. (Cl. 265—11.)

1. The method of measuring the viscosity of liquids which consists in causing the liquid to be forced at a



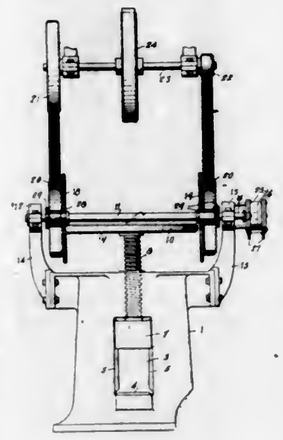
comparatively low and uniform rate into a vessel while permitting return slippage through an open passage of fixed cross sectional area, whereby the viscosity is determined by the level to which the liquid is raised in said vessel.

1,810,993. METHOD OF MANUFACTURING TRAVELING BAGS. HENRY F. WELTZ, St. Louis, Mo., assignor to Milwaukee Stamping Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 11, 1929. Serial No. 406,434. 2 Claims. (Cl. 190—54.)



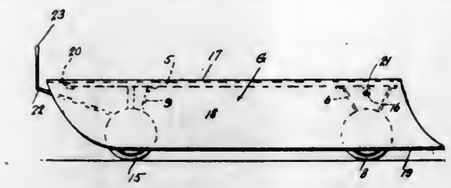
1. The method of forming traveling bags consisting in first completing a set of jaw frames, and then securing to their outer surfaces along lines inset from their outer margins, a set of laterally projecting metal connector strips of sufficient thinness and softness to permit stitching operations by an ordinary bag sewing machine, then applying the marginal portions of a bag to said connector strips with its edges abutting the jaw frames, and machine stitching the same to the connector strips while supporting and guiding the jaw and connector strip upon a portion of the sewing machine in the angle at the line of their connection for straight line stitching at a uniform distance from the frame.

1,810,994. STEERING COLUMN SWITCH. ROBERT K. WINNING, Wauwatosa, Wis., assignor to Clum Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed May 20, 1927. Serial No. 192,830. 23 Claims. (Cl. 200—59.)



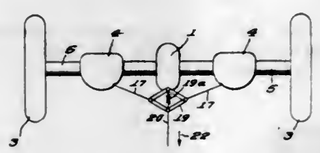
1. The combination with a driving shaft and a relatively fixed member adjacent thereto, of a switch casing including a terminal head with housed contacts interlocked with said member against rotative movement about the axis of said shaft and freely disengageable from said member in an axial direction, a switching mechanism including a movable part housed within said casing and operatively arranged for interaction with said contacts and provided with a connection to said shaft, said connection comprising a means for maintaining said casing in engagement with said member.

1,810,995. WOODWORKER'S CLAMP. WILLIAM H. WOELK, Crookston, Minn. Filed July 23, 1930. Serial No. 470,142. 5 Claims. (Cl. 144—291.)



2. In a work clamping means, two parallel clamp-supporting bars, each bar having a longitudinal groove and a plurality of transverse grooves intersecting said longitudinal groove and opening through opposite sides of the bar, all of said grooves being relatively deep and narrow, two clamp base bars adapted to rest upon said clamp-supporting bars in positions extending either longitudinally or transversely thereof, said clamp base bars having longitudinal flanges adapted for reception in either said longitudinal grooves or said transverse grooves, and relatively adjustable clamp jaws carried by said clamp base bars.

1,810,996. SCREW POWER PRESS. EDMUND W. ZEH, Newark, N. J. Filed July 27, 1929. Serial No. 381,658. 11 Claims. (Cl. 74—26.)

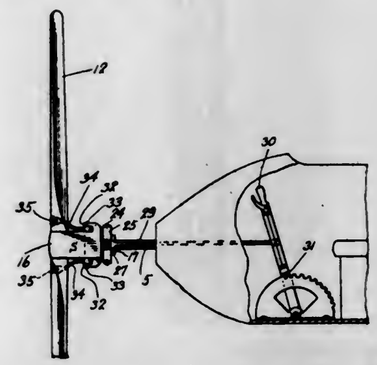


1. In a power press, the combination with a frame, a screw mounted in said frame, a head on one end of said screw and a friction wheel on the other end, of coaxial friction drive members at opposite points on the edge of said friction wheel, means for rotating said drive members at different speeds, and means for causing alternate engagement of said friction drive members with said friction wheel.

1,810,997. GLIDER. EDWARD C. BAUER, Cincinnati, Ohio. Filed Jan. 28, 1930. Serial No. 424,001. 5 Claims. (Cl. 280—8.)

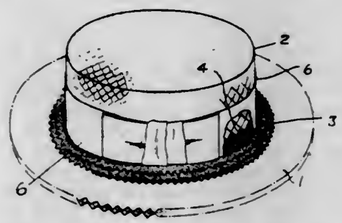
1. In a structure of the type embodying, a wheeled frame and a sled attachment, a plate to rest on top of the wheeled frame having depending side runners terminating a distance above the ground outside of the wheels, and quick detachable means fastening the sled attachment upon the wheeled frame.

1,810,998. BACKSTOP FOR MOTOR VEHICLES. OLOF BJORK, Taft, British Columbia, Canada. Filed Apr. 28, 1930. Serial No. 447,977. 4 Claims. (Cl. 188—30.)



1. A backstop for motor driven vehicles comprising, in combination with the driving axle, housings arranged upon and receiving said axle upon opposite sides of the differential housing, a clutch comprising a clutch member keyed to said axle and a clutch member loose upon said axle in each housing, expansion coil springs upon said axle abutting said housings and said loose clutch members, a coil spring pivotally supported at one end and encircling said loose clutch member, a resilient frame supported between said housings, connection between said spring and loose clutch members, and manually operable means for actuating said resilient frame.

1,810,999. FLY-OPEN KNIFE. ROBERT E. BROWN, Olean, N. Y. Filed Nov. 18, 1930. Serial No. 496,484. 3 Claims. (Cl. 30—10.)

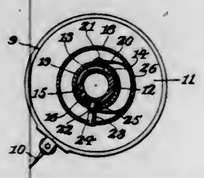


2. A knife comprising a handle defining a pocket open along one side and having side walls and a spring between the side walls extending longitudinally of the pocket with its free end adjacent an end of the pocket, a blade pivoted in the said end of the pocket and having shoulders engageable by the free end of the spring to releasably secure the blade in opened and closed positions, an actuating leaf extending longitudinally in said pocket and having pins at one end engaged in sockets formed in the side walls to pivotally mount the leaf, a lever at one side of said leaf extending through an opening in the adjacent side wall and disposed against the outer face of the side wall and movable longitudinally thereof to rock said leaf and move the spring out of engagement with a shoulder of said blade to release the blade, and a latch to releasably secure said lever against movement.

1,811,000. AEROPLANE PROPELLER. CLYDE BYER, Marion, Ind. Filed July 24, 1929. Serial No. 380,674. 2 Claims. (Cl. 170—163.)

1. A propeller structure of the class described including, in combination, a shaft, a block fixed to the shaft, a pair of propeller blades extending from the block in opposite directions, means for rockably engaging the propeller blades with the block, a slide of U-shaped formation to provide a bight with a pair of spaced parallel sides projecting therefrom in one direction to straddle the block, and a hub projecting therefrom in the opposite direction and having an annular groove, said hub and bight being circumjacent the shaft and rotatable therewith, projections on opposite corners of the bight extending in spaced parallelism with adjacent edges of the sides, links pivotally mounted between the projections and adjacent edges of the slide, ears on the propellers with which the links are pivotally engaged, and means for sliding the slide on the shaft comprising a sectional ring seated in the groove of the hub and provided with pins at diametrically opposite sides, an annular frame having openings for pivotally receiving said pins, an arm pivotally supporting one side of the frame and an operating lever operatively attached to the opposite side of the frame.

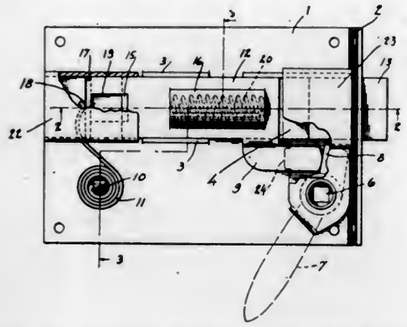
1,811,001. STRAW HAT. JOHN CAVANAGH, Norwalk, Conn., assignor to Hodshon-Berg, Inc., Norwalk, Conn. Filed May 24, 1930. Serial No. 455,263. 1 Claim. (Cl. 2—193.)



A straw-braid hat of the character described, comprising a flat stiffened brim, a stiffened crown, and means for connecting said brim and crown, said means comprising an annular flexible portion extending horizontally through a portion of the brim and vertically through a portion of the crown and spacing apart said brim and crown, said portion consisting of overlapping strips of felted cloth having their edges exposed to view in the brim portion and concealed from view in the crown portion only by the usual ribbon and sweat band.

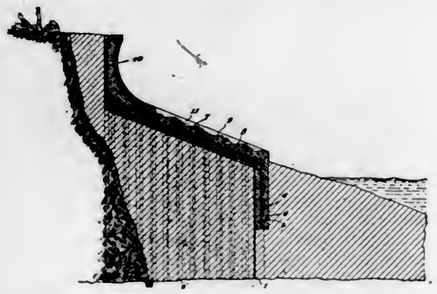
1,811,002. WELL DRILLING APPARATUS. REBUS D. DODDS, Pampa, Tex., assignor to James C. Dodds, Houston, Tex. Filed Feb. 24, 1928. Serial No. 256,539. 17 Claims. (Cl. 255—64.)

1. The combination with a tubular drill stem, of a reciprocable drilling tool at the lower end of the stem, an operating cable extending from the ground surface down through the stem and connected to said tool and means operable by the stem and effective to release said cable from said tool.



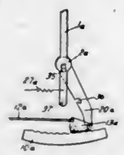
1,811,003. PHONOGRAPH ATTACHMENT. KOSMOS ETTIHIOS, New Orleans, La. Filed Mar. 21, 1929. Serial No. 348,947. 1 Claim. (Cl. 274—24.)

In a phonograph, a tone arm, a sound reproducer having a stylus for engagement with a record, and coacting means on said tone arm and reproducer for adjustably securing the latter with the stylus selectively extending at forward and rearward inclinations whereby the reproducer may be applied to a record at diametrically opposite points thereof, said securing means including a head on the tone arm and formed with spaced, concentrically arranged flanges provided with aligned openings, a spring disposed between the flanges, a pin extending through the outermost of said openings and forced by said spring to project through the innermost of said openings, a collar formed on the reproducer and extended within the innermost of said flanges, said collar having its periphery formed with a pair of spaced depressions for the selective reception therein of the inner end of said pin to resiliently lock the head and reproducer against relative rotation, said depressions being disposed at equal distances from and on opposite sides of a plane passed through the stylus and perpendicular to the plane through which the stylus is movable to extend the same at said forward and rearward inclinations.



1,811,004. LOCK ASSEMBLY FOR VEHICLES. JOHN B. FLYNN, Detroit, Mich., assignor to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 4, 1929. Serial No. 330,240. 4 Claims. (Cl. 292—169.)

1. In a door lock, a reciprocable bolt arranged to engage a keeper and having a semi-cylindrical portion, a slide having a semi-cylindrical portion and adapted to slidably engage said bolt, said semi-cylindrical portion of the bolt adapted to cooperate with the semi-cylindrical portion of the slide to form a chamber, and resilient means in said chamber for resisting relative movement between said



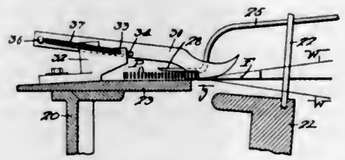
slide and said bolt, and resilient means of greater strength for projecting said slide and bolt whereby the bolt alone can be retracted against the resistance of the weaker resilient means and the bolt and slide against the resistance of the stronger resilient means.

1,811,005. SEA WALL. EDWARD ARTHUR FORBES, West Palm Beach, Fla. Filed May 22, 1930. Serial No. 454,737. 4 Claims. (Cl. 61—39.)

1. A sea wall comprising sheet metal piling interlocked and driven to a depth to insure permanency and stability and forming a bulkhead, transverse sheet metal piling permanently and rigidly connected to the bulkhead piling and extending shoreward and driven to a depth to insure a rigid and stable structure, longitudinal and transverse rods engaging the upper portions of the piling, and a concrete superstructure supported upon the piling and reinforced and strengthened by the said longitudinal and transverse rods which are embedded therein and bonded thereby.

1,811,006. MECHANISM FOR CONTROLLING BRAKES. ROBERT S. GANS, Detroit, Mich., assignor of one-half to John J. Grabfield, Detroit, Mich. Filed Feb. 3, 1928. Serial No. 251,533. 8 Claims. (Cl. 74—39.)

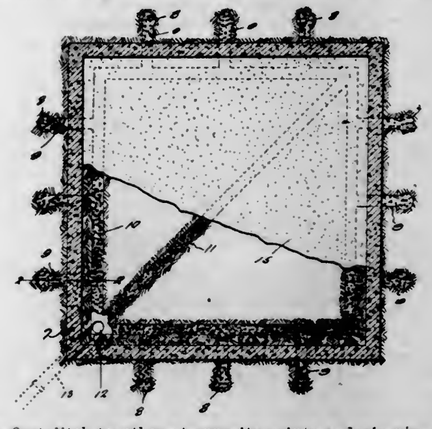
1. A mechanism for controlling automobile brakes or the like comprising in combination, a lever movable toward and away from a seat of the automobile, a brake rod,



intermediate mechanism connecting the brake rod and lever including interengaging devices which lock by reason of pull by the brake rod when the brakes are applied, said lever being adapted to be pulled back towards the said seat of the automobile when the brakes are applied, and a separable connection between the lever and the said mechanism which permits the lever to be disconnected whereby the same can be moved independently of the said intermediate mechanism and away from the seat while the brakes are held applied by said interengaging devices.

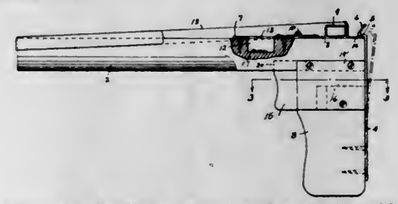
1,811,007. VENDING MACHINE. JACOB ROSS GROVE, York, Pa., assignor to Jacob Ross Grove, trustee, in trust for said Jacob Ross Grove, and Charles B. Wolf, Mount Wolf, Pa. Filed Aug. 21, 1928. Serial No. 300,987. 15 Claims. (Cl. 221—100.)

1. In a gasoline vending machine, the combination of a visible dispensing container having valve controlled inlet and outlet openings, a reservoir in which fuel is stored under pressure, said reservoir being connected to said inlet opening, an operating lever or handle for actuating the inlet and outlet valves, and means operable by depletion of gasoline in the reservoir for locking said lever against operation.



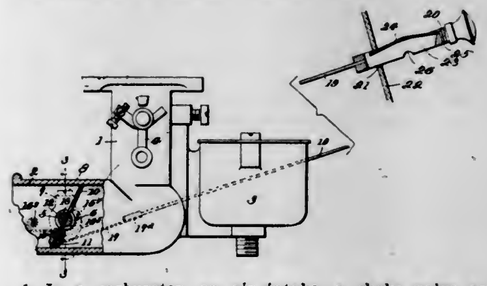
1,811,008. CROSS WIRE CARPET LOOM. WALTER HALL, Worcester, Mass., assignor to M. J. Whittall Associates, Worcester, Mass., a Voluntary Association of Massachusetts. Filed Feb. 17, 1930. Serial No. 428,893. 7 Claims. (Cl. 139—39.)

1. In a cross wire carpet loom, means to hold the last inserted pile wire from rearward movement, and a device mounted on the loom frame adjacent the selvage at the fell of the cloth and effective to depress the selvage pile warps by downward engagement therewith at the rear of but closely adjacent to the last inserted pile wire.



1,811,009. DRAINAGE SYSTEM. SAMUEL A. HARTMANN, Jackson, Mo. Filed Jan. 7, 1930. Serial No. 419,090. 1 Claim. (Cl. 72—10.)

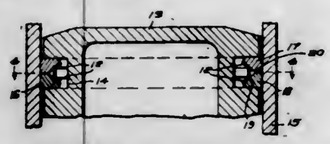
The combination with a building including foundation walls and a bottom floor, of drainage means for the building comprising ditches arranged below the walls and floor and within the confines of the wall and following the outline thereof, a diagonal ditch connecting the corners of



the first ditch together at opposite points, a drain pipe connected with the first ditch, and lateral ditches connected with the first ditch and extending below and beyond the foundation walls.

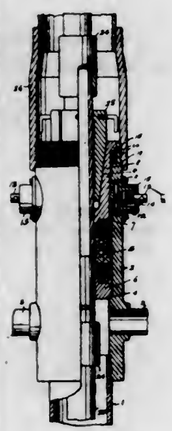
1,811,010. TOY GUN. JAMES C. HAWS, Houston, Tex. Filed Sept. 21, 1929. Serial No. 394,176. 3 Claims. (Cl. 124—14.)

3. A toy gun having a barrel and a stock, said stock forming a grip, a throw arm pivoted to the barrel, a spring attached to the stock and whose upper end is shaped to engage and hold the throw arm in rearward or retracted position, an upstanding projection carried by the throw arm, said stock having bearing, a plunger like trigger working through said bearing and movable rearwardly against said spring to effect the release of the spring from the throw arm, said spring being effective to return the trigger to forward position upon the release of the throw arm by said spring.



1,811,011. CHOKE OPERATING MEANS FOR CARBURETORS. FRANK H. HEITGER, Flint, Mich. Original application filed Feb. 20, 1928, Serial No. 255,821. Divided and this application filed Apr. 17, 1929. Serial No. 355,956. 5 Claims. (Cl. 137—139.)

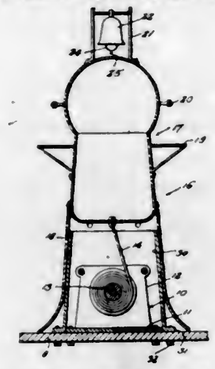
1. In a carburetor, an air intake, a choke valve arranged in said intake, a spring for normally holding said



valve in open position, actuating means for said valve including a loose connection to permit the valve to open under suction influence from the engine when the actuating means is in intermediate position, a manual control member, and motion multiplying means comprising a cam and a strap operatively connecting said manual control member to the actuating means.

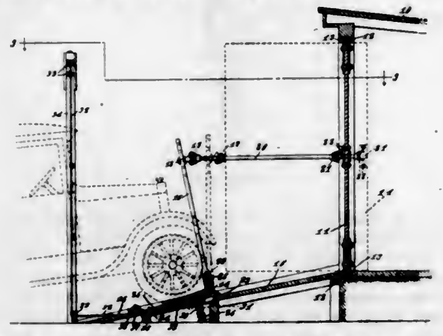
1,811,012. PISTON PACKING. JAMES G. HODGE, East Orange, N. J. Filed Nov. 28, 1930. Serial No. 498,851. 1 Claim. (Cl. 74—109.)

A corrugated piston ring expander comprising a body formed of a strip of flat spring sheet metal provided with spaced inwardly extending divergent wings connected to the opposite side edges of the body at their inner ends and having their outer ends freely flexible with respect to the body portion of said expander.



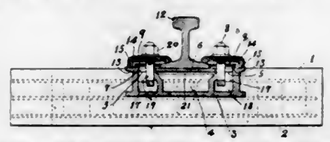
1,811,013. COMBINED CASING HEAD AND BLOW-OUT PREVENTER. GRANVILLE A. HUMASON, Houston, Tex. Filed Mar. 13, 1930. Serial No. 435,404. 1 Claim. (Cl. 166—14.)

A casing head and blow out preventer including a tubular bowl connected to the upper end of an outer pipe in a well bore and having an inside seat and an outlet beneath said seat, a sleeve like packing in said bowl and seated on said seat, said packing being shaped to surround an inner pipe and having an expansible element and its upper end being formed into a spider having a slip seat, pipe engaging slips in said slip seat, and releasable interengaging means between the bowl and packing and effective to retain the packing in the bowl, said interengaging means comprising teeth on the spider and a yieldably mounted dog in the bowl engageable with said teeth.



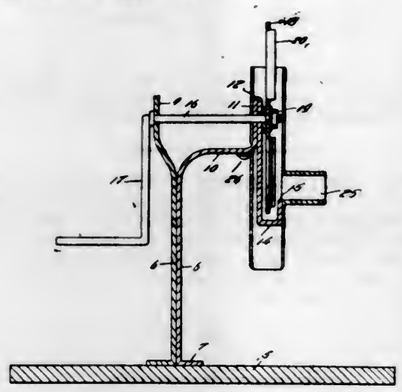
1,811,014. INDICATOR BUOY FOR SUNKEN SHIPS. HENRY J. KERWIN, Phoenixville, Pa.; Lucille A. Kerwin administratrix of said Henry J. Kerwin, deceased. Filed Sept. 3, 1929. Serial No. 390,038. 6 Claims. (Cl. 9—9.)

1. In a structure of the class described, a relatively stationary support, a windlass structure mounted thereon including a rotary drum and a feed cable mounted on said drum, a float, one end of the cable being connected with said float, and a depending skirt portion carried by



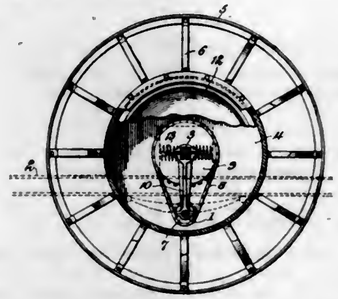
said float and normally resting on said support, a tubular shell fixed to said stationary support and immediately surrounding said windlass structure.

1,811,015. DOOR OPERATING MECHANISM. BERDIEN KLING, Dunn Center, N. Dak. Filed May 7, 1928. Serial No. 275,870. 3 Claims. (Cl. 268—35.)



3. In combination with a building having an entrance and inclined platform therefor and provided with an opening, a door for the entrance, trunnions carried by the upper and lower edges of the door and adjacent one of the side edges thereof, journals carried by the building to receive the trunnions, a treadle hinged at one end to the platform and closing the opening, a vertically disposed arm pivotally mounted at the lower end to the platform, an operating rod having universal connection between the door and arm, a second arm secured to the treadle and pivotally and slidably connected to the first mentioned arm, tension means carried by the platform to engage the treadle to automatically return the treadle to its normal position when disengaged by a vehicle, a latch to hold the treadle in a door-opening position, and means to operate the latch to permit the tension means to close the door.

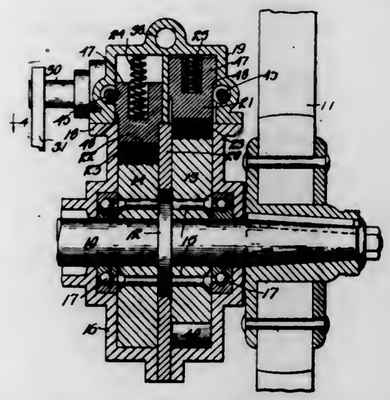
1,811,016. SLEEPER. JINICHI KUMAMOTO, Tokyo, Japan. Filed Apr. 14, 1930, Serial No. 444,224, and in Japan May 3, 1929. 6 Claims. (Cl. 238—265.)



1. In a railway sleeper made of concrete, a combination comprising a bed plate formed with a hollow open upwardly and a resilient floor plate for seating a rail thereon, which is disposed on the said bed plate and over the said hollow so that it is resiliently yieldable to the load placed on it.

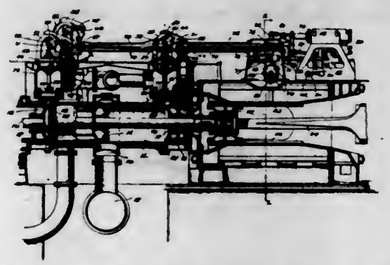
1,811,017. SOAP SHAVER. TILLMAN HOMER LEHMAN, Berne, Ind. Filed Apr. 2, 1930. Serial No. 441,049. 3 Claims. (Cl. 146—116.)

1. An apparatus of the class described including a pair of vertical strips disposed in abutment to each other and having at their lower ends feet, the upper end of one strip being offset and the upper end of the other strip being curved to extend outwardly at right angles and to merge into an upstanding portion which in turn merges into a depending portion lying there alongside and terminating below the first mentioned portion, and said last mentioned portion merging into an outwardly extending portion which terminates in a riser, a shaft journalled between the second and third mentioned portion and the offset end, a crank on the shaft and a cutting disk on the shaft.



1,811,018. TRACTION OF VEHICLES. JUAN CARLOS MOLINA MASSEY, Adrogue, Argentina. Filed Oct. 11, 1929, Serial No. 398,971, and in Argentina Sept. 9, 1929. 2 Claims. (Cl. 180—10.)

1. The combination of a traction wheel; a floating shaft carrying the same; a driving shaft; resilient means active on the floating shaft to tension the same when displaced; means uniformly spacing the shafts from each other; and means for transmitting motion from one shaft to the other.

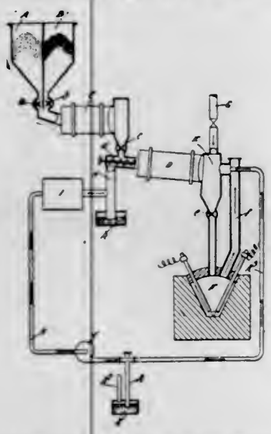


1,811,019. HYDRAULIC BRAKE MECHANISM. FRED Y. MCKENNEY, Chattanooga, Tenn., assignor of one-half to Jackson Z. Easley, Chattanooga, Tenn. Filed May 1, 1929. Serial No. 359,654. 5 Claims. (Cl. 188—91.)

1. A casing, a shaft mounted in said casing, eccentric pistons mounted upon said shaft, abutments slidably mounted in said casing having their inner ends in engagement with the pistons, ports to the chambers formed at each side of the said abutments, a valve controlling

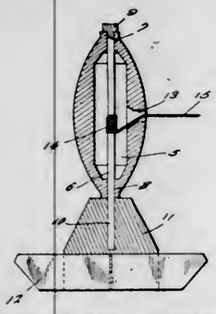
the said ports, and means controlled by the said valve for holding the abutments out of engagement with the pistons when the valve is opened, substantially as set forth.

1,811,020. REVERSIBLE ROLLING MILL ENGINE. BRUNO V. NORDBERG, deceased, Milwaukee, Wis., by Helena C. Nordberg, executrix, Milwaukee, Wis. Filed May 21, 1925. Serial No. 31,954. 35 Claims. (Cl. 121—136.)



21. The combination with a simple engine having more than three double-acting cylinders, and having cranks arranged to cause the individual working spaces to deliver their impulses seriatim at uniform intervals; ot cam actuated inlet valve mechanisms controlling the inlets to said working spaces, the actuating cams of said valves being capable of over-travel after the valve is closed and after it has been opened; a reversing valve gear of the Marshall type including a swinging yoke and radius bars, the radius bars and yoke being of unequal radii; means for controlling all said yokes simultaneously to vary the cut-off when running in either direction; and unloading valves one adjacent each inlet valve and each serving the same working space as the adjacent inlet valve, said unloading valves being arranged to be opened by the over-travel of the inlet valve actuating cam beyond inlet valve closing position.

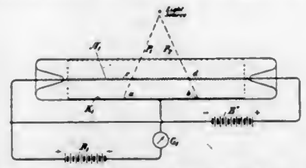
1,811,021. REDUCTION OF CALCIUM CARBONATE FOR THE MANUFACTURE OF CARBIDES. GEORGES PATART, near Paris, France, and HARALD NIELSEN, Bromley, England. Filed Dec. 4, 1928, Serial No. 323,771, and in Great Britain Dec. 30, 1927. 3 Claims. (Cl. 204—62.)



1. A method of manufacturing calcium carbide, wherein calcium carbonate is admixed with sufficient raw solid

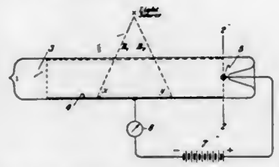
carbonaceous material to effect not only the calcining of the carbonate, but also to yield calcium carbide when the mixture is fluxed in an electric furnace, comprising calcining the carbonate and converting it into calcium oxide in a distillation chamber by the action of a mixture of hot combustion gases and a controlled volume

of a gas deficient in carbon dioxide so that said gases contain less carbon dioxide than is normally present in ordinary combustion gases, whereby the conversion is effected at lower temperatures than usual, and feeding the admixed oxide and coke resulting from said treatment into a carbide furnace.



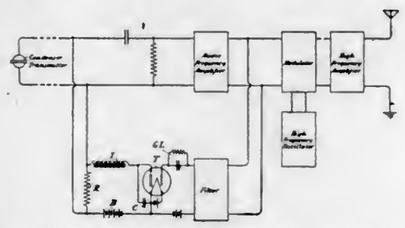
1,811,022. TOY. JOHN PETROSKY, Niles, Ohio. Filed Oct. 17, 1930. Serial No. 489,461. 1 Claim. (Cl. 46—14.).

A toy comprising a shell of substantially elliptical shape having a bearing opening at each end and also an opening in the side thereof, a shaft having one end journalled in one bearing opening, and an intermediate portion of said shaft journalled in the other bearing opening, the lower end of the shaft projecting below the shell, a head anchored to the projecting end of the shaft and abutting the shell, a cord having one end anchored to the shaft interiorly of the shell, said cord being trained through the opening in the side of the shell, the outer end of the head having radial slots therein, blades passing through the slots and projecting from the head, said blades being set edgewise to the axis of the device, and a pull ring on the free end of the cord.



1,811,023. PHOTO-ELECTRIC CELL. RALPH K. POTTER, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 8, 1926. Serial No. 134,298. 5 Claims. (Cl. 250—1.)

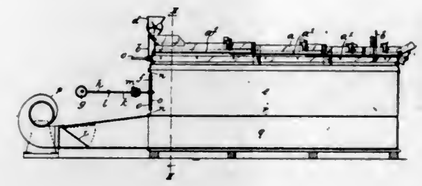
1. In a photo-electric device, an envelope, a photo-sensitive cathode and an anode therein, the envelope being adapted to admit the whole of a beam of light to fall upon said cathode at different points over a substantial range of displacement of the beam, means for impressing



a voltage between said cathode and said anode, and means for varying the output current of the device in response to the displacement of an incident light beam.

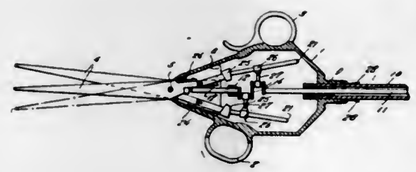
1,811,024. PHOTO-ELECTRIC TUBE. RALPH K. POTTER, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Original application filed Sept. 8, 1926, Serial No. 134,298. Divided and this application filed Sept. 8, 1926, Serial No. 134,299. Renewed July 19, 1928. 1 Claim. (Cl. 250—27.5.)

A photo-electric tube comprising an elongate envelope, a light sensitive elongate cathode therein, said envelope having a longitudinal slit adapted to admit the whole of a beam of light to fall upon said cathode at different points over a substantial range of displacement of the beam, and a spherical anode positioned substantially adjacent one end of said slit.



1,811,025. REGULATION OF LEVEL IN BROADCAST TRANSMISSION. RALPH K. POTTER, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 3, 1927. Serial No. 230,909. 15 Claims. (Cl. 178—44.)

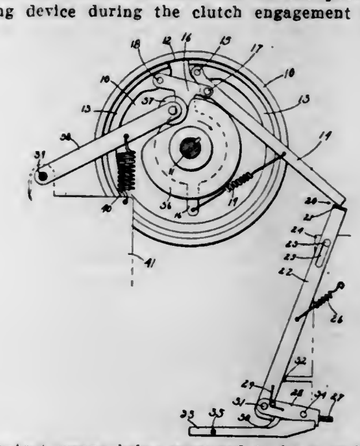
1. In a system including a device for converting sound into electrical energy, a radiating antenna, and an intermediate path, the method of decreasing changes in volume of transmitted signals which consists in impressing a constant normal polarizing potential on the sound converting device and regulating said potential in accordance with level variations in the intermediate path.



1,811,026. PROCESS AND APPARATUS FOR THE SEPARATION OF SOLID MATERIALS OF DIFFERENT SPECIFIC GRAVITIES. GEORGE RAW, Washington, England. Filed Sept. 27, 1928, Serial No. 308,787, and in Great Britain Oct. 28, 1927. 10 Claims. (Cl. 209—502.)

1. Process for the separation of solid materials of different specific gravities, comprising forming a bed with the materials and distending this bed, to cause the portions of different specific gravities to stratify, by pneumatic pressure applied in a series of synchronous superposed waves.

10. Apparatus for the separation of solid materials of different specific gravities, comprising a pervious deck, a pneumatic chamber of substantially rectangular form in longitudinal section and of approximately uniform cross-section, a pulsator device at one end of the chamber and means for delivering gaseous fluid to the chamber to set up a mean pressure independent of the impulses due to the pulsator.

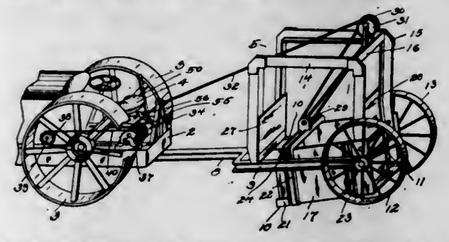


1,811,027. POWER DRIVEN SHEARS. ALFRED REA, San Diego, Calif., assignor of one-half to Joseph McGowan, San Diego, Calif. Filed Oct. 16, 1930. Serial No. 489,173. 4 Claims. (Cl. 30—13.)

1. Shears of the character described comprising a housing, a pair of co-acting cutting blades pivotally mounted on the housing and extending thereinto, a pair of levers pivotally connected with the blades for swinging movement independently of the blades and disposed within the housing, a crank shaft mounted for rotary and sliding movement in the housing, means operatively and slidably connecting the crank shaft with the levers in a manner to actuate said levers, and means for selectively coupling the levers to their respective cutting blades in a manner to retain said levers against swinging movement independently of the cutting blades.

1,811,028. CLUTCH-OPERATING MECHANISM. COMMODORE D. RYAN, Los Angeles, Calif., assignor, by mesne assignments, to Ralph G. Whitlock Patents, Inc., a Corporation of Nevada. Filed Feb. 18, 1929. Serial No. 340,944. 8 Claims. (Cl. 192—26.)

1. In a clutch operating mechanism comprising in combination a clutch having a control element movable with an element of the clutch; a tripping device for actuation independently of the clutch; contact means normally occupying the path of the control element to effect clutch release and movable by said tripping device out of the path of said control element to effect clutch engagement; and automatic means to restore said contact means to the path of said control element out of the path of said tripping device during the clutch engagement interval;



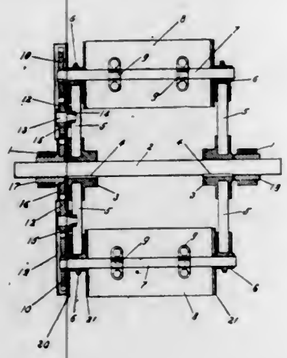
said contact means being arranged to be moved by said control element into the path of said tripping device following a clutch release.

1,811,029. PROCESS OF PREPARING LIGHT-SENSITIVE LAYERS BY MEANS OF DIAZO COMPOUNDS AND THE PRODUCTS OBTAINABLE THEREBY. MAXIMILIAN PAUL SCHMIDT and WALTER SPIETSCHKA, Wiesbaden-Biebrich, Germany, assignors to Kalle & Co., Aktiengesellschaft, Wiesbaden-Biebrich, Germany. Filed Nov. 30, 1928, Serial No. 322,959, and in Germany Dec. 10, 1927. 9 Claims. (Cl. 95—7.)

1. The process of preparing light-sensitive layers which consists in applying on a suitable base diazo compounds of aminonaphtholcarboxylic acids.

5. The process of preparing light-sensitive layers which consists in applying on a suitable base a mixture of the diazo compound of 1-amino-2-hydroxy-3-naphthoic acid, boric acid, tartaric acid, and trisodium phosphate dissolved by means of an alkali.

1,811,030. EXCAVATING AND SCRAPING APPARATUS. ALLAN B. SHAW, Delaware, Ohio, assignor to Wesley C. Shaw, Delaware, Ohio. Filed June 3, 1929. Serial No. 367,863. 5 Claims. (Cl. 37—133.)

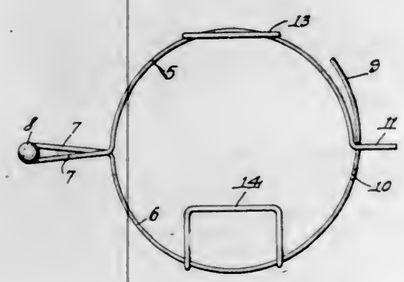


4. In a scraper, a frame, means for supporting the frame spaced from the ground, an open ended scoop pivoted at one end to the rear portion of said frame, a wall for the open pivoted end of said scoop stationarily carried by said frame, and serving to close the end of the scoop during the loading thereof and means for raising the scoop at its front end so that the bottom of the scoop becomes spaced from said end wall.

1,811,031. WATER WHEEL. EDWARD F. SMITH and CHARLES D. SMITH, Cincinnati, Ohio. Filed Sept. 25, 1926. Serial No. 137,784. 6 Claims. (Cl. 170—120.)

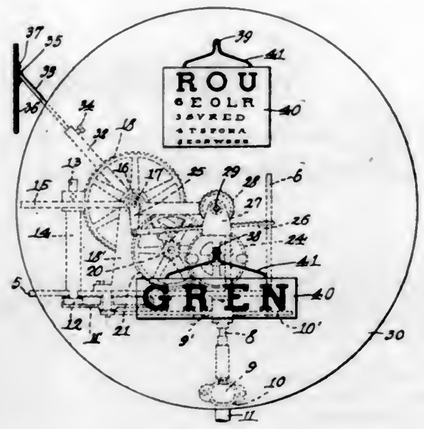
1. A propelling water wheel including a body rotatable about a horizontal axis a number of parallel horizontal

shafts carried by the body, and each having its ends journaled in said body, paddles arranged on said shafts, gears fixed to said shafts, a stationary gear having its axis coaxial with the axis about which the body rotates, and



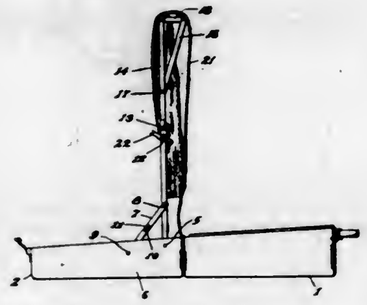
idler gears mounted on said body and meshing with the first mentioned gears and with said stationary gear, all of said gears being of the same size, whereby all of the paddles are maintained in vertical positions while the wheel rotates.

1,811,032. MANUFACTURE OF MAGNETIC ALLOY. WILLOUGHBY STATHAM SMITH, Benchams, NEWTON POPPLEFORD, HENRY JOSEPH GARNETT, Sevenoaks, and WALTER FREDERICK RANDALL, Ewell, England. Filed Aug. 16, 1930, Serial No. 475,838, and in Great Britain June 22, 1929. 11 Claims. (Cl. 178—45.)



10. A method for the heat treatment of substantially carbon and cobalt free magnetic alloys comprising mainly iron, nickel and an element to increase specific resistance to the alloy and which goes into solid solution, which comprises subjecting the alloys to a heat treatment at a temperature to anneal completely the alloy, followed after cooling, by a second heat treatment at a lower temperature but in excess of the magnetic change point of the alloy.

1,811,033. SMUDGE POT LIFTER. BURGESS TOLLSPAY, San Dimas, Calif. Filed Aug. 27, 1930. Serial No. 478,220. 2 Claims. (Cl. 294—27.)

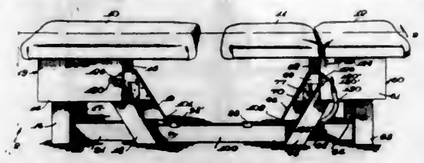


1. A lifter of the class described, comprising pivotally connected sections, means for securing the free ends of the sections together, means on the device for engaging the upper edge of the article to be lifted by the device to support the lifter while the free ends of the sections are brought together, and a handle on the lifter.

1,811,034. MEANS FOR TREATING AND EXERCISING THE OCULAR MUSCLES. WILLIAM M. UPDEGRAVE, Johnstown, Pa. Filed Mar. 18, 1930. Serial No. 436,824. 6 Claims. (Cl. 88—20.)

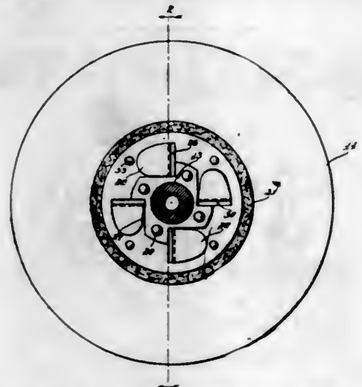
1. A device for operating optical charts for eye testing purposes, comprising a pivotal base, means for operating the base in a horizontal plane, gearing mounted on the base, a supporting member supported by the gearing and adapted to oscillate in a vertical plane, and pivoted members mounted on the supporting member.

1,811,035. TRAVELING CASE. OSSIP JOSEPH WALINSKY, New York, N. Y. Filed May 7, 1930. Serial No. 450,335. 8 Claims. (Cl. 190—41.)



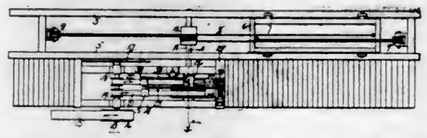
1. A traveling case comprising a section adapted to be positioned with an open side thereof uppermost, a garment hanging device mounted in said section and hinged with respect thereto so as to stand upright from the section, a garment hanger at the outer end of said device upon which garments may be hung downwardly toward the open section, said device being foldable substantially midway of its height, and a bar adjacent the line of folding of said device over which garments will be folded upon folding the device.

1,811,036. OPERATING SUPPORT. LEE M. WILSON, Los Angeles, Calif. Filed Aug. 2, 1927. Serial No. 210,108. 9 Claims. (Cl. 128—72.)



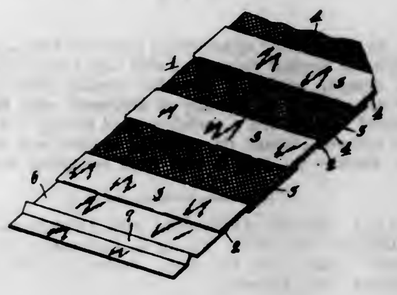
5. An operating table, comprising a pair of spacedly aligned base sections, a top section mounted on one of said base sections, a stationary top section carried by the other of said base sections, an intermediate top section

hingedly connected to said stationary top section and in slightly spaced relation with respect to said first named top section, said intermediate top section being adapted for tension opposed swinging movements between said base sections, and means for releasably securing said



intermediate top section in adjusted substantially horizontal positions, comprising a supporting beam hingedly mounted on said stationary section and slidably supporting said intermediate top section and detent means mounted on said stationary section for variably positioning said beam relative to said section.

1,811,037. ABRASIVE DISK. FRANS O. ALBERTSON and GUSTAV OLSEN, Sioux City, Iowa, assignors to Albertson & Company, Inc., Sioux City, Iowa, a Corporation of Iowa. Filed Dec. 30, 1927. Serial No. 243,492. 1 Claim. (Cl. 51—195.)

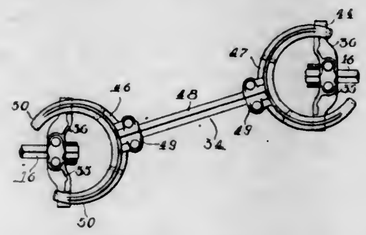


In an abrasive device, the combination of a metal hub having an outwardly projecting attaching portion and a centrally located boss, with a resilient and flexible metal disk fixedly secured to said attaching portion, and having an aperture for receiving said boss, said boss being spun outward to engage said disk, a circular cushion pad secured to said flexible disk by a plurality of rivets, said rivets being depressed in the face of said cushion pad, an abrasive disk comprising a sheet of abrasive material and a backing of fiber board, said abrasive disk, pad and metal disk having a plurality of apertures and a separate metal plate located outside said abrasive disk and having a plurality of bendable tabs for passage through said apertures in said pad and metal disk to secure said abrasive disk on said abrasive device in either of two positions.

1,811,038. CONTROLLING MECHANISM FOR SAWMILL CARRIAGES. CHARLES S. AMIDON, West Willington, Conn. Filed June 29, 1927. Serial No. 202,807. 10 Claims. (Cl. 74—21.)

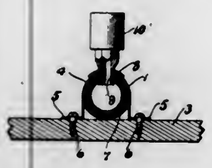
1. In combination with a carriage mounted for reciprocating movement, controlling mechanism operatively connected with said carriage and including a carriage driving shaft, a pulley secured to said shaft, a belt to drive said pulley, a pulley loosely mounted on the shaft next adjacent the secured pulley, a belt for driving said last mentioned pulley, and a connection, independent of said shaft, between said last mentioned pulley and the pulley secured to the shaft for driving the latter in a direction contrary to that effected by its belt.

1,811,039. FLASHING STRUCTURE. SAMUEL H. COHEN, Malden, and JACOB WASSERMAN, Cambridge, Mass. Filed July 23, 1928. Serial No. 294,631. 8 Claims. (Cl. 72—127.)



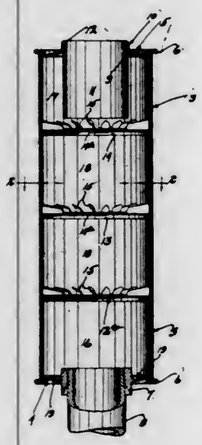
1. An article of manufacture consisting of a section of flashing of non-corrodible, imperforate sheet metal provided with metallic keying material which serves to key with the mortar where such flashing is used, said keying material being of the character of metal lath, wire cloth, chicken wire, or the like, whereby said flashing may be keyed to said mortar longitudinally and laterally.

1,811,040. STEEL PRESERVATIVE PAINT. CLARENCE H. COX, Massillon, Ohio. Filed Aug. 31, 1929. Serial No. 389,863. 4 Claims. (Cl. 135—39.)



1. An iron preservative composition consisting of from about 40% to about 60% of a mixture of zinc chromate 12.5%, basic lead chromate 12.5%, sublimed blue lead 25% and magnesium silicate 50%, and from about 60% to about 40% of a mixture of linseed oil 60%, China-wood oil 20%, turpentine 10%, and oil drier 5% and a mineral thinner 5%.

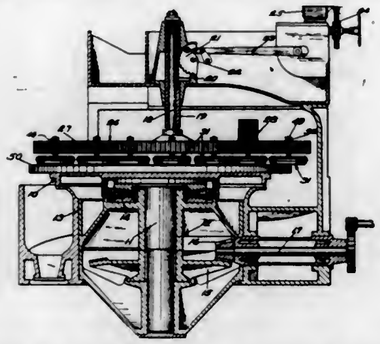
1,811,041. CHECKROW PLANTER. SAMUEL K. DENNIS, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Aug. 18, 1926. Serial No. 129,887. 5 Claims. (Cl. 64—91.)



3. In a drive coupling for multiple unit corn planters, two shafts disposed in end to end relation, and a flexible shaft coupling operably connecting the shafts, said coupling comprising a two-part crank arm mounted on each shaft having one part angularly adjustable on the shaft with respect to the other part, and means flexibly connecting the crank arms on adjacent shafts.

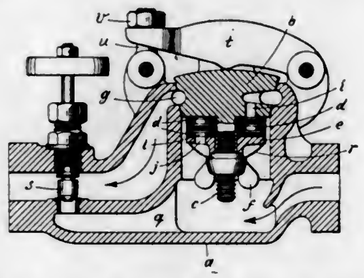
1,811,042. SPRINKLING APPARATUS. JOHN E. DESMOND, Muskegon Heights, Mich., assignor, by mesne assignments, to Desmond Manufacturing Company, Muskegon, Mich., a Corporation of Michigan. Filed May 20, 1929. Serial No. 364,483. 2 Claims. (Cl. 299—106.)

1. In a sprinkling apparatus, a length of hose, a base, a rigid metal member clamped on said base against the hose, said member having a threaded opening therethrough, said hose having an opening in alinement with the said threaded opening and a sprinkler head having a threaded stem screwed through the threaded opening and into the hose whereby the hose is kept from collapsing inwardly.



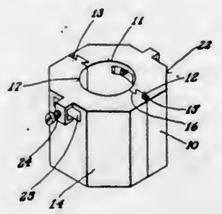
1,811,043. SPARK ARRESTER FOR INTERNAL COMBUSTION ENGINES. FRANK A. DONALDSON, St. Paul, Minn. Filed Feb. 21, 1929. Serial No. 341,675. 4 Claims. (Cl. 183—91.)

1. A spark arrester comprising a tubular casing having a head at each end thereof, an intake passage near one end of the casing and an axial other passage in the head at the outlet end of the arrester, axially spaced partitions in said casing, an annular series of circumferentially spaced deflecting blades or veins formed near the outer edge of each of said partitions close to the side of the casing, the baffle partition near the intake end of the arrester having a closed central portion and the partition near the outlet end of the arrester having an axial opening, and an outlet tube extending inward from the axial outlet passage in the head at the outlet end of the arrester and terminating short of the partition at the outlet end of the arrester.



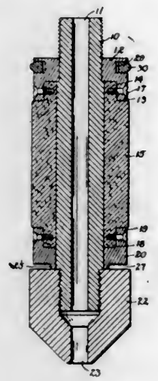
1,811,044. SHEET GLASS SURFACING APPARATUS. JOHN L. DRAKE, Toledo, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 18, 1927. Serial No. 169,207. 6 Claims. (Cl. 51—120.)

1. In glass surfacing apparatus, a horizontal supporting member rotatable about a substantially vertical axis, and a plurality of polishing members carried by said supporting member, each polishing member including a vertical spindle projecting upwardly through said supporting member and slidably keyed thereto, a compression spring



encircling said spindle above said supporting member, a plurality of vertical pins supported by said polishing member and received within pockets formed in the underside of said supporting member, and compression springs encircling said pins within said pockets.

1,811,045. STEAM TRAP. GUSTAV F. GERDTS, Bremen, Germany. Filed Apr. 6, 1929. Serial No. 353,154. 6 Claims. (Cl. 137—103.)

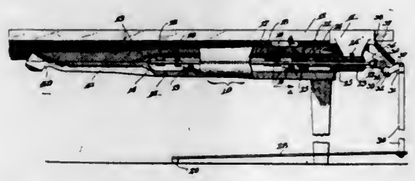


1. In a steam trap having a shell with an admission, a discharge and an intermediate opening, a plug held in the intermediate opening and forming with the shell a steam tight circumferential duct in direct communication with the discharge opening and communicating with the admission opening through an axial passage leading to the inner face of the plug and through labyrinthic channels formed by and between a plurality of baffle plates immovably held against the said inner face of the plug in axial juxtaposition and contacting parallelism.

1,811,046. EMERGENCY PIPE CUTTER. HARRY GOLDHAGEN, New York, N. Y. Filed Apr. 17, 1930. Serial No. 444,911. 4 Claims. (Cl. 81—191.)

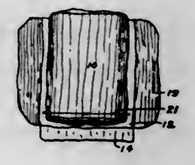
1. In a pipe cutter, a pair of complemental bodies, discs in said bodies, means for projecting said discs into cutting relation with a pipe, dovetailed ridges on one of said bodies, dovetailed passage ways on the complemental body and means on said ridges for latching said complemental bodies in matched position.

1,811,047. PACKER. ELLSWORTH GRAY, Houston, Tex. Filed Sept. 17, 1929. Serial No. 393,147. 10 Claims. (Cl. 294—96.)



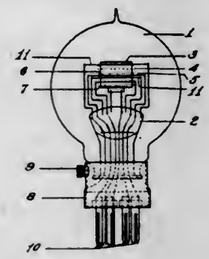
1. A packer including a mandrel, a packer head anchored thereon, a flexible packer member connected to said head, a follower ring confining the lower end of said member, said ring being exposed to fluid pressure and slidable on said mandrel to compress said packer member in response to fluid pressure.

1,811,048. SASH GUIDE. WILLIAM S. HAMM, Elkhart, Ind., assignor to The Adlake Company, Chicago, Ill., a Corporation of Illinois. Filed July 22, 1929. Serial No. 379,925. 6 Claims. (Cl. 189—75.)



1. In a sash guide, a fixed strip, a removable strip carried thereby, a connection therebetween which is releasable upon movement of the removable strip in one direction, and means for yieldingly resisting movement of the removable strip in that direction.

1,811,049. HOSIERY TURNING AND INSPECTING FORM. HUGO HEMMERICH, Wyomissing, Pa., assignor to Berkshire Knitting Mills, Wyomissing, Pa., a Corporation of Pennsylvania. Filed Sept. 4, 1929. Serial No. 390,227. 7 Claims. (Cl. 223—20.)

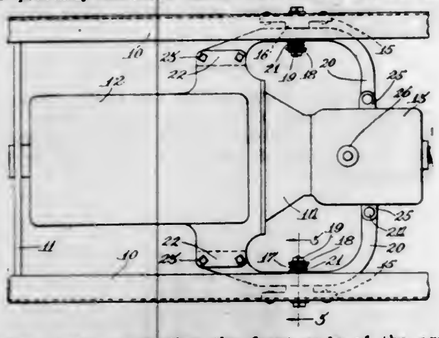


1. An inspecting form for use with tubular garments comprising two sections mounted for relative lateral movement, one of said sections having a member slidably connected therewith, and links connecting the other section to the said member, said sections being hinged together along one side.

1,811,050. PARACHUTE SKIRT DELAYER. EDWARD L. HOFFMAN, Dayton, Ohio. Filed Sept. 6, 1929. Serial No. 390,816. 4 Claims. (Cl. 244—21.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

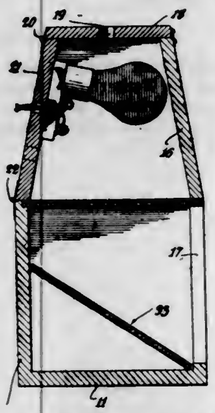
1. The combination with a parachute and a container therefor of means for retaining the skirt portion only of the parachute fixed relative to said container until forcibly withdrawn therefrom.

1,811,051. ELECTRON DISCHARGE TUBE. GILLES HOLST, Eindhoven, Netherlands, assignor to N. V. Philips' Gloeilampenfabrieken, Eindhoven. Filed Oct. 28, 1924, Serial No. 746,396, and in Germany Nov. 27, 1923. 1 Claim. (Cl. 250—27.5.)



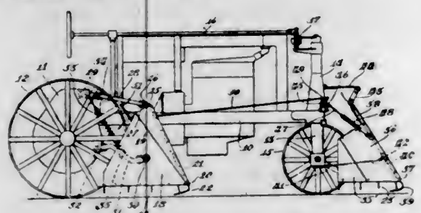
A discharge tube comprising a glass envelope, a base to which the envelope is sealed, a press supported by said base, a straight filamentary cathode perpendicular to the direction of the press, a cylindrical control grid mounted about the filament as axis, a cylindrical plate concentric with the control grid, an auxiliary cylindrical grid between the filament and the control grid, a second auxiliary cylindrical grid mounted between the control grid and the anode, prongs projecting downwardly from said base, an additional terminal on the base, a lead from one of the electrodes to said terminal, and leads from the remaining electrodes to the prongs.

1,811,052. UNIT POWER PLANT SUPPORT FOR MOTOR VEHICLES. EDWARD A. JOHNSTON, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Nov. 24, 1928. Serial No. 321,615. 8 Claims. (Cl. 180—64.)



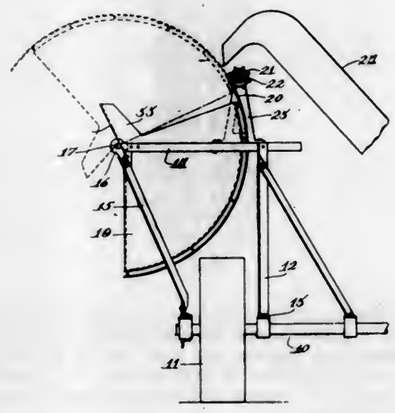
1. The combination with a motor vehicle having a pair of side frame members, a motor, a transmission, of means for connecting the transmission to the motor and mounting the two as a unit on the frame members, said means

comprising a bearing on each of the frame members, an arm pivotally mounted intermediate its ends on each



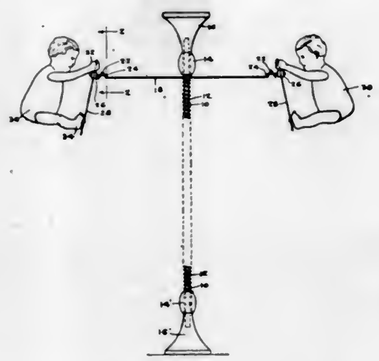
bearing, means connecting the front ends of the arms to the motor, and means connecting the rear ends of the arms to the transmission.

1,811,053. COMBINED DAYLIGHT AND ILLUMINATED SIGN. ALFRED O. KELLOGG, Pelham Manor, N. Y. Filed Sept. 8, 1928. Serial No. 304,721. 12 Claims. (Cl. 40—130.)



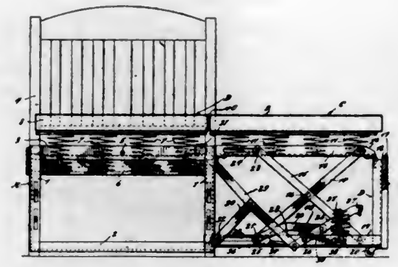
1. A sign comprising a translucent glass or equivalent supporting plate in combination with an opaque paper or equivalent paster adhesively carried by said plate and bearing a transparent legend thereon so arranged as to cause an inverse image of the legend on a mirror, a light causing said image, said light coming from the opposite side of the plate from the mirror, and being of a plurality of irregularly changing colors.

1,811,054. TRACTOR WHEEL FENDER. ROY H. KIPP and WILLIAM H. THOMPSON, Canton, Ill., assignors to International Harvester Company, a Corporation of New Jersey. Filed Apr. 8, 1929. Serial No. 353,383. 5 Claims. (Cl. 280—160.)



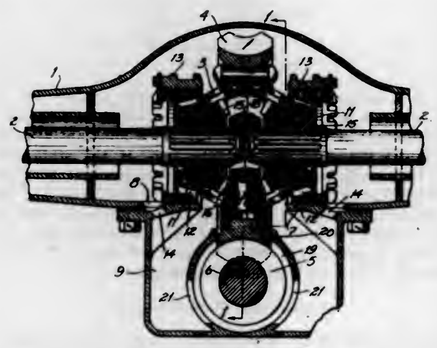
1. The combination with the traction member of a tractor, of a fender comprising an arched structure embracing the forward tread portion of the traction member and formed with its sides and upper portion converging to a forward apex located on the plane of the lower edge of the structure, a forwardly extending link connecting said structure to the tractor and pivoted to both on horizontal axes, and resilient means for supporting said structure in position.

1,811,055. GRAIN TANK FOR HARVESTERS. FRANK N. G. KRANICH, Racine, Wis., assignor to International Harvester Company, a Corporation of New Jersey. Filed Apr. 20, 1929. Serial No. 356,654. 3 Claims. (Cl. 56—122.)



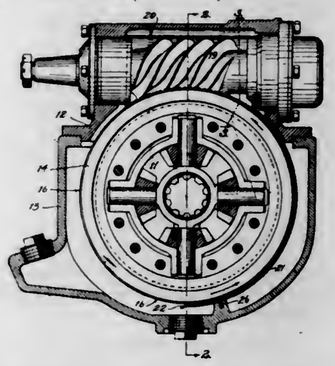
1. For a harvester having a framework, a tank having an open top, means pivotally connecting an upper edge of the tank to a shaft on said framework, and power actuated means for tilting the tank to dump the same.

1,811,056. TOY. SIDNEY L. LONG, Minneapolis, Minn. Filed Aug. 17, 1929. Serial No. 386,595. 4 Claims. (Cl. 46—40.)



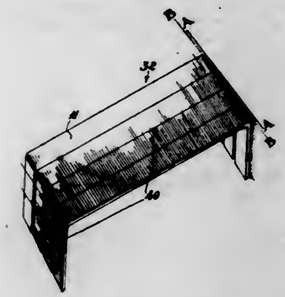
1. In a device of the class described, the combination of a standard surrounded by a helix, a bar slidable on said helix and adapted to gravitate from top to bottom thereof with an oscillating and rotating motion, outwardly and downwardly extending members pivotally attached to the ends of said bar, seats formed on the lower portions of said members, toy figures positioned on said seats, arms formed on the upper portions of said members having clamping engagement with said toy figures, and base members secured to the two ends of said standard.

1,811,057. COMBINATION COUCH AND BED. JOSEPH MARTIN, New York, N. Y., assignor to United States Cabinet Bed Co., Brooklyn, N. Y., a Corporation of New York. Filed Sept. 10, 1929. Serial No. 391,587. 6 Claims. (Cl. 5—20.)



1. The combination with a frame, of a main bed bottom pivotally connected to said frame to form a couch bed surface in one position and when reversed to form one of the bed bottoms of a double bed, a carriage guided by said frame to be movable from and into a position under said main bed bottom, the couch formation, and from and into a position adjacent said frame, the double bed formation, an extension bed bottom, means connecting the extension bed bottom to said main bed bottom, supporting means connecting said extension bed bottom with said carriage for supporting said extension bed bottom in lowered position beneath said main bed bottom in couch formation or in raised position adjacent to said main bed bottom as the other bed bottom of a double bed formation, means for actuating said carriage for inverting said main bed bottom and co-operating with said supporting means for lowering said extension bed bottom below said main bed bottom when actuating the bed bottoms into couch formation, said actuating means being also operative for reinverting said main bed bottom and co-operating with said supporting means for raising said extension bed bottom to one side of, and in alinement with said main bed bottom for actuating said bed bottoms into double bed formation, and means connecting said supporting means with said actuating means.

1,811,058. WORM DRIVE AXLE. MATHEW B. MORGAN, Detroit, Mich., assignor to The Timken-Detroit Axle Company, Detroit, Mich., a Corporation of Ohio. Filed Nov. 25, 1929. Serial No. 409,517. 13 Claims. (Cl. 74—36.)



4. A housing having a lubricant containing chamber, a worm gear mounted in said housing above said chamber, a worm located in said chamber underneath said gear and meshing with the latter, and a hollow cylindrical casing located in said chamber and enclosing said worm and the portion of the worm gear meshing therewith, the lower portion of said casing communicating at each end with said chamber.

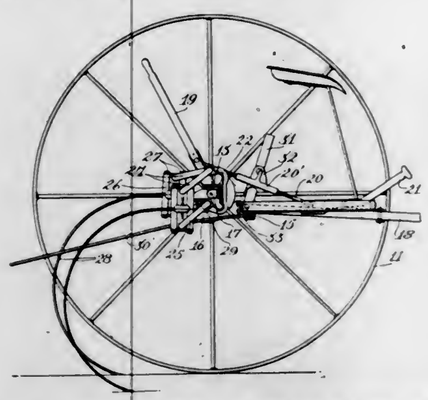
1,811,059. SELF-LUBRICATING GEAR SET. MATHEW B. MORGAN, Detroit, Mich., assignor to The Timken-Detroit Axle Company, Detroit, Mich., a Corporation of Ohio. Filed May 17, 1930. Serial No. 453,147. 6 Claims. (Cl. 74—99.)

1. The combination with a shrouded gear, an overhung driving member engaging said gear, a casing snugly enclosing said driving member and having a semi-cylindrical extension concentric with said gear and wholly beyond but adjacent to the periphery thereof.

1,811,060. STAPLE CLIP AND METHOD OF FABRICATING THE SAME. LOU OBSTFELD, Brooklyn, N. Y., assignor, by mesne assignments, to said Lou Obstfeld and Abe I. Obstfeld, Brooklyn, N. Y. Filed Mar. 18, 1930. Serial No. 436,082. 21 Claims. (Cl. 1—56.)

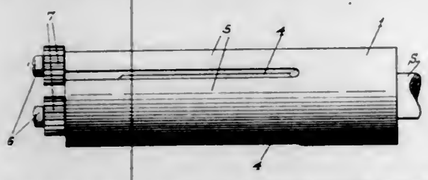
1. As an article of manufacture, a staple clip comprising a series of contiguous staples of general inverted U-shaped form, the legs of the staples having flattened portions, the tops of said staples being in substantially the same plane, and the faces of the flattened portions of said legs being wracked relatively to each other into saw-tooth conformation.

1,811,061. APPARATUS FOR AND METHOD OF LOADING BOMBS. HENRY H. OLMSTEAD, Wharton, N. J. Filed Sept. 10, 1929. Serial No. 391,653. 7 Claims. (Cl. 86—20.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)



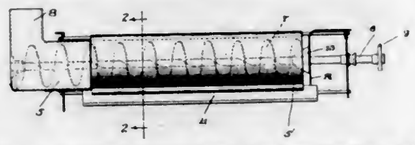
1. A method of loading an explosive into a container having an opening for receiving a booster casing which

consists in releasably supporting a rigid shell about the insertable portion of the booster casing by frictional engagement therewith, sealing the joint between the shell



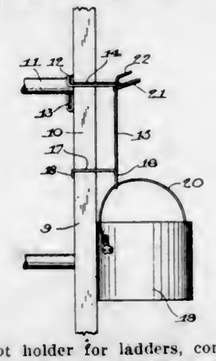
and the casing, applying the casing to the container and introducing a fused explosive through a second opening provided in the container.

1,811,062. RAKE. CHARLES PEARSON, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed May 20, 1929. Serial No. 364,383. 25 Claims. (Cl. 56—394.)



1. The combination with a rake having a finger bar, of a plurality of sets of rake tooth gangs in which each set is independently and pivotally connected to the bar.

1,811,063. ROTARY TUBE AND PIPE CLEANER. RICHARD W. RANDALL and JOHN C. KOCH, Stockton, Calif. Filed Apr. 4, 1930. Serial No. 441,536. 2 Claims. (Cl. 15—104.13.)

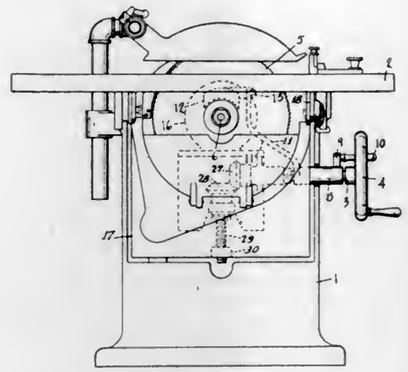


1. A tube cleaner comprising a body slotted lengthwise from one end toward the other to form a plurality of fingers capable of flexing toward and from each other at their free ends, and cutting wheels turnably mounted on the different fingers at their free ends on axes parallel to that of the body, said wheels projecting outwardly of the periphery of the body to engage the interior walls of a tube in which the body is inserted.

1,811,064. MATERIAL FEEDING MECHANISM. CLEMMA R. RANEY, Riverside, and ARNOLD E. W. JOHNSON, Chicago, Ill., assignors to International Harvester Company, a Corporation of New Jersey. Filed Jan. 6, 1927. Serial No. 159,259. 1 Claim. (Cl. 198—213.)

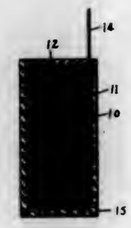
In a grain feeding mechanism, the combination of a distributor housing having an end wall and a straight shaft arranged horizontally in the housing and journaled in said end wall, a continuous auger feeder on the shaft within the housing to feed the material therethrough and toward said end wall, a substantially cone-shaped shield located at the terminal end of the housing and carried on the shaft in a manner substantially to fill the space at the said terminal end of the housing, the wide end of the conical shield being disposed closely adjacent to the end wall of the housing and rotating in close proximity thereto while the apex end of said conical shield is directed way from said end wall toward the shaft, whereby said shield functions to prevent winding of lengths of fibrous material around the discharge end of the shaft adjacent said end wall, and said auger having its terminal end flight continued partly to overlap the said conical shield.

1,811,065. PAINT POT HOLDER. JOHN S. STROEBEL, Milwaukee, Wis. Filed Aug. 25, 1926. Serial No. 131,431. 5 Claims. (Cl. 248—22.)



1. A paint pot holder for ladders, comprising a rung hook, a bail-receiving member fixed therewith and disposed laterally outwardly of the ladder style substantially adjacent the plane of the forward face of the style, and spaced laterally projecting members engageable with the forward face of said style, the upper of said laterally projecting members being adjacent said rung hook and the lower of said members being laterally adjacent said bail-receiving member and both being fixed with respect to said rung hook and bail-receiving member.

1,811,066. SAWING MACHINE. CARL E. TANNEWITZ, Grand Rapids, Mich. Filed Feb. 23, 1929. Serial No. 341,929. 6 Claims. (Cl. 143—157.)

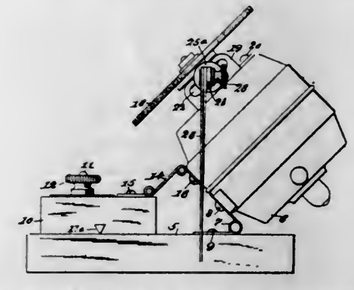


1. The combination in a sawing machine comprising a table, a saw and adjusting means, including a shaft, of a

circular saw operatively associated with said table and provided with a support pivotally mounted on said table, said saw being provided with an arbor having saw clamping collars, a bell crank brake supporting and actuating

lever pivotally mounted on said shaft and provided with a hand piece on one arm, and a brake shoe mounted on the other arm of said lever whereby the brake shoe is supported for engagement with a side of the saw adjacent the periphery of one of its said saw clamping collars.

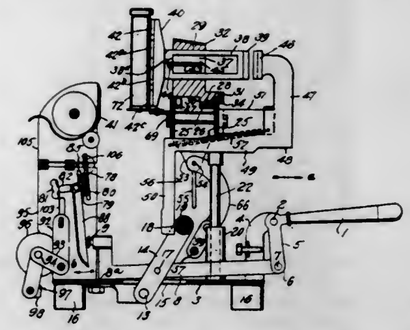
1,811,067. CONDENSER AND METHOD OF MAKING SAME. PAUL B. VALLÉ, New Haven, Conn. Filed June 25, 1927. Serial No. 201,466. 9 Claims. (Cl. 175—41.)



1. The method of making an electrical condenser which comprises forming a condenser cartridge consisting of alternate wrappings of insulating and conducting material, forming a casing of a moldable dielectric material having the property of becoming plastic when heated, inserting the cartridge into the case when the latter is in plastic condition, and cooling the assembled unit to cause the case to be shrunk upon the cartridge and exert a mechanical pressure thereon.

1,811,068. ALLOY. RICHARD R. WALTER, Starnberg, Germany. Filed Sept. 20, 1929, Serial No. 394,137, and in Germany Dec. 3, 1928. 4 Claims. (Cl. 75—1.)

1. An alloy comprising a powdered, mixed, compressed and sintered metallic aggregate, comprising over fifty per cent of a carbonitride of metal of the chromium group and up to thirty per cent of a high melting metal of the chromium group and as remainder metal of the iron group.

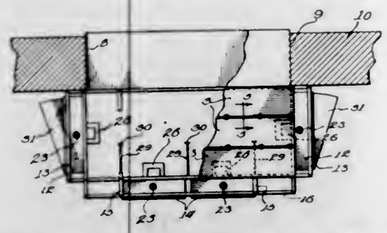


1,811,069. GRINDER. EDWARD L. WEBB, West Liberty, Iowa. Filed June 10, 1929. Serial No. 369,838. 2 Claims. (Cl. 51—128.)

1. In a grinder, a motor carrying a flat-faced grinding wheel, a base pivotally connecting with the motor, means adapted to tilt the motor and fix it in tilted positions, a pivoted laterally disposed guide support adjacent to the wheel, a flat-faced guide hung from said support, and

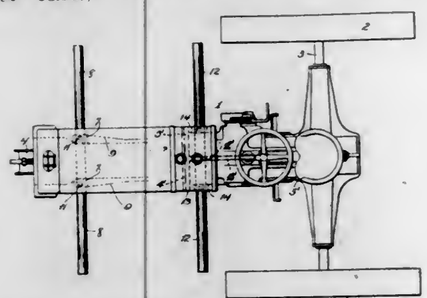
fastening means adapted to secure the guide in a position radial to the wheel, with its guiding face at an angle to that of the wheel.

1,811,070. PLACARD TYPEWRITING MACHINE. KONRAD KARL WEISSFLOCH, Nuremberg, Germany. Filed June 15, 1928, Serial No. 285,707, and in Germany Aug. 12, 1926. 2 Claims. (Cl. 197—1.)



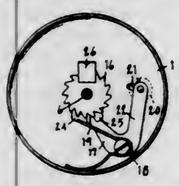
1. A typewriting machine comprising the combination with a feed roll adapted to carry a sheet of writing material, said feed roll being movable for line spacing letter feed purposes, and letter space escapement mechanism operatively connected to said feed roll and a platen in front of the feed roll for supporting the writing material at the printing point of type carriers having type thereon of a large size suitable for placards, price tickets, advertisements and the like, guiding means for said type carriers adapted to guide the carriers with the type thereon from an inoperative position to an operative position with the type in contact with a sheet of writing material on the platen supported by said abutment plate, said guiding means being spaced from the platen, so as to leave an interval between the platen and the type in the inoperative position for enabling the writing point to be visible, and being arranged at a height such that they do not obscure the view of the platen obtainable through said interval, and means actuatable by hand for moving said type carriers into and out of the operative position, as and for the purposes set forth.

1,811,071. MULTIPLE UNIT SPACE HEATER. FRED M. YOUNG, Racine, Wis. Filed Aug. 21, 1929. Serial No. 387,361. 4 Claims. (Cl. 257—137.)



2. Heating apparatus of the class described comprising a casing having a pair of air outlets, the lower end of said casing being open for admitting air from the interior of a building, a pair of unitary space heaters, each mounted on said casing in registration with one

of said air outlets and each comprising a heat interchanger, a separate blower for each space heater for withdrawing air from said casing and discharging it through



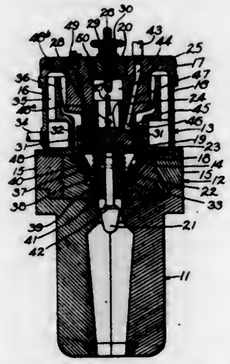
said heat interchanger, and a cover on the top end of said casing comprising removable sections for admitting air through the top of said casing and reducing the draft at the bottom thereof.

1,811,072. TRACTOR. HERMAN E. ALTGELT, South Bend, Ind., assignor, by mesne assignments, to Oliver Farm Equipment Company, a Corporation of Delaware. Filed Mar. 19, 1928. Serial No. 262,930. 12 Claims. (Cl. 280—33.15.)

10. The combination with a tractor having a longitudinally extending frame, there being an aperture in said frame extending transversely therethrough, and a transversely projecting beam secured rigidly to said frame and extending through said aperture.

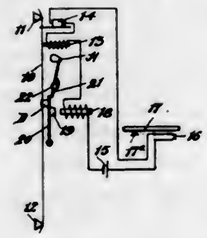
1,811,073. SPRING WINDING FISHING REEL. FRANK BUADICK, Kalamazoo, Mich., assignor to Shakespeare Company, Kalamazoo, Mich. Filed Mar. 7, 1930. Serial No. 433,869. 8 Claims. (Cl. 242—84.3.)

8. In a spring wind fishing reel, the combination of a frame, a spool, a driving spring having driving connection with said spool, winding means for said spring provided with a ratchet wheel, a coacting pawl, and a pawl releasing member operatively associated with said pawl and winding means whereby on rotation of said ratchet wheel in winding direction said pawl is automatically shifted to disengaged position.



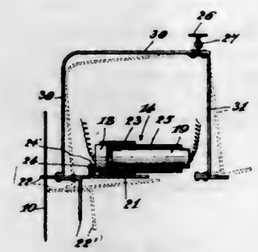
1,811,074. CONTAINER. SILAS E. BUTLER, Toledo, Ohio. Filed Mar. 7, 1929. Serial No. 345,044. 6 Claims. (Cl. 229—37.)

1. A container of the class described, made from a one piece blank and comprising five panels folded to form four sides, one of said sides being double, and a flap connected to the bottom end of each panel, each flap being folded to extend a short distance upwardly adjacent the panel from the bottom end thereof, thence across the bottom of the container and thence downwardly adjacent



the opposite panel to the bottom edge thereof, thereby forming a peripheral downwardly disposed flange about the bottom of the container, one side of said flange being five-ply, another side thereof being four-ply, and the other two sides being three-ply.

1,811,075. METHOD AND APPARATUS FOR SHAPING GLASS. ROBERT W. CANFIELD, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Jan. 26, 1929. Serial No. 335,210. 16 Claims. (Cl. 49—5.)



3. In glassware forming apparatus, a mold, a suction head coacting with the said mold, means therein for withdrawing air from the mold through a plurality of openings and means for substantially instantaneously varying the total size of the openings in response to variations in the level of the glass within the mold.

1,811,076. ELECTRICAL SOSTENUTO PIANO. SIMON COOPER, Brooklyn, N. Y. Filed Mar. 25, 1927. Serial No. 178,209. 22 Claims. (Cl. 84—262.)

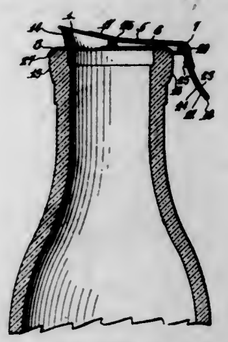
1. In an electrical musical instrument, the combination of a vibrating string, a key, a source of current supply, an electro-magnet for giving the string an initial vibration when in circuit with said source, said magnet and source being normally out of circuit, and means operated by a single movement of the key for making such circuit and then for breaking such circuit.

1,811,077. ELECTRICAL SOSTENUTO PIANO. SIMON COOPER, Brooklyn, N. Y. Filed Mar. 24, 1930. Serial No. 438,466. 13 Claims. (Cl. 84—262.)

7. In an electric sostenuto piano, vibratory strings, magnets for actuating the same, pulsators for said magnets connected with the strings, a common support, and means including connections from said support to a plurality of the pulsators for simultaneously disconnecting said plurality of controllers.

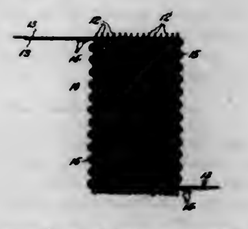
1,811,078. COATING COMPOSITION CONTAINING POLYMERIZED DIVINYL BENZENE. HARRY B. DYKSTRA, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 4, 1930. Serial No. 433,178. 6 Claims. (Cl. 134—26.)

1. A new composition of matter comprising polymerized divinyl benzene and a raw drying oil.



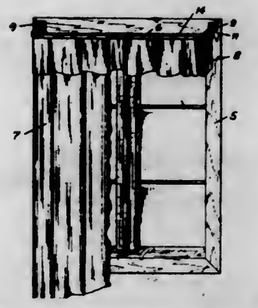
1,811,079. SAW. I. ROY FORSYTH, Spokane, Wash. Filed Mar. 8, 1930. Serial No. 434,266. 1 Claim. (Cl. 143—133.)

A circular saw having a circular periphery of uniform diameter, a plurality of spaced, equidistant teeth projecting beyond the periphery of the saw, said teeth having outturned front edges and projecting laterally beyond the opposite sides of the saw body, said periphery having recesses in front of the teeth and extended in uniform width along lines tangential to the center of the saw, and said saw having a gradually reduced surface area in front of each recess to reduce the diameter of the saw bounding such area.



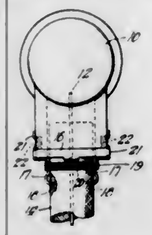
1,811,080. REMOVABLE POURING COVER FOR MILK BOTTLES. WILLIAM GADKE, Philadelphia, Pa. Filed May 17, 1928. Serial No. 278,373. 5 Claims. (Cl. 215—100.)

1. A bottle cover having a pouring spout, means for clipping the cover to the top of the bottle, a lid for the pouring spout, a finger piece continuous with the pouring spout lid, reversely bent and having a hinge member, a hinge member upon the cover and a pintle for the hinge



members whereby the pouring spout lid is continuous with one of the hinge members and is additionally strengthened at the hinge and throughout the finger piece length.

1,811,081. COMPOSITE METALLIC FABRIC. RALF L. HARTWELL, Orange, N. J., assignor to Metal Textile Corporation, West Orange, N. J., a Corporation of Rhode Island. Filed Dec. 8, 1928. Serial No. 324,638. 4 Claims. (Cl. 139—425.)



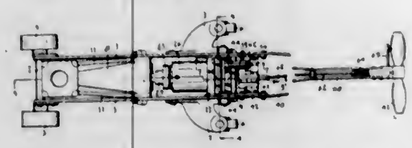
1. A fabric comprising a body composed of fibre warp threads and continuous metallic and fibre weft threads arranged in superimposed substantially parallel relation, said metallic constituent of said weft thread serving to stiffen said fabric transversely uniformly throughout the area thereof, whereby said fabric is caused to be readily flexible about transverse axes passing therethrough and is relatively rigid about longitudinal axes passing therethrough.

1,811,082. DEVICE FOR HANGING CURTAINS. JULIUS HEIMAN, Yonkers, N. Y. Filed Sept. 1, 1928. Serial 303,404. 13 Claims. (Cl. 156—19.)

1. A device for hanging curtains comprising a pair of substantially identically formed members, one of said members being mounted in stationary position, the other of said members being mounted to rotate and frictionally engage with the first member.

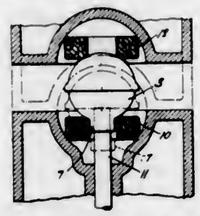
1,811,083. INSULATOR AND CLAMP FOR USE IN ELECTRICAL WORK. EDWARD F. HOGAN, Chicago, Ill., assignor to Q. R. S. De Vry Corporation, Chicago, Ill., a Corporation of Illinois. Filed Oct. 20, 1928. Serial No. 313,916. 6 Claims. (Cl. 173—322.)

1. A clamp of the character described adapted to secure an insulated conductor so as to project into a hollow insulator comprising a pair of prong-like elements adapted to be indented in the insulated covering of said conductor, means for uniting said elements, means whereby said elements and uniting means may be attached to said hollow insulator, and a slidable clamp for indenting said prong-like elements in said insulated covering.



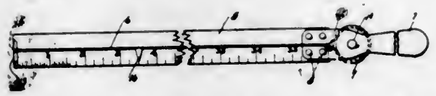
3. In combination, a hollow insulator, an insulated conductor projecting into said insulator and a clamp for clamping the conductor in place comprising a body portion having spaced projecting resilient prongs for hooking into the insulated covering of the conductor, and having spring fingers for attachment of the body portion to the insulator, said insulator having means receiving said fingers to hold them in place.

1,811,084. LIGHTING APPARATUS. ERNST EMANUEL HOLMQVIST, Stockholm, Sweden, assignor to Elvira Victoria Holmqvist, Stockholm, Sweden. Filed Mar. 28, 1929, Serial No. 350,702, and in Sweden Mar. 30, 1928. 9 Claims. (Cl. 240—78.)



1. The combination with a source of light, of a lower substantially plane reflector and an upper plane reflector group, the lower reflector being translucent and light diffusing and arranged below the light source, and in the way of at least the vertical and near-vertical direct rays from the light source, higher placed reflector being larger than lower placed reflector.

1,811,085. HYDRAULIC JACK. ARTHUR C. HOPKINS, Niles, Mich., assignor to National-Standard Company, Niles, Mich. Filed Jan. 6, 1928. Serial No. 244,840. 6 Claims. (Cl. 138—9.)

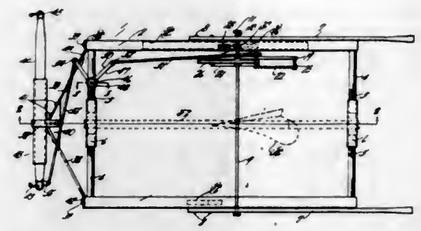


1. In a lifting jack, the combination of a frame, a lifting lever pivotally mounted on said frame, a cylinder block journaled on said frame for tilting movement and provided with a pump cylinder, a pump plunger, a ram cylinder carried by said cylinder block, a ram pivotally connected to said lifting lever, a sump, a valved intake from said sump to said pump cylinder, a valved discharge port from said pump cylinder to said ram cylinder, a valved exhaust connection from said ram cylinder to said pump, an actuating lever pivoted on the journals of said cylinder block, links connecting said actuating lever to said plunger, a releasing means for the exhaust valve comprising a push rod, a pivoted releasing lever operatively connected to said push rod, a segmental rack mounted for reciprocating movement in a plane parallel to the plane of oscillation of said actuating lever and operatively connected to said releasing lever, a return spring for said rack, and a tripping pawl on said actuating lever adapted to be selectively engaged with the teeth of said rack.

1,811,086. METHOD OF MOLDING ARTICLES PRODUCED FROM PLASTIC MATERIALS. HENRY J. KASCH, Dayton, Ohio, assignor to The Kurz-Kasch Company, Dayton, Ohio, a Corporation of Ohio. Filed Jan. 3, 1927. Serial No. 158,782. 6 Claims. (Cl. 18—59.)

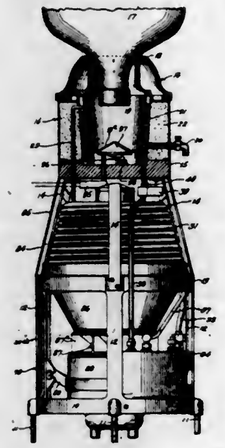
1. The herein described method of molding articles from phenolic condensation material and the like, consisting in preheating a hollow metallic form having substantially the same shape and proportions but of less size than the finished article, enclosing the preheated core in a matrix, and molding thereabout a stratum of phenolic condensation material under influence of external heat and pressure of substantially uniform thickness.

1,811,087. CALIPER RULE. ARTHUR L. KUHLMAN, Bay City, Mich. Filed Mar. 19, 1928. Serial No. 262,642. 2 Claims. (Cl. 33—107.)



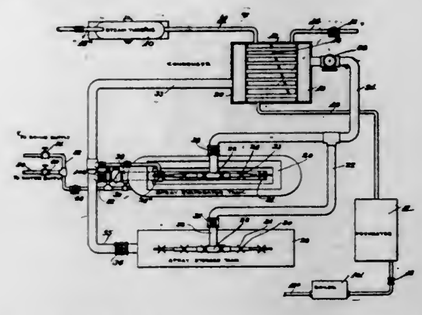
1. A grooved rule having a handle on the one end thereof, a sheave journaled in said handle and having its edges projecting beyond the edges of said handle, flexible means adapted to travel in said groove, and means on the opposite end of said rule through which the flexible means is threaded, said flexible means being trained over said sheave and forming a continuous circuit.

1,811,088. UPHOLSTERY TAG-PIN. JOSEPH S. LAUNDERVILLE, Los Angeles, Calif. Filed May 7, 1930. Serial No. 450,483. 2 Claims. (Cl. 40—11.)



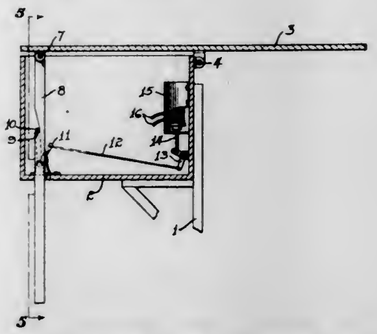
1. A fastener, for attachment to upholstery, including a button part having on its reverse face a system of fixed pins disposed about 90°, relatively; and having on its obverse face hooking and gripping means for cards and tags.

1,811,089. PLOW. JOHN THOMAS LAWRENCE, Castor, La. Filed Dec. 6, 1929. Serial No. 412,015. 3 Claims. (Cl. 97—1.)



3. In a device of the kind described, a frame, including spaced side members, a fixed plow receiving foot secured to one of the side members, a longitudinally adjustable plow receiving foot operatively mounted on the other side member, a lever fulcrumed in the frame and operatively connected to the said adjustable plow receiving foot whereby the same may be adjusted forwardly and rearwardly in the frame, and a laterally adjustable draft mechanism mounted at the front of the frame and connected to the said lever whereby the said draft mechanism may be adjusted laterally of the frame coincident with the longitudinal movement of the plow receiving foot.

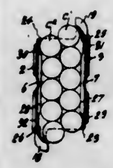
1,811,090. REFRIGERATION. ALAN VARLEY LIVINGSTON, New Haven, Conn., assignor to The Safety Car Heating & Lighting Company, a Corporation of New Jersey. Filed Mar. 7, 1925. Serial No. 13,701. 45 Claims. (Cl. 62—4.)



1. In apparatus of the nature of that herein described, in combination, a compressor, a single phase induction motor for driving said compressor and having a starting winding, means forming a substantially fluid tight casing having included therein said compressor and said motor, a condenser for receiving compressed fluid from said compressor, means for circulating cooling fluid in thermal contact with said condenser, a prime mover for driving said circulating means, a cooling device adapted to have expanded into it condensed fluid from said condenser, means for controlling the operation of said motor but dependent upon the state of operation of said prime mover, means responsive to the temperature of said cooling device for controlling the operation of said prime mover, and means exterior of said casing means for controlling the circuit of said starting winding of said motor substantially in accordance with the speed of said motor.

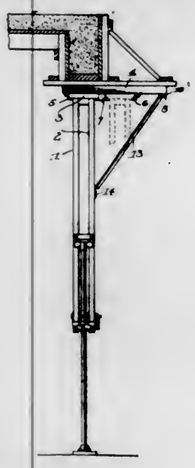
1,811,091. APPARATUS FOR THE PRODUCTION OF SALTS FROM BRINES AND SOLUTIONS. OTTO V. MARTIN, Sand Springs, Okla., assignor, by mesne assignments, to Texaco Salt Products Company, New York, N. Y., a Corporation of Delaware. Original application filed May 19, 1926, Serial No. 110,219, now Patent No. 1,657,633, dated Jan. 31, 1928. Divided and this application filed Oct. 22, 1927. Serial No. 227,912. 6 Claims. (Cl. 159—32.)

1. In an apparatus for concentrating salt brines, an open tank, a support running longitudinally of the tank and projecting thereabove, an inlet pipe carried by the upper end of the support and provided with a plurality of spray nozzles for creating a brine mist over the tank, a condenser having a cooling jacket, a pipe connecting the cooling jacket of the condenser with the first mentioned pipe, a discharge pipe running longitudinally of the tank and disposed below the first mentioned pipe, a return conduit connected with the cooling jacket of the condenser and with the discharge pipe, a supply pipe for solutions having an open end for discharging into the return conduit, said supply pipe being connected with a source of brine, and a pump for causing withdrawal of the brine from the tank and for forcing the brine from the tank to the condenser, and valves selectively operable to cause said pump to return the brine to the first mentioned pipe and the spray nozzles.



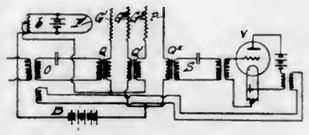
1,811,092. AMUSEMENT DEVICE. NATHAN MYRE, Toledo, Ohio. Filed Feb. 27, 1930. Serial No. 431,915. 5 Claims. (Cl. 273—102.)

1. In an amusement device, a platform fulcrumed intermediate its ends, and adapted to receive a weight at one end thereof, a member pivoted to and depending from the opposite end portion of said platform, said opposite end and said member being of greater weight than said weight receiving end, a trip member engageable with said pivoted member adapted normally to prevent said platform from swinging when a weight is imposed on the end thereof remote from said pivoted member, and means for releasing said trip member to permit swinging of



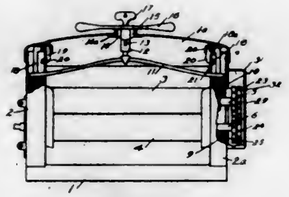
said platform whereby upon discharge of the weight the platform returns to normal position due to the greater weight on the end away from said weight-receiving end.

1,811,093. CARTRIDGE CLIP. CHESTER T. NEAL, Springfield, Mass. Filed Mar. 21, 1930. Serial No. 437,704. 23 Claims. (Cl. 42—88.)



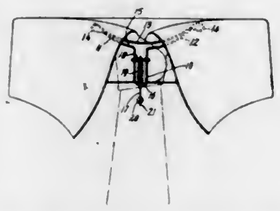
1. The combination with a gun having a magazine chamber of a clip adapted to hold a stack of cartridges in double row staggered relation, said clip having a back and stack embracing sides similarly constructed at the top and bottom so that said clip is reversible for insertion with said stack into said chamber, one side of said clip having an extended inturned ear portion only at the top, the other side of said clip having an extended inturned ear portion only at the bottom, whereby said oppositely extended ear portions determine the positions for the top and bottom cartridges of a stack, a receiver ear mounted in said gun for movement in and out of its functioning position in said magazine chamber, and means rendered operative by the movement of a clip in said magazine chamber for positioning said receiver ear.

1,811,094. SHORE ATTACHMENT. HENRY W. ROOS, Cincinnati, Ohio. Filed Dec. 1, 1926. Serial No. 152,033. 3 Claims. (Cl. 248—30.)



1. The combination with a shore, of an extension beam detachably mounted thereon, said extension beam projecting laterally from the head of said shore, a member extending parallel to and spaced from the under side of said extension beam so as to provide a socket between the member and the beam, and a brace arranged to extend obliquely between said extension beam and the body of said shore, said brace having an upper end bent at an angle to the oblique body of said brace so that said upper end extends horizontally and may be inserted in said socket by a horizontal motion, and a lower end attachable to the body of said shore.

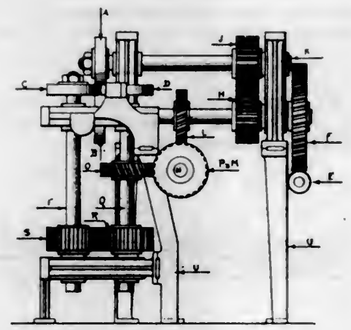
1,811,095. THERMIONIC AMPLIFIER AND DETECTOR. HENRY JOSEPH ROUND, Muswell Hill, London, England, assignor to Radio Corporation of America, New York, N. Y., a Corporation of Delaware. Filed Sept. 13, 1920, Serial No. 410,025, and in Great Britain Dec. 9, 1919. Renewed Aug. 27, 1930. 24 Claims. (Cl. 179—171.)



13. In combination in a high frequency receiving system of an electron discharge tube having cathode, control grid and anode electrodes, a plurality of auxiliary electrodes disposed between the control grid and the anode electrode, said auxiliary electrodes being biased to different potentials.

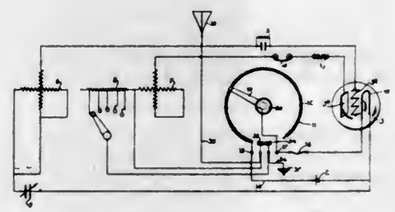
1,811,096. WRINGER. ERNEST J. SCHUDA, Erie, Pa., assignor to Lovell Manufacturing Company, Erie, Pa., a Corporation of Pennsylvania. Filed May 17, 1929. Serial No. 363,728. 15 Claims. (Cl. 68—32.)

1. In a wringer, the combination of side stiles; rolls mounted in the side stiles; a cross bar on the side stiles; a pressure device between the rolls and the cross bar; detachable connections between the cross bar and the side stiles; a safety release device on the cross bar releasing the pressure device; shafts for the rolls, said shafts extending through one of the stiles; and gears on said shafts outside of the stiles, said gears being normally in mesh, the side stile at the gear end of the shaft being slotted through its inner wall and outer wall through its top and the side stile opposite the gear being slotted through its inner wall and to the top permitting the direct removal of the upper shaft with its gear through said slots.



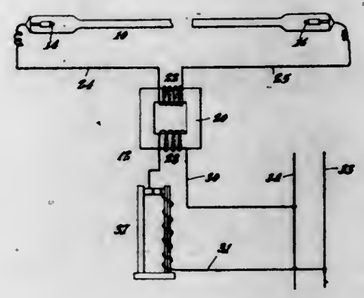
1,811,097. TIE FORM AND HOLDER. HERBERT GORDON SCOTT, Whitestone Landing, N. Y., assignor to Rosamund Lenore Gordon Scott, Whitestone Landing, N. Y. Filed Sept. 23, 1929. Serial No. 394,399. 11 Claims. (Cl. 24—57.)

1. A tie form and holder comprising a substantially T-shaped frame, the head of the T being formed with a slot therein adapted to receive a portion of the tie and the



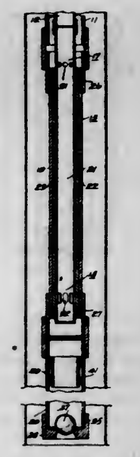
stem forming a body about which the tie may be knotted, and means for attaching the stem of the T to a collar button, said means being resiliently extensible.

1,811,098. MACHINE FOR UNDULATING WIRE. CASIMIRO HERNÁNDEZ SOLÁ, Barcelona, Spain. Filed Dec. 23, 1927, Serial No. 242,239, and in Spain Feb. 24, 1927. 2 Claims. (Cl. 140—105.)



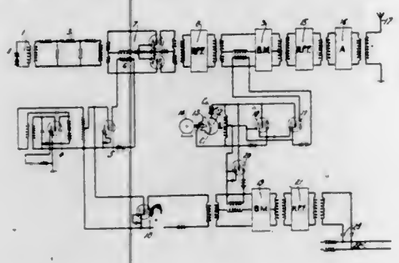
1. A machine for producing ornamental undulations in wire in two planes, situated at an angle to each other, comprising, in a unitary construction, a first pair of co-operating rotatable discs or the like arranged in one plane, between which the wire passes so as to form the undulation in this plane, and a second pair of such discs, separate from the first, arranged in the second plane, between which the wire passes after leaving the first pair, so as to form the undulations in the second plane, shafts carrying discs, and means mounting the shafts on one side only of each pair of discs.

1,811,099. RADIO APPARATUS. LAWRENCE W. STONEQUIST, Chicago, Ill., assignor of one-half to Charles Rottum, Chicago, Ill. Filed Apr. 2, 1923. Serial No. 629,350. 5 Claims. (Cl. 250—16.)



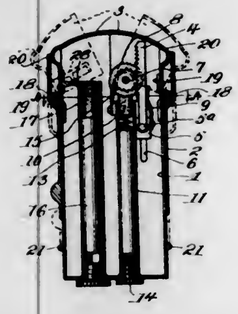
4. A radio apparatus comprising a rheostat, a tube, a circuit making and breaking device on said rheostat for connecting the resistance thereof in circuit with the tube filament and disconnecting it therefrom, a second circuit making and breaking device on said rheostat and a single movable element for successively controlling and maintaining operative either of said circuit making and breaking devices.

1,811,100. OPERATION OF LUMINOUS TUBES. CYRIL S. TREACY, Mount Vernon, N. Y., assignor to International Neon Company, Incorporated, New York, N. Y., a Corporation of Nevada. Filed Nov. 6, 1928. Serial No. 317,681. 3 Claims. (Cl. 176—124.)



1. A luminescent sign, comprising a gas-conducting display tube of the internal electrode type, having a period of the order of seconds, at the end of which flickers appear after illumination, and means for intermittently supplying current to said tube for periods not greater than the period in which said flickers appear.

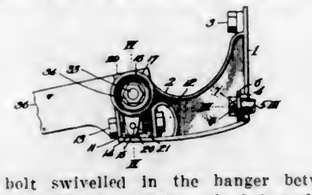
1,811,101. OIL WELL PUMP. HAROLD F. WATKINS, Oakland, Calif., assignor to Watkins Intermitting Pump Company, San Francisco, Calif., a Corporation of California. Filed Apr. 17, 1929. Serial No. 355,702. 3 Claims. (Cl. 103—240.)



1. In an oil well pump, oil and gas pipe strings extending down into the well for a substantial distance below the normal level of oil in the same, said gas pipe string being adapted for connection with a source of gas under pressure at the surface of the well, a valve for establishing and interrupting communication between said pipes at a point substantially below said level, means actuated from the surface of the well for directly applying motion to said valve whereby it is recurrently opened and closed, a second oil valve adapted to control flow of oil into said oil pipe from the well, said second valve being located below the first and being adapted to be recurrently operated responsive to operation of the first valve, and a third valve associated with the oil pipe and serving to control flow between the second valve and the well.

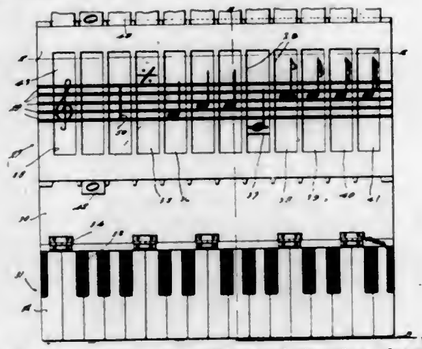
1,811,102. SIGNAL TRANSMISSION BY GUIDED AND UNGUIDED WAVES. RAY R. ADAMS, Maplewood, N. J., and ELMER V. GRIGGS, White Plains, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 10, 1924. Serial No. 736,830. 6 Claims. (Cl. 250—6.)

1. The method of secret radio signaling which comprises controlling the action of signal transmitting apparatus so as to produce two complementary components of a signal modulated wave, both of which are essential to intelligible reception of the signal, broadcasting one component through space and transmitting the other component by wire to selected receiving stations in the radio field of said one component.



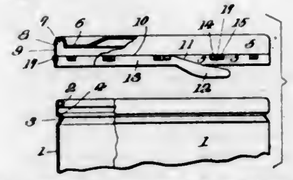
1,811,103. LIGHTER. LUCY COTTON AMENT, now by judicial change of name Lucy Cotton Thomas, New York, N. Y. Filed Aug. 24, 1929. Serial No. 388,230. 9 Claims. (Cl. 67—7.1.)

6. In combination in a lighter, an inner casing, cover members hinged at opposite sides of the top of said casing, spring means at the hinges of said covers urging them to open position, a sleeve slidable outside of said casing to frictionally engage and close the hinged covers or to allow them to open, a fuel reservoir and wick within said casing, wick igniting means comprising a frictional wheel and sparking stone within the casing, said frictional wheel having ratchet teeth thereon, and a rack bar secured to said sleeve and movable with the sleeve to operate the lighting means in unison with the opening of the covers upon downward movement of the sleeve.



1,811,104. LATERAL ARM AWNING FOR STORE FRONTS. FREDERICK A. ANTON, Topeka, Kans. Filed Jan. 20, 1930. Serial No. 422,062. 12 Claims. (Cl. 156—44.)

10. In an awning, a hanger having a transverse tubular head, a pair of clamping elements rotatably adjustable in said head, a bracket having a boss projecting into one of said clamping elements, a bolt extending axially through said boss and said clamping elements and provided with a head at one end and a retaining device at the other end for preventing separating movement of said elements and brackets; said elements having depending lugs and one of them bearing an interlocked relationship to said

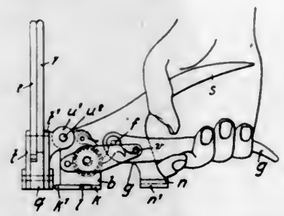


bracket, a bolt swivelled in the hanger between the said lugs, and a collar threaded on the bolt and provided with trunnions pivotally engaging the said lugs respectively.

1,811,105. EDUCATIONAL APPLIANCE. THEODORE A. APPIA, New York, N. Y. Filed June 6, 1929. Serial No. 368,846. 5 Claims. (Cl. 84—471.)

2. In an educational appliance of the class described, a base, a multiplicity of longitudinally spaced partitioning strips secured on said base and having their outer ends terminating flush with one longitudinal edge of the base, the inner ends of said strips being spaced from the remaining longitudinal edge of the base to form a writing area, said strips co-operating with each other and said base in forming open-ended guides, indicia equipped slides removably and slidably positioned in said guides, and projectable through the opposite open ends of the guides, and a facing panel fastened across the strip in spaced parallelism to the base, said panel having sight openings at longitudinally spaced points in registry with said guides, the panel being further provided with members intersecting said sight openings and arranged with respect to each other to provide a musical notation staff for co-operation with the indicia on said slides, said panel being of a width less than the length of the strip, and the opposite ends of the strips projecting beyond the corresponding longitudinal edges of the panel, said projecting ends being bevelled to facilitate insertion and removal of the slides.

1,811,106. METAL CONTAINER. CHARLES J. AULBACH, Passaic, N. J., assignor to Continental Can Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 22, 1929. Serial No. 349,064. 3 Claims. (Cl. 220—54.)



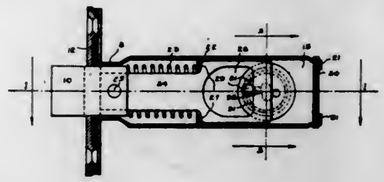
3. A metal container comprising a body portion having an annular shoulder parallel with the opening and a cover having a depending flange adapted to extend down over the body portion, a sealing material between the cover and the body portion, said flange being provided with spaced inwardly extending lugs adapted to engage said shoulder, each lug having associated therewith an outwardly extending seating projection whereby said lugs may be simultaneously forced into positive gripping engagement with the shoulder.

1,811,107. PROCESS OF RECOVERING SOLVENTS. OSCAR L. BARNEBEY, Columbus, Ohio, assignor to American Solvent Recovery Corporation, a Corporation of Ohio. Filed July 5, 1924. Serial No. 724,418. 11 Claims. (Cl. 252—4.)

1. The process of recovering volatile solvents comprising vaporizing the solvent with air in excess of the amount adapted to produce an explosive mixture with the solvent; contacting the air and solvent mixture with a solid adsorbent to adsorb the solvent and thereby separate it from the air; and distilling the solvent from the adsorbent by direct application of steam.

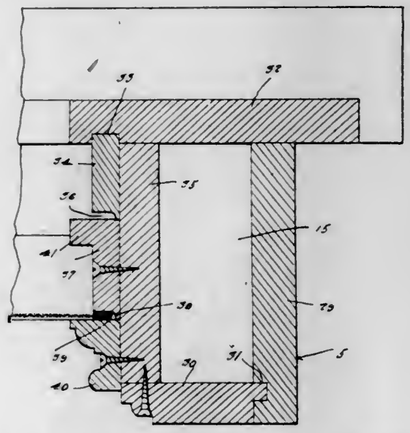
1,811,108. STRAP STRETCHING AND FASTENING TOOL. JOSEF BAYER, Barmen, Germany. Filed Oct. 15, 1927, Serial No. 226,476, and in Germany Apr. 20, 1927. 1 Claim. (Cl. 81—9.1.)

A bale-tie fastener of the character described, comprising a frame having an upward and rearward extension forming a handle, a straining lever arranged under said extension and pivoted to the frame, and a crimping and sealing tool pivoted to said frame in front of the extension, said lever and sealing tool being movable in the vertical plane of the extension.



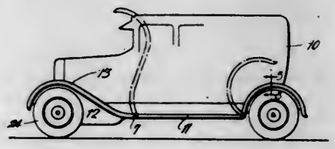
1,811,109. TIRE RIM. LOUIS BENZ, Denver, Colo. Filed Oct. 25, 1930. Serial No. 491,287. 8 Claims. (Cl. 301—32.)

3. In a tire rim, the combination of a primary section provided with a slot in one end, an auxiliary section provided with a tongue and a spur flange, said spur flange adapted to fit into said slot, and fastening means on the tongue and primary section.



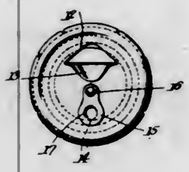
1,811,110. TUBULAR NIGHT LATCH. FRANK ELLISON BEST and FRANKLIN H. HARP, Seattle, Wash., assignors to Frank E. Best, Inc., Seattle, Wash., a Corporation of Washington. Filed May 14, 1927. Serial No. 191,411. 4 Claims. (Cl. 70—46.)

1. In a lock, a bolt, a spring urging said bolt outwardly, a tongue connected with said bolt and extending rearwardly therefrom, said tongue having an opening cut in its rear end the rear edge of said opening affording a straight edge having a shallow notch therein and a throw pin movable in the arc of a circle to engage said straight edge and retract said bolt and to enter said notch and



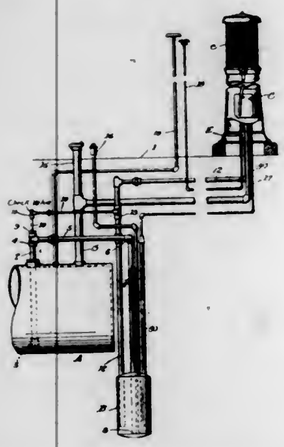
hold said bolt in maximum retracted position, said opening clearing said throw pin to allow said bolt to be pushed rearward.

1,811,111. WINDOW SCREEN AND FRAME CONSTRUCTION. JAMES W. BOOTHMAN, Providence, R. I. Filed May 27, 1930. Serial No. 456,129. 2 Claims. (Cl. 156—39.)



2. In a window frame construction with sliding sash comprising vertical side pieces for the sash, said sash having a screen secured to one end thereof with the side edges of the screen extending beyond the side edges of the sash, guides for the side edges of the screen, each guide being formed by spacing the adjacent vertical edges of the vertical side pieces.

1,811,112. MUD GUARD FOR AUTOMOBILES. AIMÉ CARTON, Woodcliffe, N. J. Filed Apr. 5, 1930. Serial No. 441,896. 1 Claim. (Cl. 280—152.)



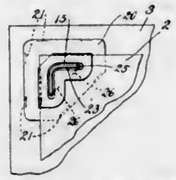
In an automobile having a running board, a wheel, and a guard apron terminating adjacent said wheel, a mud guard having one end hinged to said running board, means for removably securing said mud guard to said guard apron, said means including spaced threaded studs extending outward from said guard apron along the length thereof for the passage through openings provided in said mud guard, and securing nuts threaded to the outer ends of said studs.

1,811,113. CAP AND POURER. THOMAS N. DERBY, Round Lake, N. Y., assignor, by mesne assignments, to said Thomas N. Derby and Elwin S. Bentley. Filed Aug. 30, 1929. Serial No. 389,511. 2 Claims. (Cl. 215—38.)

1. A container closure having a plurality of spaced pouring openings therein, a spout in direct communication with one of said openings, a closure for the other of said openings and means for securing the closure to a receptacle, said spout being directed across the container closure toward the other opening.

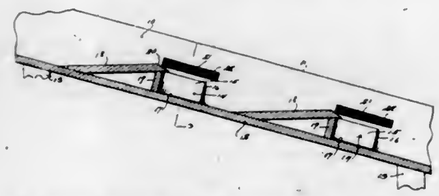
1,811,114. DISPENSING APPARATUS. CURTIS H. EDWARDS and ROBERT L. TRANSTROM, Los Angeles, Calif., assignors, by mesne assignments, to Wayne Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Nov. 10, 1926. Serial No. 147,474. 3 Claims. (Cl. 221—100.)

1. Apparatus of the character disclosed, including a dispensing cylinder, an overflow pipe within said cylinder, a drain pipe at the base of said cylinder, and valve means between the overflow pipe and the drain pipe, and a second drain pipe joined to said valve whereby when the valve is open liquid will pass from the first drain pipe into the second drain pipe.



1,811,115. RESINOUS COMPOSITION AND PROCESS OF MAKING SAME. CARLETON ELLIS, Montclair, N. J. Filed Apr. 7, 1927. Serial No. 181,892. 21 Claims. (Cl. 260—8.)

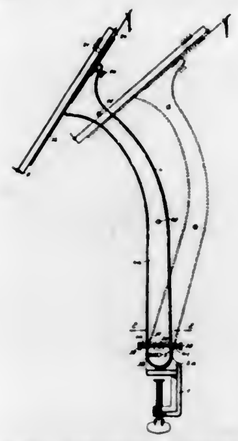
1. A soluble and fusible sulpho-chlorinated glyceride resin.



7. A heat hardened sulpho-chlorinated glyceride resin.

1,811,116. PICTURE MOUNTING DEVICE. ALBERT W. ENGEL, Chicago, Ill. Filed Dec. 7, 1928. Serial No. 324,387. 10 Claims. (Cl. 40—156.)

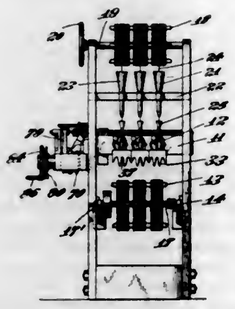
1. A device for mounting pictures and the like, consisting of a corner fitting of sheet material provided with two spaced apart slits having their respective ends terminating in a pair of planes perpendicular to each other and adapted to have a corner of a picture inserted through both of said slits, and having a depressed area intermediate said slits adapted to yieldingly engage the surface of the picture for frictionally maintaining said fitting in place, and means for attaching said fitting to a mounting member.



1,811,117. POCKET SLUICE. HERBERT FARNELL, Littleton, Colo. Filed Oct. 5, 1929. Serial No. 397,615. 2 Claims. (Cl. 209—458.)

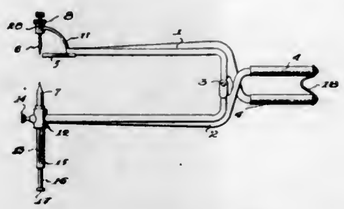
1. A sluice comprising an inclined conduit, a water fall member mounted in said conduit in substantially horizontal position, the lower end of said water fall member being downwardly inclined and positioned in spaced relation to the bottom of said conduit, an open top removable receiver in said conduit and adapted to catch the water from said water fall member, and a screen secured to said conduit whereby to screen the water entering the receiver.

1,811,118. COPYHOLDER FOR TYPEWRITERS. OSKAR FISCHER, Berlin, Germany. Filed Sept. 24, 1927, Serial No. 221,798, and in Germany Dec. 23, 1925. 8 Claims. (Cl. 120—28.)



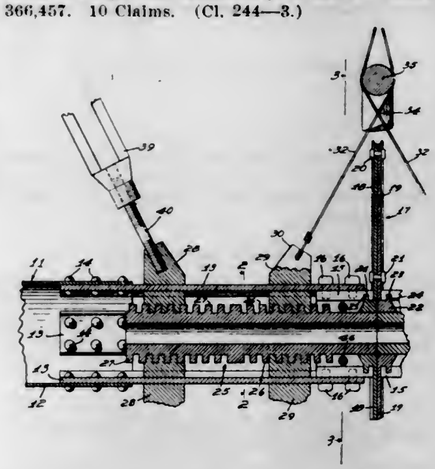
1. A copy-holder, comprising a copy-supporting frame, a curved supporting arm for said frame composed of two channeled and inter-connected members disposed with their channeled faces opposing each other and formed at their top ends with enlargements providing a plane face, a guide member secured to said plane face and having said copy-supporting frame slidably mounted thereon, and a base to which the arm is connected.

1,811,119. PROCESS FOR THE TREATMENT OF ANIMAL FIBER AND THE PRODUCT. ABRAHAM P. FURMAN, New York, N. Y., assignor, by mesne assignments, to Corticelli Silk Company, New London, Conn., a Corporation of Connecticut. Filed July 13, 1923. Serial No. 651,432. 33 Claims. (Cl. 18—54.)



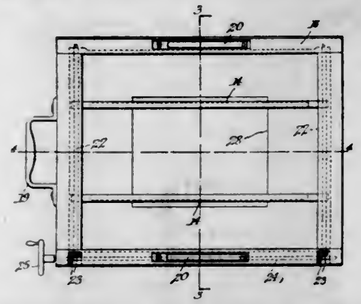
31. A process for manufacturing animal fiber which consists in dissolving animal fiber in a solvent formed from a compound of a metal selected from the group comprising nickel and copper, an alkali and an organic substance selected from the group comprising glycerine and sucrose, reforming the fiber by precipitation, washing in a bath containing glycerine, and elongating.

1,811,120. SKEIN LACING MACHINE. STEPHEN A. GASPA and DANIEL R. CAHILL, Bethlehem, Pa. Filed Dec. 26, 1928. Serial No. 328,356. 42 Claims. (Cl. 28—21.)



1. In a machine for lacing a skein of material, means for dividing the strands of the skein into groups, a lace feeder, a lace carrier, means to guide the carrier in a predetermined path above, below, and between said groups and also about the portion of the lace emerging from said feeder remote from said skein and means to propel said carrier along said guide means.

1,811,121. TRACING DEVICE. ALBERT GASTELL, Mainz, Germany. Filed Mar. 26, 1929, Serial No. 350,071, and in Germany May 9, 1928. 2 Claims. (Cl. 33—24.)



1. In a hand operated freely movable transmission device for the purpose described, including in combination, two rigid arms having their inner portions arranged in crossed formation and pivotally connected to each other, handles on said inner portions, pins mounted on the free outer ends of both of said arms and extending toward each other and arranged in alignment with each other, a tilting preventing member for engaging the surface to be operated upon mounted on one of said arms, a guide member on the arm opposite the tilting preventing member, the pin on the arm carrying the guide member being in the form of a pencil, a sleeve for receiving said pencil and longitudinally adjustable in the guide member and provided with a scale, a spring mounted in the sleeve and bearing against the inner end of the pencil, and a tension regulating member acting on the spring and the pencil.

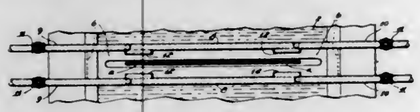
1,811,122. EXPANSION DEVICE FOR DIAGONALS AND BULKHEAD WIRES. OTTO GEISLER and GEORGE W. SETH, Chicago, Ill. Filed May 27, 1929. Serial No. 366,457. 10 Claims. (Cl. 244—3.)

2. In an airship of the lighter than air type, a plurality of movable bracing members, a plurality of bulkhead wires, and means operatively connected with said plurality of bracing members and the plurality of bulkhead wires whereby the same may be placed and held under various degrees of tension.

1,811,123. COPYHOLDER FOR PROJECTION APPARATUS. RUDOLPH A. GLASER, Cleveland, Ohio, assignor, by mesne assignments, to Gardner Abbott, as trustee. Filed Oct. 31, 1927. Serial No. 230,133. 3 Claims. (Cl. 88—24.)

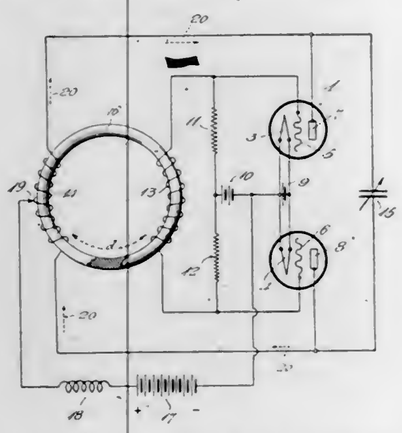
1. An improved negative or positive holder-frame for projecting cameras adapted to be inserted in a suitable groove in the camera, comprising a frame, means supported by said frame for clamping the negative or positive and automatically positioning the image carrying surface thereof in a predetermined plane with respect to the front face of said holder-frame, and means carried by said frame to automatically position the holder-frame in the camera groove with its front face in a predetermined plane with respect to the camera lens, whereby a plurality of separation images may be successively projected with assurance that the projections of corresponding elements of the images will coincide with precision.

1,811,124. BOOKHOLDER. WILLIAM H. GREELEY, Newton, Mass., assignor to Ginn and Company, Boston, Mass., a Copartnership. Filed Dec. 16, 1929. Serial No. 414,608. 1 Claim. (Cl. 24—66.)



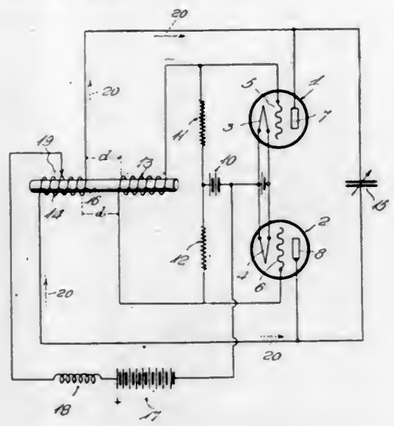
A book cover holder comprising a piece of wire formed with a center bar, and two resilient clips only, each

formed perpendicularly to the center bar at the ends thereof, each clip consisting of two adjacent lengths of the wire separated from each other at the bottom by a sufficient distance to accommodate covers of a considerable thickness



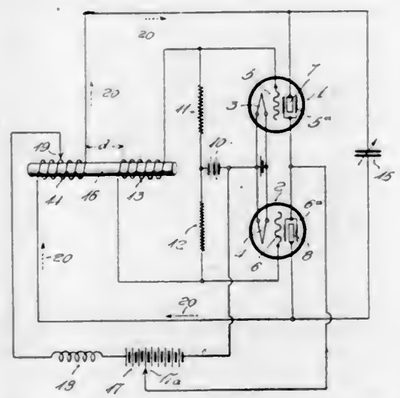
and having portions closely adjacent to each other and converging together at the open end to resiliently grip the covers, the two clips lying in the same plane and including the center bar.

1,811,125. APPARATUS FOR DRAWING SHEET GLASS. HOWARD L. HALBACH, Clarksburg, W. Va., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Apr. 4, 1928. Serial No. 267,240. 1 Claim. (Cl. 49—17.)



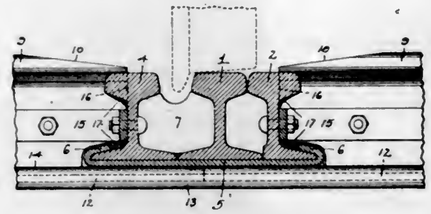
The combination with apparatus for drawing a glass sheet continuously from a body of molten glass, of a hollow metal color extending transversely of the bath adjacent such bath and the glass sheet and having a pair of opposing vertical faces with the face next to the face of the sheet substantially parallel thereto, and provided opposite the marginal portions of the sheet with enlargements whose faces also lie parallel to the sheet and closer to the sheet than does the face of the cooler intermediate the enlargements, and means for circulating a cooling liquid through the cooler.

1,811,126. BALANCED MAGNETOSTRICTIVE OSCILLATOR. JAMISON R. HARRISON, Middletown, Conn., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 11, 1928. Serial No. 325,367. 6 Claims. (Cl. 250—36.)



1. An electrically balanced circuit arrangement comprising in combination a plurality of thermionic tubes having cathodes, anodes and control electrodes, input and output circuits interconnecting said electrodes, an inductance included in said input circuit, an inductance included in said output circuit, means for selectively tuning said output circuit and a torus ring of metal interlinking the axes of said inductances.

1,811,127. BALANCED MAGNETOSTRICTIVE OSCILLATOR. JAMISON R. HARRISON, Middletown, Conn., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 11, 1928. Serial No. 325,368. 6 Claims. (Cl. 250—36.)

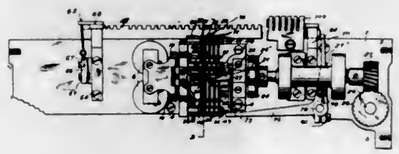


1. An electrically balanced circuit arrangement comprising in combination a plurality of thermionic tubes having cathodes, an input circuit connected between said control electrodes and said cathodes, anodes and control electrodes, an inductance included in said input circuit, an output circuit connected between said anodes and cathodes, an inductance connected in said output circuit, the windings of said inductances having the turns thereof extending in the same directions, a rod of metal cocident with the axes of said inductances and means for tuning said output circuit.

1,811,128. BALANCED MAGNETOSTRICTIVE OSCILLATOR. JAMISON R. HARRISON, Middletown, Conn., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 11, 1928. Serial No. 325,369. 15 Claims. (Cl. 250—36.)

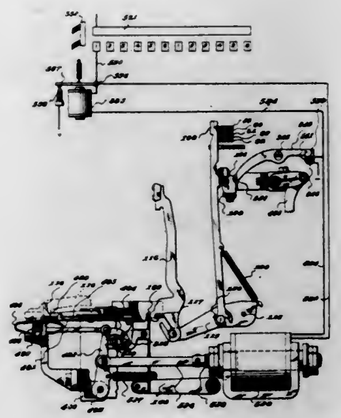
1. An electrically balanced circuit arrangement comprising in combination a plurality of thermionic tubes having cathodes, anodes, shielding anode electrodes and control electrodes, input and output circuits interconnecting said electrodes, an inductance included in said input circuit, an inductance included in said output circuit, said inductances being wound in the same direction and a magnetostrictive rod extending through said inductances and means for tuning said circuits to the frequency of free vibration of said magnetostrictive rod.

1,811,129. RAIL CROSSING. WILLIAM R. HESSKEW and JOSEPH J. NULTY, San Antonio, Tex. Filed Sept. 10, 1930. Serial No. 480,976. 4 Claims. (Cl. 246—457.)



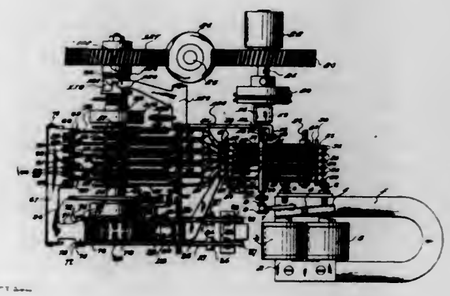
1. A railroad crossing made up of channeled rails having their confronting ends spaced, their base flanges extending from their ends and their webs at the juncture with the base flanges notched, plates welded under and to the base flanges of the rails, T-rails of a less height than the channeled rails, arranged beneath the confronting ends of the channeled rails and comprising each a main rail, a reinforcing rail contacting the main rail and a guard rail spaced from the main rail, a plate welded to the under faces of the base flanges of the reinforcing and guard rails and resting on the connecting plates for the channeled rails and having their outer base flanges received in the notches of said channeled rails and angle fish plates secured to and arranged in the outer fishing spaces of the reinforcing rail, the guard rail and the channeled rails.

1,811,130. PROCESS FOR THE POLYMERIZATION OF OLEFINES. FRITZ HOFMANN and MICHAEL OTTO, Breslau, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Apr. 30, 1927, Serial No. 188,041, and in Germany Apr. 22, 1926. 4 Claims. (Cl. 260—170.)



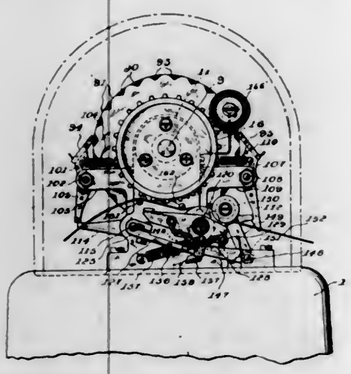
1. A process for polymerizing ethylene which comprises subjecting it to the action of boron fluoride under pressure.

1,811,131. SELECTIVE SYSTEM AND APPARATUS. EDWARD E. KLEINSCHMIDT, Long Island City, N. Y., assignor, by mesne assignments, to Teletype Corporation, Chicago, Ill., a Corporation of Delaware. Filed Apr. 3, 1924. Serial No. 704,022. 63 Claims. (Cl. 178—33.)



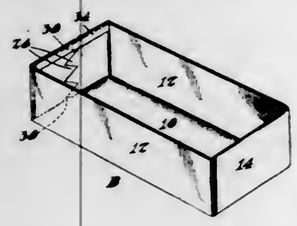
1. In selecting mechanism, a plurality of selector members, a magnet responsive to received code combinations of electrical conditions; and a cam shaft comprising a cam individual to each selector bodily moved by the actuation of said magnet in response to the received code combinations.

1,811,132. SELECTIVE SYSTEM AND APPARATUS THEREFOR. EDWARD E. KLEINSCHMIDT, Chicago, Ill., assignor to Teletype Corporation, Chicago, Ill., a Corporation of Delaware. Filed Nov. 11, 1925. Serial No. 68,307. 68 Claims. (Cl. 178—4.)



1. A printing telegraph receiver comprising a selecting mechanism embodying a plurality of notched permutation members responsive to code combinations of uniform marking conditions and uniform spacing conditions; printing means embodying a plurality of groups of characters, each group being selectable by a different code combination; a shift mechanism for determining the character of a selected group to be printed and means responsive to a special shift selecting condition added to said code combinations controlling said shift mechanism.

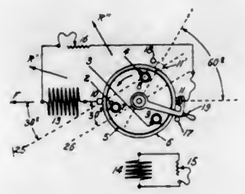
1,811,133. PRINTING TELEGRAPH. EDWARD E. KLEINSCHMIDT, Park Ridge, Ill., assignor to Teletype Corporation, Chicago, Ill. Filed Feb. 23, 1927, Serial No. 170,283. Renewed Sept. 17, 1929. 91 Claims. (Cl. 178—38.)



1. In a printing telegraph receiver, a selector device operatively responsive to received line current impulses and means following each operation of said selector device in response to a line current impulse for rendering it unresponsive to further impulses for a predetermined interval.

1,811,134. PRINTING TELEGRAPH. EDWARD E. KLEINSCHMIDT, Chicago, Ill., assignor to Teletype Corporation, Chicago, Ill., a Corporation of Delaware. Refile of abandoned application Serial No. 726,839, filed July 18, 1924. This application filed Nov. 30, 1928. Serial No. 322,946. 113 Claims. (Cl. 178—28.)

1. A selecting receiver responsive to received code combinations of electrical conditions comprising a normally moving member stopped in operation at the beginning of each reception of a code combination, and started in operation at the end of each code combination.



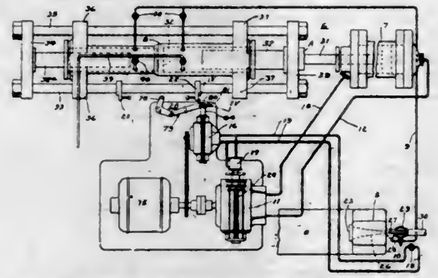
1,811,135. BOX. CUTLER D. KNOWLTON, Beverly, Mass., assignor to Hoague-Sprague Corporation, Lynn, Mass., a Corporation of Massachusetts. Filed Feb. 25, 1926. Serial No. 90,569. 3 Claims. (Cl. 229—34.)

1. A box comprising shell-material having a body-portion, opposite side wings, corner-laps extending from the opposite sides of the side wings and provided at their outer extremities with serrations intermeshing wire corresponding serrations upon opposite corner-laps, end wings adhesively secured to the outer surfaces of the corner-laps, and end-wing extensions overlying the outer ends of the meeting lines between the serrations and being adhesively secured to the inner surfaces of the corner-laps, said box while in blank-form having cover-paper adhesively secured to the entire surface which furnishes the outside of the box when set up.

1,811,136. SYNCHRONOUS MOTOR. JAROSLAW K. KOSTKO, Ferguson, Mo. Filed Sept. 11, 1926. Serial No. 134,845. 11 Claims. (Cl. 172—120.)

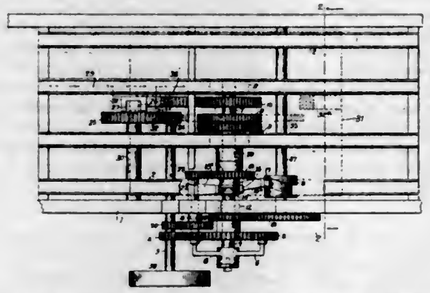
1. The method of operating a motor which carries variable load at synchronous speed, comprising, producing a primary flux which revolves with respect to the primary, causing the primary flux to generate induction-motor-torque producing ampereturns in a winding on the secondary, producing an auxiliary voltage which is of slip frequency below synchronism, of an amplitude independent of its frequency, and which becomes unidirectional at synchronism, impressing below synchronism the auxiliary voltage on the secondary winding carrying the induction-motor-torque producing ampereturns, synchronizing the motor by adjusting the phase of the auxiliary voltage to approximately coincide, very near to synchronism, with the phase of the induction-motor-torque producing ampereturns, and thereafter limiting the amplitude of the auxiliary voltage to less than that which was available during synchronization.

2. The method of operating a motor which carries variable load at synchronous speed, comprising, producing a primary flux which revolves with respect to the primary, causing the primary flux to generate induction-motor-torque producing ampereturns in a winding on the secondary, producing an auxiliary voltage which is of slip frequency below synchronism, of an amplitude independent of its frequency, and which becomes unidirectional at synchronism, impressing below synchronism the auxiliary voltage on the secondary winding carrying the induction-motor-torque producing ampereturns, synchronizing the motor by adjusting the phase of the auxiliary voltage to approximately coincide, very near to synchronism, with the phase of the induction-motor-torque producing ampereturns to synchronize the motor with an alternating synchronizing torque having unequal positive and negative maxima, and thereafter modifying the adjustment which was made to secure approximate phase coincidence between auxiliary voltage and induction-motor-torque producing ampereturns.



1,811,137. SOCKET WRENCH. WILLARD C. KRESS, Kenmore, N. Y., assignor to J. H. Williams & Co., Buffalo, N. Y., a Corporation of New York. Filed Jan. 15, 1930. Serial No. 420,855. 10 Claims. (Cl. 81—121.)

5. A wrench comprising a handle and a socket block having sockets of different dimensions in different faces, the block being pivotally mounted in the handle so that a socket in use may be rotated with respect thereto to either of two oppositely-disposed working positions, the socket being of the form of a polygon having multiple symmetry with respect to a point and a number of axes of symmetry divisible by two, the pivotal axis of the socket block and the longitudinal axis of the handle being relatively inclined at an angle greater than zero which is not exactly divisible by the angle at the center of the socket between two of its axes of symmetry which are nearest parallel.

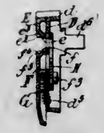


CARNEGIE LIBRARY OF ATLANTA

1,811,138. APPARATUS FOR PRESSURE TESTING. BENJAMIN LASSMAN, Pittsburgh, Pa., assignor to The American Fluid Motors Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 3, 1927. Serial No. 223,590. 33 Claims. (Cl. 73—51.)

1. The combination with a material supporting device and reversible fluid-actuated means for supplying fluid under pressure thereto, of a control device for the fluid-actuated means comprising a variable and reversible delivery pump for delivering fluid under predetermined pressure to the supply means.

1,811,139. BED DRIVING MECHANISM FOR BED AND CYLINDER PRESSES. HOWARD EVANS LAUBACH, Cincinnati, Ohio, assignor to Delphos Printing Press Corp., Providence, R. I., a Corporation of Delaware. Filed June 4, 1929. Serial No. 368,225. 23 Claims. (Cl. 74—98.)

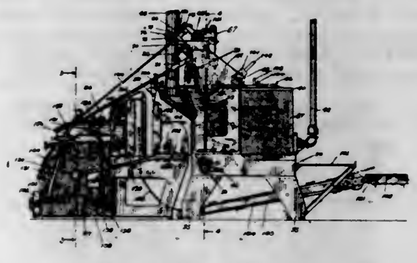


1. In a printing press a bed, a bed driving rack attached to the underside of the bed, a bed reversing rack attached to the underside of the bed adjacent each end of the bed driving rack, a pair of bed driving gears, means for independently and continuously rotating said gears in opposite directions, said gears being adapted to drive the bed on the major portions of its strokes, means for shifting said gears axially during the reversal period respectively into and out of position to engage with the bed driving rack, and means cooperating with said reversing racks while the bed driving gears are out of mesh with the bed driving rack, to slow down and stop the bed and start it in the reverse direction.

1,811,140. VISOR SIGNAL FOR MOTOR VEHICLES. THOMAS J. LAW, Clear Lake, S. Dak. Filed Apr. 1, 1930. Serial No. 440,821. 4 Claims. (Cl. 177—329.)

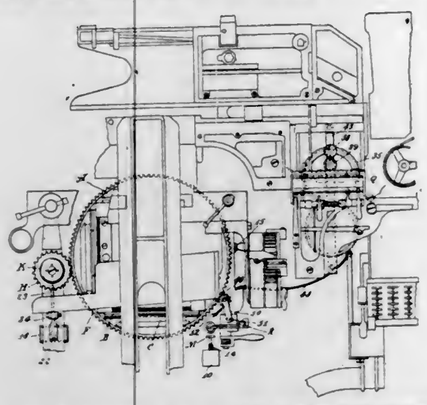
1. A motor vehicle signal comprising an elongated shallow casing including a flat top plate apertured to outline a signal symbol, means for mounting said casing at one edge to and at the top of a motor vehicle windshield to constitute a visor therefor, means for illuminating the interior of the casing, and means connecting the body portion of the casing with the top thereof whereby the body portion may be shifted relative to the top to open the casing.

1,811,141. KEY ESCUTCHEON. MITCHELL LEVENTHAL, Brooklyn, N. Y., assignor to Sosy, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 19, 1930. Serial No. 429,628. 2 Claims. (Cl. 70—8.)



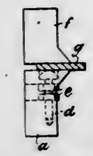
1. An escutcheon comprising an element having a keyhole therein, a member mounted on, and slidable relatively to said element and having its top surface substantially flush with the top surface of the element, a shoulder on said element in superposed relation to the keyhole, the slidable member having an end face normally held in abutting relation to said shoulder, and a depression in at least one of the aforementioned parts at their abutting surfaces adapted to receive the bit end of a key, said slidable member being adapted to yield and permit the entrance of the key into the key-hole when said key is pressed against said depression.

1,811,142. PROCESS FOR THE RECOVERY OF TIN FROM ALKALINE STANNATE SOLUTIONS. WILLIAM T. LITTLE, Westfield, N. J. Filed Oct. 6, 1928. Serial No. 310,931. 4 Claims. (Cl. 23—144.)



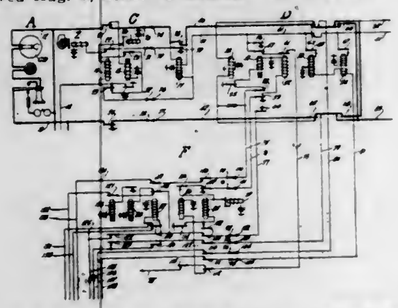
1. In recovering tin in detinning processes with cyclic use of baths, the process which comprises detinning in an alkaline bath containing alkali nitrate and nitrite until a substantial amount of solid alkali stannate is formed, removing such stannate, reacting upon such stannate in solution with nitrous gases to precipitate tin oxid, removing the precipitate and returning the liquor to the detinning bath.

1,811,143. GRID CASTING MACHINE. ARTHUR D. LUND, Minneapolis, Minn., assignor to Alcet Electro-Products Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 24, 1928. Serial No. 301,830. 29 Claims. (Cl. 22—57.)



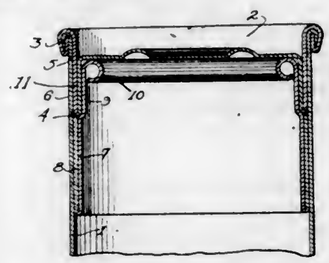
27. In a casting machine a pair of complementing molds, a ram for operating one of the molds, a feed mechanism for filling the molds, said feed mechanism having a piston and a valve for controlling the feed of the molten metal to the molds, a continuously rotatable rotor, a cam carried by the rotor for actuating the ram, a second cam carried by the rotor for actuating the piston, and a third cam carried by the rotor for actuating the valve.

1,811,144. SIGNALING AND INDICATING DEVICE FOR PROTECTING THE MOLDS AND MOLD LINERS OF TYPESETTING MACHINES. ARTHUR J. MCLOUGHLIN, Corona, New York, N. Y. Filed May 31, 1929. Serial No. 367,429. 15 Claims. (Cl. 199—52.)



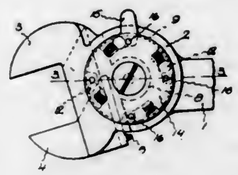
1. An attachment for linotype machines including means operable to produce a continuous signal by setting of the mold disk pinion for manipulation and means operable by manipulation of the ejector blade changing mechanism for discontinuing said signal.

1,811,145. SLUG-TRIMMING KNIVES FOR TYPOGRAPHICAL LINE-CASTING MACHINES. CARL MUEHLEISEN, Berlin, Germany, assignor to Mergenthaler Linotype Company, Brooklyn, N. Y. Filed Mar. 5, 1930, Serial No. 433,217, and in Germany Mar. 8, 1929. 6 Claims. (Cl. 199—59.)



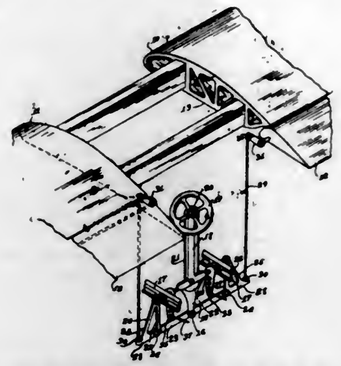
3. A slug-trimming knife for typographical line-casting machines comprising a body portion and a cutting-edge portion, the said portions being separated by a gap, and means adapted to deflect the cutting-edge portion relatively to the gap.

1,811,146. AUTOMATIC TELEPHONE SYSTEM. RODNEY G. RICHARDSON, Chicago, and MARTIN L. NELSON, Park Ridge, Ill., assignors, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Feb. 23, 1922, Serial No. 538,551. Renewed Aug. 4, 1930. 8 Claims. (Cl. 179—27.)



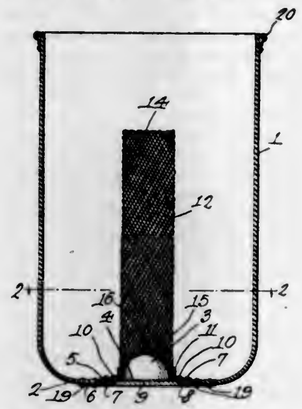
1. In a telephone exchange system, a calling line, selector switches for extending a connection from said calling line, a registering mechanism for controlling said switches, said mechanism comprising a plurality of registers and an impulse controlling device, means under the control of the calling subscriber for setting said registers to record digits of desired connections, a cross-connecting rack interposed between said registers and said impulse controlling device, and means for connecting terminals of said registers corresponding to non-existing offices of the exchange to said rack whereby connections attempted to such non-existent offices are routed to an operator's position.

1,811,147. EASY OPENING CONTAINER. FRANK J. O'BRIEN, New York, N. Y., assignor to Continental Can Company, Inc., New York, N. Y., a Corporation of New York. Filed July 20, 1929. Serial No. 379,824. 4 Claims. (Cl. 220—54.)



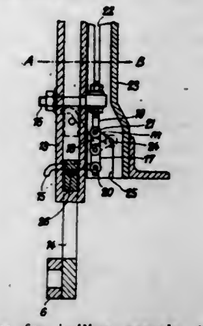
1. An easy opening container, comprising a body having ends seamed thereto, said body having spaced score lines forming a tearing strip for releasing the end from said body, a collar located within the body and attached thereto below the score lines and extending upwardly, the upper portion of the collar being inset from the wall of the body, and a depending member fixed to the upper end and disposed between the collar and the wall of the body making contact with the portion of the body having the score lines and making a removable outside slip contact with said collar when said tearing strip is removed.

1,811,148. ADJUSTABLE WRENCH. JOHAN PEHRSSON, Skillingaryd, Sweden. Filed Dec. 17, 1929, Serial No. 414,744, and in Sweden Jan. 4, 1929. 9 Claims. (Cl. 81—133.)



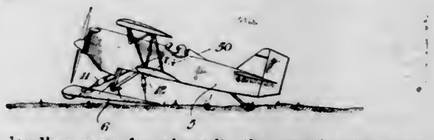
1. An adjustable wrench comprising a handle member, a wrench head rigidly connected therewith and provided with a transverse cavity one edge of which forms a fixed locking abutment, a fixed jaw rigidly connected with said head, an adjustable jaw mounted in the head for movement in relation to the fixed one, a toothed rack member connected with the adjustable jaw, a disc rotatably mounted within said cavity, means connected with the disc and provided with a peripheral row of teeth positioned in mesh with said toothed rack, the edge of said disc having circumferentially extending recesses facing the fixed abutment surface, locking means provided within said recesses and adapted for coaction with said abutment surface, means for effecting an automatic locking action of said locking means, and means for manually releasing the locking means in counteraction to the means for effecting the automatic locking action.

1,811,149. STEERING CONTROL FOR AEROPLANES. ARTHUR G. PETERSEN, Brooklyn, N. Y. Filed Jan. 25, 1930. Serial No. 423,287. 17 Claims. (Cl. 244—29.)



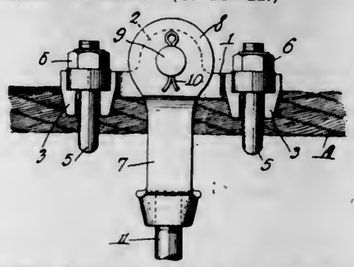
1. In combination with an aeroplane having right and left wings and an elevator each wing provided with an aileron movable to change the wing profile on the pressure side, a shaft mounted for movements about its axis, a stick pivotally supported on said shaft so as to move in planes longitudinal with said axis, means for moving the free end of the stick in all directions, and means for transmitting forward and rearward movements of the stick into up and down movements of said elevator and into downward movements of said right and left ailerons and sideward movement of the stick in one direction into simultaneous upward movement of the right aileron and downward movement of the left and sideward movement in the other direction into simultaneous downward movement of the right aileron and upward movement of the left and combination movements of the stick forward or rearwards and sidewards into combination movements of said ailerons and elevator.

1,811,150. FIREPROOF MAIL BAG. HAROLD BERNICE PEYTON, Jacksonville, Fla. Filed Sept. 3, 1929. Serial No. 390,025. 2 Claims. (Cl. 169—2.)



1. A mail bag having a mouth and provided on its bottom with a receptacle having an outlet discharging into the bag, thermal means for closing the outlet, and a tubular guard constructed of closely woven foraminous material and closed at its end adjacent the mouth of the bag, the guard being disposed within the bag and about the receptacle, the guard extending toward the mouth of the mail bag far enough to permit a discharge of the contents of the receptacle throughout the major portion of the mail in the bag when the thermal means acts to open the outlet of the receptacle.

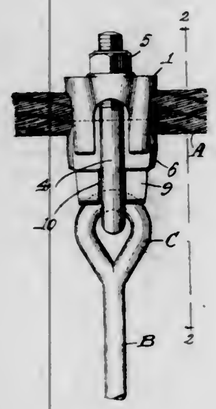
1,811,151. SAFETY VALVE FOR BOILING VESSELS. JAKOB PFOTZER, Kehl, Baden, Germany. Filed Feb. 12, 1930, Serial No. 427,893, and in Germany June 25, 1928. 2 Claims. (Cl. 137—53.)



1. A safety valve for boiling vessels, the contents of which are liable to cause the valve to stick to its seat, having a valve lever, a weight on the said lever, an electric lifting magnet, a contact pressure gauge for controlling the lifting magnet, two loosely interengaging stirrups capable of acting in the lifting direction of the magnet for coupling the lifting magnet and the valve lever, one stirrup being attached to the movable part of the magnet and the other to the valve lever, two strap members pivoted together, a slotted guide for guiding the pivots of the said strap members, an intermediate member between the stirrups attached to the magnet and one of the strap members, stops on the stirrup attached to the valve lever and transmission levers attached to the free end of the other strap member for transmitting the weight of the lifting magnet by way of the said stop to the valve lever and the valve, as and for the purpose set forth.

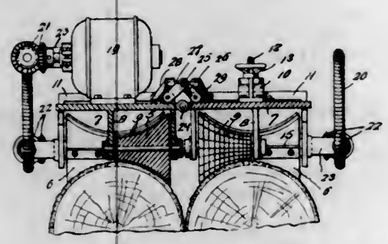
1,811,152. LANDING GEAR FOR AIRCRAFT. ALEXANDER PROCOFIEFF-SEVERSKY, New York, N. Y. Filed July 24, 1926. Serial No. 124,562. 7 Claims. (Cl. 244—2.)

1. In landing gear for aircraft, the combination with an axle, of an extension member arranged to be connected to said axle, a ground engaging member mounted on the axle and extension to permit relative angular movement and longitudinal movement.



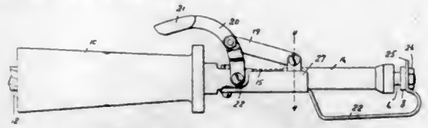
1,811,153. FITTING FOR HEAVY DUTY SUSPENSION HANGERS. FRANK WARD REILLY, Chattanooga, Tenn., assignor to Williamsport Wire Rope Company, a Corporation of Pennsylvania. Filed Jan. 10, 1930. Serial No. 419,920. 4 Claims. (Cl. 14—22.)

1. A fitting of the class described including an elongated saddle adapted to rest upon a span cable and hav-



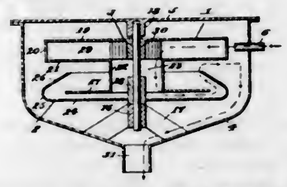
ing helical grooves to receive cable strands, means at the ends of the saddle for binding it upon said cable, a hanger engaging clevis suspended from the saddle and straddling the cable and saddle, and a coupling pin connecting the clevis to the saddle for transmitting the weight of a load from the clevis through the saddle to the cable.

1,811,154. FITTING FOR LIGHT DUTY SUSPENSION HANGERS. FRANK WARD REILLY, Chattanooga, Tenn., assignor to Williamsport Wire Rope Company, a Corporation of Pennsylvania. Filed Jan. 10, 1930. Serial No. 419,921. 4 Claims. (Cl. 14—22.)



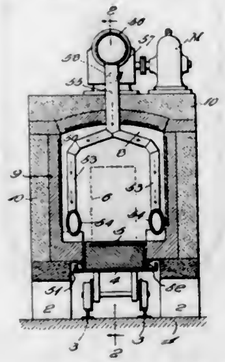
1. A fitting of the class described including a clip for straddling a cable, said clip having grooves for the reception of portions of the cable, a block movably mounted in the clip having a cable-receiving recess and a recess for the reception of one end portion of a hanger, and a U-bolt straddling the block and adjustably connected to the clip for binding a cable between the grooved surface of the clip and the recessed end of the block, said bolt constituting means for extending through and engaging a hanger.

1,811,155. LOG TRIMMING MACHINE. WILLIAM T. RICH, Lufkin, Tex. Filed July 26, 1929. Serial No. 381,227. 8 Claims. (Cl. 144—208.)



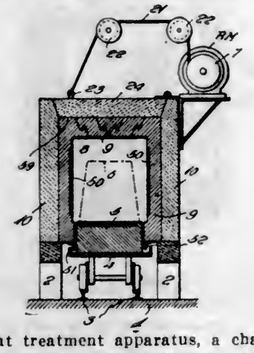
1. In a portable log trimming machine, a log trimming instrumentality including an elongated frame provided with supporting rollers to promote travel of and guide the same along the log, said rollers being of concave form and arranged in spaced tandem relation, an arm rigid with and projecting rearwardly from the frame, a bracket suspended from said arm, a horizontal concave vertically movable cutting cylinder journaled in said bracket in position to debark or trim the circumference of the log, manually operable means for turning said bracket to angularly adjust said cutter cylinder relative to the line of travel of the machine, and driving means for said cutter cylinder.

1,811,156. WELDING HANDLE. HUBERT C. SADLER, Hamilton, Ohio. Filed Feb. 19, 1929. Serial No. 341,194. 3 Claims. (Cl. 219—8.)



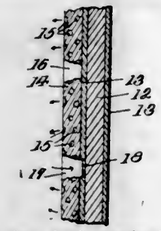
1. In a welding handle of the class described, a shank having a hole at its outer end extending in a direction transverse to the length of the shank and through which a welding rod is adapted to slide, a sleeve slidable on said handle and including a portion engageable with the rod, spring means for urging the sleeve into rod gripping position, manually manipulated releasing means for the sleeve, said means comprising a pivoted lever and an operating link between the lever and the sleeve.

1,811,157. CENTRIFUGAL APPARATUS FOR PURIFYING OIL. WALTER SCHWERDTFEGER, Rathenow, Germany. Filed Dec. 10, 1928, Serial No. 324,897, and in Germany Jan. 2, 1928. Renewed Feb. 3, 1930. 7 Claims. (Cl. 233—24.)



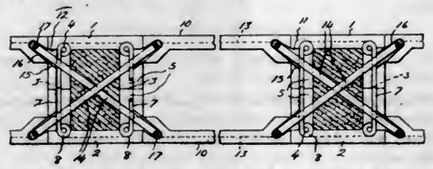
1. An apparatus for cleaning lubricating oil comprising a casing, a shaft rotatably mounted in said casing, a centrifugal separating means mounted upon said shaft and a jet impelled turbine operated by the oil to be cleaned also located within said casing for rotating said separating means.

1,811,158. FURNACE OR HEAT TREATMENT CHAMBER COOLING MEANS. EDWIN L. SMALLEY, Whitefish Bay, Wis., assignor to Hevi Duty Electric Company, Milwaukee, Wis., a Corporation of Wisconsin. Original application filed Feb. 9, 1928, Serial No. 253,199. Divided and this application filed Apr. 1, 1929. Serial No. 351,679. 8 Claims. (Cl. 263—44.)



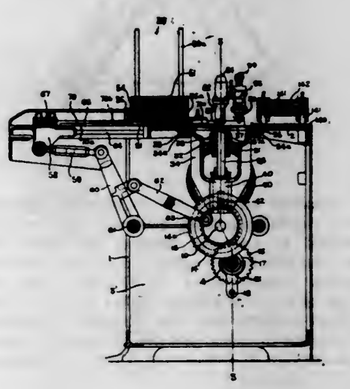
1. In a heat treatment apparatus, a chamber for material to be subjected to heat treatment, a plurality of vertically extending flues positioned adjacent the interior walls of said chamber, horizontally extending manifolds interconnecting opposite ends of said flues, and means for forcing a cooling mixture through said manifolds and flues for lowering the temperature of said chamber over a predetermined time period.

1,811,159. FURNACE OR HEAT TREATMENT CHAMBER COOLING MEANS. EDWIN L. SMALLEY, Whitefish Bay, Wis., assignor to Hevi Duty Electric Company, Milwaukee, Wis., a Corporation of Wisconsin. Original application filed Feb. 9, 1928, Serial No. 253,199. Divided and this application filed Apr. 1, 1929. Serial No. 351,680. 8 Claims. (Cl. 263—44.)



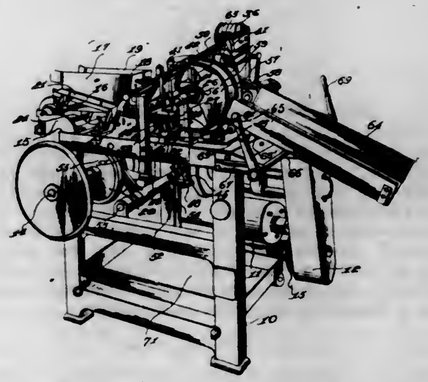
3. In a heat treatment apparatus, a chamber for material to be subjected to heat treatment, a heat resisting covering for said chamber, means for eliminating the heat resisting effect of said covering over predetermined time intervals for facilitating the cooling of the material within said chamber over a predetermined time period without admission of free air to said chamber and means for restoring the heat resisting effect of said covering when said chamber cools to a predetermined temperature.

1,811,160. CONTAINER FOR FOOD PRODUCTS. ARTHUR E. STEVENSON, Chicago, Ill., assignor to Continental Can Company, Inc., New York, N. Y., a Corporation of New York. Filed June 5, 1928. Serial No. 283,131. 5 Claims. (Cl. 220—64.)



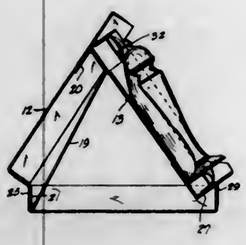
3. A container for food products containing juices which dissolve tin and iron comprising a body of tin plate having its internal surface covered by a coating containing a portion of a stannous compound, said compound being exposed to the food products in a quantity sufficient to dissolve therein and produce a precipitate on any exposed iron, so as to prevent corrosion thereof leading to perforations or hydrogen springers, said quantity of soluble tin being not sufficient to affect the food products.

1,811,161. UNIT WALL CONSTRUCTION. AVILA O. THOMAS, Detroit, Mich., assignor to The Structural Concrete Units Corporation, Detroit, Mich., a Corporation of Delaware. Filed Sept. 16, 1929. Serial No. 392,945. 17 Claims. (Cl. 72—30.)



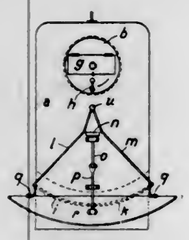
1. In a wall construction, a plurality of hollow columns, each comprising one or more pairs of vertically abutting units, wall plates between said columns and abutting said units, and a common means for maintaining the abutting relation of the column-forming units with each other and with said wall plates.

1,811,162. CAN END LINING MACHINE. NELSON TROYER and PAUL E. PEARSON, Seattle, Wash., assignors to Troyer-Fox Manufacturing Co., Seattle, Wash., a Corporation of Washington. Filed Oct. 1, 1928. Serial No. 309,663. 12 Claims. (Cl. 113—80.)



12. In a can end lining machine, means for axially rotating can ends, a support having a pivot about which it is adjustable, a nozzle on the support from which lining material may be discharged to the can ends as they are rotated by said rotating means, means coaxial of the said support for opening and closing the nozzle and which maintains its operativeness for all positions of radial adjustment of the support.

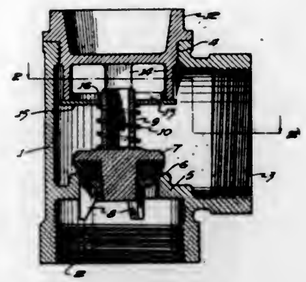
1,811,163. SAUSAGE WRAPPING METHOD AND APPARATUS. CHARLES H. VOGT, Philadelphia, Pa. Filed Feb. 4, 1928. Serial No. 251,871. 12 Claims. (Cl. 93—5.)



1. A method of wrapping sausages which comprises compressing each sausage out of its normal shape; providing the sausage with a wrapper while compressed; and permitting the sausage to expand within the wrapper to its normal shape to cause the wrapper to tightly engage the sausage.

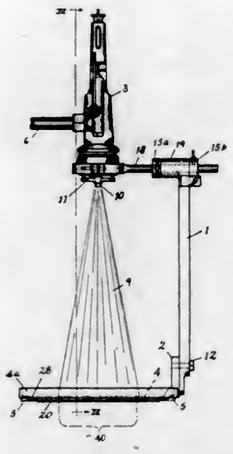
1,811,164. DISPLAY BOX. CLARENCE C. WILSON, Bridgeport, Conn., assignor to The Compressed Paper Box Corporation, Bridgeport, Conn., a Corporation of Connecticut. Filed June 13, 1929. Serial No. 370,546. 6 Claims. (Cl. 206—44.)

1. A container adapted for shipping or displaying its contents comprising a base receptacle, a complementary cover hinged at one end thereto, an insert receptacle hinged at one end to the other end of said base receptacle and nesting therein when in shipping formation, the hinged end of the insert being higher than the other walls of the insert and the base and adapted to cooperate with said cover when in closed position and said insert adapted to cooperate with the cover to exhibit its contents when in display formation.



1,811,165. DUSTBIN. JONNY WOLTER, Hamburg, Germany. Filed May 28, 1930, Serial No. 456,772, and in Germany Nov. 8, 1928. 2 Claims. (Cl. 220—36.)

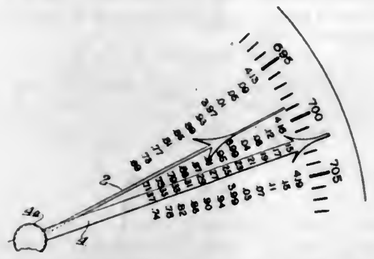
1. A dust-bin comprising a closed receptacle, a plate supported rotatably in one of the walls of said receptacle, said plate having an aperture forming the inlet for the receptacle, a frame secured to said plate inside the receptacle, a slide guided in said frame and adapted to be extended from the receptacle through said aperture, means for securing an ash pan to said slide so that it can be inserted together with the latter into the receptacle and so that it will be retained thereon when the frame is turned over by means of the plate inside the receptacle, and a hinged lid for closing said aperture.



1,811,166. CHECK VALVE STRUCTURE. FARNHAM YARDLEY, West Orange, N. J., assignor to Jenkins Bros., New York, N. Y., a Corporation of New Jersey. Filed Apr. 14, 1930. Serial No. 444,318. 2 Claims. (Cl. 251—144.)

1. A check valve structure, comprising a casing having angularly disposed inlet and outlet openings, an intermediate valve seat, and a third opening parallel with the valve seat, a valve disk having guide members on its face cooperating with the seat and a stem on its back, a screw cap closing the third opening and having a rim extending

within the casing, a floating guide plate slidably engaging said rim and traversed by the valve stem, and a spring surrounding the stem and engaging said guide plate.

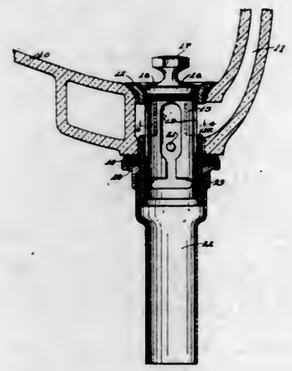


1,811,167. STENCILING DEVICE. HERMAN ANDERSON and RAYMOND J. GANNON, Pittsburgh, Pa., assignors to Jas. H. Matthews & Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 19, 1929. Serial No. 415,148. 5 Claims. (Cl. 101—123.)

1. In a portable stenciling machine which is movable as a unit to a position of rest upon the surface to be marked, the combination of a supporting base for the machine, a stencil removably secured in said supporting base, which stencil conforms to the surface to be marked and comprises the bottom face of said base which is adapted to lie in close contact with said surface to be marked, a standard extending upward from said base, and a paint-gun movably secured to said standard above said base and its included stencil.

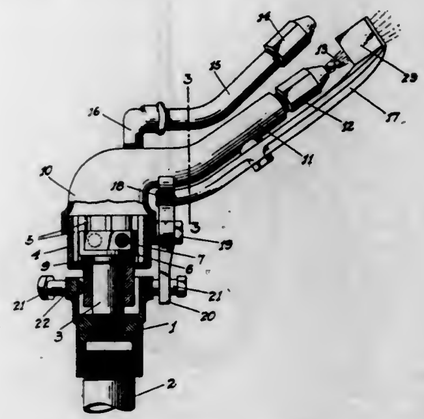
1,811,168. BAROMETER FOR USE IN CONNECTION WITH DIAGNOSTIC WORK. DANIEL R. BAAR, Grand Rapids, Ohio, assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Apr. 25, 1928. Serial No. 272,686. 2 Claims. (Cl. 73—4.)

1. In a barometric device, the combination with a pointer, of a dial for the pointer having along its periphery a set of barometric pressure indications corresponding to different positions of the pointer and having inwardly of each of said pressure indications a radial group of diagnostic indicia, a member pivotally mounted con-



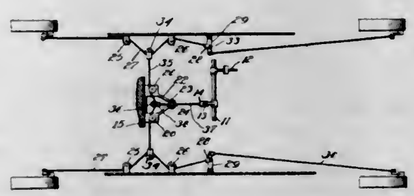
centrically with the pointer and the dial and bearing temperature indicia in radial alignment for correlation with the said diagnostic indicia, and means for moving the said member and the dial relative to one another.

1,811,169. PROCESS FOR DECOLORING SUGAR CRYSTALS. JULIEN BERGÉ, Tirlemont, Belgium, assignor to Raffinerie Tirlemontoise Société Anonyme, Tirlemont, Belgium, a Corporation. Filed Feb. 11, 1927, Serial No. 167,601, and in Germany Sept. 30, 1926. 2 Claims. (Cl. 127—64.)



1. A process for removing coloring matter from sugar crystals by means of a pure white sugar solution without substantial loss of crystallized sugar and in which said solution is maintained in a condition in which it is adapted to be regenerated by passing it through a filter of the charcoal type, comprising first completely freeing the sugar crystals from mother liquor, then mashing said sugar crystals with a pure white sugar solution to remove the coloring matter from said sugar crystals, said coloring matter passing into said solution, then separating said color bearing solution from said crystals and maintaining said separated solution in a condition in which it may be regenerated by passing it through a filter of the charcoal type.

1,811,170. LAVATORY DRAIN. FRANK G. BROTZ, Kohler, Wis., assignor to Kohler Company, Kohler, Wis., a Corporation of Wisconsin. Original application filed Feb. 8, 1930, Serial No. 425,471. Divided and this application filed Jan. 31, 1931. Serial No. 512,589. 3 Claims. (Cl. 4—288.)

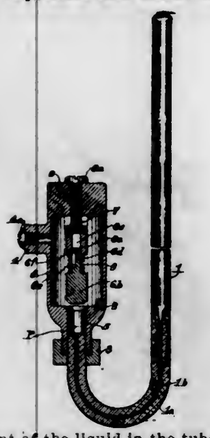


1. A drain for lavatories or the like comprising a drain connection, a nut member threaded on the drain connection and provided with an internally threaded skirt portion, and a tailpiece having an upper end portion surrounding the threaded end of the drain connection and threaded into the skirt portion of the nut.

1,811,171. OSCILLATING SPRINKLER. WILLIAM A. BUCKNER, Fresno, Calif. Filed Jan. 25, 1930. Serial No. 423,385. 8 Claims. (Cl. 299—71.)

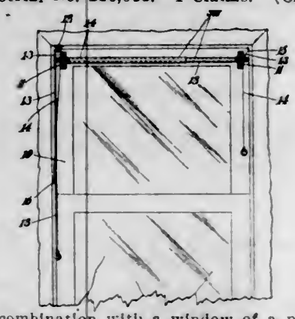
8. A sprinkler having a rotatable sprinkler head which includes a nozzle positioned to discharge in a substantially horizontal direction, means to rotate the head in one direction, and at a certain speed, separate means to rotate the head in the opposite direction and at a lesser speed, and means functioning with the rotation of the head to render the head rotating means alternately effective.

1,811,172. BRAKE EQUALIZER. HARRY E. BURTON, Chicago, Ill. Filed Aug. 6, 1929. Serial No. 383,832. 6 Claims. (Cl. 188—204.)



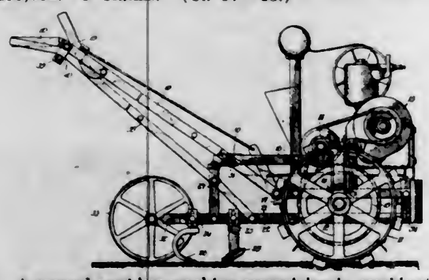
1. In a vehicle having four-wheel brakes, a cable operatively connecting a front and rear brake on each side of said vehicle, pulleys engageable with said cables, a cross cable connecting said pulleys, a slidable element, pulleys on said slidable element and supporting said cross cable, a central pulley supported by said cross cable, and means operatively connected to said central pulley for equally distributing any pressure which may be transmitted to said last named means.

1,811,173. PRESSURE GAUGE. HERBERT A. CLARK, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Mar. 29, 1928. Serial No. 265,745. 5 Claims. (Cl. 73—31.)



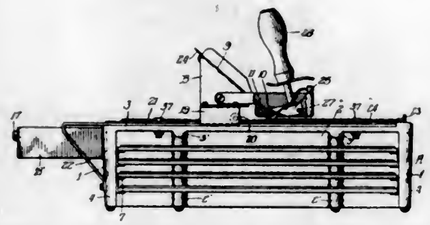
4. In apparatus of the character described, the combination with a tube, a well having a relatively thick bottom wall and a cylindrical depression in the bottom wall, the tube being closed at the top and having at the bottom a U-shaped connection to the bottom of said depression, and a liquid filling the tube and partly filling the well, the latter having an outlet above the level of the liquid, of a piston accurately fitting the said depression and disposed

above the latter, means for moving the piston into and out of the said depression and means for permitting ex-



pansive movement of the liquid in the tube when the piston is disposed in the depression, comprising resilient means between the piston and the means for moving it.

1,811,174. MEANS FOR OPERATING WINDOWS. FRANCISCO P. CORTÉS, New York, N. Y. Filed Aug. 29, 1927. Serial No. 216,088. 4 Claims. (Cl. 268—130.)

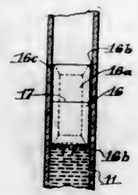


1. The combination with a window of a pair of multi-roller pulleys mounted in a casing securing to said window on opposite sides thereof, cords so arranged with respect to said pulleys that manipulation of the cords causes raising and lowering of said window, and means for preventing binding of said window against the window casing during movement thereof comprising guide rollers mounted between projections extending from the casing of said pulleys in peripheral contact with the window casing.

1,811,175. GROUND CULTIVATING MACHINE. FOREST V. DONALD, Minneapolis, Minn., assignor to Gilson Manufacturing Company, Port Washington, Wis., a Corporation of Wisconsin. Filed Sept. 9, 1921. Serial No. 499,432. 9 Claims. (Cl. 97—48.)

1. A ground working machine comprising in combination, a wheeled frame, a wheeled tool carrying frame connected to the wheeled frame in such manner as to be dragged thereby, the connection between the wheeled frame and tool frame consisting of a pair of laterally spaced substantially rigid members connected by spaced loose connections to the wheeled frame in advance of the wheel axis, said members being free to swing laterally relative to the wheeled frame.

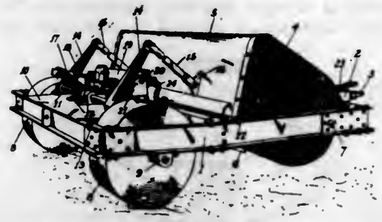
1,811,176. DUPLICATING MACHINE. JOHN J. FLANIGAN, Oak Park, Ill. Filed Apr. 10, 1929. Serial No. 353,918. 6 Claims. (Cl. 101—133.)



1. The combination of a frame having a supporting bed, a substantially L-shaped margin bar fixed at one end of the bed, a gelatin tablet on said bed, and means for detachably holding the tablet in operative relation to the margin bar.

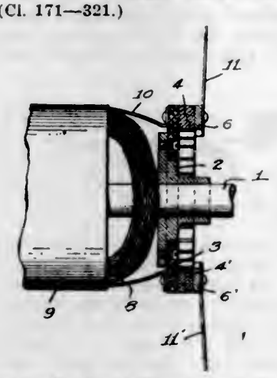
1,811,177. PROCESS OF TREATING PETROLEUM EMULSIONS. JULIUS HYMAN and ARTHUR F. SCHLANDT, Chicago, Ill., assignors to The Pure Oil Company, Chicago, Ill., a Corporation of Ohio. Filed Mar. 26, 1929. Serial No. 350,125. 5 Claims. (Cl. 196—4.)

4. The process of breaking petroleum oil emulsions, which comprises introducing into a body of such an emulsion a treating agent consisting of an oxidized hydrocarbon motor fuel produced by the molecular decomposition of high boiling point hydrocarbons while the latter are in the vapor phase, allowing the body to stand until the oil therein separates and rises to the top, and finally drawing off the oil.



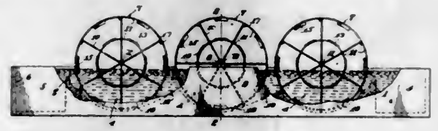
1,811,178. MERCURY PRESSURE GAUGE. GEORGE B. IRELAND, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed July 26, 1928. Serial No. 295,414. 3 Claims. (C. 73—31.)

1. In an instrument of the character described, the combination with a glass tube containing a column of mercury, of a cylindrical float adapted to rest upon the mercury column having an axial longitudinal bore widening toward its ends substantially to the periphery of the float.



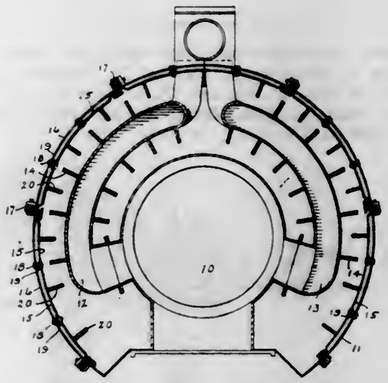
1,811,179. DIRT MOVER. BUTLER JACK, Jr., Sacramento, Calif. Filed Apr. 8, 1930. Serial No. 442,517. 2 Claims. (Cl. 37—169.)

1. A dirt mover including a horizontal frame, a bucket mounted in the frame, pivot connection means between the bowl adjacent its forward end and the sides of the frame, a transverse shaft supported from and adjacent the frame rearwardly of the bucket, an arm projecting upwardly and rearwardly from said shaft, a piston rod extending forwardly from the upper end of said arm, a hydraulic cylinder from which the rod projects supported from the



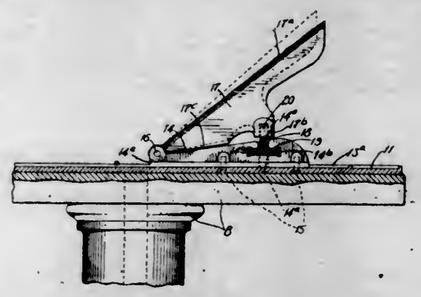
frame between the shaft and bucket, and connections between said shaft and the back of the bucket for raising and lowering the same with the movement of the rod and the turning of the shaft.

1,811,180. COMMUTATOR CONSTRUCTION FOR ELECTRIC MACHINES. CLYDE W. LANDERS, New York, N. Y. Filed Oct. 26, 1928. Serial No. 315,262. 3 Claims. (Cl. 171—321.)



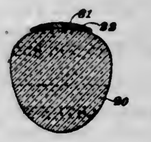
1. In a commutator for a dynamo-electric machine and in combination an insulating disc, and a plurality of segments of non-metallic conductive material secured in fixed relation to said disc to define a ring of electrically separated segments the separations between said segments constituting channels for the free passage of air when the commutator is rotated.

1,811,181. PROCESS AND APPARATUS FOR TREATING SEWAGE OR OTHER ORGANIC MATTERS. ARTHUR T. MALTBY, Chicago, Ill. Filed Oct. 20, 1928. Serial No. 313,845. 10 Claims. (Cl. 210—8.)



1. Apparatus for treating sewage or other liquid organic matters including a rotor provided with a plurality of radially disposed transverse plates carrying bacterial growths, and a container for the liquid the lower portion of the container formed as a circular transverse pit the curved surface of which is arranged to receive and closely conform to the curve of the wheel periphery and the wheel positioned and caused to rotate in said container with the lower portion of the wheel periphery moving in close relation to the curved surface of the pit and in such manner that the bacterial growths are periodically submerged in the liquid and exposed to the atmosphere.

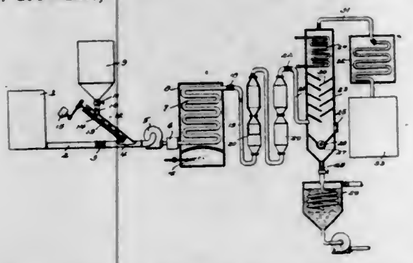
1,811,182. FURNACE. HARRY W. NEAL, Indianapolis, Ind., assignor to Hall-Neal Furnace Company, Indianapolis, Ind. Filed Oct. 21, 1929. Serial No. 401,074. 2 Claims. (Cl. 126—118.)



1. In a furnace, a heated sheet metal casing, vertical fins of folded sheet metal disposed about said casing, a sheet metal housing surrounding said surface, and similarly folded fins projecting from said housing toward said casing, each of said housing fins being disposed between two adjacent casing fins.

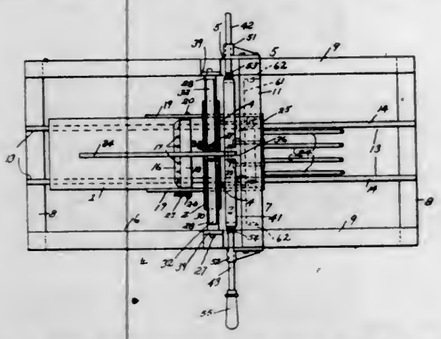
1,811,183. SUNDIAL. HERMAN NEUWIRTH, New York, N. Y. Filed Sept. 20, 1930. Serial No. 483,173. 2 Claims. (Cl. 33—62.)

1. In a sundial construction, an attachment piece adapted to be secured to the face-plate of the sundial, a gnomon movably attached to one end of said piece, a screw projecting from said gnomon spaced from said end, and a nut threaded on said screw, said piece having a portion spaced from said end formed to engage said nut for permitting angular adjustment of the gnomon with respect to said piece.



1,811,184. THERMOMETER. HARRY Y. NORWOOD, West Rush, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Feb. 26, 1930. Serial No. 431,443. 2 Claims. (Cl. 49—79.)

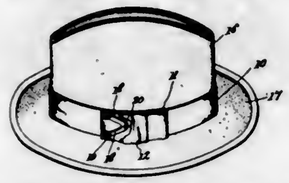
2. In a process of making thermometer tubing, the steps of forming a bore, which consist in forming a groove-



forming rib on the surface of a relatively large body of metal, pressing a body of glass in plastic condition against the said surface, joining thereto while in plastic condition another piece of glass to form a cover for said groove and then drawing the resulting body of glass.

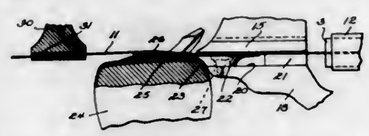
1,811,185. METHOD OF DECOLORIZING OILS. RUDOLPH C. OSTERSTROM, Chicago, Ill., assignor to The Pure Oil Company, Chicago, Ill., a Corporation of Ohio. Filed June 18, 1928. Serial No. 286,103. 7 Claims. (Cl. 196—147.)

4. In a method of purifying and decolorizing petroleum oils, the step of heating a mixture of petroleum oil and a finely divided adsorbent clay to a temperature above that at which the oil under treatment vaporizes but below a cracking temperature, preventing the evolution of oil vapors from said mixture by the application of super-atmospheric pressures thereto while said mixture is under heat treatment to maintain the oil in the liquid phase and to cause the oil to thoroughly penetrate the adsorbent clay, reducing the pressure on the mixture while said mixture is substantially at a temperature above that at which the oil vaporizes, for the purpose of releasing vapors and maintaining the oil vapors and finely divided adsorbent clay at such reduced pressure for a period of time sufficient to insure the desired contact between the adsorbent clay and the oil vapors.



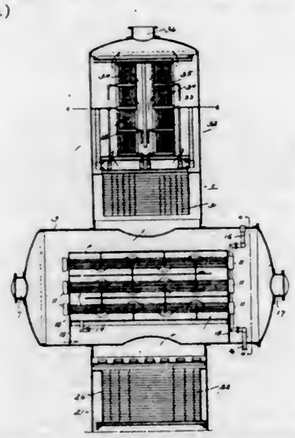
1,811,186. MACHINE FOR SLICING FRESH MEAT. JOHN A. RANKIN, Los Angeles, Calif. Filed Oct. 1, 1928. Serial No. 309,423. 6 Claims. (Cl. 146—151.)

1. A meat slicing machine comprising a knife, a movable table on which the meat is placed and sliced when the table is moved under the knife, and hooks for engaging the sliced forward end of the meat when said end of the meat passes through the knife.



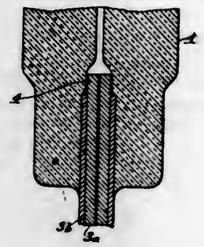
1,811,187. HATBAND FASTENER. FREDERICK R. ROBERTS, New York, N. Y. Filed Dec. 28, 1929. Serial No. 417,097. 7 Claims. (Cl. 24—150.)

1. As a new article of manufacture, a device for affixing hat bands, comprising a substantially V-shape frame of sheet metal adapted to be placed within the loop of the bow of a hat band, said frame having flat plate portions on the outer ends of its diverging arms to engage in the crease of the bow and having pointed prongs integral with said plate portions stamped inwardly therefrom and inclined backwardly, said prongs adapted to engage through the



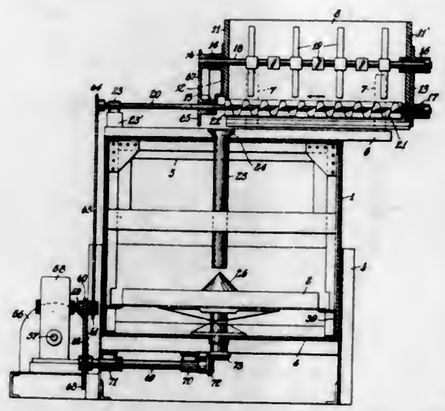
bow to hold the article therein and adapted to engage through the underlying end of the hat band when the ends thereof are disposed in overlapping position upon a hat, said prongs being of a length adapted to project inwardly from the overlapping ends of the hat band and bite into the outer surface of the hat crown to anchor the band thereon.

1,811,188. HEEL SEAT TRIMMING MACHINE. ALBERT C. ROGOE and HIRAM GORDON, Columbus, Ohio. Filed Feb. 1, 1929. Serial No. 336,806. 14 Claims. (Cl. 12—31.5.)



1. A machine for beveling the sole of a shoe to provide a heel seat margin constituting a convex surface approximating the mating concave surface of a wood heel, comprising a frame, a relatively thin flexible cutter blade supported for reciprocation between spaced guides carried by said frame, and a thin-edge work positioning member closely adjacent and in parallel plane with the cutting edge of said blade, said cutting blade and work positioning member being adapted to be forced into angular relationship by the work to provide a work receiving throat in relation to which the work is to be turned.

1,811,189. OIL FRACTIONATING APPARATUS. CLYDE L. SMITH and CORNELIUS B. WATSON, Chicago, Ill. Filed Feb. 28, 1928. Serial No. 257,690. 9 Claims. (Cl. 196—139.)

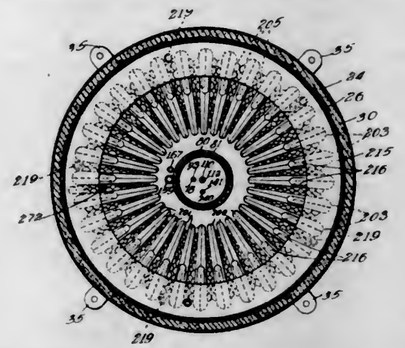


8. A fractionating tower comprising a shell of substantially closed hollow form, a vapor inlet in the lower part of said shell, and a vapor outlet in the upper part of said shell, a heating coil situated in the bottom of said shell, a cooling coil in the upper part of said shell, stripping baffles stationarily mounted in said shell between said vapor inlet and said heating coil, stationary groups of fractionating baffles mounted within said shell between said vapor inlet and said cooling coil, a plurality of vertically arranged drying baffles situated in the upper part of said shell between said cooling coil and said vapor outlet and means for causing the vapors to travel laterally and upwardly through said drying baffles.

1,811,190. THERMOMETER. KENNETH L. TATE, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Dec. 27, 1928. Serial No. 328,772. 2 Claims. (Cl. 73—52.)

1. In a mercury thermometer, the combination of a glass stem having a capillary bore and terminating in an enlarged bore, a capillary tubing embedded in the enlarged bore, said tubing consisting of an inner layer of a metal immune to mercury and an outer layer of a metal of such character and such thickness relatively to the inner layer that the coefficient of expansion of the tubing as a whole is substantially that of the glass of the stem, the inner layer at the end of the tubing in the stem extending beyond the end of the outer layer and forming with the inner surface of the glass a seal against contact of the mercury with the outer layer.

1,811,191. SMOKE GENERATOR. HARDEN F. TAYLOR, Bronx, N. Y., assignor to The Atlantic Coast Fisheries Company, New York, N. Y., a Corporation of Maine. Filed July 27, 1928. Serial No. 295,714. 14 Claims. (Cl. 99—9.)



14. A smoke generator comprising a housing, a delivery tube mounted within said housing, a feed hopper mounted on said housing adapted to feed fuel into said delivery tube, means mounted adjacent the exit end of said delivery tube to distribute the fuel fed thereby, an electrical heating element, a rotatable table disposed beneath said heating element and adapted to receive the fuel from said distributing means and maintain it in contact with said heating element, and means to feed the fuel across said table during the rotation of the latter.

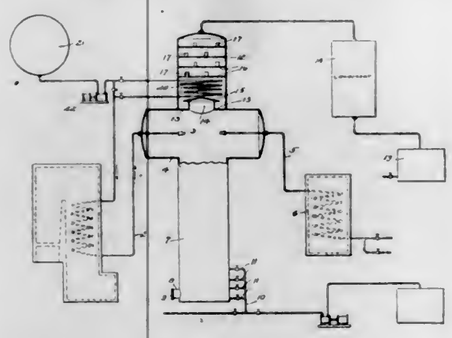
1,811,192. BRUSH. HENRY THEISS, Los Angeles, Calif. Filed Aug. 3, 1929. Serial No. 383,345. 8 Claims. (Cl. 15—129.)

1. A shaving brush of the character described including, a tubular body, there being openings in the wall of the body, a shell around the body and spaced from the body, a resilient tubular handle detachably connected to the body and shell, means for carrying an antiseptic agent in the body, a brush head in one end of the body, and means for discharging fluid at the brush head, there being a space between the body and shell at the brush head to discharge fluid at the brush head from the shell.

1,811,193. STEAM GENERATING APPARATUS. CLAYTON L. THORNE, Chicago, Ill. Filed Sept. 3, 1926. Serial No. 133,450. 3 Claims. (Cl. 122—221.)

1. In a boiler, the combination of a plurality of wedge-shaped radially disposed hollow members, and a plurality of hollow bosses formed on opposite wall portions of said members, the outer faces of the bosses on one of said members engaging the faces of the bosses on adjacent members for spacing said members annularly within the boiler.

1,811,194. METHOD OF CONVERTING OILS IN VAPOR PHASE. CARY R. WAGNER, Chicago, Ill., assignor to Gyro Process Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 21, 1928. Serial No. 300,998. 6 Claims. (Cl. 196—61.)

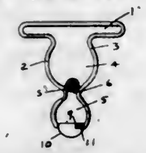


1. The process of cracking high boiling point hydrocarbons in the vapor phase which comprises vaporizing the

hydrocarbons, separating the vapors from the unvaporized hydrocarbons, heating the vapors in a stream to a cracking temperature, passing the vapors thru a zone wherein sub-

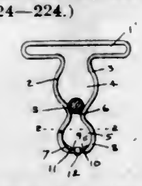
stantially only endothermic cooling occurs, again heating the vapors to a cracking temperature, and condensing and collecting the products.

1,811,195. METHOD OF TREATING PETROLEUM OIL. CORNELIUS B. WATSON, Chicago, Ill., assignor to The Pure Oil Company, Chicago, Ill., a Corporation of Ohio. Filed Feb. 9, 1927. Serial No. 167,052. 1 Claim. (Cl. 196—63.)



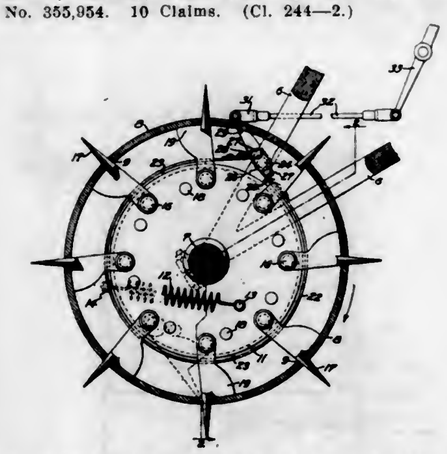
A process for cracking hydrocarbon oil to produce motor fuel which consists in vaporizing a flowing stream of high boiling point oil, and heating the oil vapors to a temperature of between 750° F. and 900° F. at a relatively low pressure and for an insufficient time to substantially crack them, then injecting the heated vapors at a high velocity into a reaction zone against a stream of superheated steam having a temperature of between 1000° F. and 1500° F. so that the temperature of the oil vapors is raised to a temperature at which they will decompose, withdrawing non-vaporous products from the reaction zone, withdrawing the vapor products overhead from the reaction zone and suddenly cooling them to a non-converting temperature directly after they leave the reaction zone, and then fractionating the cooled lighter vapors to obtain the desired motor fuel fraction.

1,811,196. AIRSHIP. GEORGE D. HAZARD, Chicago, Ill. Filed May 14, 1928. Serial No. 277,466. 4 Claims. (Cl. 244—6.)



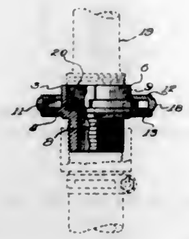
3. An airship comprising a gas enclosing body, wings of substantially equal surface area mounted on the top of said body at the front and rear thereof and provided with power units, a wing intermediate said front and rear wings and of relatively greater surface area, and a cabin mounted below said body.

1,811,197. BUTTON LOOP. GEORGE B. HEATHER, West Haven, Conn., assignor to The Wire Novelty Manufacturing Company, West Haven, Conn., a Corporation of Connecticut. Filed Feb. 20, 1930. Serial No. 429,947. 1 Claim. (Cl. 24—224.)



A button loop comprising spring arms cooperating to form associated loops in axial alignment and having an intermediate normally contracted throat, the ends of the arms overlapping and each carrying a fixed pin extending outwardly in a perpendicular direction to the plane of the loops; a clip member securing the overlapped ends against relative movement out of the plane of the loops; and slots provided by the clip member to receive the pins thereby limiting the movement of the overlapped ends in the plane of the loops.

1,811,198. BUTTON LOOP. GEORGE B. HEATHER, West Haven, Conn., assignor to The Wire Novelty Manufacturing Company, West Haven, Conn., a Corporation of Connecticut. Filed Feb. 20, 1930. Serial No. 429,948. 2 Claims. (Cl. 24—224.)



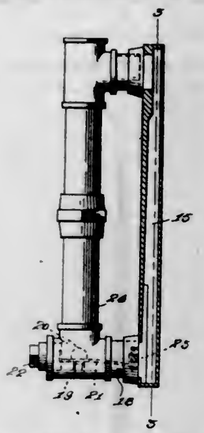
1. A reversible button loop comprising spring arms cooperating to form associated loops in axial alignment and having an intermediate contracted throat, the ends of the arms overlapping and each being provided with an intermediate reduced section relatively normally registering, and a band of less width than the length of the reduced sections and securing the overlapped ends in limited relative movement in the plane of the loops and against movement out of said plane.

1,811,199. AIRPLANE LANDING BRAKE. SAMUEL C. IRVING, Berkeley, Calif. Filed Apr. 17, 1929. Serial No. 355,954. 10 Claims. (Cl. 244—2.)

9. In an airplane landing gear, a wheel, a brake controlled drum movably mounted on said wheel, and grousers movably mounted on said wheel and operatively connected to said drum.

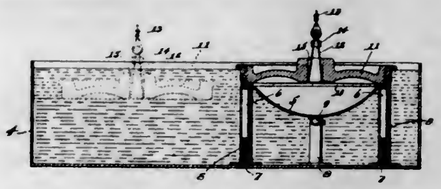
1,811,200. SPLIT SCREW COUPLING. FREDERICK C. KAINER, Park Ridge, Ill. Filed Nov. 2, 1928. Serial No. 316,675. 2 Claims. (Cl. 285—150.)

1. A split screw coupling comprising a supporting structure having an internally threaded arcuate flange sector projecting from one surface thereof, the outer surface of said flange sector being concentric with said support, an internally threaded member pivotally mounted upon said support and formed to provide a continuation of said flange, shoulder on the outer surface of said member, the outer edge of said shoulder being eccentrically curved with reference to the curvature of said member, a ring surrounding said flange and member, the inner surface of said ring having one portion formed according to the eccentricity of the shoulder on said pivot member, and the remaining portion of said surface having the same curvature as the outer surface of said flange.



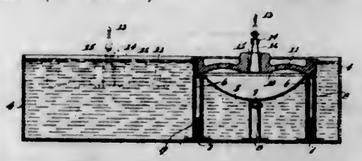
1,811,201. BOOK-COVERING MACHINE. PAUL E. KLEINEBERG, Brewster, N. Y., assignor to American Assembling Machine Company, New York, N. Y., a Corporation of Delaware. Filed May 6, 1926. Serial No. 107,054. 9 Claims. (Cl. 198—165.)

1. A book conveyor comprising two coacting endless conveyors travelling in a horizontal plane each having a series of abutting face plates squared and arranged to provide direct-contacting, continuous bands disposed in vertical parallelism to engage opposite sides of the books held vertically therebetween, and a series of flat cam-plates over which said conveyors travel continuously throughout their book-engaging runs, said plates being disposed in parallel extended relation and also separately adjustable in spaced relationship with one another.



1,811,202. DRAIN DEVICE. THOMAS GORDON LADSHAW, Spartanburg, S. C. Filed Dec. 6, 1928. Serial No. 324,302. 7 Claims. (Cl. 137—34.2.)

1. In combination with a water pipe, a relatively thin casing forming a section of said water pipe and providing a water chamber having a larger heat transmitting surface than the heat transmitting surface of the water pipe, the thinness of the casing and of the corresponding water column combined with the large heat transmitting surface serving to greatly decrease the time of freezing the



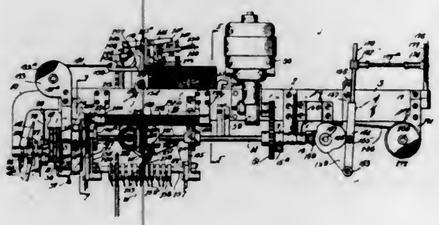
water within said chamber from that in the water pipe, and means controlled by the freezing action of water to drain the pipe on the outlet side of the casing.

1,811,203. METHOD FOR TREATING CAR WHEELS. ELMYR A. LAUGHLIN, Oregon, Ill., assignor of one-half to himself and one-half to Joshua R. H. Potts, Chicago, Ill.; Bessie D. Laughlin administratrix of said Elmyr A. Laughlin, deceased. Filed Aug. 26, 1926. Serial No. 131,585. 2 Claims. (Cl. 148—21.)

1. The method of treating car wheels which consists in first heating the same to a temperature above the upper critical range thereof; then substantially uniformly and simultaneously quenching the entire exterior surfaces of the wheels for a period of time varying from ten to thirty seconds; then discontinuing the quenching a sufficient length of time to permit said surfaces to reheat by conduction from the interior of the wheel and until the entire wheel reaches a temperature of from 1200° to 1500° F.; and then quenching the tread surfaces only of said wheel, substantially as described.

1,811,204. APPARATUS FOR TREATING CAR WHEELS. ELMYR A. LAUGHLIN, Rockvale, Ill., assignor of one-half to himself and one-half to Joshua R. H. Potts, Chicago, Ill.; Bessie D. Laughlin administratrix of said Elmyr A. Laughlin, deceased. Original application filed Aug. 26, 1926, Serial No. 131,585. Divided and this application filed Oct. 17, 1930. Serial No. 489,352. 8 Claims. (Cl. 266—6.)

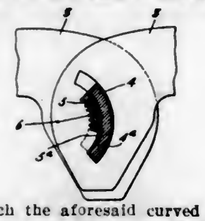
1. Apparatus for treating car wheels comprising a tank, and a depressible spring-held rest in said tank adapted



and arranged to be depressed by the weight of the wheel thereon to expose the tread surfaces only of said wheel to fluid in said tank, substantially as described.

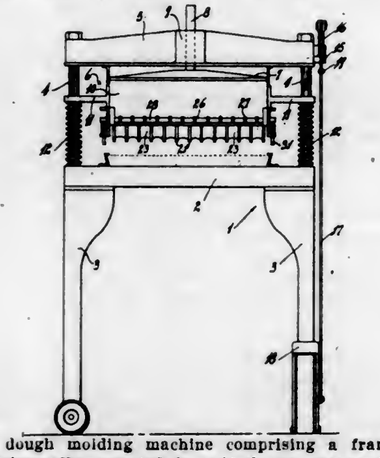
1,811,205. PIPE CLEANER. WILLIAM R. LEE, Rochester, N. Y. Filed Feb. 28, 1930. Serial No. 432,202. 3 Claims. (Cl. 131—13.)

1. A pipe cleaner comprising a stem formed of ductile material, and fibres extending radially from the stem throughout the length of the latter, the fibres gradually increasing in length from one end of the stem to the other.



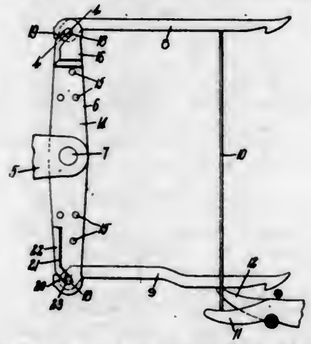
1,811,206. TEXTILE APPARATUS. SEBASTIANO MAGNANO, Lawrence, Mass., assignor to Magnano Corporation, Lawrence, Mass., a Corporation of Massachusetts. Filed Aug. 28, 1929. Serial No. 388,972. 16 Claims. (Cl. 28—41.)

1. A machine for associating detached loom elements with warp yarns comprising a magazine and means for moving the magazine relatively to the warp yarns including resilient means tending to move the magazine in one direction and power driven means for moving it in the opposite direction.



1,811,207. DRIVE CHAIN. FRANK L. MORSE, Ithaca, N. Y., assingor to Morse Chain Company, Ithaca, N. Y., a Corporation of New York. Filed Dec. 16, 1927. Serial No. 240,378. 8 Claims. (Cl. 74—32.)

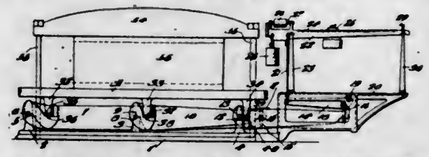
1. A drive chain comprising in combination, a series of links composed of plates having heads, a joint for pairs of said links comprising two pintle parts having complementary curved bearing surfaces, one part being non-rotative in the head of one link and the other part being non-rotative in the head of the adjacent link, the



center from which the aforesaid curved bearing surfaces are struck being located at a point offset from the center of the head.

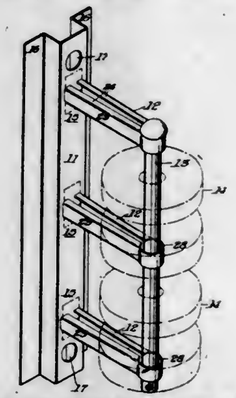
1,811,208. DOUGH MOLDING MACHINE. OSCAR NEUBERT, Jr., Long Beach, Calif. Filed Nov. 2, 1929. Serial No. 404,296. 7 Claims. (Cl. 107—21.)

1. A dough molding machine comprising a frame, a head reciprocally mounted in said frame, means to reciprocate said head, a knife plate in the head, a plurality of knives depending from said plate, said knives being spaced apart, molding blocks between adjacent pairs of knives, said blocks being slidably mounted between the knives and means securing all of said blocks together whereby they are simultaneously actuated, said knife plate being slidably mounted in the head and yieldable means bearing against the plate whereby said plate is normally urged downwardly.



1,811,209. DOBBY LEVER. ROBERT C. NEWTON, Needham, Mass., assignor to H. F. Livermore Co., Allston, Mass., a Corporation of Massachusetts. Filed July 3, 1930. Serial No. 465,495. 5 Claims. (Cl. 139—74.)

1. A dobby lever embodying therein bifurcated end bearing portions, the furcations thereof being provided with



slots therein to receive the pivot members of a dobby hook, said slots being open at an end thereof, and flexible means adapted to hold said pivot members in said slots.

1,811,210. LEVER FOR TESTING MACHINE WEIGHING SYSTEMS. TINIUS OLSEN, Philadelphia, Pa., assignor to Tinius Olsen Testing Machine Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 20, 1926. Serial No. 149,578. 3 Claims. (Cl. 265—16.)

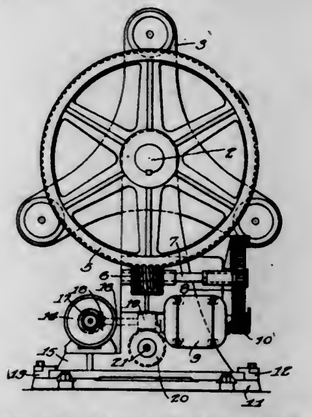
1. In a testing machine weighting mechanism having the conventional four-corner platform supports formed by a main lever and forward end levers fulcrumed on opposite sides of the main lever, intermediate levers between the end levers and the main lever, and fulcrumed on opposite sides of the main lever, and connected therewith at their forward ends, all of said levers having their effective power applied at the same point.

1,811,211. INSULATOR RACK. CHARLES L. PEIRCE, Jr., Pittsburgh, Pa., assignor to Hubbard & Company, a Corporation of Pennsylvania. Filed Jan. 26, 1929. Serial No. 335,293. 5 Claims. (Cl. 173—321.)

4. An insulator rack comprising a base member having a plurality of spaced rectangular openings therein, and recesses on the sides of said openings, tong-shaped insulator pin supports, T-shaped projections on the ends of said pin supports adapted to be received in said recesses and to cooperate and engage with said base member on each side of said recesses, and means for securing said T-shaped projections in their respective positions.

5. An insulator pin support of general tong-like appearance, having inwardly extending flanges on the leg portions of said pin supports, T-shaped projections on the ends of said legs at right angles to said flanges and a pin aperture formed at the fulcrum of said legs.

1,811,212. WALL BOARD. HARRY C. RAYNES, Portsmouth, N. H., assignor, by mesne assignments, to Bemis Industries, Incorporated, Boston, Mass., a Corporation of Delaware. Filed Sept. 10, 1926. Serial No. 134,663. 3 Claims. (Cl. 72—124.)

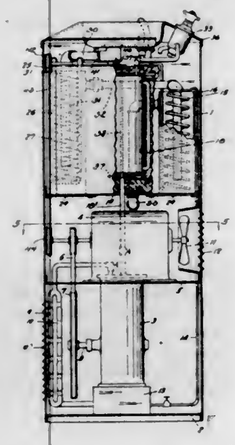


1. A fibre board composed of two substantially integral layers, one of said layers being of fine fibres having its outer surface calendered, whereby it is adapted to receive paint and varnish without the necessity of excessive sizing, and the other layer being of comparatively coarse fibres having its outer surface roughened and having open interstices between its fibres, whereby it is adapted to receive and retain plaster.

1,811,213. FURNACE HEATED BY HIGH FREQUENCY COILS. WILHELM ROHN, Hanau-on-the-Main, Germany. Filed Jan. 7, 1930, Serial No. 419,151, and in Germany Aug. 8, 1927. 8 Claims. (Cl. 13—26.)

1. A strengthened coil for a furnace heated by high frequency electric currents in which bars of electrically insulating material capable of withstanding the temperatures which arise are fixed to the coil by means of a nut-and-bolt connection, one element of the nut-and-bolt connection being externally soldered on to the various turns of the coil, and the bolts being passed through holes in the bars.

1,811,214. APPARATUS FOR SUPPLYING PAPER TO PRINTING PRESSES. JAMES E. RUST, Chicago, Ill., assignor to Gustavus A. E. Kohler, Chicago, Ill. Filed Sept. 26, 1925. Serial No. 58,768. 7 Claims. (Cl. 242—64.)

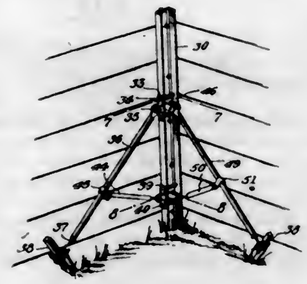


1. An apparatus for supplying paper to printing presses comprising a rotatable, roll carrying device for carrying a plurality of rolls of paper, a pedestal at one end thereof upon which said roll carrying device is rotatably mounted, a motor supported upon said pedestal and an operative connection between said motor and said roll carrying device, said motor being located within the vertical planes extending through the edges of the support whereby the apparatus may be used either as a right or left hand apparatus.

1,811,215. LIQUID REFRIGERATING AND DISPENSING APPARATUS. ADEN E. SMITH, Columbus, Ohio, assignor to The D. A. Ebinger Sanitary Mfg. Co., Columbus, Ohio, a Corporation of Ohio. Filed Jan. 25, 1929. Serial No. 335,055. 1 Claim. (Cl. 62—141.)

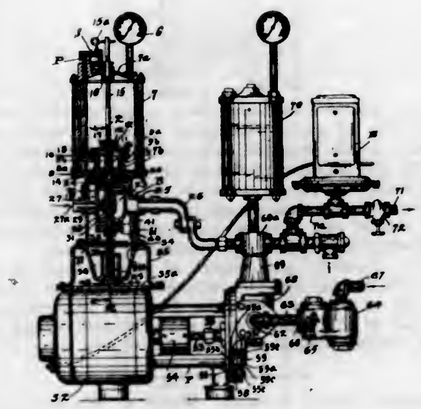
In a liquid refrigerating and dispensing apparatus, a casing formed to include a plurality of superimposed

compartments, louvers formed in one wall of the lower of said compartments and in the opposite wall of the intermediate compartment, a compressor unit in said lower compartment, a tank situated in said upper compartment, an expansion unit in said tank, a connection between said expansion unit and said compressor, means for circulating a liquid to be cooled through said tank, means situated at the top of said casing for dispensing said cooled liquid,



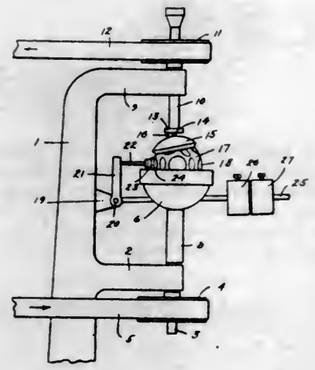
a motor unit in said middle compartment, said motor being positioned with its drive shaft at right angles to said louvers, a fan on one end of said drive shaft and adjacent said louvers for causing air to circulate through said lower and intermediate compartments, means carried by the opposite end of said shaft for driving said compressor, and an inwardly extending flange secured to the wall of said intermediate compartment for surrounding said louvers and said fan.

1,811,216. FENCE WIRE CONNECTION. CHARLES A. SPAUGH, Durham, Okla. Filed Jan. 27, 1930. Serial No. 423,835. 1 Claim. (Cl. 256—52.)



A device of the character set forth including a grooved post having openings in the inner wall of the groove, an elongated bar of substantially U-shape in cross section seated in the groove of the post to force fence wires against the walls of the groove, heads of substantially U-shape in cross section positioned in the bar, fasteners extending through the heads and side portions of the bar to prevent displacement of the heads in the bar, bolts formed on the heads and extending through the openings, and fasteners on said bolts and engaging the post.

1,811,217. FENCE POST BRACE. CHARLES A. SPAUGH, Durham, Okla. Filed Jan. 27, 1930. Serial No. 423,837. 2 Claims. (Cl. 189—31.4.)

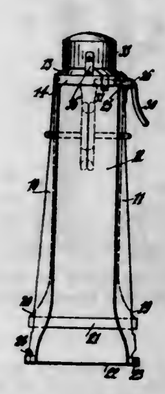


1. The combination with a fence post of U-shape formation in cross section, of a bracket arranged on one side of the post, an additional bracket arranged between the spaced parallel side members of the post, bolts common to both of said brackets for attaching the latter to the post, spaced apertured lugs projecting from each bracket, brace rods having their corresponding upper extremities connected with said lugs, anchors adapted to be driven into the ground, and a longitudinally adjustable element forming part of each brace rod and terminally connected with the adjacent anchor.

1,811,218. CARBONATING APPARATUS. LESLIE STINSON, Grand Forks, N. Dak. Filed July 31, 1930. Serial No. 471,951. 5 Claims. (Cl. 261—27.)

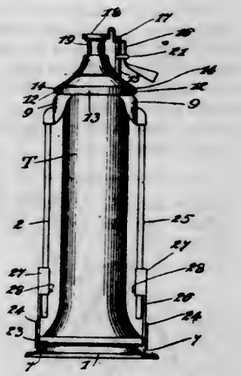
1. In apparatus for impregnating liquid with gas, a tank, a discharge connection therefor, liquid and gas supply connections thereto, means responsive to the differences in the pressures of the tank and the liquid supply connection for controlling the supply of gas to the tank, a source of liquid supply under pressure, a pump interposed between said source and said liquid supply connection, said pump permitting the passage of liquid to said tank when inoperative and means for operating said pump when the pressure of said liquid supply falls below a predetermined point.

1,811,219. LENS GRINDING AND POLISHING MACHINE. IGNATZ G. VETTER, Buffalo, N. Y. Filed June 25, 1927. Serial No. 201,354. 3 Claims. (Cl. 51—118.)



3. In a device of the class described, a frame and tool support mounted therein so as to be capable of a rotary movement, a lens grinding tool fixed on said support, adapted to hold a spherical blocker for grinding, an auxiliary grinding tool mounted above said blocker for operation in opposition thereto, a support rockingly mounted in proximity to said first-named tool, a pressure device carried thereby, and means for holding said last-named support with said pressure device yieldably in position to exert pressure against a blocker held in said tools.

1,811,220. HOLDER FOR COLLAPSIBLE TUBES. FRANK WOLF, New York, N. Y. Filed Jan. 18, 1928. Serial No. 247,501. 12 Claims. (Cl. 248—41.)

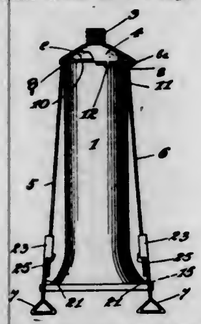


1. In a holder for collapsible tubes, a stand having upright members movable toward and away from each other, said upright members being adapted to engage the laterally projecting end portions of the tube base, means at the upper end of the stand for clamping a relatively narrow portion of the tube adjacent its outlet end, and means slidable on said upright members for locking the same in clamping position with reference to the tube.

1,811,221. HOLDER FOR COLLAPSIBLE TUBES. FRANK WOLF, New York, N. Y. Filed Jan. 18, 1928. Serial No. 247,502. 11 Claims. (Cl. 248—41.)

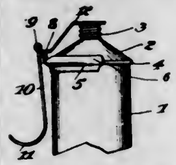
1. In a holder for collapsible tubes, a stand having spaced leg members adapted to straddle a tube, a head member on the upper ends of said leg members, said head member being centrally apertured for the reception of the neck of the tube, and tube clamping means pivoted on said head member.

1,811,222. STAND OR HOLDER FOR CONTAINERS. FRANK WOLF, New York, N. Y. Filed Dec. 24, 1928. Serial No. 328,104. 10 Claims. (Cl. 248—41.)



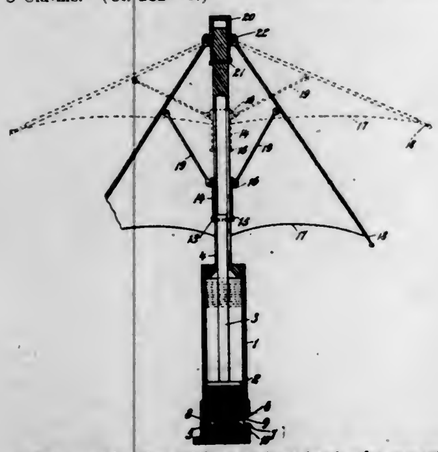
1. A stand for a collapsible tube having a body and a rigid top with a peripheral bead-flange, the stand comprising a base, legs supported at their lower ends to the base, the legs being shaped at their upper ends to engage the flanged top of the tube, and means at the upper ends of the legs to hold the legs in engaging position.

1,811,223. HOLDER FOR CONTAINERS OR STORAGE VESSELS. FRANK WOLF, New York, N. Y. Filed Dec. 24, 1928. Serial No. 328,106. 8 Claims. (Cl. 248—41.)



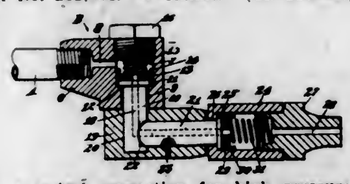
7. A holder stand for a collapsible tube with a soft body and a rigid top having a bead-flange at its periphery, the stand comprising legs, a cover member for said top, the legs being attached to said member, one leg being hinged

thereto for movement relatively to the other leg, and projections on the inner sides of the legs, said projections



being adapted on the movement of the hinged leg toward the other leg, to indent and press into said tube just below said flange.

1,811,224. ACCESSORY DEVICE FOR COLLAPSIBLE TUBES. FRANK WOLF, New York, N. Y. Original application filed Jan. 18, 1928, Serial No. 247,499. Divided and this application filed Dec. 24, 1928. Serial No. 328,107. 4 Claims. (Cl. 221—60.)

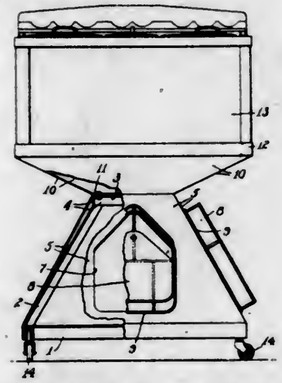


1. A device for attachment to a collapsible tube having a body and a top with a relatively stiff bead-flange around its lower edge outstanding from the body, said device comprising a semi-circular clamp formed of resilient metal the arms of which tend to have a closing spring action for gripping the bead-flange, said arms being grooved for receiving the bead-flange therein and in cross section being formed of angularly related portions rigid with respect to each other, which define the groove, said portions being adapted to contact the opposite sides of the bead-flange and retain the latter between them, whereby firmly to support the tube by said clamp.

1,811,225. SAVINGS BANK. ALFONSO F. ZERBEE, New York, N. Y. Filed July 31, 1929. Serial No. 382,449. 8 Claims. (Cl. 232—4.)

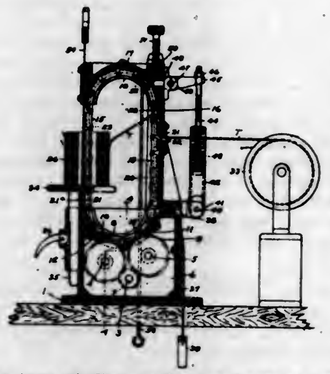
1. The combination with a savings bank of a receptacle comprising a hollow chamber, a piston within said chamber and means comprising an umbrella adapted to be operated by said piston to indicate the contents of said chamber.

1,811,226. HIGH PRESSURE HOSE. CHARLES G. BANKS, Glendale, Calif., assignor of one-half to Chas. M. O'Leary, jr., Los Angeles, Calif. Filed Nov. 11, 1927. Serial No. 232,653. 3 Claims. (Cl. 285—9.)



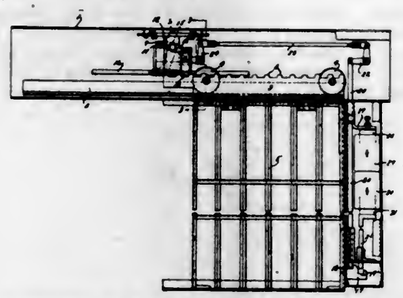
1. In a swivel connection for high pressure hose, a block, a pair of tubular pins extending into said block at right angles to each other, the inner end of one of said pins being counter-sunk into the side of the other pin with the bores of said pins communicating, and swivel connections on the outer ends of said pins.

1,811,227. KEY AND ACTUATOR LOCK FOR WRITING-ADDING MACHINES. HARRY ARTHUR FOOTHORAP, Harrisburg, Pa., assignor to Elliott-Fisher Company, a Corporation of Delaware. Filed Dec. 31, 1920. Serial No. 434,252. 15 Claims. (Cl. 235—130.)



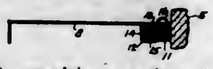
1. In a machine of the class described, the combination with a traveling series of adding keys, and an adding mechanism including a series of number wheels and a master wheel, a key locking mechanism, and means movable with the master wheel to cause the key locking mechanism to lock the keys when the master wheel advances beyond the number wheels.

1,811,228. STAND FOR BOTTLE DISPENSING REFRIGERATORS. CHESTER A. FRICK, Muncie, Ind., assignor to Glascock Brothers Manufacturing Company, Muncie, Ind., a Corporation of Indiana. Filed May 5, 1930, Serial No. 449,711. Renewed May 7, 1931. 3 Claims. (Cl. 248—41.)



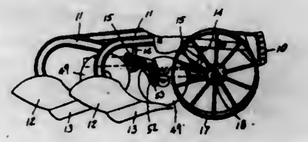
1. A supporting stand for bottle cooling receptacles comprising a pyramidal base having a rectangular base frame, four upwardly extending inwardly converging corner posts, means for connecting said corner posts together at their tops, panel plates secured to said corner posts and an inverted pyramidal support mounted on the tops of said corner posts.

1,811,229. TAPE WINDING MACHINE. GUSTAV W. FRIES, FRANK W. FINKHOUSEN, and LINUS J. JOHNSON, Fort Wayne, Ind. Filed Nov. 15, 1928. Serial No. 319,709. 2 Claims. (Cl. 242—6.)



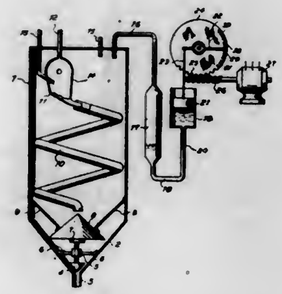
1. In a tape winding machine, a frame, a track formed on the frame, an endless carrier slidable on the track, a head slidably mounted on the frame and having a track slidably supporting the carrier, resilient means opposing the movement of the head to maintain tension on the carrier, means to move the head to release the said tension, means to drive the carrier, means to support the object to be taped in the path of the carrier and a spool of tape, the free end of the tape being extended through the carrier for attachment to the object.

1,811,230. JAIL DOOR MECHANISM. HARRY D. GARBER, Cuyahoga Falls, Ohio, assignor to The Van Dorn Iron Works Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 9, 1930. Serial No. 450,992. 6 Claims. (Cl. 189—7.)



3. In combination with a plurality of sliding jail doors, gang means including a pair of latch bolts for each door for securing said doors against opening, said gang means being adapted to deadlock one of the latch bolts of each door, and lock controlled means for individually releasing the doors each from its other latch bolt.

1,811,231. WARM AIR REGISTER SEAL. GEORGE F. GEHRI, Tacoma, Wash. Filed Apr. 23, 1929. Serial No. 357,578. 1 Claim. (Cl. 98—114.)

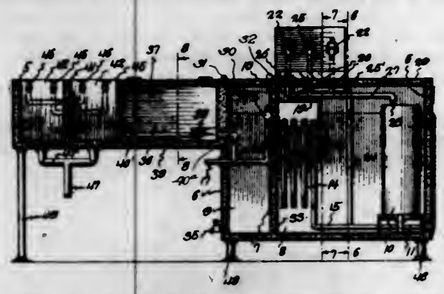


A register seal comprising a register frame; a holding strip bent in cross-section to form a holding groove adapted to lie inside of and in contact with the edge of the register frame and a bead adapted to lie outside of the edge of the register frame, said strip fitting over the edge of the register frame; and a continuous flexible sealing body held in said groove in the holding strip and extending therefrom into tight contact with the wall.

1,811,232. MULTIPLE TRASHER. DAYTON H. GILSON, Rushville, Ind. Filed Oct. 17, 1930. Serial No. 489,357. 11 Claims. (Cl. 97—209.)

1. In a multiple share plow, the combination of a plurality of spaced plow shares, a similar number of jointer stems ahead of the same, a trashing disc positionable ahead of each share, a bar connecting each disc to its stem, and an independent bracing connection interposed between each pair of adjacent discs for uniting the disc supports.

1,811,233. AUTOMATIC ANALYZING AND CONTROL SYSTEM AND APPARATUS THEREFOR. ARCHIBALD C. HARRISON, Birmingham, Ala., assignor to The Brown Instrument Company, Philadelphia, Pa. Filed July 7, 1924. Serial No. 724,630. 19 Claims. (Cl. 23—230.)

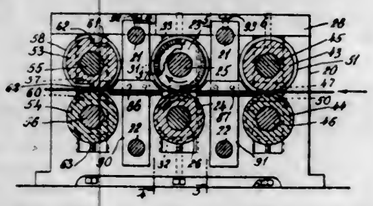


18. The method of controlling a process of treating materials which comprises the step of chemically analyzing a portion of materials entering into the process, and controlling the process by the variations in a physical characteristic of one of the products of the chemical analysis.

1,811,234. APPARATUS FOR REFRIGERATING AND DISPENSING BEVERAGES. FRANK R. HICKS, Jr., and FRANK A. MAYES, Shreveport, La. Filed Jan. 17, 1928. Serial No. 247,342. 4 Claims. (Cl. 225—28.)

1. In dispensing apparatus of the class described, a dispensing faucet, a liquid reservoir, a cooling unit, a refrigerating unit associated with the cooling unit, a coil communicating at one end with the dispensing faucet and disposed in juxtaposition to the cooling unit, a compartment in which the said reservoir, the cooling unit, and the coil are arranged, a compartment separated from and in communication with the first mentioned compartment, a wall dividing the said compartment, the wall having circulating passageways therein to provide for the circulation

of water between the compartments, a storage compartment displaced with respect to the last mentioned com-

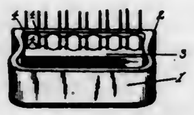


partment, and a cooling unit in the said storage compartment in communication with the pipes of the first mentioned cooling unit.

1,811,235. WELL SCREEN. WALTER E. KING, Houston, Tex. Filed Jan. 15, 1926. Serial No. 81,448. 4 Claims. (Cl. 166—6.)

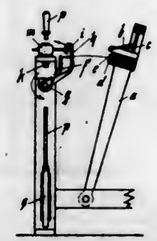
4. In combination with a screen pipe having uniform diameter openings therein, a strainer button for each of said openings, said button having peripheral projections thereon of greater diameter than that of said openings, whereby said projections may deform the faces of said openings when said buttons are driven in place.

1,811,236. SAW FORMING DEVICE. CHARLES C. KNAPP, Jersey City, N. J., assignor of one-half to Roswell B. Smith, Brooklyn, N. Y. Filed Apr. 11, 1928. Serial No. 269,141. 7 Claims. (Cl. 76—25.)



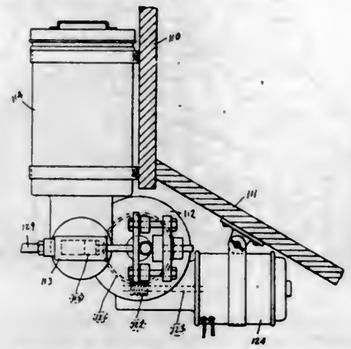
1. A saw forming device comprising means for slitting a strip of saw stock longitudinally to provide two strips each having spaced groups of saw teeth, means for setting said teeth, means for guiding said strips to said tooth-setting means and for holding said strips in engagement with each other, and means for cutting said strips transversely.

1,811,237. COLLAPSIBLE WINDING SHAFT. FRANK E. LANGDON, Vancouver, Wash. Filed Feb. 10, 1930. Serial No. 427,141. 3 Claims. (Cl. 242—72.)



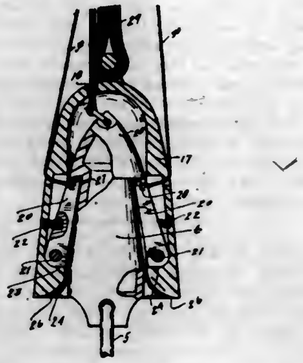
1. A collapsible winding shaft having in combination a tubular core, a plurality of arcuate jaws surrounding said core and slidably mounted thereon, wedge means between said jaws and core for moving said jaws radially as they slide longitudinally, spring means for urging said jaws to an expanded position, a slidable collar attached to all of said jaws having means for exerting a leverage between same and said tubular core, said slidable collar being normally non-rotatable with relation to said core, the fastening between said collar and jaws consisting of a rivet and keyhole connection whereby a rotary movement of said collar will permit a separation of said jaws and tubular core, and removable pin means for permitting the rotation of said collar with relation to said tubular core.

1,811,238. BALL RECEIVER. FRANK LANZA, Philadelphia, Pa. Filed Mar. 31, 1928. Serial No. 266,345. 1 Claim. (Cl. 273—11.)



The combination with a pool table having ball return chutes formed of multiple spaced ductile wires of a ball receiver having in one wall a plurality of openings to receive the ends of said chutes, the wall of each opening having spaced recesses to receive the individual ductile wires, and all of said openings communicating transversely whereby lateral clearance is provided to facilitate placing of the wires without undue bending.

1,811,239. DEVICE FOR STOPPING ELECTRICALLY DRIVEN LOOMS BY THE WEFT-GUARD. KARL LENZKES, Gladbach-Neuwerk, Germany. Filed Feb. 8, 1929, Serial No. 338,479, and in Germany Apr. 17, 1928. 1 Claim. (Cl. 139—375.)

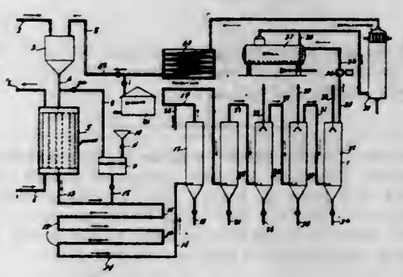


A mechanism for stopping an electrically driven loom by the weft guard, comprising in combination, with an electromotor adapted to be switched for forward and backward running, a three-pole reversing switch, a switch lever, a disengaging rod hingedly connected to said switch lever, a disengaging lever to which said disengaging rod is hingedly connected, a locking lever, a strong blade spring acting on said disengaging lever from the one side, a less strong pressure spring acting on said disengaging lever from the other side, and a projection on said locking lever adapted to lock said disengaging lever in intermediate position in which the circuit to the electromotor is interrupted.

1,811,240. PRESSURE LUBRICATING SYSTEM. JOHN B. MCFERRAN, Jr., Louisville, Ky., assignor to Louisville Electric Manufacturing Company, Louisville, Ky., a Corporation. Filed Sept. 15, 1928. Serial No. 306,274. 4 Claims. (Cl. 184—7.)

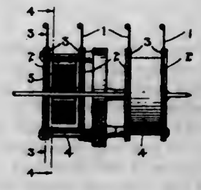
1. The combination with a vehicle, of a power lubricator mounted thereon, said lubricator including a lubricant containing receptacle, a plurality of tubes connecting said receptacle with the individual parts of the vehicle to be lubricated, a valve mounted between said receptacle and tubes, power driven means for forcing lubricant from said chamber through said valve under pressure when said valve is in open position, and a handle for selectively positioning said valve for permitting the lubricant to be forced therethrough into one of said tubes while preventing lubricant from passing through the other tubes, and means controlled by the position of said valve for actuating said power driven means when said valve is in open position with respect to said selected tube.

1,811,241. AUTOMATIC LOCATOR AND RECOVERY FOR SUNKEN VESSELS. WILLIAM O. MOREY, Portland, Oreg. Filed Mar. 18, 1929. Serial No. 347,901. 1 Claim. (Cl. 114—16.8.)



A ship raising device comprising, in combination, a conical shaped locking head, said locking head having a flange outwardly extending from the cone-shaped head, a bail secured to the top of the locking head, said bail having a buoy line secured thereto, and a conical shaped hollow lifting head, a lifting line secured to the top thereof, an opening disposed through the top of the lifting head, a plurality of openings disposed through the side of the lifting head, a plurality of hinged locking latches disposed within the lifting head and adapted to intimately engage the flanged conical shaped locking head, said locking latches being in alignment with the openings through the side wall, and trip lines disposed through the said side openings and secured to the locking latches adapted for placing the locking latches out of engagement with the locking head.

1,811,242. HEAT CONDUCTING HIGH TEMPERATURE RESISTANT REFRACTORY. JOHN D. MORGAN, Maplewood, N. J., and WILLIAM G. BJORKSTEDT, Jamaica, and RUSSELL E. LOWE, New York, N. Y., assignors to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed June 11, 1928. Serial No. 284,668. 5 Claims. (Cl. 106—9.)

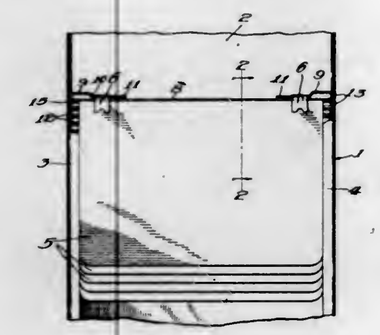


1. A composition of matter comprising substantially equal parts of zircon and silicon bonded by reaction products of phosphoric acid therewith and having a coefficient of heat transmission equal to bonded carborundum at temperatures above 2000° F., and capable of commercial use at 2600° F.

1,811,243. PROCESS OF REFINING HYDROCARBON OILS WITH METALLIC HALIDE. JAMES HAROLD OSMER, El Segundo, Calif., assignor to Standard Oil Company of California, San Francisco, Calif., a Corporation of Delaware. Filed Feb. 25, 1927. Serial No. 171,045. 6 Claims. (Cl. 196—44.)

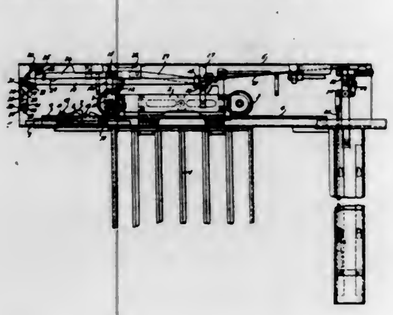
1. A process of refining a heavy hydrocarbon oil which comprises forming a mixture of said heavy oil and a lighter oil previously treated with a metallic halide, contacting said mixture with a metallic halide at a temperature insufficient to cause any substantial conversion to lower boiling oils, and separating purified heavy oils from the light oil.

1,811,244. THERMAL ELECTRIC METER. LOUIS A. PAINE, Toronto, Ontario, Canada, assignor, by mesne assignments, to The Lincoln Meter Company, Inc., Springfield, Ill. Filed May 6, 1929. Serial No. 360,692. 6 Claims. (Cl. 171—308.)



1. A thermal electric meter, comprising a chamber enclosed by heat insulating material, means thermally responsive to the flow of electric current enclosed within said chamber and affected only by the temperature therein, and means for registering only the thermal changes within said chamber, whereby power factor and temperature errors are reduced.

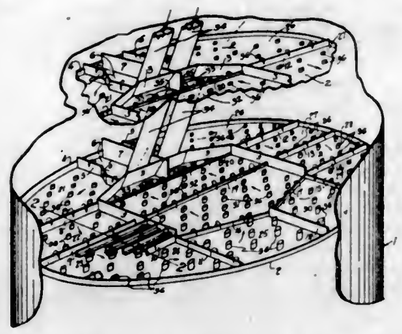
1,811,245. VISIBLE RECORD SYSTEM. FRANK D. POWELL, Chicago, Ill., assignor to Acme Card System Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 3, 1930. Serial No. 418,234. 9 Claims. (Cl. 129—16.)



1. The combination with a frame having spaced guide flanges, of means for removably attaching a card to said

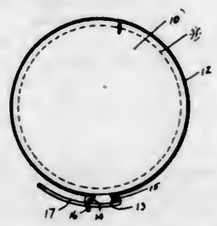
frame, comprising a member having return-bent ends forming spaced bearing portions for insertion beneath said

guide flanges and offset continuations of said return-bent portions in the same plane therewith adapted to detachably engage the card.



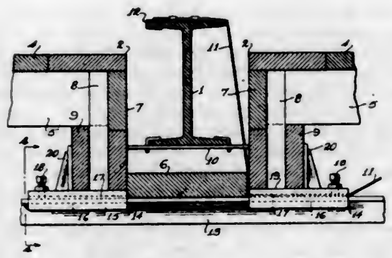
1,811,246. JAIL DOOR MECHANISM. ARTHUR E. SHANK, Cleveland Heights, GOTTFRIED FISLER, Cleveland, and JOHN M. LINDEN, East Cleveland, Ohio, assignors to The Van Dorn Iron Works Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 9, 1930. Serial No. 451,020. 2 Claims. (Cl. 189—7.)

1. In an apparatus of the class described and including a sliding door, means for moving the same between open and closed positions and including a gap nut movable between corresponding positions and operator-controlled means for associating the door with said gap nut to cause the door to follow the gap nut movements, a lock bar for securing the door in one of said positions when the door is released from said gap nut, and means adapted when the door is secured by said lock bar and the gap nut is in its corresponding position, to cause releasing movement of said lock bar upon movement of the gap nut from its said position.



1,811,247. BUBBLE TRAY. AATHUR J. SMITH, Kansas City, Mo., assignor to Smith Engineering Company, a Corporation of Missouri. Filed May 22, 1930. Serial No. 454,701. 6 Claims. (Cl. 261—114.)

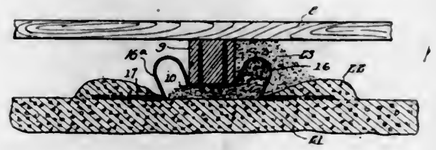
1. A device of the class described comprising a tray having a well thereon formed by partitions attached to said tray, a series of compartments formed by partitions attached to said tray extending from said well around one side of said tray and terminating in a central compartment and a second series of compartments extending from said well around the opposite side of said tray and terminating in said central compartment, said well and compartments being so constructed as to cause a liquid



to flow progressively and uniformly from said well through said separate series of compartments into said central compartment.

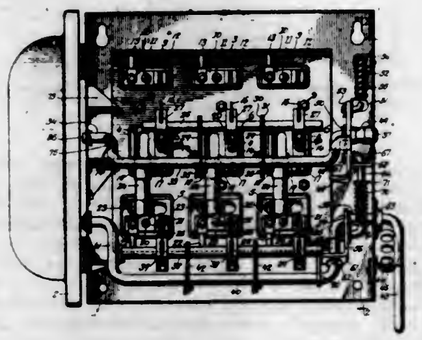
1,811,248. PISTON RING CLAMP. ELMER A. SPENCER, St. Louis, Mo., assignor to Ramsey Accessories Manufacturing Corporation, St. Louis, Mo. Filed May 10, 1930. Serial No. 451,267. 3 Claims. (Cl. 29—86.4.)

1. The combination with a split piston ring compressing sleeve, of means for locking said sleeve in compressed position comprising an apertured member locked with said sleeve adjacent one free edge thereof while movable relative thereto, and a strap having substantially the curvature of said sleeve with one end secured adjacent the other free edge thereof and extending through the aperture in said member, said strap being adapted to freely slide through said member when in one position and interlock therewith through a wedging action when in another position.



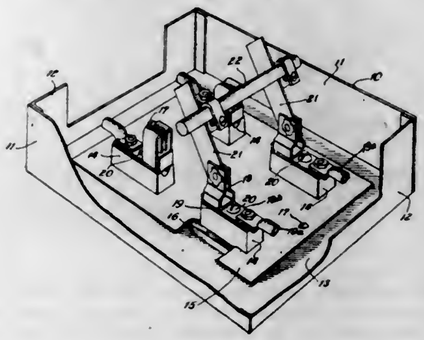
1,811,249. FORM CONSTRUCTION FOR CONCRETE FLOORS. CHARLES T. WHITESCARVER, New York, N. Y., assignor to Universal Form Clamp Co., Chicago, Ill., a Corporation of Illinois. Filed Apr. 20, 1929. Serial No. 356,800. 7 Claims. (Cl. 25—131.5.)

4. A device of the class described comprising a rail adapted to support a mold section, tie elements adapted



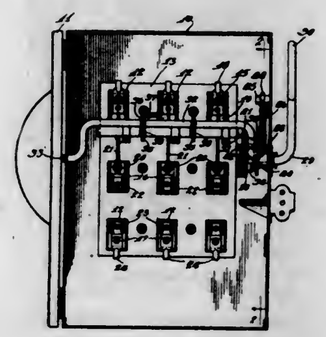
to support said rail, a pair of cleats mounted on said rail and adjustable longitudinally thereof, shelves on said cleats adapted to support other mold sections, said cleats having guideways extending therethrough for receiving the tie elements, and means on said cleats for clamping sail cleats to said tie elements and to said rail.

1,811,250. SOUND-REDUCING CONSTRUCTION. BRUNO E. BALDUF, Chicago, Ill., assignor to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 15, 1929. Serial No. 340,121. 6 Claims. (Cl. 20—6.)



4. In a resilient impact absorber for adjacent structural parts, a spring metal clip having a central saddle for attachment to one structural part, a plurality of end portions in a different plane than that of said saddle for connection to another structural part, curved, resilient, integral loops connecting said saddle and end portions, said loops having legs extending toward said end portions at an acute angle thereto.

1,811,251. ELECTRICAL SWITCH. ALBERT P. BALL, Royal Oak, Mich., assignor to Square D Company, Detroit, Mich., a Corporation of Michigan. Filed July 19, 1920. Serial No. 397,261. 26 Claims. (Cl. 200—3.)

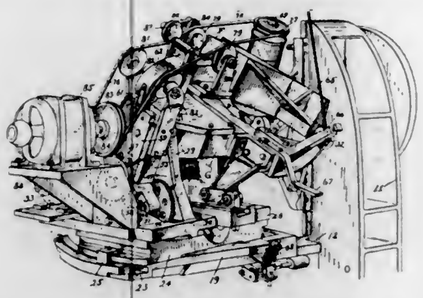


19. In a switch, a casing, main stationary contacts, a switch arm cooperating therewith, auxiliary stationary contacts, a fuse adapted to extend therebetween, an auxiliary switch arm adapted to shunt said fuse only, said arms being individually pivotally mounted in said casing, and means connecting said switch arms whereby they may be moved substantially together toward a closing position, but whereby said fuse shunting circuit is immediately snapped open after said main switch is closed by the independent movement of said arms.

1,811,252. UNIT BASE CONSTRUCTION. ALBERT P. BALL, Detroit, Mich., assignor to Square D Company, Detroit, Mich., a Corporation of Michigan. Original application filed July 19, 1920, Serial No. 397,261. Divided and this application filed Mar. 7, 1923. Serial No. 623,356. 23 Claims. (Cl. 175—369.)

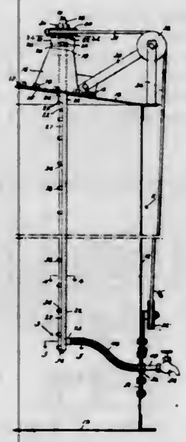
1. In a switch, a support, terminal blocks, means adapted to fit over and substantially peripherally surround said blocks, and means to secure said last means to said support whereby said terminal blocks are firmly held in relation therewith.

1,811,253. ELECTRICAL SWITCH. ALBERT P. BALL, Detroit, Mich., assignor to Square D Company, Detroit, Mich., a Corporation of Michigan. Original application filed July 19, 1920, Serial No. 397,261. Divided and this application filed Dec. 22, 1928. Serial No. 327,939. 27 Claims. (Cl. 200—67.)



1. In a switch, stationary contacts, movable contacts, an arm carrying the latter, a member loosely associated with said arm, an operator having a finger thereupon, and lugs on said member adapted to engage said arm and to be engaged by said finger, said arm, said operator, and said member all being loosely journalled about one another, and all having independent motion.

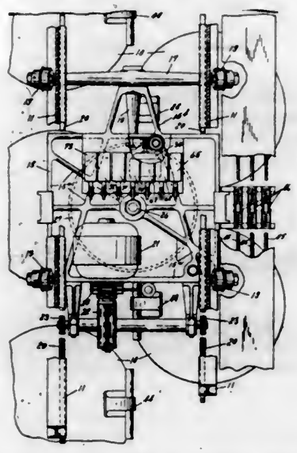
1,811,254. METHOD AND APPARATUS FOR GENERATING CURVED SURFACES ON GEAR TEETH. GUY L. BAYLEY, Chicago, Ill., assignor to Bevel Gear Grinding Company, Detroit, Mich., a Corporation of Delaware. Filed Sept. 21, 1926. Serial No. 136,803. 16 Claims. (Cl. 51—52.)



1. The herein described method of generating the curved faces of gear teeth with a cutting element provided with a cutting portion formed complementary to the face of a gear tooth and adapted to contact with the gear

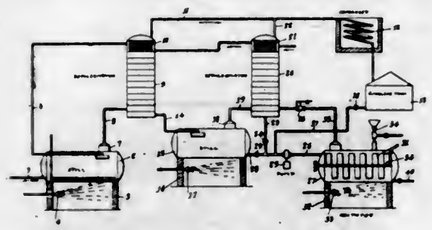
tooth along a line extending transversely across the face thereof from substantially the top to the bottom of said tooth, which comprises engaging the cutting element with a gear blank, causing a relative movement between the

cutter and blank longitudinally of the tooth face, and simultaneously causing a relative movement about an axis intersecting the line of contact between the cutter and blank.



1,811,255. LIQUID SAMPLING DEVICE. CHARLES A. BERGGREN, Los Angeles, Calif., assignor to Morris B. Pendleton, San Gabriel, Calif. Filed July 16, 1928. Serial No. 293,211. 7 Claims. (Cl. 137—18.)

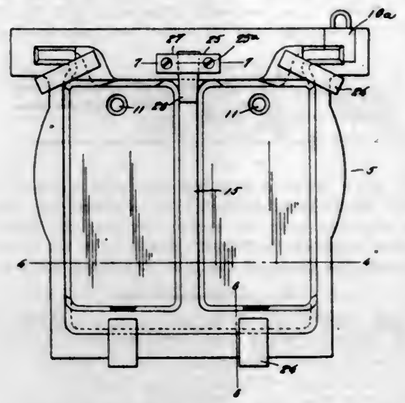
1. A liquid sampling device, for use in combination with a tank, which comprises: a bearing sleeve member suspended in said tank and having a segmental cylindrical inner surface; a sampling tube rotatably mounted in said bearing sleeve, one side of said tube being adapted to admit the passage of liquid into said tube; means for adjustably holding said sampling tube in sliding contact with said sleeve; means for rotating said sampling tube; and means for withdrawing liquid from said tube.



1,811,256. MOLD SERVING DEVICE. ROY W. BROWN, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Feb. 28, 1930. Serial No. 432,022. 20 Claims. (Cl. 18—2.)

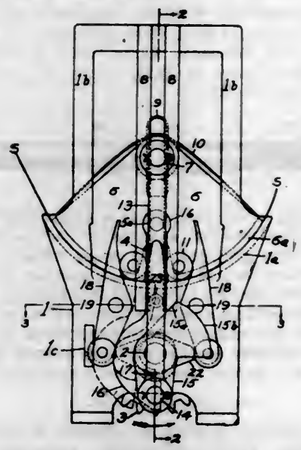
1. In combination, a plurality of aligned molds arranged in two parallel rows, a pair of tracks above said rows of molds, a bridge, means adapted to give said bridge a three-point rolling suspension on said tracks, a carriage, axial means for pivotally supporting said carriage below said bridge, an arcuate crane arm pivotally carried at the axis of its arc on the lower end of said carriage, a rack on the arcuate surface of said arm, a pinion on said carriage adapted to engage with said rack, a motor to control said pinion and thus the position of the crane

arm, a vertically extending chuck pivotally mounted at the end of said crane arm and adapted to engage in openings in said molds, and interlocking means on said chuck and in the mold openings.



1,811,257. METHOD OF PRODUCING MOTOR FUEL OR GASOLINE FROM PETROLEUM OIL. MARVIN L. CHAPPELL, Los Angeles, Calif., assignor to Standard Oil Company of California, San Francisco, Calif., a Corporation of Delaware. Filed Jan. 22, 1927. Serial No. 162,705. 8 Claims. (Cl. 196—54).

1. A process of producing blended motor fuel comprising first distilling from crude petroleum oil the lower boiling point fractions including gasoline stocks boiling below 437° F. and higher boiling point oil, subjecting the vapors to reflux separation in which operation an overhead gasoline stock vapor is formed containing oils substantially all of which have boiling points below 437° F., while forming a reflux condensate of higher boiling point oils, re-distilling from said reflux condensate a gasoline stock having boiling points between 284° F. and 437° F., subjecting the remaining higher boiling point oil after the separation of such last mentioned vapors to reaction with metallic halide under suitable temperature and pressure to decompose the oil and form a gasoline stock having boiling points mainly below 284° F., and blending the three gasoline stocks thus produced.

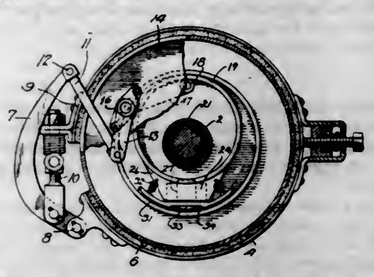


1,811,258. ADAPTER FOR MOLDS. HARRY A. CLARK, Warren, Ariz. Filed July 29, 1930. Serial No. 471,505. 5 Claims. (Cl. 22—136.)

1. An adapter for a copper anode mold comprising a T-shaped element having bevelled edges to conform to the walls of the mold, and irregularly shaped pieces similarly beveled to close the lug recesses of said mold, and

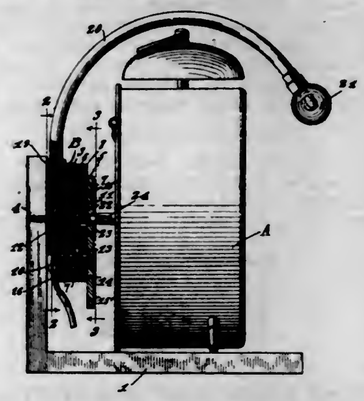
clamps adapted to clamp said adapter and irregularly shaped pieces in position in said mold and to divide said mold into a plurality of chambers.

1,811,259. METHOD AND APPARATUS FOR FORMING SHEET METAL. ARTHUR R. CURTIS, Cleveland, Ohio. Filed Dec. 28, 1923. Serial No. 683,206. 25 Claims. (Cl. 153—12.)



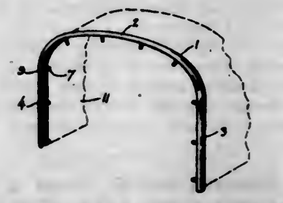
1. The method of forming perforated sheet metal articles which have portions with relatively sharp bends, which comprises perforating a sheet to provide perforated areas with relatively narrow unperforated strips lying between the perforated areas and subjecting the sheets to pressure between forming members engaging the sheets along the unperforated strips only.

17. Sheet metal forming apparatus comprising a rigid form having an intermediate upstanding rib and cylindrical face portions on opposite sides of the rib, and means co-operating with said rigid form to hold the sheet against the top of the rib and to bend the sheet over the rib and into conformity with the rib and cylindrical face portions of the rigid form.



1,811,260. ELECTRIC BRAKE. DAVID R. CUSHMAN, Albany, Calif. Filed Dec. 8, 1926. Serial No. 153,291. 14 Claims. (Cl. 188—78.)

1. In combination, a revolvable element, a cam element mounted coaxially therewith, a radial plunger reciprocating in said cam and having a shoe thereon adapted for engagement with the revolvable element for impart-



ing rotary motion to the cam, a brake mechanism operated by the cam and electro-magnetic means operating the plunger for rendering the cam active.

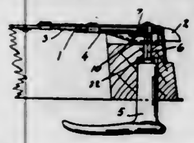
1,811,261. ALARM TIME SWITCH. ADRIAN M. DE JEU, Cleveland, Ohio. Filed Mar. 15, 1930. Serial No. 436,155. 1 Claim. (Cl. 200—36.)

Means for controlling a circuit by an alarm clock comprising a support having a circular recess therein, a pair of ring contacts carried by the support and insulated therefrom and from each other, each contact having its ends spaced apart, a circular member of non-conducting material rotatably arranged in the recess, a brush carried by the member for engaging the ring contacts, said circular member having a slot therein for receiving the winding key of the alarm mechanism of the clock, a cover plate connected with the circular member and having a slot therein through which a part of the key passes and a handle formed on the cover plate.

1,811,262. COWL MOLDING. ARTHUR J. DE SANA, Detroit, Mich., assignor to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed July 5, 1928. Serial No. 290,360. 2 Claims. (Cl. 296—29.)

1. A molding comprising a strip of metal stock fashioned transversely into a bead formation, the edges of the stock extending inwardly of the bead, fastening means overlying said edges and projecting therefrom for securing the

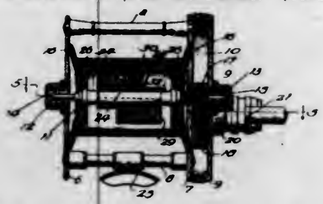
molding to a support, and separate spring means for urging the fastening means into frictional engagement with the molding whereby such fastening means is automatically and frictionally held in position prior to the securing of the molding to the support.



1,811,263. BAKING POWDER. AUGUSTUS H. FISKE, Providence, R. I., assignor to Rumford Chemical Works, Providence, R. I., a Corporation of Rhode Island. Filed Mar. 2, 1928. Serial No. 258,694. 2 Claims. (Cl. 99—10.)

1. As a new culinary product, a baking powder comprising gas producing reactants and an activated starchy diluent also constituting a carrier for oxygen available in gluten improving quantities upon mixing in the batter.

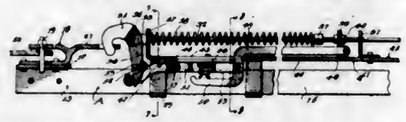
1,811,264. PREPARED FLOUR. AUGUSTUS H. FISKE, Providence, R. I., assignor to Rumford Chemical Works, Providence, R. I., a Corporation of Rhode Island. Filed Mar. 26, 1928. Serial No. 264,972. 1 Claim. (Cl. 99—10.)



In a self rising flour, an acid and a basic reactant and a basic organic addition product of urea having its hydrogen peroxide combined in loosely connected crystalline relation, the acid reactant being in neutralizing amount to both basic factors involved, whereby the basic addition product releasing its hydrogen peroxide in nascent form accelerates the gluten improving rate during mixing.

1,811,265. COACH LOCK. JOHN B. FLYNN, Detroit, Mich., assignor to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 4, 1929. Serial No. 330,241. 8 Claims. (Cl. 70—91.)

1. In a lock, a handle spindle consisting of a plurality of recessed parts adapted for relative longitudinal movement, and means cooperating with said relatively movable recessed parts to lock and unlock said handle.



1,811,266. FISHING REEL. WILLIAM A. FOSS, Cleveland, Ohio, assignor to American Fork & Hoe Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 10, 1923. Serial No. 679,544. 10 Claims. (Cl. 242—84.5.)

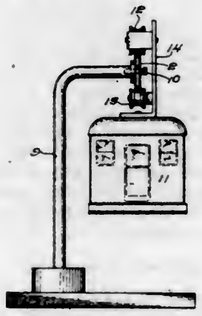
9. In a fishing reel, the combination of a frame adapted to be secured on a fishing rod, a spool rotatably mounted in the frame, the spool comprising a hollow cylindrical winding portion, means for operating the spool to wind a line on the cylindrical portion thereof, and a dynamically unbalanced weight disposed within the hollow portion of the spool and frictionally rotatable thereby.

1,811,267. TRACTOR HITCH. HARRY A. GEMBERLING and ASLE BJELLA, Epping, N. Dak. Filed July 26, 1929. Serial No. 381,362. 5 Claims. (Cl. 280—33.16.)

1. A tractor hitch comprising a pair of slidably connected sections, a clevis carried by one section for connection with a tractor, a clevis carried by the other section for connection with a farm implement, a pivoted draw bar head carried by the section having the clevis for the farm implement and normally engageable with the clevis of the other section, resilient means normally holding the

pivoted draw bar head in engagement with the clevis, said resilient means being adapted to be overcome when undue stress is placed upon the section carrying the clevis for the farm implement to permit the release of the draw bar head from the clevis of the first mentioned section.

1,811,268. METHOD OF PREPARING A LIQUOR FOR THE PRODUCTION OF SULPHITE CELLULOSE. GUSTAF HAGLUND, Stockholm, Sweden, assignor to Patent Aktiebolaget Gröndal-Ramen, Stockholm, Sweden, a Limited Company. Filed Jan. 4, 1929, Serial No. 330,414, and in Sweden Jan. 10, 1928. 2 Claims. (Cl. 92—11.)

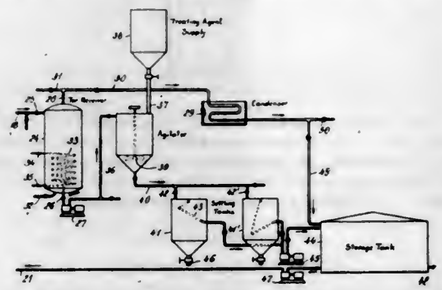


1. In the production of sulphite cellulose, the method of preparing a liquor having a high concentration of dissolved organic matters by the use of waste liquor from a previous boiling of such cellulose, which comprises, mixing the waste liquor with an alkali bisulphite solution, and adding the necessary quantities of sulphurous acid.

1,811,269. STEERING WHEEL. WALTER I. HANSON and OTTO R. STELZER, Akron, Ohio, assignors to Firestone Steel Products Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 13, 1929. Serial No. 354,780. 4 Claims. (Cl. 74—33.)

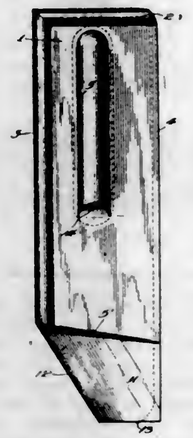
2. A steering wheel comprising a substructure including a metal hub member, a series of endless segmental members of wire provided with inner arcuate portions fitting about and secured to the hub member, radial portions positioned adjacent each other in adjoining segments to provide spokes and outer arcuate portions at the rim of the wheel, an endless rim member fitted about and secured to the outer arcuate portions of said segmental members, and a molded covering over said sub-structure.

1,811,270. MONORAIL TRACK. GEORGE C. HENDERSON, Detroit, Mich. Filed Feb. 10, 1930. Serial No. 427,207. 10 Claims. (Cl. 104—106.)



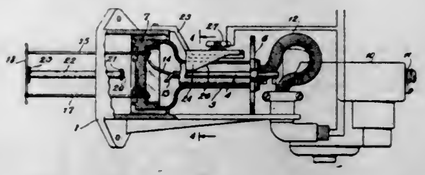
1. A mono-rail track comprising a pair of spaced upper and lower rails, and a plate of insulation rigidly connecting said rails.

1,811,271. BARBER'S COMB. JAMES W. INGRAM, San Francisco, Calif. Filed July 16, 1930. Serial No. 468,255. 8 Claims. (Cl. 132—11.)



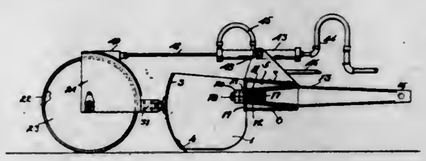
1. A barber's comb having a hand hold and a thumb-rest, said thumb-rest comprising a double-reverse curved portion for its back edge with the convexity of the central portion of said curve facing inwardly toward the body of said comb.

1,811,272. CRACKING OF HYDROCARBONS AND TREATMENT OF RESIDUES. EDWARD W. ISOM, Winnetka, Ill., assignor to Sinclair Refining Company, Chicago, Ill., a Corporation of Maine. Filed June 30, 1924. Serial No. 723,081. 6 Claims. (Cl. 196—69.)



1. The method of treating oil mixtures containing tar produced by the cracking of hydrocarbon oils under pressure when heated to approximately the cracking temperature, which comprises subjecting the tar and oil to a substantial reduction in temperature and dispersing therethrough finely divided adsorbent material, and thereafter separating the adsorbent material and accompanyng tar from the remaining substantially tar free oil.

1,811,273. REAMER BLADE. CHARLES B. KENNEDYE, University City, Mo., assignor to The Kennedye Corporation, Wilmington, Del., a Corporation of Delaware. Filed Mar. 3, 1927. Serial No. 172,247. 2 Claims. (Cl. 255—61.)

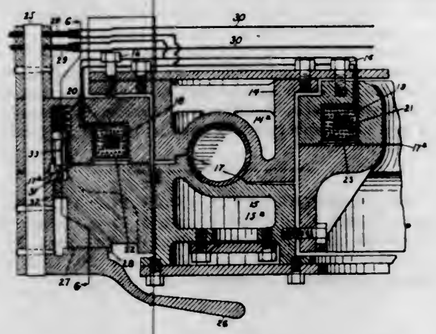


1. A reamer blade consisting essentially of a supporting body of greater length than width and of greater width than thickness, one side of which comprises an elongated reaming means adapted to be presented to the formation being drilled and consisting of a plurality of longitudinal relatively thin spaced cutting edges, a cutting blade projecting from the lower edge thereof of substantially less width, length and thickness than the supporting body and so disposed as to form an offset shoulder on the entire lower edge of said supporting body, and an integral locking lug projecting from one face of the supporting body intermediate opposite longitudinal edges, said locking lug lying in a plane substantially parallel to said longitudinal edges.

1,811,274. IGNITION MECHANISM FOR OIL BURNERS. JAMES N. MACRAE, Stamford, Conn., assignor to Petroleum Heat and Power Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 10, 1929. Serial No. 353,950. 3 Claims. (Cl. 175—115.)

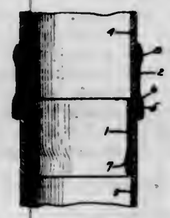
3. Ignition apparatus comprising a non-metallic resistance element as an electrode, a pair of metal supporting rods, a metal bridge across said rods, metal means intermediate the electrode and said bridge member for preventing the formation of a non-conducting film between the electrode and bridge, a spring contact for pressing the electrode into contact with said intermediate metal means, and metal intermediate the spring contact and electrode for preventing the formation of a non-conducting film between the contact and electrode.

1,811,275. SLIP TONGUE FOR SCRAPERS. WESLEY K. MCMILLAN, San Francisco, Calif., assignor, by mesne assignments, to American Tractor Equipment Co., a Corporation of Nevada. Filed July 30, 1928. Serial No. 296,200½. 3 Claims. (Cl. 37—169.)



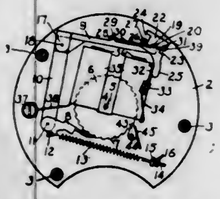
1. A scraper of the class described comprising a scraper member having end plates and a hardened knife at its lower edge, a pair of horizontal plates spaced apart and fixed to the end plates and extending across the front of the scraper, other plates secured thereto forming a square tapering pocket, and a square tapering tongue secured in said pocket to operate the scraper.

1,811,276. VULCANIZER. THEODORE A. MILLER, Akron, Ohio, assignor to Andrew J. Fleiter, Akron, Ohio. Filed Apr. 28, 1928. Serial No. 273,684. 14 Claims. (Cl. 18—17.)



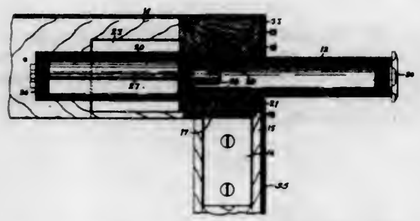
8. The combination with hinged vulcanizer sections movable to and from mating relationship and electromagnetic means for holding the sections together, of means for locking the mold sections together, for energizing or de-energizing the electromagnetic means and for cracking the mold sections comprising a rock shaft having a locking cam lug thereon, a cracking cam lug thereon and

a switch thereon so as to be rocked in one direction to lock the sections and energize the electromagnetic means and to be rocked in the other direction to de-energize the mag-



netic means and crack the vulcanizer, and means for locking said rock shaft against actuation to energize the electromagnetic means when the vulcanizer is open.

1,811,277. PIPE CONNECTER. ABRAHAM K. MOSLEY, Troy, N. Y., assignor to Bessie K. Stoll, Troy, N. Y. Filed June 15, 1929. Serial No. 371,154. 2 Claims. (Cl. 285—192.)



1. A pipe connecter formed from sheet metal comprising two ferrule portions of different diameters, the smaller of said ferrule portions adapted to fit the interior diameter of one of two pipe sections to be joined, and the larger of said ferrule portions adapted to fit the exterior diameter of the other of said pipe sections, and an intermediate portion folded upon itself to form a two-ply axially extending annular flange concentric with the inner end of the smaller of said ferrule portions and forming therewith a U-shaped channel adapted to receive and firmly grip the end of the respective pipe section, the inner and outer surfaces of the base of said U-shaped channel portion comprising abutments for the ends of the pipe sections to be joined.

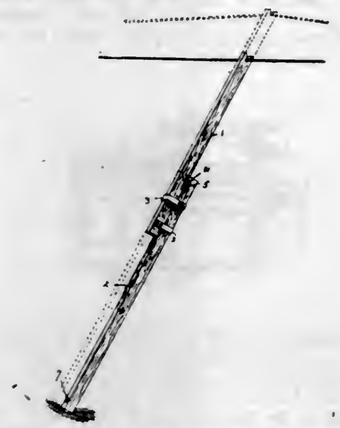
1,811,278. ELECTRIC DRIVING MECHANISM. ANDREW H. NEUBEUTHER, Peru, Ill., assignor to Western Clock Company, Peru, Ill., a Corporation of Illinois. Filed May 31, 1927. Serial No. 195,490. 10 Claims. (Cl. 185—40.)

1. In a driving mechanism, an electro-magnet, an armature mounted adjacent to said magnet, power storing means connected with and actuated by said armature, a member having a plurality of slots pivotally mounted on said armature, resilient means on said armature for controlling the positions of said member in combination with a contacting part and external means in one of said slots co-operating with said resilient means to bring said member into engagement with said contacting part.

1,811,279. REFRIGERATING APPARATUS. ALFRED QUARNSTROM, Dayton, Ohio, assignor to Frigidaire Corporation, Dayton, Ohio, a Corporation of Delaware. Filed May 27, 1929. Serial No. 366,112. 3 Claims. (Cl. 312—1.)

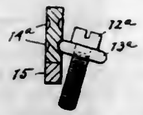
1. In a heavy elongated cabinet including a rigid framework and a casing having a frangible coating covering said framework, the combination of a sleeve rigid with said framework and a lift bar slidable into said sleeve and slidable substantially entirely within the casing.

1,811,280. COMMUNICATING HELMET. ALFRED A. RODGERS, Los Angeles, Calif., assignor to Scully Bros. Inc., Los Angeles, Calif., a Corporation of California. Filed Aug. 17, 1929. Serial No. 386,680. 6 Claims. (Cl. 181—23.)



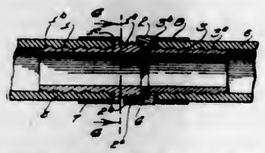
1. In combination with an aviator's headgear, a concave sound clarifying and amplifying device, having a sound communicating tubular member, and a pad attached to the edge of said amplifying device and adapted to lie against and encircle the ear of the wearer and to form a non-reverberant sound chamber.

1,811,281. ADJUSTABLE CLOTHESLINE PROP. PERRY H. SHROYER, Dayton, Ohio. Filed Dec. 23, 1929. Serial No. 416,009. 5 Claims. (Cl. 68—12.)



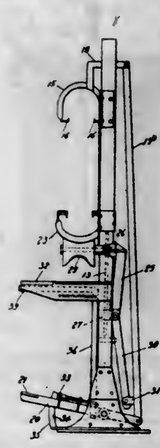
1. In a clothes line prop or the like, two bars arranged in parallel contacting relation, keeper bands carried by each bar and enclosing the other for relative longitudinal sliding motion, one of the bars having an inclined notch in its face contiguous to the other bar the inclined surface of such notch being longitudinally grooved, and a ball having rolling movement in the inclined groove into and

out of wedging engagement with the other of said bars, said ball being accessible through the open sides of the notch above the groove for disengagement from its wedg-



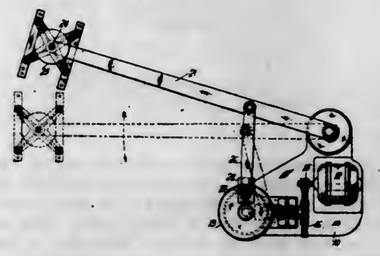
ing position said ball acting to lock the bars against retractive movement but permitting the extension by relative longitudinal sliding adjustment.

1,811,282. KNIFE FOR HULLERS. OLIVER G. SIMMONS, Lakewood, Ohio, assignor to The National Tool Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 27, 1927. Serial No. 222,249. 4 Claims. (Cl. 83—14.)



1. A knife for hullers and the like comprising a relatively flat metal bar of substantially rectangular cross section having cutting edges extending substantially the length of the bar and located on the opposite longitudinal edges of the bar on a side thereof, said bar also having a pair of recesses arranged in the side adjacent the cutting edges, said recesses being arranged on opposite sides of a plane perpendicular to the side of the bar and midway between the cutting edges thereof, said recesses further being arranged equidistant from their adjacent cutting edge, whereby the bar may be used reversibly in knife channels of greater depth than the width of the bar.

1,811,283. HOSE COUPLING. FREDERICK HARRIS SMITH, San Diego, Calif. Filed May 7, 1928. Serial No. 275,690. 4 Claims. (Cl. 285—120.)

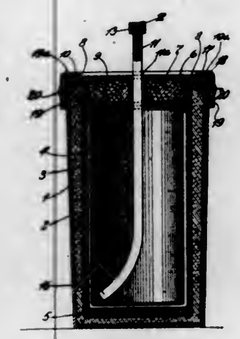


1. A hose coupling, including a hollow hose coupling member provided with external threads on one end thereof, and revolubly mounted, annular hose coupling member provided with several turns of internal threads corresponding with the threads of said other member, said annular hose coupling member being provided with a longitudinally extended portion on one side thereof adapted to engage the side of said externally threaded hose coupling member and being open at the opposite side adapted to receive the extended threaded portion of the other coupling member sideways.

1,811,284. TIRE CASING SPREADING MACHINE. OTTO E. SORDS, Cuyahoga Falls, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Jan. 12, 1927. Serial No. 160,666. 7 Claims. (Cl. 18—2.)

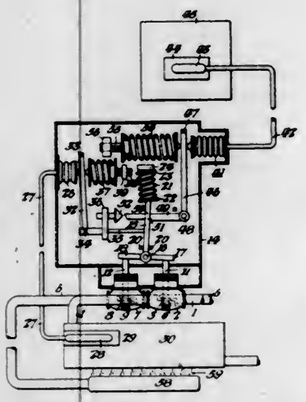
1. A tire casing spreader comprising a plurality of spaced hook members for engaging the beads of a tire casing at points about the inner periphery thereof, one of said members being reciprocable for drawing a portion of the casing radially outward, the remaining hook members being fixed, reciprocable elements adjacent said fixed hook members for engaging the exterior or tread portion of the casing, means for reciprocating said elements and said reciprocable hook member simultaneously in the same direction to spread the casing, means for latching said last-named means in its casing spreading position, and means for releasing said latching means.

1,811,285. CASTER TESTING DEVICE. HORACE D. STEVENS, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 28, 1926. Serial No. 143,717. 8 Claims. (Cl. 73—51.)



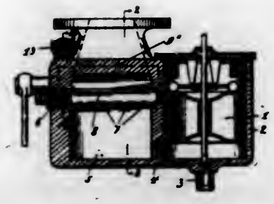
3. A device for testing casters or the like, including a carriage adapted to be supported by the casters to be tested, an arm for moving the carriage to and fro in an arcuate path, said carriage being swiveled to the arm, and means for oscillating the arm.

1,811,286. DRINKING CUP. JESSIE CARR TYNDALL, St. Louis, Mo. Filed Aug. 13, 1927. Serial No. 212,680. 7 Claims. (Cl. 215—1.)



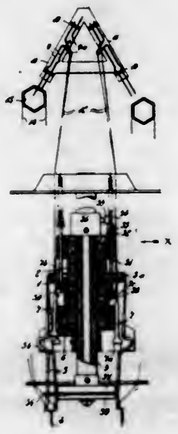
1. A drinking cup, a drinking tube arranged and positioned with its lower end in said cup and near the bottom thereof and with its upper end outside of said cup

and adapted whereby a person may drink liquid through said tube from said cup, and a top attached to said cup



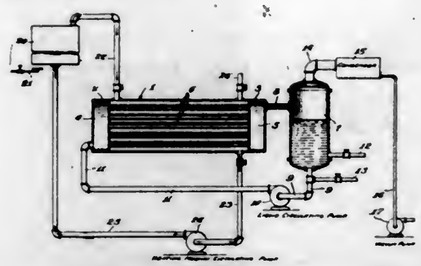
and said tube and otherwise arranged and positioned to prevent liquid from flowing from said cup except through said tube.

1,811,287. THERMOSTATIC SNAP CONTROL. JOSEPH WILLIAM WINTER, Penfield, Pa., assignor to Master Domestic Refrigerating Company, Inc., Consbohocken, Pa., a Corporation of New York. Original application filed Nov. 13, 1928, Serial No. 319,051. Divided and this application filed July 24, 1929. Serial No. 380,517. 5 Claims. (Cl. 236—48.)



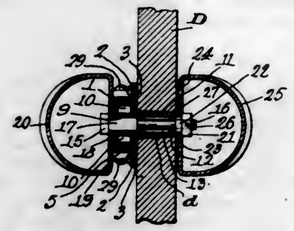
1. The combination with two valves, having respective reciprocatory stems in parallel relation and each having a valve spring continually stressing it in one direction; of a toggle device comprising a lever having three arms in radial relation with its fulcrum, including a main arm extending between said stems and substantially parallel therewith, and auxiliary arms extending transversely to said stems and respectively in cooperative relation therewith, and a spring compressed, with its axis adapted to intersect the fulcrum of said lever, in pivotal connection with the free end of said lever, adapted to snap said lever in either direction in which said lever is otherwise turned past the dead center line between the lever fulcrum and the pivotal connections of said toggle spring; and respective thermostatic devices adapted to alternately engage said main lever arm and move said toggle lever past its dead center, in respectively opposite directions, at respective predetermined temperatures; whereby, said valves are automatically alternately opened and closed, by the same lever, at such predetermined temperatures.

1,811,288. CARBURETOR. GEORGE ASHTON, Geiselgasteig, near Munich, and GOTTFRIED FREI, Munich, Germany, assignors to Arnold Haefell, Munich, Germany. Original application filed Aug. 15, 1927, Serial No. 213,022, and in Germany Apr. 16, 1927. Divided and this application filed May 28, 1929. Serial No. 366,682. 2 Claims. (Cl. 261—60.)



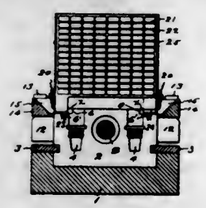
1. The combination with a carburetor body, a float chamber and a narrow slot-like chamber into which the float chamber discharges; of a horizontal tube closing the top of the latter chamber the lower wall of which tube has jet openings at the liquid level and whose upper wall has a slot over said openings, said tube being mounted in a bore of the carburetor body, a horizontal air inlet opening at about the level of said slot, a second, larger bore in the carburetor body, a rotatable throttle valve in the bore past said opening and having a horizontal passage therethrough, said passage proximate the slot in the tube, the valve passage having a controlling edge inclined to the axis of the valve to gradually control the mixture formation, and adjustable means to limit the rotation of the valve for idle engine running.

1,811,289. CIRCULAR KNITTING MACHINE. FRED ATTENBOROUGH, Harrington Park, Long Eaton, England. Filed Apr. 10, 1928, Serial No. 268,980, and in Great Britain Oct. 3, 1927. 12 Claims. (Cl. 66—135.)



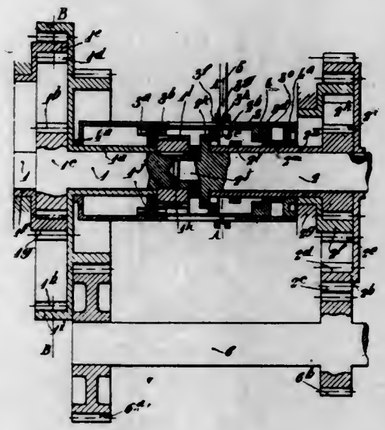
1. In a circular knitting machine, a series of radially displaceable depending thread guides arranged in a circular series, a rotary cam device operating within the circle of thread guides to displace said guides to lay threads on the machine needles, separate vertically displaceable jacks located between the cam and guides, jacquard mechanism functioning selectively to raise said jacks from an inoperative position to a position wherein same act upon and select the guides to be radially displaced by the cam and positive means for lowering the jacks to the inoperative position after having been raised by said jacquard.

1,811,290. POLYMERIZATION OF DRYING OILS. WALTER L. BADGER, Ann Arbor, Mich., assignor to Swenson Evaporator Company, Harvey, Ill., a Corporation of Illinois. Filed Aug. 16, 1928. Serial No. 299,958. 4 Claims. (Cl. 87—12.)



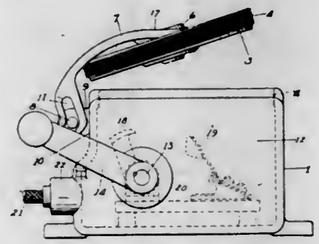
1. The method of polymerizing drying oils that comprises circulating the oil at a rapid rate from a vessel under reduced pressure through a heater and back to the vessel, and rapidly imparting heat to the oil as it passes through the heater.

1,811,291. LOCK. OTTO BANKER, Mankato, Minn. Filed May 2, 1930. Serial No. 449,282. 1 Claim. (Cl. 292—169.)



A lock including a casing constituting a grease container, said casing having a normally closed opening, a bolt slidable in the casing, a sleeve journaled in the casing and operatively connected to the bolt, a tapered tubular bushing for insertion into a door or the like, and a slotted inner bushing rotatable in the tapered bushing for receiving grease from the sleeve and housing, a spindle secured in the slotted bushing and sleeve and rotatable with the sleeve, and operating handles fixedly secured to the respective end portions of the spindle for holding the housing and bushings in abutment.

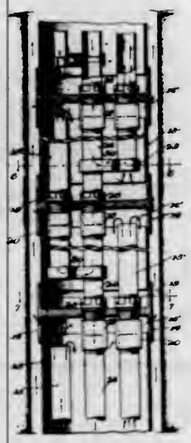
1,811,292. MANUFACTURE OF STORAGE BATTERY UNITS. FRED W. BARHOFF, Hartford, Conn., assignor to Engineering Products Corporation, Hartford, Conn., a Corporation of Delaware. Filed Dec. 22, 1928. Serial No. 327,932. 5 Claims. (Cl. 22—204.)



1. The art of uniting metal parts comprising flowing molten metal at substantially normal melting temperature of such metal in the course of casting the same to form a part and directing the path of flow to cause contact of the molten metal with a non-molten part of like metal, retarding the velocity of the flowing metal for prolonging maximum heat delivery from the molten metal to the non-molten part until fusion occurs between the formerly non-molten part and the molten metal, and solidifying the parts in the fused condition.

1,811,293. POWER TRANSMISSION DEVICE. FERNAND BERTRAND BARBERÉ, Hautaget, France. Filed Oct. 11, 1929, Serial No. 399,060, and in France Oct. 18, 1928. 2 Claims. (Cl. 74—59.)

1. In a power transmission device, a driving shaft, a first sleeve turning on the driving shaft, means for connecting the driving shaft to the said first sleeve whereby the angular speeds of the driving shaft and the said first sleeve are different, a driven shaft, a second sleeve turning on the driven shaft, means for connecting the driven shaft to the said second sleeve whereby the angular speeds of the driven shaft and the said second sleeve are different, coupling means carried by the driving shaft, by the driven shaft, by the first sleeve and by the second sleeve, and other coupling means associated with the preceding means for rigidly associating the driving shaft or the sleeve turning thereon with the driven shaft or the sleeve turning thereon.

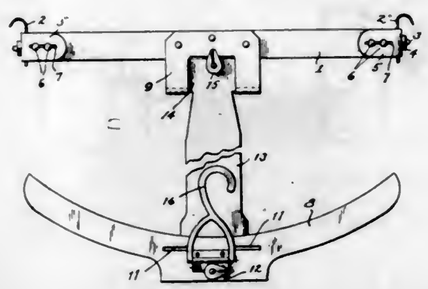


1,811,294. ELECTRIC SWITCH. WALTER J. BAUROTH, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Apr. 30, 1926. Serial No. 105,873. 4 Claims. (Cl. 220—39.)

1. In a device of the class described, a casing element having a circular collared aperture provided with peripheral threads, a circular peripherally threaded cover element for said aperture, said cover element being removable from said aperture on its axial line upon its rotation relative to the casing in the unscrewing direction,

and subsequently in a swinging movement in a plane of its axial line, a hinge pin mounted on the outside of the casing and extending transversely of the plane of swing of the cover element, and a hinge arm pivoted to the central portion of the cover element to permit rotation of the latter about its central axis relative to the arm, said arm having an elongated slot in which said pin engages, whereby the described removal movements are permitted.

1,811,295. AIR LIFT PUMP. GEORGE BLOW, Knoxville, Tenn. Filed May 28, 1926. Serial No. 112,405. 5 Claims. (Cl. 103—233.)



1. The combination of a sectional exterior pipe, a series of stage couplings connecting the sections thereof, a series of riser pipes delivering liquid to said stage couplings serially, means sealing the upper or outlet end of said exterior pipe, whereby gas under pressure can be retained in said exterior pipe, and means venting the gas passing through the riser pipes to the external atmosphere against pressure exceeding atmospheric pressure.

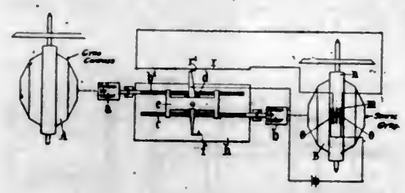
1,811,296. GOLF BAG. JAMES E. BODEN and ROY T. ORR, La Crosse, Wis., assignors to Siluntkaddi Corporation, La Crosse, Wis., a Corporation of Wisconsin. Filed Nov. 23, 1929. Serial No. 409,283. 6 Claims. (Cl. 150—1.5.)

4. Means for supporting a golf bag comprising a plurality of ground-penetrating spurs on the bottom of the bag, guards yieldably mounted on the bottom of the bag and having openings through which the respectively adjacent spurs may pass, and means for limiting the downward movement of the guards.

1,811,297. GARMENT HANGER. JOSÉ VIDAL BOSQUE, Habana, Cuba. Filed Sept. 4, 1929. Serial No. 390,335. 2 Claims. (Cl. 223—61.)

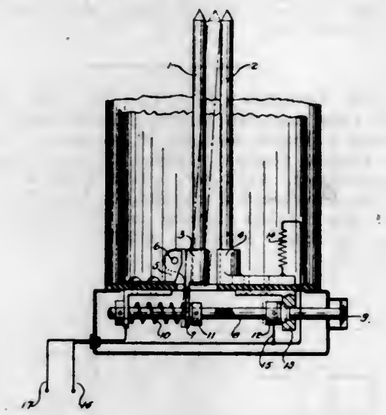
1. A garment hanger comprising a cross bar having a U-shaped member fixed thereto, the arms thereof having terminal hooks, a garment supporting member having slots therein, a member having one of its ends connected with the garment supporting member and its other end provided with a cross member, said hook terminals being adapted to engage said slots to hold said members in one position and to engage the cross member to hold said members in an inverted position.

1,811,298. PROCESS AND PRODUCT FOR PROTECTING ALUMINIUM, MAGNESIUM AND THEIR ALLOYS AGAINST CORROSION. CHARLES BOULANGER, Clichy, France, assignor to Société Continentale Parker, Clichy, France. Filed Oct. 21, 1929, Serial No. 401,384, and in France Nov. 10, 1928. 5 Claims. (Cl. 148—6.)



1. Process for protecting articles made of aluminium, magnesium, or their alloys, against corrosion, comprising the treatment of the said articles in a bath containing carbonate of soda and an alkali salt of the most oxygenated oxide of a metal capable of forming at least two oxides the most oxygenated one being soluble in alkaline solution and the less oxygenated one being insoluble.

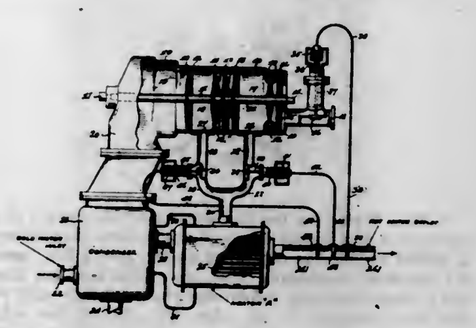
1,811,299. VISE. PAUL BROCKHAUS, Jr., Oesterau in Westphalia, Germany. Filed May 17, 1929, Serial No. 363,827, and in Belgium Aug. 25, 1928. 4 Claims. (Cl. 81—35.)



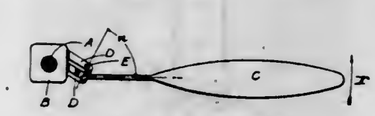
1. A vise, comprising a base-plate, guide-rails arranged on said base-plate parallel to each other and provided each with an approximately U-shaped lateral external channel having oppositely arranged guide-surfaces, a pair of vise-jaws movably seated on said guide-rails, pendent guide-cheeks arranged on the under-side of said vise-jaws and solely bearing on said guide-surfaces, pendent nuts on said vise-jaws, and a spindle adapted to move said vice-jaws simultaneously in opposite directions.

1,811,300. GYROSCOPIC DIRECTIONAL INSTRUMENT. SIDNEY GEORGE BROWN, North Acton, London, England. Filed Dec. 22, 1926, Serial No. 156,487, and in Great Britain Feb. 3, 1926. 8 Claims. (Cl. 33—226.)

1. The combination of a north-seeking gyro-compass, an independently acting static gyroscopic azimuth-indicating instrument, and means operated by these instruments for indicating the algebraic sum of their azimuthal deflection.



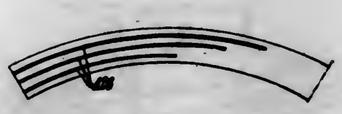
1,811,301. REGULATOR FOR SHORT CIRCUIT AMPERAGE ON STARTING ARC LIGHTS. NEWCOMB K. CHANEY, Lakewood, Ohio, assignor to National Carbon Company, Inc., a Corporation of New York. Filed July 31, 1928. Serial No. 296,458. 5 Claims. (Cl. 176—92.)



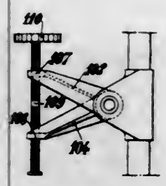
4. An arc lamp comprising electrodes mounted to separate by a predetermined distance and form an arc-gap; a resistance in series circuit with said electrodes; a shunt circuit around said resistance; and electrode moving means manually operable to shorten the arc-gap and simultaneously open said shunt circuit.

1,811,302. ELASTIC FLUID TURBINE POWER INSTALLATION. MAYNARD D. CHURCH, Wellsville, N. Y., assignor to Moore Steam Turbine Corporation, Wellsville, N. Y., a Corporation of New York. Filed Sept. 13, 1927. Serial No. 219,273. 4 Claims. (Cl. 60—67.)

2. A multi-expansion turbine comprising a plurality of expansion stages, means for supplying high pressure steam to the first stage, a final exhaust passage connected to the last stage of expansion, a primary condenser connected to said final exhaust, secondary exhaust passages connected to a plurality of stages of expansion subsequent to the first stage of expansion and in advance of the last stage of expansion, a secondary heater connected to said secondary exhaust passages, said primary condenser and secondary heater connected in series and arranged to permit a fluid to pass first through the primary condenser and later the secondary heater, a heated fluid passage connected with the outlet of said secondary heater, and separate and independent means controlled by the temperature of the heated fluid passing from the secondary heater to regulate the supply of high pressure steam to the first stage of expansion and the temperature and pressure of the exhaust steam passing from said plurality of stages of expansion into the secondary heater.

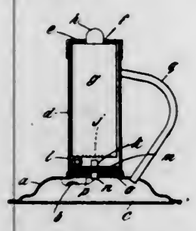


1,811,303. AIRCRAFT WITH ROTATIVE WINGS. JUAN DE LA CIERVA, Madrid, Spain, assignor, by mesne assignments, to Autogiro Company of America, Philadelphia, Pa., a Corporation of Delaware. Filed Nov. 1, 1926, Serial No. 145,654, and in Great Britain Nov. 24, 1925. 3 Claims. (Cl. 170—164.)



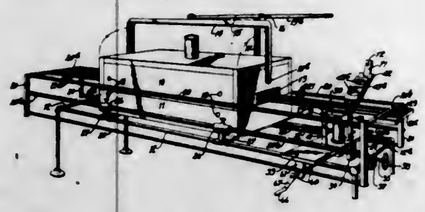
3. In an aircraft, a sustaining unit comprising a plurality of aerofoils positioned radially about a common substantially vertical axis, and means for mounting the aerofoils including means for permitting them to rotate freely about their axis under the action of relative air flow and means for permitting them individually to assume during rotation a position of equilibrium under the lift forces and centrifugal forces of rotation set up by said airflow, said last means including a flexible joint for each aerofoil having an axis set at an angle oblique both to the longitudinal axis of the aerofoil and to a plane perpendicular to the common axis of rotation of the aerofoils.

1,811,304. AIRPLANE. RENÉ ALEXANDRE ARTHUR COUZINET, Paris, France. Filed Feb. 15, 1928, Serial No. 254,558, and in France Feb. 26, 1927. 1 Claim. (Cl. 244—14.)



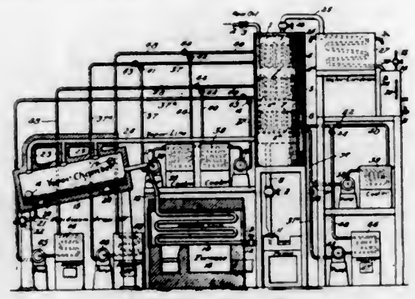
In an airplane having a hull or fuselage, wings and a tail plane, pieces of wood split partially or completely parallel to the direction of the fibers before bending, resisting strips provided in the slots and means for uniting the fibers and the resisting strips after bending for constituting resisting curved parts of the airplane.

1,811,305. CONTROL MEMBERS OF AN AIRPLANE. RENÉ ALEXANDRE ARTHUR COUZINET, Levallois-Perret, France. Original application filed Feb. 15, 1928, Serial No. 254,558, and in France Feb. 26, 1927. Divided and this application filed Sept. 15, 1930. Serial No. 482,068. 3 Claims. (Cl. 244—29.)



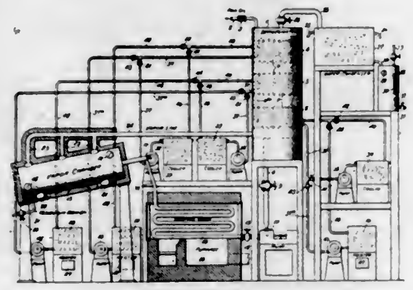
1. In a device for the foot control of the rudder of an airplane, a first rudder bar connected to the rudder levers, a second rudder bar controlled by the pilot's feet, means for angularly connecting these two rudder bars but allowing a relative angular displacement of one of the said rudder bars relatively to the other, for allowing the rudder bar controlled by the pilot to be brought back to its normal position when the rudder is permanently inclined, when compensating, by the said rudder, the stoppage of a side engine of the said airplane.

1,811,306. GAS-LIGHTER. GEORGE DAVIES, Paddington, and ALFRED HOWELL RIDGE and GEORGE ROYER, Holborn, London, England. Filed Apr. 26, 1928, Serial No. 272,980, and in Great Britain May 3, 1927. 4 Claims. (Cl. 219—32.)



1. A gas lighter comprising a metal casing, an electric battery within and movable longitudinally of said casing, a projection from one terminal of the battery extending through an aperture in an end wall of the casing and being constantly in electrical connection with said wall, a metal stud supported within the casing beyond the other terminal of the battery and insulated from the casing, yielding means of non-conducting material normally holding the adjacent battery terminal from contact with said stud, and a resistance wire having its ends connected respectively to the metal casing and said stud.

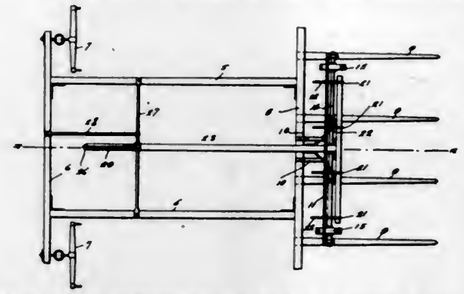
1,811,307. CERAMIC FURNACE. JOSEPH A. DEDOUCH, Oak Park, Ill. Filed Dec. 22, 1928. Serial No. 327,889. 8 Claims. (Cl. 25—142.)



1. A ceramic furnace having a heating chamber, and a reciprocable frame having work supporting strands extending entirely through the heating chamber.

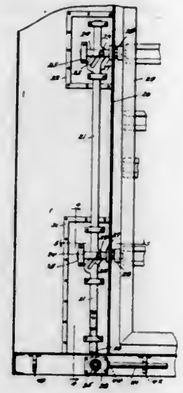
1,811,308. PROCESS AND APPARATUS FOR PRODUCING LOW BOILING POINT HYDROCARBON OILS. CARBON P. DUBBS, Wilmette, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Original application filed May 17, 1920, Serial No. 381,922. Renewed Apr. 24, 1928. Divided and this application filed May 5, 1923. Serial No. 636,860. 4 Claims. (Cl. 196—48.)

2. A process for producing low boiling point hydrocarbon oils, consisting in cracking the oil in heating and reaction zones, dephlegmating the oil vapors by intimately intermingling them with the incoming raw oil in a plurality of pools, separately controlling the condensation in the dephlegmating stage by increasing the temperature of the oil in the respective pools by local extraneous circulations from said pools through heating means and back to the respective pools.



1,811,309. PROCESS AND APPARATUS FOR PRODUCING LOW BOILING POINT HYDROCARBON OILS. CARBON P. DUBBS, Wilmette, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Nov. 1, 1928, Serial No. 316,565, in turn a continuation of application Serial No. 381,922, filed May 17, 1920. Divided and this application filed Mar. 21, 1930. Serial No. 437,764. 5 Claims. (Cl. 196—94.)

1. In the art of fractional distillation of petroleum, the process which comprises passing vapors upwardly through a plurality of fractionating zones at different levels, passing reflux liquid downwardly in a continuous stream through said zones countercurrent to and in contact with said vapors, withdrawing liquid from one of said zones and cooling it, and returning liquid so colled to a zone at least as high as the zone from which it was withdrawn.

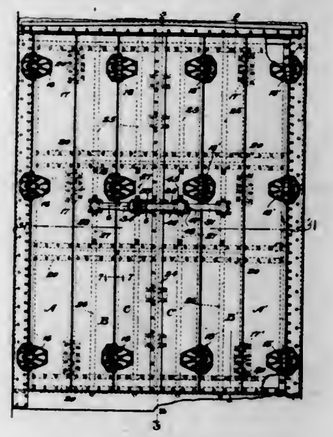


1,811,310. UNLOADING DEVICE FOR BUCK RAKES. JAMES M. ERICKSON, Glasgow, Mont. Filed Apr. 19, 1929. Serial No. 356,432. 1 Claim. (Cl. 56—395.)

In a buck rake, a front cross bar, a plurality of forwardly extending tines connected with said cross bar, a pair of spaced parallel rearwardly extending side bars connected to the front bar, a rear cross bar connected to the rear ends of the side bars and extending beyond the opposite faces of said side bars, a bowed cross rod connecting the side bars together intermediate the ends thereof, a transversely extending pusher board slidable on the tines, a rearwardly extending beam secured to the pusher board

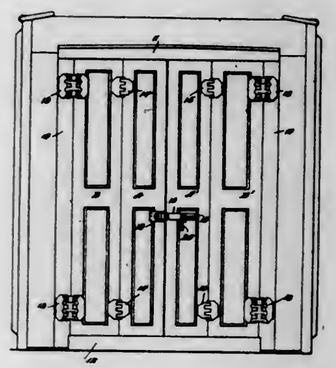
and arranged intermediate the side bars having a downwardly and rearwardly inclined terminal, a spade carried by the extreme lower end of said terminal, a flexible connection between the terminal and the bowed cross rod, and a plurality of upwardly extending spring fingers secured to the pusher board having depending rearwardly extending arcuate upper ends, as and for the purpose specified.

1,811,311. SAFETY DOORLOCK. FREDERICK K. FILDES, Altoona, Pa. Filed June 7, 1928. Serial No. 283,524. 18 Claims. (Cl. 105—366.)



1. In combination with a portable container having a door in one side, means for locking said door, operating mechanism for said locking means comprising a rock shaft mounted adjacent the bottom of the container and an arm fixed to said shaft adapted to engage the support on which the container is seated when the shaft is rotated in a direction to unlock the door.

2. In combination with a portable container having a door in one side, a bolt adapted to lock the door, and operating mechanism for said bolt comprising a rock shaft mounted under the bottom of the container, and an arm on said rock shaft adapted to strike the support on which the container is seated when the shaft is rotated in a direction to withdraw the bolt from locking position, whereby the door cannot be unlocked so long as the container rests on its support.



1,811,312. CLOSURE FOR CONTAINERS. FREDERICK K. FILDES, Altoona, Pa. Filed Oct. 9, 1929. Serial No. 398,379. 13 Claims. (Cl. 189—46.)

1. In a container having a door opening, a door comprising two leaves hinged respectively at the sides of the opening, each leaf consisting of a plurality of sections hinged so as to fold together on parallel axes, locking bolts mounted on the insides of some of the sections, arms

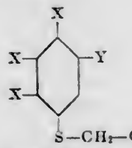
on the outsides of the sections respectively connected to said bolts, and means for interlocking the arms when the door is closed.

1,811,313. CONTAINER FOR THE SHIPMENT OF FRACTIONAL CAR LOTS. FREDERICK K. FILDES, Altoona, Pa. Filed Oct. 28, 1930. Serial No. 491,800. 4 Claims. (Cl. 105—366.)

1. A container for the shipment of fractional car load lots having registering door openings in its two sides and a double door for each opening, each of said doors being composed of two leaves respectively hinged to the sides of the door opening and each leaf comprising a plurality of sections foldable on axes parallel to the hinge axes.

1,811,314. REFRACTORY MATERIAL. TURE ROBERT HAGLUND, Stockholm, Sweden. Original application filed Nov. 12, 1927, Serial No. 232,947, and in Germany June 4, 1927. Divided and this application filed Oct. 6, 1928. Serial No. 310,917. 4 Claims. (Cl. 75—22.5.)

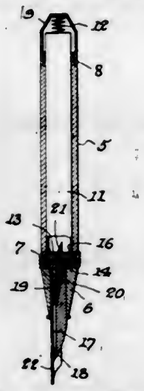
1. As a new article of manufacture a fused refractory material containing not less than 15% of oxide of magnesium, not less than 5% of oxide of chromium, not less than 75% of oxides of magnesium, aluminum and chromium counted together, and with a content of silica less than 12% and of oxide of iron less than 5%, characterized by high softening temperature and resistance against chemical erosion.



1,811,315. DISPLAY STAND. GEORGE C. HERREN, Atlanta, Ga.; Ella P. Herren, administratrix of said George C. Herren, deceased, assignor to Ella P. Herren, Atlanta, Ga. Filed July 18, 1930. Serial No. 468,908. 1 Claim. (Cl. 211—154.)

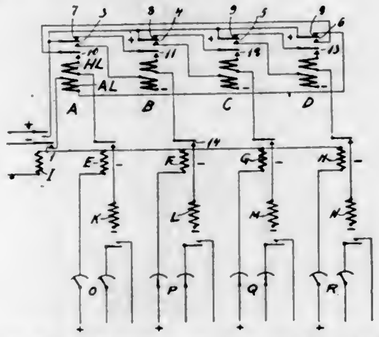
A display stand comprising a rectangularly formed upright having a plurality of vertical rows of downwardly and inwardly inclined parallel slots formed in the faces thereof, each slot of each row extending entirely across a face of the upright and into the adjacent faces on each side thereof, and terminating short of the top edge of a horizontal slot formed in each adjacent face of the upright.

1,811,316. TRIHALOGEN ARYLTHIOGLYCOLIC ACIDS AND PROCESS OF MAKING SAME. RICHARD HERZ, Frankfort-on-the-Main, ERNST RUNNE, Frankfort-on-the-Main-Hochst, and EDUARD ALBRECHT, Frankfort-on-the-Main-Fechenheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Original application filed Mar. 15, 1928, Serial No. 262,031, and in Germany Mar. 18, 1927. Divided and this application filed Feb. 13, 1930. Serial No. 428,238. 3 Claims. (Cl. 260—108.)



2. As new compounds products corresponding probably to the general formula:

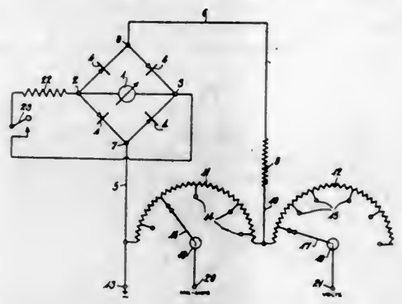
in which formula the X's mean chlorine and Y means hydrogen or an alkyl group, being crystalline powders, insoluble in alkalis which can be condensed to the corresponding oxythionaphthene-derivatives.



1,811,317. FOUNTAIN PEN. CLAUDE W. HOLSTEIN, St. Albans, W. Va. Filed June 4, 1930. Serial No. 459,137. 1 Claim. (Cl. 120—42.)

In a fountain pen, a feeder formed of suitable material and adapted to be supported in the stock of the fountain pen, said feeder provided on the top face thereof with an ink groove leading inwardly from the forward end of the feeder to terminate at its inner end inwardly from the rear end of the feeder, said feeder at said rear end having an inclined bore inclining rearwardly from the inner end of said groove to the rear end of the feeder, and a tube having an end portion extending through said

bore to terminate at the inner end of said groove, said tube having its opposite end portion extending beyond the corresponding end of said feeder, said tube providing an ink feed leading from the barrel of the pen into said ink groove.



1,811,318. CIRCUIT ARRANGEMENT FOR RELAY SWITCHES. KARL GEORG JOHNSON, Stockholm, Sweden, assignor to Telefonaktiebolaget L. M. Ericsson, Stockholm, Sweden, a Company of Sweden. Filed June 26, 1929, Serial No. 373,907, and in Sweden Apr. 21, 1928. 1 Claim. (Cl. 179—16.)

In a circuit arrangement for telephone systems in combination a series of relays forming a relay switch adapted to be used as a call consecution controller or a call distributor, a working and a holding winding at each relay, the working circuit of the first relay in the series being controlled by the last relay and the working circuits of each of the following relays being arranged to be closed by the working contacts of each of the preceding relays, a holding circuit for the first relay controlled by the last relay, and holding circuits for each of the following relays controlled by each of the preceding relays, and a number of relays corresponding to the circuits to be served, said relays being adapted to control said holding circuits.

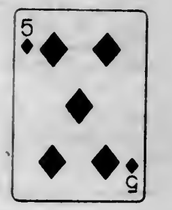
1,811,319. ALTERNATING-CURRENT DIRECT-CURRENT METER. VIVION A. JOHNSON, Greenwood, Miss., assignor to Supreme Instruments Corporation, Greenwood, Miss. Filed Sept. 8, 1930. Serial No. 480,493. 8 Claims. (Cl. 171—95.)

1. A meter comprising a rectifier, a direct current measuring instrument for measuring the output of said rectifier, means for changing the current flow in said instrument by a fixed small fractional part thereof under constant input conditions of said meter comprising a shunt

circuit around said instrument including a resistance of a value considerably greater than that of the resistance of said instrument and means for opening and closing said shunt circuit.

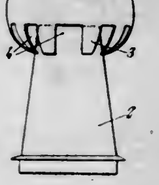
1,811,320. ADVERTISING DEVICE. RUSSELL HERBERT KERR and EDWARD F. URICH, San Antonio, Tex. Filed Apr. 11, 1930. Serial No. 443,501. 1 Claim. (Cl. 40—126.)

A display device symbolic of a pair of human limbs, said limbs pivotally connected at one end, a wire spring, one end of said spring secured to the body of one limb, the opposite end secured to the body portion of the opposite limb, thereby defining a loop, one of said limbs permanently attached to a movable object and the other limb adapted to swing freely when said movable object is vibrated.



1,811,321. AIRCRAFT LANDING AND RELEASING APPARATUS. WOLDEMAR KIWULL, Riga, Latvia. Filed Dec. 11, 1928, Serial No. 325,308, and in Germany Dec. 14, 1927. 20 Claims. (Cl. 114—0.5.)

1. The method of taking up floating bodies, more particularly aircraft, onto platforms, e. g. vessels or landing stages, consisting in mechanically producing a swell of water between the platform and the water surface and transferring said floating body onto said platform over said swell of water.

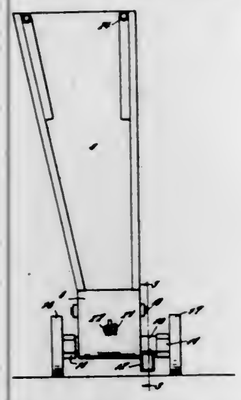


2. In combination a platform projecting beyond a water surface, means for producing a stream in the water in the vicinity of said platform, a baffle body suspended from said platform and lying in the water stream and adapted to dam up the water supplied to it by said stream.

1,811,322. OPAQUE WASHABLE PLAYING CARD AND METHOD OF MANUFACTURING SAME. SIEGFRIED KLAUSNER, Vienna, Austria, and ARTHUR EICHENGRÜN, Charlottenburg, and RICHARD RÖHM, Troisdorf, near Cologne, Germany. Filed Jan. 11, 1929, Serial No. 331,946, and in Germany Jan. 18, 1928. 4 Claims. (Cl. 273—152.)

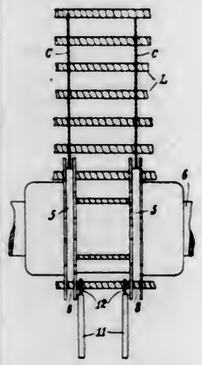
2. An opaque washable playing card blank consisting of a sheet of cellulose derivative composition of a thickness of below about 0.35 mm. with which has been incorporated a mixture of powdered zinc white and a less quantity of powdered titanium white.

1,811,323. STATIC SUCTION APPARATUS. RAYMOND LEJAY, Vincennes, France. Filed Mar. 18, 1929, Serial No. 348,103, and in France Mar. 30, 1928. 3 Claims. (Cl. 98—66.)



1. In a suction apparatus of the type described, an ovoid enclosure the generatrix of which has a curve increasing from its free edge to the fixed part on the suction conduit, deflectors disposed internally of the said enclosure for resisting the admission of a plunging wind in the suction conduit, tongues on the part with maximum curvature and forming openings between them, and means for fixing the fore ends of the said tongues on the suction conduit.

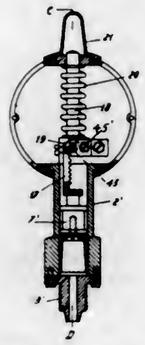
1,811,324. STONE SPREADER. ARTHUR E. LOCKARD, Grafton, W. Va. Filed Feb. 8, 1930. Serial No. 426,895. 3 Claims. (Cl. 275—2.)



1. In an apparatus of the class described, a hopper, a trough in the bottom of the hopper, a screw conveyor journaled in the trough, a wheel journaled on one end of the conveyor, a wheel keyed to the other end of the conveyor, and a spout provided at one end portion of the trough, a gate valve hingedly mounted in the hopper above the

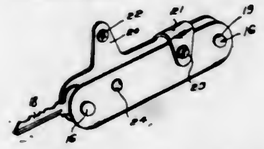
trough, and means for swinging and holding the gate valve in adjusted position, said hopper including a side wall

adjacent said one wheel which is inclined upwardly and outwardly from the other side wall to enable the apparatus to be easily tilted.



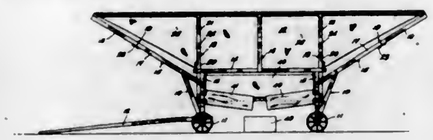
1,811,325. MANUFACTURE OF FABRICS. JAMES MORTON, Cramond Bridge, West Lothian, Scotland. Filed Oct. 28, 1930, Serial No. 491,745, and in Great Britain Nov. 21, 1929. 10 Claims. (Cl. 139—8.)

1. A method of supplying, to a given position, lengths of yarn for incorporation in fabrics during the manufacture thereof, which consists in forming yarns into side-by-side chains of loops, chaining together in parallel formation successive lengths of the yarn to be supplied by introducing them into appropriately spaced loops, and moving said chains past said position to permit said lengths of yarn to be withdrawn in succession.



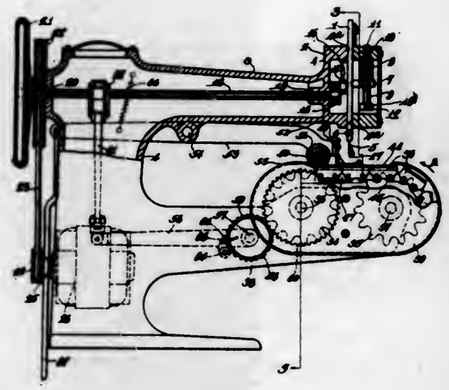
1,811,326. PRESSURE GAUGE. ADOLF MÜLLER, Zurzach, Switzerland. Filed Oct. 28, 1925, Serial No. 65,446, and in Switzerland Oct. 29, 1924. 1 Claim. (Cl. 73—111.)

A pressure gauge including a casing formed with diametrically opposed openings, a sleeve secured within the casing and depending through one of said openings, said sleeve being of uniform diameter throughout, a piston operative within the sleeve and having a tapered skirt arranged for sealing cooperation with the bore of the sleeve, a guide member removably secured to and overlying the piston, said guide member having guiding function with the bore of the sleeve, a rack bar removably secured to and overlying the guide member, said rack bar being reciprocated within the sleeve according to and in accordance with the movements of the piston, an angle piece secured to the upper end of the rack bar, a rod secured to and rising above the angle piece and guided at all times in the other of said opening in the casing, a spring encircling the guide bar and bearing between the wall of the casing and the angle piece, a frame bar supported by the casing, a pinion supported in said frame bar and at all times in coopera-



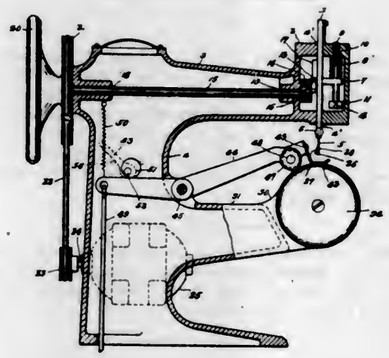
tion with the teeth of the rack bar, a shaft for the pinion extended beyond the frame bar, a pointer carried by the shaft, and a cap secured to the casing and overlying the opening through which the rod is guided, said cap receiving the end of the rod in the operative movements of the piston, the angle piece engaging the upper end of the sleeve within the casing to limit the movement of the rack bar under the influence of the spring.

1,811,327. KEY POUCH. JOSEPH A. PARRELLA, Washington, D. C. Filed Oct. 1, 1929. Serial No. 396,519. 6 Claims. (Cl. 150—40.)



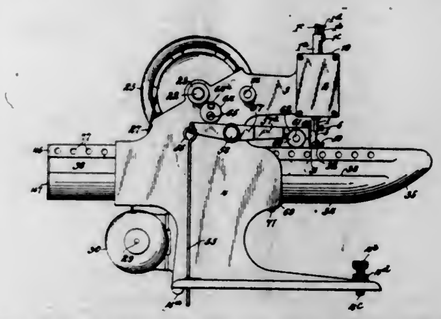
2. A key pouch formed of a sheet of flexible material folded upon itself, comprising opposite side walls, key posts uniting the said walls adjacent their ends and adapted to pivotally support sets of keys, flaps carried by one of said walls and adapted to fold over the other of said walls, and separable snap fasteners for uniting the free ends of said flaps with the second named wall.

1,811,328. FRUIT GATHERER. STEPHEN PAVLOFF, Camas, Wash. Filed Apr. 7, 1927. Serial No. 181,766. 2 Claims. (Cl. 56—329.)



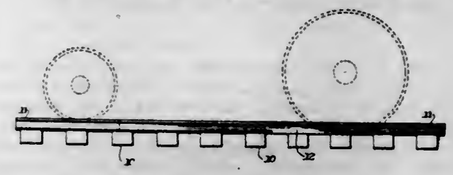
1. In a fruit gatherer of the class described, a pair of mobile units adapted to be positioned one on each side of a tree, each of said units comprising a frame having a plurality of arms upwardly and outwardly inclined from the tree, said arms each composed of a plurality of abutting members; hinge connection between said arm members; fabric members secured to said arms; and means for preventing the unintentional breaking of the hinge connections between said arm members.

1,811,329. MACHINE FOR REPAIRING KNITTED FABRICS. JOSEPH S. PECKER, Philadelphia, Pa., assignor to Patent Development Co., a Corporation of Pennsylvania. Filed Apr. 10, 1929. Serial No. 354,134. 21 Claims. (Cl. 66—1.)



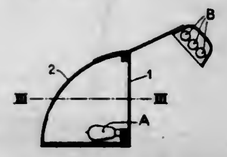
1. A machine for mending runs in fabrics, including a vertically reciprocating needle bar provided with a needle having means for looping the threads of a run in a fabric, and means for reciprocating the needle bar comprising an eccentric device arranged to positively actuate the needle bar in an upward direction, and yieldable means for moving the needle bar in a downward direction.

1,811,330. MACHINE AND METHOD FOR REPAIRING KNITTED FABRICS. JOSEPH S. PECKER, Philadelphia, Pa., assignor to Patent Development Co., a Corporation of Pennsylvania. Filed Apr. 23, 1929. Serial No. 357,426. 25 Claims. (Cl. 66—1.)



1. A machine for mending runs in fabrics including a needle provided with means for manipulating the threads of a run to close the same, and manually operable means for feeding the fabric and feeding the threads of a run successively at will by hand to the needle whereby to feed the fabric to the needle according to the gage of the fabric.

1,811,331. MACHINE FOR REPAIRING KNITTED FABRICS. JOSEPH S. PECKER, Philadelphia, Pa., assignor to Patent Development Co., a Corporation of Pennsylvania. Filed May 11, 1929. Serial No. 362,386. 29 Claims. (Cl. 66—1.)

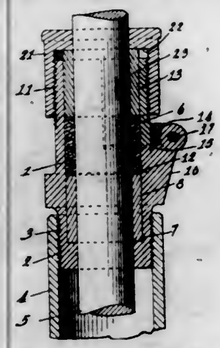


1. A machine for mending runs in fabrics, including a single needle provided with means for manipulating the threads of a run to close the latter, and manually operable means slidable at will by hand longitudinally of the run for feeding the threads thereof to the needle according to the gage of the fabric.

1,811,332. RERAILING RAILROAD EQUIPMENT. ELLIS M. PRESSNALL, Proctor, Minn. Filed Oct. 9, 1929. Serial No. 398,499. 4 Claims. (Cl. 104—268.)

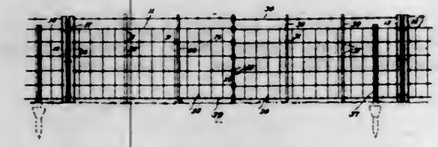
1. A replacer for rerailing equipment, comprising a base portion, a top portion, an inclined portion adjacent the top portion and terminating substantially with said base portion, said replacer having means for engaging the end of a rail, said means comprising spaced abutments extending from an end of said replacer.

1,811,333. ART OF ILLUMINATION. HOLGER MARIUS RASMUSSEN, Faaborg, Denmark. Filed Dec. 10, 1928, Serial No. 325,003, and in Denmark Dec. 10, 1927. 7 Claims. (Cl. 40—130.)



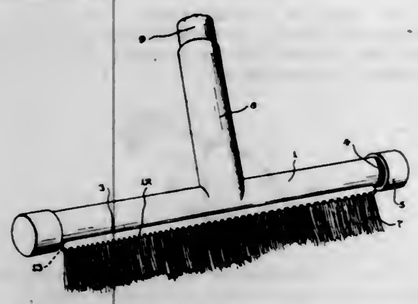
3. The art of illuminating, which comprises directing primary colored light through a perforated sheet and simultaneously directing complementary colored light onto the face of the sheet.

1,811,334. STUFFING BOX. MAX ROEMER, Lost Hills, Calif. Filed Nov. 26, 1928. Serial No. 322,004. 5 Claims. (Cl. 286—34.)



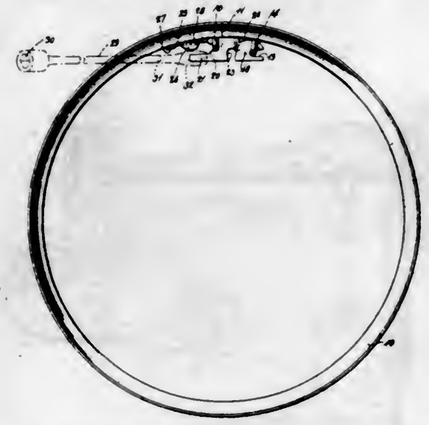
1. A stuffing box comprising a body member having a shaft extending therethrough, packing disposed in said box and surrounding said shaft, a hinged member swingable

into a position for exposing said packing from a position exterior of said box, an adjustable cap for securing said hinged member in an operative position, and a member



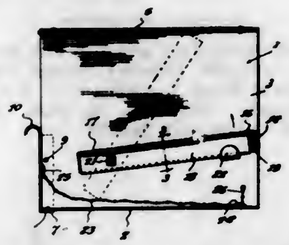
disposed between said cap and said packing whereby a movement of said cap will force said packing against said shaft.

1,811,335. FENCE PANEL COUPLING. CHARLES A. SPAUGH, Durham, Okla. Filed Jan. 27, 1930. Serial No. 423,838. 3 Claims. (Cl. 256—26.)



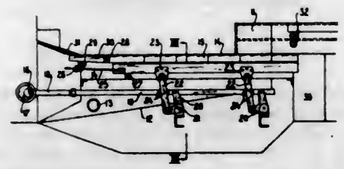
1. A fence of the character described comprising a plurality of detachable panels adapted to be arranged in end to end relation, companion bars carried by the adjacent ends of the respective panels, and having openings therein and a U-shaped link having its limbs received by said openings and detachably connecting said bars together, and each panel including a plurality of pivotally connected sections adapted to be folded one upon the other when not in use.

1,811,336. MOP HEAD. CAMILLO SPINO, Latrobe, Pa., assignor of one-half to Emilio D'Aviero, Clarksville, Pa. Filed May 28, 1930. Serial No. 456,770. 2 Claims. (Cl. 15—147.)



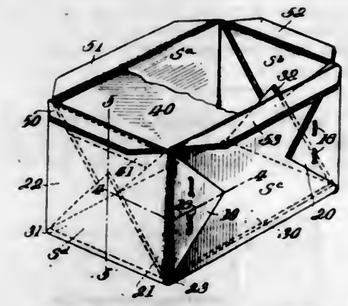
1. A mop-head comprising a tubular member closed at one end and provided with a longitudinal slot extending from adjacent said closed end to and through the opposite end of said tubular member, said slot permitting passage of a mop into said tubular member, the last-mentioned end of the tubular member being exteriorly screw threaded, an interiorly screw threaded cap having threaded fit with said exterior screw threaded portion of the tubular member, and a bar in the tubular member to secure the mop from accidental withdrawal from the tubular member.

1,811,337. DEMOUNTABLE RIM. JOHN WILLIAM STARK, Bowling Green, Ky. Filed July 5, 1928. Serial No. 290,538. 7 Claims. (Cl. 301—34.)



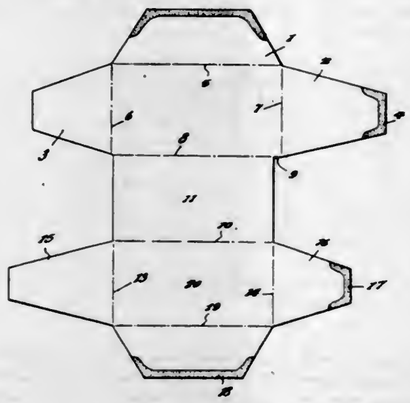
1. The combination of a one-piece transplit demountable rim, a rim-operating lever hinged at one end to an end of the rim, a pintle member secured to the other end of the rim, the other end of said lever being longitudinally notched to constitute a fork in which said pintle member is held by the inherent elasticity of the rim, and means by which said lever may be swung to make or break the rim.

1,811,338. HEN'S NEST. HERBERT A. THULLINGER, Clackamas County, Oreg. Filed May 29, 1929. Serial No. 367,095. 4 Claims. (Cl. 119—48.)



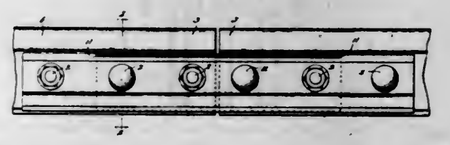
1. A nest comprising a housing open at its front and rear ends, and a laying tray in said housing pivotally mounted adjacent its front end and having its side portions bearing against side walls of the housing, said tray being adapted to be swung upwardly from an operative to a substantially vertical inopertive position and held in the raised position by frictional binding with the side walls of the housing.

1,811,339. FURNACE. ANNE J. M. A. VAN DER DOES DE BIJE, The Hague, Netherlands. Filed Oct. 22, 1928, Serial No. 314,245, and in the Netherlands Oct. 31, 1927. 4 Claims. (Cl. 110—38.)



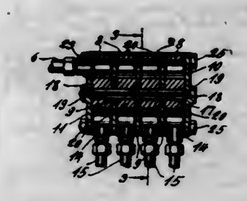
1. In a furnace the combination, a central stationary grate, cooperating means for feeding coal to the central portion of the grate and spreading it laterally therefrom, an ash-pit at the rear end of the furnace, movable grate means arranged on opposite sides of the feeding means and the stationary grate and forwardly of the ashpit and embodying a plurality of parallel arranged longitudinally and vertically movable grate bars, means for actuating the bars, and means for varying the stroke of some of the bars with respect to the other bars so that the speed with which the coal on said grate bars is conveyed toward the ashpit will have different values at different lateral distances from the central line of the feeding means and the stationary grate.

1,811,340. CANNED GOODS CONTAINER. FRANK WATSON, Baltimore, Md., assignor to The Lafayette Company, Inc., Baltimore, Md., a Corporation of Maryland. Filed Sept. 20, 1927. Serial No. 220,733. 6 Claims. (Cl. 229—32.)



1. In a fibre container a body formed with a bottom and side walls, each side wall having a tab overlapping and reinforcing the adjacent side wall, the tabs of two opposite side walls being inside the respective adjacent side walls, said tabs having their upper edges inclined downward toward the center of the respective side, and a closure member to close the top of the body, said closure member having downturned flanges parallel to opposite side walls of the body with inclined edges to rest upon the inturned tabs so that the closure member is supported independently of the contents of the container.

1,811,341. ENVELOPE. WILLIAM A. WELCH, Holyoke, Mass. Filed Aug. 26, 1929. Serial No. 388,496. 1 Claim. (Cl. 229—73.)

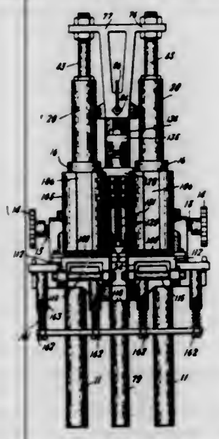


An envelope comprising a blank having three rectangular panels, one end panel being wider than the other end panel and the central panel whereby when the narrower panels are folded onto the wider panel an opening will be provided at one end to receive an opener, and side flaps and end flaps on the end panels, the side flaps on the same panel being of unequal width and the flaps on the two end panels being relatively reversed whereby the thickness of the flaps will be distributed over the area of the panels when the blank is folded and sealed.

1,811,342. SPLICE BAR OR FISH PLATE. LAWRENCE S. WILBUR, Evanston, Ill., assignor to National Rail Joint Corporation, a Corporation of Illinois. Filed Apr. 20, 1929. Serial No. 356,814. 12 Claims. (Cl. 238—243.)

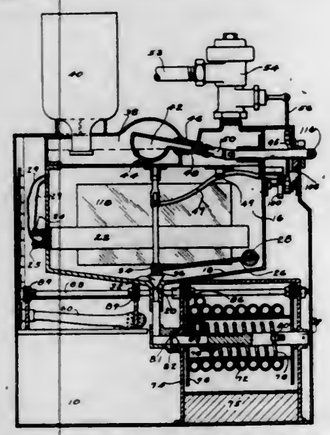
1. A rail joint comprising a splice bar having a section of metal forming a longitudinal reinforce on the inner side thereof, conforming thereto and solidly united therewith, forming a fixed part of the bar itself.

1,811,343. LUBRICATING DEVICE. GEORGE J. BANCROFT and MARTIN E. ANDERSON, Denver, Colo. Filed May 21, 1928. Serial No. 279,454. 6 Claims. (Cl. 184—7.)



1. A lubricating system including a main conduit and a plurality of resilient noncircular branch conduits, means for producing a flow of lubricant through the main conduit and the branch conduits and means at the juncture of the main conduit and the branch conduits and operable solely by the pressure of the entering lubricant for distributing the flow of lubricant in the branch conduits in a predetermined ratio for establishing a positive flow through each of the several branch conduits in accordance with the proportion of distribution allotted for each of the branch conduits.

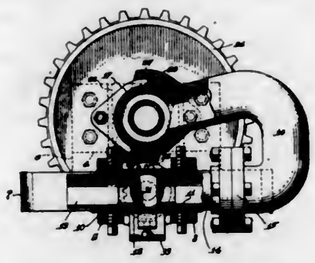
1,811,344. CAP FEEDING MECHANISM FOR BOTTLE CAPPERS. EWALD GEORGE BAUM, Natick, Mass., assignor, by mesne assignments, to American Seal-Kap Corporation, Long Island City, N. Y., a Corporation of Delaware. Filed June 19, 1929. Serial No. 372,205. 4 Claims. (Cl. 226—92.)



1. In a capping mechanism, a vertically movable head having an opening engaging over and around the mouth of a bottle to be capped, a vertically reciprocable support member connected with said head, means resiliently maintaining said head and its support member in an intermediate position relative to each other, a cap magazine

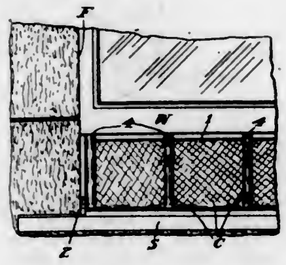
rigidly attached to said head, a cap feeding slide horizontally reciprocable beneath said magazine, and means

actuable by relative movement between said head and its supporting means from said intermediate relative position to reciprocate said slide to either end of its stroke.



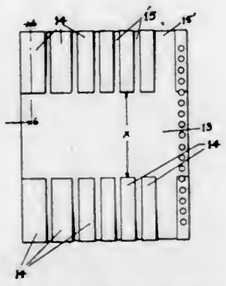
1,811,345. DEVICE FOR DISPENSING THE EQUIPMENT NECESSARY FOR THE PRACTICE OF FEMININE HYGIENE. CATHERINE M. BELL, Seattle, Wash. Filed Feb. 10, 1930. Serial No. 427,127. 5 Claims. (Cl. 128—227.)

1. A dispensing device of the class described consisting of a wall cabinet; a coin controlled operating handle; a door closing said cabinet; a latch for said door adapted to be operated by said handle; means adapted to discharge irrigation tips singly; a solution mixing reservoir; discharge tubing permanently connected to the discharge of said reservoir; a storing reel for said tubing; means coacting with said door to turn said reel with considerable force when the door is opened and closed; means for supplying a measured amount of water; means for measuring and discharging chemicals into said water; electrical means adapted to heat said water to a desired temperature; means for discharging said water when the desired temperature is reached, and a switch adapted to control said heating means.



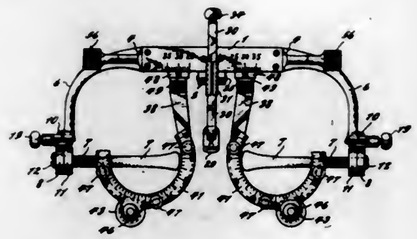
1,811,346. SOOT BLOWER FOR BOILERS. JAMES C. BENNETT, Detroit, Mich. Filed Dec. 17, 1924. Serial No. 756,452. 3 Claims. (Cl. 122—392.)

1. In a soot blower, a rotary blower arm having a lateral outlet, means for supplying steam to said arm, a valve in said means, a gear segment movable with said arm, a pinion carried by said valve and engageable by said segment, means for turning said arm alternately in opposite directions, said gear segment being arranged to



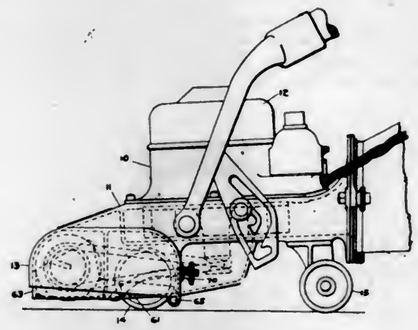
open the valve in one direction of turning and to close the valve in the other direction of turning, and bi-terminal stop means for said arm and gear operative on disenaggement of said gear from said pinion in either direction of turning.

1,811,347. SOUND ABSORBING VENTILATOR AND THE LIKE. CHARLES R. C. BORDEN, Brookline, Mass. Filed Mar. 7, 1927. Serial No. 173,322. 3 Claims. (Cl. 98—99.)



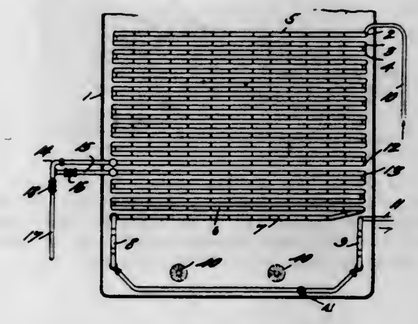
1. In a ventilator, an inwardly and upwardly inclined flat deflector member, vertical forwardly projecting end members and a plurality of intermediate vertical fins, the entire structure formed of sound deadening material and a reenforcing frame for said sound deadening material.

1,811,348. LOOSE LEAF DEVICE. JOHN LOUIS BURGOYNE, San Mateo, Calif., assignor to Wilson-Jones Company, Chicago, Ill., a Corporation of Massachusetts. Filed June 19, 1929. Serial No. 372,117. 9 Claims. (Cl. 129—1.)



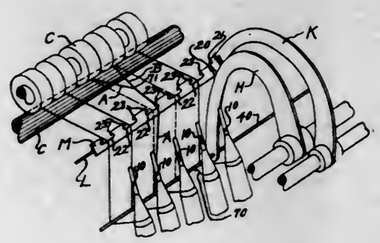
4. A loose leaf book device comprising a flexible leaf for the book provided with wedge elements spacedly arranged along a side edge and extending from the binding portion of the leaf outward, said wedge elements provided with a combined surface area substantially greater than the spaces between the wedges.

1,811,349. OPHTHALMIC TRIAL FRAME. HANS CLEMENT, New York, N. Y., assignor to General Optical Co., Inc., a Corporation of New York. Filed Jan. 4, 1927. Serial No. 158,841. 16 Claims. (Cl. 88—20.)



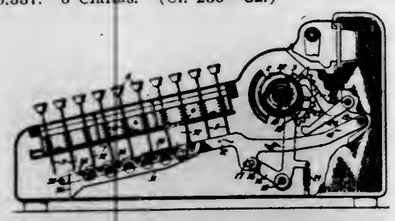
1. A trial frame having, in combination, a straight rigid cross bar extending from side to side to form a main frame part, gradually tapering stiffly resilient curved temple arms rigidly connected at their larger inner ends to the outer ends of the cross bar and extending therefrom on gradually merging curved lines outwardly and rearwardly and downwardly in substantial conformation with the shape of the head, a temple connected to the outer end of each of said arms, and a pair of trial case lens holders below and carried by said cross bar independently of said temple arms.

1,811,350. ADJUSTABLE AUXILIARY NOZZLE FOR SUCTION CLEANERS. GORDON C. CURRY, North Canton, Ohio, assignor to The Hoover Company, North Canton, Ohio, a Corporation of Ohio. Filed Oct. 8, 1924. Serial No. 742,315. 2 Claims. (Cl. 15—8.)



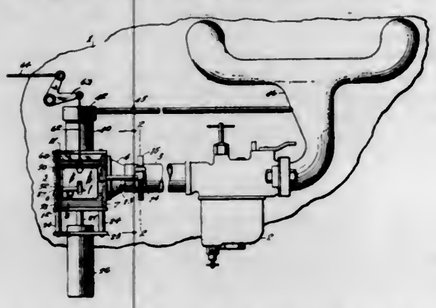
1. A suction sweeper having a main frame member defining a fan chamber, a forwardly extending open bottom nozzle hood, a suction passage connecting the fan chamber and nozzle hood, the suction passage defined in part by walls depending from the fan chamber, an auxiliary nozzle intake having its forward and its side edges defined by walls substantially perpendicular to the plane of the nozzle intake, and the rear edge defined by a flat unobstructed plate member having its forward portion substantially in the plane of the nozzle intake, the auxiliary nozzle pivotally mounted at substantially the rear of the nozzle hood, the unobstructed flat portion of the auxiliary nozzle comprising in cooperation with the depending walls a portion of the suction passage, a rod fixed to said auxiliary nozzle and arranged to extend rearwardly and in close relation to a portion of said main frame member at a point substantially above where said auxiliary nozzle is pivotally mounted, and means adjustable in connecton with said rod and co-operating with said main frame member to raise and lower said auxiliary nozzle intake with respect to said nozzle hood.

1,811,351. EMERGENCY RELIEF WITH REMOTE CONTROL. ANDREW T. DUDLEY, Port Arthur, Tex., assignor to The Texas Company, New York, N. Y., a Corporation of Delaware. Filed June 21, 1928. Serial No. 287,275. 4 Claims. (Cl. 196—110.)



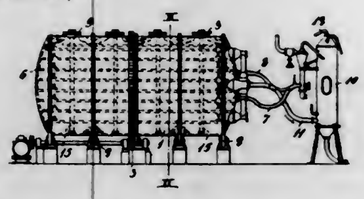
1. A pipe still comprising a plurality of tube sections through which a fluid to be heated is circulated and arranged so that the sections of tubing nearest the exit are exposed to radiant heat, heat retaining walls surrounding said still, means for heating the tubes containing the fluid, means for interrupting the flow of said fluid at a point in advance of the hottest part of the fluid-containing system, and means located at said point for diverting the flow of said fluid from said system.

1,811,352. TENSION FALLER BAR FOR SPINNING MULES. WALTER A. FEUGILL, Methuen, and JOHN R. HOSKING, North Andover, Mass. Filed Jan. 23, 1930. Serial No. 422,793. 6 Claims. (Cl. 118—10.)



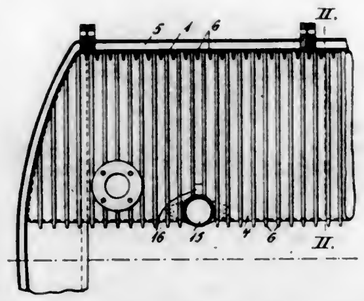
1. The combination with a spinning mule having a fixed frame and a plurality of delivery rolls revoluble therein, a carriage on which are a plurality of inclined revoluble spindles, said carriage being movable to and from said rolls, and means to move the carriage, together with means to cause such spindles to revolve for spinning, for winding, for backing off and to cause them to stop, winding faller sickle arms pivoted on the carriage and a faller wire carried thereby, tension faller sickle arms pivoted on the carriage and a faller wire carried thereby, and means to move said arms for drawing, spinning, backing off and winding; of a series of yarn guide bars each of flat metal bent at the ends and fixed between adjoining tension arms, each bar having in its upper edge a plurality of recesses the centre of each of which is opposite a spindle, there being an overhanging finger at each end of each recess, each of such fingers having in its lower edge an inverted V shaped nick having sharp cutting edges.

1,811,353. CALCULATING MACHINE. CARL M. F. FRIDEN, Oakland, Calif., assignor to Marchant Calculating Machine Company, Emeryville, Calif., a Corporation of California. Filed Sept. 17, 1928. Serial No. 306,337. 3 Claims. (Cl. 235—82.)



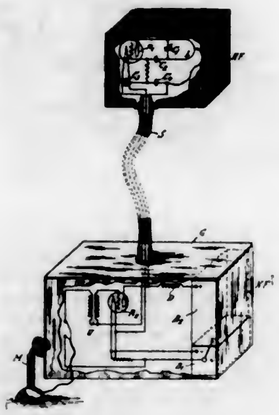
1. In a calculating machine, a plurality of impulse operated keys, a pivoted key bar positioned below the keys, a movable unit connected to said key-bar and a slide moved by the keys into engagement with the key bar to limit downward movement of the key-bar.

1,811,354. AUTOMATIC CHOKE FOR CARBURETORS. THOMAS D. JOECK, Belmar, N. J. Filed Dec. 14, 1928. Serial No. 325,992. 5 Claims. (Cl. 123—124.)



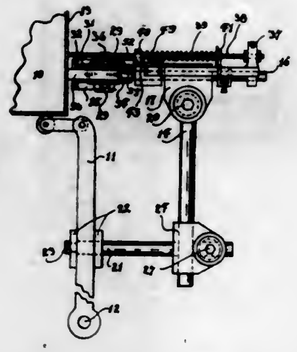
1. In combination with a carburetor, choking means for regulating the supply of air to said carburetor, said choking means comprising a valve automatically operated in response to variations in the vacuum applied to said carburetor, and dash-pot means for retarding any decrease in the choking effect of said valve, but offering substantially no resistance to an increase in the choking effect thereof.

1,811,355. DRYING APPARATUS. AUGUSTINUS EDVARD JONSSON, Lidingo, Sweden. Filed Feb. 14, 1929, Serial No. 339,999, and in Sweden Feb. 14, 1928. 2 Claims. (Cl. 257—93.)



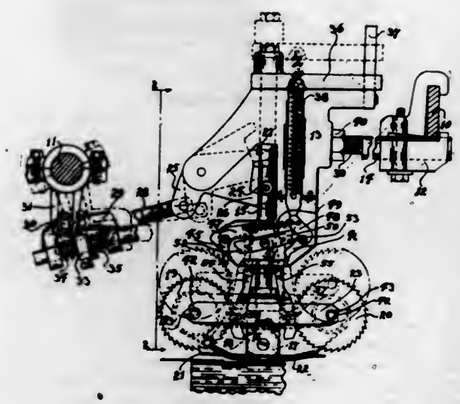
1. A drying apparatus, comprising a rotatable cylinder, hollow heating units disposed within said cylinder for the reception of a heating fluid, said units forming flat shelves extending through the whole length of the cylinder and grouped in parallel at opposite sides of a free space extending diametrically through the axis of the cylinder perpendicular to the plane of the shelves, each of said shelves extending from the circumference of the cylinder to the said diametrical free space, said space communicating with feeding and discharging openings in the wall of the cylinder.

1,811,356. DRYING APPARATUS. AUGUSTINUS EDVARD JONSSON, Lidingo, Sweden. Filed Feb. 14, 1929, Serial No. 340,000, and in Sweden Feb. 15, 1928. 5 Claims. (Cl. 257—93.)



1. A drying apparatus comprising in combination with a rotatable cylinder, a plurality of hollow flat heating shelves extending through the whole length of the cylinder and grouped in parallel on both sides of a free space extending diametrically through the axis of the cylinder perpendicular to the plane of the shelves, each of said shelves extending from the circumference of the cylinder to said diametrical free space, said space communicating with the feeding and discharging openings in the wall of the cylinder, said flat shelves having a plurality of ribs disposed in embracing relation to the exterior of the heating shelves and extending perpendicular to the axis of the cylinder thereby to prevent the material being dried from coming into direct contact with the walls of the flat shelves.

1,811,357. WIRELESS SIGNALING APPARATUS. EDUARD KARPLUS, Berlin-Tempelhof, Germany, assignor to C. Lorenz Aktiengesellschaft, Berlin-Tempelhof, Germany. Filed Mar. 11, 1929, Serial No. 345,914, and in Germany May 12, 1928. 6 Claims. (Cl. 250—16.)



1. An apparatus for wireless signaling by ultra-short waves comprising two parts arranged in spaced relation to one another, the first of said parts including the circuits for high frequency and the second of said parts comprising a screened metal casing connected with earth and including circuits for low-frequency and direct current; the said two parts being connected galvanically through leads which are screened by a metallic protective covering, and condensers shunting said leads at their connection points with the high frequency circuits.

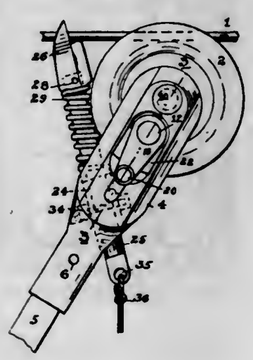
1,811,358. DATING ATTACHMENT FOR PACKAGING MACHINES. MAXIMILIAN H. KERN, Richmond Hill, New York, N. Y., assignor to Roberts Numbering Machine Company, Brooklyn, N. Y., a Corporation of New York. Filed May 14, 1930. Serial No. 452,200. 14 Claims. (Cl. 101—318.)

1. A dating attachment for packaging machines embodying therein a shaft, a head carried thereby, a rod, means connecting said shaft to said rod, printing characters carried by said head, a ribbon feed mechanism movable with said shaft and said head, a spacer bar, means adjustably connecting said spacer bar with said rod, and means whereby said bar may be rigidly connected with an oscillatory lever forming a part of a package forming machine.

1,811,359. DATING ATTACHMENT FOR WRAPPING MACHINES. MAXIMILIAN H. KERN, Richmond Hill, New York, N. Y., assignor to Roberts Numbering Machine Company, Brooklyn, N. Y., a Corporation of New York. Filed May 14, 1930. Serial No. 452,201. 18 Claims. (Cl. 101—318.)

1. A dating attachment for wrapping machines embodying therein a support positioned above the feed shelf of the feeder for a wrapping machine, a rod slidably mounted in said support, a head carried by said rod, printing characters carried by said head, means supporting and feeding an inked ribbon in relation to said printing characters, a bell crank lever, a lost motion connection between said lever and said rod, a crank member carried by a rock shaft forming a part of a feeder, and connections between said rock shaft and said bell crank lever.

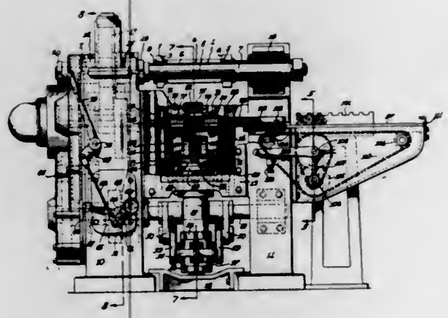
1,811,360. PROCESS FOR RECOVERY OF TIN FROM STANNATE SOLUTIONS. WILLIAM T. LITTLE, Westfield, N. J. Filed Nov. 1, 1928. Serial No. 316,623. 1 Claim. (Cl. 23—144.)



In the detinning of lead alloys containing tin by the action of a molten mixture of caustic soda and sodium nitrate, the process of producing sodium nitrate therefor and of recovering tin which comprises cooling said mixture after use, extracting with cold water to produce a solution of sodium stannate, treating said solution of sodium stannate with gaseous oxids of nitrogen to precipitate tin oxid and form sodium nitrate, separating the tin oxid from the solution of sodium nitrate thus obtained, recovering said sodium nitrate from said solution and adding said sodium nitrate thus obtained to said molten mixture of caustic soda and sodium nitrate.

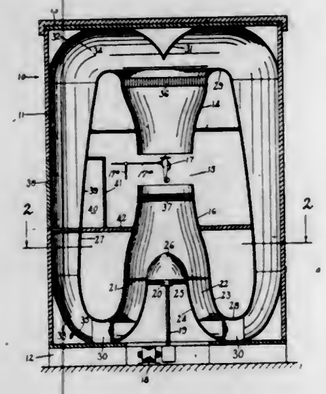
1,811,361. INK BOTTLE PEN FILLING PROTECTOR. CHARLES WIGHT MACMILLAN, Denver, Colo. Filed Feb. 4, 1930. Serial No. 425,876. 3 Claims. (Cl. 120—57.)

1. An ink bottle pen filling protector consisting of a flat, washer-shaped ring; the flat surface of said ring being soft and forming a cushion; a thin, elastic membrane attached to and extending radially from the outer, circumferential edge of said ring; said elastic membrane terminating in a circular, elastic bead and being provided with means of allowing air to pass thru said membrane; said membrane being flexible, and elastic and assuming no definite, rigid shape.



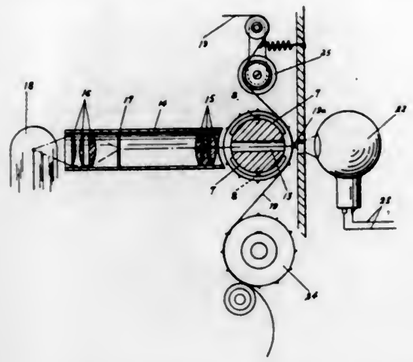
1,811,362. TROLLEY HARP AND WHEEL STRUCTURE. SALVATOR MAGGIO, Pittsburgh, Pa. Filed Aug. 7, 1930. Serial No. 473,737. 15 Claims. (Cl. 191—61.)

15. In a trolley harp and wheel structure, the combination with the harp and the wheel rotatably mounted between the arms of the harp, of a member comprising



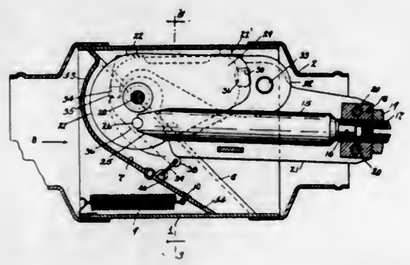
a bifurcated head which is arranged to straddle the overhead conductor from below and in advance of the wheel, and a stem which is mounted for longitudinal movement relative to the harp, means for spring-pressing the member into engagement with the conductor, means for limiting the longitudinal movement of the member relative to the harp, and means for attaching a trolley rope to the lower end of the member.

1,811,363. MILLING MACHINE. HENRY E. MORTON, Muskegon Heights, Mich. Filed May 22, 1929. Serial No. 365,187. 12 Claims. (Cl. 90—18.)



1. A milling machine including a milling cutter, means for rotating said cutter, a vertically movable head beneath said cutter, a work holder on said head removable therefrom, a horizontally reciprocable member to interlock with said holder when said holder is in lowered position, means for receiving said member, and means for raising and lowering said head.

1,811,364. WIND TUNNEL FOR TESTING AEROPLANES. DIMITRY E. OLSHEVSKY, Milford, Conn. Filed June 7, 1930. Serial No. 459,781. 14 Claims. (Cl. 35—12.)

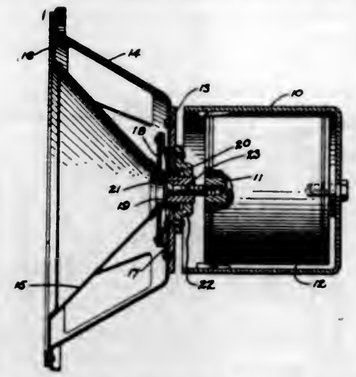


1. In a wind tunnel, a pair of throats mounted one above the other and having a gap therebetween in which an aeroplane may be suspended, and means for causing the passage of air from one of said throats to the other.

1,811,365. ROLLER SUPPORT FOR TRAVELING FILMS. FREEMAN H. OWENS, New York, N. Y., assignor to Owens Development Corporation, New York, N. Y., a Corporation of New York. Filed May 22, 1930. Serial No. 454,765. 5 Claims. (Cl. 179—100.3.)

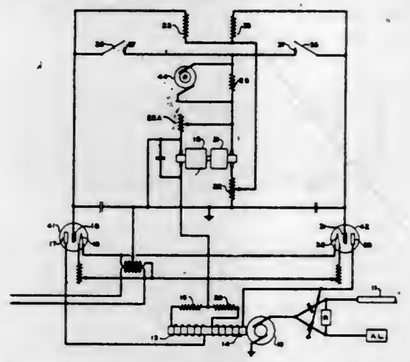
1. A roller film support, comprising a fixed arbor, a two part roller mounted for rotation on said arbor, means for maintaining the parts of the roller longitudinally separated, and said arbor being provided with an opening passing diametrically therethrough at a point in the length of the arbor between said separated roller parts.

1,811,366. THERMOSTATIC VALVE FOR AUTOMOBILES. JOHN V. O. PALM, Cleveland Heights, Ohio. Filed Jan. 9, 1924. Serial No. 685,195. 6 Claims. (Cl. 236—34.)



1. In a valve for automobile engine circulating systems, the combination of a conduit adapted to be interposed in said system between the engine and the radiator, said conduit being slightly larger than the connections of said circulating system, a valve mounted in said conduit and movable to open or close the same, said valve cooperating with the inner wall of said conduit, a relatively non-expansible frame mounted longitudinally within said conduit, and in proximity to said valve, and means carried by said frame, said means being arranged parallel to the frame and including a temperature actuated expansible member and connections between the same and said valve for actuating the latter, said connections having a different cofficient of expansion than the expansible member.

1,811,367. LOUD SPEAKER. EDWIN S. PRIDHAM, Oakland, Calif., assignor to The Magnavox Company, Oakland, Calif., a Corporation of Arizona. Filed Mar. 27, 1929. Serial No. 350,188. 7 Claims. (Cl. 179—115.5.)



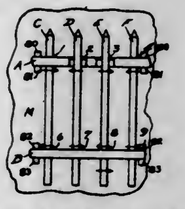
6. The method of manufacturing loud speakers which comprises forming the speaker in two major parts, one part comprising the magnetic field structure and the other

comprising a removable pole piece and an open ended conical diaphragm head assembly, and securing the two parts

together in operative relation by a single securing means which is accessible only through the opening in said diaphragm.

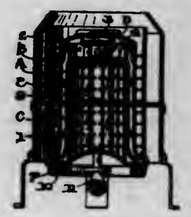
1,811,368. TELEGRAPH SYSTEM. MICHAEL I. PUPIN, Norfolk, Conn., assignor to The Commercial Cable Company of New York, New York, N. Y., a Corporation of New York. Filed Feb. 11, 1929. Serial No. 339,213. 11 Claims. (Cl. 178—58.)

1. A telegraphic signalling system comprising a plurality of vacuum tubes having a cathode, an anode, and a grid, the anode circuits containing the field windings of a dynamo electric generator, generators of direct and alternating electromotive forces to be impressed upon the anode and the grid circuits of said vacuum tubes, and movable contacts in said grid circuits with means for impressing by said contacts a biasing potential upon the grids during a definite phase-interval of the alternator.



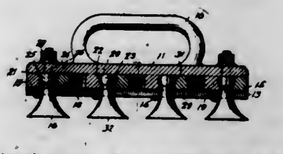
1,811,369. GUARD FOR GUYS AND THE LIKE. EVERETT ST. JOHN, Westport, Conn., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 10, 1928. Serial No. 304,868. 2 Claims. (Cl. 189—31.5.)

2. A guard for guy wires and the like comprising an elongated trough shaped member which lies along the wire, said guard having a plurality of apertures therein, said apertures being out of alignment with respect to the center line of said guard, means for securing said guard to said wire comprising a plurality of threaded members extending through said apertures into the concave portion of said guard, and adjustable means on said threaded members for securely holding said wire against the underside of said guard



---

1,811,370. METAL FENCE. JOSEPH F. SOUCY, Lowell, Mass. Filed July 13, 1929. Serial No. 378,073. 3 Claims. (Cl. 256—22.)



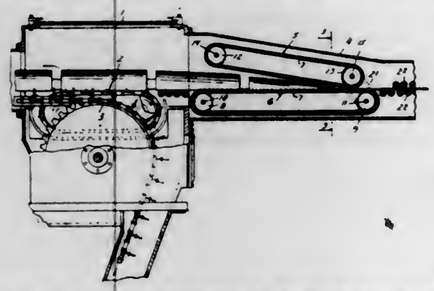
3. The combination in a metal picket fence of a top metal bar, such bar having spaced angular picket holes and a bottom bar having spaced angular picket holes in line with those on the top bar; and a plurality of angular metal pickets each of which passes through alined picket holes in the top and bottom bars and extends beyond each bar, each picket being slightly twisted in one direction under the top bar and in the other direction over the top bar.

1,811,371. OIL BURNER. SATORU TAKIMIZU, Toyotama Gun, Tokyo Fu, and HIROSHI IDEMITSU, Susaki, Fukuoka, Japan. Filed Dec. 10, 1929, Serial No. 413,004, and in Japan Dec. 31, 1928. 1 Claim. (Cl. 158—86.)

An oil burner, comprising in combination, an inner and an outer perforated tube disposed in concentric relation, said tubes forming a combustion chamber in the space between them, the said inner tube having a number of vertical channels at its periphery, a vaporizing chamber disposed above said inner tube, a vapor conducting pipe disposed in each of said channels and communicating with the vaporizing chamber at a point near its top wall, an asbestos ring disposed in the lower end of said combustion chamber, said tubes communicating with the combustion chamber immediately above said ring, means for supplying fuel to said ring for initially lighting the burner, and a source of fuel supply communicating with said vaporizing chamber at a point near its bottom wall.

1,811,372. STIPPLING TOOL. HARRY TAYLOR, West Babylon, N. Y., assignor of one-half to Paul Krause, West Babylon, N. Y. Filed Aug. 28, 1930. Serial No. 478,536. 20 Claims. (Cl. 41—5.5.)

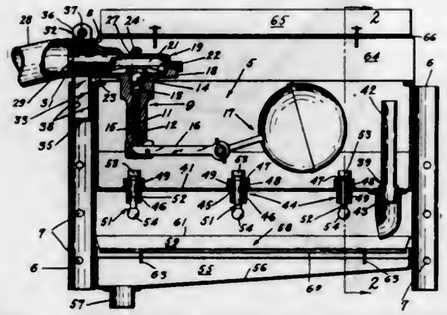
1. In a stippling tool, the combination with a series of stippling members, of a grooved holder having a handle



thereon, and a slide movable relatively to, and in the groove of, said holder, the holder and the slide having complementary recesses to engage said stippling members for holding said members removably in assembled relation to the holder.

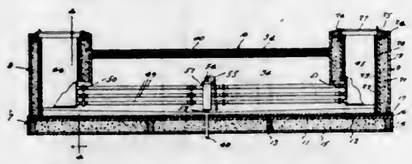
1,811,373. FURNACE WALL. HOWARD C. THAYER, Jersey City, N. J., assignor to Bernitz Furnace Appliance Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 11, 1927. Serial No. 225,522. 7 Claims. (Cl. 122—6.)

1. In a furnace wall, the combination of a series of tubes, clamps secured to said tubes and constructed to hold said tubes spaced from each other and in a definite positional relationship to each other, refractory blocks protecting said tubes and clamps, and additional means for securing said blocks to said tubes.



1,811,374. APPARATUS FOR HANDLING SHEET METAL. WILLIAM E. WATKINS, New York, N. Y., assignor to Copper Plate Sheet & Tube Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 6, 1929. Serial No. 390,787. 3 Claims. (Cl. 153—32.)

1. A sheet flattening device for flattening arched metal sheets comprising a pair of conveyors arranged in converging planes to flatten the sheets as they advance through the device, each of said conveyors comprising a pair of side chains spaced apart a distance greater than the width of the sheet, transverse strips connecting said chains, and means for driving one of said conveyors to advance the sheet.

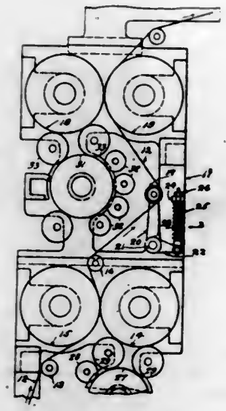


1,811,375. POULTRY DRINKING FOUNTAIN. STEWART WYSONG, Oakland, Calif., assignor of one-half to C. W. Hendrickson, Oakland, Calif. Filed Aug. 17, 1929. Serial No. 386,610. 6 Claims. (Cl. 119—80.)

1. A domestic fowl drinking fountain, comprising a container for holding water which is provided with an outlet immovably fixed thereto, a movable valve element seating on top of the outlet to control the flow of water through the outlet, a stem serving to operate the valve element and arranged within the outlet and extending to the exterior of the container, the water flowing down the stem when the valve element is open, said stem having a part of a shape

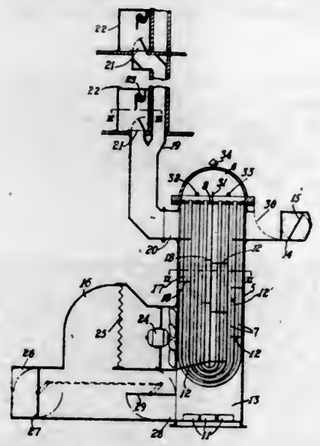
and size to be received in the beak of the fowl and being arranged to be lifted by the fowl to open the valve, and means for supporting the container at such an elevation above the body of the fowl that the fowl retains its neck in a raised position when drinking so that the water will flow down such neck.

1,811,376. REFRIGERATED DISPLAY CASE. MICHEL ABOOD, Jacksonville, Fla. Filed Jan. 27, 1930. Serial No. 423,828. 3 Claims. (Cl. 62—37.2.)



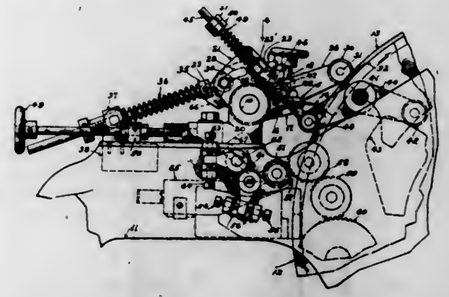
1. A refrigerated display case of the character described having end compartments and further having an intermediate display compartment extending between the end compartments and having communication with the lower portions thereof, containers mounted in the end compartments for the reception of a cooling medium, said containers having their bottoms spaced above the bottoms of the end compartments, a series of pipes traversing the display compartment and having their ends connected to the containers for the reception of the cooling medium therefrom, a drip pan disposed in the display compartment beneath the pipes to receive condensate therefrom, said drip pan extending into the end compartments and terminating in enlarged end portions disposed beneath the containers for receiving condensate therefrom.

1,811,377. WEB GUIDING MECHANISM FOR PRINTING MACHINES. HARRY V. BALL, Concord, Mass., assignor to R. Hoe & Co., Inc., New York, N. Y., a Corporation of New York. Filed Nov. 28, 1928. Serial No. 322,388. 1 Claim. (Cl. 101—220.)



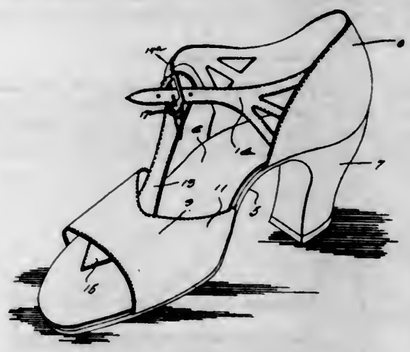
In a rotary web printing machine, a first printing couple adapted to print on one side of the web and comprising a first plate cylinder carrying a plate engaging with a first impression cylinder, a second printing couple adapted to print on the other side of the web and positioned in superposed relation to the first couple and comprising a second plate cylinder carrying a plate engaging with a second impression cylinder, inking mechanism below each of the printing couples, a first guide roller arranged to hold the web in contact with the first impression cylinder after it has passed the line of engagement with

the plate on the first plate cylinder, and a second guide roller arranged to guide the web around the inking mechanism for the second plate cylinder and to hold the web in contact with the second impression cylinder before it



reaches the line of engagement with the plate on the second plate cylinder; one of said guide rollers being resiliently supported, whereby web breaks between the couples due to variations in the radial dimensions of the printing surfaces of the plates are avoided.

1,811,378. AIR CONDITIONING SYSTEM. BRYANT BANNISTER, Pittsburgh, Pa. Filed Jan. 25, 1928. Serial No. 249,346. 2 Claims. (Cl. 126—101.)

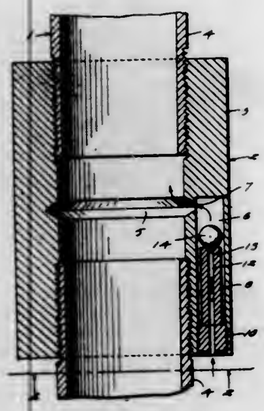


1. A heat exchange apparatus including a header, a tube sheet associated therewith, a plurality of U shaped tubes supported in said sheet and opening into said header, a housing for said tubes, a partition associated with said tubes and cooperating with said housing so that one leg of each of said tubes is located in one compartment and the other leg of each of said tubes is located in the other compartment, means for passing air through one of said compartments in contact with said tubes and a heating mechanism located in said housing and associated with the other of said compartments for passing a heating medium therethrough.

1,811,379. PLATE PRINTING MACHINE. WILLIAM EDWARD BENNISON, Wandsworth Borough, England, assignor to R. Hoe & Co., Inc., New York, N. Y., a Corporation of New York. Filed Sept. 5, 1928, Serial No. 304,124, and in Great Britain Sept. 22, 1927. 6 Claims. (Cl. 101—157.)

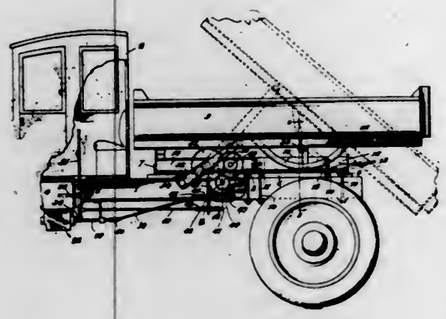
1. In a printing machine, a cylinder, a printing plate on the cylinder, an ink salvaging roller, a blade secured to a pivoted support, means for pressing the blade against the plate, means for moving the blade into engagement with the salvaging roller, a cam roller on an arm operably connected to the support, and a cam on the cylinder adapted to engage the roller and position the blade with respect to the plate.

1,811,380. SLIPPER. MARIE BERNARD, New York, N. Y. Filed Jan. 19, 1929. Serial No. 333,619. 2 Claims. (Cl. 36—1.)



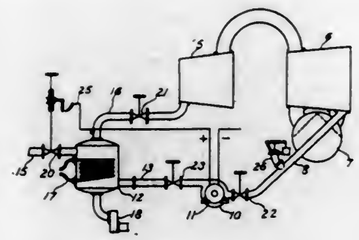
1. A high heeled shoe of the type described comprising inner and outer soles, a heel counter, a strap projected forwardly from an intermediate portion of the forward edge portion of each side of the counter; and a vamp having its edges secured between the soles, said vamp extended from the shank to a point short of the tip of the shoe, an instep strap secured on the underside of the vamp and extended rearwardly, one of said straps on the counter being extended across the upper portion of the instep strap and secured thereto, a buckle mounted at the juncture of the said straps, and the other of said straps in the counter being adapted to be extended across the upper portion of the instep strap and said one strap and adjustably secured by said buckle, said juncture of the straps being over the center of the instep of the foot.

1,811,381. OIL WELL PUMPING AND FLOWING APPARATUS. ROBERT E. BERWICK, Newkirk, Okla. Filed Sept. 11, 1930. Serial No. 481,242. 1 Claim. (Cl. 103—232.)



A flow valve for the tubing of an oil well flowing and pumping apparatus, comprising a one-piece hollow body

adapted to be interposed in the tubing and provided in the inner side of its wall between the ends thereof with an inner annular groove of less depth than the thickness of the wall and increasing in width in the direction of the longitudinal axis of the body, the body being provided in its wall radially beyond the bottom of said groove with a

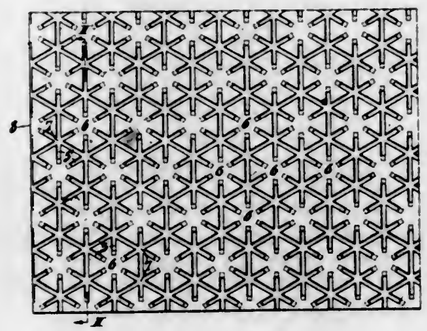


passage extending from the lower end of the wall to a point above the bottom of the groove, the wall of the body being provided with a radial port smaller diametrically than the greatest width of the groove and establishing communication between the upper end of the passage and the bottom of the groove, and a downwardly seating valve in the passage.

1,811,382. DUMPING TRUCK. EPHRIAM P. BORDEAUX, Galion, Ohio, assignor to Perfection Steel Body Company, Galion, Ohio, a Corporation of Ohio. Filed Dec. 15, 1930. Serial No. 502,521. 2 Claims. (Cl. 298—21.)

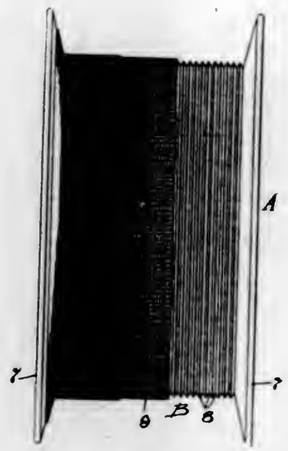
1. In a dumping truck comprising a chassis, and a dumping body mounted for tilting movement on the chassis, the combination of hoisting mechanism operatively connected with the dumping body and including a shaft having diametrically opposed projections thereon, means for rotating said shaft, a power take-off for driving said means, a lever pivotally mounted adjacent said shaft and provided at one end with a fork spanning the shaft and provided on its inner surfaces at its ends with projections to contact with the projections on the shaft, connections between the opposite end of said lever and the power take-off whereby to arrest the action of the take-off, and means for shifting said lever whereby to dispose either projection thereof in the path of the projections on the shaft.

1,811,383. MEANS FOR PREHEATING TURBINES. ERIC BROWN, Baden, Switzerland, assignor to Aktiengesellschaft Brown Boveri & Cie., Baden, Switzerland, a Joint-Stock Company of Switzerland. Filed Apr. 26, 1929, Serial No. 358,208, and in Germany May 3, 1928. 6 Claims. (Cl. 253—1.)



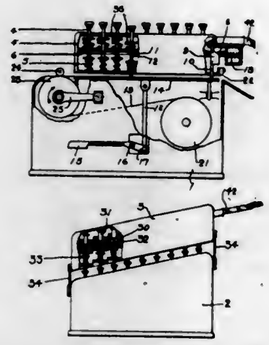
1. In a system for retaining turbines at the operating temperature, a turbine, a heat exchanger connected in the steam supply line of the turbine, means connected with said heat exchanger to separate water from the steam supply flowing therethrough, means for supplying said heat exchanger with heat, and means for causing the circulation of heating steam through the turbine and through said heat exchanger.

1,811,384. COMPOSITION FOR ARTIFICIAL PARTS FOR CORPSES. WILLIAM J. COLLIER, New York, N. Y. Filed July 30, 1929. Serial No. 382,293. 8 Claims. (Cl. 106—39.)



4. A composition of matter for the production of artificial parts for corpses comprising zinc oxide, about 50 parts, glucose, about 10 parts, borax about 20–25 parts, plaster of Paris, about 3 parts, phenol about 1 part, and alum, two tablespoons to 5 pounds of material.

1,811,385. ACOUSTICAL BOARD. FRANKLIN M. DIETZ, Hutchinson's Mills, Hamilton Township, Mercer County, N. J., assignor, by mesne assignments, to Johns-Manville Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 7, 1929. Serial No. 390,967. 6 Claims. (Cl. 181—30.)

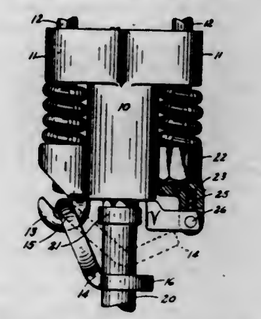


1. Acoustical board having its surface broken by a multiplicity of channels forming a recurrent pattern of polygonal units, the channels bounding each unit being prolonged into adjacent units.

1,811,386. CAKE SPOOL. WILLIAM H. FURNESS, National Park, N. J., assignor to Furness Corporation, Philadelphia, Pa., a Corporation of New Jersey. Filed July 26, 1929. Serial No. 381,199. 3 Claims. (Cl. 242—118.)

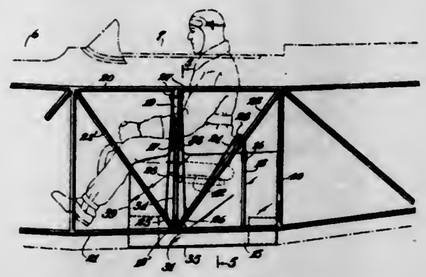
1. A spool for cakes of thread having a plurality of annular grooves on its spindle portions and a foraminous covering over said spindle portion upon which the thread is adapted to be wound.

1,811,387. RECORD MAKING MECHANISM. ROGER J. GILMORE and LEONARD W. LANGFORD, Boston, Mass.; said Gilmore assignor to said Langford. Filed Feb. 7, 1927. Serial No. 166,472. 9 Claims. (Cl. 235—60.)



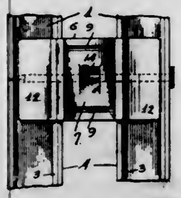
1. An apparatus for making records, comprising the combination of a punch press having a plurality of record-forming punches, a member adapted to be superposed over the keyboard of an adding or like machine and having a plurality of key operating elements so arranged as to adapt the elements to operate the keys of such machine when the member is thus superposed, means for moving the said elements to perform their key operating function, and means forming connections between the punch press and first named means whereby the elements corresponding to the punches selected and operated are caused to function.

1,811,388. TROLLEY SHOE. WALTER F. GRAHAM, Richland, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed June 10, 1930. Serial No. 460,204. 17 Claims. (Cl. 191—59.1.)



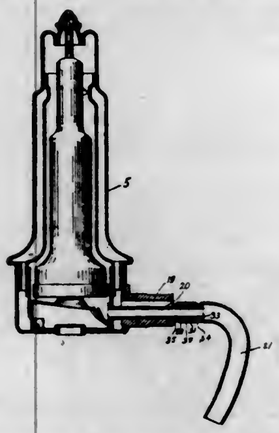
1. A trolley shoe comprising a body of ferrous material having a grooved portion with an elongated surface to receive and engage a trolley wire, a portion of the body forming said grooved surface having a higher carbon content than the other portions of the shoe.

1,811,389. LOCKING DEVICE FOR TOOL RETAINERS. DANIEL J. HAFFORD, Cleveland, Ohio, assignor to The Cleveland Rock Drill Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 21, 1929. Serial No. 372,692. 7 Claims. (Cl. 121—32.)



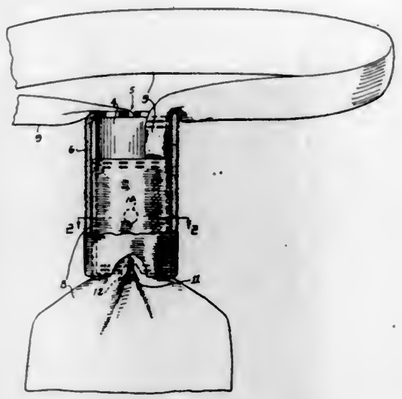
1. In combination with a tool retainer for a reciprocatively operated tool, a machine head, a tool retainer adjustably supported thereby, and movable stop means interposed between said retainer and machine head.

1,811,390. AIRCRAFT. CARL BROWN HARPER, Washington, D. C. Filed Apr. 6, 1929. Serial No. 352,945. 17 Claims. (Cl. 89—40.)



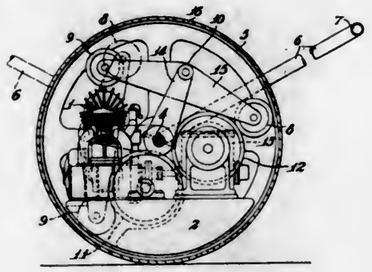
1. In an airplane a body having a gunner's compartment therein, a deck gun mount near the upper part of said compartment, a tunnel gun mount adjacent the lower part of said compartment, a lowerable platform in the compartment adjacent the tunnel gun mount which is normally on a level with the bottom of the body, said platform being movable independently of the gun mounts to a position substantially lower than the compartment floor upon which platform the gunner may stand to operate a gun on the deck mount or may kneel to operate a gun on the tunnel mount.

1,811,391. PARTITION-STUD CLAMP. WILBERT D. HENDERSON, San Francisco, Calif. Filed Aug. 22, 1928. Serial No. 301,361. 2 Claims. (Cl. 189—35.)



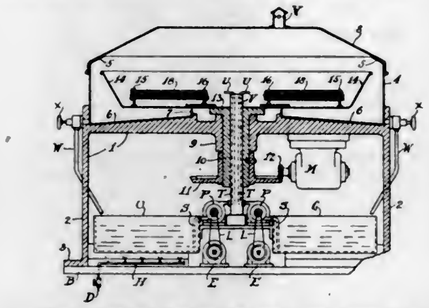
1. A clamp for partiti n studding members comprising a spring metal strip shaped to engage and hold a pair of structural iron channel members in spaced parallel relation, said strip comprising a central body portion, a pair of channel engaging portions formed at the ends of the body portion to engage adjacent legs of the channel members, the sides of each channel engaging portion being inclined relatively to each other at an angle slightly less than the angle between the inner and outer faces of the channel leg, and end portions extending laterally from the channel engaging portions and inclined toward the plane of the body portion to engage the inner surfaces of the backs of the channels; and an outwardly disposed apertured lug struck from the body portion to receive a securing member inserted through the aperture of the lug and engaging the backs of the channels to spring the channel engaging portions into gripping engagement with the legs of the channels and compress the end portions against the inner surfaces of the channel backs to exert a spring pressure against said channels.

1,811,392. SWIVEL TUBE CONNECTION. GEORGE D. HOFFMAN, Pasadena, Calif., assignor to Hoffman Specialty Company, Waterbury, Conn., a Corporation of Illinois. Original application filed Jan. 24, 1922, Serial No. 531,425. Divided and this application filed June 9, 1925. Serial No. 36,055. 3 Claims. (Cl. 285—9.)



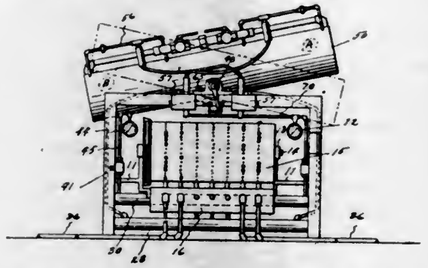
1. The combination of two tubes, one of which projects at its end within the end of the other, the inner tube having two external encircling collars or ribs spaced apart from each other and from the adjacent end of the tube with an open space between them adapted to admit the liquid passing through the tubes, said end forming a trunnion, and the outer tube having an internal shoulder surrounding and bearing on said trunnion, and being set inward at its extremity toward the inner tube beyond the shoulder most remote from said trunnion, the portion of the outer tube between said internal shoulder and extremity being formed to surround and bear freely on the outer circumferences of said collars.

1,811,393. NECKTIE. EDWARD J. HOOPER, Nutley, N. J. Filed Sept. 23, 1929. Serial No. 394,713. 1 Claim. (Cl. 2—150.)



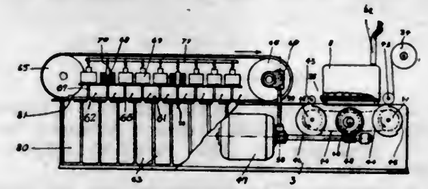
In a necktie, the combination with a tubular body having a completely open vertical slit at the rear, and a V-notch in its lower edge at the front, of a fabric breast piece applied to the interior of the tubular body, and puckered to project through the V-notch in a fold, and a fabric covering secured about said body and a neck piece also secured to the tubular body at one end so that its free end may be drawn laterally through the open vertical slit, and means for securing the free end of the neck piece within the tubular body.

1,811,394. INTERNALLY DRIVEN POWER ROLLER. HAROLD HORNSBY, Scunthorpe, England. Filed Mar. 8, 1930. Serial No. 434,422. 6 Claims. (Cl. 180—19.)



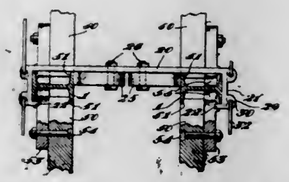
1. A power-driven roller for the purposes specified, having contained within the drum a suspended weighted body on which are mounted a power unit and rotatable friction discs constantly driven by said power unit, and having a displaceable element carrying rollers adapted to be brought into use selectively to frictionally transmit the drive from the rotary friction discs to the roller drum and rotate same in one or the other direction, and a guiding handle for the roller adapted to swing and to transmit its movements to the said displaceable element in order to effect driving of the roller in the direction required characterized in that the said displaceable member within the drum comprises a rigid arm secured to the drum axle and a rocker pivotally attached to said arm and having mounted on its respective ends a pair of rollers.

1,811,395. METHOD FOR INCREASING THE TENSILE STRENGTH OF YARNS. FREDERICK J. HOXIE, Phenix, R. I., and ASHTON M. TENNEY, New Rochelle, N. Y., assignors, by direct and mesne assignments, of one-half to Wellington, Sears & Company, New York, N. Y., a firm consisting of Harry L. Bailey, Norman S. Hope, John H. Bennett, and Charles O. Richardson and one-half to Warwick Mills, West Warwick, R. I., a Corporation of Rhode Island. Filed Mar. 19, 1926. Serial No. 95,978. 13 Claims. (Cl. 91—70.)



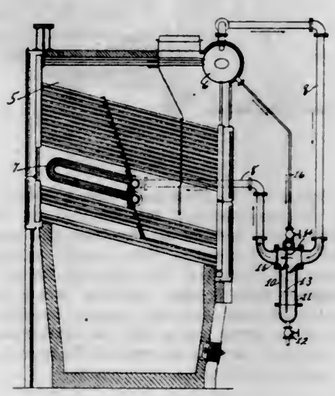
1. The process of coating yarns in the skein for increasing the tensile strength thereof which consists in immersing the yarn in an aqueous solution of gelatine, subjecting said yarn to whirling, then immersing said yarn in a heated oil the temperature of which is above the evaporating point of the water in said gelatine solution, to vaporize said water, then whirling the yarn to remove the heated oil.

1,811,396. AUTOMATIC INTERMITTER. SHERMAN D. JACKSON, Seminole, Okla. Filed May 20, 1929. Serial No. 364,540. 19 Claims. (Cl. 137—145.)



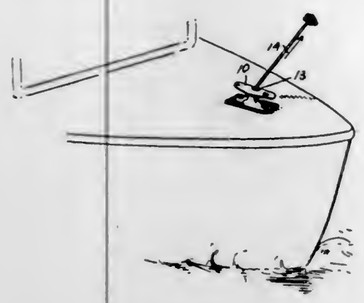
2. In an intermitter for controlling fluid pressure, a fluid valve for supplying such pressure at each of a plurality of points of use, fluid lines connected to said valves for individually operating the same, means for individually controlling the supply of compressed fluid to said lines, movable means for selectively varying the period of flow through each of said fluid line controlling means, and means for intermittently operating the movable means.

1,811,397. RECORD MAKING MECHANISM. LEONARD W. LANGFORD, Boston, Mass. Filed Jan. 20, 1927. Serial No. 162,367. 14 Claims. (Cl. 235—60.)



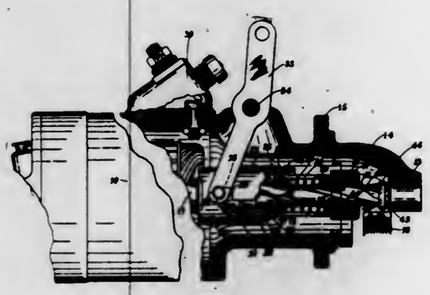
1. An apparatus for making records, comprising the combination of a punch-press having a plurality of punches, a keyboard adapted to be superposed over the keyboard of an adding or like machine in a manner to operate the latter from the former, means for operating the punches to punch record blanks supplied thereto, and means forming connections between the superposed key-board and punch-press whereby the punches corresponding to the keys depressed are selected.

1,811,398. CONCRETE FORM. ISAAC W. LITCHFIELD, Boston, Mass., assignor to Bemis Industries Inc., Boston, Mass., a Corporation of Delaware. Filed Nov. 25, 1927. Serial No. 235,439. 9 Claims. (Cl. 25—131.)



3. A self-supporting concrete form comprising uprights, form boards extending between the uprights, vertically extending channels in the uprights receiving the form boards and locking means engaging the channel walls to hold the boards in place, transverse ties securing uprights to each other and comprising members extending about the outer surfaces of the uprights, and means combined with the transverse ties for engaging longitudinal connections between the uprights, said transverse ties being vertically slidable upon the uprights, and said form boards being vertically slidable in the channels.

1,811,399. STEAM CLEANING DEVICE. CHARLES E. LUCKE, New York, N. Y., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Nov. 26, 1927. Serial No. 235,813. 5 Claims. (Cl. 122—459.)



1. In a steam boiler, means for separating impurities from steam generated in said boiler and removing them from the system, said means being located below the water level of said boiler and comprising a connection to the water space of said boiler, said connection being so connected to the separating means as to wash the impurities therefrom.

1,811,400. MOORING CLEAT FOR BOATS AND THE LIKE. WILLIAM DODSON MCCLELLAN, Richmond, Va. Filed Nov. 10, 1930. Serial No. 494,718. 7 Claims. (Cl. 114—218.)

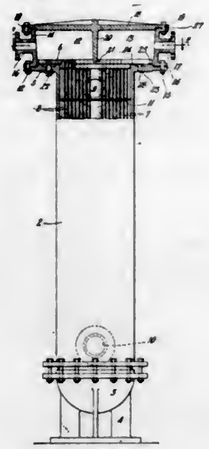
1. A means for mooring or docking small craft comprising a spring reel secured to an inner surface of the craft hull, a rope and a device on a hull outer surface for holding engagement with the rope, the rope passing freely from the reel to said device.

1,811,401. ENGINE STARTING MECHANISM. WILLIAM L. MCGRATH, Elmira, N. Y., assignor to Eclipse Machine Company, Elmira Heights, N. Y., a Corporation of New York. Filed Oct. 2, 1929. Serial No. 396,769. 10 Claims. (Cl. 74—7.)

1. In a device of the class described, a power member, a driving member mounted for longitudinal movement and limited rotary lost motion thereon and adapted to engage and drive a member of an engine to be started, means under the control of the operator for moving the driving member into driving position, means for automatically moving said driving member to idle position when the engine starts and means for restricting the rotary lost motion of the driving member on the power member when in driving position.

1,811,402. HEATER OR COOLER. DANIEL RAYMOND MCNEAL, Abington, Pa., assignor to Andale Engineering Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 12, 1927. Serial No. 232,745. 13 Claims. (Cl. 257—222.)

1. In apparatus of the character described, a casing member and a tube plate member secured thereto, one of said members having a groove cooperating with the other member to form a channel with a joint at each side thereof, a head secured to said casing member, said



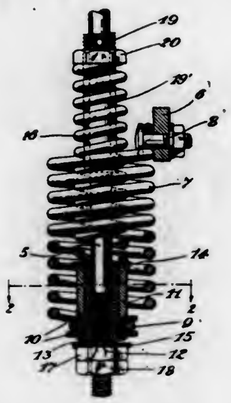


plate and casing forming a chamber and said plate, casing, and head forming another chamber, and an outlet connected to said channel.

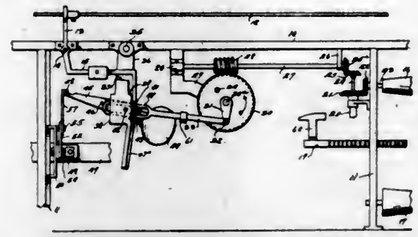
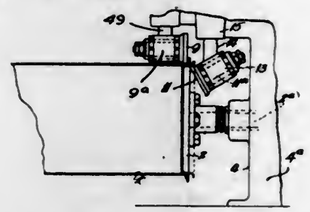


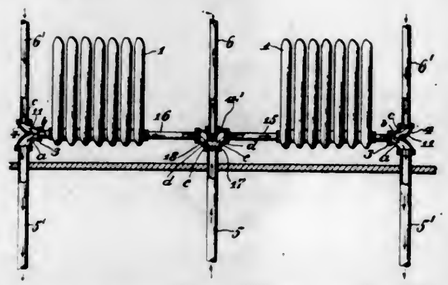
1,811,403. ADJUSTING MEANS FOR SPRING CUSHIONING DEVICES. HENRY MESINGER, Mount Vernon, N. Y. Filed Dec. 10, 1928. Serial No. 324,843. 6 Claims. (Cl. 267—60.)

1. In combination with cushioning means having an outer expansion spring fixed at its upper end, an inner compression spring, and a rod movable through said inner and outer springs, means for regulating the action of said cushioning springs including an abutment member on the rod engaged by the upper end of the inner spring, a sleeve surrounding said rod and connected with the lower end of the outer spring and transmitting the thrust of said inner spring thereto, and manually adjustable means on said rod to coact with said sleeve and thereby simultaneously adjust the tension of the inner and outer springs.



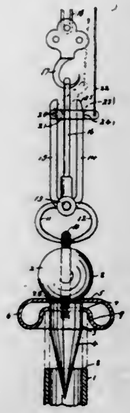
1,811,404. KNOCK-OFF MECHANISM FOR SLUBBERS AND ROVING FRAMES. JAMES C. NULLALLY, Greer, S. C. Filed Mar. 20, 1930. Serial No. 437,408. 9 Claims. (Cl. 242—39.)

1. In a stop motion for winding machines, the winding machine including a vertically reciprocatable bobbin rail, a shipper lever forming part of the stop motion, a swingable member normally supporting the shipper lever in a raised position, a latch carried by the swingable member and normally projecting therefrom, means actuated from the driving mechanism of the winding machine acting



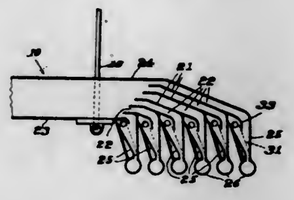
after a predetermined time from the start of said driving mechanism to release the direct engagement of the member with the lever and permit the lever to drop upon said latch, and means actuated upon a downward movement of the bobbin rail to retract the latch.

1,811,405. APPARATUS FOR ATTACHING THE HEADS OF SHEET METAL RECEPTACLES. CHARLES JOSEPH RHODES, Wakefield, England. Filed Jan. 10, 1929, Serial No. 331,452, and in Great Britain Oct. 2, 1928. 7 Claims. (Cl. 113—23.)



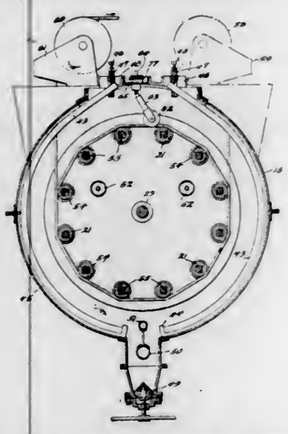
1. Apparatus for attaching the heads to sheet metal receptacles comprising two head-stocks, axially aligned chucks supported by said headstocks, between which the work is held, means for rotating said chucks, a supporting roller, a flanging roller cooperating with said supporting roller so constructed and arranged that it presents a minimum surface of contact with the work throughout the flanging operation and other rollers for completing the attachment of the head to said receptacles.

1,811,406. PRESSURE EQUALIZING MEANS FOR HEATING SYSTEMS. ALFRED J. RUDOLPH, Bywood, Pa. Filed Nov. 29, 1927. Serial No. 236,408. 8 Claims. (Cl. 237—1.)



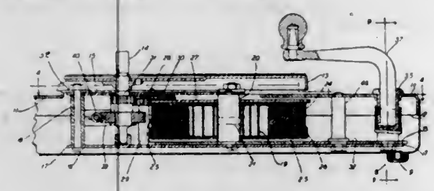
1. A heating system comprising heat radiating means, a supply pipe for supplying a heated fluid to said means, a return pipe for conveying the said fluid from said heat radiating means, means for connecting the supply pipe to the said heat radiating means, means for connecting the said return pipe to the said heat radiating means, and means embodied in each of said pipes which tend to cause the heated fluid to flow therefrom through the said connections toward the said heat radiating means to thereby balance the pressures of the heated fluid in said heat radiating means.

1,811,407. OIL CASING PLUG. ULYSSES G. SKELLY, Los Angeles, Calif. Filed June 25, 1930. Serial No. 463,689. 7 Claims. (Cl. 166—14.)



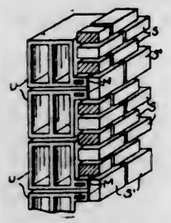
1. A fire extinguisher-plug for gas and oil well casings comprising: a cylindrical body adapted to fit tightly the inner periphery of the casing to which it is intended to be applied, a tapered extension on one end of said body, and a sleeve secured to the other end of said body and adapted to fit the outer periphery of said casing when the body is seated therein.

1,811,408. SLUICE CONCENTRATOR. ALBERT H. STEBBINS, Los Angeles, Calif. Filed Apr. 28, 1927. Serial No. 187,372. 2 Claims. (Cl. 209—458.)



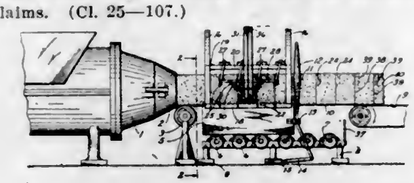
1. A sluice concentrator, comprising in combination, a sluice pipe closed from the point of feed to the points of discharge and adapted to have a stream of water bearing the materials to be separated forced therethrough under a maintained head pressure and constructed to promote a gravity stratification of the materials within the flowing stream so that materials differing in specific gravity will remain suspended in different vertically disposed portions of the stream moving through the pipe, settling receptacles, and partitions extending across said pipe near its discharge end and arranged one above the other to form a series of discharge conduits leading to said receptacles and each conduit being adapted to carry off at an undiminished rate of flow the entire volume of water that enters the space between the adjacent partitions of a conduit to thereby avoid intermingling of the material of the different sections of the stream adjacent the entrance to the conduits.

1,811,409. ELECTROPLATING APPARATUS. ALBERT F. W. THORMANN, Pittsburgh, Pa. Filed June 29, 1929. Serial No. 374,787. 5 Claims. (Cl. 204—5.)



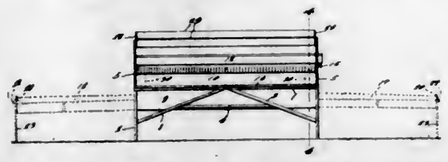
1. A continuous working apparatus for electrodepositing a copper coating on wire rope or similar products, comprising a tank for the electrolyte, a drum in the tank, rotary rods carried by the drum, rope seizing and guiding grooves in the rods, the rope being spirally wound around the drum in the grooves and successive grooves in adjacent rods being relatively offset conformably to the spiral path followed by the rope and means for rotating the rods.

1,811,410. PHONOGRAPH. ROY T. WATTS, Baltimore, Md., assignor, by mesne assignments, to William W. Varney, Baltimore, Md. Filed Feb. 9, 1927. Serial No. 166,990. 3 Claims. (Cl. 185—39.)



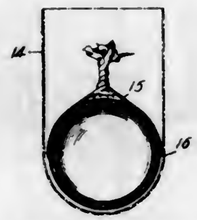
1. In a phonograph provided with a turntable operated by gears operating in a plane parallel with the plane of operation of said turntable, a spring driving said gears and a winding mechanism for winding said spring operated by gears operating in a plane parallel to said plane of operation of said turntable, and a crank for turning one of said gears operating above the plane of operation of said turntable.

1,811,411. WALL CONSTRUCTION. DONALD D. WHITTACRE, Waynesburg, and JOHN C. WOOD, Lakewood, Ohio. Filed May 5, 1928. Serial No. 275,313. 6 Claims. (Cl. 72—41.)



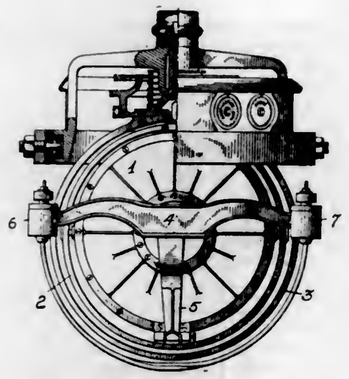
1. A composite brick and tile wall, comprising face brick laid in a plurality of stretcher courses, tile blocks behind the face brick having integrally formed lips extending into the brick facing portion of the wall between stretcher courses of brick, and brick units disposed with a lesser lateral dimension than the width of the stretcher brick and comprising part of the wall facing and lying flush with the face of the wall and disposed horizontally adjacent said tile lips between said first named stretcher courses of brick.

1,811,412. CUTTER. DONALD D. WHITACRE, Waynesburg, Ohio. Filed Sept. 7, 1929. Serial No. 391,070. 12 Claims. (Cl. 25—107.)



1. In apparatus for cutting a moving stream of plastic material into similiarly shaped pieces the combination of a table adapted to move with said material, and cutting mechanism adapted to move with said table comprising means for making spaced apart cuts through said stream of material and means for simultaneously making other cuts in said material starting in spaced relation to said first named cuts and extending to said first named cuts.

1,811,413. POULTRY FEED TROUGH. RAY C. WISEMAN, Parkersburg, W. Va. Filed Oct. 6, 1930. Serial No. 486,781. 9 Claims. (Cl. 119—61.)

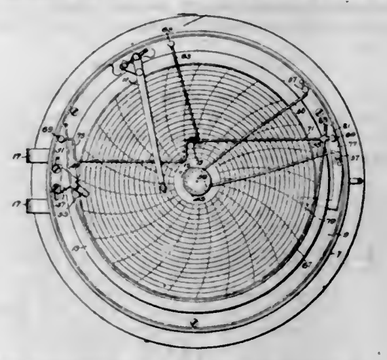


1. A poultry feeder of the class described comprising in combination, a casing, feed trays slidably mounted in said casing, said casing being open at its ends whereby said trays may be moved relative to one another into and out of said casing, said casing being open at its top, and a feed containing trough supported on the upper edge of said casing normally closing said top.

1,811,414. METHOD AND MEANS FOR REDUCING THE SIZE OF TENNIS BALLS AND HOLDING THE SAME WHILE REDUCED. JOHN R. GAMMETER, Akron, Ohio, assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed Apr. 19, 1928. Serial No. 271,312. 7 Claims. (Cl. 206—46.)

1. A tennis, or similar, ball having a wall of elastic material and an inflating medium therein under superatmospheric pressure, said wall being constructed to conform to prescribed size and rebound requirements, and a pellicular coating substantially impervious to air shrunk upon the ball for holding it under compression and within the aforesaid prescribed size.

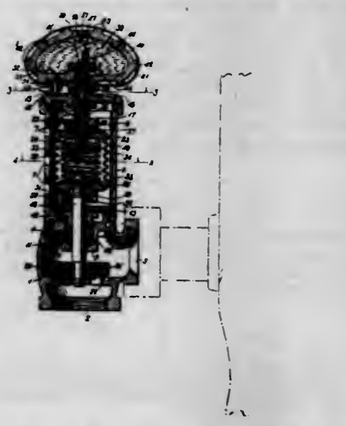
1,811,415. LIQUID CONTROLLED GYROCOMPASS. PERCY E. HARRIS, Brooklyn, N. Y., assignor to Sperry Gyroscope Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Aug. 29, 1929. Serial No. 389,146. 6 Claims. (Cl. 33—226.)



1. In a liquid controlled gyro-compass, the combination with gyroscopic element, a plurality of liquid containers located on the north side thereof and spaced in the E-W direction, a plurality of liquid containers located on the south side thereof and similarly spaced, and means interconnecting said containers in both the E-W and N-S directions.

1,811,416. REENFORCED INSULATION FABRIC. SAMUEL A. WILLIAMS, Scarsdale, N. Y., assignor to Johns-Manville Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 5, 1928. Serial No. 317,235. 8 Claims. (Cl. 154—44.)

2. A fire and heat-resisting sheet comprising matted layers of mineral fibres having reenforcing members incorporated therein, said reenforcing members consisting of cords of mineral fibres having ragged outer surfaces which mat with the fibres of the sheet and reenforced with a strand of relatively large tensile strength.



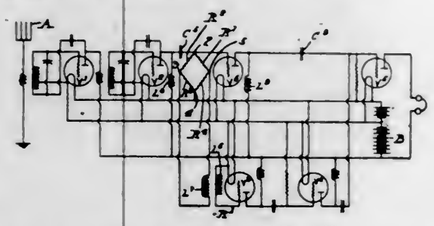
1,811,417. RECORDING INSTRUMENT. EDGAR H. BRISTOL, Foxboro, Mass., assignor to the Foxboro Company, Foxboro, Mass., a Corporation of Massachusetts. Filed June 6, 1925. Serial No. 35,352. 40 Claims. (Cl. 234—1.)

1. A recording instrument comprising a dial plate, a time shaft for supporting a chart to rest against and rotate over said plate and means for holding the margins of the chart including a bowed member secured at its ends to

the plate and having a main portion encircling a marginal portion of the chart and beneath which the chart may be slid for attachment to said shaft.

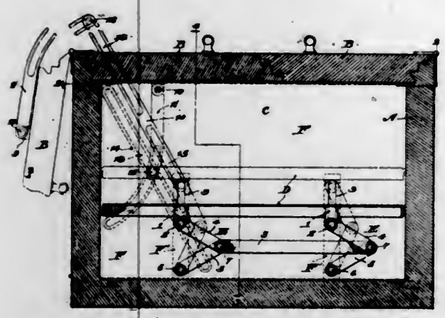
1,811,418. VALVE. MICHAEL E. MILLER, Washington, D. C. Filed Jan. 17, 1930. Serial No. 421,550. 11 Claims. (Cl. 236—42.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

1. A device of the class described comprising a valve body having inlet and outlet openings, for the flow of temperature changing fluid, a partition provided with a valve seat separating said openings, a chamber open at one side to atmospheric temperature and closed at its ends, mounted on said body with its axis in line with the axis of the valve seat, a valve adapted to co-operate with said seat to control the flow of fluid, said valve having a divided stem, connected by a bellows, a combined hand wheel and reservoir mounted on the stem, passages connecting the interior of the reservoir and bellows and an expansible fluid sealed in said last named parts and adapted to close the valve at a predetermined temperature substantially as and for the purposes specified.



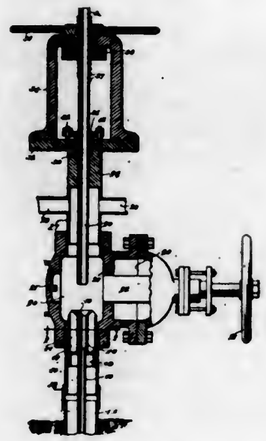
1,811,419. FISHING ROD CONSTRUCTION. CALVIN M. ANDERSON, Columbus, Ohio. Filed May 29, 1929. Serial No. 367,027. 6 Claims. (Cl. 43—18.)

1. A fishing rod consisting of a hollow body composed of longitudinally extending strips of bamboo, said strips being



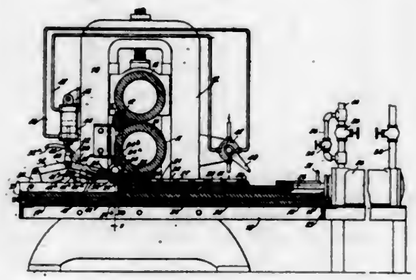
adhesively united along their longitudinal meeting edges, and a plurality of truss strips arranged within said body and extending perpendicularly to said body strips, said truss strips being interengaged along the longitudinal axis of said rod.

1,811,420. APPARATUS FOR THE RECEPTION OF RADIO MESSAGES. WILLIAM O. BARNES, Worcester, Mass. Filed Dec. 27, 1926. Serial No. 157,122. 4 Claims. (Cl. 250—20.)



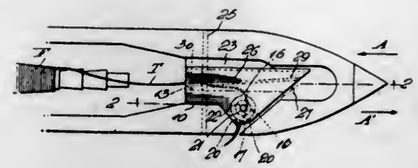
1. In a receiving device for signals transmitted in the form of electric waves, the combination with means for receiving the waves and a regulated amplifying element, of four resistances connected together in the form of a Wheatstone bridge, two opposite terminals of said Wheatstone bridge being connected with a receiving circuit, the other two opposite terminals being connected with the amplifying element to vary the intensity of the currents therein, the opposite resistances in each case being constructed to heat up at different rates under the influence of electric current and thus change their relative resistance, the four resistances constituting means whereby when the intensity of the receiving current decreases the intensity of the currents through the amplifying element will increase and vice-versa.

1,811,421. CARD POSTING SAFE. GEORGE C. BRAINARD, Youngstown, Ohio, assignor to The General Fireproofing Company, Youngstown, Ohio, a Corporation of Ohio. Filed Dec. 16, 1926. Serial No. 155,215. 2 Claims. (Cl. 312—174.)



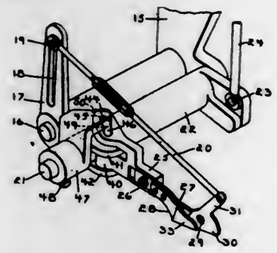
1. In combination with a receptacle having a door hinged for swinging movement from a position closing an open side of the receptacle through an arc of approximately 270° to a position overlying an adjacent side of the receptacle substantially parallel thereto; a support within said receptacle, means mounting said support for movement towards and from the open side of the receptacle comprising a slotted guide member fixed within the receptacle, a pin carried by said support and extending through the slot in said guide member, a toggle arm pivotally connected at one end to said pin, and a second toggle arm having a fixed pivot at one end within the receptacle and pivotally connected at its other end with the second end of said first mentioned toggle arm, and a connection between said door and said support whereby the final portion at least of opening movement of said door is effective to move said support towards the open side of the receptacle, said connection comprising an arm pivoted to the door, and a lost motion link connection between said arm and said pin.

1,811,422. WELL HEAD EQUIPMENT. CICERO C. BROWN, Hebbronville, Tex. Filed June 27, 1929. Serial No. 374,113. 6 Claims. (Cl. 166—15.)



1. A head for oil wells having means for attachment to the top of a master gate valve casing, said head having a chamber provided with a side opening for connection with a fluid conduit and a sealing bearing closing the top of said chamber, a flow pipe extension vertically movable in said bearing, a permanent well flow pipe in the well the upper end of which terminates below the valve, the lower end of said pipe extension normally having close communication with the upper end of said permanent well flow pipe to form a continuous conduit, and means to move said pipe extension from said well flow pipe to permit said valve to be closed.

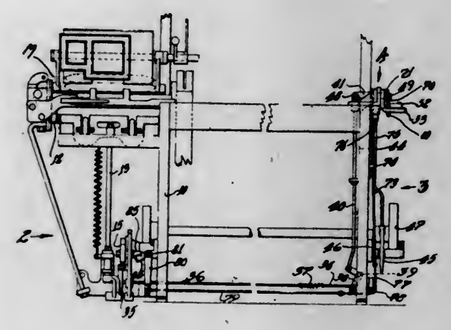
1,811,423. METHOD AND APPARATUS FOR FILLING MOLDS. JAMES W. BRUNDAGE, Akron, Ohio, assignor to John R. Gammeter, Akron, Ohio. Filed May 27, 1927. Serial No. 194,647. 17 Claims. (Cl. 18—30.)



15. Molding apparatus comprising means for movably supporting a mold, means for moving the mold thereon, and means for pressing stock into the mold as the mold moves past the said pressing means, the means for moving the mold comprising a fluid-pressure cylinder, conduits for charging and venting the two ends of the cylinder and a fine-adjustment throttle-valve for regulating the venting of one end of said cylinder to regulate the speed of the mold's movement past the pressing means, one of the conduits being provided with a by-pass and with a valve within the span of the by-pass, and the throttle valve being mounted in the by-pass.

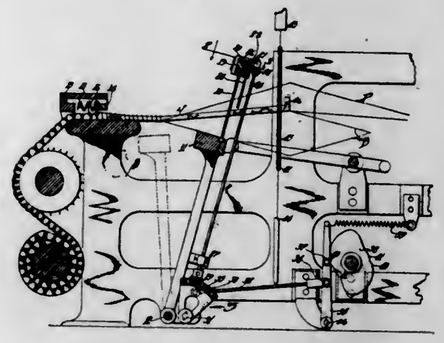
1,811,424. SHUTTLE THREADER. LOUIS ALEXANDRE CADORET, Pawtucket, R. I. Filed July 17, 1930. Serial No. 468,714. 4 Claims. (Cl. 139—222.)

1. In a shuttle threader, a vertical wall, outwardly thickened at its front end, the front face of said thickened end being at an acute angle to the inner side of said wall and at an acute angle to the top of said wall, said thickened wall end having a recess, a vertical thread slot from said recess through the inner side of said wall and a vertical thread slot from said recess through the outer said of said thickened wall end, the portion of the latter in front of said recess and said slots terminating sufficiently above the bottom of the threader to allow entrance of thread into the recess and slots, and thread-tensioning means confined within said recess.



1,811,425. COMBINED SHUTTLE FEELER AND THREAD CUTTER. AUGUSTIN J. CHEVRETTE, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed July 22, 1929. Serial No. 380,181. 4 Claims. (Cl. 139—264.)

1. In a weft replenishing loom having a shuttle and a combined shuttle feeler and thread cutter and clamping unit pivoted above and behind the lay when the latter is in its forward position, a fixed operating member, and a lever device to cooperate with the operating member supporting said unit and movable in a vertical plane to effect shuttle feeling and movable in a horizontal plane under influence of the operating member to cause the thread clamp to move toward the selvage, a holder for the unit movable vertically pivotally connected thereto, said fixed means to cooperate with the unit and effective during vertical motion of the holder to cause pivotal movement of the unit in a direction toward the selvage.

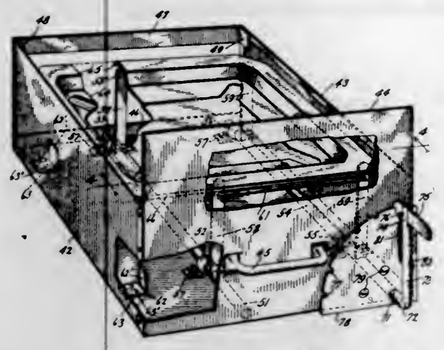


1,811,426. WEFT DETECTOR CONTROLLING DEVICE. AUGUSTIN J. CHEVRETTE, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 28, 1929. Serial No. 417,241. 5 Claims. (Cl. 139—230.)

1. In a weft replenishing loom, shifting shuttle boxes at one end of the loom having a normal running position and a replenishing position, weft replenishing mechanism associated with said shifting shuttle boxes, a weft detecting device at the other end of the loom, normally inoperative means to shift said shuttle boxes, said means being

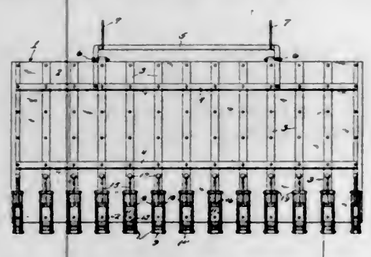
rendered operative by said weft detecting device upon indication of weft exhaustion, and means to render said weft detecting device inoperative whenever and so long as said boxes are removed from normal running position.

1,811,427. STATIONARY WIRE WILTON LOOM. EDWARD J. DACEY, Philadelphia, Pa., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed May 3, 1929. Serial No. 360,229. 6 Claims. (Cl. 139—47.)



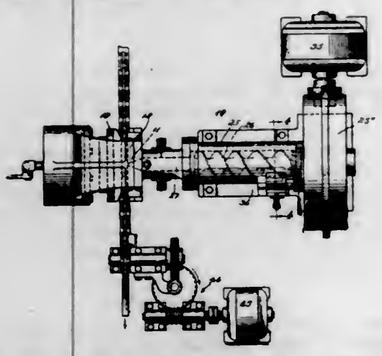
1. In a pile fabric loom, a stationary pile wire extending longitudinally of the fabric being woven and having a free rear end, a lay having a hand rail, a rack movable along the hand rail, fingers movable with the rack to engage the active pile yarn, means to move the rack laterally with respect to the lay to shift the active pile yarn from one side to the other side of the pile wire, said fingers being of such length that as the active pile yarn moves downwardly it will pass out of control of the fingers and when below the pile wire be free to move back to its original position.

1,811,428. BROILER. CLAUDE M. DIBBLE, Joliet, Ill., assignor to Moore Brothers Company, Joliet, Ill., a Corporation of Illinois. Filed Dec. 31, 1926. Serial No. 158,194. 9 Claims. (Cl. 126—41.)



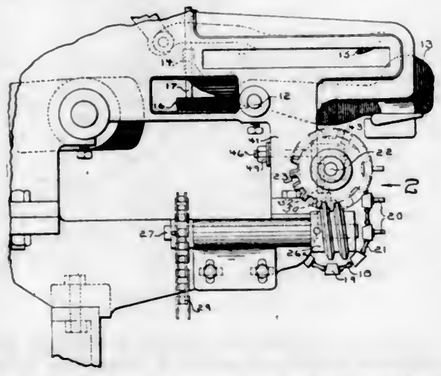
1. In a broiling oven, an oven compartment, a source of heat positioned within the compartment, a drawer

positionable within the compartment providing a closure therefor, a plurality of fingers mounted in the drawer



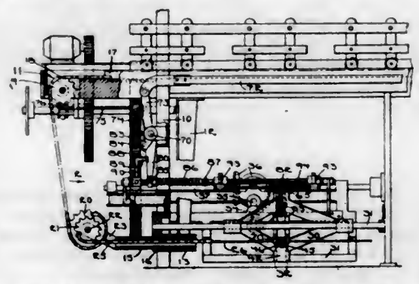
pivoted for rotation in vertical planes transverse the drawer, and a broiling tray slidingly supported by the fingers.

1,811,429. BRICK STACK CARRIER. ROBERT A. FONTAINE, Martinsville, Va. Filed June 16, 1928. Serial No. 285,912. 14 Claims. (Cl. 294—63.)



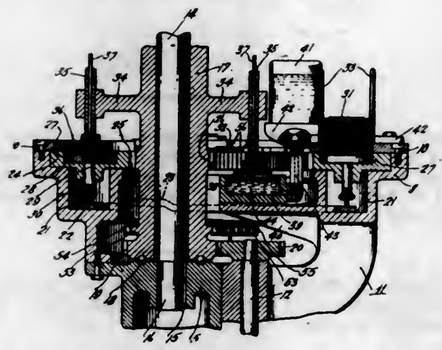
1. A brick carrier comprising a back member equipped with suspension means, a plurality of arm members carried by the back member and adapted to engage beneath a stack of bricks, and link and lever means cooperating with the back member for normally maintaining said arm members rigid with respect to the back member, said means being releasable.

1,811,430. MOLD FILLING APPARATUS. JOHN R. GAMMETER, Akron, Ohio. Filed Mar. 30, 1928. Serial No. 265,839. 11 Claims. (Cl. 18—30.)



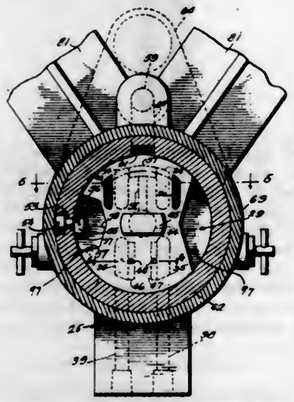
7. A mold filling machine for rubber heels, comprising a cylinder having a stock supply inlet adjacent one end and a die plate with a restricted discharge opening at the other end, a screw rotatable in the cylinder for propelling plastic rubber therethrough, a feed roller at the stock supply inlet to feed the rubber into the cylinder at a substantially constant pressure, spaced parallel guide members disposed in a plane adjacent and parallel to that of the die plate and adapted to support a flat mold for movement transversely of the discharge opening, the mold having successive series of cavities adapted to be brought into communication with the discharge opening, fluid-pressure means for maintaining the mold in surface contact with the die plate, and an endless belt for moving the mold on said guide members while the screw and feed roller are rotated.

1,811,431. DOBBY FOR LOOMS. ANTHONY D. GARGOLINSKI, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 23, 1929. Serial No. 357,544. 5 Claims. (Cl. 139—74.)



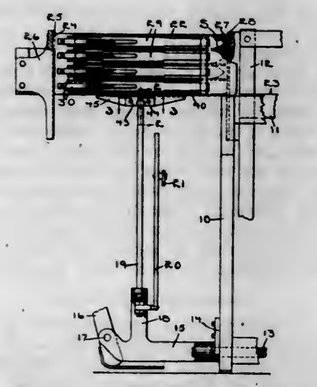
1. In a loom dobby having a set of dobby fingers pivotally mounted on a transverse support, a pattern chain cylinder under the fingers having an axis substantially parallel to the support, a pair of spaced feet, one on each side of the fingers, each foot having a slot therein the plane of which is substantially perpendicular to the axis of the cylinder, each foot also having a main bearing surface substantially parallel to the axis of the cylinder and an auxiliary surface at an angle to the main surface, bearing blocks in which the cylinder is rotatably mounted, holding means for the blocks passing through the slots and movable in the latter to place the blocks in different positions relatively to the fingers, said blocks having surfaces parallel to the axis of the cylinder and engaging the said bearing surfaces, said blocks having fins parallel to the slots to engage the auxiliary surfaces, and means to hold the blocks against the bearing surfaces.

1,811,432. STOPPING MECHANISM FOR NARROW WARE LOOMS. ELBRIDGE R. HOLMES, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed July 9, 1930. Serial No. 466,660. 7 Claims. (Cl. 139—336.)



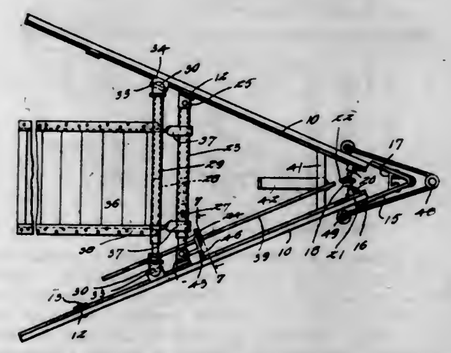
1. In a narrow ware loom, shuttle reciprocating devices, actuating mechanism therefor, a yieldable driving connection between said mechanism and said devices, said connection being disabled if normal movement of said shuttle reciprocating devices is prevented, and means for stopping the loom, said latter means being rendered operative by disablement of said driving connection.

1,811,433. COMPOUND LINING MACHINE. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 1, 1927, Serial No. 223,283. Renewed Feb. 26, 1931. 19 Claims. (Cl. 113—80.)



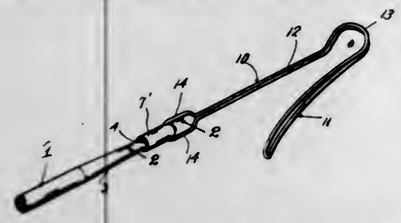
1. In a gasket lining machine for can ends having a lining applying station, the combination of a source of lining compound, continuously moving dies having the shape of the gasket to be formed and receiving lining compound from said source to form said gasket, a continuously moving can and carrier having a path of travel intersecting that of the dies, and means causing relative approach and retreat of the can ends and dies at such intersection to accomplish the application of the compond.

1,811,434. FLUID PRESSURE OPERATED VALVE GEAR SHIFTING MECHANISM. SAMUEL HANCE LEWIS, Richmond, Va. Filed Sept. 5, 1923. Serial No. 661,075. 10 Claims. (Cl. 121—41.)



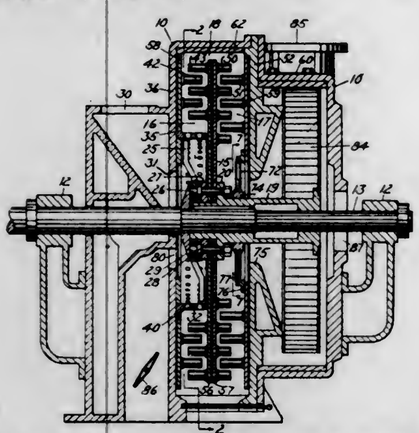
1. The combination with a cylinder, a piston mounted to reciprocate therein, and means for connecting the piston to the valve gear of a steam engine, of a valve seat provided with admission ports communicating with opposite ends of the cylinder and an exhaust opening communicating with the atmosphere, a valve engaging said seat and provided with a plurality of admission ports adapted to move progressively into and out of registration with the admission ports of said seat the admission port of said valve which initially moves into registration with one of the admission ports of said seat being of restricted area, said valve being further provided with an exhaust port adapted to afford communication between one port of said seat and the exhaust opening of said seat when the valve is moved a predetermined distance, and means for supplying fluid pressure to said admission ports.

1,811,435. DROP SHUTTLE BOX AND CONNECTER THEREFOR. CARL J. LINDEGREN, Providence, R. I., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 16, 1930. Serial No. 444,842. 8 Claims. (Cl. 139—182.)



1. In a loom having a lay, shifting shuttle boxes movable to different positions with respect to the lay, a box lifter, a ball formed on the lifter, and a socket member carried by the shuttle boxes and housing the ball, the ball and socket constituting a means of transmitting force from the lifter to the shuttle boxes.

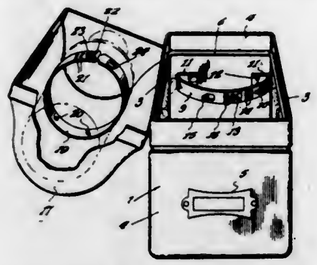
1,811,436. SNOWPLOW. ABRAHAM LUYSTER and CULVER P. LUYSTER, Muskegon Heights, Mich. Filed Nov. 7, 1929. Serial No. 405,402. 5 Claims. (Cl. 37—46.)



5. In a plow of the character described, two convergent wings spaced apart at their forward ends and pivotally and detachably connected to each other whereby the wings may be shifted into or out of a more or less convergent position, means adjacent the rear end of the plow whereby the wings may be held in angularly adjusted relation nearer to or further from each other and a metallic nose V-shaped in cross section permanently attached on one side to one wing of the plow and projecting forward therefrom but unattached to the other wing of the plow and extending to the adjacent edge of this wing said nose closing the gap between the wings.

1,811,437. STOCK AND POULTRY HOOK. THOMAS CLARENCE ORR, Willows, Calif. Filed Oct. 1, 1929. Serial No. 396,501. 2 Claims. (Cl. 119—152.)

1. A stock and poultry hook of the character described comprising a socketed thimble for mounting on a handle, a laterally extending flange on the thimble, a forwardly extending shank of less diameter than the flange connected thereto, a tubular sleeve having one end slidably and rotatably mounted on the flange, said sleeve extending over the shank in spaced relation thereto and having an end wall adjacent the end of the shank, said shank, the flange and the end wall being provided with longitudinally aligned openings, a threaded shank anchored in the thimble and extending through the aligned openings, a securing nut threaded on the forward end of the threaded shank in a manner to secure the sleeve in position and a hook extending forwardly from the sleeve.



1,811,438. PULVERIZING APPARATUS. ROBERT SANFORD RILEY and OLLISON CRAIG, Worcester, Mass., assignors to Riley Stoker Corporation, Worcester, Mass., a Corporation of Massachusetts. Original application filed Nov. 7, 1925, Serial No. 67,639. Divided and this applicaiton filed May 1, 1926. Serial No. 106,082. 5 Claims. (Cl. 83—11.)

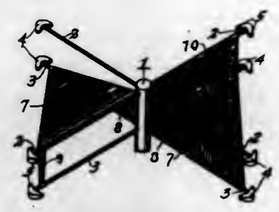
1. A pulverizing apparatus comprising a casing having an inlet and an outlet centrally located on opposite sides of the casing; means dividing the casing into two zones connected by an annular passage; hammers revolubly mounted adjacent the inlet in one zone to crush the material preliminarily; revolving beaters surrounding and concentric with the hammers which receive the material from the hammers and deliver it to the second zone through said annular passage; and beaters arranged in the second zone to pulverize the material as it travels inwardly towards the outlet.

1,811,439. LUNCH BOX. LOUIS SCHERZ and EMIL SCHERZ, Wilkes-Barre, Pa. Filed Apr. 2, 1929. Serial No. 351,978. 2 Claims. (Cl. 206—4.)

1. A lunch box comprising a body open at its top and having a bottom and upstanding walls, means in the body to removably secure a container, said means consisting of resilient jaws extending horizontally in said body and adapted to be drawn towards each other about a container, one jaw having openings in its free end portion

spaced longitudinally of the jaw and the other jaw having a bill at its free end engageable in a selected opening of the first jaw, finger holds projecting from said jaws to facilitate movement of the jaws towards each other, and a cover for said body.

1,811,440. WINDSHIELD WIPER. BERNARD J. SHEPARD, Brooklyn, N. Y. Filed Jan. 13, 1930. Serial No. 420,564. 2 Claims. (Cl. 15—255.)

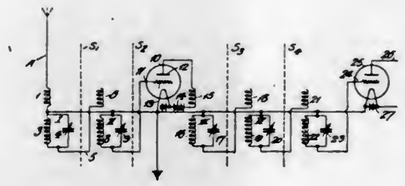


2. A wind shield wiper, comprising an elongated flat casing open at one edge only, a non-heat-conducting lining located in said casing and having rubberized opposite edge portions protruding beyond the open edge of the casing and adapted for contact with the surface of a wind shield to be wiped, and a heater element arranged in the fold of the lining and casing and disposed in direct alignment with the space between said wiper elements for radiating heat directly from the heater element to the surface confined between the wiper elements.

1,811,441. AIRPLANE PROPULSION DEVICE. SAM R. SMITH, South Bend, Ind., assignor of one-fourth to Paul G. Hoffman and one-fourth to Dorothy B. Hoffman, South Bend, Ind. Filed Nov. 13, 1929. Serial No. 406,957. 11 Claims. (Cl. 170—169.)

1. In a propulsion device, a rotatable shaft, spaced parallel inner and outer sets of radially extending arms carried by said shaft in balanced relation, and air displacing members carried by said shaft, the edges of each of said air displacing members extending from the inner end of an arm of the outer set to the outer end thereof, thence

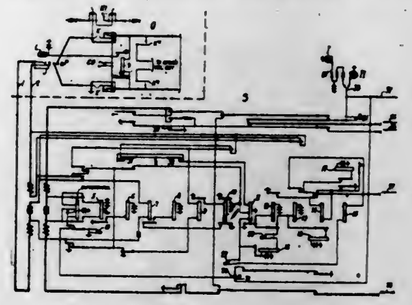
to the outer end of the parallel arm of the inner set, thence diagonally in counter rotation direction to the



outer end of an adjacent arm of the inner set, thence to the inner end of said last named arm, and thence to the point of beginning.

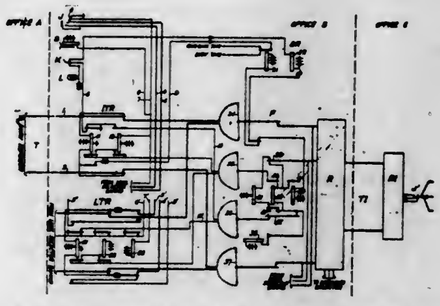
1,811,442. THERMOSTAT. WALTER O. SNELLING, Allentown, Pa. Filed Nov. 3, 1925. Serial No. 66,674. 7 Claims. (Cl. 297—15.)

5. In a thermostat, a temperature responsive element anchored at one end, spring means opposing movement of the free end of said element, the spring means being so shaped as to offer greater opposing force to movement of the said end in one direction than in the other, means for adjusting the resistance offered by said spring means, a member carried by said element and a second member fixed with respect to the anchored end so as to lie in the path of said member, one of said members being resilient.



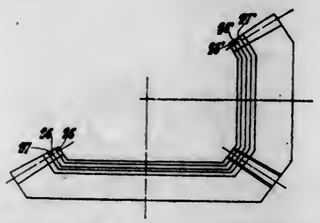
1,811,443. SYSTEM OF SELECTIVE SIGNALING. GEORGE A. SOMERSALO, New York, N. Y. Filed Aug. 15, 1927. Serial No. 212,872. 12 Claims. (Cl. 178—44.)

1. An electric wave receiving system comprising a number of tuning stages, connected in cascade means for inductively coupling these stages with substantial elimination of mutual impedances between adjacent stages, said means including an open coil, and means of amplification associated with these stages.



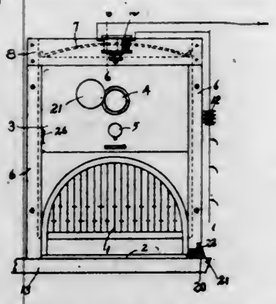
1,811,444. TOLL SERVICE TRUNKING SYSTEM. VICTOR S. THARP, Elmhurst, Ill., assignor to Reserve Holding Company, Chicago, Ill., a Corporation of Delaware. Filed Apr. 19, 1930. Serial No. 445,570. 15 Claims. (Cl. 179—27.)

9. In a toll transmission selector adapted to cooperate with connectors which either open or reverse the direction of current flow over a control circuit when a called line is connected with, a control circuit over which a current flow is maintained during the setting up of a con-



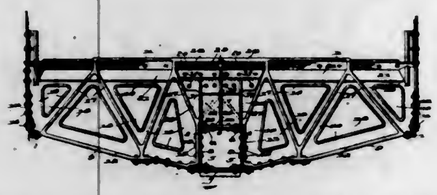
nection, and a switchover relay operative responsive to either the opening of or the reversal of current flow over said control circuit.

1,811,445. MULTIOFFICE TELEPHONE SYSTEM. VICTOR S. THARP, Elmhurst, Ill., assignor to Reserve Holding Company, Chicago, Ill., a Corporation of Delaware. Filed Apr. 30, 1930. Serial No. 448,701. 11 Claims. (Cl. 179—27.)



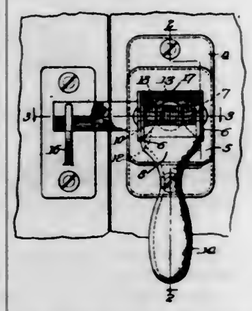
1. In a telephone system, an exchange, incoming trunk lines and outgoing trunk lines terminating in said exchange, a manual switchboard at the exchange for answering calls over said incoming trunk lines, and switching mechanism at said exchange for automatically extending incoming trunk calls over said outgoing trunk lines when said switchboard is unattended.

1,811,446. BEVEL WHEEL. GEORGES VEBER, Epinal, France, assignor to Roger Gabriel Louis Coutant, Vincennes, Seine, France. Filed Sept. 26, 1927, Serial No. 222,060, and in France Nov. 5, 1926. 1 Claim. (Cl. 74—41.)



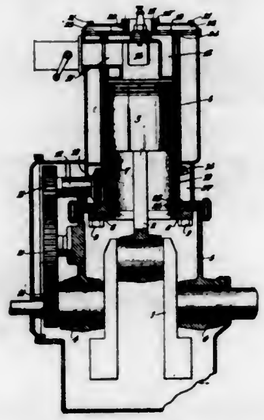
A bevel gear wheel, wherein the addendum cone and the dedendum cone have the same vertex and wherein the teeth are straight and symmetrical and have a section in the form of an involute, which remains the same the entire length of the tooth, so that the pressure angle varies from one end of the tooth to the other.

1,811,447. ROBBERYPROOF EQUIPMENT. PAUL F. WEST and EVERETT HOBART REED, Detroit, Mich. Filed Nov. 10, 1928. Serial No. 318,527. 6 Claims. (Cl. 20—1.01.)



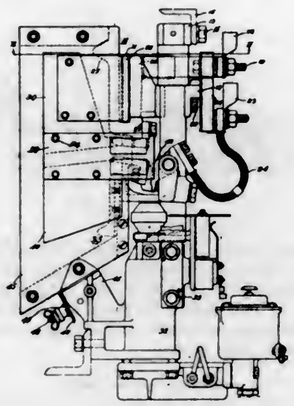
1. A robbery-proof apparatus of the class described, comprising in combination, a bullet-proof steel main plate, mounted in channels or grooves, and means to actuate said steel plate; and means to stop said main plate before it reaches a position that would injure any one's hand that may be underneath, at the time of its movement, leaving an opening at one end, and a sub-plate operated by a spring, and released by said main plate, after it has been stopped at the end of its travel, said sub-plate closing the opening left by said main plate.

1,811,448. RAILWAY CAR. WILLIAM E. WINE, Toledo, Ohio. Filed Apr. 11, 1929. Serial No. 354,358. 17 Claims. (Cl. 105—230.)



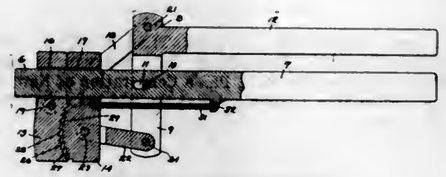
1. In a railway car, the combination with a center sill having a top cover plate, of a body bolster provided with a portion overlying the center sill in spaced relation to its cover plate, and load sustaining means interposed between and rigidly secured to the cover plate and the said portion of the bolster for bracing the latter.

1,811,449. LATCH. GEDOR W. ALDEEN, Rockford, Ill., assignor to National Lock Co., Rockford, Ill., a Corporation of Delaware. Filed Jan. 31, 1927. Serial No. 164,729. 10 Claims. (Cl. 292—224.)



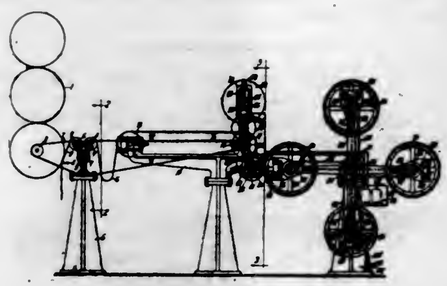
1. In a latch, the combination of a housing, a pivotally movable latch bar, an operating lever connected to said bar, and a spring disposed in said housing and in direct contact with both said lever and bar for yieldably holding both in predetermined position and so connected to said lever and bar that a movement of either from its respective predetermined position causes an increase in the potential of the spring acting upon the other.

1,811,450. SLEEVE VALVE INTERNAL COMBUSTION ENGINE. JOSEPH A. ANGLADA, Jenkintown, Pa. Filed Feb. 12, 1927. Serial No. 167,617. 6 Claims. (Cl. 123—80.)



1. In an internal combustion engine of the rotary sleeve valve type an outer cylinder, an inner stationary working cylinder insertable from below and having a water cooled combustion chamber formed integral with and closing its upper end, and extending adjacent said sleeve valve.

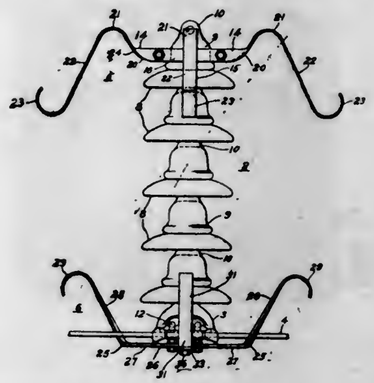
1,811,451. CONTROL APPARATUS. BASCUM O. AUSTIN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 26, 1925. Serial No. 18,635. 13 Claims. (Cl. 200—147.)



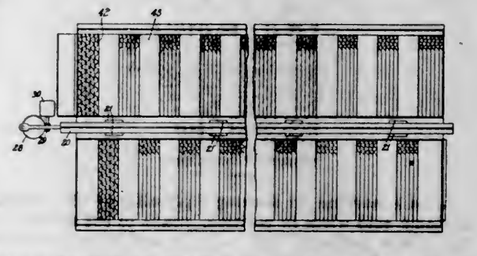
1. In an arc-rupturing device, in combination, a plurality of relatively movable arc horns, cores adapted to concentrate the lines of magnetic force induced by current flowing through the arc horns to provide an arc-rupturing field, said arc horns being looped about the cores to strengthen the arc-rupturing field as arcs travel along them.

1,811,452. PIPE WRENCH. JAMES E. BLALOCK, Pacific Palisades, Calif. Filed Aug. 21, 1928. Serial No. 301,003. 5 Claims. (Cl. 81—88.)

1. A wrench comprising a shank, one end of said shank being extended to provide a handle, a pair of opposed gripping jaws slidably mounted upon the shank above the handle, an actuating lever comprising a transverse portion pivoted to and extending across the shank and a longitudinal portion extending adjacent the handle, a link pivoted at one end to the uppermost of said jaws and at the other end to said transverse portion adjacent the same end thereof as that to which the longitudinal portion is affixed, and a link pivoted at one end to the lowermost of said jaws and at the other end adjacent that end of the transverse portion of the lever opposite the point of attachment of the other of said links.



1,811,453. APPARATUS FOR THE MANUFACTURE OF INNER TUBES. HENRY C. BOSTWICK, Kenmore, Ohio, assignor to The Akron Standard Mold Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 29, 1927. Serial No. 179,274. 23 Claims. (Cl. 154—7.)

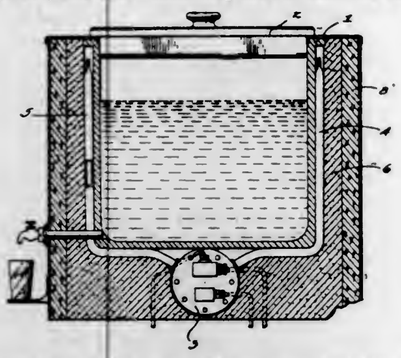


3. An apparatus for forming cylindrical blanks for use in the manufacture of inner tubes, comprising the combination of a calender, a drum and a pressure roller in contact therewith, the sheeted rubber passing directly from the calender to the pressure roller by which it is applied to tthe drum, and means for shifting the position of the drum relative to the line of feed of the sheeted rubber, said means including a split nut fixed at the axis of said drum and adapted to cooperate with threads on the hub of the drum.

1,811,454. FIELD CONTROL DEVICE. RICHARD W. CARLISLE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 29, 1928. Serial No. 289,319. 7 Claims. (Cl. 173—318.)

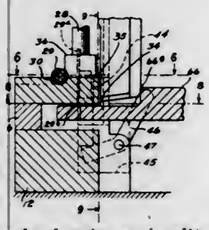
1. In combination, in a transmission-line device, an insulator and an upper arcing-horn structure therefor comprising an arm extending substantially parallel to the line and an arm extending transversely to the line, each of said arms having a supporting portion adjacent to the insulator, a portion extending upwardly from said supporting portion and a portion extending downwardly from said upwardly-extending portion to a position below said supporting portion.

1,811,455. REGENERATIVE AIR PREHEATER. GEORGE C. COOK, Millington, N. J. Filed Apr. 10, 1926. Serial No. 101,032. 6 Claims. (Cl. 257—6.)



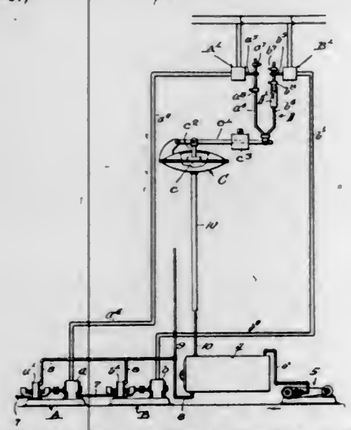
3. A regenerative preheater for air and the like in furnace plants, comprising an open-ended casing a regenerative mass therein consisting of continuous alternate plain and corrugated heat-interchanging plates affording uninterrupted channels between the said ends of the casing and all of said plates extending the full length of the corresponding casing walls; a pair of distributing hoods located respectively at the casing ends; means to effect a relative continuous reciprocation between the hoods and the channels afforded by the successive plates, partitions dividing said hoods longitudinally into transverse compartments and all of the plates extending to the planes in which the ends of the hoods and partitions thereof reciprocate, and said hoods also being entirely open at the portion contiguous to said mass to deliver fluid directly thereto, and having also adjacent rows of alternate openings and closures along the top staggered relatively to each other; and adjacent ducts contiguous to and conforming to tops of the respective hoods for supplying and removing air and gas through corresponding openings therein.

1,811,456. DISPENSING UNIT EMBODYING MECHANICAL REFRIGERATION. LLOYD G. COPEMAN, Flint, Mich., assignor to Copeman Laboratories Company, Flint, Mich., a Corporation of Michigan. Filed Apr. 30, 1928. Serial No. 273,786. 8 Claims. (Cl. 62—141.)



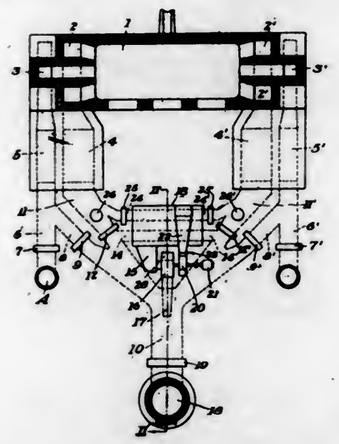
1. A refrigerating apparatus of the liquid dispensing type, comprising an integral container for receiving the liquid to be cooled and dispensed, an evaporator positioned in heat conducting relation with one of the walls

of said container for receiving and circulating a volatile refrigerant, and heat conducting branch members extend-



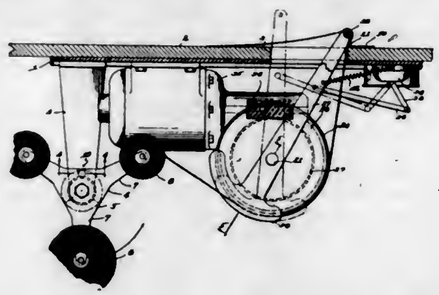
ing from said evaporator in heat conducting relation with other walls of said container whereby to effect equalization in the cooling of said liquid contents.

1,811,457. MACHINE FOR FORMING BEAD WIRES. CLARENCE DE PUY, Newark, and ROBERT BAINDLE, Jr., West Orange, N. J., assignors to Arcturus Radio Tube Company, Newark, N. J., a Corporation of Delaware. Filed May 16, 1929. Serial No. 363,472. 15 Claims. (Cl. 153—25.)



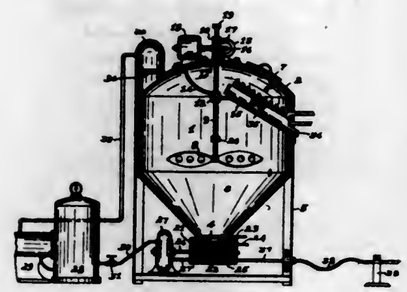
1. In a machine for forming a plurality of wires, means to clamp said wires in position, means to cut off some of said wires, means to bend some of said wires in one direction, and means to bend some of said wires in another direction, said cutting and bending operations being performed while the wires are clamped in position.

1,811,458. ELECTRIC SWITCH ACTUATING MECHANISM. AUGUSTUS C. DURDIN, Jr., Chicago, Ill. Filed Aug. 6, 1928. Serial No. 297,907. 24 Claims. (Cl. 200—5.)



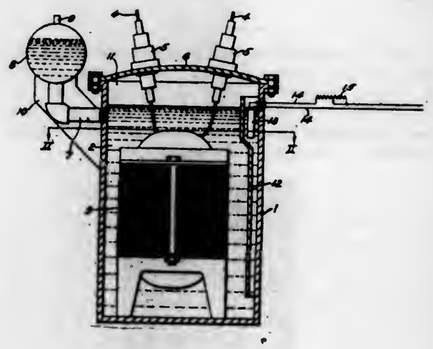
1. Mechanism for actuating a plurality of devices in alternate sequence, comprising a pressure device which is responsive to variations of pressure, and motion transmitting connections between said pressure device and the individual devices to be actuated thereby, said connections including alternately acting means for actuating said individual devices in alternate sequence.

1,811,459. REGENERATIVE HEATING SYSTEM. WALDEMAR DYRSSEN, Sharpsburg, Pa., assignor to Blaw-Knox Company, Blawnox, Pa., a Corporation of New Jersey. Filed May 1, 1928. Serial No. 274,221. 8 Claims. (Cl. 263—15.)



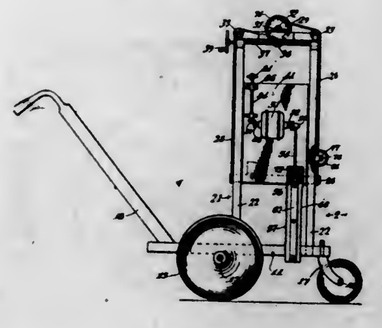
5. The combination with a regenerative heating system including a checker chamber, of a preheater for the regenerative heating system, and means for passing a regulable portion of the waste gases from the checker chamber through the preheater.

1,811,460. FABRIC PULLING MACHINE. HORACE M. EATON, Nahant, Mass., assignor of one-half to George L. Preble, Lynn, Mass. Filed Oct. 12, 1927. Serial No. 225,718. 7 Claims. (Cl. 242—55.)



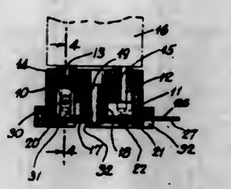
1. Apparatus for pulling a run of adhesively coated material from a roll of said material, comprising a friction roll adapted frictionally to engage the run of material, means to impart movement to said friction roll, control means for said first-named means, a rotatable support adapted to hold a plurality of rolls of coated material and to permit rotation of the same, said support being positioned to cause a run of said material to engage a segmental surface of the friction roll, said support being movable to a plurality of positions to supply coated runs of different characteristics to the friction roll and means adapted automatically to lock the support in each of its several positions.

1,811,461. PULVERIZED FUEL CARBURETOR. HENRY L. ELLIOTT, Claysville, Pa., assignor of one-third to Thomas W. Henderson, Washington, Pa. Filed Feb. 19, 1929. Serial No. 341,100. 4 Claims. (Cl. 302—44.)



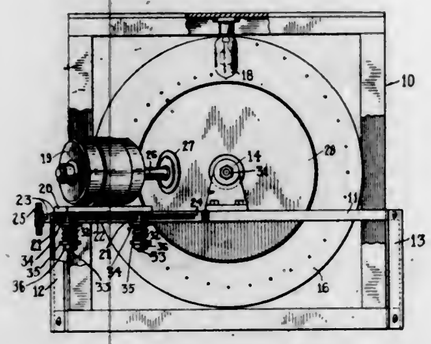
1. In a pulverized fuel carbureting apparatus of the character described, a tank for storing the pulverized fuel, a mixing chamber disposed below and communicating with said tank, means for feeding said pulverized fuel from said tank to said mixing chamber, a condenser element mounted in said tank for dehydrating the air and pulverized fuel in said tank, a compressed air element drawing its air supply from said tank, and means for passing the compressed air through said mixing chamber for conveying the pulverized fuel from the latter.

1,811,462. GAS EXCHANGE SYSTEM. OTTO H. ESCHHOLZ, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 6, 1927. Serial No. 211,090. 8 Claims. (Cl. 23—2.)



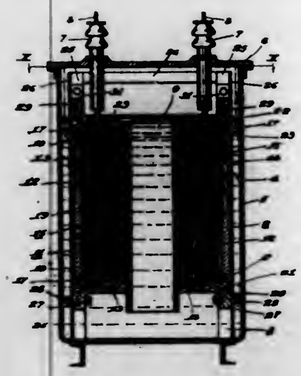
1. In the art of controlling interchange between a gaseous medium and a contacting liquid medium in which an electrical translating device is immersed, the step which consists in elevating the temperature of said liquid medium in a local region only independently of the heat generated by said translating device for transferring a constituent of said gaseous medium to said liquid medium.

1,811,463. HEDGE TRIMMER. ISRAEL EVANS, San Bernardino, Calif. Filed June 20, 1928. Serial No. 286,783. 11 Claims. (Cl. 56—237.)



1. A hedge trimmer comprising a movable carriage, a framework carried thereby, a platform vertically slidable upon said framework, a serrated knife guard extending from said platform, a serrated knife slidable longitudinally upon said guard, and means carried by said platform for reciprocating said knife upon the guard, said platform being hingedly supported to permit its being positioned optionally with the guard and knife disposed horizontally or vertically.

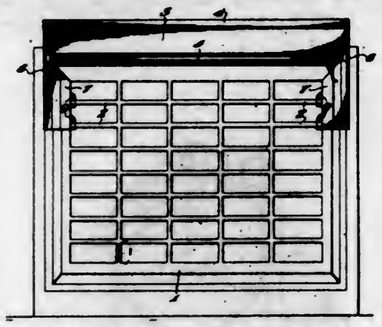
1,811,464. SOCKET. JOHN GELOSO, New York, N. Y., assignor, by mesne assignments, to Pilot Radio & Tube Corporation, Brooklyn, N. Y., a Corporation of Delaware. Filed June 15, 1928. Serial No. 285,517. 1 Claim. (Cl. 173—328.)



A socket for a vacuum tube, comprising a casing having a series of chambers formed interiorly thereof adjacent its periphery, apertures disposed in the top of said casing, forming the termination of said chambers, an aperture formed centrally in the top of said casing and merging into a smaller aperture extending to the base of said casing, a carrier plate positioned at the base of said casing for enclosing the chambers therein, resilient conductor members positioned in the respective chambers for contacting with the prongs of a vacuum tube passing through the apertures leading thereto, said conductors being fixed intermediate their ends to said carrier member and extending radially from said carrier member for forming contacts with elements in a radio circuit, said conductors being adapted to rest in cutout portions along the periphery of the casing at the base thereof, an aperture disposed centrally of said carrier in line with the central aperture of the casing, and a rivet for fastening the casing and said carrier at their central apertures, and a cutout portion on the outer periphery of said carrier, and a projection in the base of said casing for positioning the carrier, so as to locate the contact members in their proper chambers, and to prevent displacement thereof.

1,811,465. TELEVISION DEVICE. JOHN GELOSO, New York, N. Y., assignor, by mesne assignments, to Pilot Radio & Tube Corporation, Brooklyn, N. Y., a Corporation of Delaware. Filed Dec. 24, 1928. Serial No. 328,076. 8 Claims. (Cl. 178—6.)

1. The combination of a scanning disc, a motor having an armature shaft, a friction element on said shaft adapted to engage said disc to drive the same, a carriage for supporting said motor, and means for moving said carriage in a direction parallel to the plane of said disc.

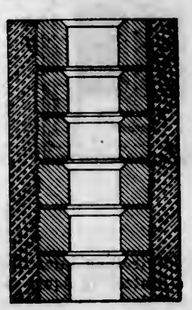


1,811,466. CURRENT-LIMITING REACTOR. ROBERT B. GEORGE and HOMER B. WEST, Sharon, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 18, 1929. Serial No. 393,564. 6 Claims. (Cl. 175—361.)

1. In a current-limiting reactor, means for conducting the stray magnetic flux along the periphery of said reactor coil when energized, said means comprising parallel groups of continuous iron laminations attached to the periphery of said reactor and formed integral therewith.

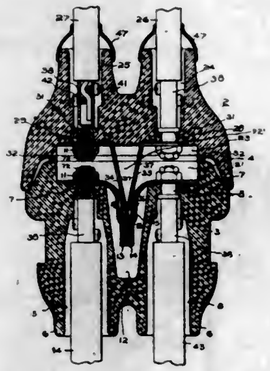
1,811,467. FURNACE REGISTER SHIELD. JOSEPH L. GILLMAN, Jr., Columbus, Ohio, assignor to The W. E. Lamneck Company, Columbus, Ohio, a Corporation of Ohio. Filed July 24, 1930. Serial No. 470,397. 2 Claims. (Cl. 98—108.)

1. A shield for furnace registers, formed of sheet metal, comprising a body of channel form in cross section adapted to bear against a margin of a register and extending therefrom at an obtuse angle, end bracket walls joined with said body, each wall having an inturned flange to bear against the top portion of the side margin of the register, and



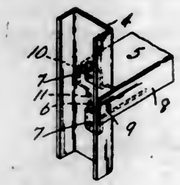
one or more tangs extending laterally therefrom of hook form to engage with the lattice-work of a register for slip-on connection therewith.

1,811,468. MOTOR HEAT INDICATOR. HENRY C. HEBIG, Hoffmans, N. J., assignor to Harrison Hurlbert Boyce, Jericho, N. Y. Filed Feb. 10, 1928. Serial No. 253,297. 13 Claims. (Cl. 116—114.)



1. In a device for indicating the heat condition within an automotive radiator, having a mechanical indicating element, a casing for housing said indicating element, and a cylindrical magnifying means within said casing and adjacent said indicating element.

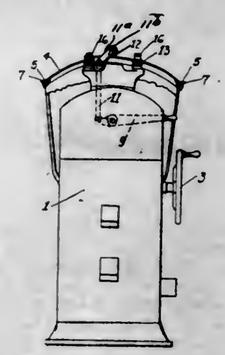
1,811,469. METHOD OF MAKING COMPOSITE DISKS. WILLARD H. KEMPTON, Wilkinsburg, and THOMAS C. ROANTREE, East Pittsburgh, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed June 22, 1927. Serial No. 200,666. 4 Claims. (Cl. 74—28.)



1. The method of manufacturing composite disks consisting of metal hubs and rims of laminated material comprising providing a plurality of hub portions, molding a single rim portion about the said hub portions and cutting the blank so formed transversely to form disks.

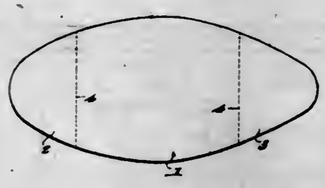
1,811,470. CABLE TERMINAL. SAMUEL B. KRAUT, South Bend, Ind., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 4, 1928. Serial No. 251,854. 3 Claims. (Cl. 173—353.)

1. A quick-disconnecting cable terminal comprising a top member and a bottom member, said top member having a depending flange adapted to fit down over said bottom member, the top member having a recessed inner portion and a plurality of channels communicating with said recess, bushings disposed in said channels, connectors extending through said bushings, the bottom member having an inner recessed portion and a plurality of openings communicating therewith, bushings disposed in said openings, and connectors extending through said bushings and coacting contact members disposed in said recesses.



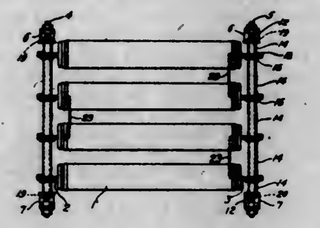
1,811,471. METAL FURNITURE AND THE LIKE. OSCAR J. LARSON and JAMES RICHARD JONES, Jamestown, N. Y., assignors to Art Metal Construction Company, Jamestown, N. Y. Filed Feb. 16, 1929. Serial No. 340,602. 5 Claims. (Cl. 312—141.)

1. In a sheet metal furniture and the like, a pair of spaced walls, a pair of posts extending laterally toward one another from said spaced walls, a cross bar fitted between and secured to said posts at its upper and lower edges between the forward and rear faces of each post, said bar having an extension at each end abutting and secured to one of said faces of the adjacent post.



1,811,472. DOUGH MIXER. FRANK X. LAUTERBUR and EDWARD J. LAUTERBUR, Sidney, Ohio. Filed June 30, 1926. Serial No. 119,706. 6 Claims. (Cl. 220—36.)

1. In combination with a mixing machine, a bowl element pivotally mounted on a fixed axis, walls of said bowl having upper edges arcuately shaped along arcuate lines formed with said fixed axis as a center, a cover for said bowl, having a contour similar to that of the upper edges of said walls, depending portions of said covers adapted to seat within said bowl walls to form a tight closure, and

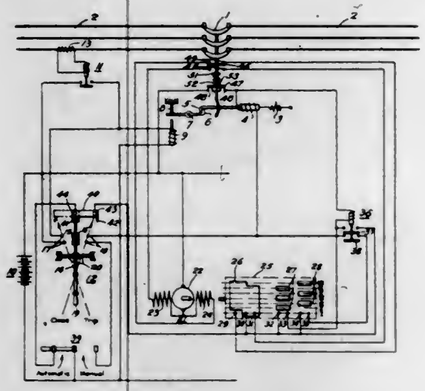


means for elevating said cover so as to permit said bowl to be tilted from under said depending portions of said cover.

1,811,473. TAP FOR SHOES. GILMORE MANDELL MELLOR, Oak Park, Ill., assignor to The American Oak Leather Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Nov. 18, 1929. Serial No. 407,870. 1 Claim. (Cl. 36—25.)

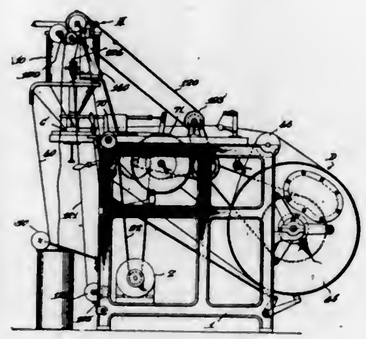
A tap for use in the manufacture or repair of shoes comprising a blank of ovate outline forming a composite half sole and heel lift, the intermediate portion of said blank with one end portion forming a tap sole for attachment to a pointed toed shoe and the other end, with the intermediate portion, forming a tap sole for attachment to a blunt toed shoe.

1,811,474. LOCKING DEVICE. HARRY C. NAGEL, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 8, 1927. Serial No. 224,878. 5 Claims. (Cl. 207—63.)



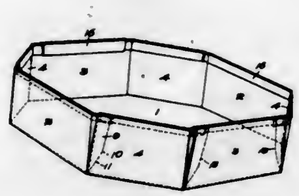
1. In a resistance device, the combination with a frame comprising a plurality of screw-threaded rods, of a resistor element provided with a plurality of ears having open slots in one side whereby the resistor element may be mounted upon the screw-threaded rods from a side position, a plurality of flanged members disposed upon the rods with their flanged portions extending over one side of said ears, and means for holding said ears and said flanged member in locking relation to each other.

1,811,475. SPIKE DRIVING APPARATUS. GUSTAVE M. NELL, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 12, 1929. Serial No. 354,514. 1 Claim. (Cl. 145—1.)



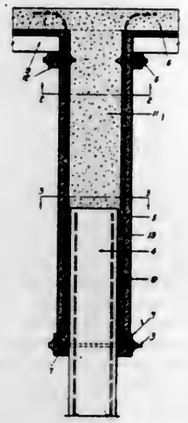
A punch formed at one end with a shank for insertion into a power operated percussive machine, the portion of the punch remote from said shank being cut away in planes at right angles to one another to form a penetrating portion substantially square in cross section, the cut away portion on two opposed sides being of greater extent than on the two other sides thereby to provide advance projections for limiting the penetration of said punch.

1,811,476. CIRCUIT INTERRUPTER CONTROL SYSTEM. ALFRED J. A. PETERSON, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 15, 1926. Serial No. 102,206. 7 Claims. (Cl. 175—294.)



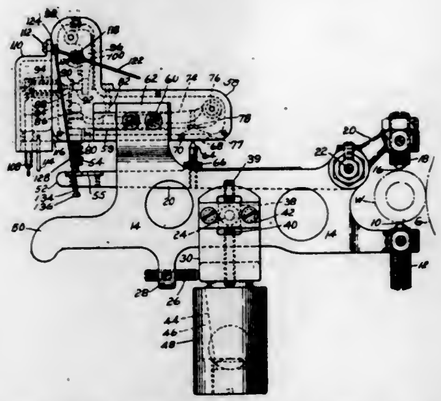
1. In an electrical system, in combination, a circuit interrupter, closing means and tripping means therefor, automatic means for rendering the closing means operative, a manually operable switch having a neutral position and two operative positions, means for returning said switch to and maintaining it in its neutral position after an actuation thereof to either of its operative positions, means cooperating with said switch when it is actuated to one of its operative positions to render the closing means operative, means cooperating with said switch when it is actuated to the other of its operative positions to render the tripping means operative, and a contact member actuated by said switch when said switch is actuated from its neutral position to the operative position other than the operative position to which it was last previously actuated, but unaffected by the actuation of said switch to the same operative position to which it was last previously actuated and by the return of said switch from either of its operative positions to its neutral position, said contact member being adapted to render the aforesaid automatic means operative when the said manually operable switch is actuated to said one of its operative positions to render the circuit interrupter closing means operative, and to render said automatic means inoperative when said switch is actuated to its other operative position to render the tripping means effective, and a transfer switch for selectively rendering either the automatic means or the manually operable switch ineffective to operate said closing means.

1,811,477. RIBBON COVERING MACHINE. GEORGE LINCOLN PREBLE, Lynn, Mass., assignor to Parco Specialty Co., Lynn, Mass., a Corporation of Massachusetts. Filed Nov. 7, 1927. Serial No. 231,439. 4 Claims. (Cl. 154—37.)



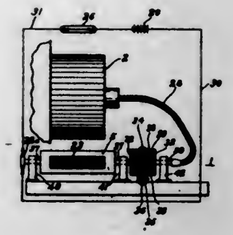
1. Apparatus for applying a covering strip to a ribbon which has a portion adjoining one margin adhesively coated and the remainder uncoated, said apparatus comprising a guide passage for the ribbon, a guide passage of smaller width for the covering strip arranged to direct the strip toward the coated portion of the ribbon, and a roller adapted to receive the ribbon and strip wrapped thereabout in superimposed relation, a pair of rollers, means yieldably urging said rollers toward each other, said pair of rollers being arranged to receive therebetween the strip and ribbon as they leave the first named roller.

1,811,478. BOX AND COVERING BLANK THEREFOR. RICHARD P. SECKENDORF, Somerville, Mass., assignor to The Cambridge Paper Box Co., Cambridge, Mass., a Corporation of Massachusetts. Filed Apr. 4, 1929. Serial No. 352,542. 6 Claims. (Cl. 229—30.)



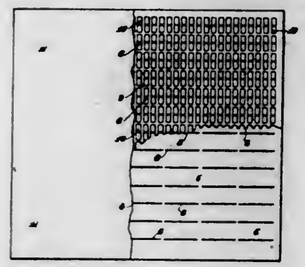
1. A covered box comprising a box proper having a bottom and at least three upturned side walls extended in different directions, and a box covering comprising a blank applied to said bottom and with as many outwardly extended flaps as there are box sides, one of more of said flaps initially upturned having both their edges winged to overlap adjacent portions of adjoining box walls, at least one of said flaps for final upturning having both edges inwardly tapering, and at least one intermediate flap provided with one winged and one tapering edge covering said box proper and the walls thereof.

1,811,479. REENFORCED CONCRETE PILE CONSTRUCTION. HARRY E. SQUIRE, Oakland, Calif., assignor of one-half to Frank G. White, San Francisco, Calif. Filed Nov. 1, 1927. Serial No. 230,247. 6 Claims. (Cl. 61—50.)



1. The method of extending a driven pile to a predetermined position which comprises positioning an extension on said pile, said extension having a loose fit with respect to said pile, supporting said extension on said pile, and adjusting said extension vertically and laterally to said predetermined position.

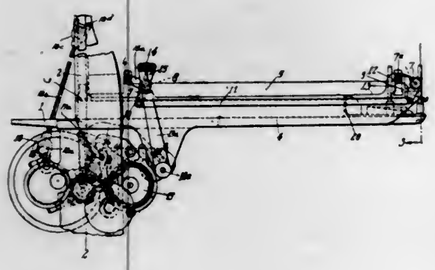
1,811,480. FEELER CONTROL GAUGE. SIDNEY E. STOCKWELL and ALFRED E. MURDOCK, Hartford, and CHARLES J. WINZIG and ERNEST F. MORRIS, West Hartford, Conn., assignors to The New Departure Manufacturing Company, Bristol, Conn., a Corporation of Connecticut. Filed Dec. 13, 1927. Serial No. 239,768. 12 Claims. (Cl. 51—165.)



1. In a device of the character described, a gauge housing, a lever pivoted in the gauge housing, an arm pivoted in the housing and having an electric contact making member, a cooperating contact member, a spring for pressing the arm in a direction to bring the contact members together to complete an electric control circuit of the machine, a trigger bar mounted on the lever for latching or releasing the arm, a lever outside the housing and having a feeler for engaging a work-piece during machining, means for transmitting movement from the feeler lever to the lever in the housing, and means actuated by the feeler lever for moving the arm to latched position; substantially as described.

1,811,481. STROBO-ROTOSCOPIC DEVICE. MORRIS STONE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 17, 1927. Serial No. 240,840. 10 Claims. (Cl. 88—14.)

1. An instrument for observing the successive phases of a periodic motion comprising the combination with means for periodically flashing a light, and means for periodically exposing said phases to be viewed only during said flashing periods.

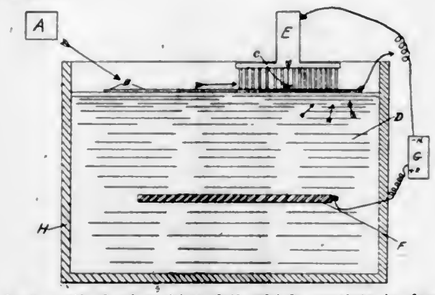


1,811,482. ELECTROSTATIC ACOUSTIC AMPLIFYING DEVICE. CLIVE OSBORNE TAYLER, Victoria, British Columbia, Canada. Filed Apr. 9, 1930. Serial No. 442,907. 2 Claims. (Cl. 179—111.)

1. In an electric static acoustic amplifying device the combination comprising, a base member consisting of a sheet of metal rectangular in form and having a series of parallel lines of narrow slots formed therein, said slots being in spaced apart relation in said lines and positioned transversely of said sheet, said member being coated with insulating varnish on its operative edges and surface, a sheet of insulating fabric of corresponding rectangular form and size and having a series of clean edged rectangular apertures in spaced apart relation and positioned side by side and end towards end and in such spaced relation that the width of insulation between adjacent apertures is less than half the width of the said aperture, the relative positions of the two said sheet members being such that the narrow slots in the one span the apertures in the other at a point intermediate of their ends, a third sheet member corresponding in form and size with the other said members and comprising a film of super-thin metal, said metal film having a coating of insulating varnish on one surface, the varnished surfaces of the two metallic members aforesaid being firmly cemented to the respective surfaces of the said insulating member, whereby when an electric wave impulse of suitable frequency is passed through the two said metallic members a sound vibration will be set up by the said super-thin member

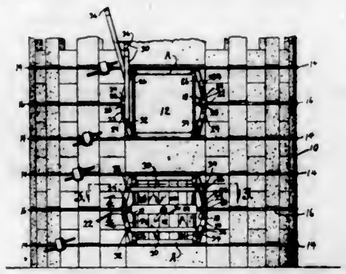
within the said apertures and emitted through the said narrow slots in addition to the sound propagated by the outward face of the vibrating member.

1,811,483. CLAMP FOR PAPER CUTTERS. WILLIAM L. VALIQUETTE, Dayton, Ohio, assignor to The Harris-Seybold-Potter Company, Dayton, Ohio, a Corporation of Delaware. Filed May 11, 1927. Serial No. 190,579. 6 Claims. (Cl. 164—45.)



1. In combination with a table and means for clamping paper thereon adjacent an edge of the paper to be cut, a pressure frame and means for suspending same in horizontal alignment with the table, and for imparting parallel movement to said frame with relation to the table, a trigger arm secured to said means for holding the frame in suspended position and means operated by the clamp operating mechanism to release said trigger arm ahead of the engagement of the clamping means with the paper, for the purpose described.

1,811,484. SAFETY DEVICE FOR AUTOMOBILES. JOHN H. WESTLUND, Marshalltown, Iowa. Filed July 11, 1927. Serial No. 204,784. 5 Claims. (Cl. 180—83.)



1. In combination with a vehicle having a motor thereon, a device of the character disclosed comprising shut off means for stopping said motor, starting means for starting said motor and movable means mounted on the extremities of said vehicle, said movable means being associated with said shut off means and with said starting means whereby movement of the movable means will operate the shut off means and lock it in shut-off position and movement of the starting means to again start the motor will release the shut off means in readiness to be again operated by the movable means.

1,811,485. METHOD OF FORMING METAL FOILS. GIBSON YUNOBLUT, Dayton, Ky., and HARRY C. FISHER, Cincinnati, Ohio, assignors to The Richardson Company, Lockland, Ohio, a Corporation of Ohio. Filed Jan. 9, 1925. Serial No. 1,456. 8 Claims. (Cl. 204—1.)

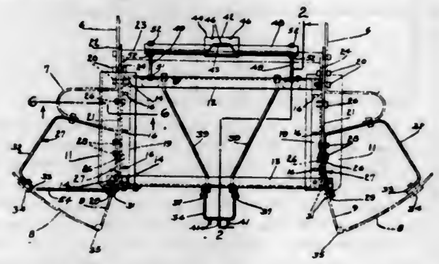
1. A method of making foil which consists in forming an emulsion of finely divided metal, driving off the emulsifying agent while same is supported on a liquid, and uniting the film into a foil by establishing contact therewith to make of the film a cathode, said film being supported at this stage particularly, on an electrolyte.

1,811,486. SILO DOOR FRAME AND LADDER CONSTRUCTION. SIGURD E. ANDERSON, Des Moines, Iowa. Filed Dec. 18, 1929. Serial No. 414,963. 8 Claims. (Cl. 72—6.)

1. In a silo door frame and ladder construction a frame member, means for attaching the sides of said frame member to the ends of a pair of spaced silo rods and ladder step members extending across said door frame from side to side thereof.

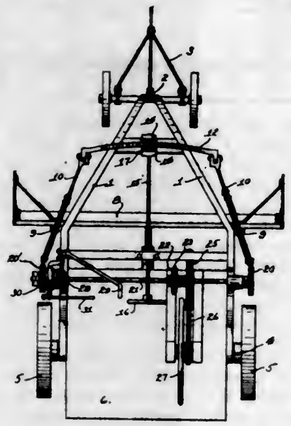
1,811,487. HARD FACING ALLOY. ELMER C. BELDING, Whittier, Calif., assignor to National Tool and Metals, Incorporated, Torrance, Calif., a Corporation of California. Filed Apr. 16, 1929. Serial No. 355,662. 2 Claims. (Cl. 75—1.)

1. A hard facing alloy comprising fifty-five per cent tantalum, four per cent molybdenum, forty-one per cent tungsten.



1,811,488. SUPPORTING MEANS FOR LOOM PICKER SPINDLES. JOHN BERNINI, Allentown, Pa. Filed May 10, 1930. Serial No. 451,213. 11 Claims. (Cl. 139—158.)

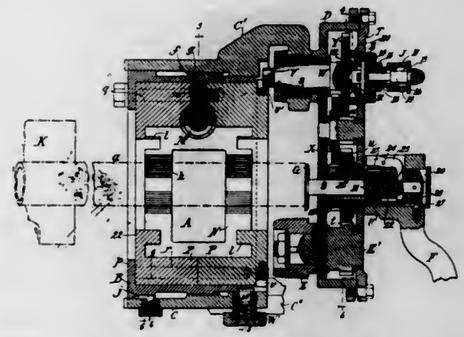
1. Picker-spindle supporting devices for a loom having, in combination, guiding means holding the spindle



in parallel with the lay, a step limiting endwise movement of the spindle in one direction, and a wedge acting upon the spindle to force it against the step.

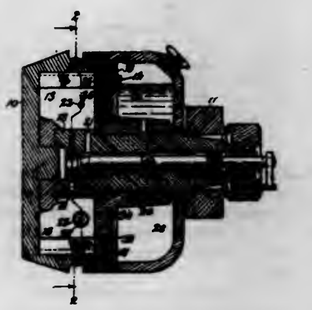
1,811,489. TRUNK RACK. SIDNEY B. BLAKELY, Minneapolis, Minn., assignor to Durkee-Atwood Company, Minneapolis, Minn., a Corporation of Minnesota. Filed May 31, 1930. Serial No. 457,798. 5 Claims. (Cl. 224—29.)

1. A trunk rack including spaced-apart supporting plates having means for securing a trunk thereto, means for connecting said supporting plates with the frame of an automobile, a laterally disposed member adjustably connected with said plates and situated above and forwardly thereof, and a bracket adapted to partially encircle said member and having means for connecting it with the vehicle body, said bracket having an adjustable connection with said member.



1,811,490. LAND GRADER. EDGAR P. BROWN, Watsonville, Calif. Filed Feb. 7, 1930. Serial No. 426,540. 5 Claims. (Cl. 37—155.)

5. A land grader comprising a frame; a blade movably carried thereby; a horizontal shaft rotatably mounted upon said frame; a hand wheel connected with said shaft; a pair of endless flexible members running over and operated by said shaft, one run of each member being connected with one end of said blade; and means for separably connecting one of said members with said shaft.

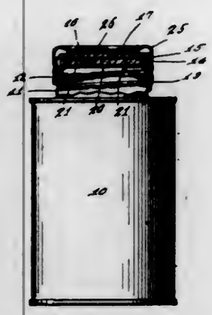


1,811,491. PLANETARY PIPE-THREADING TOOL. THEODORE M. BRUBACK and DE LOS E. HIBNER, Jr., Du Bois, Pa. Filed July 3, 1928. Serial No. 290,176. 15 Claims. (Cl. 10—154.)

1. A portably planetary pipe-threading tool comprising a stationary body and means for locking it on the pipe, a casing rotative around and receiving said body, a rotary multiple thread cutter, a mounting for said cutter movable with respect to said casing for feeding the cutter toward the pipe axis, a crank for rotating said cutter,

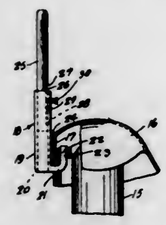
gearing driven by said crank for rotating said casing around the body to advance the cutter in a planetary course around the pipe, and means for limiting such planetary movement to one revolution.

1,811,492. SHOCK ABSORBER. ANTHONY B. CASPER, Buffalo, N. Y., assignor to Houde Engineering Corporation of Buffalo, N. Y., a Corporation of New York. Filed July 26, 1929. Serial No. 381,164. 4 Claims. (Cl. 188—89.)



1. A wall arranged between a working chamber and a replenishing chamber and provided with an opening having an internal screw thread, and a plug having an external screw thread engaging the internal thread of said opening, said plug being fixed in said opening and parts of the opposing faces of said threads being out of engagement with each other throughout their length to such an extent that a helical passage is formed between said plug and partition which will permit the passage of air from the working chamber to the pressure chamber but prevent the passage of liquid therethrough.

1,811,493. LIQUID CONTAINER. MOREY D. COCHRAN, Indianapolis, Ind., assignor to Industrial Solvents, Inc., Indianapolis, Ind., a Corporation of Indiana. Filed Mar. 14, 1931. Serial No. 522,583. 6 Claims. (Cl. 15—134.)

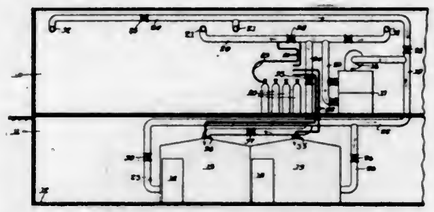


1. A container for liquids, comprising a hollow body having an opening at its top, a disk of absorbent material supported over said opening, and means for regulating the supply of liquid to said disk when the container is inverted, said means comprising two baffles

and an interposed layer of porous material, each of said baffles having one or more liquid-passing holes, any hole or holes in one baffle being out of alinement with the

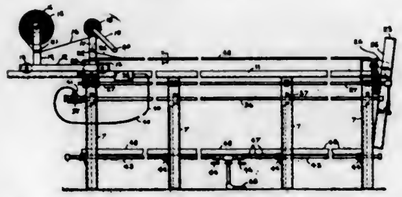
hole or holes in the other baffle whereby liquid will be directed to flow laterally through said layer of porous material.

1,811,494. FENDER PROTECTOR. JOHN J. CONWAY, Bridgeport, Conn., assignor to The Acme Shear Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Jan. 19, 1931. Serial No. 509,771. 3 Claims. (Cl. 116—31.)



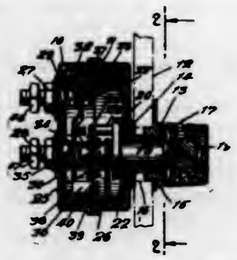
1. A fender protector comprising a body, means for securing said body to a fender, upright indicating means adjustable vertically through said body, means to hold said indicating means in adjusted position, and means to prevent withdrawal of the adjustable indicating means from the body.

1,811,495. MULTIPLE-IMAGE CAMERA. HAROLD N. COX, Glen Ridge, N. J., assignor to Cox Multi-Color Photo Company, Pittsburgh, Pa., a Corporation of Delaware. Filed July 25, 1928. Serial No. 295,256. 1 Claim. (Cl. 88—1.)



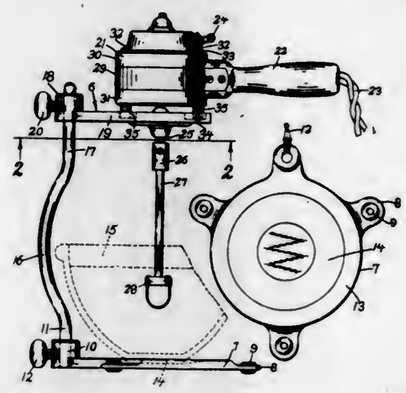
A lens system for multiple-image work adapted to serve interchangeably with a single-image lens of given focal length and width of aperture, and to project upon a film and within the area covered by the single-image lens multiple-images of equal angle of view, such system including a plurality of identical lens units, of fixed aperture symmetrically spaced about an axis, the focal length of which lenses is substantially $\frac{1}{2}n \times w$, in which n= the numerical aperture of the lens units of the multiple-image system, and w=the width of the film area.

1,811,496. EQUIPMENT FOR TREATING PERISHABLE PRODUCTS. FRED JOHN DAY, Los Angeles, Calif., assignor to Pre-Cooling Car Service Co., Los Angeles, Calif., a Corporation of California. Filed July 7, 1928. Serial No. 290,971. 7 Claims. (Cl. 62—24.)



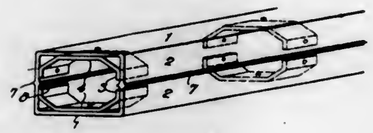
1. In apparatus of the class described, the combination of a railway track, a fixed storage room located in proximity to the track, a refrigerator car on the track in proximity to the storage room and provided with ice bunkers, means for establishing air connection between the refrigerator car and the storage room, and means exterior of the storage room for maintaining an air circuit through said refrigerator car and said storage room, for equalizing the temperature in the storage room and in the refrigerator car.

1,811,497. CONTINUOUS PROCESS FOR THE DECORATING OF A FABRIC AND DEVICE FOR CARRYING OUT SAID PROCESS. HUGH DENNIS, New York, N. Y., assignor, by mesne assignments, to Madeleine Dennis. Filed Sept. 11, 1928, Serial No. 305,274. Renewed Apr. 8, 1931. 11 Claims. (Cl. 41—1.)



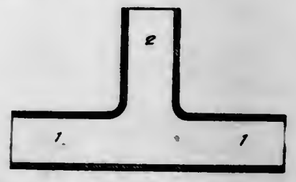
1. A process for placing decorations on a fabric by hand which consists of stretching a section of a bolt of cloth both longitudinally and laterally in a position adapted to receive said decorations, placing said decorations thereon by hand, drying the decorations, rolling said decorated section of fabric on a roller between rolls of paper, repeating said operations until the full bolt of decorated fabric is rolled onto said roller and placing the same in an oven to set the colors of said decorations.

1,811,498. SWITCH. JOHN GELOSO, New York, N. Y., assignor to Pilot Electric Manufacturing Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed June 5, 1929. Serial No. 368,463. 8 Claims. (Cl. 200—67.)



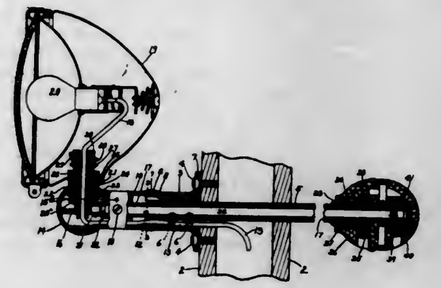
1. A switch comprising a casing, a plurality of fixed terminals extending therefrom, a fixed contact mounted in the casing, in electrical contact with one of said terminals, a movable contact pivoted on the other of said fixed terminals, a crank and resilient means interconnecting the crank with one extremity of said movable contact, and a spindle fixed to said crank, a knob for actuating said spindle, stop means for limiting the displacement of the said crank, said movable member, being displaceable about its pivot, into and out of contact with the fixed contact, upon the rotation of said spindle.

1,811,499. MIXING APPARATUS. ALFRED C. GILBERT, Hamden, Conn., assignor to The A. C. Gilbert Company, New Haven, Conn. Filed Mar. 17, 1928. Serial No. 262,539. 19 Claims. (Cl. 259—135.)



1. In a beverage mixer or the like, a motor, a mixing element carried by said motor and a motor support, said support being provided with an opening through which said mixing element projects, and means for supporting said motor in said opening in spaced relation to the motor support, said means positively preventing rotational displacement of the motor on the support, said motor being freely movable away from said support in an upward direction without intereference from said positive means.

1,811,500. WELDING SEGMENTS. HENRY S. HOLMES, New York, N. Y., assignor, by mesne assignments, to Metropolitan Engineering Company, Brooklyn, N. Y., a Corporation of New York. Filed Jan. 23, 1929. Serial No. 334,379. 2 Claims. (Cl. 219—10.)

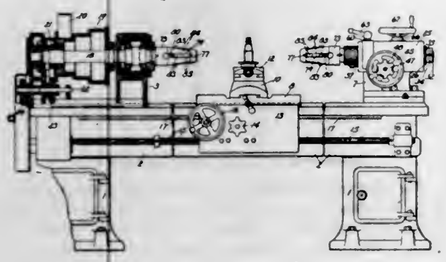


1. The method of making a hollow article of sheet metal segments which consists in first applying and uniting stiffeners to the inside of the segments near their edges, then assembling and pressing the edges of said segments together between electrodes and passing a welding current.

1,811,501. PRODUCING PIPE FITTINGS AND OTHER HOLLOW ARTICLES. HENRY S. HOLMES, Rockville Center, N. Y., assignor, by mesne assignments, to Metropolitan Engineering Company, Brooklyn, N. Y., a Corporation of New York. Filed Feb. 11, 1929. Serial No. 339,023. 7 Claims. (Cl. 29—157.)

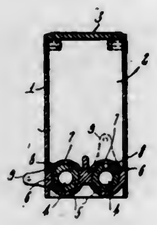
1. The method of making a tubular product which consists in bending up sheet metal blanks to form segments, welding such segments together along longitudinal edges to form a thin-walled tubular blank and upsetting an end of said tubular blank by an endwise pressure to increase its thickness without diminishing its diameter.

1,811,502. SPOTLAMP FOR VEHICLES. ROBERT H. HUMMERT, Dayton, Ohio, assignor to The S. H. Thomson Manufacturing Company, Dayton, Ohio, a Corporation of Ohio. Filed Sept. 7, 1929. Serial No. 391,038. 5 Claims. (Cl. 240—61.13.)



1. In a device of the type described, a horizontal support attachable to a vehicle, a gear housing free to turn vertically on said support, a hollow shaft passing through said support and connected to the gear housing to turn it, said housing having a hole in its top portion, a post projecting upwardly through said hole, a shaft passing through the hollow shaft, a pinion on the second shaft, a floating gear surrounding said post for engagement with said pinion, and a lamp housing secured to the floating gear.

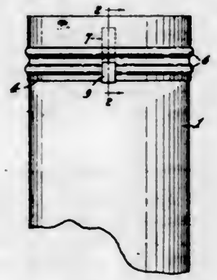
1,811,503. COIN COUNTING MACHINE. JOSEPH JANOVSKY, New York, and JULIUS J. LANGE, Astoria, N. Y., assignors to Abbott Coin Counter Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 20, 1928. Serial No. 248,061. 17 Claims. (Cl. 133—8.)



1. A coin counting machine having, in combination, a counting device, a feed wheel for feeding coins past the counting device to actuate the same, and means acting automatically to move the feed wheel out of the path of the coins when a predetermined number of coins have been fed past said device.

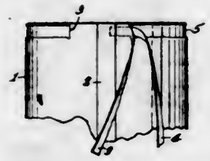
1,811,504. ROLL TURNING MACHINE. ROBERT A. JOHNSON, Longmeadow, and EARLE M. CHASE, Springfield, Mass., assignors to Porter-McLeod Machine Tool Co., Hatfield, Mass., a Corporation of Massachusetts. Filed May 29, 1928. Serial No. 281,500. 3 Claims. (Cl. 82—31.)

1. A tail stock structure comprising in combination, a body having a spindle reciprocable therein, a rack on said spindle, an operating sleeve rotatable in the body having a pinion meshing with said rack, a hand wheel on an outer end of said sleeve at a side of said body, an operating shaft rotatable in said body having a hand wheel at another side of said body, a worm on said shaft, a worm gear rotatable on an inner end of said sleeve having a clutch face, a rod rotatable in said sleeve having a hand wheel at its outer end adjacent said first-named hand wheel, a clutch member associated with an inner end of said sleeve and rod for engaging the clutch face of the worm gear, a member reciprocable in a part fixed to said body for actuating said clutch member and means associated with said rod and member whereby the latter is actuated by rotation of the former.



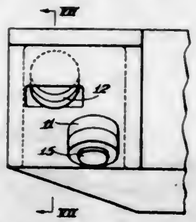
1,811,505. COATING APPARATUS. JOSEPH A. KENNEDY, Pawtucket, R. I., assignor to Anaconda Wire and Cable Company, New York, N. Y., a Corporation of Delaware. Filed May 19, 1930. Serial No. 453,719. 5 Claims. Cl. 91—46.)

1. A lacquering box, comprising a body portion forming a lacquer reservoir, a member adjacent the reservoir and having a tube receiving passage and a connecting port through which lacquer flows from the reservoir to the first said passage, and means whereby the said member can be moved to a position closing said port.



1,811,506. SHEET METAL PACKAGE. HENRY KIELBERG, Martins Ferry, Ohio, assignor to Wheeling Steel Corporation, Wheeling, W. Va., a Corporation of Delaware. Filed Sept. 28, 1929. Serial No. 395,884. 3 Claims. (Cl. 220—53.)

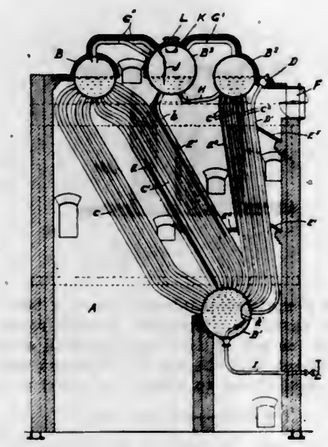
1. In a sheet metal package, a cylindrical body having an open end, a sheet metal band attached in embracing relation to said body at said end, a closure having an annular outwardly extending flange fitted within the embrace of said end, said band having its upper edge portion turned inwardly into interiorly seated relation to said closure flange, and a sheet metal strap interposed between said body and said band, said strap having one end anchored to said closure flange and its other end protruding from



beneath the lower edge of said band to form a tongue, said tongue being adapted to be grasped and pulled to effect cross-tearing of said band.

1,811,507. SHEET METAL PACKAGE. HENRY KIELBERG, Martins Ferry, Ohio, assignor to Wheeling Steel Corporation, Wheeling, W. Va., a Corporation of Delaware. Filed Sept. 28, 1929. Serial No. 395,885. 3 Claims. (Cl. 220—53.)

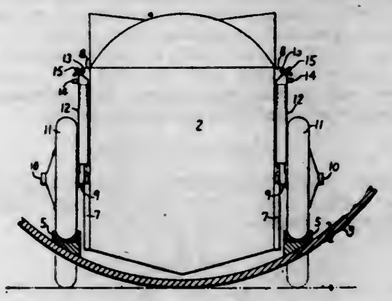
1. A sheet metal package comprising a tubular body of readily rupturable material, having an open end, said body having an aperture therein adjacent to said end, a closure for said end having an outwardly directed annular flange provided with a recess, said closure being received within said end in a position wherein said recess is located adjacent to said aperture, and a metal-tearing member interposed between said closure flange and said body in embracing relation to the former, one end of said member having a hook end received in said recess and having its opposite end projected outward through said aperture, the extreme end of said body being turned inward into interiorly seated relation to said closure flange.



1,811,508. RECIPROCATING MACHINE BED. NORMAN H. KLAGES, Pittsburgh, Pa., assignor to G. W. Klages & Son, Inc., a Corporation of Pennsylvania. Filed Nov. 3, 1928. Serial No. 317,007. 1 Claim. (Cl. 308—6.)

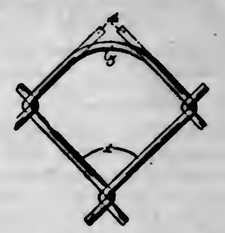
In combination, a base provided with a pair of guide rails, each of which has a pair of guide surfaces lying at an angle to each other and extending longitudinally of the base, one of said rails having the surfaces thereof at an acute angle to each other, and a table carried by the base and provided on one side with a single set of rollers, one roller of which set engages one surface on the guide rail having its surfaces at an acute angle, and the other of which set engages the other surface on said rail, said table being provided on its other side with two sets of rollers

spaced apart longitudinally of the table, with one roller of each set engaging one surface on the other guide rail and the other roller of each set engaging the other surface on such last rail, the surfaces on said last rail lying at an acute angle to a horizontal plane, and means for adjusting one roll of said single set toward the surface which it engages comprising a bearing pin on which the roll is mounted having an end which is eccentrically disposed with respect to the axis of rotation of the roll, a support in which said end is mounted for rotative adjustment, and means for securing said end against rotation in its various positions of adjustment.



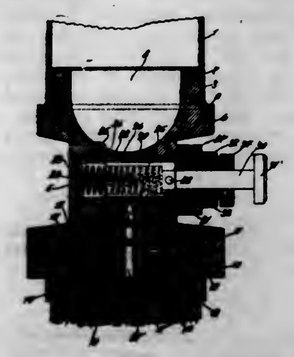
1,811,509. BENT TUBE BOILER. WALTER LOCKE, Philadelphia, Pa., assignor to Edge Moor Iron Company, Edge Moor, Del., a Corporation of Delaware. Filed Apr. 21, 1930. Serial No. 445,904. 2 Claims. (Cl. 122—302.)

1. A bent tube boiler comprising a steaming section made up of an upper and lower drum connected by two banks of bent tubes and provided with baffles located between the tube banks and in the rear of the rear bank to direct furnace gases upward along the front bank and downward along the rear bank, said boiler having also a water heating section made up of a drum located approximately on the level of the upper drum of the steaming section and tubes connecting said drum to the lower drum of the steaming section each heating secton being provided with baffles for directing the gases upward along the tubes, in combination with a fourth drum located approximately on the level of the upper drums aforesaid, said fourth drum being unconnected with the tube banks forming the main circulatory system of the steaming and water heating elements of the boiler but having steam conduits connecting its steam space with the steam spaces of the other two upper drums and water conduits connecting its bottom with the bottom of the rear upper drum acting to maintain an approximately uniform water level in the so connected drums.



1,811,510. HANDLING CARRIAGE FOR STOWING AIRPLANES. GROVER LOENING, New York, N. Y. Filed Nov. 7, 1930. Serial No. 493,942. 3 Claims. (Cl. 244—2.)

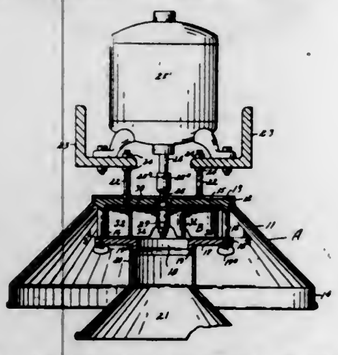
1. A handling carriage for stowing airplane bodies, comprising wheels and wheel-carriers disposable adjacent the sides of the body of the airplane, means for detachably connecting the wheel-carriers with the body, and means controlling vertical movement of the wheels relatively to the body so that in an elevated position the wheels will support the body in a curved berth and in a depressed posi-



tion they will support it on a flat surface, said means adapted to sustain the load on the wheels throughout the range of vertical movement.

1,811,511. METHOD OF FORMING WIRE FENCE FABRIC. FRANK J. MAFERA, Revere, Mass. Filed Sept. 3, 1930. Serial No. 479,475. 2 Claims. (Cl. 140—3.)

1. The method of forming woven wire fencing with a selvage devoid of projections, which consists in bending the terminal end portions of related pairs of the strands of the fencing into alined end-to-end abutting relation, and welding said end portions together.



1,811,512. FOUNTAIN BRUSH. WALT MARSH, Belleville, Ill., assignor to Marsh Stencil Machine Company, Belleville, Ill., a Corporation of Illinois. Filed Sept. 16, 1929. Serial No. 392,821. 2 Claims. (Cl. 15—138.)

1. A fountain brush comprising a body member having in one end an inlet opening and in the opposite end an outlet opening that is out of alinement with said inlet opening, a device mounted in said body member between said openings controlling passage of fluid from said inlet opening to said outlet opening, a receptacle in connection with that end of said member having said inlet opening, an internally threaded extension in connection with the op-

posite end of said member concentric with said outlet opening, a ring screwed into said extension, a wall attached to the upper portion of said ring, a downwardly tapered central portion in connection with said wall, a downwardly tapered portion in connection with said body surrounding said outlet opening and engaging said tapered portion of said wall, and brush bristles having their upper ends clamped between said ring and said downwardly tapered wall portion for receiving and distributing the substance discharged from said outlet opening.

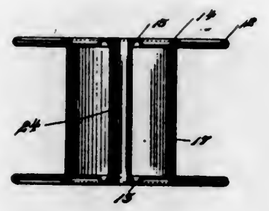
1,811,513. FOAM DESTROYER. CHARLES DOREL MASON, Des Moines, Iowa. Filed Sept. 8, 1930. Serial No. 480,469. 6 Claims. (Cl. 183—2.6.)

2. In a foam destroyer, a hoodlike structure having a top and a downwardly extending wall, an annular plate supported below said top, a foam intake member extending downwardly from the opening in the plate, a fan arranged between said top and plate having a disc-like top and substantially radial blades below the top.

1,811,514. VEHICLE SPRING CONSTRUCTION. GEORGE MATAKOVICH, Keewatin, Minn. Filed Aug. 21, 1929. Serial No. 387,381. 12 Claims. (Cl. 267—45.)

1. The combination comprising a vehicle frame, an axle, a primary spring unit supporting the frame with respect to the axle, a secondary spring unit comprising a horizontally disposed series of leaf springs secured to the frame with one end pivotally connected to the axle, said secondary spring unit being normally inactive, and means for rendering the secondary spring unit active when the frame is spread from the axle a predetermined distance.

1,811,515. TURBINE. ANTHONY C. MCGINTY, Los Angeles, Calif. Filed Mar. 12, 1930. Serial No. 435,222. 3 Claims. (Cl. 253—50.)



1. A turbine comprising a housing, a rotor revoluble therein and comprising a shaft journalled axially of said housing, a plurality of vanes rigid with and extending along said shaft, means for directing fluid against said vanes adjacent one end of the rotor, and a plurality of deflectors arranged on each vane and inclining toward said shaft and toward the other end of the rotor to direct said fluid inwards towards the axis of revolution of said rotor.

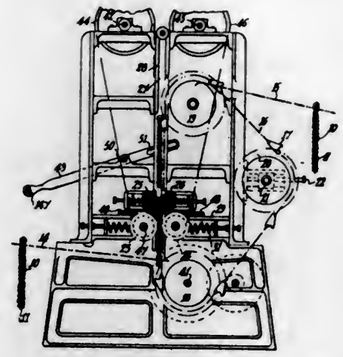
1,811,516. HIGH TEMPERATURE HEAT INSULATION MATERIAL AND METHOD OF MAKING THE SAME. CARLTON EARLE MILLER, Redwood City, Calif. Filed Apr. 7, 1924. Serial No. 704,696. 10 Claims. (Cl. 106—18.)

1. A heat insulating material comprising a mixture of diatomaceous earth, calcium carbonate, and basic magnesium carbonate.

1,811,517. REEL. FRANK MOSSBERG, Attleboro, Mass., assignor to Mossberg Pressed Steel Corporation, Attleboro, Mass., a Corporation of Massachusetts. Filed July 26, 1928. Serial No. 295,415. 6 Claims. (Cl. 242—77.)

1. A reel comprising a tubular barrel, a head on each end thereof having a continuous circular recess therein for receiving one end of the barrel, one wall of the recess forming a pocket with the end of the barrel and welding material in said pocket to secure the barrel to the head.

1,811,518. CLAMP. GEORGE E. PALMER, Cedar Rapids, Iowa. Filed Sept. 28, 1929. Serial No. 395,955. 3 Claims. (Cl. 144—303.)

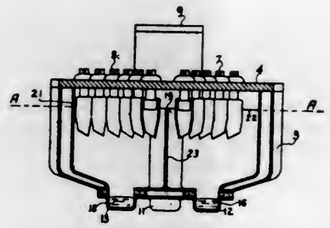


1. In a hand-clamp, the combination of a smooth-edged bar, an abutment jaw attachable to the bar and provided with a lateral seat for another bar at an angle to the first-mentioned bar, a companion jaw slidable on the bar, and having diagonally disposed bar-gripping members at opposite sides of the bar, a compression screw and head carried by the slidable jaw, and means for attaching the secondary bar to a fixed support, and the connected head to said bar.

1,811,519. DEBURRING MACHINE. WALTER PERKS, London, England, assignor to William Vicars, Rose Bay, near Sydney, Australia. Filed Mar. 1, 1928, Serial No. 258,397, and in Australia July 18, 1927. 5 Claims. (Cl. 149—19.)

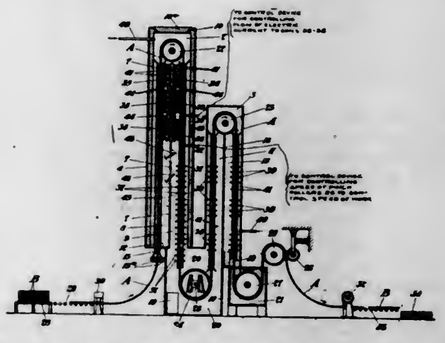
1. In a deburring machine, a pair of endless traveling members spaced apart from each other and disposed for movement through a vertical path, a plurality of skin-carrying members, means for delivering said members in succession to a position between said traveling members,

and cooperating means carried by said traveling members and skin-carrying members automatically operative to en-



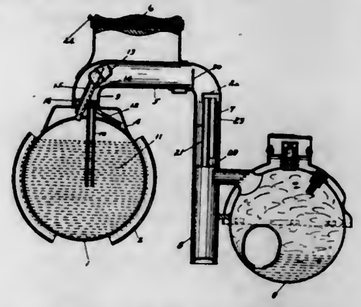
gage the latter and move them through said vertical path and to release the skin-carrying members after their passage through said path.

1,811,520. JEWEL SETTING. MAURICE J. SCHLESS, New York, N. Y. Filed Aug. 4, 1930. Serial No. 472,868. 2 Claims. (Cl. 63—26.)



1. In a jewel setting, a substantially rectangular mounting plate formed with a jewel receiving aperture, means to secure a jewel therein, attaching means integral with the plate and comprising projecting corners having straight sides parallel to the sides of the plate and being cut away on the upper surfaces to form recessed reflecting surfaces lying in a plane parallel to the plane of the plate surface.

1,811,521. ELECTRIC CURRENT RECTIFIER. OSKAR SEITZ, Baden, Switzerland. Filed Aug. 26, 1930, Serial No. 477,807, and in Germany Aug. 2, 1929. 3 Claims. (Cl. 250—27.5.)

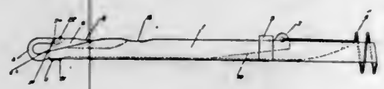


1. In an electric current rectifier of the metallic vapor type, a closed tank, a plurality of groups of anodes extending into said tank, a cathode divided into a plurality of portions equal in number to the number of said anode groups and arranged in the bottom of said tank, and metallic walls substantially separating said groups of anodes into separate compartments within said tank.

1,811,522. FURNACE. BARTON R. SHOVER, Pittsburgh, Pa., and FRANK P. TOWNSEND, East Orange, N. J., assignors to Strip Tin Plate Company, Pittsburgh, Pa., a Corporation of Delaware. Refiled for application Serial No. 334,203, filed Jan. 22, 1929, and in France Nov. 17, 1930. This application filed May 14, 1931. Serial No. 537,408. 7 Claims. (Cl. 263—3.)

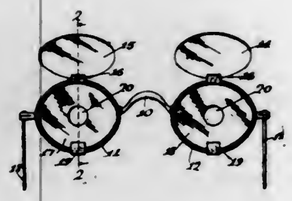
3. A vertically disposed heat treating furnace comprising at least one stack divided by a vertically disposed partition to form up and down-travel chambers for the material to be treated, said materials being in the form of a continuous strip, means for movably suspending said material in said chambers, heat radiating means adjacent the upper end of said chambers below said material suspending means, and means for causing a flow of gas through said furnace counter-current to the direction of travel of the material being heated.

1,811,523. REFRIGERATION UNIT. RUSSELL T. SMITH, Cincinnati, Ohio, assignor to The Crosley Radio Corporation, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 20, 1930. Serial No. 429,981. 4 Claims. (Cl. 62—120.)



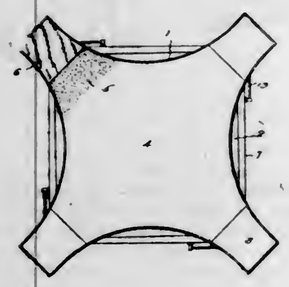
1. In an absorption system refrigeration unit the combination with a generator absorber shell, a condenser evaporator shell and tubular means connecting the same, the generator absorber shell being loose from the tubular means except for defined passageways, of a shell erected about the generator absorber shell, said shell communicating with the tubular means and arranged to retain a portion of the absorbent agent used in the system, and a conduit extending from the tubular means to a point below the absorbent level within said erected shell in order to promote absorption within the same.

1,811,524. NEEDLE FOR REPAIRING KNITTED ARTICLES. MARCEL VITOUX, Troyes, France. Filed Mar. 1, 1930, Serial No. 432,298, and in France Mar. 29, 1929. 5 Claims. (Cl. 66—117.)



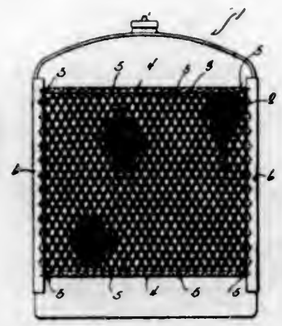
1. A sliding latch needle for repairing knitted articles, comprising, in combination, a rod terminating in a hook,

a movable latch within a longitudinal slot of said rod, said latch alternately opening and closing said hook, a strap surrounding said rod and rigidly connected therewith, and resilient means connecting said latch with said



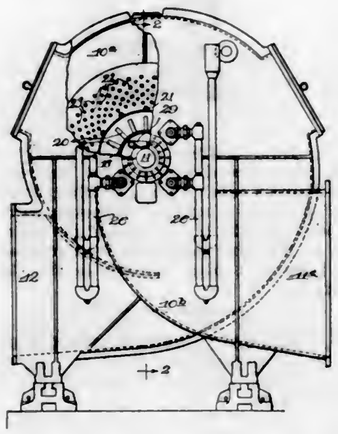
rod, said latch being also displaced by the threads of the knitted article in a direction perpendicular to the longitudinal axis of said rod, this displacement being limited by the bottom of said groove and by said strap.

1,811,525. GLARE SHIELD FOR EYELENSES. CHARLES I. WALKER, Los Angeles, Calif. Filed July 31, 1928. Serial No. 296,511. 1 Claim. (Cl. 88—41.)



A glare shield comprising a spectacle frame, a pair of lenses formed of semi-transparent material, pivotally mounted upon the tops of the lens frames of the spectacle frame, adapted to assume positions over the lens frames, and a second pair of lenses formed of semi-transparent material, pivotally mounted upon the bottoms of the lens frames, adapted to assume positions over the lens frames, one of the pairs of lenses having apertures formed centrally thereof.

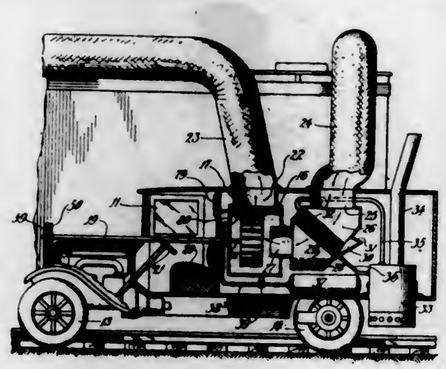
1,811,526. CARD TABLE. ALFRED R. WRIGHT, Essex, Conn. Filed July 2, 1929. Serial No. 375,350. 2 Claims. (Cl. 45—11.)



1. A table comprising a unitary top with a plane upper playing surface, said top having four concaved side edges and four wide radial and integral extensions separating the concaved sections, with legs hinged to the under side of said extensions and adapted to fold against and open from the table, said legs when folded extending across the concaved recesses in the side edges and providing handles for transporting the table.

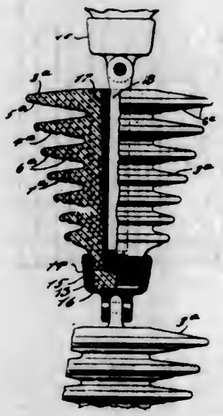
1,811,527. RADIATOR. FRED M. YOUNG, Racine, Wis. Filed Sept 8, 1930. Serial No. 480,388. 3 Claims. (Cl. 293—54.)

1. In combination with a radiator having a core, a protecting screen for the core having its medial portion bulged and four of its edge portions flat and in a common plane, and means for attaching the screen to the radiator.



1,811,528. ROTARY DISINTEGRATOR. CHARLES W. ANDREWS and SELWYNE P. KINNEY, Chicago, Ill., assignors to H. A. Brassert & Company, Chicago, Ill., a Corporation of Illinois. Filed July 15, 1929. Serial No. 378,257. 6 Claims. (Cl. 261—90.)

1. In a disintegrator apparatus, in combination with a casing, a cylindrical basket rotatable in said casing, means for supplying water to said basket, a plurality of tubes adapted for discharge of water radially from said basket, and a plurality of relatively, rotative radially spaced disintegrator members operating in said casing radially beyond said basket, one of said disintegrator members being a fixed, cylindrical, perforated screen closely approached to the discharge ends of the tubes carried by said basket.

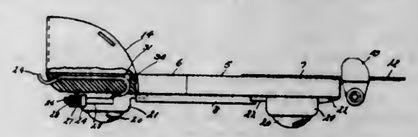


1,811,529. PORTABLE APPARATUS FOR CONDITIONING PERISHABLE PRODUCTS. WELCH BARATOW and FRED JOHN DAY, Los Angeles, Calif., assignors to Pre-Cooling Car Service Co., Los Angeles, Calif., a Corporation of California. Filed June 13, 1928. Serial No. 285,134. 6 Claims. (Cl. 99—2.)

2. In an apparatus of the class described, the combination of a vehicle including a roofed over box body, running gear and an engine for propelling the vehicle, two pipes secured to the roof of the box body and adapted to extend to opposite ends of the enclosure to be treated, means for clamping the ends of the pipes to the enclosure to provide for the passage of air into and out of the enclosure, a fan casing located within the box body and communicating with the end of one of the pipes, a fan within the fan casing, and power connections from the

engine for driving the fan, an air conditioning box located adjacent the fan casing and in communication therewith and in communication with the other pipe, a radiator extending across the air conditioning box and in interposed relation to the passage of air therethrough, means for supplying a heating medium to the radiator, a gas tank located within the box body, and a gas pipe leading therefrom to a suitable position to admit gas into the air circuit.

1,811,530. INSULATING DEVICE. FRANK G. BAUM, San Francisco, Calif., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 20, 1921. Serial No. 509,148. 2 Claims. (Cl. 173—318.)

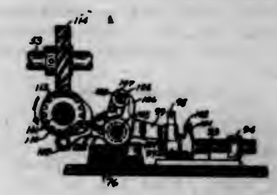


2. An insulator of the character described comprising an elongated tubular porcelain body, a metal cap secured upon one end of said body, a bolt extending axially within the body, a mass of cement embedding one end of the bolt within the said end of the body, the other end of the bolt projecting beyond the other end of the body and a mass of water-repellant plastic material filling the space within the body between said mass of cement and the second named end and acting to center the bolt.

1,811,531. SILICEOUS MATERIAL AND METHOD OF PRODUCING THE SAME. ABRAHAM SIDNEY BEHRMAN, Chicago, Ill., assignor, by mesne assignments, to The Permutit Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 4, 1927. Serial No. 231,164. 12 Claims. (Cl. 23—113.)

5. A base exchange material comprising the reaction product of an alkali metal amphoterate and an adsorbent siliceous material.

1,811,532. SKATE. ANDREW G. BENETATOS, New York, N. Y. Filed Mar. 17, 1930. Serial No. 436,358. 6 Claims. (Cl. 208—173.)

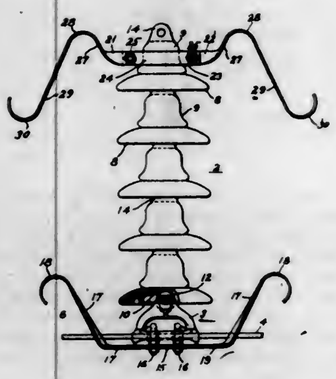


1. A skate consisting of a foot piece, socket members mounted on the outer surface of said foot piece, supporting balls retained by said sockets, and anti-friction devices carried by the foot piece and engaged by the supporting balls.

1,811,533. FILTER BAG CONNECTER. JOHN B. BERRIGAN, Chicago, Ill., assignor to The Press & Drier Co. Filed Feb. 17, 1930. Serial No. 429,147. 3 Claims. (Cl. 100—54.)

1. The combination of a plurality of filter bags arranged side by side in parallel relation, registering apertures in the fabric walls of adjacent bags, a piece of flexible material having a similar opening therein, secured to the exterior side of each filter bag at the openings therein, a ring between said piece of flexible material and the side wall of a bag, and U-shaped clips applied over the outer edges of said rings to connect adjacent bags together, said U-shaped clips being resilient and having the inner edges of their ends beveled.

1,811,534. CASH REGISTER. SAMUEL BRAND, Dayton, Ohio, assignor to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed June 13, 1927. Serial No. 198,499. 5 Claims. (Cl. 235—22.)

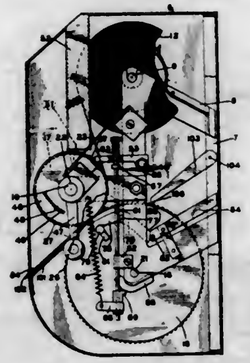


1. In a cash register, the combination of a plurality of keys, a differential mechanism controlled thereby, a plu-

rality of receptacles, a finger shaft controlled by said differential mechanism, the position of which shaft determines which of said receptacles will be released, a cam and arm for raising said finger shaft to release said selected receptacle, a manually operable lever, and a rod shiftable longitudinally by said lever and having notches, the positions of which render said releasing means ineffective upon operation of the machine.

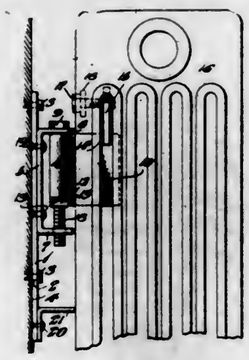
1,811,535. PROCESSES FOR PURIFICATION OF OIL SOLUBLE SODIUM SULPHONATES. HYYM E. BUC, Roselle, and HOWARD R. TATE, Elizabeth, N. J., assignors to Standard Oil Development Company, a Corporation of Delaware. Filed Nov. 19, 1927. Serial No. 234,548. 6 Claims. (Cl. 260—159.)

6. The process of preparing a non-deteriorated sodium salt of an oil soluble sulphonic acid derived from the treatment of petroleum oil with fuming sulphuric acid of sulphuric anhydride, which comprises dissolving the salt in an organic solvent in which inorganic materials are relatively insoluble and evaporating the solution so obtained in the presence of an alkali metal salt of a weak organic acid, which salt is capable of forming either a true or colloidal solution with petroleum lubricating oil, to recover the solvent and produce a residue of non-deteriorated oil soluble sodium sulphonate mixed with the added salt of the weak organic acid.



1,811,536. FIELD CONTROL DEVICE. RICHARD W. CARLISLE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 29, 1928. Serial No. 289,320. 10 Claims. (Cl. 173—318.)

1. An electrostatic-field-control device comprising spaced electrodes one of which has an inner portion adjacent to the longitudinal axis of the device, a portion extending from said inner portion to a position laterally at one side, and longitudinally removed from, said inner portion in a direction away from the other electrode and a portion extending from said position toward said other electrode to a position longitudinally spaced from said other electrode.

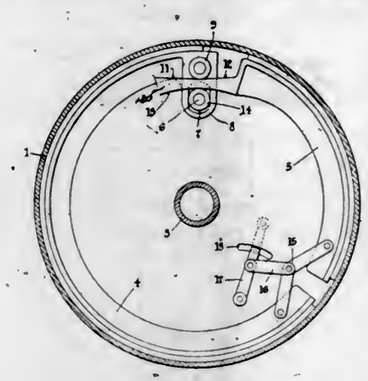


1,811,537. SANITARY TOILET SEAT DISPENSER. SCHILLER B. CUMMINGS, Long Beach, Calif., assignor, by mesne assignments, to Richard Pendleton Johnson, Long Beach, Calif. Filed Jan. 21, 1929. Serial No. 334,050. 5 Claims. (Cl. 164—68.)

1. In a dispensing device, a housing having a delivery opening therein, means for freely supporting a supply of the article to be dispensed, a pair of rolls journalled within said housing and engaging therebetween a portion of said article, said rolls being disposed to propel the end of said portion through the delivery opening

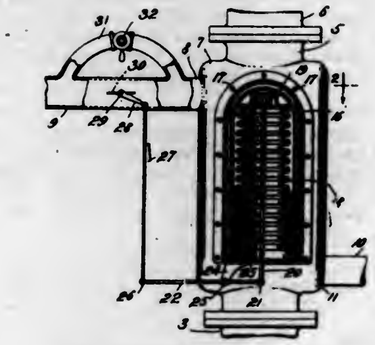
as they are rotated, means for rotating said rolls, a knife disposed within a groove extending longitudinally of one of said rolls, spring means urging said knife outwards of said groove to sever a predetermined length of the article, and means for withdrawing said knife.

1,811,538. RADIATOR BRACKET. ANTHONY E. DAVIS and JOHN N. INMAN, Jr., Philadelphia, Pa. Filed Jan. 17, 1928. Serial No. 247,331. 5 Claims. (Cl. 248—17.)



5. In a radiator hanger, the combination with a wall engaging member and a bracket arm supported on said member and arranged to project between sections of a radiator, of a carrying member engaging the arches of juxtaposed sections and resting on and removably engaging said arm.

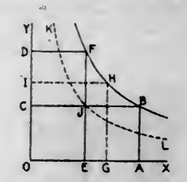
1,811,539. BRAKE. WALTER HAMILTON DELAHAYE, Ottawa, Ontario, Canada, assignor to Bendix Brake Company, South Bend, Ind. Filed May 1, 1929. Serial No. 359,448. 13 Claims. (Cl. 188—78.)



1. In a brake and in combination with a fixed support, an anchor on said support, a shoe mounted for limited

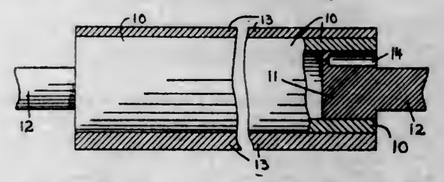
radial movement on said anchor, a servo shoe, means connecting the adjacent ends of said shoes for urging them

into engagement with a brake drum, the other end of said servo shoe lying outside the anchor and bearing against the shoe anchored thereon.



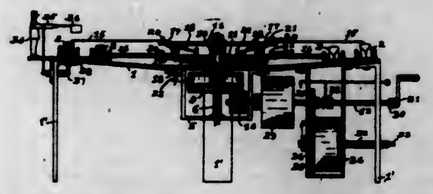
1,811,540. INTERNAL COMBUSTION ENGINE. WILLIAM P. DEPPE, Brightwaters, N. Y. Filed Oct. 16, 1923. Serial No. 668,842. 10 Claims. (Cl. 123—122.)

1. In the operation of an internal combustion engine, the method of producing a superheated dry gaseous mixture and operating the engine thereon, which comprises forming a mixture of air and liquid fuels in predetermined ratio, then passing said mixture to the engine while simultaneously subjecting it to heat at a preselected substantially constant temperature, which is above the vaporizing or boiling points of the fuel constituents in the air ratio employed and below the temperature of cracking and of the spherical state of the liquid fuels, said constant temperature being maintained by heat from a substantially continuous source in conjunction with heat from a source subject to control for maintaining the preselected constant temperature, the arrangement and control of the heat being such that a superheated homogeneous dry gaseous mixture is produced, maintained and delivered to the combustion chambers of the engine.



1,811,541. METHOD AND MEANS FOR MEASURING AND RECORDING APPARENT POWER. ALEXANDER DAWES DU BOIS, Minneapolis, Minn. Filed July 26, 1927. Serial No. 208,530. 13 Claims. (Cl. 234—1.5.)

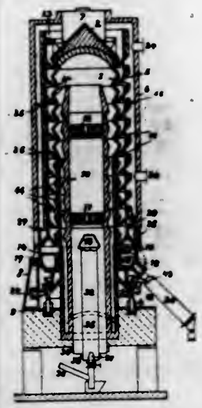
6. In conjunction with the moving element of an ammeter and the moving element of a voltmeter, the combination of: directive elements actuated by said moving elements of ammeter and voltmeter; a platen consisting of strips of conductive material, separated by insulative material, arranged substantially in the form of a family of



hyperbolic curves; a stylus, movable jointly by said directive elements, in contact with said platen; and means for indicating which one of the conductive strips is in contact with the stylus at any given time.

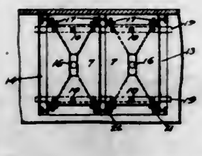
1,811,542. PROCESS OF PRODUCING BALANCED ROLLS AND THE LIKE. HARLAND FANKBONER, Chicago, Ill., assignor to The Goss Printing Press Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 13, 1930. Serial No. 420,320. 19 Claims. (Cl. 18—59.)

1. The process of producing balanced rolls and the like, comprising the provision about a metal support of a layer of easily applied material with its outer surface concentric with respect to an established axis of rotation of said support, then balancing said covered support with respect to said axis, and then after the balancing operation providing a layer of body material about said metal support with its outer surface concentric with respect to said axis.



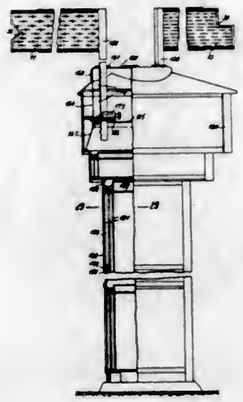
1,811,543. MECHANICAL TOY. JOSEPH G. GAVLAK, Monongahela City, Pa. Filed Jan. 31, 1930. Serial No. 424,848. 10 Claims. (Cl. 273—86.)

1. In a mechanical racing toy of the character described, a track member, a turning disk revolubly mounted on said track member, racing elements, and means pivotally connected with said turning disk and joined with said racing elements.



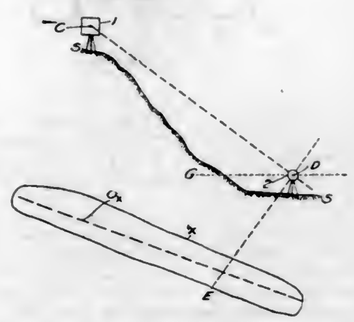
10. In a mechanical racing toy of the character described, a track member, a pair of turning disks mounted on said track member, a plurality of connecting rods each having pivotal connections with one of said turning disks, a racing element carried at the outer end of each of said connecting rods and travelling on said track member, a driving mechanism for simultaneously rotating said pair of turning disks at different speeds relatively to each other, means carried by each of said pair of turning disks for limiting the movements of said connecting rods on said pivotal connections, and means carried by one of said pair of turning disks and by said track member for intermittently engaging the inner ends of said connecting rods for shifting the latter forwardly on their said pivotal connections.

1,811,544. RETORT OVEN. KARL GEISSEN, Berlin-Zehlendorf, and WERNER VORBRODT, Spandau, near Berlin, Germany, assignors, by mesne assignments, to Kohlenveredlung Aktiengesellschaft, Berlin, Germany. Filed Jan. 8, 1926, Serial No. 79,996, and in Germany Jan. 8, 1925. 8 Claims. (Cl. 202—218.)



1. Retort oven comprising an outer shell a vertical tubular inner shell within the same and entirely closed save at the bottom end and supported solely at the bottom end, apertured means for guiding the material to be treated in contact with the outer surface of said inner shell, and means for guiding heating gases in downward direction in contact with the inner surface of said inner shell and means for taking off gas from the material treated.

1,811,545. AUTOMOBILE STORAGE. CHARLES F. GODDARD, Denver Colo., assignor, by mesne assignments, to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 12, 1926. Serial No. 141,159. 15 Claims. (Cl. 214—16.1.)



1. In an elevator system, means defining a pair of adjacent vertical columns interconnected at their respective ends, a plurality of load receptacles in each of said columns supported one upon another, means for circuitously moving said receptacles through the path defined by said columns, said moving means comprising a cylinder at the bottom of each of said vertical columns and reciprocating means for each cylinder, said cylinder having a non-elastic fluid for actuating said reciprocating means for that cylinder, said reciprocating means moving the adjacent columns of receptacles simultaneously in opposite directions until the topmost receptacle in the first column is entirely above the topmost receptacle in the second column and the bottommost receptacle in the second column is entirely below the bottommost receptacle in the first column, means mounted on said means defining said vertical columns for supporting said receptacles in each column in this position, and means movable by subsequent movement of said reciprocating means for transferring the topmost receptacle in the first column laterally into vertical alinement with the receptacles in the second column and the bottommost receptacle in the second column laterally into vertical alinement with the receptacles in the first column.

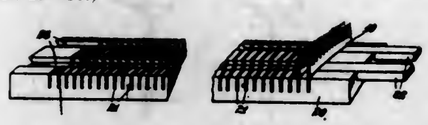
1,811,546. TRAFFIC REGULATING SIGN. MARTIN HEINE, Schwelm/Westfalen, Germany. Filed Aug. 14, 1928, Serial No. 299,549, and in Germany Jan. 29, 1927. 14 Claims. (Cl. 40—145.)

1. In a traffic regulating device, the combination of a central pillar, at least one horizontal plate mounted on said pillar, said horizontal plate being provided with openings arranged around and at a distance from the axis of said plate, pointers provided with rods adapted to be inserted into said openings, means for attaching said rods and adjusting them with respect to said horizontal plate, and a housing for said pillar and plate, said housing including a frame-work and show-boards forming closed panels in the side walls of said housing.

1,811,547. METHOD AND APPARATUS FOR LOCATING UNKNOWN CONDUCTIVE BODIES. JOHN J. JAKOSKY, Los Angeles, Calif., assignor to The Radiore Company, Los Angeles, Calif., a Corporation of California. Filed June 19, 1928. Serial No. 286,557. 8 Claims. (Cl. 175—182.)

1. The method of locating conductive bodies within a mass of less conductive material which comprises energizing such a conductive body by means of an electromagnetic field transmitted from an energizing loop, and then, by means of a direction-finding coil, detecting the presence and measuring the effect of the secondary electromagnetic field resulting from the induced current in said conductive body, at a plurality of points adjacent said energizing loop, the direction-finding coil being rotated, for the purpose of making such measurements, about an axis substantially parallel to the direction from said coil to the energizing loop.

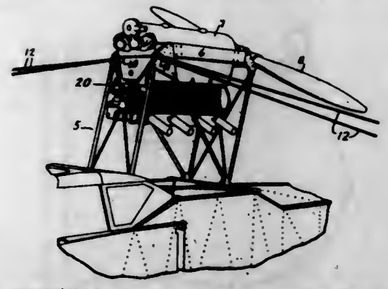
6. An energizing apparatus for use in electromagnetic induction methods of locating unknown conductive bodies



comprising a ring-shaped housing of insulated material mounted upon a tripod for universal adjustment thereon, said housing having an enlarged portion at the bottom, a transmitting loop wound within said ring-shaped housing, and oscillating circuit means located within said enlarged portion and connected to said loop, said housing completely enclosing the turns of said loop and the enlarged portion thereof completely enclosing said oscillating circuit means.

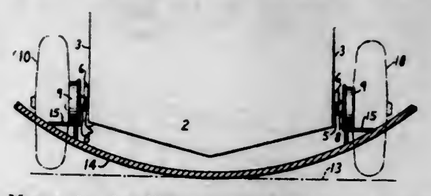
1,811,548. BREAST HOLDER. HENRIETTE KLOPFER, Berlin-Wilmersdorf, Germany, assignor of one-half to the Firm W. & G. Neumann, Berlin, Germany. Filed Sept. 29, 1927, Serial No. 222,872, and in Germany June 24, 1927. 2 Claims. (Cl. 2—42.)

1. A method of producing breast pockets for breast holders consisting each of a triangular piece of fabric, consisting in cutting a square piece of fabric along one of the diagonals into two equal right angle triangles each forming the material for one breast pocket, in folding said right angle triangles along a line extending from the apex perpendicular to the base to form two equal right angle triangles, in stitching said folded triangles on a line extending at an incline from the base near the right angle corner of the triangle to the folded edge of the triangle, in cutting off the right angular corner of the triangle parallel to said stitching, in cutting off the remaining piece of the base on a line extending from the lower end of said stitching perpendicular to the diametrically opposite side of the triangle, and in turning the remaining piece of fabric inside out to form a breast pocket having a bulged out portion for accommodating the nipple.



1,811,549. RAG GRINDING MACHINE. EDUARD LANGER, Leipzig, Germany. Filed June 26, 1930, Serial No. 463,884, and in Germany Mar. 24, 1930. 6 Claims. (Cl. 19—83.)

1. In a rag grinding machine of the type described, i. e. having a rotary grinding drum studded with sharply pointed pins and being cooperatively associated with rag feeding and supporting rollers, a drum presenting at its cylindrical surface slots which extend substantially parallel to the direction of the equatorial line of symmetry of the drum and transverse grooves, which extend substantially parallel to the axis of the drum, toothed blades having holes provided therein and being adapted to be inserted into the said slots in radial direction relatively to the drum, keys adapted to be inserted into the said transverse grooves (key ways), so as to detachably secure the toothed blades in their working position at the drum, and rag feeding and supporting rollers having an inner core of metal and an outer coat of non-metallic elastic material.



1,811,550. FLYING BOAT. GROVER LOENING, New York, N. Y. Filed June 26, 1930. Serial No. 463,875. 1 Claim. (Cl. 244—31.)

In a monoplane flying-boat, the combination of an engine mount above the wing, comprising members rising from the hull, longitudinal engine-bearers carried by said members, an inverted engine within the mount supported on said bearers, said engine-bearers extending beyond the ends of the engine, top cross-bracing for the engine

mount comprising cross-members connecting said bearers in front and rear of the engine, and top stays for the wings connected to said cross-bracing and carried thereby directly across the top of the engine mount.

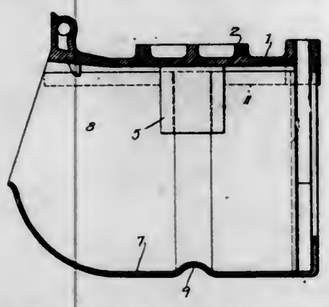
1,811,551. HANDLING CARRIAGE FOR AIRPLANE BODIES. GROVER LOENING, New York, N. Y. Filed Nov. 7, 1930. Serial No. 493,943. 4 Claims. (Cl. 244—2.)

1. Means for handling and stowing airplane bodies, comprising a large and a small wheel applicable to each side of the airplane body, and wheel supports adapted to connect said wheels detachably to the body and to permit the large wheels to be removed while the small wheels remain in place.

1,811,552. STABLE MIXTURE OF PETROLEUM HYDROCARBONS AND SECONDARY ALCOHOLS. MATTHEW D. MANN, Jr., Roselle, N. J., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed July 9, 1929. Serial No. 377,078. 4 Claims. (Cl. 44—9.)

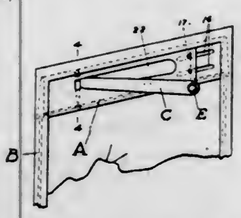
1. A compositition of matter consisting of liquid petroleum hydrocarbon and secondary alcohol.

1,811,553. SCREEN. BARNEY E. MCELYEA, St. Louis, Mo. Filed May 31, 1930. Serial No. 457,980. 2 Claims. (Cl. 156—14.)



1. An improved screen comprising a frame, a metallic screen proper secured therein, and metallic fastening means of similar electric affinity to the screen proper, substantially as described.

1,811,554. CAR JOURNAL BOX. THOMAS E. MURRAY, Jr., Brooklyn, N. Y., assignor to Metropolitan Engineering Company, a Corporation of New York. Filed June 4, 1924. Serial No. 717,728. 1 Claim. (Cl. 308—39.)



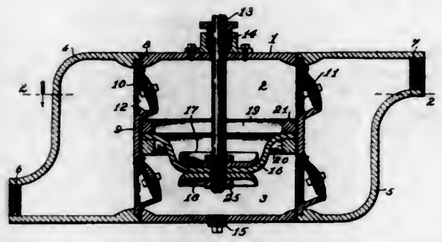
A journal box cellar comprising a cast upper segment comprising a top portion constituting an arch bar seat

with bolt openings and projections constituting inside stop pieces, and a sheet metal lower segment having grooves at the sides registering with said stop pieces and in line with said bolt openings, the cast upper segment having

flanges on its lower face abutting against the edges of the sheet metal lower segment and having flanges beyond said stop pieces projecting down on the outside of the lower segment, said segments being welded together along the abutting edges of the flanges and the lower segment.

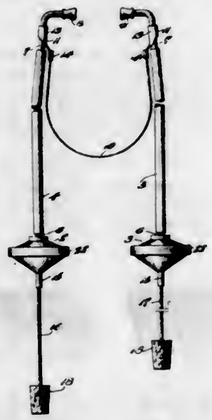
1,811,555. AUTO SIGNAL. GUS MYERS, Fargo, N. Dak. Filed Jan. 28, 1927. Serial No. 164,272. 6 Claims. (Cl. 116—52.)

1. A signal for vehicles adapted to be positioned in the window pane channel including, a panel, spring means adapted to expand the thickness of a portion of said panel into the side edges of the channel in a manner to hold said signal in operative position when the window is up or down.



1,811,556. HYDRAULIC JACK STRUCTURE. LEONARD D. NILSON, Wayzata, Minn., assignor to Marquette Manufacturing Company, St. Paul, Minn. Filed June 25, 1928. Serial No. 288,101. 11 Claims. (Cl. 138—9.)

1. In a jack structure, a frame, a lifting arm pivoted thereon and a hydraulic actuating mechanism having one end pivoted to said frame and its other end pivoted to said lifting arm for swinging the same when the hydraulic mechanism is actuated, said mechanism comprising a piston rod and a cylinder slidable relative thereto and a pump structure in said piston rod.

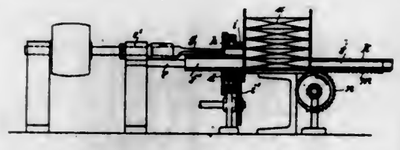


1,811,557. DOUBLE-ACTING PUMP. EDWARD N. OVE, Dike, Iowa. Filed May 26, 1930. Serial No. 455,620. 1 Claim. (Cl. 103—150.)

A duplex pump, comprising in combination, a pump barrel having open opposite ends, and having a top bearing aperture, closure plates for said open ends, a pair of medial clamping rings mounted in said barrel, a flexible piston member partitioning said barrel and having its margin clamped between said rings, a pump rod seated to reciprocate in said barrel bearing aperture and having a termination traversing said piston member centrally, clamping disks contacting opposite faces of the piston member and removably secured upon said rod, said closure plates having above and below said piston member

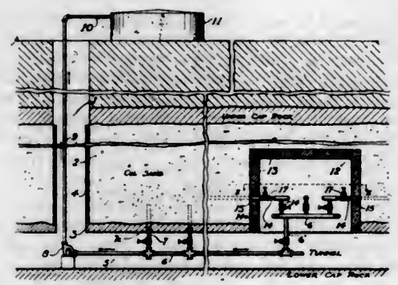
valve ports, valves for said ports opening in one direction only, and like but reversed outer chambers secured to said pump barrel and clamping between them said closure plates removably, said chambers having respectively like ports reversed in position, of which one port is a receiving port and the other port is a discharge port, the said closure plates, and said chambers being interchangeable each for the other respectively.

1,811,558. LOCATOR OF ABNORMAL SOUNDS AND VIBRATIONS. GEORGE PORTER, Berlin, N. J. Filed Oct. 4, 1930. Serial No. 486,300. 10 Claims. (Cl. 181—24.)



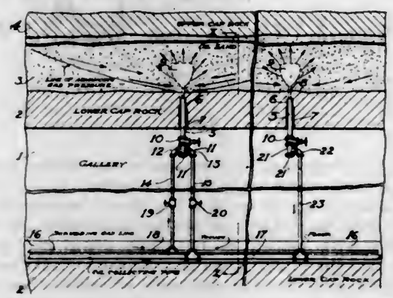
1. In a device of the character stated, a pair of independent sound detecting and transmission elements, a corresponding pair of independent sound insulating and conveying elements and a pair of independent sound amplifiers operatively interposed between said corresponding pairs of elements respectively, each of said amplifiers comprising a sound box, a diaphragm transversely secured therein, cushioning means for said diaphragm, a plurality of spaced vibratory elements in said box intermediate said diaphragm and the corresponding sound detecting and transmitting element, and means for adjusting the distance between said vibratory elements.

1,811,559. MACHINE FOR MAKING CLOTHES PEGS. KARL PRÖNNECKE, Quedlinburg, Harz, Germany. Filed Sept. 15, 1930, Serial No. 481,955, and in Germany Nov. 27, 1929. 1 Claim. (Cl. 144—9.)



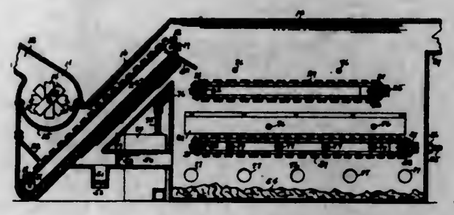
In a machine for working clothes pegs, the combination of a drum, an axle carrying said drum, a rotary

milling cutter arranged above said axle adapted to cut a raised curved surface on the inner side of one arm of the peg and a cavity in the other arm in a single operation, carriage guides arranged eccentrically on said drum adapted to accommodate the peg blanks and feed said



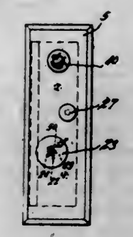
blanks past said cutter, means for periodically stopping said drum after every half revolution and means for ejecting the finished milled pegs out of one of said carriage guides and for inserting a fresh peg blank in the other of said carriage guides.

1,811,560. METHOD OF AND APPARATUS FOR RECOVERING OIL. LEO RANNEY, New York, N. Y., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed Apr. 8, 1926. Serial No. 100,531. 4 Claims. (Cl. 262—1.)



1. Method of recovering oil from the earth, comprising forming a gallery adjacent and generally parallel to the oil-bearing stratum, forming a chamber within the oil-bearing stratum but spaced therefrom by a wall of impervious material, drilling a plurality of elongated openings from said chamber and into the oil-bearing stratum in a plane substantially parallel to the gallery, and individually and selectively controlling simultaneous flow from a number of said openings.

1,811,561. METHOD AND MEANS FOR WORKING OIL SANDS. LEO RANNEY, New York, N. Y., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed Jan. 13, 1927. Serial No. 160,793. 5 Claims. (Cl. 262—1.)

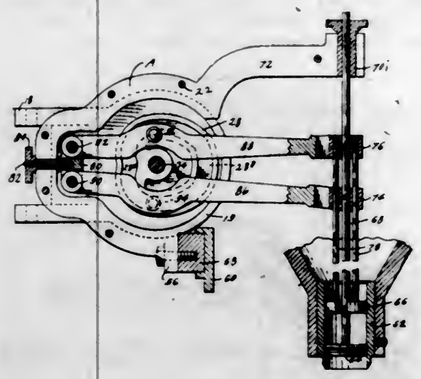


1. In an installation for recovering oil from the earth by means of a mine gallery adjacent an oil sand, but spaced therefrom, the improvement which comprises a series of pipes in the gallery and tapping the oil sand, a gate valve near the exposed end of certain of said pipes, an elbow connected to each said pipe below the gate valve, an oil-collecting pipe, and a connection between said elbow and said oil-collecting pipe.

1,811,562. GARBAGE INCINERATOR. DAVID M. REESE, Des Moines, Iowa. Filed May 3, 1928. Serial No. 274,780. 8 Claims. (Cl. 110—15.)

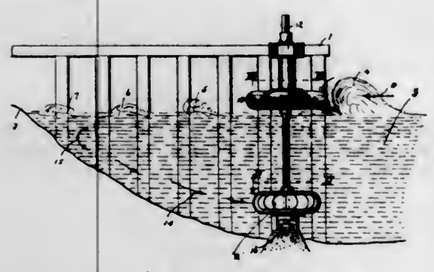
1. In a device of the class described, a cremating housing, grates in said housing, a hopper, an enclosed trough having one end communicating with the bottom of said hopper and its other end communicating with the upper portion of said housing, a hot air distributing pan embracing the bottom of said trough having its upper end communicating with the inside upper portion of said housing, a pipe leading from said cremating housing to said pan, and a means for regulating the amount of hot air passing through said pipe.

1,811,563. COMBINATION LOCK. DARIO ROBERTI, Springfield, Mass. Filed Dec. 19, 1929. Serial No. 415,265. 4 Claims. (Cl. 70—18.)



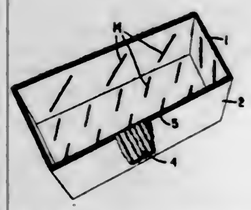
1. In a combination lock in combination, a lock bolt movable between lockable and unlockable positions, a plurality of separately operated racks mounted in intersecting relation with said lock bolt for locking the same in its lockable position, each of said racks having an arbitrarily positioned notch for freeing said lock bolt, selective means for operating said racks comprising a sliding pinion adapted to engage with any one of several racks, a return spring and a holding pawl associated with each rack.

1,811,564. ADJUSTABLE DOUGHNUT MACHINE. FRED L. SCHOEL, Waterloo, Iowa. Filed Apr. 14, 1930. Serial No. 444,290. 5 Claims. (Cl. 107—14.)



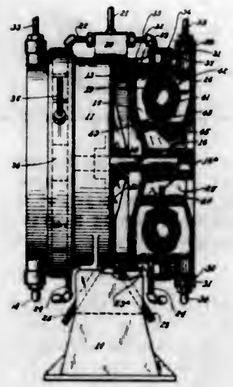
1. In a dough dispensing machine having a dough hopper and a movable member for dispensing dough therefrom, a shaft, a cam thereon, an arm pivotally connected with said movable member the cam surface of said cam coacting with said arm to move the same upon rotation

of the shaft, a bearing member, one end of said arm being pivoted to said bearing member, said bearing mem-



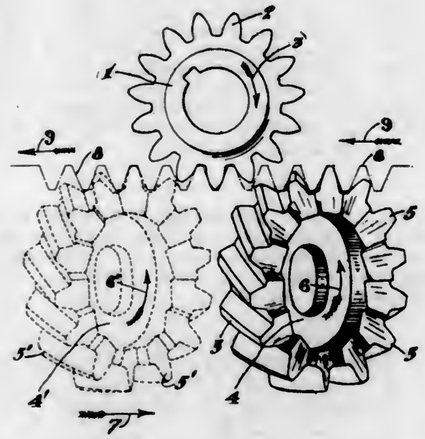
ber being movable toward and away from said movable member to vary the pivot point of said arm relative to said cam and said movable member.

1,811,565. WAVE MOTOR. SAM I. SCHWABACHER, San Francisco, Calif. Filed July 22, 1929. Serial No. 380,083. 2 Claims. (Cl. 170—115.)



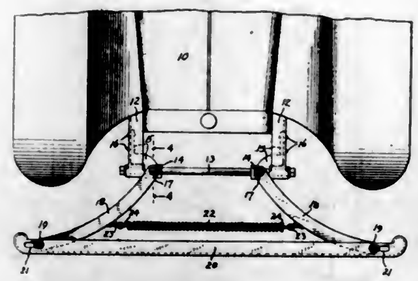
1. A wave motor comprising a framework adapted to be supported on an ocean bed, a vertically disposed shaft journalled in said framework, a first impeller on said shaft adapted to be actuated by the advancing waves of the ocean whereby said shaft is rotated in a predetermined direction, and a second impeller of less diameter than said first impeller on said shaft and adapted to be actuated by the receding waves of the ocean whereby said shaft is rotated in said direction.

1,811,566. CORRUGATED BAKING PAN LINER. JAMES A. SCOTT, Somerville, Mass. Filed Jan. 2, 1930. Serial No. 418,145. 4 Claims. (Cl. 53—6.)



1. A hollow container for baking formed of fabricated sheet material having a corrugated outer layer, and a flat smooth inner surface layer united to form an air cell structure.

1,811,567. VULCANIZER. FLORAIN J. SHOOK, Akron, Ohio, assignor, by mesne assignments, to National Rubber Machinery Company, Akron, Ohio, a Corporation of Ohio. Filed Dec. 9, 1926. Serial No. 153,563. 20 Claims. (Cl. 18—17.)

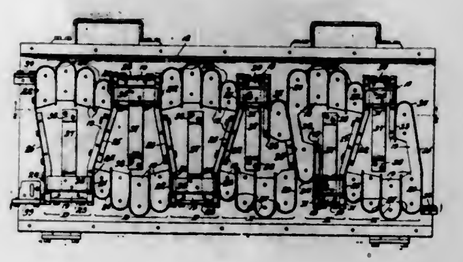


18. A heater mold comprising a cylinder having an open end, a fluid pressure actuated member mounted for reciprocating movement in the cylinder, a mold section in the cylinder carried by the fluid pressure actuated member, and a mold section removably secured to the open end of the cylinder whereby said fluid pressure actuated member forcibly mates said mold sections together to define a molding cavity.

1,811,568. METHOD OF GENERATING GEARS. OLIVER G. SIMMONS, Lakewood, Ohio. Filed Nov. 21, 1927. Serial No. 234,788. 20 Claims. (Cl. 90—9.)

1. The herein described method of generating teeth in a gear blank with a gear shaper cutter having helical teeth which comprises positioning the cutter with its axis at an angle to the axis of the blank, moving the cutter laterally with respect to the blank along the common tangent to the pitch circles of the cutter blank, rotating the cutter and blank at the rates at which they would be driven by an imaginary rack moving along said tangent line, and reciprocating the cutter to generate the teeth of the gear blank.

1,811,569. VEHICLE BUMPER. ADOLPH A. THOMAS, New York N. Y. Filed Apr. 16, 1930. Serial No. 444,636. 13 Claims. (Cl. 293—55.)

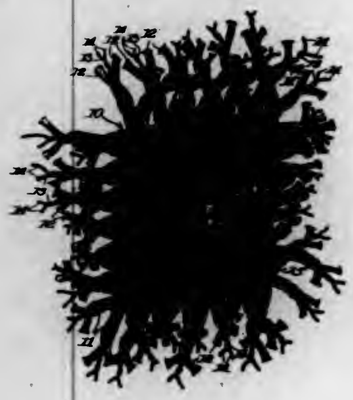


1. A bumper structure for automobiles comprising a pair of outwardly diverging levers pivoted at their inner ends to the car, tensioned elastic means connected to said levers at points between the inner and outer ends of the levers, and a bumper bar slidably connected to the outer ends of said levers, whereby the latter are spread apart to expand said elastic means when the bumper bar strikes an obstruction.

1,811,570. GLOVE. ALBERT C. ACKERMAN, Ballston Spa, N. Y. Filed May 21, 1930. Serial No. 454,367. 1 Claim. (Cl. 2—169.)

In a glove, the combination with a back section comprising finger portions and a wrist portion; of a front section comprising finger portions, a thumb portion and a wrist portion, the wrist portion of the front section being narrower than the wrist portion of the back section; and the thumb portion being disposed in longitudinal alinement with the fore-finger portion of the front section; and a combined thumb and wrist strip, the thumb portion of the strip being opposed to the thumb portion of the front section and the wrist portion of the strip being disposed alongside of the wrist portion of the back section, the combined width of the wrist portion of the front section and the wrist portion of the strip being substantially equal to the wrist portion of the back section whereby to permit flat lying of the front section and the thumb and wrist strip compositely upon the back section, said sections and a strip being united by stitching.

1,811,571. GANG DIE FOR CUTTING GLOVE BLANKS. ALBERT C. ACKERMAN, Ballston Spa, N. Y. Filed June 25, 1930. Serial No. 463,733. 9 Claims. (Cl. 164—29.)



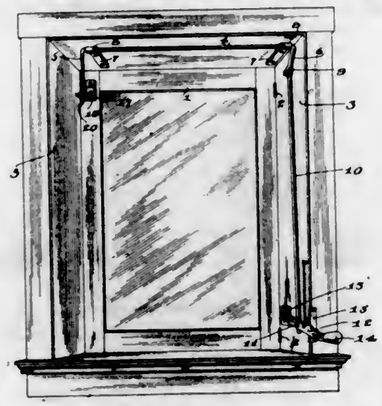
1. A glove face blank cutting die comprising cutting edges disposed to stamp out a glove face blank having an extended wrist portion at one end and finger extensions at its other end, and cutting edges for stamping out a thumb portion connected to and extending from the blank in the direction of the wrist portion.

1,811,572. GAS DISCHARGING DEVICE. ADRIAN S. AILES, Chicago, Ill., assignor, by mesne assignments, to The Lake Erie Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 21, 1929. Serial No. 341,641. 4 Claims. (Cl. 299—89.)

2. A device of the character described, comprising a casing, a frangible container for containing a noxious fluid mounted in the casing, means for breaking said container to liberate the liquid, an atomizer arranged for the discharge of the liquid after liberation, and a frangible cartridge containing a compressed gas for operating said breaking means and atomizing said liquid poison or noxious fluid.

1,811,573. FILTER CLOTH. WILLIAM H. BACHELDOR and WILLIAM E. WOOD, Wood River, Ill., assignors to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed July 29, 1929. Serial No. 382,057. 7 Claims. (Cl. 139—425.)

1. A filter cloth for filtering highly heated viscous hydrocarbon oils in pressure filters which comprises interwoven threads each thread being formed of asbestos fibres and not more than 5% of cotton fibres intermingled th rewith.

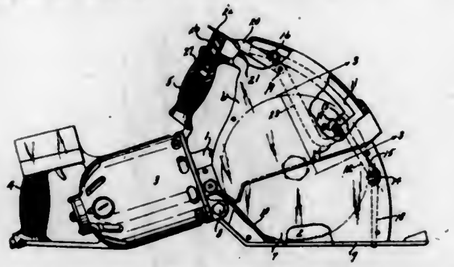


1,811,574. COLLAPSIBLE BAG. WILLIAM E. BARRETT, Flint, Mich. Filed Mar. 14, 1930. Serial No. 435,864. 1 Claim. (Cl. 229—53.)

A receptacle for a potted plant comprising a substantially rigid bottom of circular shape, an upwardly tapered body of circular shape in cross section having its lower end connected with the bottom, said body being formed with a plurality of superimposed folds, a number of flaps, each of triangular shape in cross section having their bases connected with the top of the body and adapted to be folded inwardly to provide a conical closure for the top of the receptacle.

1,811,575. DEVICE FOR CLOSING CASEMENT WINDOWS. WALTER FREDERIC BROADWATER, Orlando, Fla. Filed July 17, 1930. Serial No. 468,721. 2 Claims. (Cl. 292—196.)

1. A sash closer comprising an eye member secured to the inner face of the sash near its swinging edge, a lever member pivoted to the window frame having a hooked arm adapted to engage the eye member, a second arm disposed at an acute angle to the first arm, a second

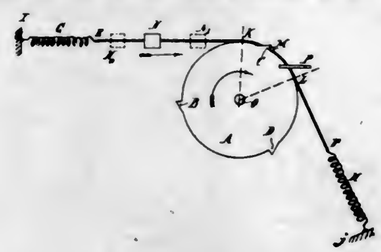


lever pivoted to the window frame and a link connecting the second mentioned arm of the first lever and the second lever.

1,811,576. DYEING OF CELLULOSE DERIVATIVES. RENÉ CLAVEL, Basel-Augst, Switzerland. Filed Jan. 18, 1923, Serial No. 613,533, and in Great Britain July 28, 1922. 11 Claims. (Cl. 8—5.)

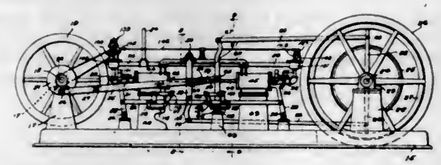
1. In a process for dyeing cellulose acetate with azo development dyes, treating the material with the developer component at above 60° C.

1,811,577. HAND TOOL. JOHN M. CHOWE, Covington, Ky., assignor to The Stanley Works, New Britain, Conn., a Corporation of Connecticut. Filed Aug. 21, 1930. Serial No. 476,758. 5 Claims. (Cl. 143—159.)



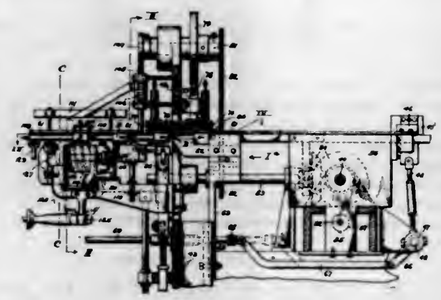
1. In a portable power-driven hand tool adapted to be applied bodily to the work and moved along the same by the operator, a frame, a cutting blade operatively mounted thereon, blade-driving means, a guard movably mounted on said frame to advance or recede to guard or expose a cutting portion of said blade, means tending to advance said guard, latch means for automatically securing said guard in full guarding position, operator-operated means associated with said latch to release said guard therefrom and arranged to be ineffective to prevent relatching of the guard following the guard-releasing operation and recession of the guard.

1,811,578. MOTION TRANSFORMING MECHANISM. CHARLES LOUIS FLORISSON, Courbevoie, Becon-les-Bruyeres, France, assignor of one-half to Societe de Condensation & d'Applications Mecaniques, Paris, France, a Corporation of France. Filed Oct. 30, 1929. Serial No. 403,465, and in France Nov. 8, 1928. 10 Claims. (Cl. 74—14.)



1. A mechanical movement of the type described comprising a driving shaft, a ratchet wheel on said driving

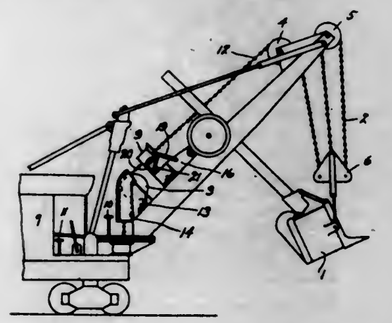
shaft, flexible means extending part way round the periphery of said ratchet wheel, resilient means supporting the ends of said flexible means, means on said flexible



means for engaging the teeth of said ratchet wheel and reciprocable means operatively engaged by said flexible means.

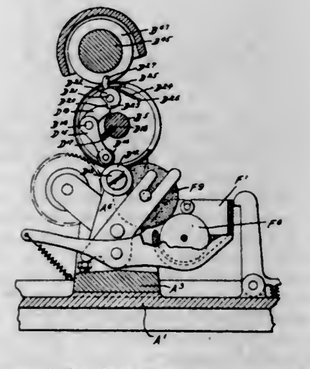
1,811,579. FLUID PRESSURE ENGINE. FRED A. GERLING, Boise, Idaho. Filed Jan. 18, 1930. Serial No. 421,778. 12 Claims. (Cl. 121—117.)

10. In an engine, a pair of cylinders, inlet and exhaust means connected with one end of each cylinder, pistons within the cylinders, piston rod means connecting the pistons, centralizing levers pivotally supported upon opposite sides of the piston rod means and connected with the same, a rotatable member, operating levers pivotally supported at the center of the rotatable member and extending in opposite directions, gripping devices carried by the operating levers and engaging the rotatable member and operating in opposite directions, rods connected with the gripping devices and with the centralizing levers, a rotatable stroke regulating element, and a rod connecting the stroke regulating element with the connecting rod means, the stroke regulating element being rotatable in either direction independently of the rotation of said member.



1,811,580. METHOD OF AND APPARATUS FOR MAKING FERRULES. LILBURN T. GOLDSBOROUGH, Baltimore, Md. Filed July 17, 1930. Serial No. 468,669. 20 Claims. (Cl. 113—9.)

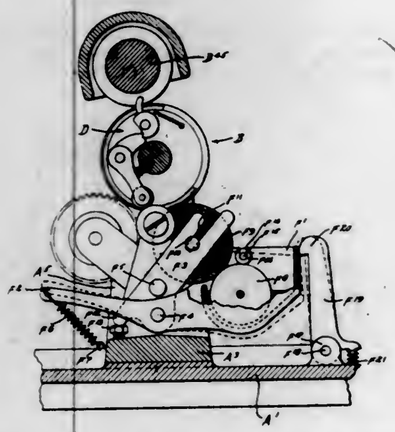
1. The mode herein described of making a ferrule from a flat metallic blank, said mode consisting in bending such a blank at a point substantially midway of its length, overlapping the ends of such bent blank with a slightly curved surface contact to form an enclosed hollow structure tapered toward the overlapping ends, disengaging such overlapped ends from each other, and permitting the same to frictionally re-engage in overlapping relation with the former inner end on the outer side and the former outer end on the inner side.



10. The combination, in a machine for forming ferrules from flat metallic blanks, of a horn, of blank feeding means cooperating with said horn, blank bending means which bends and overlaps the free ends of a blank, and means for temporarily disengaging the overlapped ends of the blank but permitting them to reengage in overlapping relation but with the former inner end on the outside and the former outer end on the inside.

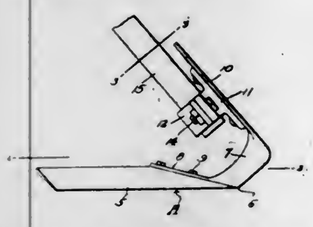
1,811,581. STEAM SHOVEL SAFETY ATTACHMENT. GEORGE R. INGHAM, Ajo, Ariz. Filed July 23, 1929. Serial No. 380,313. 1 Claim. (Cl. 214—135.)

In a steam shovel, the combination with the boom, sheaves at the ends of the boom, and a hoist chain passing over said sheaves, of a pair of relatively spaced chain guards, one of said guards being of elongated channel section and fastened to a lower sheave support and of substantially L-shape for covering the inner side of the sheave and lower portion of the hoist chain and the other guard consisting of a relatively short tube fastened to the boom in spaced relation to the lower sheave support and encircling the portion of the hoist chain immediately above the lower sheave, said tubular guard being flanged outwardly at its upper end.



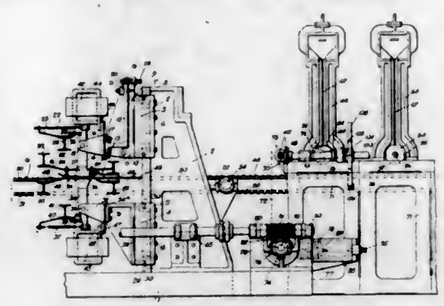
1,811,582. PRINTING AND STAMPING MACHINE. RAYMOND F. JAHN, Brooklyn, N. Y. Original application filed Apr. 13, 1927, Serial No. 183,318. Patent No. 1,744,770, dated Jan. 28, 1930. Divided and this application filed June 22, 1929. Serial No. 372,822. 6 Claims. (Cl. 101—235.)

1. A machine of the class described, comprising a printing roller, a fixed stop adjacent the roller, a stop lever



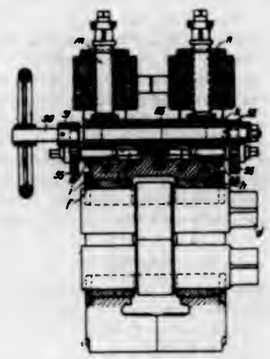
pivoted on the roller and adapted to normally engage against said fixed stop, and a trip lever independently pivoted on the roller, said trip lever and stop lever having mutually engaging means for maintaining the stop lever in its normal position.

1,811,583. PRINTING AND STAMPING MACHINE. RAYMOND F. JAHN, Brooklyn, N. Y. Original application filed Apr. 13, 1927, Serial No. 183,318, Patent No. 1,744,770, dated Jan. 28, 1930. Divided and this application filed June 22, 1929. Serial No. 372,823. 3 Claims. (Cl. 101—351.)



1. In a printing machine of the class described, the combination with a printing couple, of inking means including an ink well, an ink roller associated therewith, an ink distributing roller mutually engaging said ink roller and the printing member of the printing couple, swinging arms supporting the distributing roller for movement toward and away from the printing element, and an eccentric pivotal connection between said arms and the ink well.

1,811,584. CULTIVATOR SWEEP. MELVIN JOHNSON, Forest City, Iowa. Filed Oct. 10, 1930. Serial No. 487,851. 1 Claim. (Cl. 97—205.)

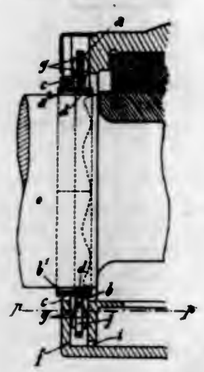


A device of the class described comprising a substantially V-shaped sweep including rearwardly diverging wings having their outer edges disposed below the horizontal plane of their inner edges, the outer edges formed to provide knife edges, a knife extending upwardly and forwardly from the apex portion of the sweep, said knife being of a substantially isosceles triangular cross sectional shape, an integral apertured arm extending upwardly and rearwardly from the lower end portion of the knife and rigidly secured to the sweep, a shank plate merging upwardly and rearwardly from the upper end of the knife, and a clamp mounted on the shank plate for engagement with a support, the cutting edge of the knife being rounded adjacent its point of mergence with the plate.

1,811,585. WIRE WELDING MACHINE. THOMAS HENRY KANE, Youngstown, Ohio, assignor to Truscon Steel Company, Youngstown, Ohio, a Corporation of Michigan. Filed July 19, 1922. Serial No. 575,943. 33 Claims. (Cl. 140—112.)

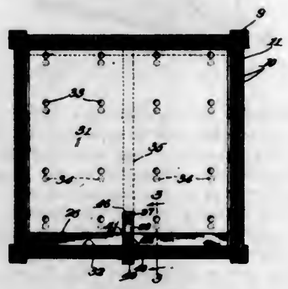
1. In a machine of the kind described, in combination, a common feeding means operative to effect both the feeding of a series of longitudinal wires and the feeding of a succession of individual cross wires, prior to the welding thereof to said longitudinal wires, means for operating said feeding means, and welding means operative to weld the cross wires to the longitudinal wires at the points of intersection thereof.

1,811,586. ROLLING MILL. RUDOLF KRONENBERG, Hans Kronenberg, Germany. Filed Aug. 28, 1929, Serial No. 389,007, and in Germany Jan. 29, 1929. 5 Claims. (Cl. 80—56.)



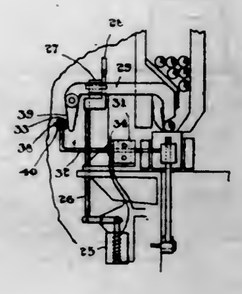
1. A rolling mill, comprising rollers, in combination with one of the rollers, an adjusting member provided for it and located above, and being coupled with it, a projection extending forth from the middle portion of said member; threaded bolts engaging said projection parallel to the ax's of said roller on the two sides concerned, correspondingly threaded stationary members in which said bolts are supported; cog-wheels on the free ends of the bolts; other cog-wheels meshing with those first mentioned; a shaft to which said other cog-wheels are secured, and means for turning said shaft.

1,811,587. PROCESS OF PURIFYING WATER. KARL P. MCELROY, Washington, D. C., assignor to The Permutit Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 1, 1929. Serial No. 343,851. 6 Claims. (Cl. 210—24.)



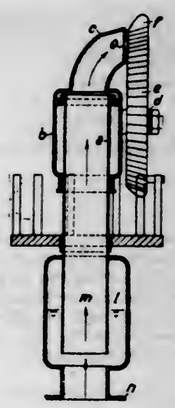
1. The process of removing dissolved alkali from softened water containing dissolved sodium salts introduced in softening, which comprises dealkalizing such water by passing it through a pervious bed of granular, acid-treated, acid-resistant, siliceous material, then regenerating said material by passing an acid solution through said bed, washing the bed and repeating the cycle.

1,811,588. OIL LOSS PREVENTING DEVICE. JULES MOREAU, La Garenne-Colombes, France. Filed Mar. 19, 1929, Serial No. 348,319, and in France Apr. 7, 1928. 3 Claims. (Cl. 286—6.)



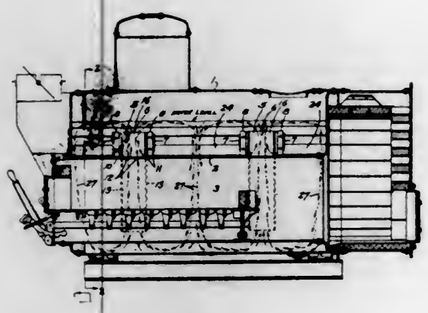
1. A device for preventing waste of lubricant in journal boxes and bearings of rotatable shafts comprising a plate, a tube rigid with said plate, a band of supple material disposed on the interior of said tube adapted to surround the shaft and a plurality of sinuous projections formed on said band for projecting the particles of lubricant which come in contact therewith toward the interior.

1,811,589. CALIBRATED VENTILATOR ADJUSTMENT FOR INCUBATORS. BENJAMIN F. C. MORRIS, Oklahoma City, Okla. Filed June 28, 1927. Serial No. 202,041. 2 Claims. (Cl. 119—35.)



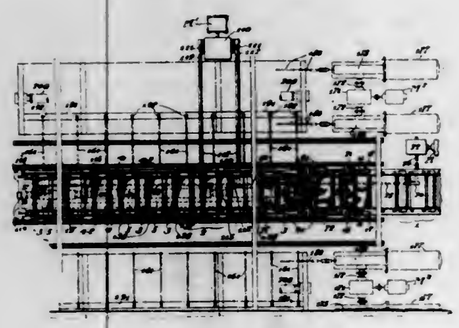
1. In a ventilating adjustment for incubators, the combination with the floor of the incubator having a series of spaced openings therein adapted to admit unheated atmospheric air through the incubator chamber, a movable slide mounted on the floor and of less width than the floor in the incubator chamber, said slide having openings therein adapted to be moved into and out of register with the openings in the floor, said slide having a recess, a block in the recess having a threaded opening, a bottom strip connected to the slide and to the block and operating in a groove across the bottom in its top surface, a screw having a bearing in the front wall of the incubator and held against movement therein, said screw being threaded into the block and having a head externally of said wall with calibrations thereon, and a pointer on said wall cooperating with said calibrations.

1,811,590. FEELER MOTION FOR AUTOMATIC SILK LOOMS. GEORGE W. NICELY, Montreal, Quebec, Canada, assignor to British American Silk Mills Limited, Montreal, Canada. Filed Aug. 26, 1929, Serial No. 388,500, and in Canada July 24, 1929. 2 Claims. (Cl. 139—271.)



1. In a loom, a bobbin having a metallic wrapping thereon, replenishing mechanism including a transferrer, an insulated block, feeler mechanism comprising a pair of spaced feeler elements slidable through said blocks, means for limiting the movements of said elements in one direction, resilient means urging and normally maintaining said elements in contacting engagement with said bobbin, a bar connecting the corresponding outer extremities of said elements, a solenoid, one of said elements being electrically connected with the solenoid, means connecting the solenoid and the other of said elements with a source of electrical supply, and an extension carried by the transferrer and engaging said bar to move said feeler elements in a direction away from the bobbin as and for the purpose specified.

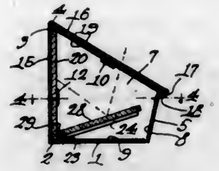
1,811,591. PERIODIC JET ROTARY SPRINKLER. THEODOR OEHLER, Berlin-Lichterfelde, Germany, assignor to the Firm Hydor G. m. b. H.,-Regenanlagen- und Silo-Bau, Berlin-Mariendorf, Germany. Filed Jan. 21, 1930, Serial No. 422,307, and in Germany Aug. 24, 1927. 9 Claims. (Cl. 299—68.)



1. In a sprinkler, a supply pipe, a discharge nozzle connected to said supply pipe, an air chamber in said supply pipe, and automatic means for periodically throttling said nozzle.

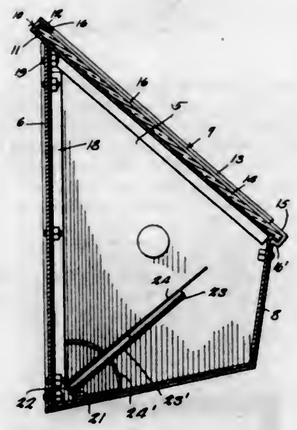
1,811,592. CIRCULATING DUCT FOR BOILERS. HORACE H. PEEK and ALPHEUS C. GRIST, Chattanooga, Tenn.; said Grist assignor to said Peek. Filed July 18, 1930. Serial No. 468,903. 3 Claims. (Cl. 122—410.)

1. In combination, an internal fired horizontal type boiler having a furnace shell forming the outside of the furnace, and a boiler shell surrounding the furnace shell, lug means comprising a plurality of lugs, each lug having spaced legs attached to the furnace shell, and one or more water circulating ducts attached to the lug means.



1,811,593. PLATE PILING MACHINE. EDWARD T. PETERSON, Reading, Pa., assignor to Birdsboro Steel Foundry and Machine Company, Birdsboro, Pa., a Corporation of Pennsylvania. Filed Apr. 12, 1929. Serial No. 354,519. 23 Claims. (Cl. 214—6.)

1. In a plate piling machine, the combination of a delivery table including means for conveying plates over the said table, means for lifting the said plates from the said conveying means, and means located midway of the opposite sides of said table and movable transversely of the said table in opposite direction for discharging plates laterally therefrom in either direction.

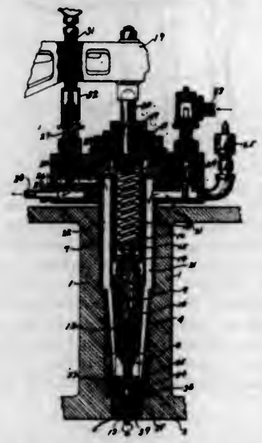


1,811,594. STREET SIGN. WILLIAM M. POWERS, Minneapolis, Minn., assignor to Powers Sign Co., Inc., Minneapolis, Minn., a Corporation of South Dakota. Filed Feb. 26, 1930. Serial No. 431,504. 4 Claims. (Cl. 40—130.)

1. In a device of the class described, a casing having a top through which light can pass, the casing having a sign on its front, a shaft journaled in the casing and having a crank, a reflector so disposed in the casing as to receive light from the top of the casing and reflect the

light through the sign, the reflector resting on the crank and having its lower edge in loose abutment with a portion of the front, and means for holding the shaft in adjusted positions.

1,811,595. STREET MARKER. WILLIAM M. POWERS, Minneapolis, Minn., assignor to Powers Sign Co., Inc., a Corporation of South Dakota. Filed Aug. 6, 1930. Serial No. 473,400. 4 Claims. (Cl. 40—130.)

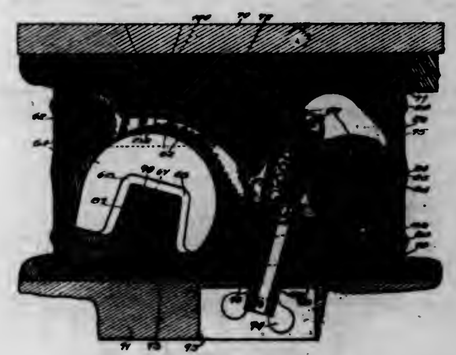


1. An illuminated sign comprising a casing, a front wall having cut out portions, forming a part of the casing, a shaft mounted within the casing, said shaft having an offset supporting portion, a reflector loosely mounted within the casing and resting on the supporting section, a keeper having notches disposed within the casing, one end of the shaft extending at right angles and adapted to engage within the notches to hold the shaft in its position of adjustment, and a transparent top forming a part of the casing, to allow light rays to pass therethrough.

4. An illuminated sign comprising a casing, said sign having a front wall formed with cut out portions defining words, a transparent top disposed at an oblique angle with respect to the front wall to project light rays inwardly to the interior of the casing, a rear wall and end walls forming a part of the casing, and a bottom forming a continuation of the rear wall.

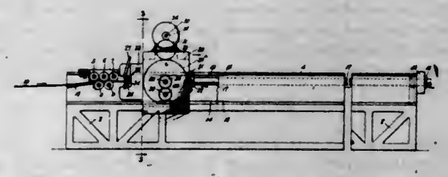
1,811,596. INJECTION VALVE MEANS FOR HYDROCARBON MOTORS. CARL D. SALISBURY, Cleveland, Ohio, assignor to The Winton Engine Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 24, 1929. Serial No. 402,178. 1 Claim. (Cl. 123—139.)

In a hydrocarbon motor having a combustion chamber, a fuel injection apparatus therefor comprising means forming a metering chamber adjacent and having communication with said combustion chamber, plunger means arranged to vary the metering chamber volume, an injection valve arranged to seat within said metering chamber to cut off said communication and to be unseated by me-



tering chamber fluid pressure, yieldable means for opposing valve unseating movement, and stop means cooperative with said valve for limiting said unseating movement whereby reseating of said valve is unaffected by unseating inertia forces.

1,811,597. APPARATUS FOR CLEANING GASES. ALFRED STEINBART, Pittsburgh, Pa. Filed Dec. 28, 1929. Serial No. 417,247. 2 Claims. (Cl. 183—85.)

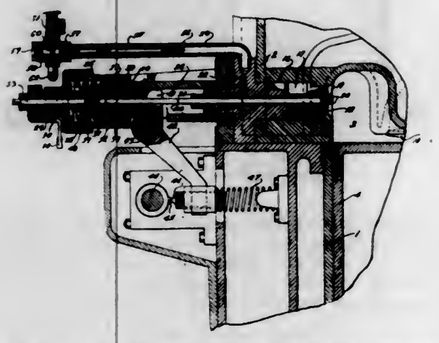


1. An apparatus for cleaning gases comprising a lengthwise vertical cylindrical gas cleaning chamber having a lengthwise vertical inlet opening adjacent its upper end, a lengthwise vertical cylindrical gas supply box having a lengthwise vertical outlet opening, a duct connecting said opening in said gas supply box with said inlet opening in said chamber, said duct being arranged tangentially so as to impart a whirling motion to the gases passing through said duct and into said chamber, horizontal webs extending from side to side within said duct to reenforce the duct and form a plurality of separate channels in said duct, selected ones of said channels being adapted to be obstructed to increase the speed of the gas flowing through the other of said channels, a clean gas conduit communicating with the upper end of said chamber, a downwardly tapering nozzle connected to said clean gas conduit and extending downwardly within said chamber, said nozzle having an inlet opening of materially smaller diameter than the diameter of said clean gas conduit, an impurity discharge opening at the lower end of said chamber, a horizontal disk of materially less diameter than the diameter of said chamber mounted within said chamber above said impurity discharge opening to prevent the suction of the whirling gases reaching the impurities deposited in said chamber.

1,811,598. AMPLIFYING HORN. FRED W. TEMPLE, Chicago, Ill., assignor to Temple, Inc., Chicago, Ill., a Corporation of Illinois. Original application filed Aug. 1, 1927, Serial No. 209,730. Divided and this application filed Nov. 19, 1927. Serial No. 234,486. 31 Claims. (Cl. 181—27.)

1. An amplifying horn comprising a massive-like member having passage therein, means forming a chamber directly in front of the outlet end of said passage, and a reproducing unit disposed in said chamber and communicating with the inlet end of said sound passage.

1,811,599. MACHINE FOR ROLLER LEVELING AND STRETCHING STEEL SHEETS. THOMAS L. THOMAS, Youngstown, Ohio, assignor to The Youngstown Foundry & Machine Company, Youngstown, Ohio, a Corporation of Ohio. Filed Jan. 9, 1930. Serial No. 419,615. 5 Claims. (Cl. 153—35.)



1. A machine for leveling and stretching steel sheets comprising a plurality of horizontally disposed rolls, means for preliminarily actuating the rolls to thread the sheet therein, means for gripping the sheet and adapted to pull the sheet through the rolls and thereby actuate the rolls, and the said rolls also providing a proper tension on the sheet whereby the sheet will be roller leveled and stretched as the same is pulled through the rolls.

1,811,600. PROCESS FOR PRODUCING CLICHÉS FOR TWO, THREE OR MORE COLOR PRINTS, LANTERN SLIDES, AND COLORED WINDOWS AND THE LIKE. LOUIS OSCAR VAN STRAATEN, Biggekerke, Netherlands. Filed Aug. 29, 1930, Serial No. 478,786, and in the Netherlands Sept. 6, 1929. 2 Claims. (Cl. 95—2.)

1. Process for producing clichés for two, three or more color prints, lantern slides, colored windows and the like which comprises producing a first series of two, three or

more photographic negatives of an object with the employment of a corresponding number of different color filters (for example, green, violet and orange), simultaneously producing corresponding negative images of primary colors (for example, blue, yellow and red), producing a second series of photographic negatives of the said object with the employment of light filters of the corresponding complementary colors of the said primary colors (for example red, yellow and blue), producing a corresponding series of diapositives from the second series of negatives of a density which corresponds to the inherent faults of the first series of negatives as disclosed by the images of the three primary colors upon the first series of negatives, so placing each of the first series of negatives with relation to the corresponding diapositives that the images coincide exactly to form a compound element for the purpose set forth.

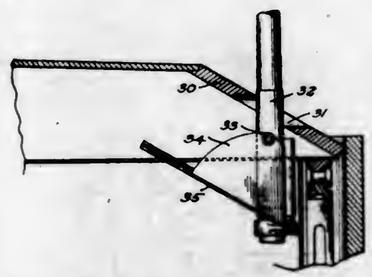
1,811,601. INJECTION VALVE MEANS. ALEXANDER WINTON, Lakewood, Ohio. Filed Oct. 8, 1927. Serial No. 224,917. 2 Claims. (Cl. 137—145.)

1. Valve means for the purpose described comprising a valve having a stem portion, a movable intermediate member and spring means, said stem portion and said intermediate member having abutting portions and said spring means being associated with said intermediate member to act through sad abutting portions to urge said valve to seated relation, gear for periodically moving said intermediate member against said spring means, resilient means effective between said valve and said intermediate member to cause said valve to follow movements of said intermediate member effected by said gear, and means for adjustably limiting said following movements of said valve.

1,811,602. MANUFACTURE OF PHOSPHORUS SULPHOCHLORIDE. WILLARD H. WOODSTOCK and GUY A. MCDONALD, Chicago Heights, Ill., assignors to Victor Chemical Works, a Corporation of Illinois. Filed Mar. 13, 1930. Serial No. 435,661. 3 Claims. (Cl. 23—14.)

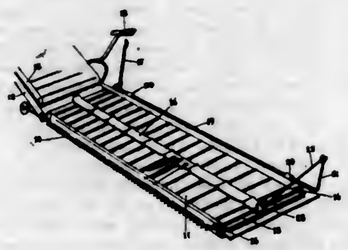
1. The method of producing phosphorus sulphochloride from ferrophosphorus which comprises chlorinating ferrophosphorus, thereby forming a phosphorus pentachloride-iron chloride complex, and reacting thereupon with sulfur.

1,811,603. MANUFACTURE OF ELECTRICAL RECTIFIERS. DONALD G. ACKERLY, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Sept. 11, 1929. Serial No. 391,985. 5 Claims. (Cl. 175—366.)



1. The process of producing a rectifier unit which consists in treating a copper blank to form cuprous oxide thereon, and then placing the treated blank in a bath of molten metal to reduce the outer surface of the oxide to copper.

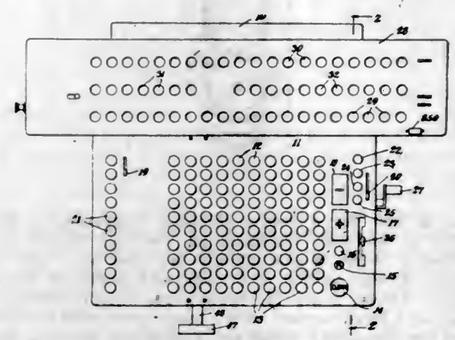
1,811,604. GARDEN TOOL. WILLIAM P. BANCROFT, Lincoln, Nebr. Filed Feb. 11, 1929. Serial No. 339,233. 3 Claims. (Cl. 97—63.)



2. A garden tool having a flattened intermediate portion and a pair of flattened tines projecting therefrom at the extremities thereof, said intermediate portion and said tines being each provided with front and rear cutting edges, and means for securing a handle to said intermediate portion to project rearwardly therefrom, said means inclined rearwardly from said intermediate portion and in the direction of said tines but terminating appreciably short of the free extremities thereof whereby said garden tool is reversible to operatively position the cutting edges of either said intermediate portion or said tines.

1,811,605. ORDNANCE. CHARLES BITTINGER, Washington, D. C. Original application filed Apr. 26, 1926, Serial No. 104,832. Divided and this application filed Apr. 3, 1930. Serial No. 441,329. 3 Claims. (Cl. 89—37.)

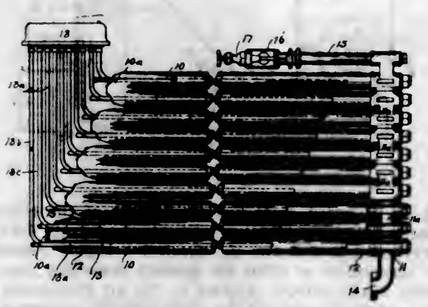
1. A gun mount including a turret having a conventionally inclined armored wall having a port, a gun projecting through the port, a trunnion support for the gun in which it is horizontally pivoted, means for moving the trunnions in a plane substantially parallel with the inclined wall so that the trunnions are in substantial vertical alignment with the port whereby the gun may be elevated to the vertical for firing.



1,811,606. GRAIN RETARDER. JOHN BOYLE, Scribner, Nebr. Filed Mar. 26, 1929. Serial No. 349,996. 2 Claims. (Cl. 56—466.)

1. A grain retarder for binder platforms, said grain retarder comprising a strap having a length substantially

equal to the length of the binder platform, said grain retarder being provided with a plurality of spaced ridges throughout its length, the distances between successive ridges decreasing from the outer extremity toward the inner extremity of said grain retarder, and means at the outer extremity of said grain retarder for pivotal connection with the frame of the binder platform at the outer extremity thereof.



1,811,607. CALCULATING MACHINE. EDWIN F. BRITTEN, Jr., Maplewood, N. J., assignor to Monroe Calculating Machine Company, Orange, N. J., a Corporation of Delaware. Filed Sept. 8, 1930, Serial No. 480,475, and in France Jan. 15, 1930. 13 Claims. (Cl. 235—63.)

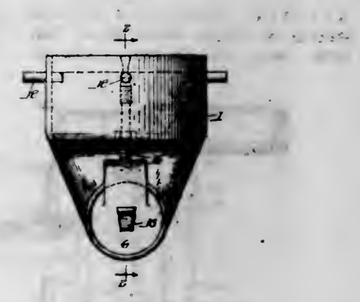
1. In a calculating machine, the combination of a set of register wheels, differential actuators therefor, intermediate transmitting means between said actuators and said register wheels, a carriage supporting said register wheels and movable relatively to said actuators, means for moving said carriage relatively to said actuators, and means automatically operable upon initiating an operation of said carriage, for moving said transmission means to ineffective position.

9. In a machine of the class described, the combination of a transversely movable carriage, register wheels mounted thereon, gears for operating said register wheels, a swinging frame supporting said gears, a latch cooperative with said frame for holding its gears in effective relation to said register wheels, and a finger-piece operable for first moving said latch to ineffective position and then moving said carriage laterally.

1,811,608. AUXILIARY APPARATUS FOR STEAM GENERATORS. ALFRED W. BRUCE, New York, N. Y. Filed Aug. 13, 1929. Serial No. 385,659. 11 Claims. (Cl. 122—477.)

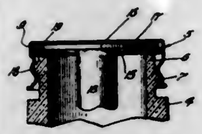
1. In an apparatus for locomotives, the combination of an economizer comprising a plurality of superposed water tubes arranged in vertical rows, the tubes of each row being connected at their rear ends in pairs by separate, spaced, return bends to permit the flow of combustive gases longitudinally between said tubes, means for connecting the opposite ends of the tubes to permit the circulation of water therethrough, and a plurality of fire tubes each passing through one of the water tubes.

1,811,609. BOBBIN BUSHING. EDWIN C. BUFFINGTON, Manchester, N. H., assignor, by mesne assignments, to U S Bobbin & Shuttle Company, 1929, Providence, R. I., a Corporation of Rhode Island. Filed July 27, 1927. Serial No. 208,745. 4 Claims. (Cl. 242—120.)



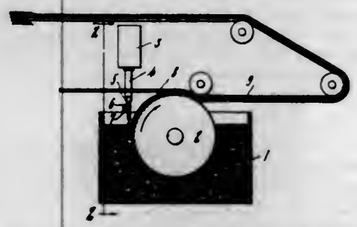
1. A bobbin bushing comprising a longitudinally split tubular body adapted to fit within the bore of a bobbin, said bushing having an element which is yieldable to a position substantially within the body of the bushing to permit the bushing to move axially in one direction along the bobbin bore but which tends to bite into the wall of the bore to oppose movement of the bushing in the opposite direction.

1,811,610. METHOD OF PREPARING METALLIC MOLDS FOR CASTING METAL. FRANK S. CARLILE, Abington, Pa. Filed Aug. 2, 1930. Serial No. 472,768. 10 Claims. (Cl. 22—192.)



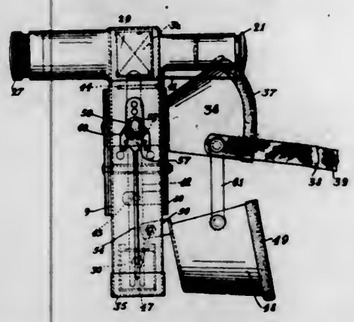
1. The method of preparing metallic molds for casting metal consisting in applying to the said mold a varnish like coating and heating the said mold to a temperature sufficiently high to cause the said coating to blister.

1,811,611. FLOOR DRAIN. FRANK W. CARLSON, Chicago, Ill. Filed Jan. 18, 1930. Serial No. 421,669. 8 Claims. (Cl. 182—15.)



2. A drain valve comprising a main body having a portion of the wall thereof extended inwardly to provide a horizontal wall portion, said main body having an outlet opening therein below said horizontal portion and having a valve seat around said opening, a valve member cooperating with said valve seat, a portion depending from said horizontal wall portion providing a support, a lug on said valve member rested on said support for supporting said valve member for movement relative to said valve seat, means for preventing displacement of said lug from said support, a drain plate for closing the open upper end of said main body, and a member depending from said drain plate for preventing movement of means preventing displacement of said lug.

1,811,612. MUCILAGE SPREADER. WILLIAM W. S. CARPENTER, Chicago, Ill. Filed June 21, 1930. Serial No. 462,774. 3 Claims. (Cl. 91—67.2.)

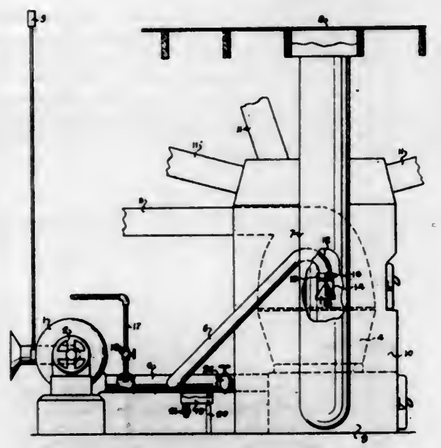


1. The combination with a bottle, of a liquid applicator integrally made of soft, flexible material adapted to extend down inside of the bottle and comprising a shank, a spreader at the lower end of the said shank, and a disk at the upper end of said shank and integral therewith and providing a closure for said bottle.

1,811,613. MOTTLED OR COLORED SHINGLE AND METHOD FOR PRODUCING IT. ALBERT L. CLAPP, Danvers, Mass., assignor to The Flintkote Company, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 7, 1924. Serial No. 697,485. 6 Claims. (Cl. 92—21.)

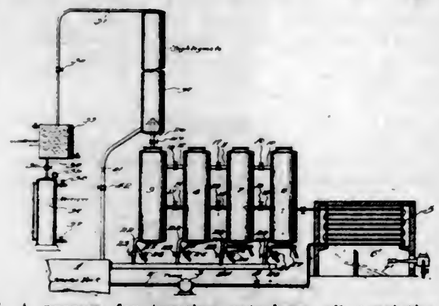
1. A daub coat for application to fibrous stock as it is being sheeted on a paper machine, which comprises an aqueous pulp having a relatively small proportion of fibrous material capable of being formed with the fibrous stock into a sheet and having a relatively large amount of water-insoluble coloring matter and waterproofing material fixed thereto by a precipitate.

1,811,614. BINOCULAR OPTICAL INSTRUMENT. HARVEY S. COVER, South Bend, Ind. Filed Aug. 22, 1928. Serial No. 301,220. 7 Claims. (Cl. 88—33.)



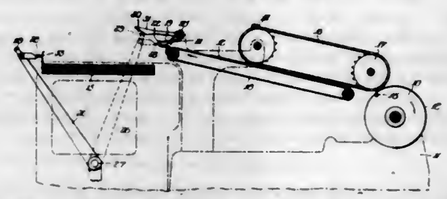
1. A binocular optical instrument, comprising a central frame member, a pair of telescopic members, each provided with a total reflecting prism operatively interposed between an objective and an ocular lens, one of said telescopic members being pivotally connected to said frame member at a point axially offset from the ocular lens, and one of said total reflecting prisms being shiftably and rotatably mounted for lateral and rotative movements to obtain proper stereoscopic vision between said telescopic members.

1,811,615. ELECTRIC SOCKET. JOHN CUTHBERT, Chicago, Ill., assignor to Economy Fuse and Manufacturing Company, Chicago, Ill., a Corporation of New York. Filed May 21, 1920. Serial No. 383,085. 2 Claims. (Cl. 173—350.)



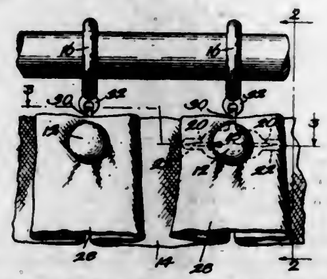
1. A base for a socket cartridge comprising a disc carrying conductor terminals on one face thereof and having a recess in the opposite face thereof, a pair of switch springs secured to the disc and positioned in the recess thereof, a key for causing the switch springs to make and break contact with a snap action, and a second disc for closing the recess and cooperating with the first disc to hold the key in place.

1,811,616. HOT AIR FURNACE. ALFRED DOYLE, Hamilton, Ontario, Canada. Filed Mar. 18, 1930. Serial No. 436,814. 3 Claims. (126—110.)



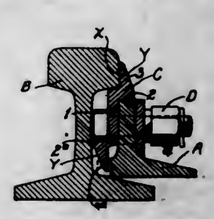
1. In a forced draft hot air furnace of the character described, the combination with the forced air draft delivery conduit and the air circulation supply conduit to the furnace, of a third air conduit extending from the forced draft delivery conduit to the air circulation supply conduit, the end of the third conduit projecting into the centre of the air circulation supply conduit and extending in the same direction as the air flow in the air supply conduit, and means for spreading the air passing from the third conduit into the air supply conduit.

1,811,617. PROCESS FOR TREATING PETROLEUM OIL. CARBON P. DUBBS, Wilmette, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed July 31, 1922. Serial No. 578,703. 5 Claims. (Cl. 196—59.)



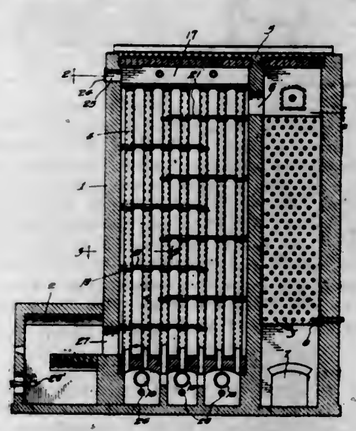
1. A process for treating petroleum oil consisting in raising the oil to a conversion temperature in a cracking zone, passing the oil through successive vapor chambers in maintaining a superatmospheric pressure on the oil in said chambers, withdrawing the evolved vapors therefrom and subjecting them to a dephlegmating action, condensing the dephlegmated vapors and recycling the unvaporized oil from selected vapor chambers to the cracking zone for retreatment, and withdrawing the unvaporized oil from the remaining vapor chambers from the system without returning the same to said cracking coil for further cracking.

1,811,618. DELIVERY MECHANISM. EDWARD F. DUDLEY, Oak Park, Ill., assignor to The Miehle Printing Press & Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 15, 1928. Serial No. 285,616. 10 Claims. (Cl. 271—68.)



1. In a delivery mechanism for printing presses and the like, the combination of a sheet carrier operative to remove a sheet from a cylinder of the press at cylinder speed, oscillating delivery means, and means continually moving at a slower speed than said carrier and adapted to receive a sheet therefrom and advance it towards said delivery means.

1,811,619. DRAPERY HANGER. RAYMOND B. DWYER, Chicago Ill. Filed Feb. 26, 1927. Serial No. 171,281. 9 Claims. (Cl. 156—21.)

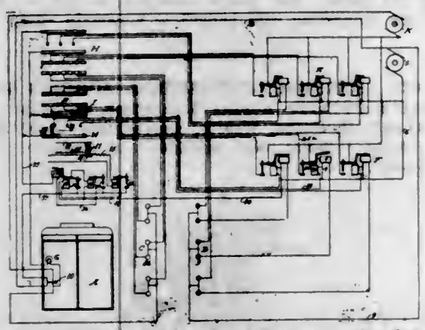


1. A drapery hanger including detachably connected plates, one of which is provided with means to pierce the arranged folds of the drapery and to extend through a perforated portion of the other part, said piercing part being bendable behind the perforated part into clinching engagement therewith to hold the folds in position between the plates, and means provided on one of said parts for connecting said hanger to a curtain ring.

1,811,620. REVERSIBLE TERMINAL MEMBER FOR SWITCH POINTS. ROBERT E. EINSTEIN, St. Louis, and BENJAMIN B. BETTS, Webster Groves, Mo. Filed Oct. 25, 1930. Serial No. 491,210. 4 Claims. (Cl. 246—437.)

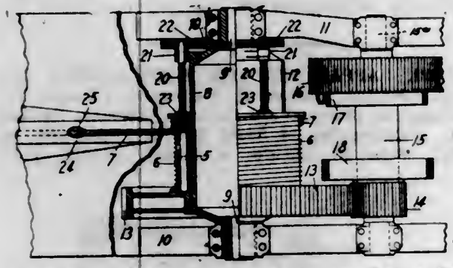
1. A renewable terminal member for switch points, having a web that is adapted to be arranged in overlapping relationship with the web of a point and secured to same, and a wheel-engaging portion at the top edge of the web of said terminal member provided at its inner side with a surface that is adapted to bear against the head of a running rail and provided on its outer side with a wheel flange engaging surface.

1,811,621. APPARATUS FOR HYDROCARBON OIL CONVERSION. OSCAR H. FAIRCHILD, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Oct. 10, 1927. Serial No. 225,078. 8 Claims. (Cl. 196—110.)



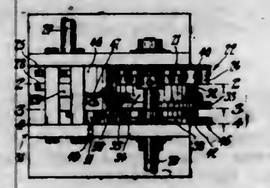
1. An apparatus for cracking hydrocarbon oil vapors, comprising in combination, a furnace and connected sections of tubing forming a continuous passageway mounted therein, said sections being constructed of carborundum.

1,811,622. SIGNAL SYSTEM FOR ELEVATORS. HAROLD J. FEAR, Montclair, N. J., assignor to Elevator Supplies Company, Inc., Hoboken, N. J., a Corporation of New Jersey. Filed July 14, 1926. Serial No. 122,342. 11 Claims. (Cl. 177—336.)



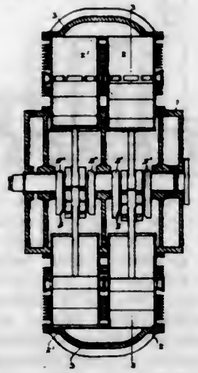
1. In an elevator signal system a car, a signal for said car for a floor at which said car may stop and a circuit therefor, means at said floor for setting said circuit in signal operating condition, means operating in

synchronism with the car for operating said signal in response to the operation of said signal setting means, means for restoring said signal setting means to its normally inoperative condition comprising a restoring circuit,



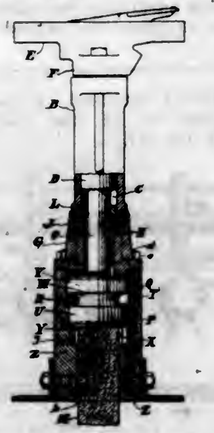
two normally open switches in said circuit, means for closing one of said switches as an incident to the stopping of the car at said floor, and means for closing the second switch only upon the departure of said car from said floor.

1,811,623. SELF-ALIGNING CABLE DRUM. BERLIN S. FERGUSON, Marion, Ohio, assignor to The Marion Steam Shovel Company, Marion, Ohio, a Corporation of Ohio. Filed June 8, 1928. Serial No. 283,976. 3 Claims. (Cl. 254—186.)



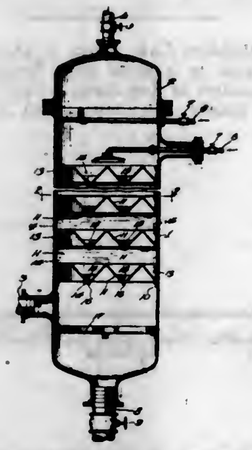
1. In a mechanism of the character described, a frame having bearings, a supporting member having trunnions journaled in said bearings, a drum mounted on said supporting member for rotation therewith and for axial movement with relation thereto, means for rotating said supporting member, screws rotatably mounted on said supporting member, extending lengthwise thereof and held against axial movement, nuts carried by said drum to receive said screws, gears secured to the respective screws at one end of said supporting member, and a gear rigidly mounted on said frame concentric with the axis of said supporting member and meshing with the gears on said screws.

1,811,624. INTERMITTENT DRIVE. HANNIBAL C. FORD, Jamaica, N. Y., assignor to Ford Instrument Company, Inc., Long Island City, N. Y., a Corporation of New York. Filed Dec. 28, 1927. Serial No. 243,032. 12 Claims. (Cl. 74—7.)



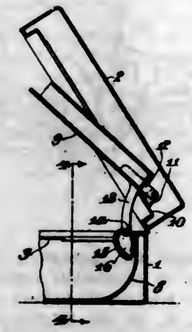
1. A transmission gearing comprising a reversible rotatable driving element and a driven element, said elements having relatively shiftable relation, shifting means operable to relate and irrelate said elements, and a control for said shifting means whereby the driven element passes successively between conditions of sustained rest and rotation.

1,811,625. TWO CYCLE RADIAL ENGINE. HERALD B. GREENING, Hamilton, Ontario, Canada, and JAMES W. GALLOWAY, Detroit, Mich., assignors to Galloway Engineering Company Limited, Hamilton, Ontario, Canada. Filed Dec. 28, 1928. Serial No. 329,021. 3 Claims. (Cl. 123—53.)



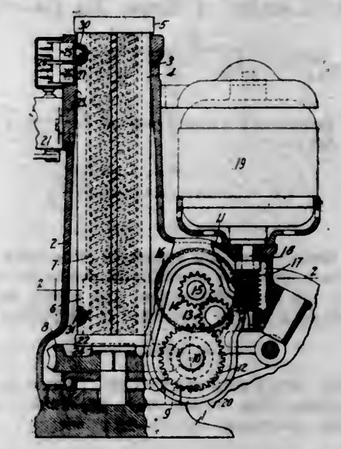
1. An improved radial-type engine, comprising in combination a crank shaft having a pair of power cranks slightly offset one from the other in a direction circumferentially of the shaft axis, a plurality of paired cylinder units spaced circumferentially around the shaft axis, the cylinders of each unit being disposed side by side longitudinally of the shaft axis with their axes intersecting the shaft axis and being connected at their outer ends by a common combustion head, pistons operating in said paired cylinder units, and a group of connecting rods radiating from each of said cranks, each group co-operating respectively with the pistons of the corresponding circumferential group of cylinders of said paired cylinder units whereby the pistons of said cylinders operate in groups, one group being in advance of the other to effect the operation of one piston of each of said paired cylinder units in advanced relation to the other.

1,811,626. PILE DRIVER ATTACHMENT FOR ROCK DRILLS. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 21, 1929. Serial No. 387,382. 6 Claims. (Cl. 61—77.)



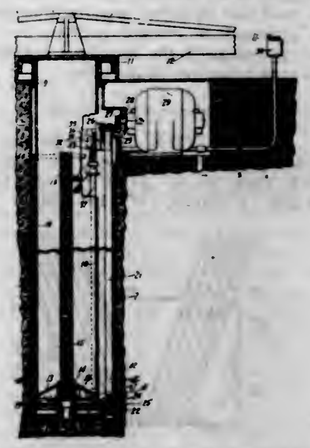
1. The combination with a rock drill having a cylinder and a hammer piston therein having a stem, of a front head abutting the front end of the cylinder, a bore in the front head comprising an enlarged portion and a smaller portion, a bushing in the smaller portion of the bore forming a guide for the stem, a head on the bushing engaging both the cylinder and the front head to maintain the front head in axial alignment with the cylinder, and means in the enlarged portion of the bore for transmitting the blows of the hammer piston to an element intended to be actuated.

1,811,627. FRACTIONATING COLUMN. JACOB BENJAMIN HEID, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Jan. 31, 1927. Serial No. 164,990. 4 Claims. (Cl. 261—114.)



1. A dephlegmator comprising a shell having a vapor inlet and outlet and a liquid outlet, a plurality of vertically disposed layers of inverted V-shaped baffle elements within said shell, the elements of each layer being spaced to provide passages therebetween and the elements in one layer being arranged transversely with respect to the elements in the adjacent layer, and liquid overflow members positioned in said passages.

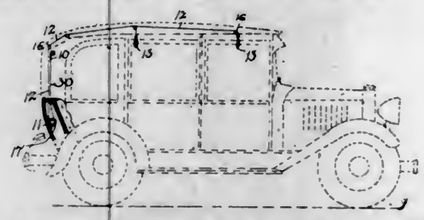
1,811,628. CASING-COVER LOCKING DEVICE. HERMAN HOLLERITH, Jr., Riverton, N. J., assignor to Victor Talking Machine Company, a Corporation of New Jersey. Filed Sept. 1, 1928. Serial No. 303,418. 19 Claims. (Cl. 312—8.)



3. In a portable phonograph comprising two hingedly connected sections, a receptacle for records pivotally mounted on one of said sections and movable with respect to said sections, means on one of said sections, and means connected to said receptacle and engaging said first named means, the aforesaid means cooperating to prevent relative movement of said sections when in open position and being releasable by movement of said receptacle to permit the closing of said sections.

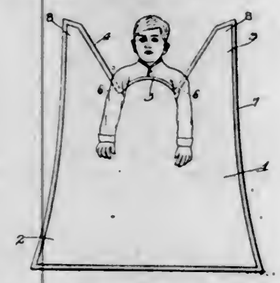
1,811,629. ELECTRICALLY OPERATED LIFTING JACK. ION V. K. HOTT, Dayton, Ohio, assignor to The Joyce-Cridland Company, Dayton, Ohio, a Corporation of Ohio. Filed Aug. 29, 1927. Serial No. 216,127. 5 Claims. (Cl. 254—103.)

1. In a lifting mechanism comprising a nut and a screw engaging said nut, one of said elements being rotatable to impart axial movement to the other element, said nut and said screw having high pitch threads to permit said axially movable element to move downwardly under the weight of a load thereon, a worm wheel connected with said rotatable element, a high pitch worm meshing with said worm wheel, a second worm wheel, reducing gearing connecting said second worm wheel with said worm, a second worm having a low pitch thread engaging said second worm wheel and serving to lock the same against reverse movement, a motor connected with said second worm to operate the same at high speed, and means to control the operation of said motor.



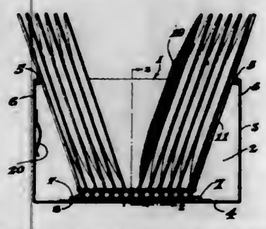
1,811,630. LIFTING MECHANISM. ION VON KERT HOTT, Dayton, Ohio, assignor to The Joyce-Cridland Company, Dayton, Ohio, a Corporation of Ohio. Filed Dec. 17, 1928. Serial No. 326,422. 11 Claims. (Cl. 254—103.)

1. In a lifting mechanism of the character described, a casing, an actuating screw rotatably mounted in said



casing, a supporting member having a screw threaded part engaging said screw and held against rotation, a lifting element rotatably mounted on said supporting member, a shaft mounted in said casing alongside of said lifting element, a gear train connecting said shaft with said screw, and a motor connected with the upper end of said shaft.

1,811,631. SHADE CONTROLLING APPARATUS. WILLIAM J. HUEBNER, Garfield, N. J. Filed May 22, 1930. Serial No. 454,660. 2 Claims. (Cl. 156—28.)



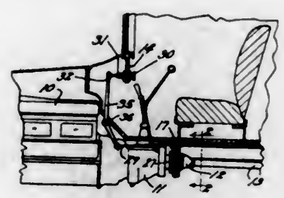
1. A shade controlling apparatus comprising means for pulling on a shade for unrolling it, means for holding the shade in the unrolled position, and means for releasing the shade on a further movement of the pulling means.

1,811,632. INFANT'S BLANKET. LOUIS A. HUMMEL, Milwaukee, Wis. Filed Mar. 26, 1930. Serial No. 439,076. 2 Claims. (Cl. 2—83.)

1. A blanket of the class described including a body portion, a cutout portion at one end of the body, a curved part at the intermediate portion of the cutout providing notches between the junction of the side walls of the cut away and the curved part, tabs at each side of the cutout adapted to be arranged in crossed relation at the back of a child and extended over the shoulders with the terminals arranged in crossed relation over the chest, and means for securing the terminals against movement relative to each other and to the body.

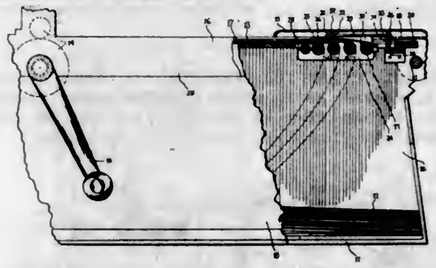
1,811,633. VISIBLE FILE CASE. LE ROI E. HUTCHINOS, Tonawanda, N. Y., assignor to Remington Rand Inc., New York, N. Y. Filed July 26, 1927. Serial No. 208,499. 8 Claims. (Cl. 129—34.)

6. In combination, a frame member having channels formed at the opposite sides thereof, a plurality of separator supporting members having portions at the opposite sides on one end of said members for engagement in said channels to pivotally mount said supporting members in said frame member, said supporting members being removable from said channels by movement transversely thereof, and a releasable locking member on said frame member engageable with one of said portions on each supporting member for preventing removal of said portions from said channels.



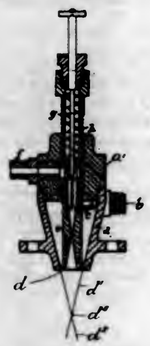
7. In combination, a panel unit including a plurality of panels and a frame member mounting said panels, a case having bottom and side walls formed to house said unit in one position, and means on the bottom of said case for receiving and centering said frame member between said side walls when said unit is placed in said case in another position.

1,811,634. LOGGING CAR. FRED A. ISAACSON, Topeka, Kans., assignor to America Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Apr. 12, 1929. Serial No. 354,474. 10 Claims. (Cl. 105—384.)



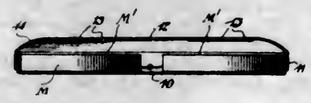
1. An arrangement of the character described, comprising, in combination, a plurality of side stakes mounted for movement between operative and inoperative positions, means for locking the side stakes in their operative positions, said locking means being releasable to permit movement of the side stakes to their inoperative positions, and automatic means for centering the side stakes when the latter occupy their operative positions.

1,811,635. SAFETY DEVICE FOR AUTOMOBILES AND THE LIKE. ANTON A. JOHNSON, Loveland, Colo. Filed May 19, 1930. Serial No. 453,480. 9 Claims. (Cl. 188—30.)



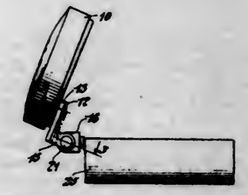
1. A safety device for preventing a reversal of the propeller shaft of an automobile comprising: a ratchet gear arranged for attachment to said propeller shaft; a brake band fixed at its one extremity and adapted to partially surround said ratchet gear; a pawl tooth positioned adjacent the free extremity of said brake band; and manually operated means for bringing said pawl tooth into engagement with the teeth of said ratchet gear so that rotation of the latter will act to clamp said brake band thereagainst.

1,811,636. MANIFOLDING MACHINE. ARTHUR A. JOHNSON, Bridgeport, Conn., assignor to Autographic Register Company, Hoboken, N. J., a Corporation of New Jersey. Filed June 17, 1927. Serial No. 199,498. 19 Claims. (Cl. 271—2.1.)



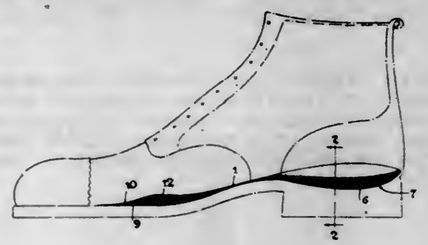
1. In a manifolding machine having a platen over which a plurality of webs is fed, a plurality of sets of means extending between the webs as they approach the platen to separate and frictionally engage the webs; and adjustable means common to said plurality of sets of means for applying thereto a variable pressure.

1,811,637. SPRAYING NOZZLE. CARL LADISCH, Meissen-on-Elbe, Germany. Filed May 18, 1924. Serial No. 713,112. 2 Claims. (Cl. 299—115.)



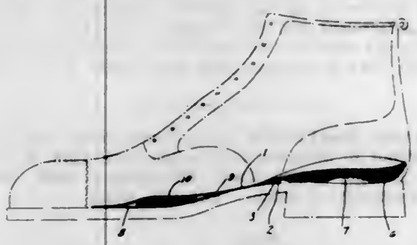
1. In a spraying nozzle, a liquid supply pipe open at one end and having an unimpeded but restricted port appreciably distant from the open end thereof, the inner wall of the pipe flaring outwardly from the restricted port to the end thereof to cause a liquid passing through the restricted port to flow slower along the flaring wall to the open end of the pipe, and a casing surrounding the said pipe and tapering to an open end substantially coincident with the open end of the said liquid supply pipe and forming therewith an annular discharge port for a fluid under pressure whereby the liquid flowing through the supply pipe in its substantial entirety is brought directly into contact with the fluid as the same is discharged through the said annular discharge port.

1,811,638. EARPHONE TRANSMITTER. HUGO LIEBER, New York, N. Y., assignor to Sonotone Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 9, 1929. Serial No. 412,685. 7 Claims. (Cl. 179—179.)



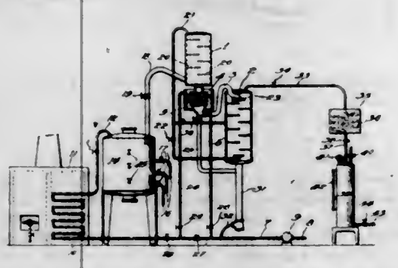
1. An earphone transmitter, comprising the combination with microphonic apparatus, of a sound-box casing having a back wall, an edge wall, and a front wall comprising a central portion substantially parallel to the face of the microphonic apparatus having an area materially less than that of the entire front wall spaced outwardly from the face of the microphonic apparatus and containing perforations and an inwardly inclined portion connecting the edge wall to said central portion and having a width not less than one-sixth of the width of the casing.

1,811,639. EARPHONE. HUGO LIEBER, New York, N. Y., assignor to Sonotone Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 9, 1929. Serial No. 412,686. 7 Claims. (Cl. 179—107.)



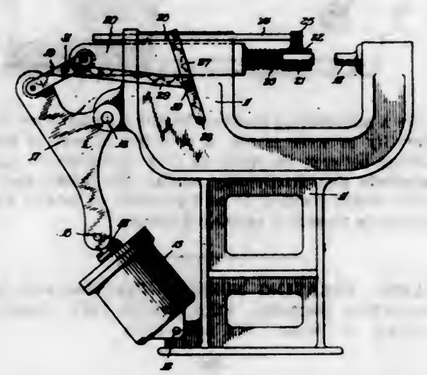
1. In an earphone device, the combination with a transmitter and a battery electrically connected, a hinge connection between the transmitter and the battery formed to permit the transmitter to be turned between a position in which its back extends along and substantially parallel to the adjacent side of the battery but spaced away therefrom and a position in which it extends transversely of such side to enable the battery to be used as an adjustable support for the transmitter.

1,811,640. ARCH CORRECTING MEMBER. ISAAC J. MARCELLE, Buffalo, N. Y. Filed Dec. 6, 1929, Serial No. 412,187, and in Canada June 15, 1929. 2 Claims. (Cl. 36—71.)



1. An arch correcting member for application in a shoe, comprising a main body member formed of an elongated piece of flexible sheet material having one end portion shaped to fit under the heel of a foot and the opposite end portion adapted to fit under the foot in advance of the heel portion, a heel member of sheet material superposed on the underside of the first named portion of said main body member and having the edge portions thereof substantially coincident with the edge portions of said main body member throughout said first named end portion, a transverse row of stitches securing the forward edge of the heel member to said main body member, a longitudinal row of stitches extending from said transverse stitches to the rear of said members and securing said heel member to said main body member along the median longitudinal portion thereof to provide a pair of pockets on opposite sides of the heel portion between said members opening at the sides, an insert adapted for removable insertion in either of said pockets, and a cushioning pad of resilient material mounted on the under face of said heel member and substantially coextensive therewith, for providing a cushion support for said insert and said members in the heel portion of a shoe.

1,811,641. ARCH CORRECTING INSERT FOR SHOES. ISAAC J. MARCELLE, Buffalo, N. Y. Filed Jan. 2, 1930. Serial No. 418,075. 1 Claim. (Cl. 36—71.)



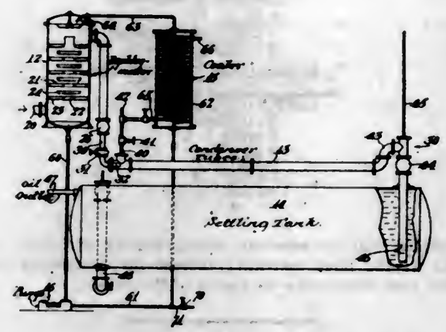
As an article of manufacture, an arch correcting member adapted for removable insertion in a shoe, comprising a main body member formed of an elongated piece of flexible sheet material having one end portion shaped to fit under the heel of a foot and the opposite end portion extending under the foot in advance of the heel portion, a heel member of sheet material superposed on the heel portion of the main body member and having the edge portions thereof substantially coincident with the edge portions of said main body member, a transverse row of stitches extending between the opposite edges of said main body member and securing the front edge portion of said heel member to said main body member, a longitudinal row of stitches extending from the front end of said heel member to the rear end thereof along the median longitudinal portion thereof for securing said heel member to said main body member to provide a pair of pockets between said members opening at opposite sides thereof and positioned at opposite sides of the median longitudinal dimension of said members, a heel supporting insert adapted for insertion in either of said pockets, and a cushioning pad securely to said heel member and substantially coextensive therewith having a central concave recess in the bottom face thereof, having portions of greatest thickness adjacent the edges of said recess and of successively decreasing thickness toward its outer edge portions.

1,811,642. PROCESS FOR CONVERTING HYDROCARBON OILS. JACQUE C. MORRELL and HARRY P. BENNER, Chicago, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Apr. 21, 1923. Serial No. 633,638. 7 Claims. (Cl. 196—48.)

1. A process for cracking hydrocarbon oils, consisting in raising the oil to a cracking temperature in a heating zone, in passing the heated oil to an enlarged zone, wherein substantial vaporization occurs, in passing the vapors thence to a primary dephlegmating zone, passing uncondensed vapors from said primary dephlegmating zone to a secondary dephlegmating zone, in withdrawing reflux condensate from said primary dephlegmating zone, in introducing portions of such withdrawn reflux condensate to said secondary dephlegmating zone, to act as a dephlegmating medium for the vapors therein, in returning reflux condensate from said secondary dephlegmating zone to said heating zone without again admitting any portion thereof to either of said dephlegmating zones, in condensing the vapors issuing from said secondary zone, and in maintaining in superatmospheric pressure on the oil undergoing conversion and the vapors in both said primary dephlegmating zone and secondary dephlegmating zone.

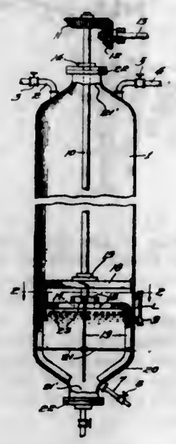
1,811,643. PLATE CLOSER. ADOLF A. NORIN, Chicago, Ill., assignor to Hanna Engineering Works, Chicago, Ill., a Corporation of Illinois. Filed Oct. 30, 1928. Serial No. 316,088. 9 Claims. (Cl. 78—52.)

1. In combination with a riveter, a movable die, means for moving the movable die, a plate closer carried by the riveter, and means to move the plate closer upon movement of the movable die simultaneously with the die, a greater distance than the movement of the movable die and at a different rate of movement than the die.



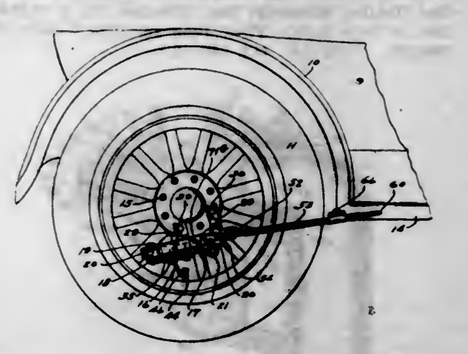
1,811,644. INDUCTION ELECTRIC FURNACE. EDWIN FITCH NORTHRUP, Princeton, N. J., assignor to Ajax Electrothermic Corporation, Ajax Park, N. J., a Corporation of New Jersey. Filed Mar. 14, 1929. Serial No. 347,020. 19 Claims. (Cl. 13—29.)

1. The method of maintaining circulation of molten metal in a submerged channel communicating with a molten furnace pool, which consists in electromatically applying a progressively advancing motor field drag lengthwise of the channel to produce uni-directional flow throughout the length of the channel and into and from the pool, thus mixing the metal of the channel with that of the pool.



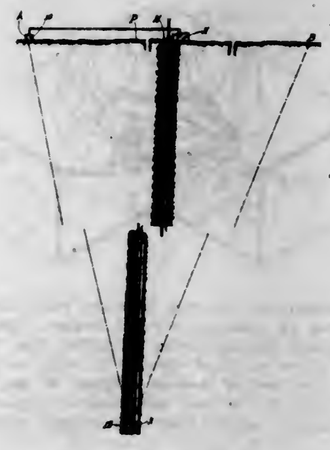
1,811,645. OIL REFINING SYSTEM. DANIEL PYZEL, Oakland, Calif., assignor, by mesne assignments, to Shell Development Company, San Francisco, Calif., a Corporation of Delaware. Filed Dec. 27, 1920, Serial No. 433,099. Renewed Oct. 22, 1929. 2 Claims. (Cl. 196—94.)

1. An improvement in the art of treating hydrocarbon oil vapors containing constituents which upon condensation would form emulsions with water comprising introducing the vapors to a dephlegmating column, removing condensate from the dephlegmating column, placing the same under a mechanical pressure, passing such condensate thence through a cooling zone and returning the cooled



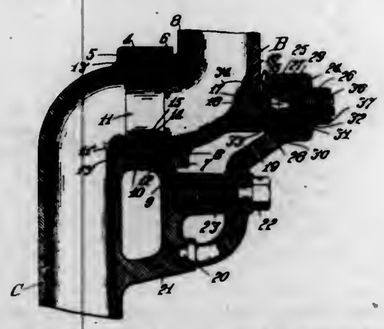
condensate to the dephlegmating column, maintaining the rate of circulation of said condensate from said dephlegmating zone through said cooling zone and back to said dephlegmating zone such that the vapors escaping from the dephlegmating column will be free of said constituents.

1,811,646. HYDROCARBON OIL TREATMENT. DANIEL PYZEL, Piedmont, Calif., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed June 29, 1927. Serial No. 202,192. 1 Claim. (Cl. 196—68.)



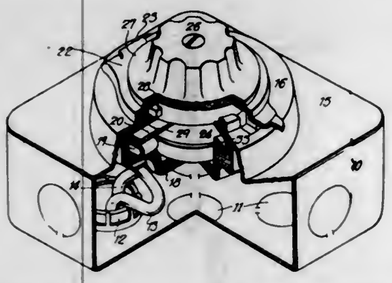
An improvement in a cracking process of the character in which the oil is heated to a cracking temperature in a coil and thence delivered to a reaction zone wherein cracking and substantial vaporization occur comprising maintaining a relatively small body of liquid oil in the reaction chamber, compelling each particle of the liquid oil to remain in the reaction chamber for substantially the same time period by supplying the oil to the reaction chamber above the small body of oil therein, and removing the unvaporized oil from the bottom of the reaction chamber, regulating the volume of oil contained in the chamber relative to the amount flowing therethrough to control the time period of retention of each particle of oil in the reaction chamber and preventing the formation of a stagnant oil film about the periphery of said oil body by causing the oil at the periphery of the body only to have an eddy-like circulation.

1,811,647. TIRE CHARGING AIR PUMP. LORRN RISK, Minneapolis, Minn. Filed Jan. 20, 1930. Serial No. 422,044. 1 Claim. (Cl. 152—11.)



An air charging device for wheels having pneumatic tires comprising a pump frame having means for attachment to the wheel, a crank journaled to said pump frame, a cylinder and piston pump with its cylinder pivoted to said pump frame and with its piston connected to said crank, said cylinder having an air discharge pipe equipped with means for attachment to a pneumatic tire, a relatively small spur gear connected to one side of said crank, a relatively large gear detachably journaled to said pump frame and removably meshed with said smaller gear on said crank, and an operating rod connected to said larger gear to reciprocate the same and oscillate said crank with a multipled stroke, said operating rod having means whereby it may be applied at will to either of said two gears and also having means whereby it may be anchored at its extended end to a relatively fixed part of a vehicle.

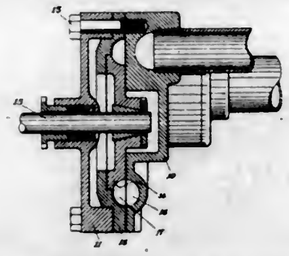
1,811,648. METHOD OF DETERMINING THE STRAIGHTNESS OF DRILL HOLES IN THE EARTH. ESME EUGENE ROSAIRE, Fort Worth, Tex., assignor to Geophysical Research Corporation, New York, N. Y., a Corporation of New Jersey. Filed Jan. 5, 1929. Serial No. 330,542. 7 Claims. (Cl. 181—0.5.)



2. The method of determining the deviation from vertical of a bore formed in the earth which consists in producing sound waves at points on the earth's surface equidistant from the bore, and recording the time intervals required by the sound waves to travel from each of said points to a selected point in the bore below the earth's surface.

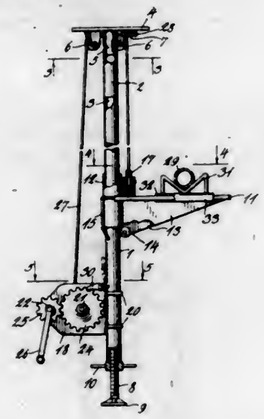
1,811,649. ADJUSTABLE THRUST BEARING AND SEALING MEANS FOR FLEXIBLE PIPE JOINTS. EDWARD A. RUSSELL, Chicago, Ill., assignor to Vapor Car Heating Company, Inc., Chicago, Ill., a Corporation of New York. Filed June 13, 1929. Serial No. 370,675. 7 Claims. (Cl. 285—9.)

1. In a metallic flexible pipe conduit, a pair of conduit sections having their end portions journaled together for relative rotation about the central axis of the conduit, there being an annular gasket receiving recess formed between the members one end wall of the recess being formed on one member and the other end wall on the other member, a gasket within the recess and bearing at its respective ends on the respective end walls of the recess, one of the conduit sections having an elbow bend adjacent the pipe joint, a bearing stud projecting from the elbow in line with the axis of the pipe joint, a bracket arm projecting from the other conduit section, a socket thrust bearing mounted in the bracket arm, and means for adjusting the socket bearing toward the joint to take up wear and increase the pressure on the ends of the gasket.



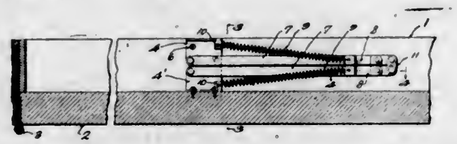
1,811,650. FUSE AND SWITCH BOX. ALBERT B. RYPINSKI, Laurelton, N. Y., assignor to Metropolitan Device Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 25, 1929. Serial No. 357,979. 11 Claims. (Cl. 200—114.)

1. Apparatus of the type described which comprises a box having an opening, terminal contact clips, a cover plate for said opening having a rotating fuse carrier and contact blades mounted thereon to enter said opening when turned out of contact relation to said terminal contact clips and to lock said cover in closed position when turned to contact with said terminal contact clips.



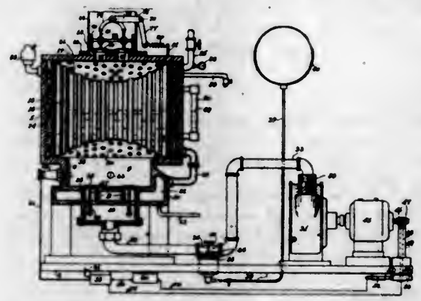
1,811,651. PRIMER FOR IMPULSE PUMPS. HENRY SCHLACHTER, Beatrice, Nebr., assignor to Dempster Mill Manufacturing Company, a Corporation of Nebraska. Filed July 5, 1929. Serial No. 375,998. 5 Claims. (Cl. 103—96.)

1. A fluid outlet for rotary pumps having a rotor with blades in a casing provided with a fluid inlet, said fluid outlet including a conduit for discharging the fluid from the casing, and a chamber for receiving a portion of the fluid from said conduit, the wall of said chamber being



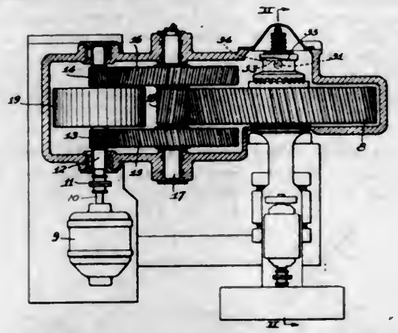
provided with an aperture communicating with said conduit at the inlet extremity thereof for conducting fluid from said chamber to the blades of the rotor.

1,811,652. LIFTING DEVICE. OTTO H. SCHUH, Denver, Colo. Filed Feb. 8, 1930. Serial No. 426,837. 4 Claims. (Cl. 254—146.)



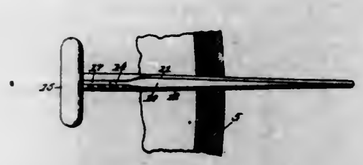
1. A lifting device of the class described comprising, in combination, a tubular member, an abutment plate secured to the upper end thereof, a screw extending into the lower end thereof, a nut associated with the screw and adapted to engage the lower end of the tubular member, a supporting bracket slidably secured to the tubular member, and means for moving the bracket along the tubular member, said means comprising a windlass secured to the tubular member and connected to the bracket by means of cables.

1,811,653. DOOR SPRING. HENRY L. SCHWARTZ, CARL A. QUAST, and LOUIS SPITZ, Milwaukee, Wis. Filed Feb. 25, 1930. Serial No. 431,104. 2 Claims. (Cl. 16—72.)



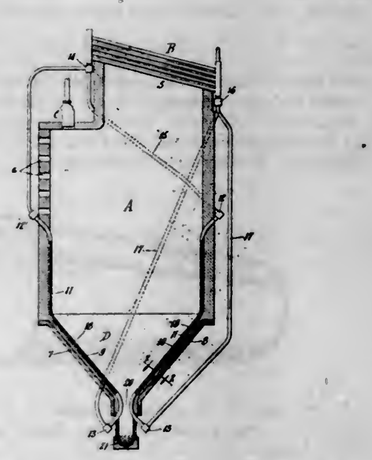
1. A device of the character described comprising a pair of angular brackets connected to a door and door casing respectively, an arm having its one end pivotally connected to the horizontal portion of each bracket, a link pivotally connecting the other ends of said arms, apertured ears carried by the other angle of said brackets, and coil springs having one end connected to the apertured ears and the other end connected to the arms adjacent their ends which are pivotally connected.

1,811,654. INTERNALLY FIRED HEAT OR POWER GENERATOR. JOHN E. SHEPHERD, Charlottesville, Va., assignor to National Cold Steam Company, Charlottesville, Va., a Corporation of Delaware. Filed Oct. 15, 1925. Serial No. 62,645. 13 Claims. (Cl. 158—1.)



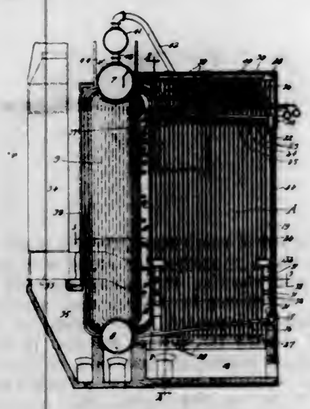
1. In combination, a housing providing a combustion chamber; a top wall on said housing having an exhaust pipe pedestal thereon, having an annular rib thereon and exhaust ports extending through the top wall into communication with said exhaust pedestal; an exhaust pipe resting on said pedestal around said rib; upwardly opening exhaust valves on said exhaust ports having upwardly pointing stems; a ring resting on said rib and carrying a cross rod having guide apertures receiving said stems; a yoke pivotally carried by the upper ends of the stems; an elbow lever fulcrumed at its elbow part on the outer face of the pipe and having a downturned lower arm, and an inner arm passing into said pipe and pivoted to the mid part of said yoke; a pin mounted on said top wall; and a spring tensioned between said pin and lower arm exterior to the pipe whereby the valves are held on the ports without overheating the spring.

1,811,655. CLUTCH MECHANISM. JOHN A. SMITMANS, Pittsburgh, Pa., assignor to United Engineering & Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 11, 1929. Serial No. 391,835. 7 Claims. (Cl. 192—24.)



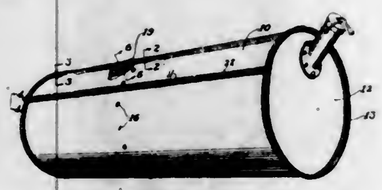
1. In a clutch, the combination of a driving clutch member, means for continuously rotating said member, a normally stationary but rotatable driven clutch member, means for moving one into engagement with the other of said clutch members, a motor, and driving connections from said motor to said driven clutch member for intermittently imparting rotation to the latter in the direction of rotation of said driving clutch member prior to the operation of said clutch-moving means.

1,811,656. METHOD OF REPAIRING PUNCTURED TIRES. ADOLPH G. SOMMERBECK, Chicago, Ill., assignor to Kex Company, Incorporated, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 6, 1928. Serial No. 252,151. 3 Claims. (Cl. 152—27.)



1. The method of repairing a puncture in an automobile tire casing which comprises the steps of simultaneously expanding and cleaning the casing material around a puncture; then placing in the puncture, while the casing material remains expanded and cleaned, an elastic element; then causing the cleaned material of the automobile tire casing, around the puncture, to compress upon said element; and then heating and softening and spreading the outer end of said element upon and against the outer periphery of the tire casing around said puncture.

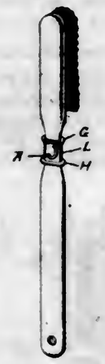
1,811,657. FURNACE FOR BURNING PULVERIZED FUEL. WILFRED R. WOOD, London, England, assignor to International Combustion Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed June 16, 1925, Serial No. 37,428, and in Great Britain Sept. 26, 1924. Renewed Mar. 13, 1931. 5 Claims. (Cl. 122—235.)



1. In a furnace for burning finely divided fuel in suspension, a boiler, a combustion chamber having substantially upright walls and a sloping bottom portion therebelow, a plurality of closely spaced tubes lining the sloping bottom portion and extending up within the combustion chamber adjacent an upright wall thereof, each of the said tubes lying in a substantially upright plane and having within the furnace and bottom thereof fin members at opposite sides, the fins on one tube being in substantial juxtaposition to the fins on adjacent tubes to form a continuous metallic surface, the said tubes being bent at their upper ends to extend out through a wall of the combustion chamber, and means connecting said tubes into the circulation of the boiler.

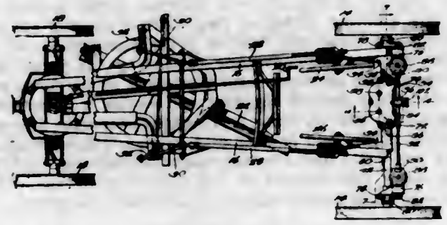
1,811,658. **STEAM GENERATION.** WILFRED R. WOOD, London, England, assignor to International Combustion Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed May 21, 1928, Serial No. 279,428. Renewed Sept. 5, 1930. 5 Claims. (Cl. 122—235.)

1. In combination, an upper and a lower drum, a bank of convection heat tubes connecting the same, a combustion chamber in front of the bank, a row of upright radiant heat tubes on each upright wall of the chamber, substantially horizontally disposed tubes connecting the upper ends of one of said rows with the upper drum and arranged below the top of the chamber to provide a space, a superheater in said space, and a baffle in the bank arranged so as to provide communication between said space and the bank, and communication between the said space and the combustion chamber proper being through spaces between said horizontal tubes.



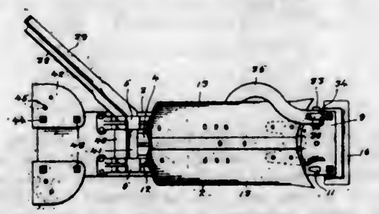
1,811,659. **FUEL TANK AND METHOD OF MAKING THE SAME.** ANDREW A. ANDRAKE, Cleveland, Ohio, assignor to The Glenn L. Martin Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 31, 1927. Serial No. 216,559. 6 Claims. (Cl. 29—148.2.)

6. The method of sealing the built up joints of a tank fabricated from aluminum alloy sheets with strips of metal inserted between and riveted to said sheets in intimate face to face relation comprising the introduction into said tank and said joints of an acid the reaction of which is such as to form a salt of said metal which is insoluble in petroleum products.



1,811,660. **IDENTIFIER FOR TOOTHBRUSHES AND THE LIKE.** HARRY BAUSHER, Montclair, N. J. Filed Apr. 1, 1930. Serial No. 440,679. 1 Claim. (Cl. 40—21.)

An identifier for the purpose referred to consisting of an elastic band adapted by its elasticity to be placed in position upon the article to be identified and to hold itself in position upon said article, said identifier being formed of moulded rubber having a relatively thin body of generally annular contour and having relatively raised marginal beads at its opposite ends moulded as integral parts of the identifier, and said identifier also having a relatively raised identifying mark moulded as an integral part

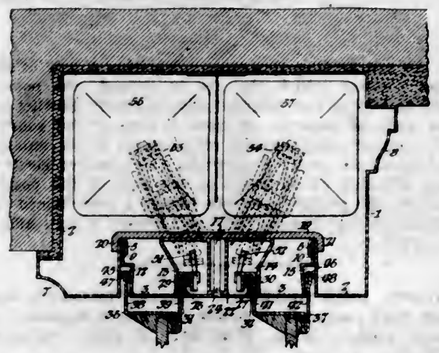


thereof in the space between said marginal beads, said marginal beads being raised to a relatively higher level than said identifying mark to thereby constitute protecting means for said identifying mark.

1,811,661. **LEANING WHEEL ROAD SCRAPER.** WILLIAM T. BEATTY, Flossmoor, FRANK S. DAVIS, Homewood, and FRED D. WILSON, Harvey, Ill., assignors to Austin Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Nov. 10, 1923. Serial No. 673,907. 5 Claims. (Cl. 37—157.)

1. In mechanism of the class described, in combination with a grader frame, a hollow gear housing carried by the frame, a horizontally reciprocable axle slidable through the gear housing, gearing in the housing for reciprocating the axle, a hollow wheel support on an end of said axle which extends beyond the frame, a traction wheel pivoted on a horizontal shaft carried by the wheel support, a gear rigid with the wheel, inside the wheel support, a worm inside the wheel support meshing with the gear, and means operable in all positions of the axle for operating the worm to incline the wheel with reference to the frame.

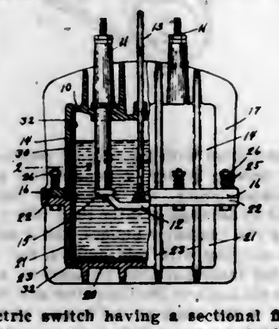
1,811,662. **GRADING AND DITCHING MACHINE.** DWIGHT L. BEATTY, Missoula, Mont. Filed Oct. 5, 1927. Serial No. 224,260. 2 Claims. (Cl. 37—173.)



2. In a machine of the character described, a land side, a mold board angularly adjustably connected therewith, and a handle structure comprising a single bracket member secured to the inner face of the land side and formed

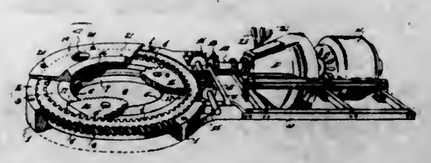
with sockets arranged in angular relation, and handle members having shanks detachably engaged within said sockets from either side thereof and diverging rearwardly.

1,811,663. **METHOD OF PRODUCING EXPLOSIVES.** NEWTON C. BOYD, Kenvil, N. J., assignor to Hercules Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 12, 1928. Serial No. 269,613. 4 Claims. (Cl. 52—22.)



1. The method of producing an explosive which includes effecting the nitration of a quantity of glycerin in the presence of a nitrating mixture and then adding a quantity of sugar to the nitrated glycerin while still in the presence of the nitrating mixture, and effecting nitration of the sugar and solution of the nitrated sugar in the nitrated glycerin.

1,811,664. **METALLIC WINDOW STRUCTURE.** ALBERT LINDSAY DOERING, Germantown, Pa., assignor to J. S. Thorn Company, Philadelphia County, Pa., a Corporation of Pennsylvania. Filed Dec. 31, 1929. Serial No. 417,627. 8 Claims. (Cl. 189—65.)

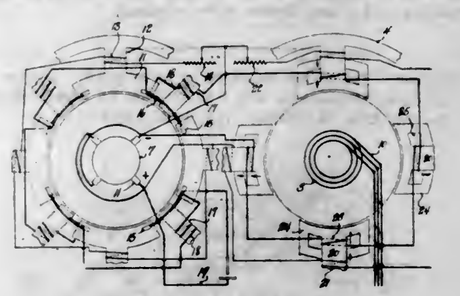


1. In a window frame; the combination with a jamb frame member formed of sheet metal and having a groove therein adapted to receive a sash weathering flange; of a sash mounted to slide in said jamb frame and having a weathering flange extending into said groove; and a weathering cap on said flange, formed of anti-friction spring sheet metal, adapted to slide in said groove in resilient contact therewith while affording a weathering seal for such slide joint; wherein the sash weathering flange is J-shaped at its end extending in said groove, and the weathering cap has one edge extending in the J-bight of said flange.

1,811,665. **ELECTRIC SWITCH.** WILLIAM S. EDSALL, Boston, Mass., assignor, by mesne assignments, to Condit Electrical Manufacturing Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 17, 1922. Serial No. 595,172. 21 Claims. (Cl. 200—156.)

1. An electric switch having a sectional fluid-perforate enclosing casing, and a relatively weak fluid-tight oil receptacle enclosed within and supported yieldingly by said casing, the walls of said casing conformed generally with and arranged to support the corresponding walls of said oil receptacle against rupture and against change in configuration due to internal pressures.

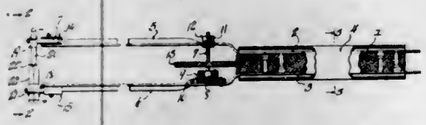
1,811,666. **AUTOMATIC POWER DRIVEN PIPE WRENCH.** WALTER W. FOSTER, Wichita Falls, Tex., assignor to Hill & Foster Company Incorporated, Wichita Falls, Tex. Filed Dec. 14, 1929. Serial No. 413,990. 1 Claim. (Cl. 81—57.)



In an automatic power driven pipe wrench, the combination including a casting having a circular portion with inner and outer flanges having a beveled approach to said opening and an extended portion to receive a frame, the said frame being rectangular in shape and extending from said casting to support power supplying means, a ring gear disposed to rotate between the flanges of said casting having gears on its inner and outer peripheries, spaced, cam shaped members having gears engageable with the gears on the inner periphery of said ring gear and provided with teeth projecting inwardly in the direction of the opening in said casting, a cover conforming to said casting and having an opening in register with said casting and likewise having a beveled approach to its opening, and means for transmitting rotary motion to said ring gear from said power supplying means.

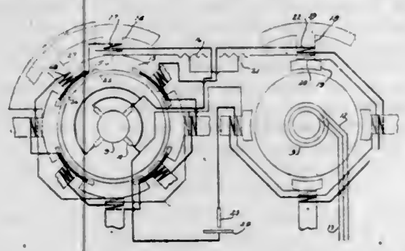
1,811,667. **FLUX FOR SOLDERING.** JAMES H. GRAVELL, Elkins Park, Pa., assignor to American Chemical Paint Company, Ambler, Pa., a Corporation of Delaware. Filed Feb. 4, 1930. Serial No. 425,823. 1 Claim. (Cl. 148—23.)

A flux for soldering, being an admixture comprising zinc chloride, butyl alcohol, aniline hydrochloride, and petrolatum.



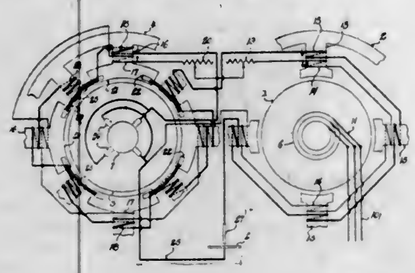
1,811,668. **DYNAMO ELECTRIC MACHINE.** KLAUS L. HANSEN, Milwaukee, Wis. Filed Apr. 9, 1928. Serial No. 268,658. 4 Claims. (Cl. 171—123.)

4. The combination of a direct current dynamo having a rotor provided with a winding and a separate and distinct synchronous motor having a rotor provided with a winding, said dynamo supplying the current for energizing its field, the windings of said rotors being interconnected, a work circuit connected to said dynamo, said dynamo having a series commutating winding, said motor having a series field winding, and means for producing a large



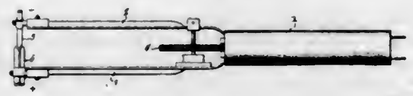
leakage flux interlinking the said series field winding of said synchronous motor, whereby a highly reactive load circuit is provided.

1,811,669. ARC WELDING APPARATUS. KLAUS L. HANSEN, Milwaukee, Wis. Filed Aug. 9, 1928. Serial No. 298,494. 3 Claims. (Cl. 219—8.)



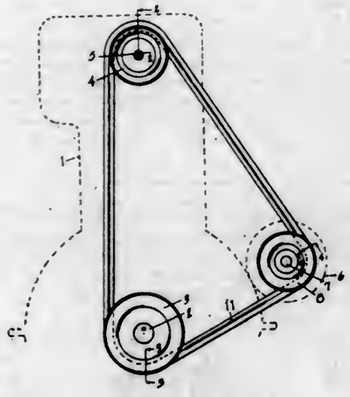
1. An arc welding apparatus comprising a pair of electrodes between which the arc is formed, the positive electrode having two enlarged approximately parallel portions and the negative electrode having its end located between the enlarged portions of the positive electrode, the negative electrode being arranged at an angle to the axis of the positive electrode.

1,811,670. DYNAMO ELECTRIC MACHINE. KLAUS L. HANSEN, Milwaukee, Wis. Filed Jan. 26, 1929. Serial No. 335,179. 2 Claims. (Cl. 171—123.)



1. In a dynamo electric machine, the combination of two rotors, one of said rotors being a driving rotor and having an alternating current winding thereon, the other of said rotors being a generator rotor, slip rings connected to said winding, a winding carried jointly by said rotors, a commutator connected to said last mentioned winding, brushes bearing upon said commutator, a field structure for each of said rotors, the field structure for said generator rotor having a shunt winding and a differential series winding thereon, the other of said field structures having a shunt winding and a cumulative series winding.

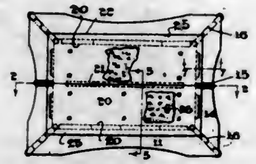
1,811,671. DYNAMO ELECTRIC MACHINE. KLAUS L. HANSEN, Milwaukee, Wis. Filed Apr. 24, 1929. Serial No. 357,633. 4 Claims. (Cl. 171—123.)



3. A dynamo electric machine comprising a direct current rotor, a field structure associated therewith, an alternating current rotor, a field structure associated therewith, an alternating current winding carried by each rotor, a direct current winding carried by the direct current rotor and inductively coupled to that portion of the alternating current winding carried by the direct current rotor, a shunt field and a cumulative series field winding carried by the field structure associated with said alternating current rotor, said field windings being supplied by said direct current winding.

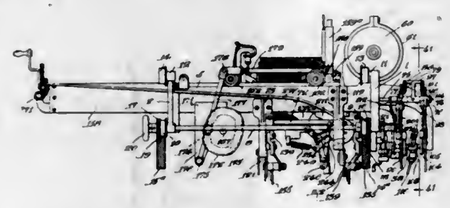
1,811,672. ARC WELDING APPARATUS AND METHOD OF ARC WELDING. KLAUS L. HANSEN, Milwaukee, Wis. Filed Sept. 9, 1929. Serial No. 391,253. 5 Claims. (Cl. 219—8.)

1. An arc welding apparatus comprising a pair of electrodes between which the arc is formed, the positive electrode having two enlarged approximately parallel portions, and the negative electrode having its end substantially symmetrically located with respect to the enlarged portions of the positive electrode, the negative electrode being arranged at an angle to the axis of the positive electrode, the positive electrode having a core formed of a material of high conductivity and having a high affinity for oxygen.



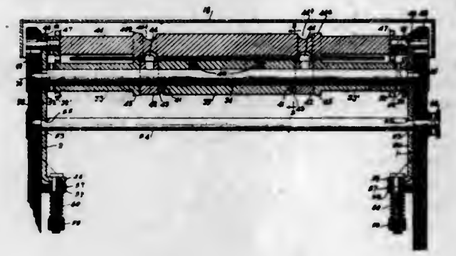
1,811,673. BELT GEARING. CHARLES HOLLERITH, Jackson, Mich., assignor to Automotive Fan & Bearing Company, Jackson, Mich. Filed Mar. 12, 1930. Serial No. 435,080. 6 Claims. (Cl. 74—21.)

1. The combination with an internal combustion engine, of a flanged driving pulley, a flanged fan pulley and a flanged generator pulley, the flanges of the fan pulley being disposed at an angle greater than that of the flanges of the driving and generator pulleys, and a belt of tapered cross section coacting with said pulleys, the side walls of the belt having inner portions disposed at an angle corresponding to the angle of the fan pulley and outer portions corresponding to the angle of the flanges of the generator pulley.



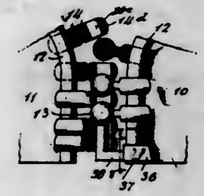
CARNEGIE LIBRARY OF ATLANTA

1,811,674. COLLAPSIBLE STEPPING BOX. FREDERICK W. LONGLEY, Verdun, Quebec, Canada. Filed July 21, 1928. Serial No. 294,460. 2 Claims. (Cl. 155—169.)



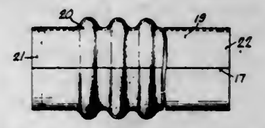
1. A step box comprising side members, sectional top members hingedly attached to one another and to the side members, and sectional end members, each end member being hingedly attached to one another at their adjacent edges and at their remote edges to the side members.

1,811,675. TEXTILE MACHINE. SEBASTIANO MAGNANO, Lawrence, Mass., assignor to Magnano Corporation, Lawrence, Mass., a Corporation of Massachusetts. Filed Jan. 26, 1929. Serial No. 335,190. 58 Claims. (Cl. 28—41.)



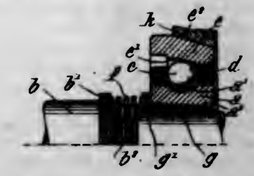
1. A machine for associating detached loom elements with warp threads comprising means for presenting such an element for engagement with a thread and means for moving said presenting means in a path substantially parallel to the warp threads.

1,811,676. AUTOGRAPHIC REGISTER. FRANK E. PFEIFFER, Dayton, Ohio, assignor to The Egry Register Company, Dayton, Ohio, a Corporation of Ohio. Filed Mar. 31, 1930. Serial No. 440,278. 25 Claims. (Cl. 282—16.)



1. In an autographic register having a plurality of superimposed sheets with interleaved carbon sheets, said paper sheets having spaced holes therein, means for ejecting said sheets, aligning means associated with said ejecting means, means on the ejecting means to limit the movement of the aligning means between predetermined limits, and means for rendering inoperative said ejecting means when the aligning means is engaged by the ejecting means at one end of the limit of relative movement of the aligning means with respect to the ejecting means.

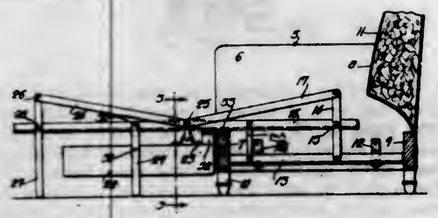
1,811,677. SEPARABLE FASTENING DEVICE. LOUIS ROCKE, Brooklyn, N. Y. Filed Apr. 21, 1928. Serial No. 271,764. 3 Claims. (Cl. 24—205.)



1. A slider for a separable fastening device of the type wherein two sets of metallic fastening members secured to the edges of the two pieces of flexible material are moved into and out of interlocked engagement by the action of said slider, characterized by the slider being made of a single piece of sheet metal formed to provide a front portion and a back portion, each of which is provided with inturned flanges forming slotted side walls for said slider, a bridge portion joining said front and back portions at the top thereof and a pair of tabs each having a pair of reduced lateral extensions extending from said bridge portion, said front and back portions being provided with a pair of axially alined apertures, and the reduced ends of said tabs being inserted into said apertures and being riveted over to hold said portions in spaced relationship.

1,811,678. METHOD OF MAKING CIRCUMFERENTIALLY CORRUGATED SHEET METAL PIPE. GEORGE M. SMITH, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed July 27, 1928. Serial No. 295,711. 4 Claims. (Cl. 113—33.)

1. The method of making circumferentially corrugated sheet metal pipe, which consists in corrugating a metal plate transversely between its plain ends, bending the plate on lines crossing the corrugations to form a curved section, aligning and abutting the corrugated edges with others of like formation, and welding the aligned and abutted edges and the plain edges together on a line extending in the direction of the length of the pipe.



1,811,679. BALL AND ROLLER BEARING. RENÉ ALFRED LAURENT VOLET, La Varenne St. Hilaire, France. Filed July 10, 1929, Serial No. 377,178, and in Belgium Aug. 13, 1928. 8 Claims. (Cl. 308—236.)

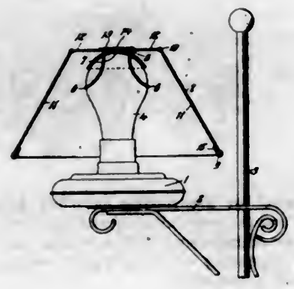
1. In combination,—a shaft,—a sleeve slidably mounted on said shaft, said sleeve having an external conical surface,—means tending to force said sleeve along said shaft,—a ring having an internal conical surface coacting with the external conical surface of said sleeve,—a plurality of rotatable elements mounted to roll in contact with the external surface of said ring,—an annular body having an internal surface positioned to contact with said rotatable

elements, said internal surface of the annular body converging towards the external surface of the ring, said annular body having an external conical surface,—and a journal member having an internal conical surface coacting with the external conical surface of said annular body.

1,811,680. COMBINATION BED AND CHAIR. TILLIE ARZT, New York, N. Y. Filed Jan. 24, 1929. Serial No. 334,725. 1 Claim. (Cl. 5—31.)

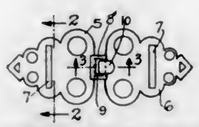
A combination chair and bed comprising a chair, a foldable seat therefor, an inner and an outer spring frame, links pivotally joining said frames, a reinforce bar connecting said links, means securing the reinforce bar to the chair seat, angle strips in the chair, front and rear links pivoted on the ends of said reinforce bar, floor engaging legs pivoted to and depending from the ends of said front links and also pivoted to the outer frame, links depending from the ends of said rear links and pivotally connected to the inner frame and to the supporting angle strips, auxiliary legs connecting said inner frame with the support strips, other legs connecting the chair seat and the said outer frame, and the seat being hinged to the chair.

1,811,681. WINDOW AND SCREEN SECURER. WALTER BILDSTEIN, Brooklyn, N. Y. Filed June 20, 1930. Serial No. 462,551. 1 Claim. (Cl. 292—262.)



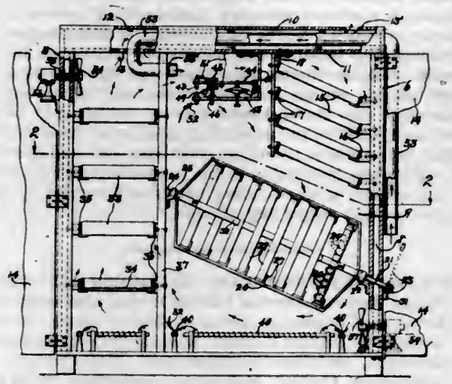
A device for keeping the sashes of sliding windows and screens apart and locking the same in their relative adjusted positions comprising two telescoping hollow members, one slotted at its lower end, a band guided about this slotted end, oppositely disposed, perforated ears at the inner ends of said band, a screw bolt extending through the perforations of these ears, a head formed at one end of said bolt to limit its movement in one direction and a sleeve and hand wheel carried by the other end of said bolt for allowing a firm squeezing of the slotted lower end of one member about the upper end of the other member telescoping therein, a plug received in the upper end of the upper member and means securing the same therein, a head formed with said plug laterally projecting beyond the outer limits of the upper member at its upper end, a projection on the outer end of said head adapted to engage in a socket on the lower face of a window frame, a base for the lower end of one of said members undercut to form a depending lip adapted to engage the upper bar of a window frame, means for securing said foot on said member, and a rubber cushion on the lower end of said foot.

1,811,682. NONFERROUS ALLOY. RALPH L. BINNEY, Toledo, Ohio, assignor to The Binney Castings Company, Toledo, Ohio, a Corporation of Ohio. Filed July 31, 1929. Serial No. 382,591. 8 Claims. (Cl. 75—1.)



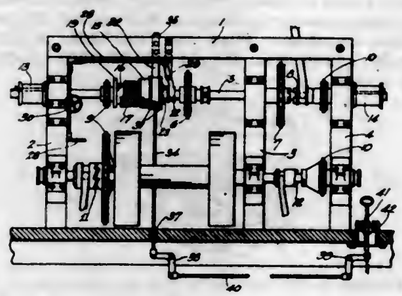
4. An alloy having high resistance to scaling and checking at high temperatures, the ability to withstand distortion, and low coefficient of expansion, the alloy containing from 40 to 80% copper, from 10 to 30% nickel, from 6 to 9% aluminum, from 6 to 9% zinc, and from an effective amount up to 5.0% vanadium.

1,811,683. MEANS FOR SUPPORTING AND EQUILIBRATING LAMP SHADES. JOHN ESTEN BOLLING, Mountain Lakes, N. J. Filed Mar. 8, 1930. Serial No. 434,224. 6 Claims. (Cl. 240—138.)



1. Means for supporting and equilibrating lamp shades, comprising pivotal supporting means permitting lateral swinging of the shade with respect thereto, and equilibrating weighting means disposed at separated points around the vertical axis of the shade to maintain the shade stationary with its said axis in a true vertical position at all times.

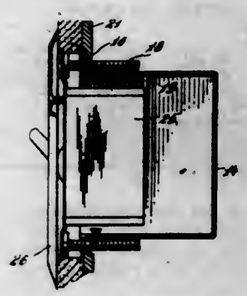
1,811,684. BUCKLE CONSTRUCTION. BORIS COOPER, New York, N. Y. Filed May 27, 1930. Serial No. 456,084. 1 Claim. (Cl. 24—75.)



A metallic belt buckle combination cast to provide an eye member and a hook member, said members having the eye and hook portions thereof formed as an integral part of each of said members, and each of said members being also cast to provide integral belt engaging loops, and said eye portion and loops being out of the plane of the member with which they are cast.

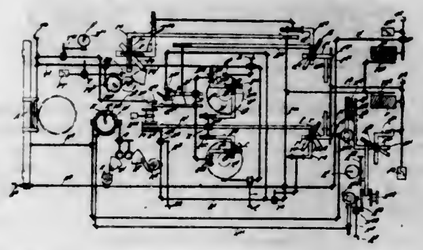
1,811,685. INCUBATOR. LOUIS DE VRIES, Streator, Ill. Filed Oct. 20, 1928. Serial No. 313,761. 3 Claims. (Cl. 119—37.)

1. An incubator comprising a casing having a cradle mounted therein with its axis at an inclination from a horizontal line, egg trays mounted transversely and removably in said cradle for holding eggs therein, and handle means at the outside of said casing for turning the cradle and trays a half revolution and thereby turning the eggs.



1,811,686. DIRECT PULLING PIPE SPINNING WINCH. WILLIAM H. ENDSLEY, Maud, Okla. Filed Feb. 14, 1929. Serial No. 339,925. 3 Claims. (Cl. 254—187.)

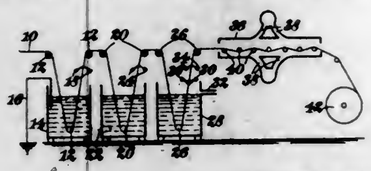
1. The combination with a standard draw works of a rotary well drilling outfit having a frame, said frame having two end posts and an intermediate post, a drum, a drum shaft carrying the same and supported on the posts, a line shaft supported on the posts, and means for driving said line shaft and said drum shaft, of a rope drum carried by said line shaft, means within said drum for operably connecting it to and disconnecting it from said line shaft, means for operating said connecting and disconnecting means from a point adjacent one of said end posts, a brake for said drum, and means for operating said brake from a point adjacent the other of said end posts.



1,811,687. ADJUSTABLE OUTLET BOX. PHILIP GOLDBERG and NELSON L. COSTELLO, Mount Vernon, N. Y. Filed Feb. 15, 1930. Serial No. 428,600. 2 Claims. (Cl. 247—21.)

2. In a device of the class described, an outlet box adapted to house a switch unit, adjusting screws, ears on said outlet box, said ears being stepped down from the marginal edge of said box, said adjusting screws engaging said ears, a set screw mounted in said outlet box engaging said adjusting screw for securing the screw in adjusted position, a head on said adjusting screw, a plurality of aligned threaded openings, all but one of said threaded openings being offset from the axis of said adjusting screw, said adjusting screw when rotated being adapted to shift

on the central threaded opening selectively from one position to another to permit angular, sidewise or vertical displacement of said switch unit.

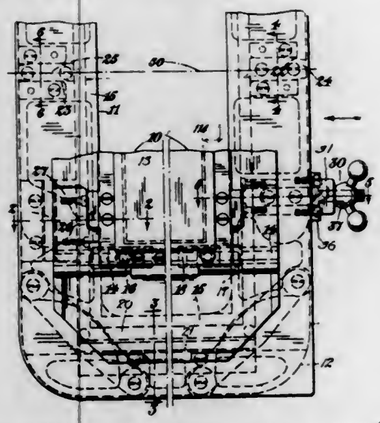


1,811,688. APPARATUS FOR USE IN THE LAYING OF ANTIAIRCRAFT GUNS. PERCY WILLIS GRAY, Westminster, London, England, assignor to Vickers Limited, Westminster, London, England. Filed Nov. 28, 1922, Serial No. 603,888, and in Great Britain Dec. 22, 1921. 23 Claims. (Cl. 235—61.5.)

1. Apparatus for use in the laying of antiaircraft guns, comprising elements adjustable in accordance with the initial horizontal range of a target, elements adjustable in accordance with the initial angle of bearing of the target, elements adjustable in accordance with the speed of the target in the horizontal plane, elements adjustable in accordance with the course of the target in the horizontal plane, elements adjustable in accordance with the height of the target and means jointly controlled by all of said elements for predicting the future position of the target after the lapse of a given interval of time.

5. Apparatus for use in the laying of anti-aircraft guns, comprising elements adjustable in accordance with the initial horizontal range of a target, elements adjustable in accordance with the speed of the target in the horizontal plane, elements adjustable in accordance with the course of the target in the horizontal plane, means associated with the elements adjustable in accordance with the speed and course of the target and adjustable in accordance with the rate of change of horizontal range, means for correcting the movement of said means in accordance with the effect of the wind on the shot, means for multiplying the corrected rate of change of horizontal range by the time of flight of the shot, a member movable by the last named means in accordance with the change of horizontal range, a part movable in accordance with the instantaneous horizontal range, means for mechanically adding the displacement of the member to that of the part and a member movable in accordance with the sum of said displacements.

1,811,689. MANUFACTURE OF SHEETS OR FILMS. HENRY JAMES HANDS, London, England, assignor to Spicers Limited, London, England, a British Company. Filed Aug. 20, 1928, Serial No. 300,932, and in Great Britain Aug. 30, 1927. 12 Claims. (Cl. 18—57.)

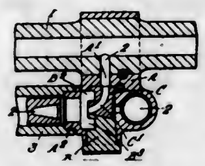


1. A process of the type described for the manufacture of cellulose acetate films, which consists in spreading in the form of a film on a supporting surface a solution of the cellulosic acetate in a volatile solvent, concentrating the solution by the evaporation of solvent therefrom, and removing the film from the supporting surface aforesaid and passing it through an electrically conducting aqueous bath which is capable of wetting the film and is electrically connected to earth.

1,811,690. DUPLICATING OR PRINTING APPARATUS. ROBERT HARRIS, London, England, assignor, by mesne assignments, to Lithoprintex Corporation, a Corporation of Delaware. Filed Sept. 17, 1926, Serial No. 136,017, and in Great Britain Sept. 25, 1925. 4 Claims. (Cl. 95—73.)

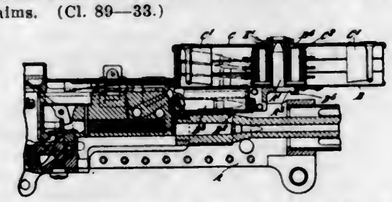
1. In photographic step-and-repeat contact-printing apparatus, the combination of a fixed support, a press member movable towards and away therefrom, leaf springs each connected at the middle of its length to said press member, and an unit-holding frame connected to the said springs at their ends, substantially as set forth.

1,811,691. PRESS-FRAME FOR DUPLICATING OR PRINTING APPARATUS. ROBERT HARRIS, London, England, assignor, by mesne assignments, to Lithoprintex Corporation, a Corporation of Delaware. Filed June 10, 1927, Serial No. 197,789, and in Great Britain Aug. 11, 1926. 9 Claims. (Cl. 95—73.)



1. A press frame of the character described, comprising in combination a base member, a supporting member detachably mounted on the base member, a unit-holder for carrying a unit adjustably carried by said supporting member, clamping means for clamping said holder in its adjusted position on said supporting member, and holding means for removably securing the supporting member in its operative position on the base member, locating means for automatically locating said supporting member in its operative position on the base member in two directions at right angles to one another at the end of its sliding movement into its operative position, which said holder can be adjusted on the supporting member in two directions lying transversely to one another and also angularly in its own plane in relation to the supporting member when said clamping means is slack but is still carried by said holder or said supporting member.

1,811,692. ELECTROLYTIC RECOVERY OF ZINC. HARRY HEY and ARTHUR FANNIN EVANS, Melbourne, Victoria, and ROWLAND THOMAS DRYLL WILLIAMS and ARCHIBALD PHILIP NEWALL, Risdon, Hobert, Tasmania, Australia, assignors to Electrolytic Zinc Company of Australasia Limited, Melbourne, Australia. Filed Dec. 17, 1927, Serial No. 240,923, and in Australia Dec. 29, 1926. 2 Claims. (Cl. 204—18.)



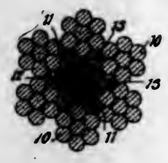
2. In the electrolytic recovery of zinc, the electrolysis of zinc sulphate solutions, containing a toxic substance of the nature of cobalt, the addition to the electrolyte of a soluble salt of antimony in such quantities as will provide an antimony content in the electrolyte of from about 0.1 to about 0.5 milligrams of antimony per litre.

1,811,693. GAS OPERATED MACHINE GUN AND AUTOMATIC SMALL ARM. CARL ALFRED LARSSON and PERCY REUBEN HIGSON, Westminster, England, assignors to Vickers-Armstrongs Limited, Westminster, England, a British Company. Filed Jan. 13, 1931, Serial No. 508,402, and in Great Britain Feb. 10, 1930. 4 Claims. (Cl. 42—3.)

1. For use in the gas block of a machine gun or automatic small arm of the gas operated type, a gas plug composed of a main part which is adapted to be secured in the gas block, and a subsidiary part which fits into the main part and is provided with a curved gas passage in the form of a recess opening on to one of the faces of said subsidiary part.

1,811,694. DRUM MAGAZINE FOR MACHINE GUNS AND AUTOMATIC SMALL ARMS. CARL ALFRED LARSSON and PERCY REUBEN HIGSON, Westminster, England, assignor to Vickers-Armstrongs Limited, Westminster, England, a British Company. Filed Jan. 13, 1931, Serial No. 508,405, and in Great Britain Apr. 10, 1930. 5 Claims. (Cl. 89—33.)

1. A drum magazine for use with a machine gun or automatic small arm in which the cartridges are withdrawn rearwardly from the magazine during the rearward movement of the lock or bolt, the said magazine comprising in combination a stationary pan portion and a movable cover portion serving to displace the cartridges step by step in order to bring them one at a time into a discharge opening in the base of said pan portion, an inclined chute or conduit which communicates with said discharge opening and conveys the cartridges into the required position for being extracted during the rearward movement of the lock or bolt, and a removable member at the lower or outer end of said chute or conduit, this member when in position serving to locate the lowermost or outermost cartridge in its extracting position and when removed opens the chute or conduit so as to enable the magazine to be recharged with cartridges.



1,811,695. MANUFACTURE OF RUBBER ARTICLES FROM RUBBER LATEX. TULLIO GUIDO LEVI, Milan, Italy, assignor to Società Italiana Pirelli, Milan, Italy, a Corporation of Italy. Filed June 20, 1930, Serial No. 462,704, and in Great Britain June 27, 1929. 25 Claims. (Cl. 18—58.)

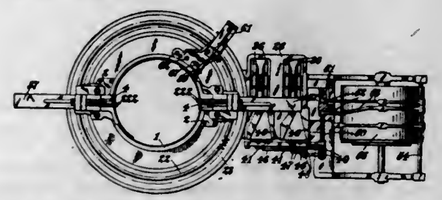
1. In the manufacture of rubber articles direct from normal rubber latex by local heating of the latex in the presence of a coagulant of such nature and in such proportion as to produce at the temperature of addition to the latex at the most a decrease in fluidity and on heating to the forming-temperature thickening and coagulation, the process which comprises subjecting the latex, prior to the introduction of the coagulant, to a period of moderate heating followed by cooling.

1,811,696. CARBON-FREE METAL. PAUL DYER MERICA, Westfield, N. J., and AUGUSTUS ERNEST KAYES, Huntington, W. Va., assignors, by mesne assignments, to The International Nickel Company, Inc., New York, N. Y., a Corporation of Delaware. Filed May 19, 1927. Serial No. 192,782. 2 Claims. (Cl. 75—66.)

1. The process of producing nickel-containing castings, which comprises melting the metal, subjecting it to a treatment which completely oxidizes any carbon present, boiling out the resultant gaseous oxides, and thereafter adding silicon and magnesium and substantially completely deoxidizing the nickel.

1,811,697. WIRE ROPE. FRANK WARD REILLY, Chattanooga, Tenn., assignor to Williamsport Wire Rope Company, a Corporation of Pennsylvania. Filed Feb. 19, 1930. Serial No. 429,546. 2 Claims. (Cl. 117—59.)

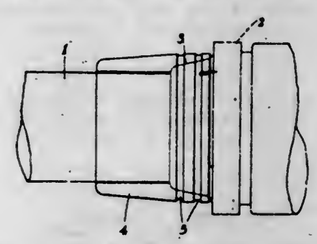
1. A wire rope for oil well pumping and analogous purposes, comprising a wire rope center including a plurality of strands, each of which consists of a plurality of wires, and a plurality of outer strands each consisting of a plurality of wires, the outer strands being in approximately direct contact with portions of the center strands and with longitudinal interstices between the outer and center strands, and fibrous packing impregnated with liquid proof material compressed and completely filling said interstices and preventing leakage of oil or other liquid surrounding the rope through the rope interstices.



1,811,698. MANUFACTURE OF VANADIUM STEEL. BYRAMJI D. SAKLATWALLA, Crafton, Pa., assignor to Vanadium Corporation of America, Bridgeville, Pa., a Corporation of Delaware. Filed Dec. 20, 1928. Serial No. 327,480. 1 Claim. (Cl. 75—45.)

The process of making vanadium steel of controllable grain size, which comprises forming a molten bath of steel in which is incorporated a reducing agent and introducing vanadium into the bath partly in the form of a previously reduced vanadium alloy and partly in the form of an unreduced vanadium compound charged into the molten bath and reduced therein by the reducing agent present in the bath.

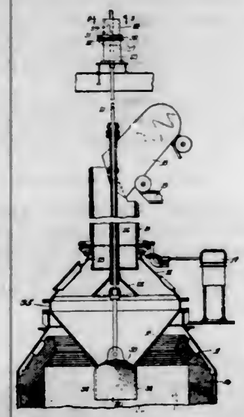
1,811,699. PREVENTION OF CAKING OF CRYSTALS, POWDERS, AND THE LIKE. ALEXANDER CRUICKSHANK SCOTT, Faversham, England. Filed Nov. 3, 1928, Serial No. 317,120, and in Great Britain Nov. 11, 1927. 8 Claims. (Cl. 23—243.)



1. A method of preventing caking of a crystalline mass which consists in intimately incorporating with the said mass a proportion of asbestos fibre not exceeding 5%.

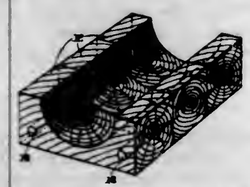
1,811,700. KNITTING MACHINE. EDWIN WILDT and HENRY HAROLD HOLMES, Leicester, England, assignors to Wildt & Company Limited, Leicester, England, a British Company. Filed July 12, 1927, Serial No. 205,181, and in Great Britain Sept. 8, 1926. 15 Claims. (Cl. 66—137.)

1. For a knitting machine having a needle-bed and needles therein, the combination of reverse-plating mechanism comprising interchangeable yarn-feeders relatively movable side-by-side in straight-line paths that are inclined with respect to the lengths of the needles in planes that are parallel to those lengths, individual selector means for every needle in succession in a plurality thereof at which yarn reversal is to be effected, and an operative connection between said selector means and said reverse-plating mechanism to enable reversal of the yarn-feeding positions to be effected optionally at each and every one of the said plurality of needles.



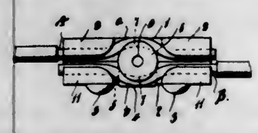
1,811,701. JOINTING OF LEAD OR LIKE PIPES OR SHEATHS. ALFRED EDGAR WILSON, Kent, England. Filed July 23, 1930, Serial No. 469,998, and in Great Britain July 31, 1929. 2 Claims. (Cl. 29—148.)

1. The method of jointing pipes (or other equivalent members), one of which by reason of its material, form or dimensions offers greater resistance to compression than the other, which comprises taking a sleeve of com-



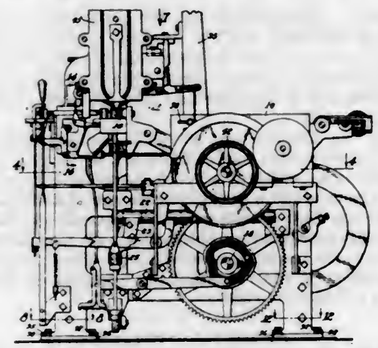
pressible metal, fitting it over the ends of the two pipes to be joined, arranging that at one end of the sleeve there is less resistance to the compression than at the other end, owing to the provision of spaces into which the metal can flow, the easier flow being at the end where the pipe offers the greater resistance to compression, and applying compression to the outside of the sleeve to compress it as a whole into contact with the ends of the two pipes.

1,811,702. FURNACE CHARGING BELL. CHARLES W. ANDREWS, Chicago, Ill., assignor to H. A. Brassert & Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 1, 1928. Serial No. 250,970. 5 Claims. (Cl. 214—36.)



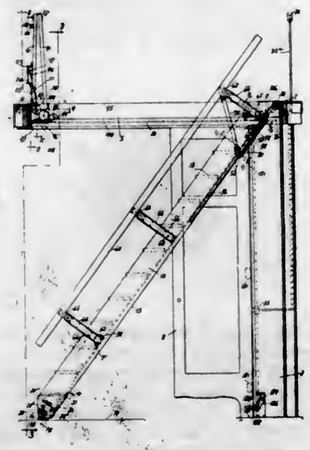
1. In a blast furnace or the like, a rotatable charging bell located interiorly of the top of the furnace, a hopper ring having a circular edge engaging the upper surface of the bell for closing the furnace top, said bell being of varying radial widths at different points on its circumference, and being substantially symmetrical about any vertical plane passed through the vertical axis of the bell.

1,811,703. BEARING. KARL W. ATWATER, Chicago, Ill., assignor to H. A. Brassert & Company, Chicago, Ill., a Corporation of Illinois. Filed July 29, 1929. Serial No. 381,844. 5 Claims. (Cl. 308—238.)



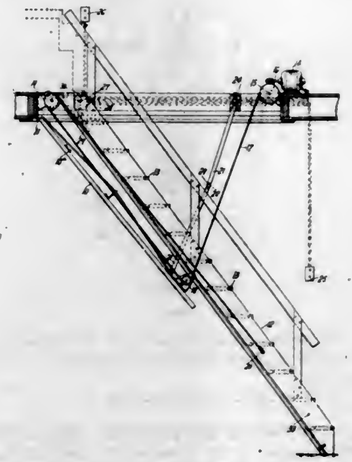
1. A bearing for rolling mills formed of a dense hard wood containing a natural lubricant, the bearing having the grain running approximately transversely of the bearing seat.

1,811,704. WIRE CONNECTER OR CABLE CLAMP. STEPHEN M. BAYUS, Bakersfield, Calif. Filed July 11, 1930. Serial No. 467,347. 3 Claims. (Cl. 24—125.)



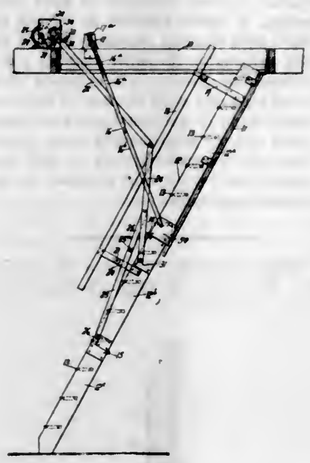
3. A wire connecter and cable clamp, comprising elongated blocks adjustably engaging one another, a laterally extending tongue on one block, the other block having a groove slidably mounting said tongue, a grooved post on the first block intermediate of its ends, a grooved offset on said block on each side of said post, a grooved offset on the other block on each side of the groove aforesaid, the grooved offsets and post being adapted to receive the meeting ends of wires or cables and the post to kink said wires or cables between the offsets on the respective blocks, and means to secure the blocks in assembled position.

1,811,705. POWER LOOM. CARL P. BERGSTROM, Millbury, Mass., and CARL J. LINDEGREN, Providence, R. I., assignors to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 15, 1929. Serial No. 332,691. 4 Claims. (Cl. 139—1.)



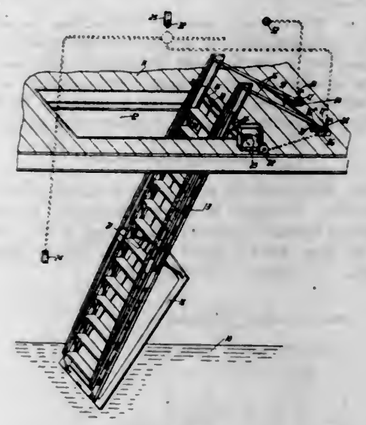
1. In a loom, a loom frame comprising loom sides each substantially flat and unobstructed on its outer face and having spaced finished bearing surfaces thereon, each loom side being provided with a plurality of relatively deep stiffening ribs on its inner face and with inner cored bearing portions supported by said ribs, and cross frame members having their ends abutting said inner bearing portions and firmly secured to said loom sides.

1,811,706. DISAPPEARING WALL STAIRWAY. FRANK E. BESSLER, Akron, Ohio, assignor to The Bessler Disappearing Stairway Company, Akron, Ohio, a Corporation of Ohio. Filed May 12, 1928. Serial No. 277,171. 26 Claims. (Cl. 228—50.)



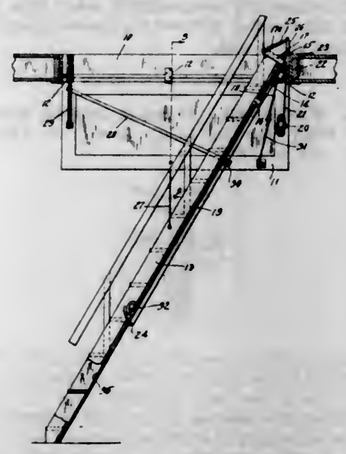
2. In a device of the class described, a ceiling having an opening therein, a pivoted support on one end of the opening, and a stairway longitudinally movable in the support from vertical to inclined position.

1,811,707. DISAPPEARING STAIRWAY. FRANK E. BESSLER, Akron, Ohio, assignor to The Bessler Disappearing Stairway Company, Akron, Ohio, a Corporation of Ohio. Filed July 20, 1928. Serial No. 294,275. 15 Claims. (Cl. 228—50.)



10. A disappearing ceiling stairway comprising a movable panel, a stair structure carried thereby and movable thereon, power means for moving the panel and for moving the stair structure on the panel, means for supplying power to the power means, and means actuated by movement of the panel and stair structure respectively to its retracted position and its position for use to disconnect the supply of power from the power means.

1,811,708. DISAPPEARING STAIRWAY. FRANK E. BESSLER, Akron, Ohio, assignor to The Bessler Disappearing Stairway Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 27, 1928. Serial No. 315,430. 19 Claims. (Cl. 228—50.)

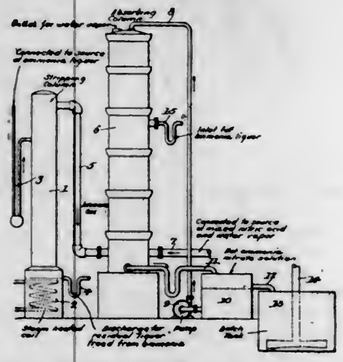


15. In a disappearing stairway adapted for use in an opening between a lower and upper floor, a movable panel closure for the opening, a foldable stair structure carried by the panel, means for opening and closing the panel, and means actuated thereby for positively unfolding and folding the stairway.

1,811,709. DISAPPEARING STAIRWAY. FRANK E. BESSLER, Akron, Ohio, assignor to The Bessler Disappearing Stairway Company, Akron, Ohio, a Corporation of Ohio. Filed Jan. 19, 1929. Serial No. 333,551. 10 Claims. (Cl. 228—50.)

5. In a disappearing stairway installation comprising a stair structure pivotally and slidably mounted to move through a ceiling opening to a position of use on the lower floor and having a panel on the lower portion for closing the opening when retracted, reversible power means for actuating the stairway, and means operable by movement of the stairway for stopping the power means and setting it in reverse when the stairway is moved into its position of use and into its retracted position.

1,811,710. DISAPPEARING STAIRWAY. FRANK E. BESSLER, Akron, Ohio, assignor to The Bessler Disappearing Stairway Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 4, 1929. Serial No. 352,556. 15 Claims. (Cl. 228—50.)



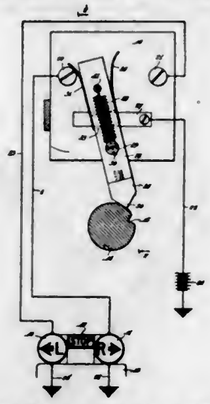
12. The combination in a disappearing stairway cooperating with a ceiling opening between lower and upper floors of a building, of a stair structure, mounting means for pivotally and slidably supporting the stair structure on one end of said opening, a closure panel hinged at one side of said opening, and means on the panel adapted to limit the pivotal movement of the stairway at a proper inclination when said stairway is extended to the lower floor.

1,811,711. PROCESS FOR MAKING SYNTHETIC MENTHOL. JOHN WILLIAM BLAGDEN, London, England, assignor of one-half to Howards & Sons Limited, Ilford, Essex, England. Filed June 19, 1924, Serial No. 721,137, and in Great Britain May 21, 1924. 18 Claims. (Cl. 260—153.)

1. In a process of making crystalline menthol by catalytic hydrogenation of cyclic ketones which yield on hydrogenation a mixture of crystalline menthol and a normally liquid product, the step which consists in adding to the ketone to be hydrogenated a quantity of the normally liquid constituent of the hydrogenated ketone.

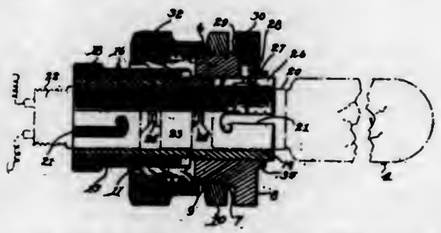
1,811,712. METHOD OF MANUFACTURING AMMONIUM NITRATE. RICHARD N. BOYD, Allentown, Pa., assignor to Trojan Powder Company, New York, N. Y., a Corporation of New York. Filed Dec. 14, 1927. Serial No. 240,012. 1 Claim. (Cl. 23—103.)

The method of concentrating an aqueous solution of ammonium nitrate, which comprises adding to such solution nitric acid occurring in vaporous condition with or without water vapor, and ammonia in vaporous condition, and simultaneously evaporating water from the ammonium nitrate solution, the latent heat of evaporation required to effect such evaporation being supplied solely from the heat evolved in the reaction between the gaseous ammonia and the vaporous nitric acid.



1,811,713. FASTENER. FRANK H. BROOME, Rutherford, N. J. Filed May 31, 1930. Serial No. 458,397. 4 Claims. (Cl. 24—67.)

1. A paper fastener comprising a substantially T-shaped member formed of a strip of flexible non-metallic material including a body and legs extending from the body and having extremities adapted for passage through openings provided in a plurality of sheets of paper, an adhesive upon one face of said extremities, and a relatively stiff reinforcing member secured to the body.



1,811,714. SWITCH. PETER T. CALAMARI, Deep River, Conn. Filed Nov. 4, 1927. Serial No. 231,105. 5 Claims. (Cl. 200—59.)

1. An electrical switch including a stationary block and a pair of spaced contacts thereon, a switch arm slidably fulcrumed intermediate its ends on the block for rocking movement across the face of the block, a pair of spaced spring contacts carried by one end of the arm engageable

with the respective fixed contacts as the arm is rocked, and a rotatable member operatively connected to the other end of the arm.

1,811,715. FOCUSING MECHANISM. GEORGE H. CUSHING, Washington, D. C., assignor to Cushing Lamp Incorporated, Washington, D. C., a Corporation of Delaware. Filed Feb. 16, 1929. Serial No. 340,570. 7 Claims. (Cl. 240—44.2.)

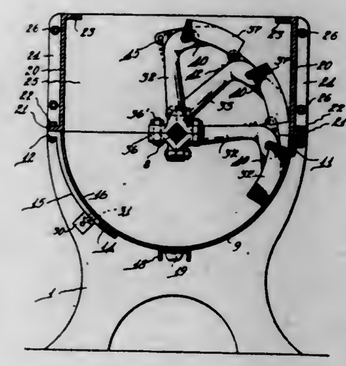
1. A device for adjusting the position of a filament of an electric light bulb relatively to a reflecting surface, comprising a tubular member mounted in fixed relation to a reflecting surface, a sleeve adapted to receive the base of an electric light bulb slidably mounted in said member, an internally and externally threaded bushing positioned between said sleeve and member, the external threads being of one hand and engaging with threads in said member, the internal threads being of another hand and engaging with threads on said sleeve, said bushing upon rotation being adapted to move the sleeve relatively to said member, and tightening means carried by said member for locking the sleeve in adjusted positions.

1,811,716. FIRE ALARM. THOMAS C. DUNCAN, Portsmouth, Va. Filed Sept. 5, 1930. Serial No. 479,989. 1 Claim. (Cl. 116—105.)

A device of the class described comprising a casing having explosive material therein, a fuse passing through one end of the casing and projecting therefrom, the other end of the casing being flattened and having a hole therein for receiving a nail or the like to fasten the device to a support and a covering of inflammable and waterproof material fitting over the casing and having one end extended and enclosing the projecting part of the fuse.

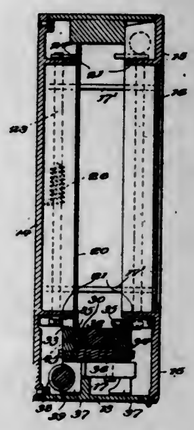
1,811,717. WINDSHIELD WIPER. WILLIAM C. ELLIXSON, Jackson, Mich. Filed June 6, 1930. Serial No. 459,543. 3 Claims. (Cl. 15—255.)

1. A windshield wiper comprising a block, a wiper strip carried thereby, a channel shaped member in which the block fits, means for adjusting the block to cause the strip to properly contact the windshield, an outer channel shaped member having flaring flanges and in which the first channel shaped member fits, scraper blades attached to the flaring flanges, a heating element arranged between the outer channel shaped member and the first channel shaped member for heating the scraper blades and means whereby the outer member can be detached from the other parts.



1,811,718. TRUNK. HANS HOFBAUER, Munich, Germany. Filed Jan. 13, 1928, Serial No. 246,559, and in Germany Aug. 12, 1926. 2 Claims. (Cl. 190—28.)

1. A joint structure of the character set forth for lidded containers, comprising counterpart double U-shaped members for respective attachment to the body and lid members of the container, each such member comprising a body portion, a short flange extending from said body portion, and a relatively longer flange extending from said body portion in substantial parallelism with said shorter flange and spaced therefrom, to form a channel between the two flanges, the shorter flange being set back from the outer plane of the body portion to substantially an extent of the width of the longer flange, and a compressible sealing means in said channel, the two opposed joint members when in interlocking position forming a doubly sealed four-flanged interengagement.

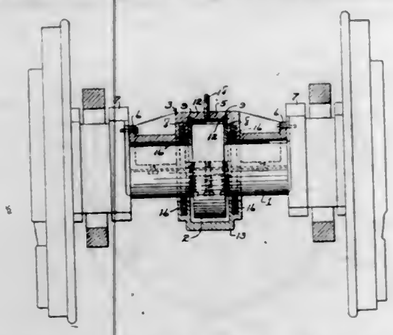


1,811,719. MIXING MACHINE. FRANCIS JOHNSON, Detroit, Mich. Filed Mar. 1, 1929. Serial No. 343,588. 6 Claims. (Cl. 83—73.)

1. In a mixing machine, side and end members forming an enclosure open at its top and bottom, parallel retaining members attached to the lower edges of said side members, one of said retaining members being detachable, a bottom member at the bottom of said enclosure between said retaining members and abutting said retaining members, and

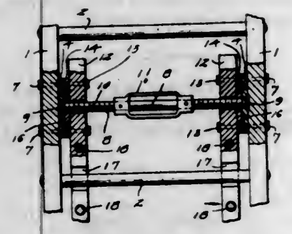
a supporting member on which said bottom member rests, said supporting member being spaced from said detachable retaining member to permit withdrawal of the bottom member in a direction transverse of said enclosure, on removal of said detachable retaining member.

1,811,720. ADVERTISING EXHIBITOR. ALBERT J. KAUFFMAN, Hollywood, Calif. Filed Sept. 23, 1929. Serial No. 394,594. 3 Claims. (Cl. 40—79.)



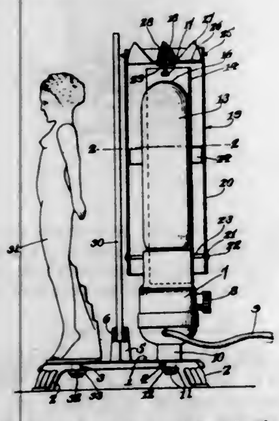
1. An advertising exhibitor including a casing equipped with a fixed advertising card receiving platform, a card transfer carriage slidably engaged with said platform, and anti-friction means interposed between the carriage and platform.

1,811,721. LATERAL ELIMINATOR. JOSEPH J. KECK and ERNEST E. KELLEY, Parsons, Kans. Filed Mar. 10, 1930. Serial No. 434,776. 4 Claims. (Cl. 105—80.)



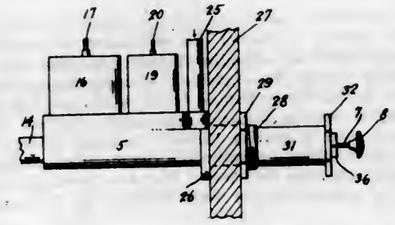
2. In combination with an axle and its journal boxes, said axle having a centrally arranged circular enlarge-

ment, a housing extending between the boxes and secured at its ends thereto and having a semi-circular chamber therein for receiving a part of the enlargement, an oil pan,



bolts connecting the pan to the under part of the chamber and compression springs on the bolts, said pan enclosing the lower part of the enlargement.

1,811,722. LADDER. WILLIAM H. KIMBERLIN, Natchez, Miss., assignor of one-half to William Henry Beatty, Natchez, Miss. Filed May 11, 1929. Serial No. 362,313. 6 Claims. (Cl. 228—64.)

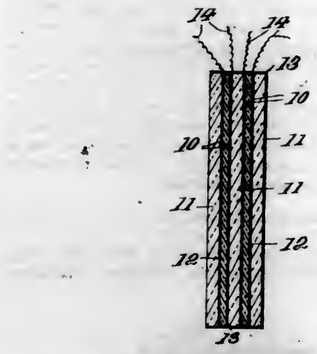


1. A ladder structure of the character described comprising rung connected side members, oscillatable prop legs adjustable relative to said members, means for shifting said prop legs laterally of the side members and relative to one another, and means for securing the prop legs in one shifted position.

1,811,723. LIGHT EFFECTING DEVICE. ALVIN C. LOEWER, Parkville, Md. Filed Apr. 7, 1930. Serial No. 442,420. 5 Claims. (Cl. 240—10.)

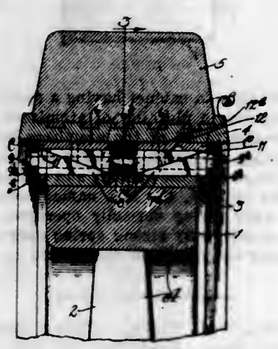
1. In a device for the purpose set forth, a base provided on its upper face with a socket, a vertically disposed light diffusion member mounted in said socket, an upstanding light source coupled to the base rearwardly of said member, an object coupled to the base forwardly of said member, a vertically disposed, resilient, cylindrical reflector split from end to end surrounding the light source, said reflector gradually increasing in diameter from its lower to its upper end, the split ends of said reflector being arranged in spaced relation to provide a light ray passage, a diametrically disposed bar secured within said reflector adjacent the larger end of the latter and provided on its outer face with a tapered pin and a revoluble light ray color changer element supported upon the pin and enclosing the reflector when interposed between the reflector and said member.

1,811,724. MEASURING FAUCET. JOE R. MANLEY, East Liverpool, Ohio. Filed June 14, 1929. Serial No. 370,986. 2 Claims. (Cl. 225—26.)



1. In a device of the kind described, a measuring faucet comprising an elongated hollow body, a water supply pipe connection at one end, a water container mounted on said body near the water pipe connection, having a passage communicating with the interior of said hollow body, a syrup container mounted intermediate the water container and the other end of the hollow body and having an outlet port and an inlet port communicating with said interior of said hollow body, a syrup supply pipe mounted in the hollow body intermediate the syrup container and the spigot end thereof and communicating with the interior of said hollow body, a slidable closed ended hollow mixing cylinder having ports registrable with the outlet passage in the water container and the outlet port of the syrup container, and other ports registrable with the inlet port of the syrup container and the syrup supply pipe, respectively, and said cylinder having a depression in the side of said cylinder to cooperate with the inlet port of the syrup container and the syrup supply pipe to form thereby a passage for syrup from the supply pipe to the syrup container when the cylinder is moved to close all the other passages in said hollow body except the water inlet port to the water container, and discharge passages near the spigot end of the cylinder to discharge its contents into the said spigot, and a cylinder operating push rod journaled in the end of the hollow body and connected to the companion end of the cylinder, an annular shoulder on the inner surface of the hollow body to act as a stop and form with the closed end of the cylinder a spigot valve, a spring associated with the push rod to return the cylinder end, when the push rod is released, to abutting relation with said shoulder to close the spigot, said shoulder operating push rod adapted to be pressed inwardly toward the hollow body to register with the outlet port of the spigot and water container and discharge the contents thereof through the cylinder and through said spigot and to dispense the same, and air vents in the containers for permitting gravitational discharge of the contents thereof.

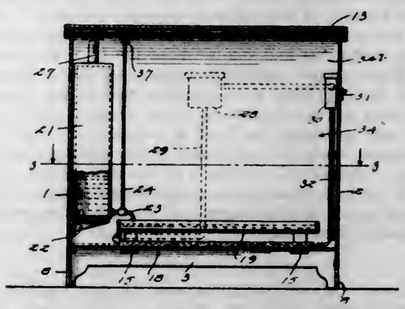
1,811,725. ELECTRICAL DEVICE AND METHOD OF MAKING THE SAME. OTTO S. MARCKWORTH, Columbus, Ohio. Filed Sept. 18, 1922. Serial No. 588,922. 5 Claims. (Cl. 175—41.)



1. The method of constructing a composite article comprising first producing components for said article by

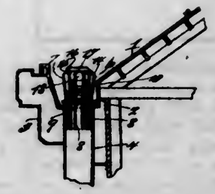
applying a permanent conductive surface coating to each one of a plurality of sheets of dielectric material, moistening binder sheets with a solvent which is normally incapable of attacking the binder sheet, so that the condition of said binder sheet remains unchanged during the application of the solvent, interposing the moistened binder sheets

between and in contact with the coated surfaces of two or more of said components, and finally causing said solvent to become sufficiently active to soften the moistened portions of said binder sheets so as to cause the moistened surfaces to unite with contiguous coated surfaces of other components.



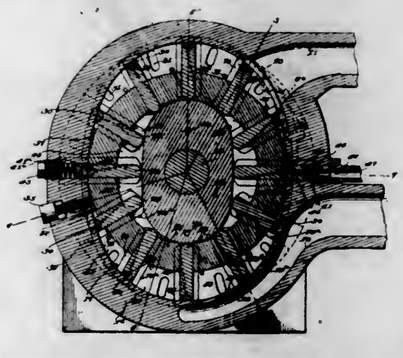
1,811,726. WHEEL CONSTRUCTION. WILLIAM C. MARTIN, Chicago, Ill., assignor to John H. Lee, Oak Park, Ill. Filed Aug. 3, 1928. Serial No. 297,158. 7 Claims. (Cl. 301—20.)

1. In combination; a wheel-center; an encircling tire having an annular base; a pair of rings interposed between the wheel-center and said annular base; a series of wedge-devices associated with each ring, comprising a circle of wedge-blocks within the ring having out-turned points and a circle of complementary wedge-blocks within the first-mentioned circle having inturned points, each pair of blocks associated with one ring being in alinement with a pair of blocks associated with the other ring; and an annular series of bolts, each bolt extending through two alined pairs of blocks and serving to draw the inwardly tapering members thereof together.



1,811,727. ELECTRIC HUMIDIFIER. CLIFFORD C. McCLOUD, Mayville, Wis. Filed Sept. 17, 1929. Serial No. 393,295. 4 Claims. (Cl. 219—38.)

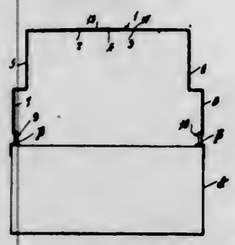
1. A humidifier comprising a cabinet provided at its lower side with an air inlet and at its front side with an air outlet, a deflector arranged within the cabinet and extending from the upper edge of the front side of the cabinet to a point adjacent the lower edge of the rear side of the cabinet, a hinged top for the cabinet, a pan arranged within the cabinet and adapted to contain water, a water supply tank arranged within the cabinet and provided with a filling opening arranged rearwardly of the deflector, a



closure for said opening, a pet-cock extending from the lower end of the tank and discharging into the pan, a rod extending from the pet-cock to a point above the deflector, and a heating element arranged within the cabinet below the pan.

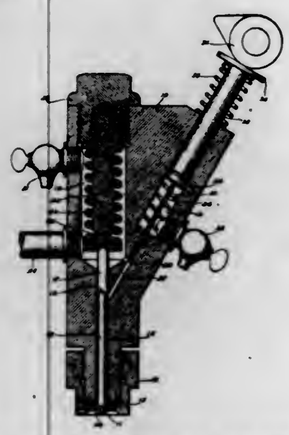
1,811,728. DRAINAGE DEVICE FOR ROOF GUTTERS AND THE LIKE. ROBERT MCKEE, Philadelphia, Pa. Filed May 31, 1929. Serial No. 367,562. 4 Claims. (Cl. 210—170.)

1. A drain device for roof gutters and drain pipes, comprising a cage having depending yieldable stays, which engage within the drain pipe, said cage having an apex cap supported at the top of the device, a plurality of cylindrical concentric spaced rings operatively supported within the cage at gradually increasing heights, thereby arranging the rings in conical formation.



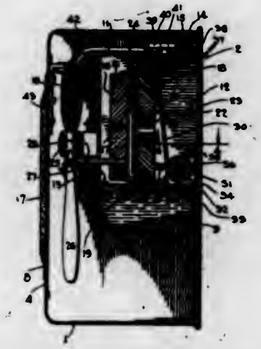
1,811,729. ROTARY ENGINE. HENRY F. MOLKENBUR, Bellaire, White Bear Lake, Minn. Filed Apr. 22, 1926. Serial No. 103,944. 10 Claims. (Cl. 123—16.)

1. A rotary engine comprising a housing having elliptical shoulders, a rotor revolubly mounted about the shoulders,



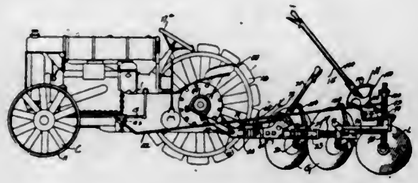
said rotor having radial slots, abutments slidably mounted in said slots and having their inner ends riding over the elliptical shoulders for causing radial movement of the abutments, said housing having an elliptical inner wall engaged by the outer free ends of the sliding abutments, the rotor being in contact with the elliptically shaped wall of the housing at diametrically opposite points, but spaced from the remaining portion of said wall, the spaces formed by the abutments and side walls of the rotor and housing providing variable compression and combustion chambers, means for supplying a combustible fluid to the chambers at a point in the travel of the rotor where said abutments have been extended the limit of outward movement, and an exhaust conduit connected with the housing, said rotor having a cylindrical portion and annular flanges at each end of the cylindrical portion, and lateral chambers being located in one of the flanges, and communicating with the combustion and compression chamber.

1,811,730. GRAPPLE FOR STORAGE BATTERIES AND THE LIKE. HARRY E. NEWTON, Hardy, Iowa. Filed May 28, 1930. Serial No. 456,479. 2 Claims. (Cl. 294—106.)



1. A grapple for storage batteries and the like, comprising two strips of rigid material hingedly secured together end to end, each of said strips being downturned intermediate of their ends, the extremities of said downturned portions being inturned to provide grappling jaws, and the side edges of the hinged ends of the strips being curled upwardly to strengthen said portions of the strips and to provide a handhold, said upwardly curled edges tapering in width from the hinged portion outwardly therefrom.

1,811,731. COMBINED FUEL MEASURING PUMP AND FUEL FEED VALVE FOR INTERNAL COMBUSTION ENGINES. VERN REED PETTY, Brooklyn, N. Y. Filed Sept. 30, 1926. Serial No. 138,800. 1 Claim. (Cl. 123—139.)

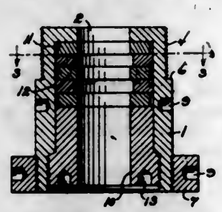


A combined fuel measuring pump and fuel feed valve for internal combustion engines, comprising a body having a vertical portion, a supply chamber in the upper part thereof and a discharge chamber in the lower part thereof, an integral angularly related portion containing a pressure chamber communicating with said supply and discharge chambers and also containing a recess located above said pressure chamber, a plunger slidably mounted in said pressure chamber and extending into said recess, said plunger having a shoulder, a coil spring on said plunger and bearing against said shoulder, means for actuating said plunger, an oil bleeder valve communicating with the lowermost part of the recess, an air bleeder valve communicating with the uppermost part of said supply chamber, a supply tube communicating with said supply chamber, a valve located in said discharge chamber and having a smaller diameter than said chamber, an enlarged portion of said valve extending into said supply chamber and means for urging the valve to closed position.

1,811,732. CABINET. ALBERT PFEIFER, New York, N. Y. Filed Oct. 31, 1927. Serial No. 230,079. 9 Claims. (Cl. 167—3.)

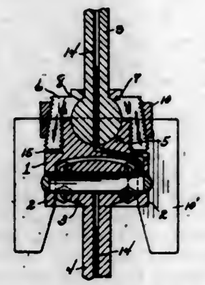
1. In combination, a cabinet having a door, a sterilizing apparatus including a plurality of atomizers, a tank, and a bellows common to all of the atomizers to operate the same, a plurality of article supports for each atomizer, mechanism operated by the opening and closing of the door to operate the bellows, the last named means including a relatively weak spring normally operative to open the bellows, and a relatively strong spring operative to close the bellows and the door and compressed by the opening of the door.

1,811,733. TRACTOR PLOW. JOSEPH HERSCHEL TAYLOR, Athens, Tenn. Filed Nov. 19, 1928. Serial No. 320,367. 7 Claims. (Cl. 97—47.)



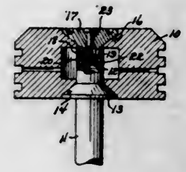
1. In a tractor plow the combination of a tractor including rear running and traction gearing including an axle housing and a draw bar cap connected therewith between its ends, a hitch member connected at its ends to the axle housing and intermediate its ends having a coupled connection with the draw bar cap, a plow frame, and means connecting the plow frame with the hitch member at opposite sides of the draw bar cap for sliding movement along the hitch member and pivoted vertical movement.

1,811,734. PLANOGRAPHIC PRINTING PLATE HAVING MERCURIALIZED INK REFUSING AREAS FOR PHOTOMECHANICAL PRINTING. ARTHUR RONALD TRIST, London, England, assignor to William Y. Dear, Montclair, N. J., as trustee. Filed Apr. 8, 1927, Serial No. 182,059, and in Great Britain May 18, 1926. Renewed Oct. 28, 1930. 13 Claims. (Cl. 41—41.5.)



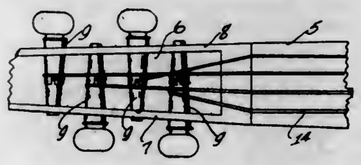
7. A planographic printing plate comprising printing areas of chromium, and non-printing areas of mercurial amalgam.

1,811,735. PACKING GLAND. FRANK VAN BEZEL, El Centro, Calif., assignor to Dual Aircraft Motors Inc., Ltd., El Centro, Calif. Filed July 19, 1929. Serial No. 379,465. 1 Claim. (Cl. 286—35.)



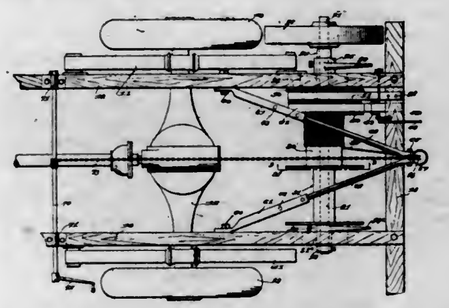
In combination with a member having a threaded hole therein and a flat shoulder surrounding the lower end of the hole and a second member having a hole therein of greater diameter than the threaded hole, a gland having its body provided with a reduced upper part exteriorly threaded to fit in the threaded hole, the shoulder formed at the junction of the reduced part with the other part of the body engaging the shoulder on the first member and the lower part of the body passing through the hole in the second member, a nut threaded on the lower end of the body and bearing against the second member, packing rings in the body and a removable retainer threaded in the lower part of the body for holding the packing rings in place.

1,811,736. PISTON ROD COUPLING. FRANK VAN BEZEL, El Centro, Calif., assignor to Dual Aircraft Motors Inc., Ltd., El Centro, Calif. Filed July 19, 1929. Serial No. 379,466. 1 Claim. (Cl. 287—87.)



A universal connection comprising a body having a reduced upper part exteriorly threaded, a split nut engaging the threaded part, said upper part of the body and the nut having recesses therein forming a spherical socket, a member having a spherical enlargement fitting in the socket, a lock nut engaging the split nut, said split nut having a tapered exterior which is threaded to receive the lock nut and said lock nut having a tapered interior to fit over the tapered part of the split nut.

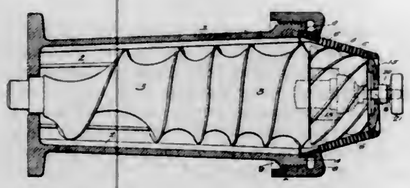
1,811,737. PISTON AND ROD CONNECTION. FRANK A. VAN BEZEL, El Centro, Calif., assignor to Dual Aircraft Motors Inc., Ltd., El Centro, Calif. Filed July 11, 1930. Serial No. 467,367. 2 Claims. (Cl. 74—108.)



1. In combination, a piston having an opening therethrough and beveled seats at each end of the opening, a rod having a hollow interiorly threaded end within said opening, a beveled collar integral with the rod adjacent said end and engaging one of the beveled seats of the piston, a beveled plug engaging the other seat of the piston, a split threaded stem carried by the plug for removable engagement with the threaded end of the rod, and means to force the threads of the stem into binding engagement with the threads of the rod to lock the parts against relative movement.

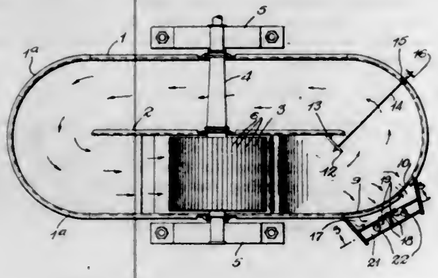
1,811,738. MUSICAL INSTRUMENT STRING SECURING DEVICE. CALVERT B. WILLIAMS, Santa Cruz, Calif. Filed May 23, 1930. Serial No. 455,039. 2 Claims. (Cl. 84—297.)

1. A musical instrument string securing device comprising a rotatable tuning peg, a ring positioned on said peg, said peg and said ring having coinciding openings extending therethrough and adapted to grip a string passing through said openings.



1,811,739. ATTACHMENT FOR TRUCKS. REUBEN M. WILLIS, CARTER A. WILLIS, and GORDON J. WILLIS, Chanute, Kans., assignors to The Willis Drilling Machine and Manufacturing Company, Chanute, Kans., a Corporation of Kansas. Filed June 25, 1928. Serial No. 288,169. 4 Claims. (Cl. 254—166.)

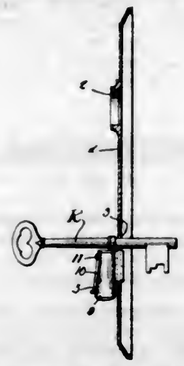
1. An attachment for a truck provided with traction wheels, comprising a frame, a cable, a derrick mounted on the frame for supporting the cable, a shaft mounted



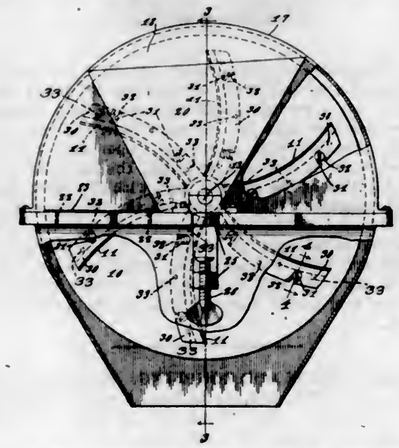
on the frame, a pulley on the shaft, eccentrics receiving the shaft and adapted when actuated for laterally displacing the shaft and pulley for causing the pulley to frictionally engage a traction wheel, and spools driven by the shaft and connected with the cable for winding up the cable.

1,811,740. MEAT CHOPPER. CHARLES W. ASBURY, Philadelphia, Pa., assignor to The Enterprise Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 21, 1929. Serial No. 341,753. 2 Claims. (Cl. 146—185.)

1. The combination in a chopper for meat and like substances, of a barrel; a frusto-conical perforated cutting head; means for detachably securing the cutting head to the barrel; a feed screw in the cutting head; a cutter having spiral blades and mounted on the end of the feed screw and arranged to turn therewith, the blades of the cutter extending to the end thereof, the cutting head being open at the end; a plate arranged to close said opening; and means for attaching the plate to the rotating cutter, so that on detaching the plate the clogged material can be removed.



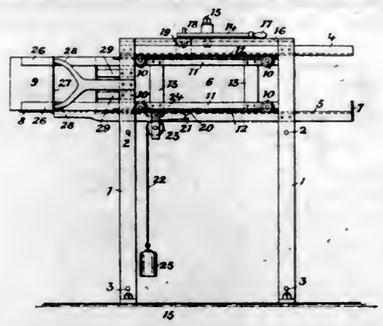
1,811,741. CONTINUOUS BEATER FOR PAPER MAKING. BENJAMIN M. BISHOP, Terre Haute, Ind., assignor to The Terre Haute Paper Company, Terre Haute, Ind., a Corporation of Ohio. Filed Oct. 7, 1929. Serial No. 397,990. 5 Claims. (Cl. 92—23.)



1. In a continuous beating machine, the combination with a tub having an enclosing wall, a mid-feather, a beater-roll and cooperating bed-plate, and a back-fall in rear of the beater-roll, of a screen interposed in the wall and forming a part thereof, and arranged rearwardly of the back-fall, said screen being curved transversely and so arranged that the pulp flowing over the back-fall impinges against the inner face of the screen, and a vertical deflector supported by the mid-feather in angular position for deflecting the pulp horizontally toward the screen.

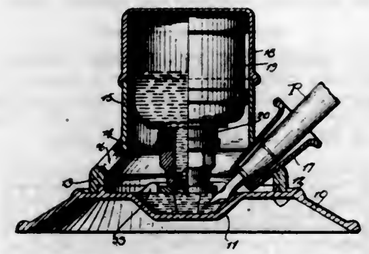
1,811,742. KEYHOLE GUARD. ALICE L. BREWER, East Hartford, Conn. Filed Jan. 15. 1931. Serial No. 508,958. 2 Claims. (Cl. 70—7.)

1. A guard attachment for keyholes comprising a tubular casing longitudinally split on one side, an outwardly directed extension at each side edge of the split portion, an outwardly directed lug at the outer end of each extension to be engaged with the edge walls of a keyhole, and a wedge member in the casing to prevent movement of the lugs toward each other.



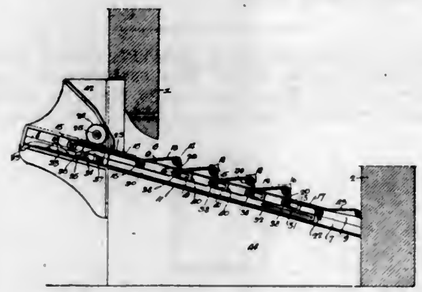
1,811,743. CUTTER FOR VEGETABLES AND FRUITS. AUGUST BROMBERG, Wauwatosa, Wis., assignor of one-half to Enos L. Dillon, Milwaukee, Wis. Filed July 20, 1928. Serial No. 294,160. 1 Claim. (Cl. 146—114.)

A cutter including a casing having a hopper and a discharge neck, a cutter disk journaled in said casing and having knife grooves each including a straight side wall and an oppositely inclined side wall, adjusting screws threaded into the disk at the grooves, cutting blades positioned in the grooves with the cutting edges disposed adjacent the inclined side walls and having slots opening outwardly through the non-cutting edges thereof to receive the screws to permit the blades to be adjusted to vary the cutting edges towards and from the inclined walls and set screws carried by the disks at the opposite side of the disks from the adjusting screws and bearing against the blades and cooperating with the adjusting screws in varying the inclination of the cutting edges of the blades relative to the inclined side walls of the grooves.



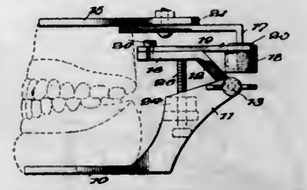
1,811,744. METHOD OF AND APPARATUS FOR TYING PACKETS. HUGO BRÜNINGHAUS, Barmen-Wichlinghausen, Germany. Filed Sept. 21, 1929, Serial No. 394,371, and in Germany Sept. 25, 1928. 11 Claims. (Cl. 140—93.)

1. An apparatus of the kind described, comprising a frame, a carriage adapted to run thereon and to receive a packet to be tied, angle pieces mounted on said carriage and adapted to abut on parallel edges to be embraced by a tying means, of the packet upon said carriage running



in one direction, and means for shifting the packet out of said angle pieces and carriage upon the latter running in opposite direction.

1,811,745. READY DIP INKWELL. JAN P. CLARY, Hartford, Conn. Filed Mar. 31, 1930. Serial No. 440,437. 9 Claims. (Cl. 120—59.)



1. In an ink well, a base having a central well portion, a casing having pen openings and mounted on said base and adapted to contain an inverted ink bottle, the lower edge of the casing being spaced from the central well, an ink bottle, and a normally closed valve in the neck of said bottle arranged to open upon proper positioning of the bottle in the casing with the lower end of the bottle terminating at the upper end of the well and spaced from the sides of the well whereby a pen inserted in the pen opening may enter the well beneath the bottle.

1,811,746. STOKER. EDMUND J. CLERGET, Chicago, Ill., assignor to American Engineering Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 19, 1924. Serial No. 732,971. 10 Claims. (Cl. 110—33.)

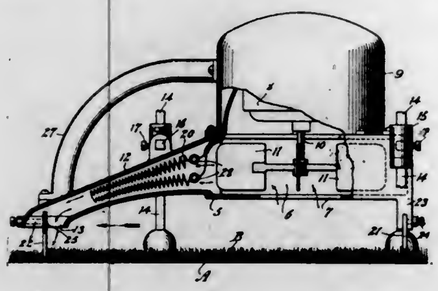
1. A grate structure comprising a longitudinal series of pivotally connected grate and hinge plates, said grate plates alternating with said hinge plates, and tripping means operable to cause the buckling of pairs of said grate and hinge plates upon an application of force to one end of said grate structure.

1,811,747. DENTAL ARTICULATOR. LUCIAN G. COBLE, Greensboro, N. C. Filed Aug. 21, 1929. Serial No. 387,483. 2 Claims. (Cl. 32—1.)

2. In a dental articulator, the combination of a lower jaw, a sectional upper jaw, a pivotal connection between said jaws, and a receptacle on one of said jaws capable of retaining in liquid form a readily fusible metal when the articulator is in its normal upright position, a portion of the other jaw extending into the receptacle and held rigidly upon solidification of the material in the receptacle.

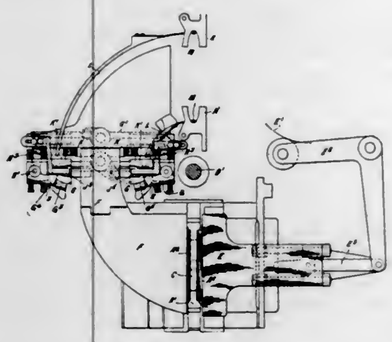
1,811,748. NECKTIE. CARLO DI TOSTO, Patchogue, N. Y. Filed Aug. 15, 1929. Serial No. 385,988. 2 Claims. (Cl. 2—150.)

1. A necktie comprising a hollow member tapering from each end to its center, a tie body provided with folds and having the upper portion thereof covering the front and sides of the hollow member, a knot forming portion covering the upper portion of the tie body and the upper portion of the hollow member with the ends thereof secured together at the rear of said hollow member, said knot forming portion extending over one edge of said hollow member and disposed against the inner face thereof, a neck band having the ends thereof passing through the hollow member, a latch means for pressing portions of the neck band against the hollow member, a wedge member in the upper part of the hollow member for clamping a portion of the knot forming portion in the hollow member, the free ends of the neck band entering the folds of the tie body, and means for connecting the edges of the folds together to hold said ends of the neck band in place.



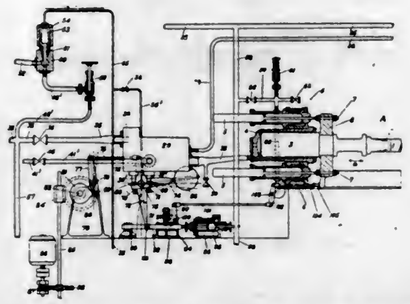
1,811,749. POWDER PUFF OR DIP. MARIE E. FROMERT, East Rockaway, N. Y. Filed Mar. 14, 1931. Serial No. 522,698. 5 Claims. (Cl. 132—78.5.)

1. The method of manufacturing powder puffs consisting in rolling fibrous material into compressed rolls,



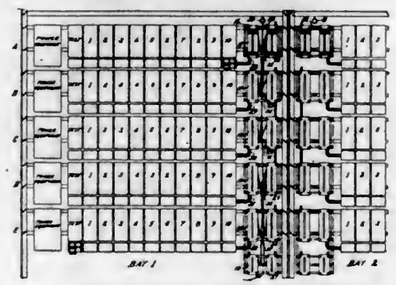
coating these rolls with translucent material, removing a part of the translucent material to leave a handle, and fluffing the fibrous material out where the protector has been removed.

1,811,750. FUR TREATING DEVICE. BENJAMIN FURGANG, Brooklyn, N. Y. Filed July 20, 1929. Serial No. 379,803. 6 Claims. (Cl. 149—24.)



2. In a device for the treatment of fur or pelts adapted for movement over the fur or pelt, a casing defining a draft chamber having an inlet and formed with a downwardly directed outlet nozzle, a rotary impeller within the draft chamber for drawing air into the inlet and expelling the same from the outlet nozzle, and means for supporting the casing for movement over the fur or pelt.

1,811,751. MACHINE FOR WRAPPING CIGARS AND OTHER ELONGATED BODIES. FREDERICK GROVER, Leeds, England, assignor to The Forgrove Machinery Company Limited, Leeds, England. Filed July 25, 1928, Serial No. 295,127, and in Great Britain Aug. 16, 1927. 6 Claims. (Cl. 93—7.)

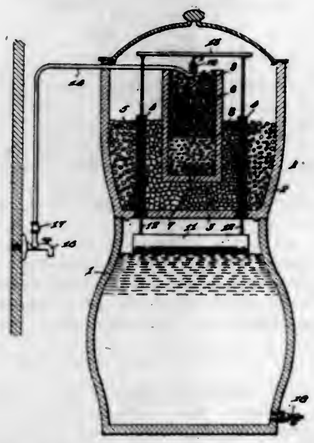


1. A machine for wrapping cigars and other elongated bodies, comprising in combination means for enclosing the body in a tubular wrapper the ends of which wrapper project beyond the body, means for holding the body thus enclosed in the tubular wrapper, male and female dies located at opposite ends of the tubular wrapper, means for approaching the male and female dies towards each other transversely of the body, means for distancing such male and female dies after the under ends of the wrapper have been bent upwards to form two side ears, a transversely moving finger adapted to turn inwardly one side ear fold of the two side ear folds formed by the dies at each end of the body, means for turning inwardly the other side ear fold in the opposite direction to overlap the first side ear fold, and means for turning down the central projecting ear fold formed by the turning in of the side ear folds.

1,811,752. INSTALLATION FOR FORCING VISCOUS FLUID INTO CONTAINERS. THOMAS EDMUND HOLMES, Glasgow, Scotland. Filed Feb. 26, 1930, Serial No. 431,554, and in Great Britain Mar. 1, 1929. 13 Claims. (Cl. 103—48.)

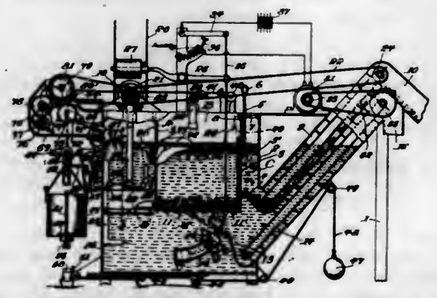
1. An installation for forcing viscous liquid into a receiver, comprising a hydraulic cylinder, a cylinder for viscous liquid adjoined with said hydraulic cylinder, a forcing ram presenting a high pressure end working in said cylinder for viscous liquid and a low pressure end working in said hydraulic cylinder, inlet and delivery valves for said cylinder for viscous liquid, and fluid pressure means for operating said inlet and delivery valves.

1,811,753. AUTOMATIC TELEPHONE SYSTEM. OLE C. HOVLAND, Chicago, Ill., assignor to Reserve Holding Company, Kansas City, Mo., a Corporation of Delaware. Filed Nov. 23, 1928, Serial No. 321,353. Renewed May 15, 1930. 22 Claims. (Cl. 179—98.)



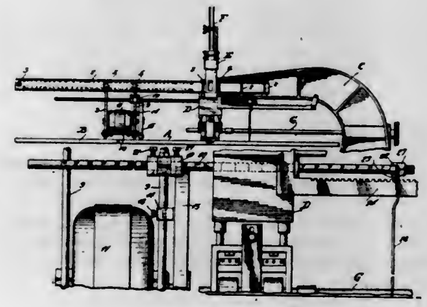
6. In a telephone system, a plurality of groups of connector switches, a terminal block mounted adjacent to each group, bank cables connecting from the banks of said connector switches to said terminal blocks, other terminal blocks mounted adjacent the first-mentioned terminal blocks, respectively, and facilities for running jumpers between the first-named terminal blocks and the said other terminal blocks.

1,811,754. ELECTRICALLY HEATED SALT BATH FURNACE. AXEL GUSTAF EMANUEL HULTGREN, Soderfors, Sweden. Filed June 10, 1930, Serial No. 460,231, and in Sweden Feb. 25, 1930. 4 Claims. (Cl. 13—1.)



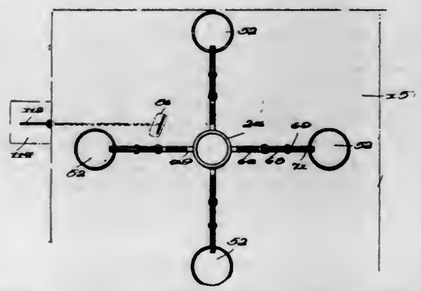
1. Salt bath furnace for heating of tools and other metal objects, in which heat is supplied by electric current passing through the salt, having an even number of electrodes arranged in pairs in the crucible in such a manner that the space to be occupied by the immersed objects is not traversed by any straight current paths drawn between coordinated electrodes.

1,811,755. WATER FILTER. VIRGIL S. JOHNSTON, Huntington Park, Calif. Filed Oct. 6, 1930. Serial No. 486,839. 2 Claims. (Cl. 210—104.)



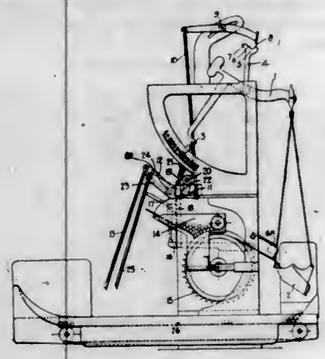
1. A filter of the class described comprising upper and lower receptacles, a tube passing through the bottom of the upper receptacle and extending to a point well above the bottom of the said receptacle, filtering material in the upper receptacle through which the tube passes, a small container in the upper receptacle having an opening in its bottom, filterng material in the small contniner, said small container having its lower part embedded in the filtering material in the upper receptacle, a flont in the lower receptacle, a rod connected with the float and passing through the tube, a projection on the upper end of the float, a supply pipe extending into the upper receptacle and arranged above the small container therein and a normally closed valve in the pipe engaged by the projection on the rod when the float lowers to open the valve.

1,811,756. SEPARATING JIG. PETER MARADEO, Nesquehoning, Pa. Filed Nov. 24, 1928. Serial No. 321,628. 4 Claims. (Cl. 209—496.)



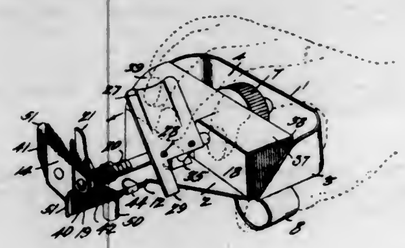
1. A jig of the class described comprising a tank having a plunger chamber, a plunger in the plunger chamber, means for operating the plunger, a discharge door in the bottom of the tank, valve controlled means for supplying water to the tank, automatic means for opening the door and the valve at predetermined intervals, such means being operated from the plunger actuating means, means whereby the door is closed before the closing of the valve and means associated with the plunger and cooperating with the door and valve opening means for actuating such means if the material should collect in the bottom of the tank through damage of the screen, said mans associated with the plunger including a member operated by impact with the material in the bottom of the tank.

1,811,757. VENEER CUTTER AND MATCHER. RAYMOND HILLS MCLEOD, Laurel, Miss., assignor to McLeod Furniture Company, Laurel, Miss., a Corporation of Mississippi. Filed June 28, 1930. Serial No. 464,623. 8 Claims. (Cl. 144—279.)



1. A veneer cutting and matching attachment for taping machines comprising a pair of angle bars, rollers adapted to travel upon said bars, a frame suspended from said rollers, a motor driven cutter mounted upon said frame, a bar having graduations thereon, means for adjustably connecting said bar to said cutter supporting frame whereby the latter may be retained at the predetermined positions upon the taping machine, and means for retaining said bar in various adjusted positions.

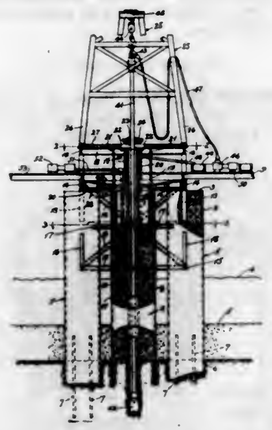
1,811,758. AMUSEMENT DEVICE. JAMES L. MEEHAN, Ashland, Ky. Filed Oct. 26, 1929. Serial No. 402,750. 35 Claims. (Cl. 104—53.)



1. An amusement device comprising a floor space, a revolving head, latch means releasably connecting a vehicle thereto, and manually controlled cam means for actuating said latch means to release the vehicle from said head to be free to move under its own momentum over said floor space.

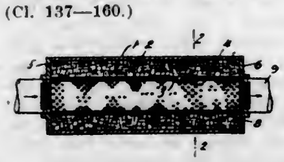
1,811,759. CIGARETTE MAKING MACHINERY. WALTER EVERETT MOLINS, Deptford, London, England. Filed Sept. 9, 1929, Serial No. 391,496, and in Great Britain Sept. 25, 1928. 12 Claims. (Cl. 131—39.)

1. In apparatus for use on a cigarette making machine, the combination with weighing apparatus, of mechanism for delivering a batch of cigarettes comprising a predetermined number from the machine to said weighing apparatus, and means operatively associated with said weighing apparatus for controlling the feed of tobacco in the machine.



1,811,760. HAIR CUTTING MACHINE. HUGH BODDINGTON RONEY, London, England. Filed Aug. 1, 1929, Serial No. 382,785, and in Great Britain Aug. 1, 1928. 2 Claims. (Cl. 30—1.)

1. A hair cutting device comprising a handle made up of a gripping section and a body section mounted for sliding cooperation, means whereby the gripping section and body section may be relatively adjusted to meet the requirements of the operator, a shaft mounted in the body section and terminally provided with a blade, a fixed cooperating blade carried by the body section, a plate secured to the shaft and projecting laterally therefrom to serve as a means for moving the shaft in one direction, and a spring for moving the shaft in the opposite direction whereby under finger pressure on the plate the shaft is oscillated to actuate the cutter carried thereby.

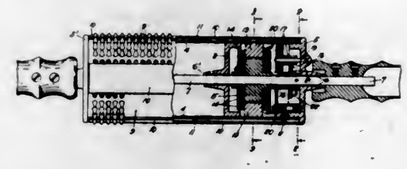


1,811,761. SUBMARINE OIL WELL DERRICK. CHARLES L. ROBERTS, Reno, Nev. Filed Feb. 8, 1930. Serial No. 426,863. 2 Claims. (Cl. 61—48.)

1. In apparatus for off-shore oil wells consisting of a derrick supported on a series of piers, the combination therewith of a caisson extending down into the ocean bottom, a conductor pipe within said caisson for reception of drills and production of oil, said pipe extending down into the ocean bottom, the space between the pipe and the caisson walls, except for a suitable space adjacent the top of the caisson acting as a cellar, being filled with

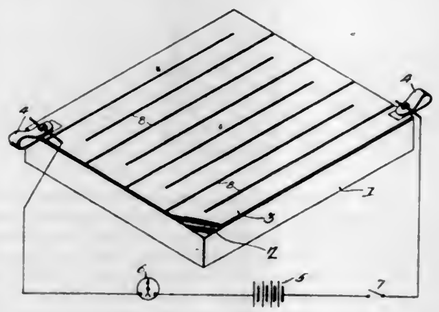
concrete, said concrete extending to the ocean floor to seal the interior of the caisson to prevent contamination of the ocean waters by oil, and vice versa.

1,811,762. EXHAUST MUFFLER. FREDERICK H. SCHNELL, Madison, Wis., assignor to C. F. Burgess Laboratories, Inc., Madison, Wis., a Corporation of Delaware. Filed May 8, 1929. Serial No. 361,376. 20 Claims. (Cl. 137—160.)



1. A muffler for the noise producing exhaust of an internal combustion engine comprising the combination with a substantially imperforate casing, of a substantially straight duct in said casing forming a substantially straight passage for said gas through said casing, said duct having a foraminous wall and a contiguous backing of porous gas-pressure absorbing and sound absorbing material of sufficient thickness and porosity to cause gas pressure peaks in said gas to be suppressed primarily in the interstices of said absorbing material, said material occupying from 1 to 20 per cent of the volume of the space into which it is packed, said absorbing material not causing any material increase in the resistance to the flow of said gas through said duct.

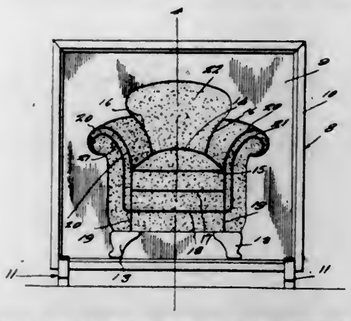
1,811,763. FOUNTAIN PEN. JOHN F. SCHWEIGER, Flora, Ind. Filed Apr. 20, 1929. Serial No. 356,657. 6 Claims. (Cl. 120—42.)



1. A fountain pen comprising a barrel, a pen stock removably fitting in one end of the barrel and having an ink pocket and a feed duct communicating with the pocket, and a non-collapsible ink container supported at one end in the pen stock with its open end extending into said pocket into abutting engagement with one wall thereof, said open end of the container being notched in its side to provide communication between the container and ink pocket.

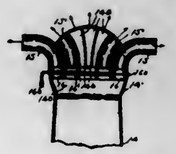
1,811,764. MASSAGE DEVICE. WILLIAM MARTIN FENNELL SHERWOOD, London, England. Filed Jan. 17, 1930, Serial No. 421,477, and in Great Britain June 28, 1929. 3 Claims. (Cl. 174—89.)

1. A massage roller comprising in combination a metal cylinder rotatable upon a central shaft having handles at its ends, electrodes and massage pads disposed alternately around the outer surface of said cylinder, said electrodes being in metallic connection therewith, a magneto-electric machine, arranged internally of said cylinder, comprising a wound stator carried by said cylinder and a permanent magnet rotor arranged to rotate freely on said shaft, and epicyclic gearing connecting said rotor with said shaft whereby a high rate of rotation of said rotor relative to said stator is produced by rotation of said cylinder upon said shaft, the ends of said stator winding being connected respectively to said cylinder and to said gearing so that a difference of potential is set up between said electrodes and said handles.



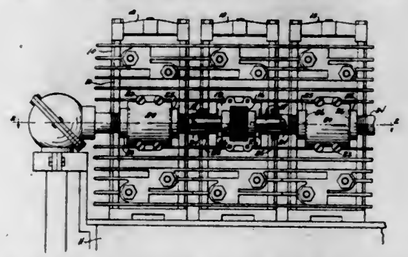
1,811,765. APPARATUS AND METHOD FOR TESTING THE EFFECTIVENESS OF PROTECTIVE MEDIUMS. WALTER O. SNELLING, Allentown, Pa., assignor to Trojan Powder Company, New York, N. Y., a Corporation of New York. Filed Dec. 7, 1928. Serial No. 324,506. 11 Claims. (Cl. 175—183.)

1. The method of testing the ability of a protecting medium to withstand progressive deterioration, which comprises applying a film of said medium to an electrically conductive material, exposing the coated surface to an agent capable of affecting the conductance of said material, and determining the deterioration of the said film by successive measurements of the conductance of said material.



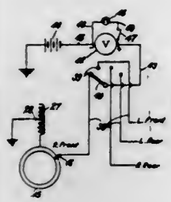
1,811,766. ADVERTISING SCREEN. EDWIN E. STEADMAN and EZEKIEL DONALD KUHN, North Tonawanda, N. Y.; said Kuhn assignor to said Steadman. Filed Mar. 6, 1929. Serial No. 344,759. 1 Claim. (Cl. 35—17.)

An advertising and display device comprising a panel having an opening therein of the general shape of the article to be advertised, a backing board, form blocks on the front face of said board, each block being of a shape to simulate a part of the article, means for holding the board against the rear face of the panel with the blocks located in the opening in the panel, with fabric placed between the board and panel and covering the blocks, said



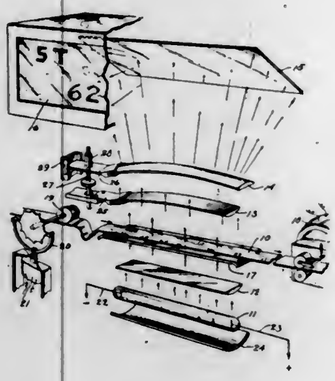
blocks being spaced apart and a wire frame stretched across the opening and having its wires located to press portions of the fabric into the spaces between the blocks.

1,811,767. WINDSHIELD HEATER. HORACE W. TURNER, Phoenix, N. Y. Filed Feb. 24, 1930. Serial No. 430,726. 2 Claims. (Cl. 299—146.)



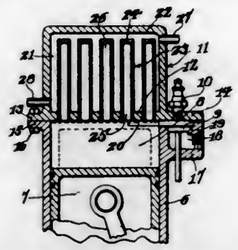
2. A device for distributing fluid against the windshield of an automobile or the like composed of a tubular head having a plurality of members therein forming independent passages for distributing fluid outwardly of the head, a common chamber communicating with each of the inner ends of the passages, a common shaft extending through the common passage, and independent dampers on the shaft for each of the passages, the dampers having a relative angular relation so as to alternately divert the fluid from the common chamber into the respective passages.

1,811,768. SLEEVE VALVE OPERATING SHAFT. FRANK A. VAN BEZEL, El Centro, Calif., assignor to Dual Aircraft Motors Inc., Ltd., El Centro, Calif. Filed July 11, 1930. Serial No. 467,357. 4 Claims. (Cl. 123—59.)



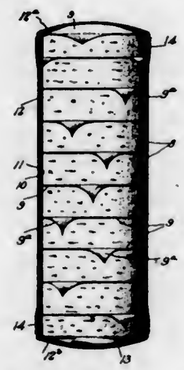
1. In an engine, cylinders, sleeves rotatable within the cylinders, gears carried by the sleeves, a shaft disposed transversely with respect to the cylinders and including a separate section for each cylinder, a gear mounted upon each section of the shaft and engaging one of the sleeve gears to rotate the sleeves when the shaft is rotated, means to rotate the shaft, means providing a detachable interlocking engagement between the shaft sections, removable bearings for the shaft sections, and a separate removable bearing housing for each section.

1,811,769. TELEMETRIC INDICATING SYSTEM. JOHN P. WEAVER, Anderson, Ind. Filed July 31, 1929. Serial No. 382,551. 9 Claims. (Cl. 177—351.)



2. A tire inflation indicator comprising, in combination, a pressure gauge in continuous communication with the inner tube of said tire, a resistance element adjacent the movable element of said pressure gauge, a contact carried by a movable portion of said pressure gauge and in contact with said resistance element, said contact grounded to the frame of the vehicle, a voltmeter having a movable dial, means to connect said resistance with said voltmeter and with a grounded battery, a resistance element connected in parallel with said voltmeter, means to break the circuit through said last named resistance and means whereby to adjust said dial in accordance with the condition of the charge of said battery whereby when said last named resistance is removed from circuit the dial may be adjusted to give a true reading of the degree of inflation of the tire when said last named resistance is restored to circuit.

1,811,770. PROJECTING APPARATUS. EVAN R. WHEELER, North Plainfield, N. J., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed July 23, 1929. Serial No. 380,387. 6 Claims. (Cl. 88—24.)



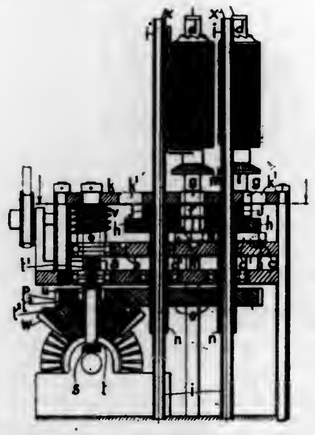
1. In a projecting apparatus, the combination with a tape having markings thereon, of a source of light substantially coextensive with the length of tape to be projected at any instant, means for projecting said light upon said tape, a reflector, a lens interposed between the tape and reflector for projecting the markings of the tape upon the reflector, and a screen disposed so as to receive the image from said deflector, said lens having a linear dimension substantially coextensive with the light source and being convex towards said reflector along said linear dimension.

1,811,771. INTERNAL COMBUSTION ENGINE. WILLIAM P. WIEMANN, Pittsburgh, Pa. Filed July 23, 1929. Serial No. 380,386. 7 Claims. (Cl. 123—191.)

1. In an internal combustion engine, a cylinder, and plurality of spaced units providing a divided compression space external of the cylinder, each unit consisting of a tube closed at its outer end and opening at its inner end into the bore of the cylinder.

1,811,772. METHOD AND MEANS OF PACKETING DOUGH. LIVELY B. WILLOUGHBY, Louisville, Ky., assignor to Ballard & Ballard Company, Louisville, Ky., a Corporation of Kentucky. Filed Mar. 10, 1931. Serial No. 521,599. 16 Claims. (Cl. 99—8.)

3. A method of packeting a number of raw dough formations preservatively for commercializing purposes, which consists in applying the formations together with separating material therebetween and with an enveloping material therearound within a closed container having a vent at one end, and causing an expansion of the dough inside the container so as to press over and seal said vent after first expelling the air therefrom by the pressure of expansion.



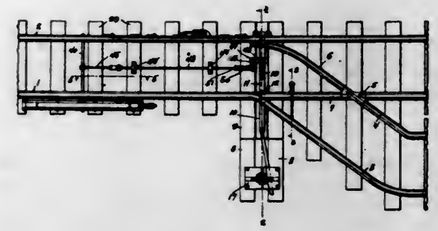
12. As an article of manufacture, a container provided with an air vent and having an expanded filling of dough sealing said vent while in the expanded condition and therewithin preserved in fresh soft condition ready for baking on removal.

1,811,773. CLOSURE FASTENER. ALMIRA L. H. WILLSON, Virden, Ill. Filed Sept. 14, 1929. Serial No. 392,702. 2 Claims. (Cl. 220—32.)

1. In combination, a pair of abutting hinged closure members, a keeper carried by one of said members, and a tongue carried by the other member and engageable in said keeper whereby to lock said one member upon closing of said other member.

1,811,774. BRAIDING MACHINE. ADOLF ZEHNDER, Birmenstorf, and JEAN KAPPELER, Mellingen, Switzerland. Filed Dec. 26, 1930, Serial No. 504,912, and in Switzerland Jan. 9, 1930. 2 Claims. (Cl. 96—12.)

1. A high speed braiding machine, comprising a stationary guide plate with a groove comprising circular sections, braiding heads on said plate for the braid warp threads, travelling bobbin spindles guided in said guide plate groove, rotating discs in the braiding heads for driving said bobbin spindles, a control foot bridge on each bobbin spindle, a pair of carrying balls arranged to run in said guide groove and to support said foot on opposite sides of the spindle, and controlling means so arranged as to so swing said control foot lever fashion about the point of support formed by the rearmost ball, alone at the beginning of operations and with the aid of the centrifugal force of the spindle during normal running, that the front leading ball is forced out of the one circular section of the guide-way into the next circular section thereof for the passage of the bobbin spindle from one braiding head to the next.

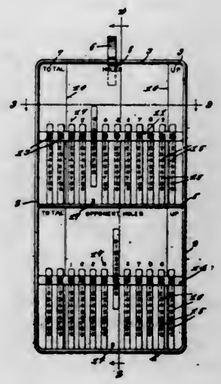


1,811,775. TONGUE CLEANER. WILLIAM H. BARKWILL, Cleveland, Ohio. Filed July 30, 1930. Serial No. 471,753. 1 Claim. (Cl. 128—304.)

A device of the kind described, comprising a straight handle having a flattened laterally spreading end portion provided with a cut-away area to form a depression therein, the wall of the depression being outwardly beveled, and a straight flange confronting the depression and disposed at right angles to the plane of the handle, said flange having a working edge beveled throughout.

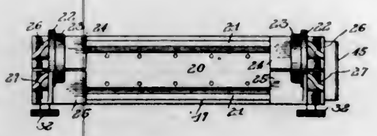
1,811,776. AUTOMATIC RAILWAY SWITCH. THOMAS E. BLACKWELL and LESLIE T. SMITH, McKinney, Tex. Filed Dec. 14, 1927. Serial No. 239,957. 1 Claim. (Cl. 246—277.)

A track device comprising a plate adapted to be arranged longitudinally of and adjacent one rail of a track, said plate having an apertured upturned end at one end thereof, an elongated treadle bar, means movably connecting said bar to said plate, an arm pivotally mounted on said treadle bar and passing through said apertured upturned end, a



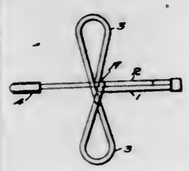
spring on said arm on each side of said upturned end, thereby holding the treadle bar in its proper position, and means operated by the movement of the treadle bar for connecting the same to a switch.

1,811,777. PROCESS FOR MAKING SYNTHETIC MENTHOL. JOHN WILLIAM BLAGDEN, London, England, assignor of one-half to Howards & Sons Limited, Ilford, England. Original application filed June 19, 1924, Serial No. 721,137, and in Great Britain May 21, 1924. Divided and this application filed Dec. 16, 1925. Serial No. 75,886. 14 Claims. (Cl. 260—153.)



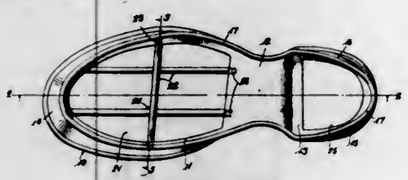
1. A process of making crystalline menthol, which comprises treating piperitone with hydrogen under pressure in presence of a hydrogenating catalyst at a temperature between 130° C. and 160° C. until there has been absorbed a quantity of hydrogen substantially in excess of that theoretically required to convert the piperitone into menthone.

1,811,778. GOLF SCORE BOARD. ROY BOWEN, Hoopeston, Ill. Filed Sept. 12, 1930. Serial No. 481,488. 6 Claims. (Cl. 40—65.)



1. A score board of the class described comprising a body plate, a member extending transversely of the plate and formed with a longitudinal series of slots spaced with respect to the face of the plate, and also formed with a series of openings each opposite a respective one of the slots, and a resilient numeral bearing strip slidably adjustably fitted through each of said slots and adjustable to bring any one of the numerals opposite the respective opening.

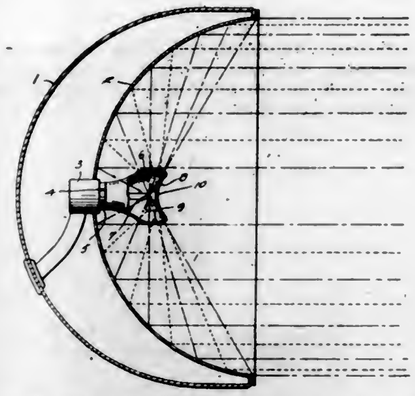
1,811,779. ROLL HOLDER FOR PHOTOGRAPHIC APPARATUS. ARTHUR W. CAPE, Rochester, N. Y., assignor to Photostat Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Mar. 4, 1927. Serial No. 172,842. 10 Claims. (Cl. 242—71.)



1. In photographic apparatus, a roll casing, a guide rail rigidly mounted within said casing and extending substantially parallel to a side wall thereof, and a roll holder provided with a groove for the reception of said guide rail mounted on said guide rail with the said rail engaging the walls of said groove; said roll holder being slidably movable from a substantially central position on said rail to a position in which the rail and groove walls are out of engagement.

1,811,780. SAFETY PIN. MOSES F. CARR, Lexington, Mass., assignor, by mesne assignments, to United-Carr Fastener Corporation, Cambridge, Mass., a Corporation of Massachusetts. Filed Mar. 10, 1928. Serial No. 260,687. 3 Claims. (Cl. 24—150.)

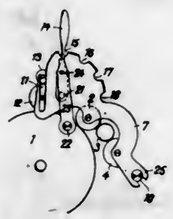
1. A non-swallowable safety pin having a back portion, a pointed pin portion and interlocked loops to prevent distortion formed integral with and extending laterally at each side of one of said portions to provide guard means for preventing swallowing of the said safety pin.



1,811,781. OVERSHOE. EUGENE R. DEGGE, Chicago, Ill. Filed Mar. 26, 1930. Serial No. 439,105. 7 Claims. (Cl. 36—11.6.)

1. In an overshoe, a plurality of elements to form a tread surface below spikes of an engaged shoe, said elements being movable one relative to the other for positioning according to the disposition of the said spikes.

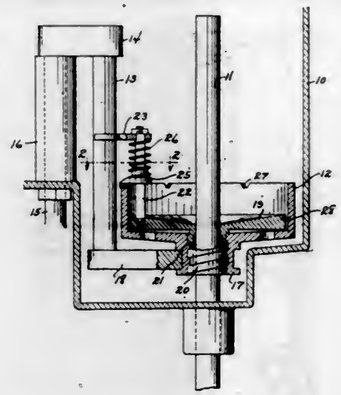
1,811,782. LIGHT PROJECTOR. THOMAS P. DUNCAN, Jr., Newport News, Va. Filed Dec. 31, 1929. Serial No. 417,756. 1 Claim. (Cl. 176—34.)



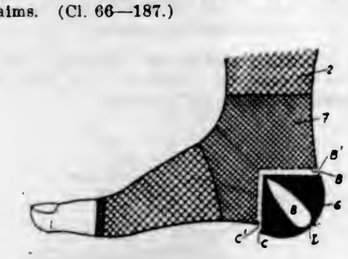
An incandescent lamp for use with a parabolic reflector, comprising a bulb, a filament within the bulb formed to provide a radiant designed to be located at the focal center of the reflector, an in-pressed portion at the forward end of the bulb having the center in relatively close proximity to the filament, and a silvering substance upon the outer surface of the in-pressed portion providing a convex mirror facing the filament, said in-pressed portion being of substantially parabolic contour and so disposed relative to the radiant as to intercept all light rays issuing therefrom in an angle defined by lines drawn from the radiant tangential to the reflector of the bulb.

1,811,783. METHOD FOR MAKING WHITE AND BLEACHED WOOD PULP SUITABLE FOR THE MANUFACTURE OF PAPER WITHOUT ADDITION OF CELLULOSE. ERNST ELGERUS, Niklasdorf-on-the-Mur, Austria. Filed Mar. 28, 1929, Serial No. 350,778, and in Germany Sept. 26, 1927. 4 Claims. (Cl. 92—11.)

1. A method for making bleached wood pulp which consists in treating wood for several hours at superatmospheric pressure with hot waste sulfite liquor without supplying any heat other than that contained in the liquor and disintegrating the treated wood to mechanical wood pulp.



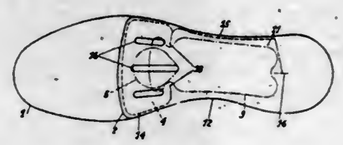
1,811,784. OFFSET PRINTING MACHINE. FERDINAND FISCHER, Berlin, Germany. Filed Mar. 21, 1928, Serial No. 263,343, and in Germany Apr. 14, 1927. 1 Claim. (Cl. 101—352.)



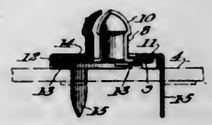
Inking mechanism for offset printing machines comprising a movable frame, inking rollers on the frame, an inking cylinder on the machine, and means whereby said frame may be adjusted to and held in different positions so that the inking rollers can be brought in to and out of contact with the usual form cylinder and the inking cylinder and into a position in which they contact only the inking cylinder.

1,811,785. ADJUSTABLE SIRUP MEASURING CUP. FRANK E. FOWLER, Athens, Ga. Filed June 8, 1928. Serial No. 283,870. 1 Claim. (Cl. 226—102.)

The combination with a bottle filling machine, a measuring cup mounted for vertical and rotary movement and having spaced dog engaging means around its edge, a lifting rod for said cup to move the cup vertically, a false bottom within the cup, means connected to the bottom and cup to provide for independent vertical and rotary movement of said bottom to regulate the capacity of the cup, a vertically disposed rod carried by the false bottom, means carried by said rod for sliding engagement with the lifting rod, a spring influenced dog mounted upon the rod to engage the dog engaging means and yieldingly hold the false bottom and cup against accidental rotation.

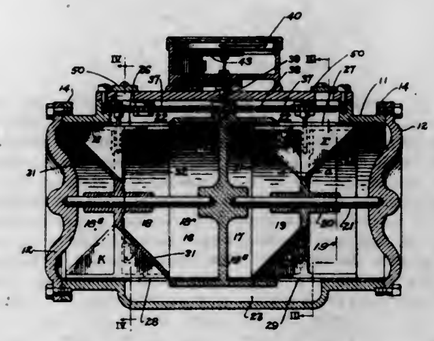


1,811,786. STOCKING FOR VARICOSE VEINS. ELISABETH FREI, Zurich, Switzerland. Filed July 25, 1929, Serial No. 380,964, and in Switzerland Nov. 22, 1928. 3 Claims. (Cl. 66—187.)



1. A knitted surgical stocking for varicose veins, having an opening at the heel, the sides of which openings are at substantially right angles to each other and a heel portion inserted in said opening and the ends of which are stitched to the angularly related sides of the heel opening, said inserted heel portion being provided on opposite sides with substantially elliptical openings arranged with their axes coincident with a plane extending from the apex of the heel to the center of the instep.

1,811,787. FOOT ARCH SUPPORT. ELISABETH FREI, Zurich, Switzerland. Filed Jan. 27, 1930, Serial No. 423,821, and in France Jan. 28, 1929. 3 Claims. (Cl. 36—71.)

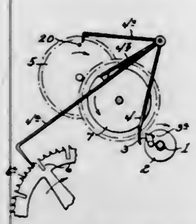


1. A foot arch support comprising a lower part adapted to cover the whole foot area, an upper part adapted to cover the whole area of the foot from the heel to the metatarsal bones, stitching uniting the said two parts to form three pockets, a transverse pocket adapted to accommodate pads to support the metatarsal bones, a second pocket adapted to receive a longitudinal arch supporting insert and a heel pocket to accommodate cushioning pads, the said insert projecting into said transverse pocket.

1,811,788. FLOATING TRIM STUD. JOHN H. GOSS, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Oct. 1, 1927. Serial No. 223,878. 1 Claim. (Cl. 24—213.)

A floating trim stud, having a head member comprising a shank having a head at one end and a flange at its opposite end, and a base provided with a central opening of considerably greater diameter than the diameter of said shank and a flanged rim provided with inturned fingers formed by cutting into the flange so that the fingers when bent inwardly are spaced from and out of contact with a support, with the free edge of the flange abutting said support, thereby to support the head member above the level of the lower level of the rim flange and permit freedom of lateral motion of the head member within its base so as to accommodate the head member to its complemental socket member, and attaching prongs extending from the lowermost edge of the rim flange in a direction away from the head member, so that the device may be located on the inner or unexposed side of said support and thereby avoid protuberances on the outer or exposed side.

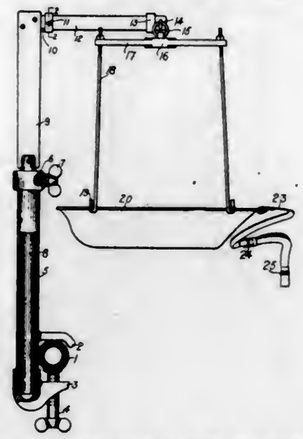
1,811,789. FLUID METER. ALBERT J. GRANBERG, Berkeley, Calif., assignor to Ralph N. Brodie Company, Oakland, Calif., a Corporation of California. Filed Dec. 20, 1927. Serial No. 241,309. 13 Claims. (Cl. 73—30.)



1. A meter comprising a casing having an intake and an exhaust chamber, a pair of metering cylinders arranged in axial alignment, a piston in each metering cylinder, said pistons being adapted to be reciprocated by fluid from the intake chamber, said metering cylinders and said pistons having cooperating ports to admit fluid to one end of each chamber and to permit fluid at the opposite end of each chamber to be displaced by the pistons during each stroke thereof, an indicating device and mechanism connected with the pistons and with the indicating device and actuated by the reciprocation of the pistons to impart rotary movement to the pistons and to operate the indicating device.

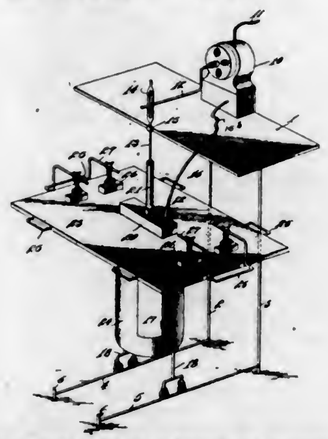
1,811,790. AUTOMOBILE WINDOW OPERATOR. JAMES W. GREIG, Grosse Pointe, Mich. Filed Jan. 10, 1928. Serial No. 245,754. 2 Claims. (Cl. 268—126.)

1. In a closure operating device, a support, a solid cam element journaled on the support in closely spaced relation therewith and having a closed side remote from the support and an opposite side provided with a spiral groove formed therein and faced toward the support, a single closure operating lever pivotally mounted on the support and extending between the latter and the solid cam element for direct connection with the closure, roller means journaled on the closure operating lever and engaged in the spiral groove of the solid cam element, the point of engagement of said roller means and groove always lying on an arc struck from the pivot point of said closure operating lever as a center and passing through the center of said cam element whereby said roller means is always maintained on dead center relative to said groove, and means for rotating said solid cam element to thereby swing said lever and move said closure.



1,811,791. STRIKING CLOCK. ELWOOD C. HALL, Vienna, N. J. Filed July 9, 1928. Serial No. 291,320. 2 Claims. (Cl. 58—8.)

1. An interrupter for a striking clock including an arbor and having a striking train and a minute post, a wheel having spaced notches associated with the striking train, teeth arranged on the wheel between the notches, a pin carried by one of the gears of the striking train, a second wheel having a notch associated with the striking train, a releasing wire fixed to the arbor, a disk secured to the minute post, a pivoted pawl on said disk to engage and actuate the releasing wire, tension means to return the pawl to its normal position when disengaged from the releasing wire, a second wire connected to the releasing wire to engage the periphery of the first wheel between the teeth and to drop into one of the notches thereof after the completion of a striking operation, a third wire secured to the first and second wires to engage the periphery and drop into the notch of the second wheel, and a fourth wire secured to said wires to be engaged by the pin when the third wire drops into the notch of the second wheel to further prevent movement of the striking train.

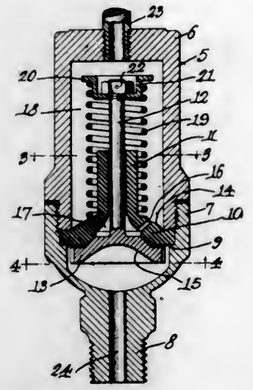


1,811,792. SUPPORT FOR SCROTUM BOWLS. LILLIAN M. HOOVER, Lansing, Mich. Filed July 26, 1929. Serial No. 381,295. 2 Claims. (Cl. 128—1.)

2. In a support of the character described, the combination with a base clamp, of an extensible upright adjustable vertically and rotatable on its vertical axis, an arm projecting at an angle from said upright, the said arm having an extensible portion, a spider carried by the end of the said extensible portion in detachable relation, a plurality of rods disposed vertically and having upper ends adjustably connected with the spider, said rods hav-

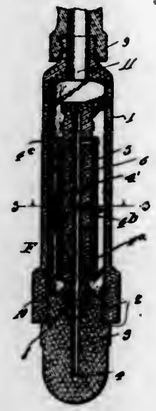
ing hooks at their lower ends, a bowl having spaced holes in its rim constructed to removably engage the hooks of said rods, and a plurality of extensible straps attached to the said bowl at separated points and having clips arranged to engage the clothing of the patient or bed at separated points whereby said bowl may be positioned and held against swinging or turning.

1,811,793. IRONING MACHINE. HARLEY A. W. HOWCOTT, New Orleans, La. Filed Nov. 10, 1928. Serial No. 318,398. 3 Claims. (Cl. 68—9.)



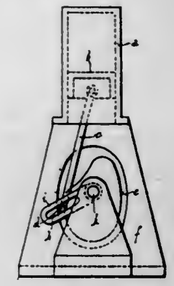
1. In an ironing machine, a supporting structure, power supply means having a crank shaft, a sad iron, a tube pivotally connected with the upper face of said iron, a driving shaft inserted in said tube and pivotally mounted on said structure and having a slot extending longitudinally of said shaft through which said crank shaft passes to impart oscillatory motion to said iron.

1,811,794. OIL VALVE. JOSEPH D. KILLIAN, Cheyenne, Wyo. Filed June 22, 1928. Serial No. 287,495. 1 Claim. (Cl. 184—58.)



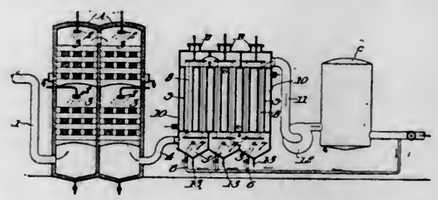
A valve for force feed lubrication, comprising a valve housing, a removable valve seat mounted within the

housing and dividing the housing into upper and lower compartments, said valve seat having an extension, a valve member including a valve stem, mounted within the extension, said valve engaging the valve seat to control the passage of oil through the valve, a coiled



spring surrounding the extension, a cap on one end of the valve stem and engaged by the spring to normally hold the valve seated, said valve seat having an opening to allow oil to pass therethrough, and inlet and outlet pipes connected with the housing.

1,811,795. FILTER FOR VISCOSE SOLUTIONS. THOMAS L. KIRBY, Old Hickory, Tenn. Filed Feb. 1, 1927, Serial No. 165,220. Renewed Apr. 28, 1931. 1 Claim. (Cl. 210—164.)

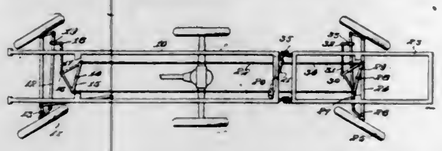


A filter of the class described, comprising a casing open at both ends, a filter, a plug seated in the lower end of said casing and having an angular passage therethrough, a member rising centrally from said plug, said member having a vertical passage therein in communication at its lower end with the vertical leg of the passage in said plug and extending beyond the plane of the upper end of said filter, the upper end of the passage in said member being closed, said passage in said member having spaced upper and lower parallel lateral branch passages opening outwardly through the same and into said casing, an intermediate lateral branch passage opening through said body at right angles to the said first named lateral branch passages, said filter comprising a filtering material surrounding said member and secured thereto at points above and below said upper and lower lateral branch passages and corrugations formed in the outer surfaces of said member and extending between the several of the lateral branch passages for distributing the fluid to be filtered to the filtering material.

1,811,796. DRIVING CRANK FOR PISTON ENGINES. KARL KUEHN, Cologne, Germany. Filed Jan. 18, 1929, Serial No. 333,445, and in Germany Jan. 25, 1928. 2 Claims. (Cl. 74—20.)

1. In a piston engine, a rod with its foot connected to the piston, means for guiding the head end of said rod including a fixed curved cam groove and a crank connected loosely to the rod head, said cam groove having an incurved part situated on the side corresponding to the drive stroke of the active surface of the piston and beginning in the direction of rotation at a point located slightly in front of the line of the dead points of said piston, said part forming a small angle with the line of the dead points.

1,811,797. PROCESS FOR THE PRODUCTION OF SULPHURIC ACID AND OLEUM BY THE CONTACT PROCESS. FRITZ LECHLER, Frankfort-on-the-Main, Germany. Filed June 14, 1928, Serial No. 285,418, and in Germany July 7, 1927. 5 Claims. (Cl. 23—178.)

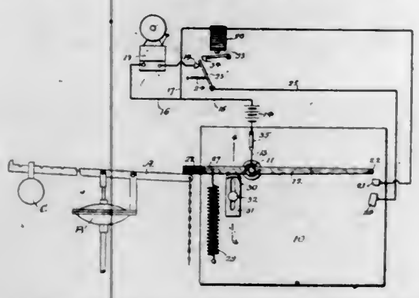


1. A process for preparing sulfur dioxide-containing gases for conversion into sulphuric acid and oleum by the contact process which comprises first contacting the gases with a series of sprays of sulphuric acid of successively greater strength up to a strength at which an appreciable amount of water is left in the gases, and thereafter, without any further treatment of the gases with sulphuric acid sprays, introducing sulfur trioxide into the gases and simultaneously subjecting the gases to the action of an electrical potential and to indirect cooling to remove the remaining amounts of water and other impurities.

1,811,798. AUTOMOBILE TRAILER. ADAM J. LUCKE, Gooding, Idaho. Filed Dec. 26, 1928. Serial No. 328,530. 1 Claim. (Cl. 280—33.55.)

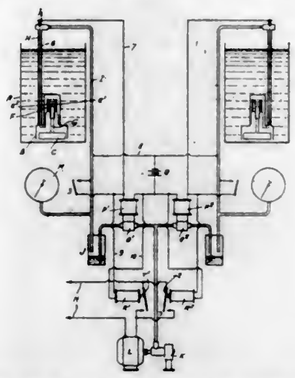
In a trailer of the class described, the combination with the chassis frame of a tractor vehicle, the front wheels thereof, and a connecting rod extending between the wheels, of a triangular rock lever mounted, intermediate the ends of one of its sides, in the frame for transverse

swinging movement, an arm upon the connecting rod, a rod connecting the said arm and the forward corner of said lever, a bar rock lever pivotally mounted between its ends at the rear end of the chassis frame, rods connecting the other corners of the triangular rock lever and the ends of the bar rock lever, a trailer comprising a chassis frame, an axle, wheels mounted for turning adjustment at the ends of the axle, a rod extending between the wheels, a



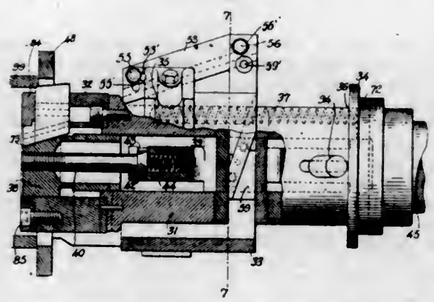
triangular rock lever mounted, intermediate the ends of one of its sides, in the frame, an arm upon the rod, a rod connecting the arm and the forward corner of the said lever, rods connecting the other corners of the said lever and the ends of the rock lever, and coiled springs connected to and extending between the corresponding rear and front ends of the tractor chassis and trailer chassis frames.

1,811,799. MAGNESIUM OXYCHLORIDE MIXTURE AND METHOD OF MAKING THE SAME. HIRAM S. LUKENS, Philadelphia, Pa., assignor to Solidon Products, Inc., Philadelphia, Pa., a Corporation of Delaware. Filed Nov. 12, 1929. Serial No. 406,560. 5 Claims. (Cl. 106—29.)



1. As a new composition of matter, a mixture of magnesium oxide, magnesium chloride and aggregate in such proportions that the amounts of magnesium oxide and magnesium chloride are within the ratio of one part by weight of magnesium oxide to form about .84 to 1.25 parts by weight of $MgCl_2 6H_2O$, and the ratio of the amount of aggregate to the combined amounts of magnesium oxide and magnesium chloride is such that the amount of water required to produce therefrom a mix of proper consistency for manipulation will not be in excess of that amount which would produce a solution of 16°B. if the amount of magnesium chloride in the mixture were dissolved therein.

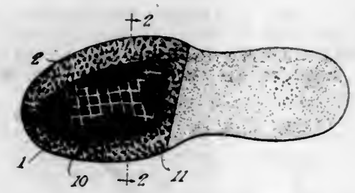
1,811,800. ALARM OR SIGNAL FOR BOILERS. FREDERICK J. MILDENBERGER, Passaic, N. J. Filed Dec. 28, 1927. Serial No. 242,996. 3 Claims. (Cl. 177—311.)



1. A device for signaling the reduction of pressure in a steam boiler equipped with a pressure responsive element, said device including a signal, means operable by said pressure responsive element upon a predetermined pressure reduction for actuating said signal, a member manually movable to render the signal inactive, a detent for retaining said member in an inactive position and means automatically operable by a predetermined increase in pressure above said predetermined reduction for releasing said detent to permit of a subsequent functioning of said member to actuate the signal.

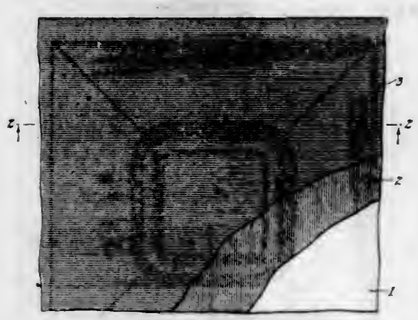
1,811,801. APPARATUS FOR INDICATING THE DEPTH OF LIQUIDS IN TANKS OR OTHER CONTAINERS. LEONARD MURPHY, Dublin, Ireland. Original application filed Mar. 15, 1928, Serial No. 261,919, and in Great Britain May 5, 1927. Divided and this application filed Apr. 13, 1929. Serial No. 354,923. 8 Claims. (Cl. 73—54.)

8. Apparatus of the type described for indicating the depth of liquid in a plurality of tanks or other receptacles, said apparatus comprising an air compressor; an electric motor for actuating said air compressor; an electric circuit to said motor; a line pipe charged with air from said compressor; branch pipes from said line pipe; a plurality of vessels for immersion, respectively, at the lower portions of said receptacles, each of said vessels being closed at its upper end and open at its lower end, said vessels having their upper ends connected, respectively, to said branch pipes; a normally closed valve in each branch pipe; an electromagnetic device for opening each of said valves; relay magnets for closing the electric circuit to said motor; circuits connecting said relay magnets, respectively, to said electromagnetic devices; a casing attached to the upper part of each of said vessels; electric contacts fixed within each of said casings; the electric contacts in each casing being in the electric circuit to the electromagnetic device associated with the corresponding vessel; a float in each of said vessels; a spindle secured to each float; a collar on each of said spindles for bridging the contacts in the casing associated with the vessel in which its associated float is contained when such float rises to close the electric circuit to the corresponding electromagnetic device and also energize the corresponding relay magnet; and a switch in the circuit of each of said casings by which the contacts in such casing can be short circuited at any time.



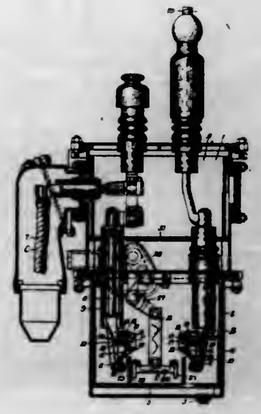
1,811,802. COLLAPSIBLE TAP. SAMUEL F. NEWMAN, Waynesboro, Pa., assignor to Landis Machine Company, Waynesboro, Pa., a Corporation. Filed Apr. 25, 1927. Serial No. 186,470. 15 Claims. (Cl. 10—145.)

1. A collapsible tap comprising a body, a member slidable axially of said body having a cam groove in the end



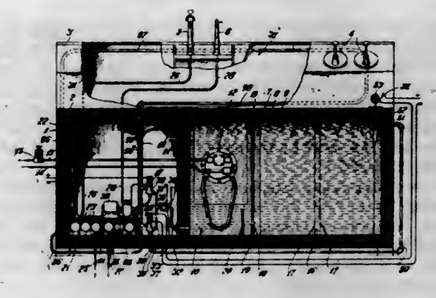
thereof for engagement with a corresponding cam surface upon a cutter holder member and having a shoe member on the opposite end for engagement with a radially slidable member having cam grooves cut at an angle therein, a ring member mounted upon said body, a member having a cam surface secured to said ring member and adapted to engage a corresponding cam edge in the transverse member whereby movement of the ring member in one direction will force the said transverse member inwardly and force a retraction of the slidable member to produce a taper thread, substantially as set forth.

1,811,803. RUBBER SOLE AND HEEL FOR BOOTS AND SHOES. LAURENCE M. OAKLEY, Trenton, N. J., assignor to Essex Rubber Company, Trenton, N. J., a Corporation of New Jersey. Filed Nov. 1, 1927. Serial No. 230,210. 1 Claim. (Cl. 36—59.)



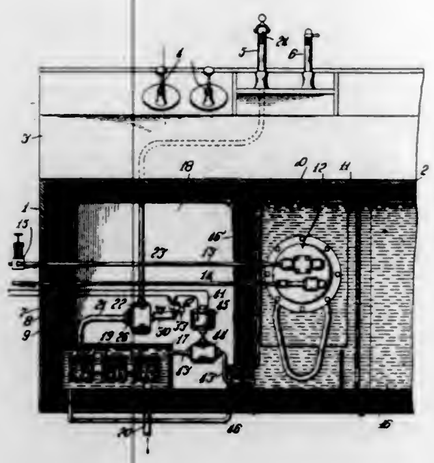
A rubber sole or heel having textile strands embedded therein at or near the surface thereof and lying in a plane parallel to the plane of the tread surface of the sole or heel, said strands being spaced apart a substantial distance and running both longitudinally and transversely thereof, the longitudinal strands being double and the transverse strands being single.

1,811,804. DECALCOMANIA AND DECALCOMANIA PAPER. ALFRED B. POSCHEL, Brooklyn, N. Y., assignor to Decorative Development, Inc., a Corporation of Delaware. Filed Dec. 27, 1929. Serial No. 416,910. 4 Claims. (Cl. 41—33.)



1. A decalcomania paper particularly adapted for high speed offset printing presses, comprising a paper stock, a water-soluble coating and a non-water-soluble coating placed on top of the water-soluble coating, said non-water-soluble coating having as one of its ingredients a dryer capable of drying the ink deposited thereon from even high-speed offset printing press.

1,811,805. OIL SWITCH. JOSEPH RAH, Chicago, Ill., assignor to G. & W. Electric Specialty Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 7, 1927. Serial No. 181,667. 1 Claim. (Cl. 200—150.)



In a switch the combination of a casing including an oil receptacle, fixed electrodes extending into said oil receptacle below the oil level thereof, contact shoes, means resiliently connecting said contact shoes and electrodes, resilient means disposed between said shoes and electrodes for urging said shoes away from said electrodes, a contact block having contact shoes thereon, means for moving said contact block whereby said shoes contact said first named shoes for electrically connecting said electrodes, said shoes having noses shaped to guide said shoes into rubbing contact, arcing leaves carried by said electrodes and aligned with the noses of the associated shoes, and means on said electrodes cooperating with the shoes carried thereby for limiting the position thereof and presenting said shoes for flat surface engagement by the shoes of said contact block.

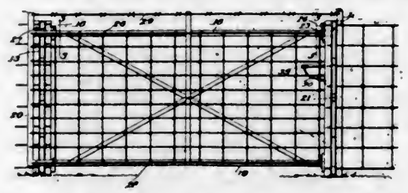
1,811,806. SODA FOUNTAIN. FRED I. RAYMOND, River Forest, Ill. Filed Mar. 18, 1929. Serial No. 347,947. 21 Claims. (Cl. 62—2.)

1. In a refrigerating apparatus of the character described, a cooler for a fluid, a tank containing brine in which this cooler is immersed, and means for varying the temperature of the brine comprising thermostatic mechanism responsive to the temperatures of both the fluid in the cooler and the brine in the tank.

1,811,807. SODA FOUNTAIN. FRED I. RAYMOND, River Forest, Ill. Filed Mar. 20, 1929. Serial No. 348,488. 19 Claims. (Cl. 62—7.)

15. In a refrigerating apparatus, the combination of a main brine tank, an auxiliary brine tank, a cooler in said auxiliary tank, and means responsive to the flow of liquid through said cooler for controlling the flow of brine from said main tank into said auxiliary tank.

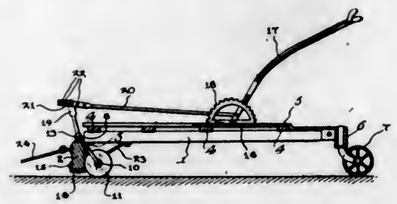
1,811,808. PHENOLIC CONDENSATION PRODUCT AND PROCESS OF PRODUCING THE SAME. LAWRENCE V. REDMAN, ARCHIE J. WEITH, and FRANK P. BROCK, Evanston, Ill., assignors to Bakelite Corporation, New York, N. Y., a Corporation of Delaware. Filed May 23, 1921. Serial No. 471,918. 21 Claims. (Cl. 106—22.)



1. In a process of the character set forth, the step which comprises producing a reaction between a mass comprising a fusible non-reactive condensation product and a free phenolic body, and a substance adapted to convert the free phenolic body into a compound which will not readily react with an active methylene body.

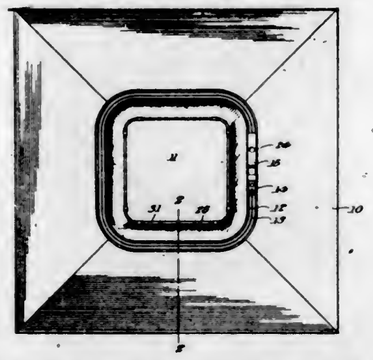
1,811,809. PULVERULENT PREPARATION FOR THE PRODUCTION OF A RINSING LIQUID FOR THE AFTER TREATMENT OF WASHED ANIMAL FIBERS, WOOLEN OR SILKEN FABRICS, AND ESPECIALLY THE HAIR OF THE HEAD. KURT SCHWARZKOPF, Tempelhof, near Berlin, Germany. Filed July 17, 1930, Serial No. 468,730, and in Germany May 24, 1928. 2 Claims. (Cl. 23—250.)

1. A pulverulent preparation for the production of a rinsing liquid for the aftertreatment of washed animal fibers (woolen or silken fabrics) and especially the hair of the head, composed of a mixture of an organic acid and a non-hygroscopic acid having no influence on the chemical properties thereof.



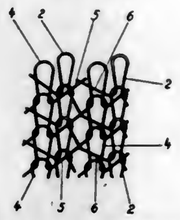
1,811,810. GATE. CHARLES A. SPAUGH, Durham, Okla. Filed Jan. 27, 1930. Serial No. 423,836. 1 Claim. (Cl. 39—87.)

A gate including a gate frame having slots in the upper and lower rungs and adjacent one end thereof and a fence post of substantial U-shape in cross section, arms secured to one side of the post and having portions thereof offset laterally of the respective side of the post with the free ends bent vertically and disposed through the slots with the upper and lower rungs of the gate frame resting



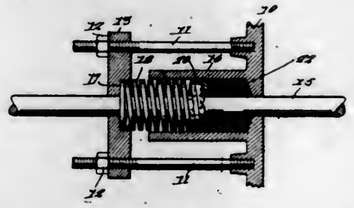
on the laterally disposed portions, and pins carried by the post and projecting over the upper and lower rungs to prevent displacement of the gate frame from the arms when in the act of latching or unlatching said gate.

1,811,811. LAND LEVELING IMPLEMENT. MYRON THORNTON, Glenrock, Wyo., assignor of forty per cent to Roscoe R. Gardner, Glenrock, Wyo. Filed Nov. 30, 1929. Serial No. 410,779. 3 Claims. (Cl. 37—165.)



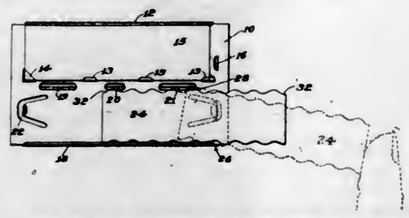
1. A land leveling implement comprising a triangular shaped frame, a caster wheel secured to and carried by the rear or apex end of said frame, a transversely extending scraper bar rigidly secured to and depending from the forward end of said frame, means for adjustably supporting the forward end of the frame whereby the lower edge of said scraper blade may be retained in various positions with respect to the ground over which it travels and a draft connection pivotally connected to the forward face of said scraper bar.

1,811,812. AMUSEMENT DEVICE. BOWMAN B. UBER, Youngstown, Ohio. Filed June 5, 1929. Serial No. 368,722. 6 Claims. (Cl. 273—108.)



1. An amusement device embodying a table, a target movable along one edge thereof, means whereby the target may be moved, a gravity projectile capable of movement over the top of the table toward the target and means for automatically stopping the target by contact with the gravity element.

1,811,813. DOUBLE-SIDED WARP GOODS. FRIEDRICH WAGNER, Russdorf B/Oberfrohna, Germany. Filed Nov. 28, 1928, Serial No. 322,398, and in Germany Dec. 3, 1927. 1 Claim. (Cl. 66—195.)

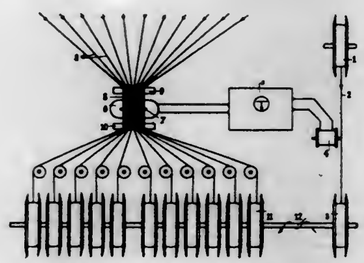


A double-sided warp fabric consisting of a thread system forming loops on one side of the fabric only and running through said loops in one direction, and a second thread system forming loops on the other side of the fabric only and running through its loops in one direction, said thread systems crossing each other only by the thread parts connecting the loops together and the loops of one thread system being arranged before the loops of the other thread system.

1,811,814. STUFFING BOX. FRANCIS G. WORDEN, Brinkley, Ark. Filed Nov. 30, 1925. Serial No. 72,393. 1 Claim. (Cl. 286—30.)

In a device of the class described, a box for receiving packing, a body of packing material therein, a gland bearing on said body and provided with a helical groove on the side opposite that portion contacting with the body of packing material, a spring extending into the box and retaining the gland in position, the end portion of the spring being threaded into said groove in the gland, the outer surfaces of the gland and of the spring where threaded being flush and adapted to contact with the walls of the box when an element mounted to reciprocate with reference to the box is slightly out of alinement, and an adjustably mounted element engaging the outer end of the spring.

1,811,815. PRINTING PLATE. STANLEY ANTHONY, Boston, Mass., assignor to Addressograph Company, Wilmington, Del., a Corporation of Delaware. Filed Nov. 21, 1929. Serial No. 408,839. 2 Claims. (Cl. 101—369.)

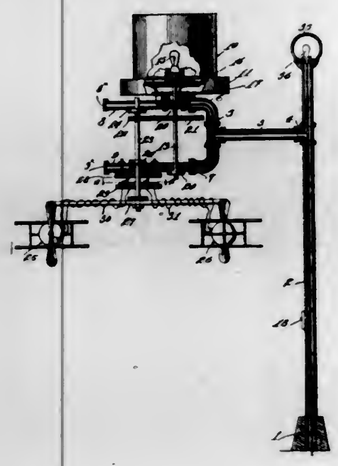


1. A printing plate comprising a metal strip for use in a holder having retaining means with which the plate engages to seat it in printing position, said strip being of greater length than width and both longitudinal edges thereof having a sinuous or serpentine outline.

1,811,816. TUBULAR BODY FOR HEATING OR THE LIKE AND METHOD OF MAKING THE SAME. GEORGE E. BLAKE, East Aurora, N. Y., assignor to Forsyth Metal Goods Company, Inc., East Aurora, N. Y., a Corporation of New York. Filed Mar. 21, 1929. Serial No. 348,798. 11 Claims. (Cl. 137—75.)

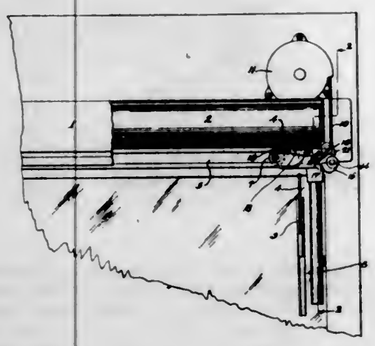
1. A method of making the body part of a heater which comprises cutting a piece of flexible metal tubing longitudinally from end to end to form two sections and forming the edges of said sections to provide an interfitting joint between the same.

1,811,817. DUPLICATION OF SOUND RECORDS OBTAINED BY MAGNETIC MEANS. CURT STILLE, Berlin, Germany, assignor to Telegraphie-Patent-Syndikat G. m. b. H., Berlin, Germany. Filed Apr. 12, 1929, Serial No. 354,686, and in Germany Oct. 20, 1928. 4 Claims. (Cl. 179—100.2.)



1. An apparatus for the simultaneous repeated duplication of steel carriers in the form of bands or wires on which acoustic vibrations are magnetically recorded comprising in combination with a magnetic master record a duplicating "talking head" and means inserted between the said master magnetic record and the duplicating talking head for influencing the latter in accordance with the magnetic record of the acoustic vibrations on the master record, the said talking head having a wide magnet over which the steel carriers to be duplicated are caused to pass parallel and close to one another.

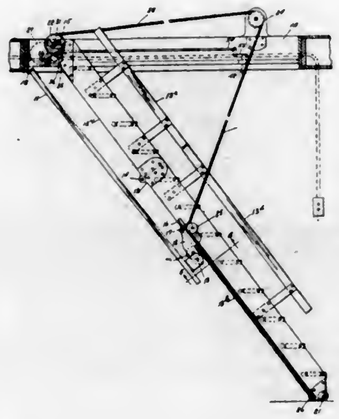
1,811,818. ADVERTISING APPARATUS. BEN T. PARIS, Cave Spring, Ga., assignor of one-fourth to James C. Davenport and one-fourth to Walter N. Crawford, Washington, D. C. Filed May 31, 1930. Serial No. 458,540. 3 Claims. (Cl. 40—33.)



1. In an advertising apparatus a supporting structure, an indicia carrying member revolubly mounted on said structure, motors supported on said structure and mounted to revolve thereon, means for lighting said indicia carry-

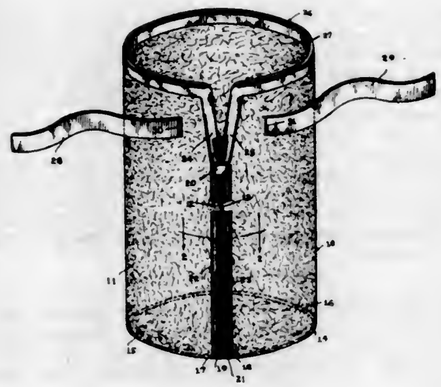
ing member to display the indicia thereon, means for supplying electricity to said motors, said indicia carrying

member and said motors being connected whereby the former is driven by the latter and propellers driven by said motors.



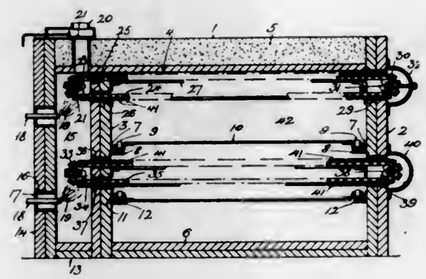
1,811,819. WINDSHIELD CLEANER. BARTON A. BEAN, Jr., Williamsville, N. Y., assignor to Trico Products Corporation, Buffalo, N. Y. Filed July 1, 1927. Serial No. 202,856. 14 Claims. (Cl. 15—253.)

1. A windshield cleaner comprising a reciprocatory carrier, a wiper operable thereby, a movably mounted and normally parked heater, and means for coupling the heater to the wiper for movement therewith and while the latter is in operation.



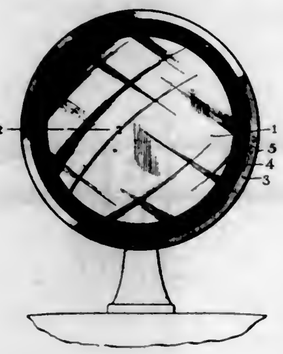
1,811,820. DISAPPEARING STAIRWAY. FRANK E. BESSLER, Akron, Ohio, assignor to The Bessler Disappearing Stairway Company, Akron, Ohio, a Corporation of Ohio. Filed Feb. 23, 1929. Serial No. 342,028. 18 Claims. (Cl. 228—50.)

2. The combination with the ceiling of a lower room having an opening therein to give access to an upper room, of a stair structure supported at its upper end at said opening so as to be moved upwardly out of the way through said opening and comprising a single pair of



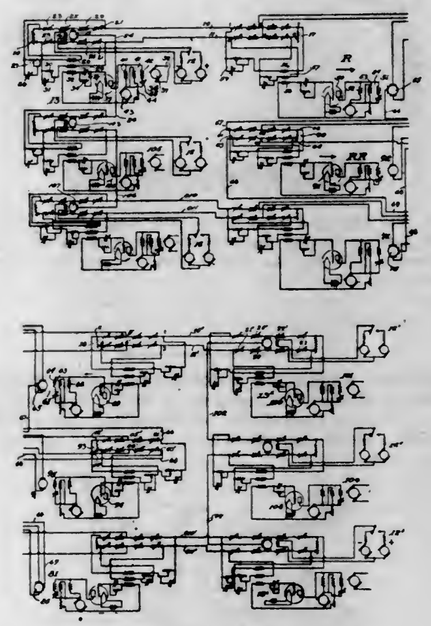
sections pivoted to each other so that the stair structure may be collapsed to inverted V-formation in the manner of a toggle to pass through said opening.

1,811,821. ROBE. DAVID BLOOM, New York, N. Y., assignor to Tidy Products Corporation, New York, N. Y. Filed June 15, 1929. Serial No. 371,194. 1 Claim. (Cl. 2—69.)



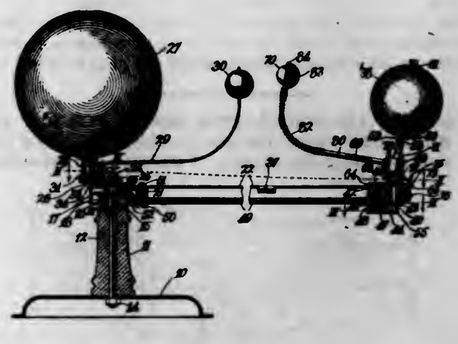
A robe of the character described comprising fabric material formed into a bag-like member and having a bottom member formed thereon leaving an open top, and leaving the other edges open longitudinally, a combined closure for said open longitudinal edges comprising at one portion of said edges co-operative stringers and interlocking fastener elements including a slide therefor serving to bring said edges into open or contact engagement, said stringers being fastened at spaced points from said edges, the combined width of said spaced portions being greater than the combined width of the stringers when engaged, whereby the edges of the fabric are contacted into compressed engagement overcoming the inherent resiliency of the fabric and covering the stringers, and flexible adjustable fastening means for the other portions of said longitudinal edges adjacent the top of the bag whereby the top of the bag may be fastened.

1,811,822. BAKING OVEN AND METHOD OF HEATING THE SAME. IRWIN ELLIOTT, Bronx, N. Y., assignor to Universal Oven Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 12, 1929. Serial No. 346,452. 8 Claims. (Cl. 107—55.)



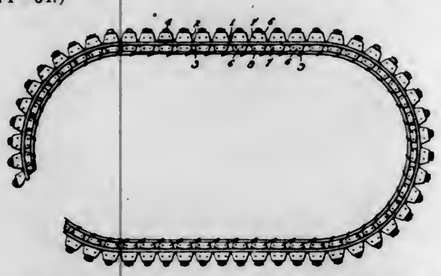
2. A baking oven comprising a structure forming a baking chamber and a combustion chamber, said baking chamber having a hearth to support the products to be baked, movable means disposed above and below said hearth and having members to receive heat, heating means in said combustion chamber for heating said members while they are traveling in said combustion chamber, said heating members being adapted to release their heat in the baking chamber above and below said hearth while traveling in the baking chamber.

1,811,823. FENDER MIRROR. ERWIN C. HORTON, Hamburg, N. Y., assignor to Trico Products Corporation, Buffalo, N. Y. Filed Feb. 24, 1930. Serial No. 430,963. 4 Claims. (Cl. 88—1.)



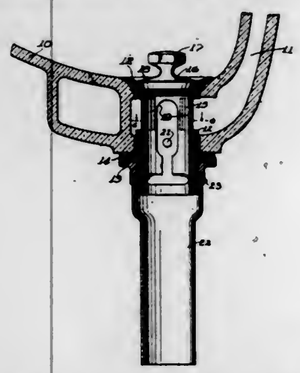
1. A rear view mirror for motor vehicles comprising a reflective plate, a frame encircling the same and having a brilliant finish simulating the field, and a non-reflecting border separating the field from the frame whereby reflections from the field are definitely spaced from any reflected rays from the frame.

1,811,824. VACUUM TUBE REPEATER AND TERMINAL SET FOR SUPERPOSED TELEGRAPH SYSTEMS. RONALD V. MORGENSTERN, Irvington, N. Y., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Feb. 20, 1930. Serial No. 430,075. 20 Claims. (Cl. 178—71.)



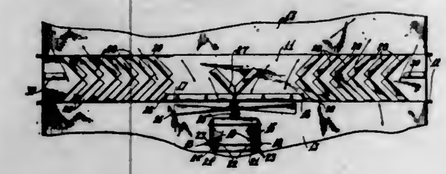
1. In a superposed telegraph system, a metallic circuit repeater comprising a dynamo electric unit, a superposed circuit repeater and a conductor connecting the superposed circuit repeater to the midpoint of the armature of said dynamo electric unit.

1,811,825. PLANETARIUM. JACOB B. NEEVEL, Kansas City, Mo.; Mrs. Jacob B. Neevel, executrix of said Jacob B. Neevel, deceased, assignor to Harry L. Neevel. Filed May 25, 1928. Serial No. 280,541. 3 Claims. (Cl. 35—3.)



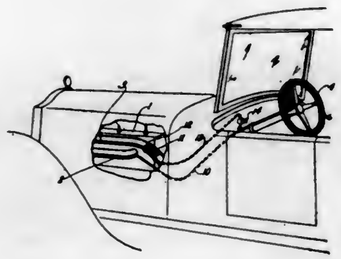
2. In a planetarium, an upright standard, a fixed vertical spindle carried by said standard, a planet carrying arm provided with a combination gear and clamping device rotatively securing said arm to said spindle for movement about the axis thereof, and a second planet carrying arm actuated by the gear portion of said combination device.

1,811,826. POWER TRANSMISSION BELT. PAUL B. REEVES, Columbus, Ind., assignor to Reeves Pulley Company, Columbus, Ind., a Corporation of Indiana. Filed Mar. 22, 1929. Serial No. 349,082. 7 Claims. (Cl. 74—64.)



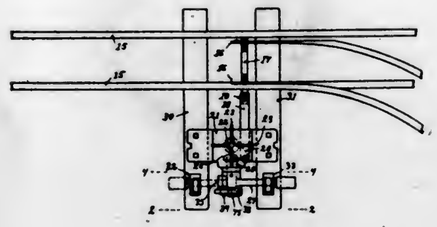
1. An edge and face drive belt comprising a flexible belt member having secured thereto at regularly spaced intervals and on the inner faces thereof transversely extending blocks, wedge shaped in cross section, and a flat friction belt secured on the inner faces of said blocks and comprising a plurality of overlapping sections.

1,811,827. LAVATORY HAND LIFT DRAIN. FRANK G. BROTZ, Kohler, Wis., assignor to Kohler Company, Kohler, Wis., a Corporation of Wisconsin. Filed Feb. 3, 1930. Serial No. 425,471. 1 Claim. (Cl. 4—204.)



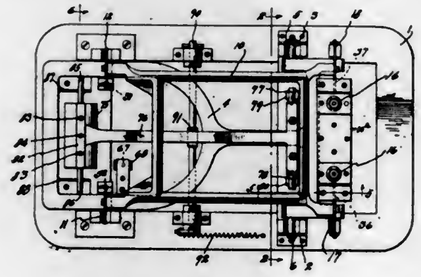
A lift drain for lavatories or the like comprising a drain connection, a plug member seated therein and provided with a handle by means of which it may be turned or lifted, a guide tube in which the plug member is removably threaded, said guide tube fitting loosely in the drain connection and having a pin and slot connection therewith for limiting the movements of the plug member.

1,811,828. AIR CIRCULATING DEVICE FOR HOT AIR FURNACES. EMIL ACKERMAN, Chicago, Ill. Filed Jan. 8, 1929. Serial No. 331,087. 7 Claims. (Cl. 230—240.)



1. An air circulating device for a furnace, having in combination, a blower fan, a fixed deflector adjacent said blower fan, an air passage on each side of said blower fan for spreading the draft created by said blower fan, and a plurality of fixed deflectors in said air passages.

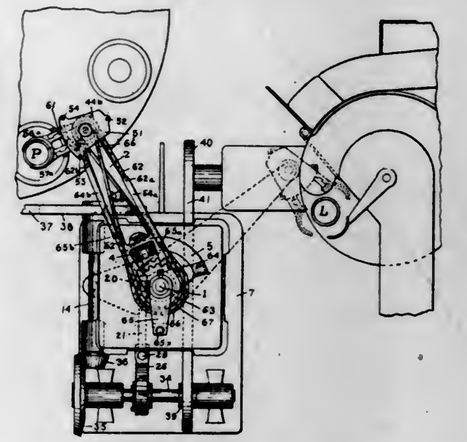
1,811,829. HEATER ATTACHMENT FOR AUTOMOBILES. FREDERICK G. FOLBERTH and WILLIAM M. FOLBERTH, Cleveland, Ohio, assignors to Trico Products Corporation, Buffalo, N. Y., a Corporation of New York. Original application filed Sept. 24, 1923, Serial No. 664,618. Divided and this application filed June 21, 1927. Serial No. 200,469. 2 Claims. (Cl. 237—12.3.)



1. In combination with a motor vehicle provided with a rimmed steering wheel and an internal combustion engine having an intake manifold and an exhaust manifold, a radiator comprising a tube coiled around the steering wheel rim and having one end connected to the intake manifold, whereby the suction within the latter will induce a flow of air from the radiator into the intake manifold, an air inlet conduit connected to the opposite end of the radiator and open to the atmosphere for admitting atmospheric air thereinto, said conduit being heated by the exhaust manifold whereby the inflowing air will be heated thereby and effect a warming of the radiator, and valve means for closing the conduit to the heat from the exhaust manifold and opening the conduit directly to the atmosphere whereby the radiator for the steering wheel may be cooled.

1,811,830. SWITCH STAND. WALLACE M. GRAY, Cincinnati, Ohio, assignor to The American Valve and Meter Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 20, 1930. Serial No. 429,951. 11 Claims. (Cl. 246—289.)

1. In combination with a switch, a crank shaft provided with a crank operatively connected to the switch, a switch actuating lever adapted to actuate said crank shaft and to be latched to normally hold the switch in place at either extremity of the switch movement, a stop member normally movable with said crank shaft and actuating lever to permit a full throw of said actuating lever and crank shaft, and yieldable means adapted to normally hold said actuating lever in predetermined operative relation to said crank shaft and switch, said yieldable means being adapted to yield when said actuating lever is latched and said switch is forced to change the relation of said stop member to said actuating lever and thereby permit said switch to be forced a fraction of its normal throw and prevented by said stop member from being forced a complete normal throw, and thereby indicating by the position of the switch that the switch has been forced.



1,811,831. SCALE. BERT W. KING, Detroit, Mich., assignor to Barnes Scale Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 21, 1927. Serial No. 220,899. 21 Claims. (Cl. 265—61.)

1. In a scale, a lever system comprising a main load lever of the first order, bearings near one end of the lever for receiving the load, the other end of the lever being arranged to counterbalance the load, load platform supporting means carried by said bearings, and a pair of spaced arms constituting check links pivotally connected to the platform supporting means and extending in the same direction as the main load lever and being pivotally mounted adjacent the counterbalancing end of the main load lever.

1,811,832. AUTOMATIC TRANSFER MACHINE. WILBUR S. MAYERS, Fairmont, W. Va., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Aug. 23, 1926, Serial No. 130,915. Renewed Oct. 4, 1928. 25 Claims. (Cl. 214—1.)

25. Glassware handling apparatus comprising a member pivotally supported at one end, ware gripping means on the other end of said member, means for effecting a translatory movement of said member in a horizontal plane about a center in one direction, and means for simultaneously moving the last named end of said member about the first named end as an axis in the opposite angular direction.

1,811,833. CAPSULE TOOTHBRUSH. KARL A. SIMON, Jackson, Mich., assignor of one-half to Edward J. Boardman, Jackson, Mich. Filed Mar. 1, 1930. Serial No. 432,299. 4 Claims. (Cl. 15—135.)

1. A capsule tooth brush adapted for receiving and retaining tooth paste therein ready for use, comprising a suitable brush handle, rows of brush bristles set in one face of said handle at one end thereof, said brush handle being formed with an elongated back recess placed opposite the brush and having an elongated slotted passage leading from said recess directly into said brush, said recess and slot being extended nearly the full length of the head, and an elongated severable paste capsule inserted within said back recess adjacent the slotted passage.

Patents Nos. 1,811,834 to 1,812,849

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office

Vol. 407—No. 5 TUESDAY, JUNE 30, 1931 Price—$10 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual index, $11.50; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Vacation Notice

U. S. Court of Customs and Patent Appeals,
Friday, June 5, 1931.

It is ordered that the vacation period of this court, in so far as it affects the postponement by stipulation of the filing of appellants' and appellees' briefs in customs appeals, as provided in paragraph 3 of Rule XIX, and in so far as it affects the postponement of the printing of records and the filing of appellants' and appellees' briefs in patent appeals, as provided in paragraph 1 of Rule XXVI and in paragraphs 3 and 4 of Rule XXVII, shall commence on the 6th day of June, 1931.

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,660,564, Fletcher Thorington, Means for the radio-translation of phonographically recorded sound waves, decided June 11, 1931, claims 2 and 3.

Pat. 1,771,794, L. L. King, Liquid level indicator, decided May 25, 1931, claims 2 and 3.

Pat. 1,778,486, N. W. Dorman, A. H. Schlotz, and M. K. Hatch, Adjustable bed for power presses, decided June 6, 1931, claims 2, 3, 8, 9, 10, 11, and 12.

Trade-Marks Canceled

93,326. Certain prints and publications. Barse & Hopkins, New York, N. Y. Registered September 9, 1913. Canceled May 27, 1931.

255,410. Table syrup. California Vinegar Co., also doing business as Golden West Syrup Co., Los Angeles, Calif. Registered April 23, 1929. Canceled May 27, 1931.

257,744. Mineral waxes. Vacuum Oil Company, New York, N. Y. Registered June 18, 1929. Canceled May 27, 1931.

263,174. Men's dress shirts and negligee shirts. I. Janov-Abeles Shirt Co., New York, N. Y. Registered October 29, 1929. Canceled May 27, 1931.

Notices of Cancellation

U. S. Patent Office, *Washington, June 4, 1931.*

American Pozzolana Company, its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of The Master Builders Company, of Cleveland, Ohio, to effect the cancellation of the trade-mark registration of the American Pozzolana Company, of 210 Penway Building, Indianapolis, Ind., No. 130,612, dated May 4, 1920, and the notice of such proceeding sent by registered mail to the said American Pozzolana Company at the said address having been returned by the post-office as undeliverable, notice is hereby given that unless said American Pozzolana Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

M. J. MOORE,
Assistant Commissioner.

U. S. Patent Office, *Washington, June 4, 1931.*

The National Gum Co., Inc., its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of the United Drug Company, Greenleaf, Leon, and Forsyth Streets, Boston, Mass., to effect the cancellation of the trade-mark registration of The National Gum Co., Inc., of 44 Spring Street, Newark, N. J., No. 220,965, dated November 23, 1926, and the notice of such proceeding sent by registered mail to the said The National Gum Co., Inc., at the said address having been returned by the post-office as undeliverable, notice is hereby given that unless said The National Gum Co., Inc., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

M. J. MOORE,
Assistant Commissioner.

Condition of Applications Under Examination at Close of Business June 13, 1931

(Total number of applications awaiting action, excluding Trade-Mark Division, 93,963; Trade-Mark Division, 1,186. Oldest new case, Oct. 13, 1930; oldest amended, Oct. 13, 1930. The dates given are 1930 except where † indicates 1931.)

Room No.	Divisions, Examiners, and Subjects of Inventions	Oldest new application and oldest action by applicant awaiting office action: New	Amended	No. of applications awaiting action
112	1. LOEFFLER, F. A., Closure Operators; Fences; Gates; Tillage; Scattering Unloaders; Handling and Hoist Line Implements.	†Jan. 9	†Feb. 6	775

DECISIONS IN PATENT AND TRADE-MARK CASES

Commissioner's Decisions

Ex parte McBrides Theatre Ticket Offices, Inc.

Decided April 16, 1931

Trade-Marks—Theatre Tickets—Merchandise.

Theatre tickets *Held* to be merely tokens of service and not merchandise within the meaning of the Trade-Mark Act and a mark used thereon properly refused registration.

On Appeal.

Application for registration of trade-mark for theatre tickets.

Mr. E. F. Wenderoth for applicant.

Kinnan, *First Assistant Commissioner:*

The applicant has appealed from the decision of the Examiner of Trade-Marks denying registration under the ten-year proviso of the Trade-Mark Act of February 20, 1905, as amended, of the name "McBride's" as a trade-mark applied to tickets for amusement enterprises.

Registration was refused on the ground that the goods upon which the name is used are merely tokens of service and not goods or merchandise which are sold and consequently the trade-mark is not "used in commerce."

The applicant purchases and resells theatre tickets. These tickets, as well stated by the Examiner, obviously have no intrinsic value but are mere evidences of a contract entered into between the seller and the purchaser to furnish the latter an entertainment.

The Examiner has relied upon certain adjudicated cases in support of his ruling and the applicant has invited attention to various additional adjudicated cases upon which reliance is placed in support of the appeal. A review of the cases referred to by the applicant fails to support the contention that the bits of pasteboard in themselves possess any intrinsic value or are goods or merchandise in any sense save that they are mere evidence that their owners have purchased a right to certain service of the nature and to be rendered at a time indicated upon the ticket.

While the language of some of these adjudicated cases might be construed to indicate property in the bit of pasteboard comprising the ticket yet a careful reading of such cases shows clearly enough that property or the thing that is sold resides in a right to enjoy or be present at an entertainment. It is deemed plain the applicant is not entitled to the registration sought.

The decision of the Examiner is affirmed.

Thompson *v.* Keller

Decided May 23, 1931

Interference—Patent and Application—Application for Reissue of Patent—Open to Inspection by Opposing Party.

Where an applicant for the reissue of a patent is involved in interference on the original patent, the application for reissue will, ordinarily, be open to inspection by the interfering party, upon his request.

Recommendation of the Examiner of Interferences.

Messrs. Pennie, Davis, Marvin & Edmonds for Thompson.

Mr. De Witt C. Tanner, Mr. John G. Roberts, Mr. Joel C. R. Palmer, and *Mr. E. W. Adams* for Keller.

Kinnan, *First Assistant Commissioner:*

The Examiner of Interferences under date of May 18, 1931, has submitted to the Commissioner a recommendation that the Thompson reissue application Serial No. 419,692 be made special. A copy of the recommendation of the Examiner of Interferences is enclosed.

The record of the interference is fully set forth in a decision of the Examiner of Interferences dated May 18, 1931, suspending "proceedings in this interference until the Thompson reissue application has been finally disposed of and Thompson has been thus definitely limited to one of his present two conflicting positions."

The party Keller copied certain claims from the Thompson patent and the interference resulted. The application for reissue of the Thompson patent was filed before the declaration of the interference and in such reissue application the claims involved in the interference were omitted although many other claims additional to those of the original patent were made in the reissue application. There has been filed in the interference record a statement of counsel for the applicant for reissue that no claims appear in this reissue application which could be made in the application of Keller with which the patentee is in interference.

It is clear this interference should not be determined or terminated until the reissue application filed by the party Thompson is either granted or abandoned, to the end that the status of the original Thompson patent be first finally settled. Should the party Thompson however unduly delay the prosecution of this reissue application the party Keller may, upon renewed motion, again raise the question of entering judgment in the interference prior to the final disposition of the reissue application. Under the conditions here present it is thought the party Keller should, in order to protect his interests, be in position to know the status of the reissue application since obviously there may be presented at any time before final allowance of such reissue application claims which would interfere with subject matter claimed by the party Keller. Where therefore, as in the present case, an applicant for reissue of a patent is involved in an interference as to the original patent, the reissue application will, ordinarily, be open during the interference for inspection by the interfering party, upon his request, to the end that the entire controversy between the parties may be terminated in one proceeding. The present situation of the instant interference justifies vacating my decision of March 24, 1931, in which the party Keller was denied access to the reissue

application, and it is now held that such party may during the interference have access to the Thompson reissue application.

Applications for reissue of patents are under the rules made special and the Examiner will so far as practicable expedite the prosecution of the reissue application. To the extent indicated, the recommendation of the Examiner of Interferences is approved.

U. S. Court of Customs and Patent Appeals

PRATT FOOD COMPANY v. THE CRETE MILLS AND SECURITY MILLS AND FEED COMPANY

No. 2,681. Decided March 25, 1931

1. TRADE-MARKS—INTERFERENCE—PRACTICE.
   Where the Examiner of Trade-Marks denied a motion to dissolve the interference based on the ground that there was no interference in fact *Held* that it was not necessary for the Examiner of Interferences either to affirm or reverse that ruling.
2. SAME—SIMILARITY—"VICTOR" AND "VICTORY".
   A mark consisting of the word "Victory" used as a trade-mark for foods for chickens, etc., *Held* confusingly similar to a mark for the same goods consisting of the word "Victor" printed somewhat diagonally and pierced at an angle by a representation of a sword, the word "Victor" being the dominating feature of the latter mark and the representation of the sword being but a subordinate character playing little if any part in the uses of the trade of the products.
3. SAME—INTERFERENCE—PRIORITY.
   Evidence reviewed and *Held* to establish that the C. Company used its mark, the dominant feature of which is the word "Victor" prior to the date on which the P. Company began the use of the mark "Victory" upon the same goods and priority was properly awarded the former.

APPEAL from the Patent Office. Affirmed.

Mr. George R. Hamlin for Pratt Food Co.

Mr. Emil F. Lange and *Mr. Raymond J. Mawhinney* for The Crete Mills and Security Mills and Feed Company.

GARRETT, *J.*:

This is a trade-mark interference proceeding arising under the Trade-Mark Registration Act of 1905, as amended.

Appellant, as Pratt Food Company, of Philadelphia, Pennsylvania, on January 23, 1923, secured registration, No. 163,695, of the word "Victory" for trade-mark use for "foods for chickens, ducks, turkeys, geese, pigeons, birds and fowl". The application for this registration seems to have been filed December 6, 1921, and use of the mark alleged "since on or about October 1, 1920."

Prior to that time, to wit, on February 14, 1922, Security Mills and Feed Company, of Knoxville, Tenn., had secured registration, No. 151,941, of the word "Victor", apparently, in connection with the figure of an eagle having outstretched wings, for use on "Poultry feed".

In an application originally filed July 28, 1926, but which was put in final form December 13, 1927, The Crete Mills, of Crete, Nebr., sought to register, for use on certain poultry feeds, the word "Victor", printed somewhat diagonally and pierced at an angle by a representation of a sword. Use of the mark was alleged as follows: for chick mash, 1918; chick food, 1908; growing mash, 1918; hen scratch, 1918; laying mash, 1918; poultry fattener, 1914; husky scratch, 1920; crate fattener, 1914.

In April, 1928, the Examiner of Trade-Marks declared an interference to exist between the application of The Crete Mills and the registrations mentioned.

Registrant, Security Mills and Feed Company, made no response to the notice of interference and took no part in the subsequent proceedings. It is, therefore, only a nominal party herein and its registration need be no further considered. The issue is solely between Pratt Food Company and The Crete Mills, and "appellee", as hereinafter used, will be understood as referring wholly to The Crete Mills.

On May 9, 1928, appellant filed a motion for dissolution of the interference on the ground—

> that no interference in fact exists between the trade-mark "Victory" * * * and the trade-marks of the [other] parties.

This motion alleged (*a*) that "Victory" and "Victor" do not conflict; (*b*) that "Victory", as registered by appellant, stands alone and has a wholly different appearance from "Victor" in association with the figure of an eagle, or in association with a representation of a sword; (*c*) that some admission by counsel for The Crete Mills in a "paper filed August 17, 1927," expressing doubt whether confusion could arise between the two marks was binding; and (*d*) that a certain waiver by the Quaker Oats Company in appellee's favor negatived the presumption that appellee was claiming the word "Victor" alone, as did the fact that, in the drawing accompanying appellee's application, the word was associated with the sword.

In June, 1928, the motion for dissolution was overruled by the Examiner of Trade-Marks, who stated, among other things:

> The Examiner is clearly of the opinion that the words Victor and Victory conflict when used upon the same goods. Sound and appearance of the words are alike and the association of either word with such devices as swords or eagles merely enhances the idea of conquest common to the two words. It is not believed that any expressions of doubt in the record of one of the parties estops that party from seeking to have the doubtful issue determined in an interference or that failure to oppose a published mark should lead to a presumption of acquiescence.

Following the overruling of this motion for dissolution proof was taken by both parties, and, on January 28, 1929, the Examiner of Interferences rendered decision adjudging The Crete Mills to be "entitled to the registration for which it has made application".

Upon appeal to the Commissioner of Patents the decision of the Examiner of Interferences was affirmed. The issue was then brought before us by appeal.

In the notice of appeal, appellant sets out 15 assignments of error; in his brief it is stated that his reliance is upon 10 of these assignments.

Of those so relied upon it seems proper first to consider the ones which assert error in the alleged failure of the Examiner of Interferences to "rule upon interference in fact". This contention is expressed in assignments 2, 3 and 10.

It is the insistence of appellant that the Examiner of Interferences made no ruling upon its motion to dissolve, and that, therefore, the provisions of section 7 of the Trade-Mark Registration Act were not complied with; that it has been denied a right made mandatory by statute, and that the decision should be reversed and, presumably, the matter remanded for an express declaration or holding by the Examiner of Interferences upon this point.

As to this contention we have only to say that it seems to us that appellant would have read into the statute language not now contained therein. Section 7 of the statute makes no mention of "motions for dissolution". The only applicable language here seems to be that:

> * * * the Commissioner * * * in every case of interference * * * shall direct the Examiner in Charge of Interferences to determine the question of the *right of registration* to such trade-mark, * * * in such manner and upon such notice to those interested as the Commissioner may by rules prescribe. (Italics ours.)

Appellant has not made, and is not before us making, objection to appellee registering its mark, except, of course, it does not wish this to be done under an adjudication of priority in appellee's favor.

Appellant is not an opposer, in the sense of the statute, in these proceedings; the interference was not declared upon its initiative, but was the act of the Examiner of Trade-Marks, presumably, acting for the Commissioner of Patents under general instructions.

The obvious purpose of declaring the interference was to place the matter in a situation where the *right of appellee to register* might be passed upon in the light of the prior registrations found of record. Since no one appearred opposing appellee's application, and since, under the facts appearing, the Examiner of Trade-Marks did not feel it proper to either grant or reject the application without the question of priority being determined the interference was declared.

Section 26 of the Trade-Mark Registration Act provides:

> That the Commissioner of Patents is authorized to make rules and regulations, not inconsistent with law, for the conduct of proceedings in reference to the registration of trade-marks provided for by this act.

Acting under this general authority rules "governing the registration of trade-marks" have been promulgated, among them rule 54, the here material portion of which reads:

> Motions to dissolve an interference upon the ground that no interference in fact exists * * * or which deny the registrability of an applicant's mark * * * will be heard and determined by the examiner of trade-marks.

Also rule 55, which, in part, reads:

> The decision of the Examiner in Charge of Trade-Marks, upon a motion for dissolution, will be binding upon the Examiner in charge of interferences unless reversed or modified on appeal.

We find nothing inconsistent with the statute in these rules. The statute does not require the Examiner of Interferences to pass upon motions to dissolve except, of course, as such motions may relate to the "right of registration". In determining that right he may reverse or modify a decision of the Examiner of Trade-Marks. If there were no rule such as 55 and the Examiner of Interferences did not expressly or by clear implication reverse or modify a decision of the Examiner of Trade-Marks declaring an interference, the latter's holding would necessarily stand as an adjudication.

What the statute expressly requires of the Examiner of Interferences is determination of the right to registration. That he did expressly determine and declare in his decision in this case.

Our recent decision in the *Skookum Packers' Ass'n. v. Pacific Northwest Canning Co.*, 18 C. C. P. A. (Patents) ——, 45 F.(2d) 912, 403 O. G. 515 will be found to contain matter here relevant.

In cases where there is an opposer the Examiner of Interferences is also charged by the statute with determining "the sufficiency of objections to registration".

That element is not presented in this case. Appellant's motion to dissolve was not the act of an opposer. On the contrary, it was equivalent to an act of acquiescence, or of consent on appellant's part to the registration sought.

The expression in the decision of the Examiner of Interferences, which reads,

> This adjudication is regardless of whether the trade-mark rights of the parties are the same or different,

is taken by us to mean that no matter whether he agreed with the Examiner of Trade-Marks or not, on the matter of an interference being properly declared, appellee was entitled to register; that is, were the interference dissolved, appellee would be entitled to register because of there being no conflict, while, if there was a conflict between the words, appellee was still entitled to register because of its priority in the use of its word.

[1] Under this view it was not necessary for the Examiner of Interferences either to affirm or reverse the Examiner of Trade-Marks.

Assignments of error Nos. 2, 3 and 10 are without merit and are overruled.

Other assignments of error relate to the matter of appellee's word being associated with a representation of a sword, it being claimed that the mark must be treated as a whole, and that the presence of the sword affects the appearance of the mark.

This goes to the question of whether the marks of the respective parties so nearly resemble each other as that their application to goods, admittedly of the same descriptive properties, would be likely to cause confusion or mistake in the mind of the public or to deceive purchasers.

[2] We think there can be no serious question that such is the case. A mere inspection of appellee's mark is sufficient to demonstrate that the word "Victor" is its dominating feature. The evidence is practically undisputed that the products upon which it is used are designated in the trade by both customers and salesmen as "Victor" products. The sword is but a subordinate characteristic of the mark and plays little, if any, part in the usages of trade in the products. Even without testimony "Victor" and "Victory" so closely simulate each other in appearance and sound as that it seems obvi-

ous confusion would likely arise in their use. But we are not left to speculate about likelihoods or probabilities. Actual confusion has been proven to have already occurred not alone when the words have been applied to flour, a product not here involved, but when applied to poultry foods.

The assignments of error upon this issue are also overruled.

The only remaining question of importance is that of who was the prior user.

There is no serious dispute but that appellant has used its word "Victory" upon poultry food products substantially continuously since 1920.

Relative to the use of "Victor" by appellee, the Board, in its decision, said:

It must be held the decision of the Examiner of Trade-Mark Interferences that The Crete Mills was first to adopt the mark including the word "Victor" upon poultry feed is correct. The witnesses A. L. Johnson, Q. 54 to Q. 59, and B. L. Johnson, Q. 28 to Q. 30 and Q. 32, corroborated by the witnesses Talheim, Q. 12 to Q. 14 and Q. 18, and Monaghan, Q. 18, fairly establish the use of the Victor trade-mark, whether with or without the sword is deemed immaterial, upon poultry food as early as 1908.

Appellant has attacked the sufficiency of the evidence adduced by appellee to prove use of its mark upon poultry feeds earlier than the time when appellant began the use of "Victory" on its poultry food,

[3] It is sufficient for us to say, on this point, that the evidence has been examined and we do not feel justified in reversing the finding of facts by the tribunals of the Patent Office in concurring decisions.

The assignments of error relating to the effect of a certain permission given by the Quaker Oats Company to The Crete Mills to use "Victor" upon certain products is not pressed by appellant, nor is there any serious insistence that an expression by an attorney, for appellee, in a letter of August 17, 1927, addressed to the Patent Office, to the effect that "it is not at all certain" whether confusion would occur, is binding upon appellee.

We do not regard either of these matters as entitled to consideration in determining the case. All assignments of error are overruled and the decision of the Commissioner of Patents is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

BOURJOIS, INC. (INTERNATIONAL PERFUME CO. INC., SUBSTITUTED), *v.* CHEATHAM CHEMICAL CO.

CHEATHAM CHEMICAL CO.

No. 2,614. Decided March 25, 1931

TRADE-MARKS—SIMILARITY—"POLLY PEACHTREE" AND "PEACHES", "PEACH BLOW", "PEACHES AND CREAM" AND "VELVET OF PEACHES".

The term "Polly Peachtree" as used by the applicant as a trade-mark for toilet articles *Held* not confusingly similar to the marks "Peaches", "Peach Blow", "Peaches and Cream" and "Velvet of Peaches", previously used and registered by the opposer.

BLAND, *J.*, and HATFIELD, *J.*, dissenting.

APPEAL from the Patent Office. Affirmed.

Mr. Louis Alexander and *Mr. Conway P. Coe* for Bourjois, Inc. (International Perfume Co. Inc., Substituted).

Mr. Will T. Gordon and *Mr. Philip Weltner* and *Mr. T. L. Mead, jr.*, for Cheatham Chemical Co.

LENROOT, *J.*:

This is a trade-mark opposition proceeding. Appeal is taken from a decision of the Commissioner of Patents affirming a decision of the Examiner of Interferences dismissing the opposition of appellant to the registration by appellee of its claimed trade-mark consisting of the notation "Polly Peachtree" for toilet water, perfumes, bay rum and other toilet articles. In its representation of the mark the words are in script with the word "Polly" above the word "Peachtree."

In its notice of opposition, appellant alleged prior adoption and use by it of trade-marks for toilet articles of like character, said trade-marks consisting of the words "Peaches", registered February 13, 1917, No. 115,435, and "Peach Blow", registered October 19, 1886, No. 13,745, the latter mark being again registered on November 11, 1924, No. 191,436; said notice of opposition further alleges that if appellee were permitted to use and register the mark "Polly Peachtree" as a trade-mark for toilet preparations, confusion in trade and deception of the public would result therefrom, and that appellant believes it would be damaged thereby.

Both parties took testimony.

It is conceded that the marks of the parties are used upon goods of the same descriptive properties.

The Commissioner of Patents concurred in the finding of the Examiner of Interferences that the marks of appellant were used and owned by it prior to the adoption and use by appellee of its mark, but found, as did the Examiner, that the marks of the respective parties do not bear such a close resemblance to each other as to be likely to cause confusion or mistake in the mind of the public or to deceive purchasers.

Appellant offered in evidence certificates of the registrations pleaded, and in addition two other certificates of registration owned by it, one of the words "Peaches and Cream" and the other of the words "Velvet of Peaches." Appellee objected to the introduction in evidence of the two certificates last above named, upon the ground that they were not pleaded in the notice of opposition. Inasmuch as it appears in the decision of the Commissioner that he considered the said last named marks, and as it is clear that he had a right to do so under that provision of section 7 of the trade-mark law of 1905, which requires in an opposition proceeding a determination of the question of the right of registration of a trade-mark, as well as the sufficiency of objections made thereto, the certificates of registration of the marks "Peaches and Cream" and "Velvet of Peaches" are properly before us.

We therefore have four trade-mark registrations of appellant, "Peaches", "Peach Blow", "Peaches and Cream" and "Velvet of Peaches", all of which registrations were made prior to the first use claimed by appellee of its trade-mark "Polly Peachtree", and the question is whether said last named mark so nearly resembles any of said marks of appellant, when applied to goods of the same descriptive properties, as to be likely to cause confusion or mistake in the mind of the public or to deceive purchasers.

That appellant's marks are valid trade-marks we do not question, but it is also true that if one engaged in the production of perfumeries should manufacture a perfume made from peach blossoms, he would have the right to so label and describe it upon such goods, notwithstanding appellant's trade-marks, provided he did so in such a way as to differentiate such description from the form of the marks used by appellant. Furthermore, Funk & Wagnalls Standard Dictionary gives as one of the definitions of "peach blossom": "a pink color dashed with yellow."

The same authority defines "peach bloom" as:

The delicately fine powder found on a ripe peach; hence a soft pinkish color of the skin, especially of the cheek.

It also defines "peach blow", which is one of appellant's marks,

A light purple glare inclining to pink, seen on some oriental porcelain.

We think that one manufacturing a face powder or rouge having the color of "peach blossom", "peach bloom" or "peach blow", as above defined, would have the right to indicate such color upon such goods without infringing appellant's trade-marks.

We have referred to the fact that certain combinations of words containing the word "peach" may be descriptive of certain goods of the class to which the marks here in issue are applied, as a circumstance which we think it proper to consider in passing upon the likelihood of confusion arising from the use of the marks of the respective parties hereto.

In Nims on Unfair Competition, sec. 216, certain observations are made which we think are sound and here applicable:

There is a distinct difference between a true trade-mark and a name in the public domain at the very instant of first use. When a fanciful word is first used that first use is as a trade-mark and *it has only one meaning in all the world*, i. e., its trade-mark meaning. The day Kodak was first used on a camera, it had only one meaning, i. e., its trade-mark meaning. * * *

On the other hand, in the case of a word of the language—or a name in the public domain, when it is first used as a trade-mark it has also a significance other than its trade-mark meaning and if its trade-mark use is such that it is possible that the public may give to it, even when used on merchandise, its public meaning instead of its trade-mark meaning, it may be that the trade-mark rights in the word are limited by, and must follow the education of the public in recognizing its trade-mark meaning. * * * (Italics quoted.)

Appellant contends that the key word of its various trade-marks is the word "peach", and that its various combinations are only to indicate various members of its "peach" family. This may be true, and if "peach" was a purely fanciful word, we would be of the opinion that anyone purchasing the same class of goods under another trade-mark, but in which the word "peach" occurs, would be very likely to ascribe to appellant origin of such goods from that fact alone; but, holding as we do that the word "peach", as used by appellant, is not a fanciful word, we think the purchasing public would not be so likely to ascribe to appellant origin of goods, because of the presence of the word "peach" in both marks, as if it were a purely fanciful word. Therefore, in ascertaining whether confusion or mistake will arise in the mind of the public in the use of the two words, the presence of the word "peach" in the two marks is not determinative of the issue, but the question is whether the words "Polly Peachtree" are confusingly similar to the words "Peaches", "Peach Blow", "Peaches and Cream" and "Velvet of Peaches", or any of them, when applied to goods having the same descriptive properties.

It appears from the testimony that the words "Polly Peachtree" have been used for years as a nom de plume by a columnist in a daily newspaper in Atlanta, Georgia, where appellee is located, and that Peachtree Street is a wellknown street in that city, and that it was from these facts that appellee conceived the idea of adopting the words "Polly Peachtree" as a trade-mark for use upon its goods. Of course, if confusion or mistake is likely to be caused by the use of appellee's mark, its good faith can not aid it in securing registration. We simply say here that there is no fradulent intent claimed or shown with reference to the conduct of either of the parties to the case at bar.

Considering, therefore, the trade-mark "Polly Peachtree" as a whole, we are of the opinion that it is not so similar to the marks of appellant, or any of them, as to be likely to cause confusion or mistake in the mind of the public or to deceive purchasers.

We think purchasers would not dissect the mark and emphasize the syllable "peach" in "Peachtree", but would either remember the word "Polly" or the words "Polly Peachtree" as a whole, and we do not think that upon seeing the mark, or hearing it pronounced, the ordinary purchaser of the goods to which the mark was applied would ascribe their origin to appellant.

The decision of the Commissioner of Patents is affirmed.

Affirmed.

BLAND, *J.*, dissenting:

I must dissent from the opinion of the majority for two reasons.

First. The reasoning of the opinion leads to the conclusion that there would be less likelihood of confusion between "Polly Peachtree" and the trade-marks of the opposer "Peaches", "Peach Blow", "Peaches and Cream" and "Velvet of Peaches", on account of the fact that "Peaches" is suggestive rather than "fanciful". The fact that the word "Peach" is suggestive, which the majority concedes in no way invalidates the trade-mark, would make the probability of confusion more likely since the predominant thought in "Polly Peachtree" obviously is "Peach", which is equally suggestive of the character of the goods in all the marks.

It is hardly logical to say that "appellant's marks are valid trade-marks", and at the same time sustain appellee's right to register chiefly upon the theory, as I understand the situation, that opposer unfortunately selected trade-marks which are so suggestive as to make confusion easy.

The majority opinion says:

That appellant's marks are valid trade-marks we do not question, but it is also true that if one engaged in the production of perfumeries should manufacture a perfume made from peach blossoms, he would have the right to so label and describe it upon such goods, notwithstanding appellant's trade-marks, provided he did so in such a way as to differentiate such description from the form of the marks used by appellant.

Just what is meant by this statement is difficult to say. If the writer intended to convey the impression that on account of the word "Peach", in appellant's marks, being suggestive, the appellee would have the right to so label his peach perfumery and in doing so use the word "Peach" as a trade-mark, regardless of confusion that might result, it is clearly against numerous decisions by this court. If the statement does not mean that, it is useless and misleading. Of course he would have the right to "describe" his product by saying that it was made from peach blossoms, but that is far from saying that he would have the right to use "Peach Blossom" as a trade-mark. We have repeatedly held that the right to register is to be distinguished from the right to use. *National Biscuit Co.* v. *Sheridan*, 18 C. C. P. A. (Patents) —, 44 F.(2d) 987, 402 O. G. 4; *American Fruit Growers, Inc.*, v. *Michigan Fruit Growers, Inc.*, 17 C. C. P. A. (Patents) 906, 38 F.(2d) 696, 393 O. G. 789; *California Packing Corp.* v. *Tillman & Bendel, Inc.*, 17 C. C. P. A. (Patents) 1048, 40 F.(2d) 108, 394 O. G. 789. A trade-mark may not be registered if it is probable that confusion will result between it and a valid registered mark. Since appellee concedes that appellant's trade-marks are valid, the fact that they are suggestive should not lessen our vigilance in ascertaining the probability of confusion, since if they both suggest the same thing there is more probability of confusion than there would otherwise be.

Second. Irrespective of the above consideration, I think this record presents a state of facts from which no other reasonable conclusion can be deduced than that confusion to the public will result from the registration and use of appellee's trade-mark "Polly Peachtree". For two or three generations, appellant's "Peach brand" trade-marks have been one of the leaders of toilet articles and have been popular with the toilet article purchasing public. It is natural to conclude that when a new trade-mark containing the word "Peach", used in connection with the sale of a toilet atricle, is placed on the market, the public will think it is another of the "Peach" family of appellant. The fact that appellant has four "Peach" trade-marks increases the likelihood of confusion. Many purchasers will be led to buy "Polly Peachtree" toilet water through an incorrect belief as to its origin.

Congress intended to encourage the registration of trade-marks only which would not lead to confusion. It had no right to remedy, and did not attempt to provide a remedy for, the confusion the public would necessarily have to suffer by virtue of rights and limitations which grew out of the use of trade-marks and irrespective of their registration.

Since I am convinced that confusion will result and disagree with the inferred reasons for arriving at the conclusion which the majority reached, I must dissent. The opposition should have been sustained.

HATFIELD, *J.*, concurs in the dissenting opinion.

Patent Suits

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922]

813,130, 813,131, 813,132, 855,153, J. Zimmerman, Pile fabric; 1,195,322, same, Wrap printing machine, D. C., S. D. N. Y., Doc. E 57/402, *Artloom Corp.* v. *National Better Business Bureau, Inc., et al.* Consent and order of discontinuance Apr. 27, 1931.

813,131. (See 813,130.) 813,132. (See 813,130.)

855,153. (See 813,130.)

1,102,152, P. Jones, Process of pumping oil wells, C. C. A., 10th Cir., Doc. 386, *Jones-McLaughlin, Inc.*, v. *Amerada Petroleum Corp.* Patent held invalid, decree affirmed (notice Apr. 22, 1931).

1,125,476, G. Claude, System of illuminating by luminescent tubes, filed Apr. 17, 1931, D. C., N. D. Calif. (San Francisco), Doc. 2843, *Claude Neon Electrical Products, Inc.*, v. *E. Jahnigen (Imp Electric Sign Co.)*. Doc. 2844–L, *Claude Neon Electrical Products, Inc.*, v. *Novelty Electric Sign Co.* Doc. 2845–S, *Claude Neon Electrical Products, Inc.*, v. *W. T. Sconyers et al. (Genuine Neon Sign Co.)*. Doc. 2846–S, *Claude Neon Electrical Products, Inc.*, v. *J. G. Sims (Sims Neon Co.)*. Doc. 2847–S, *Claude Neon Electrical Products, Inc.*, v. *J. Waldron et al. (Neon Window Display Sign Co.)*.

1,184,673, C. C. Fardon, Storage tank, C. C. A., 10th Cir., Doc. 360, *Johns-Manville Corp.* v. *National Tank Seal Co.* Patent held not infringed; decree reversed (notice Apr. 22, 1931).

1,195,322. (See 813,130.)

1,240,459, C. J. Klein, Electric switch; 1,651,035, 1,788,665, G. J. Meuer, same, filed Apr. 28, 1931, D. C. Conn. (New Haven), Doc. E 2128, *Cutler-Hammer, Inc.*, v. *Carling Tool & Machine Co., Inc.*

1,296,596, F. A. Parkhurst, Metal mold; 1,296,597, same, Mold and process of casting, filed Apr. 21, 1931, D. C., N. D. Calif. (San Francisco), Doc. 2858–L, *Aluminum Co. of America* v. *United Engine & Machine Co.*

1,296,597. (See 1,296,596.)

1,306,477, I. C. Frey, Brick mold handling apparatus; 1,482,638, W. J. Sullivan, Apparatus for transporting and unloading brick; 1,555,785, G. E. Luce, Brick setting apparatus; 1,564,652, W. W. Wallace, Dumping fork, D. C., S. D. N. Y., Doc. E 48/308, *New York Brick Handling Corp.* v. *J. Mayone, Inc., et al.* Dismissed without prejudice as to 1,306,477 and with prejudice as to other three patents Apr. 23, 1931.

1,320,384 (*a*), Godbold and Fletcher, Drill-cutter; 1,480,014, F. L. Scott, Self-cleaning roller drill, C. C. A., 10th Cir., Doc. 129, *Hughes Tool Co.* v. *International Supply Co.* Decree as to 1,320,384 reversed and remanded, as to 1,480,014 affirmed (notice Apr. 22, 1931.)

1,320,384 (*b*), Godbold and Fletcher, Drill-cutter, appeal filed Apr. 3, 1931, D. C., S. D. Calif. (Los Angeles), Doc. E T–90–C, *Hughes Tool Co.* v. *F. & S. Welding & Machine Works et al.*

1,340,423, F. Smith, Parachute; 1,403,983, same, Parachute pack; 1,462,456, F. Smith, Parachute pack and harness; 1,554,192, G. M. Ball, Parachute pack; 1,560,366, same, Parachute harness, D. C. Del., Doc. E 728, *Irving Air Chute Co., Inc., et al.* v. *Russell Parachute Co.* Claims 1, 2, 3, 4, and 10 of 1,340,423, claims 5 and 8 of 1,403,983, and claims 1, 11, 12, 15, and 18 of 1,462,456 held valid and infringed Apr. 6, 1931.

1,352,627, J. P. Ratigan, Pumping apparatus, D. C., S. D. Calif. (Los Angeles), Doc. I–66–B, *J. P. Ratigan* v. *Sargent Engineering Corp.* Patent held valid Apr. 16, 1931.

1,365,043, Mann and Williams, Process of making reactive acid liquor from hydrocarbon gases containing olefins; 1,486,646, Ellis and Cohen, Alcohol and process of making; 1,486,647, same, Production of acid extract and alcohol from hydrocarbon gases; 1,744,207, Born and Isham, Process of producing alkyl sulphate and alcohols therefrom, filed Apr. 22, 1931, D. C. Del., Doc. E 873, *S. B. Hunt et al.* v. *Petroleum Chemical Corp.*

1,377,566, Re. 15,231, C. F. Eckart, Method of and means for enhancing the growth of plants, D. C., E. D. Mo., E. Div., Doc. 8475, *International Paper Co.* v. *Graham Paper Co.* Decree after mandate Apr. 24, 1931.

1,379,224, O. P. Smith, Dog racing amusement; 1,507,440, same, Housing for conveyer cars and tracks; 1,630,812, same, Traction car, C. C. A., 10th Cir., Doc. 112, *Magic City Kennel Club, Inc., et al.* v. *H. M. Smith.* Decree reversed and remanded (notice Apr. 22, 1931).

1,382,224. (See Re. 14,916.) 1,403,983. (See 1,340,423.)

1,431,222, A. E. Field, Lubricating pitman, D. C., E. D. Wash. (Spokane), Doc. E 4390, *A. W. Field* v. *Caterpillar Tractor Co. et al.* Dismissed on stipulation of counsel Apr. 22, 1931.

1,482,688. (See 1,306,477.) 1,462,456. (See 1,340,423.)

1,480,014. (See 1,320,384 (*a*).) 1,486,646. (See 1,365,043.)

1,486,647. (See 1,365,043.) 1,507,440. (See 1,379,224.)

1,528,845, H. W. Russ, Heel and method of making same; 1,536,691, same, Heel-blank breast shaping machine, D. C., S. D. Ohio, W. Div., Doc. —, *United Shoe Machinery Corp.* v. *The Day Wood Heel Co.* Claims 1, 3, 5, and 6 of 1,536,691 and all claims of 1,528,845 held valid and infringed (notice Apr. 28, 1931).

1,536,044, J. W. Swan, Method and means to facilitate the distribution of fuel in internal combustion engines; 1,636,721, same, Manifold, filed Apr. 25, 1931, D. C., E. D. Mich., S. Div., Doc. 4746, *The Swan Carburetor Co.* v. *Reo Motor Car.* Same, filed Apr. 27, 1931, D. C., N. D. Ohio, W. Div., Doc. 1152, *The Swan Carburetor Co.* v. *The Willys-Overland Co.*

1,536,691. (See 1,528,845.)

1,538,303, C. R. Short, Transmission belt, filed Apr. 29, 1931, D. C., S. D. Ohio, W. Div., Doc. E 734, *The Dayton Rubber Mfg. Co.* v. *H. Stagnaro (Cinti Belting Co.) et al.*

1,545,207, 1,617,179, 1,617,180, C. G. Smith, Electrical apparatus; 1,617,171, same, Method and apparatus for the rectification of alternating currents; 1,617,172, 1,617,177, same, Production of electrical variations; 1,617,174, same, Electrical apparatus and method; 1,617,178, 1,617,181, V. Bush, Electrical apparatus, filed Apr. 22, 1931, D. C. Mass., Doc. E 3419, *Raytheon, Inc. et al.* v. *Selectron Corp. et al.*

1,554,054. (See Re. 14,916.) 1,554,192. (See 1,340,423.)

1,555,785. (See 1,306,477.)

1,558,644, T. L. Smith, jr., Scale, D. C. Del., Doc. E 721, *Rhodes-Hochriem Mfg. Co.* v. *International Ticket Scale Corp.* Patents 1,598,620 and 1,622,571 eliminated by amendment May 15, 1930, bill dismissed Apr. 11, 1931.

1,560,366. (See 1,340,423.) 1,564,652. (See 1,306,477.)

1,594,334, E. J. Swectland, Method of preventing wear of the moving parts of an automotive internal combustion engine; 1,594,335, same, Means for filtering oil in the lubricating system of an internal combustion engine; 1,624,689, same, Lubricating system of internal combustion engines; 1,646,377, 1,646,378, Sweetland and Greenhalgh, Renewable filter unit, C. C. A., 6th Cir., Doc. 5826–27, *Motor Improvements, Inc., et al.* v. *General Motors Corp. et al.* Two claims of 1,594,334, four claims of 1,594,335 and nine claims of 1,624,689 held valid and infringed, three claims each of 1,646,377 and 1,646,378 held invalid Apr. 17, 1931.

1,594,385. (See 1,594,334.)

1,594,490, E. C. Bertolet, Method of dyeing bone and the product thereof, appeal filed Sept. 8, 1930, C. C. A., 3d Cir. Doc. 4487, *G. K. Hale Mfg. Co.* v. *Hafleigh & Co. et al.*

1,617,171. (See 1,545,207.) 1,617,172. (See 1,545,207.)

1,617,174. (See 1,545,207.) 1,617,177. (See 1,545,207.)

1,617,178. (See 1,545,207.) 1,617,179. (See 1,545,207.)

1,617,180. (See 1,545,207.) 1,617,181. (See 1,545,207.)

1,624,689. (See 1,594,334.) 1,630,812. (See 1,379,224.)

1,636,721. (See 1,536,044.) 1,646,377. (See 1,594,334.)

1,646,378. (See 1,594,334.) 1,651,035. (See 1,240,459.)

1,658,792, J. S. Bushey, Axle setting apparatus for autos; 1,761,516, same, Method of adjusting camber in automobile wheels, filed Apr. 18, 1931, D. C., S. D. Calif. (Los Angeles), Doc. E T–97–M, *Food Machinery Corp. et al.* v. *Kelley Bros. et al.* Doc. E T–98–C, *Food Machinery Corp. et al.* v. *F. Bechtoldt.*

1,663,505, W. H. Mason, Hard grainless fiber product and process of making, filed Apr. 2, 1931, D. C. Del., Doc. E 871, *Masonite Corp.* v. *The Celotex Co.*

1,704,961, T. Birkenmaier, Disconnecting block; 1,743,942, E. Volkmann, Switch; 1,731,775, W. A. Heinrich, Hanger, D. C., E. D. Mo., E. Div., Doc. 9161, *W. N. Matthews Corp.* v. *J. R. Kearney Corp.* Consent decree Apr. 1, 1931.

1,731,775. (See 1,704,961.)

1,741,118, Rosenfeld and McCabe, Sign and method of manufacture, D. C., N. D. Ohio, E. Div., Doc. 3449, *The Grabler Mfg. Co.* v. *Vacuum Oil Co.* Claims 1, 7, and 8 held valid and infringed (notice Apr. 25, 1931).

1,743,942. (See 1,704,961.) 1,744,207. (See 1,365,043.)

1,761,516. (See 1,658,792.) 1,783,665. (See 1,240,459.)

Re. 14,916, A. H. Pitney, Mail marking machine and postage meter; Re. 15,734, same, Postage meter and mail marking machine, 1,382,224, same, Locking mechanism for numeral wheels, 1,554,054, E. N. Weyer, Envelope mailing and stamping machine, filed Mar. 26, 1931, D. C. Del., Doc. E 870, *Pitney-Bowes Postage Meter Co.* v. *Whitlock Metered Mail Co., Ltd.*

Re. 15,231. (See 1,377,566.) Re. 15,734. (See Re. 14,916.)

Re. 17,180, C. T. Hibbard, Method and means for starting synchronous motors, filed Apr. 28, 1931, D. C., S. D. N. Y., Doc. E 59/278, *Electric Machinery Mfg. Co.* v. *General Electric Co.*

Re. 17,328, R. D. Davies, Process of facing the cutting edges of drilling tools, filed Apr. 23, 1931, D. C., S. D. Calif. (Los Angeles), Doc. E T–104–J, *P. L. & M. Co.* v. *F. A. Bell.*

Des. 78,526, C. K. Marcell, Vanity case, D. C., S. D. N. Y., Doc. E. 50/25, *C. K. Marcell* v. *Sagamor Metal Goods, Inc.* Patent held valid and infringed, counter-claim dismissed Apr. 28, 1931.

Des. 81,678, J. Tuteur, Electric vacuum cleaner, filed Apr. 27, 1931, D. C. Conn. (New Haven), Doc. E 2127, *Electric Vacuum Cleaner Co., Inc.*, v. *Landers, Frary & Clark.*

Disclaimers

1,165,825.—*Garfield A. Wood*, St. Paul, Minn. HYDRAULIC PUMP. Patent dated December 28, 1915. Disclaimer filed June 17, 1931, by the assignees, *Wood Corporation of Delaware, and Wood Hydraulic Hoist & Body Company.*

Hereby make disclaimer with respect to the improvement described and defined in claim 15 of so much thereof as is in excess of the following:

"A motor driven vehicle having a dumping body pivotally mounted thereon, a fluid pressure operated piston in a cylinder for elevating the body against the action of gravity, a pump driven by the motor of said motor driven vehicle for pumping fluid continuously to actuate the piston to elevate the body, means for automatically limiting the height of elevation of said piston, means for maintaining a circulation of fluid through said cylinder for maintaining said piston in elevated position, and means for reversing and permitting acceleration of fluid flow through said cylinder to increase the speed of return of said piston to normal position."

1,529,912.—*James V. L. Peacock*, Dothan, Ala. PULLING MACHINE. Patent dated March 17, 1925. Disclaimer filed June 15, 1931, by the patentee, and the *Medley Manufacturing Company*.

Your petitioners, therefore, hereby enter this disclaimer to that part of the claim in said specification which is in the following words, to-wit:

"4. The combination with a tractor having front and rear axles and supporting wheels therefor, of a pulling attachment comprising gears adapted to be mounted in place of the wheels on the rear axles and to be driven thereby, a pedestal adapted to support the rear axles, a drum shaft journaled in said pedestal and carrying a drum and gearing driven by the gears on said rear axles, means to brace the pedestal to the tractor, and means to connect an anchorage to said pedestal."

"7. The combination with a motor tractor having front and rear axles and wheels mounted on said axles, of a pulling attachment comprising gears adapted to replace the rear tractor wheels, a pedestal adapted to support the rear end of the tractor, a drum shaft journaled in the rear end of said pedestal, a transmission to drive said drum shaft from said rear axle gears, journal bearings for said drum shaft having caps adapted to be moved to permit the drum shaft to be rolled rearwardly off the pedestal, means to brace the pedestal fore and aft to said tractor, and means to provide an anchorage for said pedestal."

1,692,837.—*Raymond Henry*, Rock Island, Ill. OILLESS SPRING SHACKLE. Patent dated November 27, 1928. Disclaimer filed June 9, 1931, by the assignee, *O.-N. Spring Shackle Company*.

Hereby disclaims claim 11 of said Letters Patent.

1,727,308.—*Frederick S. Denison* and *Lewis L. Cunningham*, Minneapolis, Minn. HEAT-REGULATING DEVICE. Patent dated September 3, 1929. Disclaimer filed June 15, 1931, by the assignee, *Minneapolis-Honeywell Regulator Company*.

Hereby enters this disclaimer to claims 20 to 24, inclusive, of said Letters Patent which are in the following words, to wit:

"20. A device of the class described including ignition and fuel supply means and circuits therefor, a relay controlling the fuel supply circuit, a warp switch having a heating coil and a shunt circuit for the coil, the coil of the warp switch being in series with the coil of the relay, a switch for the shunt circuit, and means for causing operating of the switch as result of ignition of fuel delivered by fuel supply means.

"21. A device of the class described including ignition and fuel supply means and circuits therefor, an electromagnetic device controlling the fuel supply circuit, a thermally operable device having a heating coil and a shunt circuit for the coil, the coil of the latter device being in series with the coil of the electro-magnetic device, a switch for the shunt circuit and means for controlling its operation as the result of ignition of fuel delivered by the fuel supply means.

"22. An electric fuel supply system comprising a relay controlling a fuel supply circuit, a warp switch having a heating coil, and a shunt circuit for the coil, the coil of the warp switch being in series with the coil of the relay and said warp switch controlling energization of the relay, a switch for the shunt circuit, and means for causing the operation of the switch as the result of the ignition of fuel delivered by the fuel supply means.

"23. A device of the class described including ignition and fuel supply means and circuits therefor, a relay controlling the fuel supply circuit, a warp switch having a heating coil and a shunt circuit for the coil, said switch being in circuit with said relay, electrical connections for energizing the heating and relay coils simultaneously, a switch for the shunt circuit, and means for causing operation of the switch as result of ignition of fuel delivered by fuel supply means.

"24. A device of the class described including ignition and fuel supply means and circuits therefor, a relay controlling the fuel supply circuit, a warp switch having a heating coil and a shunt circuit for the coil, the coil of the warp being electrically connected with the coil of the relay, a switch for the shunt circuit and means for causing operation of the switch as result of ignition of fuel delivered by fuel supply means."

1,758,894.—*Adolf H. Schaffert*, Youngstown, Ohio. WINDOW STRUCTURE. Patent dated May 13, 1930. Disclaimer filed June 9, 1931, by the patentee, and the assignee, *Truscon Steel Company*.

Hereby enter this disclaimer to that part of the claim in the specification, which is in the following words, to-wit:

"1. The combination with a window frame, of a plurality of sashes mounted in said frame to swing, an actuating bar mounted to reciprocate in the window frame, a connection between one of the sashes and the bar that causes the swinging of the sash on the reciprocation of the bar, and a bolt movably mounted on the other sash and detachably engaging with the bar to effect its movement with the latter sash and to permit the independent movement of said latter sash.

"2. The combination with a window frame, of a plurality of sashes mounted in said frame to swing, an actuating bar mounted to reciprocate in the window frame, a connection between one of the sashes and the bar that causes the swinging of the sash on the reciprocation of the bar, and a device mounted on the other sash and having a detachable pivotal engagement in the bar and a slidable interfitted mounting on said bar that is operative when the pivotal engagement is detached.

"3. The combination with a window frame, of a plurality of sashes, links pivoted to the frame and to the sashes, reciprocatory actuating bars at the sides of the frame, a pivotal mounting for one sash on the said bars, and a bolt structure mounted on the other sash and having detachable pivotal mountings on the bars and mountings that are slidably interfitted with the bars when the pivotal mountings are disengaged."

"7. The combination with a window frame, of guideways at the opposite sides of the frame, actuating bars mounted to reciprocate in the guideways, upper and lower sashes, connections between the sashes and the frame that permit the sash to swing, pivotal connections between one sash and the bars to cause its swinging movement on the reciprocation of the bars, sliders on the bars adjacent the other sash, and bolts on said other sash that slidably pass through the sliders and detachably interlock with the bars, said bolts when detached from the bars maintaining their engagements with the sliders and causing the sliding movements of the sliders on the bars when the sash is swung."

Adjudicated Patents

(C. C. A. Ohio.) Bucknam patent, No. 1,059,329, for blowpipe apparatus, claims 1 and 4 *Held* valid and infringed. *White Tool & Supply Co.* v. *Air Reduction Co.*, 48 F.(2d) 720.

(D. C. Calif.) Claude patent, No. 1,125,476, for system of illuminating by luminescent tubes, claim 1 *Held* valid and infringed. *Electrical Products Corporation* v. *Neale, Inc.*, 48 F.(2d) 824.

(D. C. Pa.) Lowenstein patent, No. 1,258,423, for variable electrical apparatus, claims 1, 2, 3, 4, 9, and 10 *Held* valid and infringed. *Scovill Mfg. Co.* v. *Balistocky*, 48 F.(2d) 875.

(C. C. A. and D. C. Calif.) Lorraine patents, Nos. 1,396,860, for method and apparatus for separating oil and gas; 1,577,917, for method and apparatus for separating gas and oil; and 1,620,771, for oil and gas separator, and Reissue 15,220, for oil, gas and sand separator, *Held* invalid as to the claims in suit. *Lorraine Corporation* v. *Union Tank & Pipe Co.*, 48 F.(2d) 847 and 848.

(D. C. Calif.) Miller and Harvey patent, No. 1,552,332, for air deflector, *Held* valid but not infringed. *Harvey* v. *Wrightsman*, 48 F.(2d) 845.

(D. C. Tex.) Cook patent, No. 1,783,006, for method of coating pipes, *Held* invalid. *Wailes Dove-Hermiston Corporation* v. *Oklahoma Contracting Co.*, 48 F.(2d) 901.

(C. C. A. N. Y). Berlinger design patent, No. 70,209, for wedding ring, *Held* invalid. *Berlinger* v. *Busch Jewelry Co.*, 48 F.(2d) 812.

TRADE-MARKS

OFFICIAL GAZETTE, JUNE 30, 1931

[VOL. 407. No. 5]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

Raw or Partly-Prepared Materials

Ser. No. 311,150. LITTLE WAR CREEK COAL COMPANY, Charleston and Litwar, W. Va. Filed Feb. 17, 1931.

Litwar

For Coal.
Claims use since 1921.

Ser. No. 311,595. THE CHAMPION FIBRE COMPANY, Canton, N. C. Filed Mar. 2, 1931.

RADIANT

For Soda Pulp.
Claims use since Jan. 15, 1931.

CLASS 2

Receptacles

Ser. No. 314,521. UNION BAG & PAPER CORPORATION, New York, N. Y. Filed May 13, 1931.

UNION
TRANS-O-FACE

The drawing is lined to indicate red.
For Paper Bags.
Claims use since May 4, 1931.

Ser. No. 314,727. UNION BAG & PAPER CORPORATION, New York, N. Y. Filed May 18, 1931.

UNION
TRANS-PAK

The drawing is lined to indicate red.
For Paper Bags.
Claims use since May 12, 1931.

CLASS 3

Baggage, Animal Equipments, Portfolios, and Pocketbooks

Ser. No. 310,730. MAJESTIC LEATHER GOODS CO., INC., New York, N. Y. Filed Feb. 4, 1931.

PREST ACK T

For Travelling Bags; Luggage for Men and Women Comprising Oxford Bags, Club Bags, Gladstone Bags, Railroad Bags, Pullman Bags, Kit Bags, Suit Cases, Satchels, Grips, Dressing Cases, Hat Boxes, and Hand Wardrobe Trunks.
Claims use since Jan. 2, 1931.

CLASS 4

Abrasive, Detergent, and Polishing Materials

Ser. No. 305,386. BESSIE B. BURGESS, doing business as Budge-It Products, New York, N. Y. Filed Sept. 6, 1930.

BUDGE-IT

For Chemical Compound in the Form of a Paste Used for Rug and Carpet Cleaning and Which May Also Be Used for General Household Cleaning Purposes.
Claims use since Aug. 7, 1930.

Ser. No. 309,172. SAUL PALAIS, doing business as Lucky Kat Stove Polish Company, Peabody, Mass. Filed Dec. 19, 1930.

Lucky Kat
SHAKE WELL
STOVE POLISH

The words "Shake Well" and "Stove Polish" are disclaimed apart from the mark shown.
For Stove Polish.
Claims use since Sept. 1, 1930.

Ser. No. 312,688. ADA BALDWIN, Philadelphia, Pa. Filed Mar. 30, 1931.

WET ME WET

For Cleansing and Polishing Compounds for Metal and Glass.
Claims use since 1900.

Ser. No. 313,913. GREEN OIL SOAP COMPANY, Chicago, Ill. Filed Apr. 28, 1931.

GRENOL

For Shaving Cream, Paste Soap, Sweeping Powder, Soap Powder, a Cleanser in Liquid Form for Rubber, Cork, Tile, Wood, Varnished and Enameled Surfaces; Shampoo Base Soap, Surgical Base Soap, Surgical Soap, Shampoo Base and Coco Base Soap.
Claims use since Sept. 15, 1924.

Ser. No. 314,599. COLGATE-PALMOLIVE-PEET COMPANY, Chicago, Ill. Filed May 15, 1931.

The shading in the drawing is to indicate colors. The solid black indicates a black band; the vertical lines at the right end of the band indicate a red seal; and the word "Palmolive" as it appears in the aforementioned black band is in gold.
For Soap.
Claims use since June, 1899.

CLASS 6

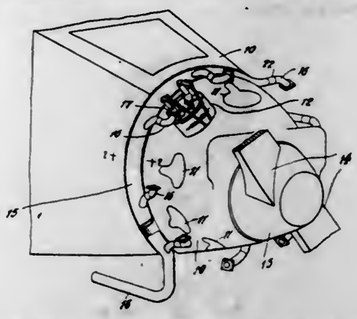
REISSUES

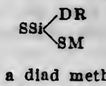
JUNE 30, 1931



18,114. FLUID FILTER. BROR HENNING LUNDBORG, Stockholm, Sweden, assignor to Svenska Ackumulator Aktiebolaget Jungner, Stockholm, Sweden, a Corporation. Original No. 1,648,773, dated Nov. 8, 1927, Serial No. 147,588, filed Nov. 10, 1926, and in Sweden June 19, 1926. Application of reissue filed Mar. 18, 1929. Serial No. 348,100. 2 Claims. (Cl. 210—183.)

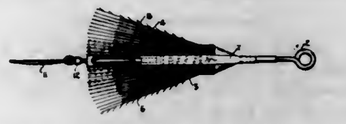
1. In a fluid filter, the combination of a housing closed at one end and a detachable covering member at the other end, the housing having an inlet and an outlet for the fluid to be filtered, said covering member having passages leading from the interior of the housing to the outlet thereof; with a core member detachably connected with the covering member, extending into the housing and spaced therefrom to form an annular chamber communicating with the inlet of the housing, and having a series of grooves extending around its periphery with a duct in its circumferential face intersecting the grooves and communicating with the passages through the covering member; and a sleeve-shaped filtering screen mounted in the annular chamber, including a series of bands spaced apart and respectively positioned opposite to the several grooves in close overlapping relation to the channel edges of the core member to preclude the passage of solid matter through the screen into the grooves.

18,115. EXHAUST MANIFOLD. GUISEPPE M. BELLANCA, New Castle, Del., assignor to Bellanca Aircraft Corporation, New Castle, Del., a Corporation of Delaware. Original No. 1,713,814, dated May 21, 1929, Serial No. 135,770, filed Sept. 16, 1926. Application for reissue filed Mar. 27, 1930. Serial No. 439,520. 16 Claims. (Cl. 244—31.)



1. In an exhaust manifold construction for aeronautical engines of the radial type, a cowl through which the exhaust discharging ends of the radially disposed cylinders project, said cowl being provided with a circumscribing groove in its outer surface adjacent the engine cylinders,

an exhaust manifold mounted in said groove and adjustable circumferentially therein, and a discharge terminal on the exhaust manifold.

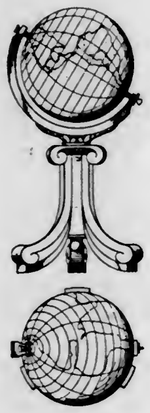


18,116. ORE FLOTATION PROCESS. IRA H. DERBY and ORIN D. CUNNINGHAM, Indianapolis, Ind., assignors to Peter C. Reilly, Indianapolis, Ind. Original No. 1,765,302, dated June 17, 1930, Serial No. 321,269, filed Nov. 22, 1928. Application for reissue filed Oct. 15, 1930. Serial No. 488,986. 9 Claims. (Cl. 209—166.)

1. A process which comprises subjecting ores to froth flotation in the presence of a compound having the general structure,

in which D represents a diad metalloid element oxygen or sulfur, R represents an alkyl, aralkyl or aryl group and M represents alkali-forming metal or hydrogen or alkyl, aryl or aralkyl.

18,117. COMBINED FISHHOOK AND WEED GUARD. JOSEPH E. PFLUEGER, deceased, Akron, Ohio, by the Enterprise Manufacturing Company, Akron, Ohio, a Corporation of Ohio, assignee. Original No. 1,726,502, dated Aug. 27, 1929, Serial No. 793, filed Jan. 6, 1925. Application for reissue filed Mar. 25, 1931. Serial No. 525,629. 12 Claims. (Cl. 43—39.)



1. A fish hook, and a flexible weed guard for the hook, said weed guard having a hook guarding portion and a guiding portion rearwardly thereof and movable over the curved portion of the hook, and a lure attached to the guiding portion of the weed guard.

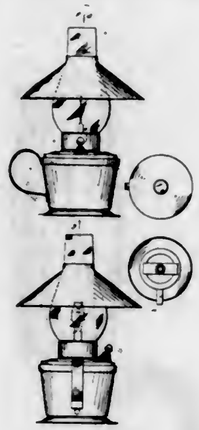
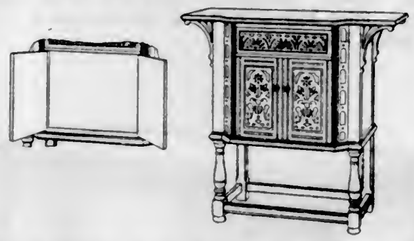
84,537. LAMBREQUIN. MARIE R. OBERTINO, Mineral Point, Mo. Filed Feb. 19, 1931. Serial No. 38,721. Term of patent 7 years.



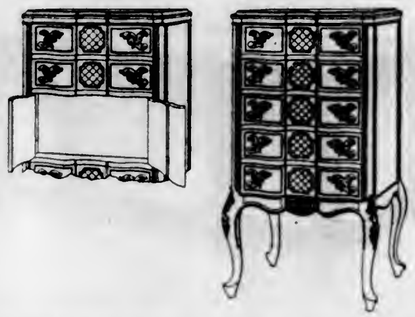
The ornamental design for a lambrequin, as shown.

84,538. BASE FOR LAMP OR ANALOGOUS ARTICLES. FRANK PALLONE, Brooklyn, N. Y. Filed May 12, 1931. Serial No. 39,816. Term of patent 7 years.



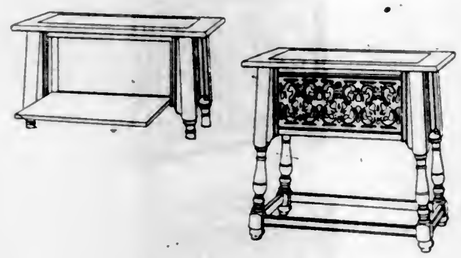
The ornamental design for a base for lamp or analogous articles, as shown.

84,539. ELECTRIC TABLE LAMP. FLOYD S. PARMENTER, Los Angeles, Calif. Filed Mar. 6, 1931. Serial No. 38,970. Term of patent 8½ years.



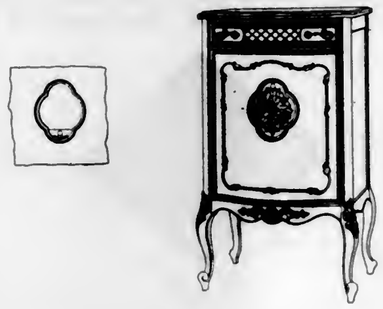
The ornamental design for an electric table lamp, as shown.

84,540. RADIOCABINET OR SIMILAR ARTICLE. GEORGE J. PIKE, Grand Rapids, Mich., assignor to General Motors Radio Corporation, Dayton, Ohio, a Corporation of Ohio. Filed May 8, 1931. Serial No. 39,767. Term of patent 7 years.



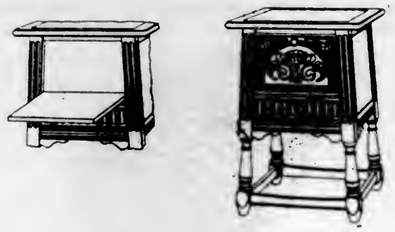
The ornamental design for a radio cabinet or similar article as shown.

84,541. RADIOCABINET OR SIMILAR ARTICLE. GEORGE J. PIKE, Grand Rapids, Mich., assignor to General Motors Radio Corporation, Dayton, Ohio, a Corporation of Ohio. Filed May 8, 1931. Serial No. 39,768. Term of patent 7 years.



The ornamental design for a radio cabinet or similar article as shown.

84,542. RADIOCABINET OR SIMILAR ARTICLE. GEORGE J. PIKE, Grand Rapids, Mich., assignor to General Motors Radio Corporation, Dayton, Ohio, a Corporation of Ohio. Filed May 8, 1931. Serial No. 39,770. Term of patent 7 years.

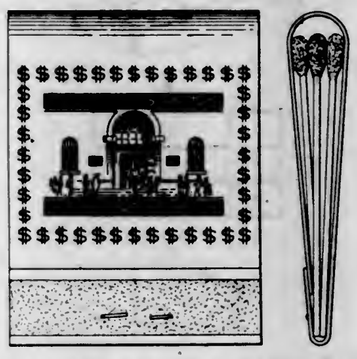


The ornamental design for a radio cabinet or similar article as shown.

84,543. RADIOCABINET OR SIMILAR ARTICLE. GEORGE J. PIKE, Grand Rapids, Mich., assignor to General Motors Radio Corporation, Dayton, Ohio, a Corporation of Ohio. Filed May 8, 1931. Serial No. 39,771. Term of patent 3½ years.

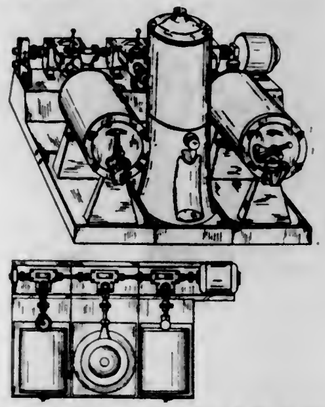
The ornamental design for a radio cabinet or similar article as shown.

84,544. RADIOCABINET OR SIMILAR ARTICLE. GEORGE J. PIKE, Grand Rapids, Mich., assignor to General Motors Radio Corporation, Dayton, Ohio, a Corporation of Ohio. Filed May 8, 1931. Serial No. 39,772. Term of patent 7 years.



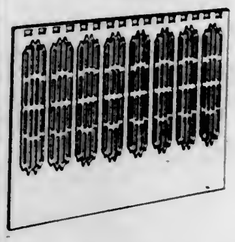
The ornamental design for a radio cabinet or similar article as shown.

84,545. RADIOCABINET OR SIMILAR ARTICLE. GEORGE J. PIKE, Grand Rapids, Mich., assignor to General Motors Radio Corporation, Dayton, Ohio, a Corporation of Ohio. Filed May 8, 1931. Serial No. 39,773. Term of patent 7 years.



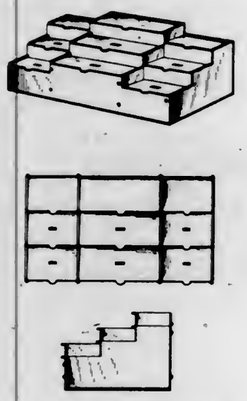
The ornamental design for a radio cabinet or similar article as shown.

84,546. MATCH BOOK. ARTHUR C. POTTER, North Woodstock, Conn. Filed Oct. 13, 1930. Serial No. 37,250. Term of patent 14 years.



The ornamental design for the match book as shown and described.

84,547. CASING FOR A REFRIGERATING, MIXING, AND DISPENSING MACHINE. EUGENE L. REYNOLDS, Portland, Oreg. Filed Nov. 17, 1930. Serial No. 37,691. Term of patent 7 years.

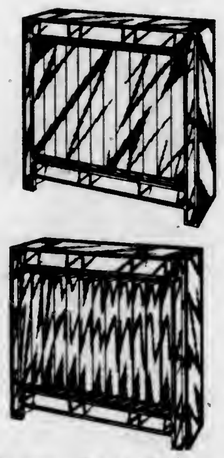


The ornamental design for a casing for a refrigerating, mixing, and dispensing machine, as shown.

84,548. GRILLE FOR A RADIATOR CABINET OR SIMILAR ARTICLE. HARRY RODSTEIN and ISIDORE NATHANSON, Brooklyn, N. Y. Filed Mar. 19, 1931. Serial No. 39,167. Term of patent 7 years.

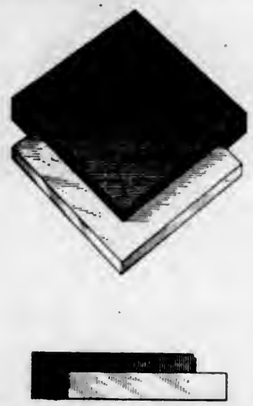
The ornamental design for a grille for a radiator cabinet or similar article, as shown.

84,549. PIN AND NEEDLE STAND. WALTER RUSILAS, Paterson, N. J. Filed Oct. 15, 1930. Serial No. 37,261. Term of patent 7 years.



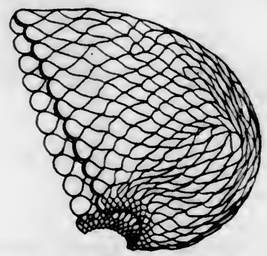
The ornamental design for a pin and needle stand, as shown.

84,550. CONTAINER FOR LIQUIDS OR ARTICLE OF SIMILAR NATURE. PETER SANTURELLO, Columbus, Ohio. Filed Jan. 24, 1931. Serial No. 38,440. Term of patent 14 years.



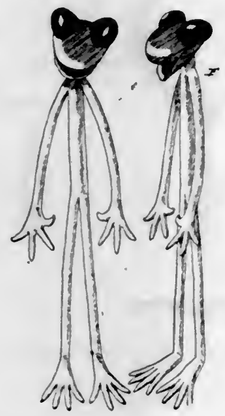
The ornamental design for a container for liquids or article of similar nature, as shown.

84,551. RADIATOR INCLOSURE. ELEANOR P. SCHOLLE, New York, N. Y., assignor to Isabella Barclay, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 26, 1931. Serial No. 39,253. Term of patent 14 years.



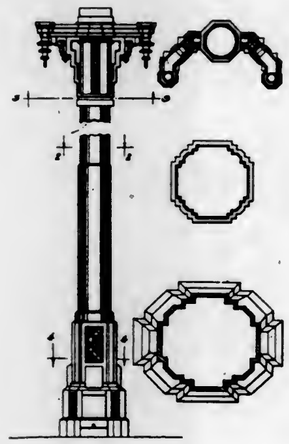
The ornamental design for a radiator inclosure as shown and described.

84,552. BASE FOR A DISPLAY STAND OR SIMILAR ARTICLE. VICTOR N. SIEGEL, Paris, France. Filed Apr. 29, 1930. Serial No. 35,432. Term of patent 3½ years.



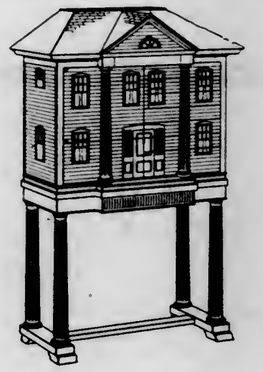
The ornamental design for a base for a display stand or similar article, as shown and described.

84,553. HAIR NET. NAT L. SOLOMON, Brooklyn, N. Y. Filed Nov. 21, 1930. Serial No. 37,752. Term of patent 14 years.



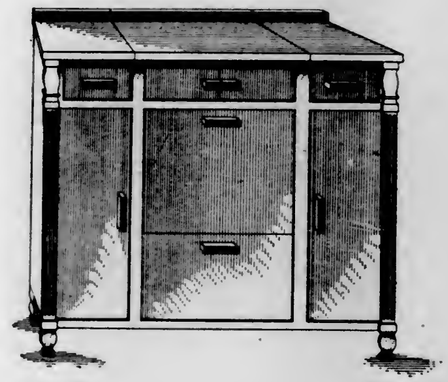
The ornamental design for a hair net as shown.

84,554. TOY FIGURE. WILMA FRITSCHY THOMPSON, New York, N. Y. Filed Apr. 25, 1931. Serial No. 39,628. Term of patent 7 years.



The ornamental design for a toy figure, substantially as shown.

84,555. LIGHTING POST. WESTERN UNDERWOOD, Santa Monica, Calif. Filed Sept. 24, 1930. Serial No. 37,065. Term of patent 14 years.



The ornamental design for a lighting post, as shown.

84,556. OPERATING ROOM CABINET OR SIMILAR ARTICLE. ELMER M. WACHTEL, Two Rivers, Wis., assignor to Hamilton Manufacturing Company, Two Rivers, Wis., a Corporation of Wisconsin. Filed Mar. 16, 1931. Serial No. 39,110. Term of patent 7 years.

The ornamental design for an operating room cabinet or similar article substantially as shown.

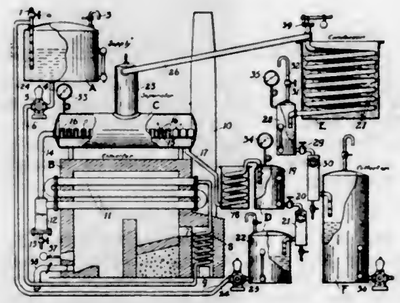
84,557. RANGE. GEORGE D. WILKINSON, Oak Park, and ELMER D. PELLEGRIN, Des Plaines, Ill., assignors to Cribben & Sexton Company, Chicago, Ill., a Corporation of Illinois. Filed May 7, 1931. Serial No. 39,756. Term of patent 7 years.

The ornamental design for a range as shown.

84,558. COMB. JOSEPH ZAPPULLA, Bay Shore, Long Island, N. Y. Filed Apr. 16, 1931. Serial No. 39,496. Term of patent 3½ years.

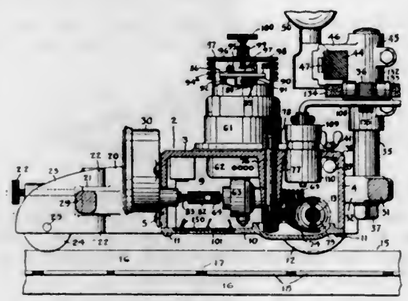
The ornamental design for a comb as shown.

84,559. HAND MIRROR. JOSEPH ZAPPULLA, Bay Shore, Long Island, N. Y. Filed Apr. 16, 1931. Serial No. 39,497. Term of patent 3½ years.



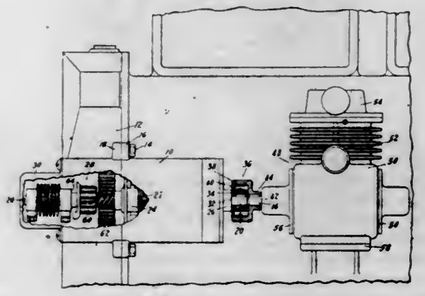
The ornamental design for a hand mirror as shown.

PATENTS



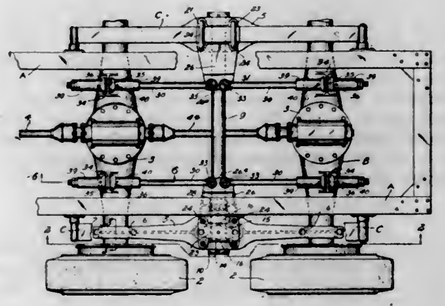
GRANTED JUNE 30, 1931

1,811,834. APPARATUS FOR THE CONVERSION AND TRANSFORMATION OF HYDROCARBONS, LIQUIDS AND FLUIDS. JOSEPH H. ADAMS, Brooklyn, N. Y., assignor, by mesne assignments, to The Texas Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 26, 1916, Serial No. 74,337. Renewed Jan. 12, 1929. 18 Claims. (Cl. 106—109.)



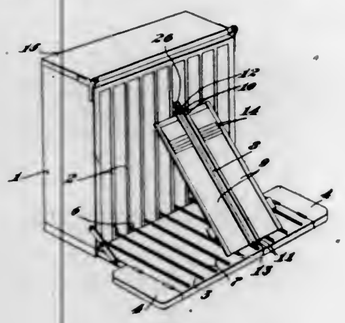
1. Apparatus for converting high boiling hydrocarbon oil into lower boiling products, comprising a tubular oil converter, maintained at a cracking temperature, means for supplying oil to said converter at the top, means for discharging products at the bottom, a carbon and residue collecting device connected to said discharge and extending below the point of discharge, means for drawing off the collected residue and carbon in said device, a separating chamber connected at the upper portion of said collecting device to receive the vapors and oil therefrom, and means for separately drawing off the converted vapors and unconverted oil from said separating chamber.

1,811,835. PORTABLE CUTTING AND WELDING MACHINE. JAMES L. ANDERSON, Tenafly, N. J., assignor to Air Reduction Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 12, 1930. Serial No. 495,047. 29 Claims. (Cl. 266—23.)



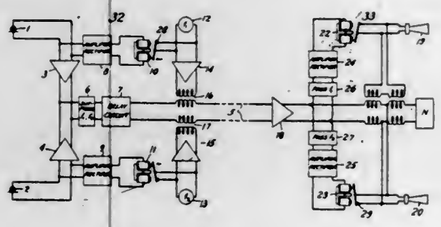
10. A machine for cutting or welding of metals, comprising a portable wheeled torch-carriage capable of traveling on a track or on the surface of the work, a motor on the carriage, a constant-speed-ratio drive from said motor to part of the wheel support of the carriage, an adjustable governor for the motor, and a translation-speed indicator operated by said drive.

1,811,836. COMBINED STARTING AND PUMPING SYSTEM FOR MOTOR VEHICLES. VINCENT G. APPLE, Dayton, Ohio, assignor to Bendix Brake Company, South Bend, Ind., a Corporation of Illinois. Filed Jan. 30, 1929. Serial No. 336,300. 10 Claims. (Cl. 290—28.)



1. Automotive apparatus comprising, in combination, an internal combustion engine, an electric circuit including an electric motor, a pump, means automatically responsive to the rotation of the motor in the one direction to connect the motor to the engine for starting, means automatically responsive to rotation of the motor in the other direction to connect the motor to the pump for pumping, a switch in said circuit manually operable to make the circuit for rotating the motor in the starting direction and automatically returnable to its normal position to permit the making of the circuit therethrough for rotating the motor in the pumping direction.

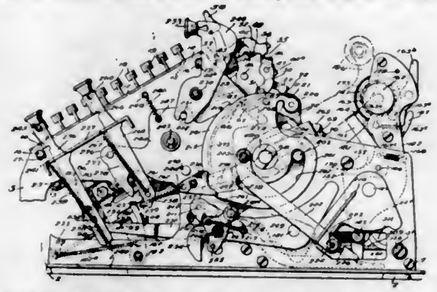
1,811,837. MOTOR VEHICLE. HERBERT W. ALDEN, Detroit, Mich., assignor to The Timken-Detroit Axle Company, Detroit, Mich., a Corporation of Ohio. Filed June 28, 1928. Serial No. 288,931. 15 Claims. (Cl. 180—22.)



1. In a motor vehicle, a truck comprising two driving axles and side frames connecting said driving axles, members fixed to said side frames intermediate said axles, collars sleeved on said members, spring seats supported on said collars, and connections between said spring seats and said collars permitting transverse rocking movement of said truck side frames relative to said spring seats.

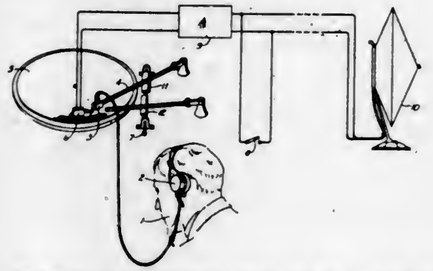
1,811,838. CABINET INDEX. STANLEY ANTHONY, Boston, Mass. Filed Feb. 7, 1930. Serial No. 426,572. 10 Claims. (Cl. 45—2.)

1. An index comprising a cabinet open at the front, a movable carrier normally housed in upright position within the cabinet with its lower end supported by the cabinet bottom, an arm pivoted within the upper portion of the cabinet and connected to the carrier so that the carrier is slidable along the arm, said connection constraining the carrier to move parallel to the arm, means for supporting the lower end of the carrier when it is moved outwardly of the cabinet, and means for limiting the outward movement of the carrier so that the extended carrier is supported at an inclination to the cabinet front.



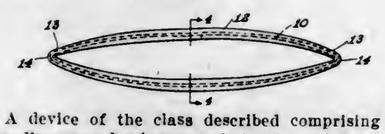
1,811,839. SOUND TRANSMISSION. HAROLD D. ARNOLD, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed June 14, 1929, Serial No. 370,794. 6 Claims. (Cl. 179—100.4.)

1. In a transmission system a plurality of variously located sound pick-up devices, a plurality of signaling means, a transmission line including means common to the devices for delaying currents of voice frequencies, circuits for the signaling means independent of the delaying means, a plurality of receivers variously located to correspond to the pick-up devices, and means responsive to the signaling means for selectively associating the receivers with the line.



1,811,840. ADDING MACHINE. GLENN J. BARRETT, Evanston, Ill., assignor to Portable Adding Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 14, 1925. Serial No. 50,219. 6 Claims. (Cl. 235—60.)

2. The combination of an adding sector, a register wheel, a rock frame supporting said register wheel, a spring normally holding said rock frame with the register wheel in engagement with the adding sector, a rock arm connected to said rock frame, a handle operated cam disc, a lever pivoted on said rock arm and carrying a roller, a spring connected to said lever and to the rock arm normally holding said lever against a stop with the roller in position to be engaged by the said cam disc on the forward stroke of the handle to force the register wheel out of engagement with the adding sector without moving the lever on its pivot; and means to cause the lever to turn on its pivot to swing the roller out of the

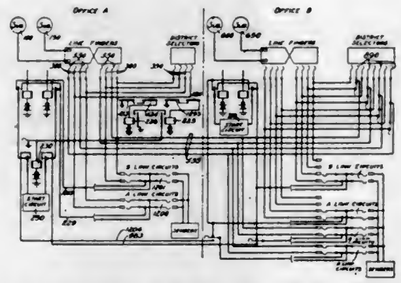


path of the cam disc at the beginning of the return stroke of the handle to thereby permit the register wheel to immediately snap back into engagement with the adding sector, the cam disc being shaped to permit the pivoted lever to snap back to normal position on completion of the return stroke of the handle.

1,811,841. SOUND REPRODUCING SYSTEM. JOHN C. BENJAMIN, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed July 13, 1928. Serial No. 292,533. 3 Claims. (Cl. 179—100.4.)

1. The method of eliminating noise in the reproduction of a sound record which consists in reproducng the record for monitoring purposes and separately reproducing for entertainment purposes only those portions of the record upon which matter has been recorded as indicated by the monitoring reproduction.

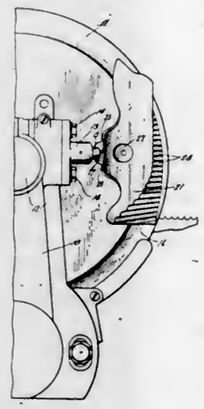
1,811,842. HAIR FASTENER. ELSIE BOSSART, New York, N. Y. Filed Feb. 28, 1931. Serial No. 518,999. 2 Claims. (Cl. 132—48.)



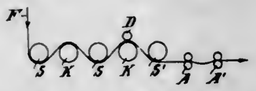
1. A device of the class described comprising a resilient endless core having oppositely disposed arcuate sides joined at the ends, said core having a cover of flexible material, the diameter of said sides being largest at the middle and lessening towards the ends.

1,811,843. ANTISLIP FABRIC. LESTER B. CHISHOLM, Waterbury, Conn., assignor to The American Mills Company, Waterbury, Conn., a Corporation. Continuation of application Serial No. 380,869, filed July 25, 1929. This application filed May 23, 1930. Serial No. 455,129. 8 Claims. (Cl. 139—421.)

1. An anti-slip fabric comprising interwoven warp and weft strands; and a ribbon of resilient anti-slip material folded transversely upon itself and secured to the fabric by strands extending transversely across the ribbon at spaced intervals, the said folded ribbon and the said strands for holding the same in place both being positioned to permit one of the folded reaches of the former to bulge outward from the face of the fabric between the said strands to form a series of protuberant and resilient anti-slip pockets.

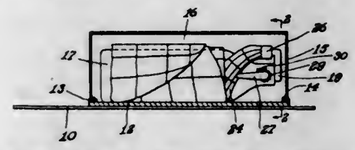


1,811,844. AUTOMATIC TELEPHONE EXCHANGE SYSTEM. AMOS F. DIXON, Jersey City, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 6, 1930. Serial No. 418,861. 11 Claims. (Cl. 179—18.)



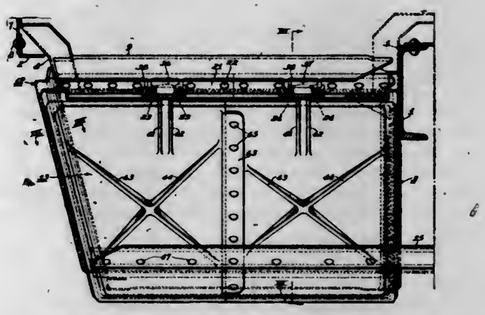
1. A telephone exchange system comprising a plurality of offices, call distributing and call extending equipment at each office, trunks connecting said offices, means including said trunks for associating call distributing equipment at one office with the call extending equipment of another office independently of the call extending equipment of the first office, and means for thereupon completing any call originated in said first office over the call extending equipment of said other office.

1,811,845. DEFLECTOR FOR SLICING MACHINES. JOSEPH FOLK, La Porte, Ind., assignor to U. S. Slicing Machine Company, La Porte, Ind., a Corporation of Indiana. Filed Apr. 13, 1927, Serial No. 183,391. Renewed Oct. 23, 1929. 11 Claims. (Cl. 146—102.)



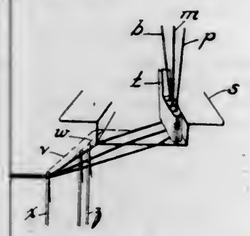
1. The combination with a slicing knife, of a deflector for directing slices away from the knife, a support for said deflector adjustable in a plane substantially parallel to the plane of the edge of said knife to adjust said deflector along the edge portion of said knife toward and away from the cutting edge thereof, means for detachably securing said deflector to said support, and means for relocating said deflector on said support in a predetermined position relative thereto after removal of said deflector to permit cleaning.

1,811,846. METHOD OF PRODUCING FANCY FIGURES ON TEXTILE MATERIAL BY MERCERIZATION. EMIL GMINDER, Reutlingen, Germany. Filed Mar. 11, 1927, Serial No. 174,473, and in Germany Mar. 13, 1926. 3 Claims. (Cl. 8—20.)



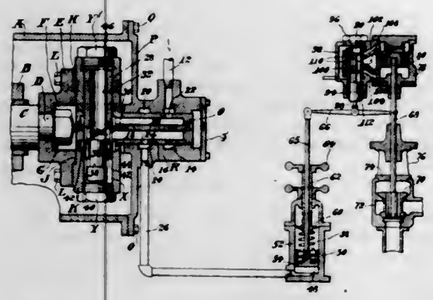
1. The process of producing a design or fancy figures on vegetable fabrics which consists in impregnating the fabric with a caustic solution, putting the fabric under tension, neutralizing said medium at certain points while still under tension to produce the said design or fancy figures, thereafter releasing the tension to permit shrinking of the unneutralizing portions, and neutralizing said last mentioned portions while in sbrunken condition.

1,811,847. VALVE CONTROLLED LIFE PRESERVER. OSCAR HELLRICH, New York, N. Y. Filed Feb. 28, 1931. Serial No. 519,031. 5 Claims. (Cl. 9—19.)



1. In a device of the class described, a support plate, a cushion on said support plate, a hinged cover secured to said plate and adapted to rest on said cushion in leakproof condition, a balloon adapted to be folded beneath said cover, a flask connected to said balloon mounted on said support plate, a valve in said flask and means on said cover for opening said valve in said flask upon opening of said cover.

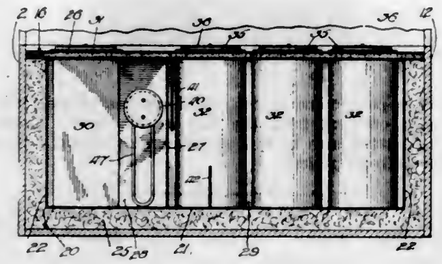
1,811,848. HOPPER CAR DOOR. EDWARD HILL HOLMES, McKees Rocks, Pa., assignor to Fort Pitt Malleable Iron Company, McKees Rocks, Pa., a Corporation of Pennsylvania. Filed Dec. 11, 1930. Serial No. 501,531. 13 Claims. (Cl. 105—280.)



1. In a hopper car door structure, in combination, a door frame comprising two integral castings joined to constitute connected top, side and bottom members, and a door for cooperating with the frame comprising two integral castings joined to constitute a solid plate.

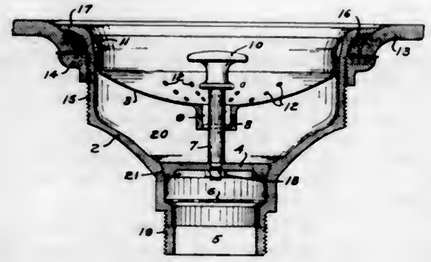
1,811,849. PROCESS OF KNITTING PLATED FABRIC. HAROLD E. HOUSEMAN, Edge Moor, Del., assignor to Standard-Tramp Bros. Machine Company, Wilmington, Del., a Corporation of Delaware. Original application filed Apr. 20, 1928, Serial No. 271,428. Divided and this application filed Feb. 12, 1929. Serial No. 339,327. 15 Claims. (Cl. 66—36.)

1. The process of producing on a knitting machine a plated knitted fabric which comprises feeding three threads toward the needles, imposing such differential tension on the threads as to cause one thread to normally appear on the face, and the other threads respectively in the center, and on the back, of the fabric in plated relation, manipulating threads engaged by certain needles to bring a second thread on the face, and the other threads respectively in the center, and on the back, of the fabric in plated relation, and manipulating threads engaged by other needles to bring a third thread on the face, and the other threads respectively in the center, and on the back, of the fabric in plated relation.



1,811,850. CENTRIFUGAL HYDRAULIC SPEED GOVERNOR. LESLIE R. HUFF, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 10, 1930. Serial No. 494,611. 5 Claims. (Cl. 264—14.)

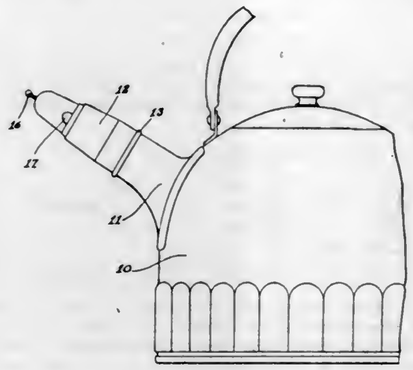
1. A hydraulic speed governor, comprising a casing adapted to be attached to a rotary member and having a valve chamber therein, a projection on the casing having an inlet and a connecting passage extending into the valve chamber, a hydraulically operated valve in the valve chamber having a groove in its outer periphery extending across the inlet and connecting passages, a longitudinal bore in the valve, said bore being closed at one end by a sliding plunger, said valve adapted to be centrifugally moved by the rotation of the rotary member to change the relationship between the groove and the passages.



1,811,851. SODA FOUNTAIN. FRANKLIN B. HUNT, Chicago, Ill., assignor, by mesne assignments, to The Liquid Carbonic Corporation, Chicago, Ill., a Corporation of Delaware. Filed Apr. 20, 1925. Serial No. 24,333. 7 Claims. (Cl. 62—95.)

2. A cooling cabinet for soda fountains comprising a plurality of compartments, a heat-transmitting partition wall separating adjacent compartments, a baffle wall extending parallel to said partition wall and spaced therefrom in one of said compartments, a fluid cooling medium

in said last mentioned compartment contacting with said partition wall and said baffle wall, and refrigerating means located in the other of said compartments.

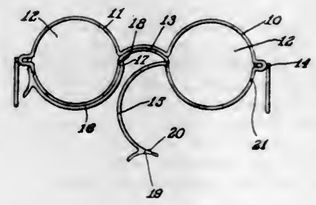


1,811,852. STRAINER. JULIUS S. JUDELL, Shorewood, Wis., assignor to Milwaukee Flush Valve Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 3, 1928. Serial No. 316,928. 5 Claims. (Cl. 4—287.)

1. In combination, a member forming a pocket having maximum internal diameter at its upper end and having an outlet at the lower end thereof, a strainer disposed entirely within said pocket, said strainer being formed with a flange at its upper end resting directly upon the upper enlarged internal portion of said member and having a downwardly dished bottom provided at its lowermost portion with an opening located above said outlet, a stopper movable beneath the lowermost portion of said strainer to control said outlet, a rod secured to said stopper and freely movable longitudinally through and rotatable within said opening, and an abutment carried by said rod and cooperable with the bottom of said strainer to hold said stopper in open position, said abutment being formed to enter said opening during closing of said stopper.

1,811,853. KETTLE ALARM. GERALD LANDMAN, Ozone Park, N. Y. Filed Dec. 29, 1930. Serial No. 505,303. 2 Claims. (Cl. 116—140.)

1. A device of the class described comprising a substantially tapering body having openings therein, a block slidable in said body and having longitudinal channels therein said body having vibrating tongues thereon at the ends of said channels adjacent said openings, and means for varying the longitudinal position of said block with

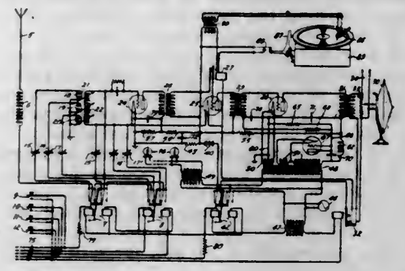


respect to said openings in order to vary the pitch of vibration of said means upon the passage of steam through said openings.

1,811,854. MANUFACTURE OF CARBON BLACK. GEORGE CHARLES LEWIS, New Dorp, N. Y., assignor to Columbian Carbon Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 19, 1928. Serial No. 271,407. 7 Claims. (Cl. 134—60.)

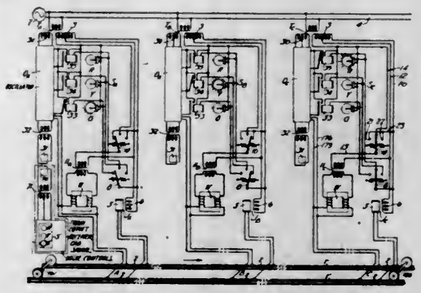
4. The process of producing carbon black which includes burning a mixture of hydrogen and a hydrocarbon gas with impingement of the flame on a cooling or collecting surface.

1,811,855. SUPPORT FOR HOLDING SPECTACLES ABOVE THE LINE OF VISION. HERBERT LODDE and JOHN DIECKMANN, New York, N. Y. Filed Aug. 13, 1930. Serial No. 474,976. 3 Claims. (Cl. 88—41.)



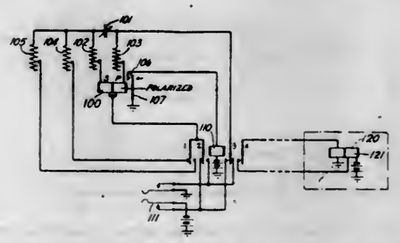
1. In combination with spectacles, a pair of lens rings forming part of a frame, each lens ring having a finger pivotally secured thereto, said finger being adapted to rotate from the unused to the depending and used position, and means at the extremity of said finger for supporting said eyeglass frame upon the nose of the user in a position in which the eyeglass frame is raised above the vision of the user.

1,811,856. SWITCHING DEVICE FOR RADIO AND PHONOGRAPH COMBINATIONS. MAURICE B. LONG, Glen Ridge, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Original application filed Oct. 1, 1926, Serial No. 138,854. Divided and this application filed May 26, 1927. Serial No. 194,342. 13 Claims. (Cl. 179—100.4.)



1. In combination, a radio receiver, a phonograph having an electrical reproducer and record actuating means,

start-stop mechanism for the latter, a sound reproducer, and a switch for connecting said radio receiver and said electrical reproducer to said sound reproducer alternative-



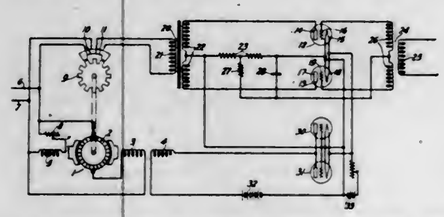
ly, said switch being connected to said start-stop mechanism and operated in the normal operation of said start-stop mechanism.

1,811,857. RAILWAY TRAFFIC CONTROLLING SYSTEM. LAURENCE E. MELHUISH, Glen Ridge, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 30, 1926. Serial No. 151,664. 7 Claims. (Cl. 246—30.)

1. In combination, a source of waves differing in frequency, a body movable relatively to said source, means responsive to said waves for controlling the motion of said body, said means comprising a source of waves of frequency differing from said other frequencies, means for combining said waves from said sources to produce resulting waves of frequencies different from the frequencies of said combined waves, and means responsive to said resulting waves for controlling the motion of said body.

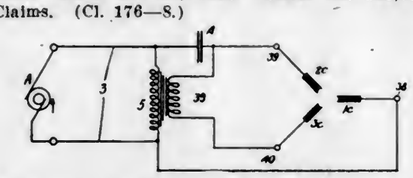
1,811,858. CONTROL SYSTEM FOR TRANSMISSION OF SIGNALS. OLIVER R. MILLER, Floral Park, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 30, 1929. Serial No. 359,365. 14 Claims. (Cl. 175—373.)

6. A system for transmitting impulses and for regulating the duration of each impulse and the open period between



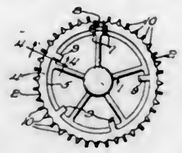
impulses comprising a polarized electromagnet having a primary and a secondary winding arranged to oppose each other when both are energized, an armature for said electromagnet, a condenser in series circuit with said secondary winding for limiting the duration of current flow through said winding, variable shunts for said secondary winding for altering the duration of current flow through said secondary winding for separately controlling the duration of impulses and the open period between impulses, and a second electromagnet operable in response to the movement of said armature in one direction and released by the movement of said armature in the opposite direction for transmitting said impulses for controlling the direction of current flow through said primary and secondary windings to operate said armature in either direction and for selecting the proper shunt for association with said secondary winding for each operation of said armature.

1,811,859. SELF COMPUTING LEVELING ROD. CHESTER H. MILLS, Wichita, Kans. Filed Apr. 2, 1928. Serial No. 266,507. 4 Claims. (Cl. 33—74.)



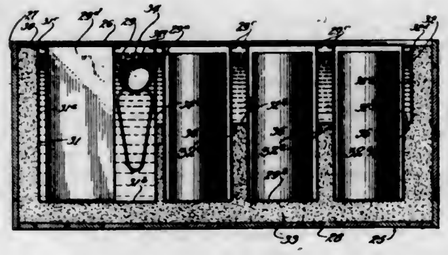
1. In a device of the class described, a lower rod and an upper rod slidably associated; an extension below the lower rod as a base element and means for adjustably positioning the same with respect to said lower rod; said means including a plate slidably mounted on the lower rod near the base thereof, said plate having openings for receiving a plunger mechanism; a plunger mechanism carried by the extension member and adapted to engage within a selected opening in said plate for adjustably positioning the parts as previously stated.

1,811,860. REGULATOR SYSTEM. EDMUND R. MORTON, Brooklyn, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed May 25, 1929. Serial No. 365,904. 12 Claims. (Cl. 172—293.)



1. In combination a dynamo-electric machine, means comprising a detector for regulating said machine to maintain a characteristic thereof constant, and auxiliary means operating on said detector upon tendency of the machine characteristic to change for applying a relatively large corrective force to said machine to return the characteristic thereof to normal and for gradually reducing the corrective force.

1,811,861. ILLUMINATING APPARATUS. ALEXANDER NYMAN, Dobbs Ferry, N. Y., assignor to Radio Patents Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 20, 1926. Serial No. 143,008. 2 Claims. (Cl. 176—8.)

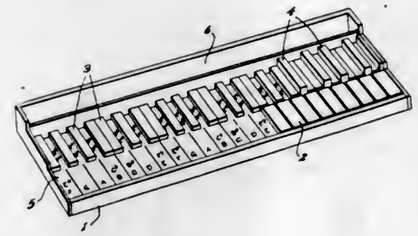


2. A system for producing constant illumination from single phase alternating current, comprising a lighting unit having at least three electrodes in operative relation to each other, a single phase alternating current supply line, two of the said electrodes being inductively coupled to the supply line by a transformer, two of the said electrodes being connected across the supply line through a condenser, and two of the said electrodes being connected across the supply line through the secondary winding of said transformer in series with said condenser, whereby currents in three phase relation are supplied to the lighting unit.

1,811,862. LAWN MOWER ACCESSORY. SARAH E. PIERCE, Conshohocken, Pa. Filed Mar. 11, 1929. Serial No. 345,940. 3 Claims. (Cl. 301—40.)

1. A traction band for attachment to a lawn mower wheel having contiguous transverse corrugations, said band comprising a correspondingly corrugated sheet metal strip for circumferentially embracing the wheel, said strip having integral radial traction projections struck out therefrom, the ends of said strip being laterally fashioned for engagement by fasteners for connecting said ends to clamp the band upon a wheel, one margin of said band being formed with an integral lateral projection adapted to be bent beneath the wheel rim and into driving engagement with the spokes of the wheel.

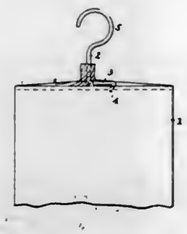
1,811,863. COOLER CABINET. JABEZ H. PRATT and FRANKLIN B. HUNT, Chicago, Ill., assignors, by mesne assignments, to The Liquid Carbonic Corporation, Chicago, Ill., a Corporation of Delaware. Filed Mar. 6, 1926. Serial No. 92,744. 7 Claims. (Cl. 62—95.)



1. A cooler cabinet comprising an outer casing, a brine tank mounted in said casing and having a pair of brine

compartments of different depths, an ice cream receptacle located in one of said brine compartments, refrigerating means located in said brine compartment with said receptacle, and another ice cream receptacle extending downwardly into the other of said brine compartments and through the bottom wall thereof.

1,811,864. PROCESS OF LIBERATING FIBER FROM BAGASSE OR LIKE STALKS. GEORGE A. RICHTER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Jan. 20, 1927. Serial No. 162,417. 7 Claims. (Cl. 92—14.)



1. A process which comprises steeping bagasse or similar monocotyledons at about room temperature in an alkaline liquor of an alkalinity of at least 7% caustic soda equivalent until such liquor has diffused into and penetrated such stalks, and then cooking such stalks at atmospheric pressure in such liquor.

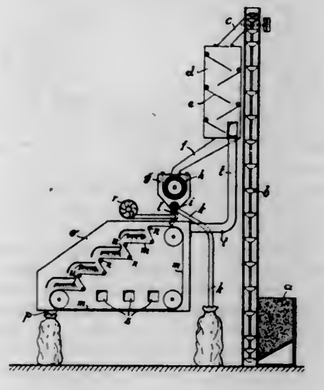
1,811,865. MECHANISM FOR USE IN MUSICAL INSTRUCTION. GEORGE ARTHUR ROGERS, New York, N. Y. Filed Mar. 31, 1930. Serial No. 440,397. 4 Claims. (Cl. 84—482.)

3. A device of the character described comprising a tray having a rim, and a plurality of removable keys of rectangular and regular shape filling the said tray from the rim at one end thereof to the rim at the other end thereof, said keys being removable and reversible and retained in either normal or reversed position by said rim.

1,811,866. METHOD OF AND IMPLEMENT FOR CLOSING BAGS. HERBERT RUMSEY, Jr., Nutley, N. J., assignor to Henry Muhs Company, Passaic, N. J., a Corporation of New Jersey. Filed July 21, 1930. Serial No. 469,613. 3 Claims. (Cl. 24—30.5.)

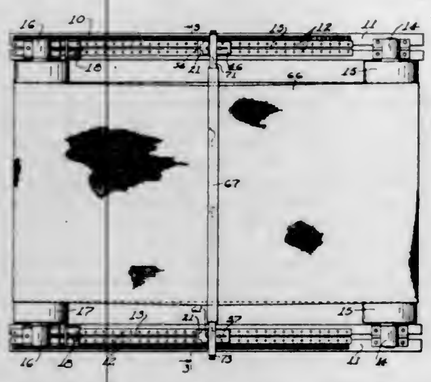
2. The hereindescribed method of constricting the mouth of a mouthed container of flexible material which consists in puncturing its mouth portion with a twisting implement having a portion to puncture said mouth portion, then turning said implement relatively to the remainder of the container in a direction to twist said mouth portion thereof and finally causing said portion of the implement to puncture the container at a point removed from its thus-twisted mouth portion, whereby the implement will retain said mouth portion in its twisted state.

1,811,867. SELF ROTATING AIR SCREW FOR THE AERODYNAMIC BRAKAGE OF AEROPLANES AND THE LIKE. GIOVANNI SERRAGLI, Florence, Italy. Filed Sept. 27, 1930, Serial No. 484,813, and in Italy Oct. 24, 1929. 5 Claims. (Cl. 244—19.)



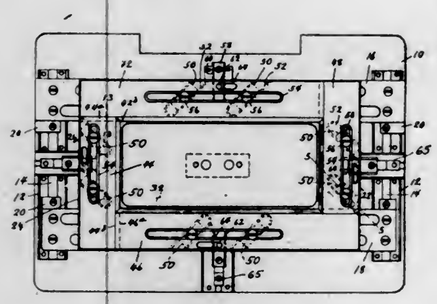
1. Braking air screw for retarding the descent of aeroplanes and the like, characterized by the fact that it is mounted loose on a shaft at right angle to the direction of the traction axis of the aeroplane, which corresponds normally to the vertical position, and is formed by four blades rigidly fixed to a hub, three of which blades forming an angle of inclination nil or practically nil with the plane of revolution of the air screw, so that when the direction of movement of the airplane coincides with the plane of the air screw, the fourth blade acts as a steering surface to prevent the air screw from revolving and when the aeraplane inclines forward the screw starts revolving thus acting as a brake for moderating the velocity of the descent.

1,811,868. PROCESS FOR PREPARING 1,8-CINEOL (EUCALYPTOL). SIEGFRIED SKRAUP, Wurzburg, and OTTO HIRSCHLER, Dusseldorf-Oberkassel, Germany, assignors to Rheinische Kampfer-Fabrik G. m. b. H., Dusseldorf-Oberkassel, Rhineland, Germany, a German Firm. Filed Aug. 10, 1929, Serial No. 385,062, and in Germany Aug. 21, 1928. 10 Claims. (Cl. 260—153.)



1. The process for preparing 1,8-cineol (eucalyptol) which comprises the steps of treating at temperatures below 0° C. mixtures containing 1,4-cineol and 1,8-cineol with mineral acids having a hydrating action, separating any terpene hydrocarbons which may be present, and subjecting the solution to steam distillation.

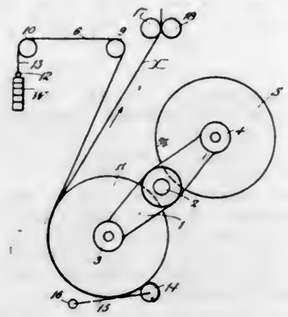
1,811,869. METHOD FOR REMOVING THE MOLDY SMELL AND TASTE OF TAINTED CEREALS AND THE LIKE. EDMUND VON HORVATH and PETER VIELWERTH, Munich, Germany. Filed Jan. 20, 1928, Serial No. 248,075, and in Germany Jan. 20, 1927. 5 Claims. (Cl. 99—11.)



1. The process of reconditioning tainted cereals, legumes and the like which comprises exposing the moist material to a drying temperature not exceeding approximately 55° C. until the excess moisture therein has been removed and its normal water content substantially restored, and effectually subjecting the material to the action of ultra-violet rays for a period not substantially exceeding five minutes.

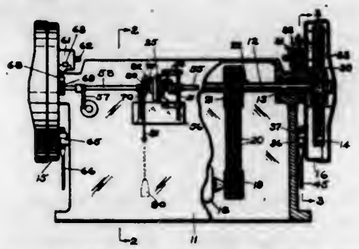
1,811,870. MEANS FOR AND METHOD OF TREATING FOURDRINIER WIRE BELTS. ALBERT B. WEISSENBORN, Appleton, Wis., assignor to Appleton Wire Works, Appleton, Wis., a Corporation of Wisconsin. Filed Nov. 13, 1929. Serial No. 406,887. 19 Claims. (Cl. 140—108.)

1. Apparatus for crooking a woven wire belt, comprising, in combination, means for supporting the belt at longitudinally spaced points, clamping means transversely engaging the belt at a region intermediate said spaced supporting means, means for displacing said clamping means, laterally of the direction of the belt to shift the belt toward one side substantially in its plane for producing angularly related flights between said clamping means and said spaced points and means for stretching the belt longitudinally.



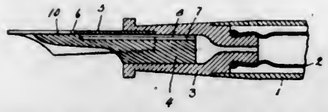
1,811,871. FOLDING MACHINE. JOSEPH W. ANTHONY, Lynn, Mass. Filed Dec. 13, 1928. Serial No. 325,826. 23 Claims. (Cl. 154—41.)

3. In a folding machine, folding elements arranged to fold over the material at the sides and also at the included corner of a blank consisting of a pair of folding plates which bound a folding space and have inner folding edges, the end of one plate closely confronting the inner folding edge of the other plate and means to move said plates simultaneously inwardly of and around the folding space.



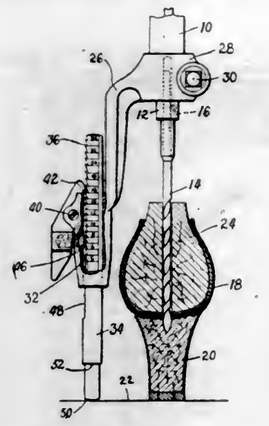
1,811,872. WEB ROLL CHANGER. HARRY V. BALL, Concord, Mass., and WALTER OGDEN, Cleveland, Ohio, assignors to R. Hoe & Co., Inc., New York, N. Y., a Corporation of New York. Filed Aug. 17, 1925. Serial No. 50,536. 16 Claims. (Cl. 242—75.)

16. In a roll changer, a rotatable web roll carrier adapted to carry a spare web roll and a running web roll, a tension device including a belt support therefor, said support being located within the space through which the web rolls pass when the carrier is rotated, and a belt engaging the



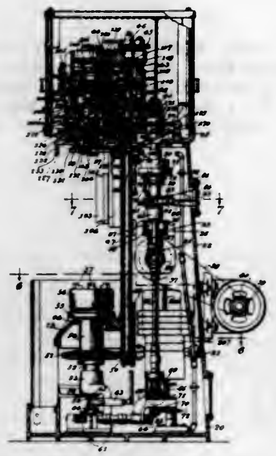
surface of the running roll and having one end fastened to the belt support and the other end held yieldingly under tension.

1,811,873. SPEED CONTROL DEVICE FOR GRINDING MACHINES. ALBERT G. BELDEN and GLENN C. NARAMORE, Worcester, Mass., assignors to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed June 29, 1929. Serial No. 374,796. 8 Claims. (Cl. 51—166.)



1. A grinding machine comprising a base, a spindle rotatably mounted thereon, a grinding wheel on said spindle, a variable speed motor to rotate the wheel, an electrical speed control device to regulate the rate of rotation of said wheel which includes a movable control member, a contact member movable relative to the wheel periphery and limited in its movement by contact therewith, and a stop device independently of and in the path of the control member and movable with the contact member, said parts being so arranged that the control member may be moved independently but may not be moved to increase the wheel speed above a predetermined limit until the wheel has worn away to a predetermined smaller size.

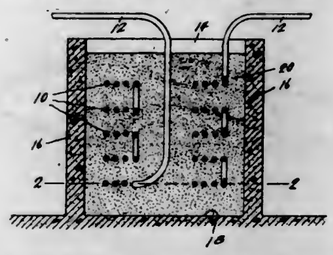
1,811,874. FOUNTAIN PEN. EDWARD C. BERRY, Melrose, Mass., assignor to The Chilton Pen Company, Inc., Long Island City, N. Y., a Corporation of New York. Filed Jan. 30, 1929. Serial No. 336,171. 9 Claims. (Cl. 120—50.)



1. A fountain pen feed adapted for use in connection with a pen having an aperture and a slit extending therefrom to its writing point, said feed having an elongated unrecessed face arranged to extend from points adjacent the pen point to points beyond the pen aperture and to fit against its middle portion about its aperture and at each side of its slit, to provide a capillary feeding face thereto, and having a passage therein arranged to feed the ink to the inner end and side edges of said face.

1,811,875. HEEL DRILLING MACHINE. FREDERIC E. BERTRAND, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 9, 1929. Serial No. 331,375. 6 Claims. (Cl. 144—93.)

1. In a machine having a rotating drill holder, the combination of a gage carrier having a clamp by which it may be secured to the machine in fixed longitudinal relation to the drill holder, a depth gage member movable through said carrier in a direction parallel to the axis of the drill holder, spaced teeth upon the gage member, and a hook upon the carrier arranged to engage any one of said teeth to secure the gage in various definite positions relatively to the drill holder.

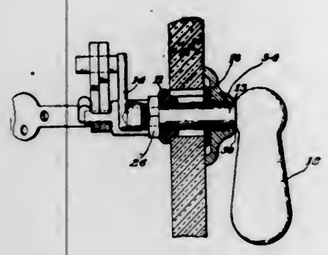


1,811,876. VERTICAL SPINDLE MACHINE TOOL. EDWARD P. BULLARD, Jr., Stratford, Conn., assignor, by mesne assignments, to The Bullard Company, Bridgeport, Conn., a Corporation of Connecticut. Filed July 8, 1925. Serial No. 42,186. 18 Claims. (Cl. 82—2.)

1. In a machine tool of the character described, the combination of a base, a rotary work carrying spindle mounted in said base, a column extending upwardly from said base at one side of said spindle, tool slide means mounted in said column, feed works mounted at the upper end of said column operatively connected with said tool slide means to move said means into and out of relation with said spindle, drive means for said spindle, drive means for driving said feed works and spindle drive comprising a continuously driven shaft vertically disposed in said column, an intermittent drive shaft in axial alignment with said continuously driven shaft and operatively connected to said feed works and spindle drive for simultaneously driving them, clutch means for connecting and disconnecting said intermittent drive shaft and said continuously driven shaft, manual means for connecting said clutch means, and automatic means adapted to be operated at the end of a single cycle of operation of said tool slide means for disconnecting said clutch means.

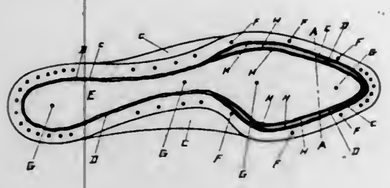
15. In a machine tool of the character described, the combination of a base, a rotary work carrying spindle mounted in said base, a column extending upwardly from said base at one side of said spindle, tool slide means mounted on said column, feed works mounted at the upper end of said column operatively connected with said tool slide means to move said means into and out of relation with said spindle and including slow and fast speed feed means whereby the working feed of said tool slide means is relatively slow and the return feed is relatively fast, drive means for said spindle, continuous drive means, intermittent drive means for simultaneously driving said feed works and said spindle drive means, clutch means for connecting and disconnecting said intermittent drive means to said continuous drive means, operating means for said clutch including a shaft rotatably mounted in said column, means for manually rotating said shaft, clutch operating means fixed to said shaft adapted upon rotation of said shaft in one or the other direction to connect and disconnect said clutch, means fixed to said shaft adapted upon rotation of said shaft in clutch connecting direction to connect said slow speed feed means of the feed works, automatic means for connecting said fast speed feed means of the feed works during the cycle of operation of the tool slide means, and automatic means adapted to be operated at the end of a single cycle of operation of said tool slide means for disconnecting said clutch means.

1,811,877. ELECTRIC CURRENT LIMITING REACTOR. GEORGE A. BURNHAM, Saugus, Mass., assignor to Condit Electrical Manufacturing Corporation, South Boston, Mass., a Corporation of Massachusetts. Filed Dec. 31, 1927. Serial No. 243,901. 6 Claims. (Cl. 175—359.)



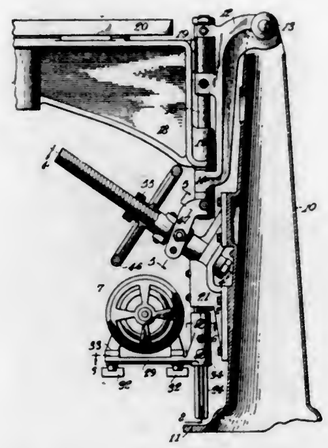
1. An electric current limiting reactor having a plurality of conductor convolutions and a mobile body of solid loose discrete particles of insulating material in which said conductor convolutions are embedded, said mobile body providing a mechanical support for said convolutions against displacement due to the magnetic forces of the reactor and also constituting means to shield said conductor convolutions against access thereto of a conducting gas.

1,811,878. OUTLET VALVE OPERATING MECHANISM FOR FLUSHING TANKS. ANDREW F. CURTIN, Medford, Mass. Filed Aug. 18, 1928. Serial No. 300,431. 6 Claims. (Cl. 4—67.)



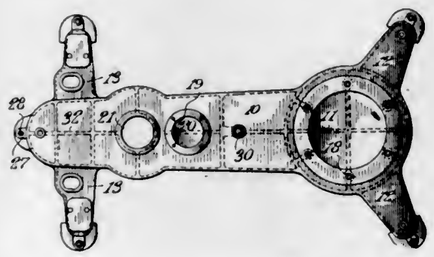
4. Outlet valve operating mechanism for flushing tanks comprising a valve operating lever, a support upon which the lever is pivoted, a tank having a hole in its wall, a hollow bolt having a flange intermediate its ends, one end of the bolt being provided with threads and the other end

being unthreaded, the bolt being adapted to be mounted with the threaded portion extending through the hole in the tank wall and with the flange in contact with the outer surface of the tank wall, a nut for the threaded end of the bolt for clamping the lever support against the inner surface of the tank wall to hold the support and bolt in position, a porcelain escutcheon mounted upon the unthreaded portion of the bolt and provided on one face with a main recess to receive and cover the flange of the bolt and with a supplementary recess extending into the body of the escutcheon from the main recess to receive



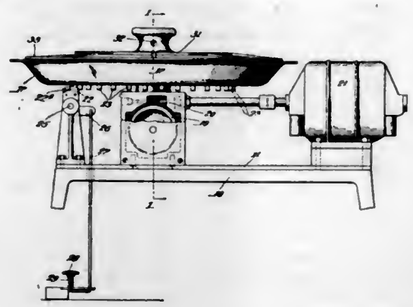
means for frictionally securing the escutcheon upon the bolt and in close contact with the outer surface of the tank wall, the opposite face of the escutcheon being unrecessed and fitting closely the end of the unthreaded portion of the bolt and substantially flush therewith, means located in said supplementary recess for so securing the escutcheon upon the bolt, and a porcelain handle provided with a shaft extending through the hollow bolt for actuating the lever, the handle being formed with a hub portion overlying and covering the end of the bolt and the escutcheon adjacent thereto.

1,811,879. METHOD OF MAKING SHOES. AUGUSTO D'ALESSANDRO, Lynn, Mass. Filed Jan. 14, 1930. Serial No. 420,777. 2 Claims. (Cl. 12—142.)



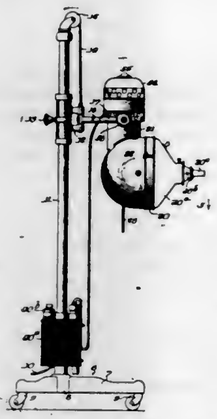
1. The method of making shoes which includes temporarily tacking an insole upon an unarmoured last; assembling a lined upper upon the last and insole thereon, pulling the lining and upper over the insole in desired position and temporarily securing the upper and lining in such position by a limited number of tacks driven part way in on a line away from the edges of the upper and lining so as to leave said edges and that part of the insole thereunder free and accessible, coating with cement the outer available surface of the insole, the inner available portions of the upper, and both available surfaces of the lining, allowing the cement to dry, pressing the upper and lining against the insole into final resting place and removing the tacks, buffing the bottom of the shoe to remove all projections and glaze, coating the bottom of the shoe with cement, allowing the same to dry, applying an outsole which has first been cement coated and dried, pressing the outsole into finished position, stitching the shoe through and through the outsole, upper, lining, and insole, and finishing the shoe in the usual manner.

1,811,880. ADJUSTING APPARATUS FOR MOTION PICTURE PROJECTION MACHINES. AUGUSTO DINA, Jersey City, N. J., assignor to International Projector Corporation, New York, N. Y., a Corporation of Delaware. Filed Apr. 18, 1928. Serial No. 271,092. 5 Claims. (Cl. 248—15.)



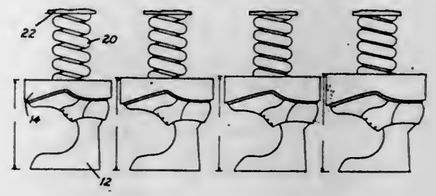
1. A motor support comprising a bracket, means for securing said bracket to a pedestal, a downwardly extending post associated with said bracket, said post being provided with a wedge shaped keyway, a motor table comprising a flat portion adapted to receive said motor and a tubular portion adapted to engage said post, a wedge shaped key secured in said tubular portion in engagement with said keyway, and means for varying the pressure of said keyway for securing the assembly in any desired position, said key having a wedge shaped slot therein and a screw threaded bolt in said tubular section and having a wedge shaped end adapted to engage said slot for preventing movement of said key relatively to said tubular portion when the pressure thereon is released.

1,811,881. BASE FOR MOTION PICTURE PROJECTION MACHINES. AUGUSTO DINA, Jersey City, N. J., assignor to International Projector Corporation, New York, N. Y., a Corporation of Delaware. Filed May 31, 1928. Serial No. 281,870. 5 Claims. (Cl. 248—15.)



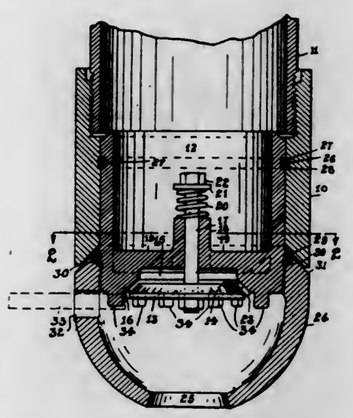
1. A base for a motion picture projecting apparatus comprising an elongated body portion having an enlarged circular section for receiving the pedestal of the projection apparatus, a pair of supporting legs extending outwardly from said pedestal supporting section, a second pair of supporting legs located at the rear of said base and means located at an intermediate portion of said base for independently supporting the same.

1,811,882. INDEXING TABLE. ROBERT D. EASTON, Chicago, Ill., assignor to R. R. Donnelley & Sons Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 13, 1928. Serial No. 325,753. 8 Claims. (Cl. 45—26.)



1. An indexing device comprising a rotatable member having a series of pockets each adapted to hold indexing tabs of a given kind, continuously operating friction means tending to rotate said member, and control means including a series of removable stops carried by said movable member for stopping said member at predetermined points.

1,811,883. THERAPEUTIC LAMP. NORRIS E. GOODRICH, Battle Creek, Mich., assignor to Sanitarium Equipment Company, Battle Creek, Mich., a Corporation of Michigan. Filed Feb. 13, 1928. Serial No. 253,833. 18 Claims. (Cl. 174—177.)

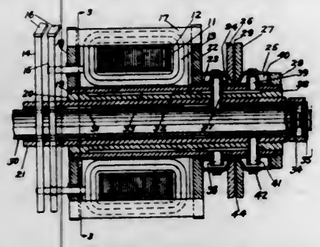


1. In a therapeutic lamp, the combination of a lamp support, a frame adjustably carried thereby, a lamp hood carried by said frame, means for supporting and feeding the carbons including a reciprocable member operable for causing relative movement between the carbons, said member being capable of holding one of the carbons in alignment therewith and provided with means whereby the outer end of the carbon may extend outside of the hood and mechanism for actuating said member including an electrically actuated plunger, a retarding means therefor, a pivotally mounted member connected at spaced points to said retarding means and said plunger respectively whereby the movement of the latter is retarded and a clutch mechanism for transmitting the movement of said pivoted member to said reciprocable member when said pivoted member is actuating in one direction by said plunger.

1,811,884. PRESSING SOLES. JOHN J. HEYS, deceased, Lynn, Mass., by Lucy A. Heys and George H. Heys, executors, Lynn, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 10, 1926. Serial No. 153,968. 3 Claims. (Cl. 12—33.)

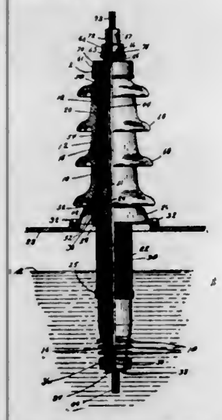
1. A sole-pressing machine having a pair of pressure-applying forms and a pressure mechanism comprising a spring arranged to force the forms relatively toward each other with a sole between them, the pair of such forms having sole-engaging areas to operate upon a sole of a certain area, one of said forms having sufficient thickness to provide it with a portion to effect such additional compression of the spring during the operation of the machine as to cause the machine, without preliminary adjustment, to apply to such sole substantially the same pressure per unit of area as would be applied to a sole of less area when operated upon by such machine provided with a form of correspondingly less thickness.

1,811,885. FLOAT PLUG AND GUIDE FOR WELL CASINGS. ROWLAND F. HILL, Toledo, Ohio, assignor to The National Supply Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 23, 1928. Serial No. 272,053. 9 Claims. (Cl. 166—1.)



1. In a float plug and guide for well casings, a casing shoe for attachment to the lower end of a casing, a sleeve positioned within the shoe, means preventing the longitudinal movement of the sleeve in the shoe when the sleeve is in normal position in the shoe, a frangible guide positioned below the shoe and threaded on the sleeve so as to permit the guide to be adjusted toward and away from the shoe, and a packing ring between the shoe and the sleeve and engaged by the guide acting as a gland to compress the packing.

1,811,886. WELDING TRANSFORMER. THOMAS M. HUNTER, East Orange, N. J. Filed Feb. 16, 1929. Serial No. 340,513. 14 Claims. (Cl. 219—6.)

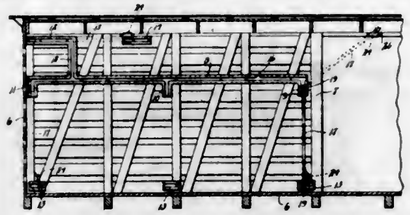


4. In a heating and seam welding transformer, a core, a primary winding surrounding said core, a heavy current secondary consisting at least in part, of bars of good

conducting material, said bars being alternately intermingled with the coils of the primary, metallic discs located one each on opposite sides of the core and securely connected to the corresponding bar ends, one of said discs having an annular ring extending therefrom,

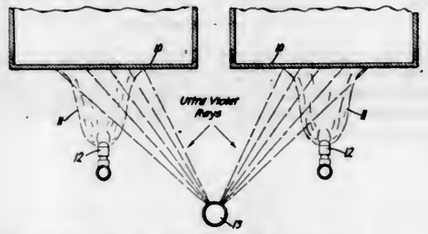
a second annular ring having metallic connection with the other of said discs, a two-part welding or heating member clamped between said rings, thus forming the working terminals of the secondary, both of said rings being hollow, and means for passing a cooling fluid through the hollow portions of said rings.

1,811,887. INSULATOR. GUSTAV JANSSON, Wollaston, Mass., assignor to Condit Electrical Manufacturing Corporation, South Boston, Mass., a Corporation of Massachusetts. Filed Apr. 14, 1926. Serial No. 102,027. 8 Claims. (Cl. 173—318.)



1. An electric insulator having two solid insulating bodies composed of dissimilar insulating materials, one of which is composed of paper and is more deleteriously affected by a long continued high electric stress than the other and is located in that portion of the insulator in which the electric field is least.

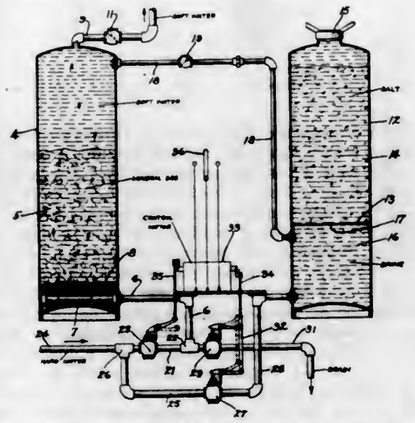
7. A high tension insulating bushing consisting of a high tension conductor, a porcelain insulating tube surrounding said conductor, and a paper insulating tube surrounding said porcelain tube.



1,811,888. PARTITION FOR RAILWAY CARS. CHARLES E. JOHNSON, Minneapolis, Minn., assignor of one-half to David H. Eisenstadt, Minneapolis, Minn. Filed Dec. 21, 1927. Serial No. 241,528. 9 Claims. (Cl. 119—11.)

1. In a railway car, a pair of substantially horizontally disposed guide members secured to the sides of the car in spaced relation from the floor thereof, a gate adapted to be disposed between said guide members, short vertical guide members communicating with and extending downwardly from said first mentioned guide members at spaced intervals thereon, short horizontally disposed guide members secured to said walls directly below said second mentioned guide members, wheels mounted on said gate at either side thereof at top and bottom, the lower wheels being capable of being disposed within the outline of the sides of said gate but being extensible outwardly therefrom, whereby said upper wheels may be mounted

within said first mentioned guide members for movement therein from one set of said second mentioned guide members to another, whereupon said lower wheels may be secured in said third mentioned guide members to retain said gate in place in such position that it divides the car into two sections.

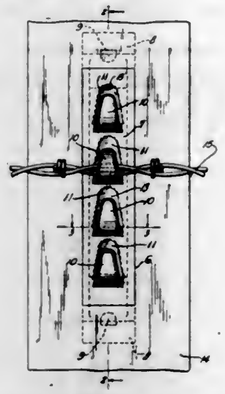


1,811,889. MANUFACTURE OF CARBON BLACK. GEORGE CHARLES LEWIS, New Dorp, N. Y., assignor to Columbian Carbon Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 31, 1927. Serial No. 243,899. 18 Claims. (Cl. 134—60.)

13. The method of increasing the yield of carbon black produced by the action of a gas flame on a moving iron surface, which includes the step of bombarding the iron surface and flame with ultra violet light.

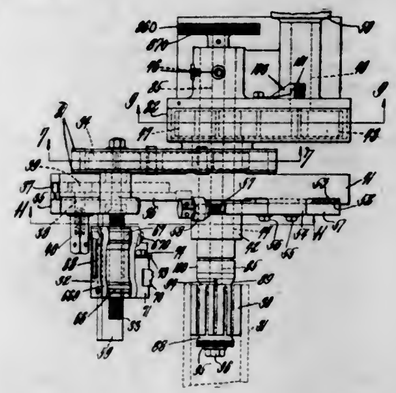
14. An apparatus for producing carbon black including a burner and a source of ultra violet rays disposed adjacent thereto.

1,811,890. WATER SOFTENER. LYNN G. LINDSAY, Minneapolis, Minn., assignor to Trupar Manufacturing Company, Dayton, Ohio, a Corporation of Ohio. Filed Sept. 14, 1925. Serial No. 56,288. 7 Claims. (Cl. 210—24.)



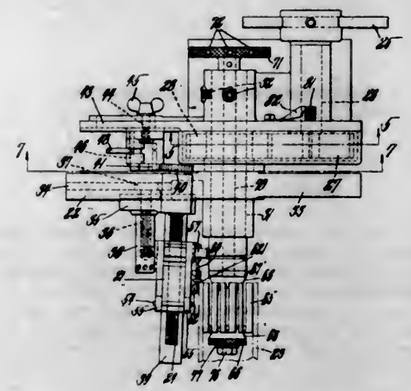
1. In a device of the class described, a pressure tank, a brine tank, a valve casing, a pipe connecting the valve casing with the pressure tank, a pipe connecting said valve casing with the brine tank, and a slidable valve in said casing to put said pipes in communication with each other for the purpose specified.

1,811,891. FASTENING FEEDING SYSTEM. THOMAS LUND, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of Massachusetts. Filed Dec. 31, 1928. Serial No. 329,380. 8 Claims. (Cl. 1—39.)



1. In a fastening-feeding system, a member provided with an opening, a relatively short flexible tube held in alinement with the opening, and a relatively long flexible fastening-conducting tube delivering to the short tube and arranged for a movement of self-adjustment longitudinally thereof.

1,811,892. WIRE FASTENING MEANS. JOHN G. OSBORNE, Milwaukee, Wis., and WILLIAM W. HICKS, Fort Worth, Tex. Filed Jan. 7, 1929. Serial No. 330,743. 2 Claims. (Cl. 256—50.)

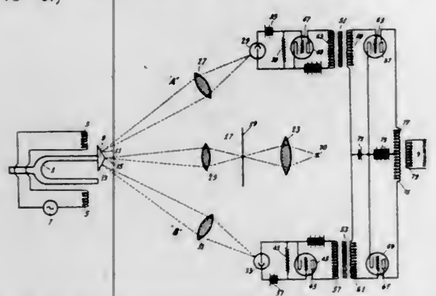


2. A fence strand anchoring member, comprising an elongated metallic plate formed with integral inwardly offset securing end portions and having a plurality of integral outwardly offset bendable tongues extending longitudinally of the plate, the plate being formed with enlarged openings adjacent each tongue and also having integral longitudinal ribs along its rear side edges, and a secondary plate coacting directly with said elongated plate between said ribs and extending longitudinally to cover the inner ends of said openings.

1,811,893. FIELD THREADING AND SQUARING MACHINE. HOWARD PARKER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Sept. 21, 1926. Serial No. 136,784. 11 Claims. (Cl. 82—4.)

1. In a machine of the class described, a stationary standard, means mounted on said standard for holding the work in fixed position, a member carried by said standard revoluble about the axis of the work, a stud carried by said member and radially adjustable relatively to said axis, said stud being disposed in parallel relation to said axis, a tool carriage slidably supported by said stud and revoluble therewith about the work, a feed screw disposed in parallel relation to said stud and engageable by said tool carriage, and means for rotating said feed screw continuously as the tool carriage is revolved about said axis.

1,811,894. FIELD POINTING MACHINE. HOWARD PARKER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Sept. 21, 1926. Serial No. 136,785. 4 Claims. (Cl. 82—4.)



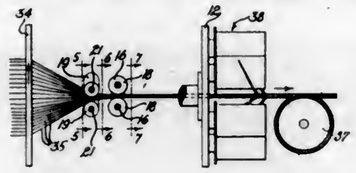
1. A machine for shaping ends of tubes, comprising an expansible chuck adapted to enter the end of a tube, a support for said chuck, means for holding said chuck against rotation relative to said support, means actuable to expand said chuck without longitudinal displacement, a tool carriage, means actuable to revolve the carriage about the work, and means for feeding the carriage along the work.

2. A machine for shaping ends of tubes, which comprises an expanding chuck adapted to enter an end of the work, means actuable to expand the chuck without longitudinal displacement thereof or change of axis, a

tool carriage, mechanism actuable to revolve the carriage about the work, said mechanism comprising a crank arm having a hub portion disposed coaxially with said chuck, a stud mounted on said arm for adjustment longitudinally thereof, said stud having a predetermined angular relation to the plane of revolution of the carriage and being adapted to slidably support said carriage, a feed screw disposed parallel to said stud and engageable by said carriage, and means for rotating said feed screw as the carriage is revolved about the work.

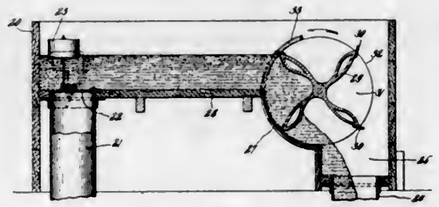
1,811,895. LIGHT CONTROL SYSTEM. RICHARD HOWLAND RANGER, Newark, N. J., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Oct. 31, 1928. Serial No. 316,157. 11 Claims. (Cl. 178—5.)

1. In a picture transmitting system, a picture to be transmitted, a light source for directing light to said picture, means for directing the light issuing beyond said picture along a predetermined path, a plurality of photoelectric elements for translating light energy into electrical energy, an amplifying means associated with each of said photoelectric elements, and means for continuously shifting the said light to switch the light issuing from said picture from one to another of said elements and utilizing substantially the entire amount of light available.



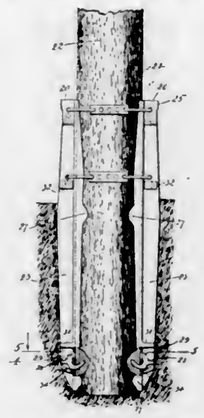
1,811,896. SPLASHLESS DISHPAN, BASIN AND THE LIKE. CHESTER R. ROSS, Cambridge, Mass. Filed Sept. 23, 1929. Serial No. 394,520. 2 Claims. (Cl. 141—9.)

1. A dish pan having outwardly and upwardly sloping side walls, the upper edges of which are bent inwardly and downwardly to provide an annular continuous splash-preventing flange, the marginal portion of which is flat and of conical form and the free edge of which at any point is directed toward the opposite wall of the dish pan, said dish pan having a vent opening in its side wall slightly below the free edge of the splash-preventing flange and situated to maintain the water level in the dish pan sufficiently below the splash-preventing flange so that any water splashed against the side of the pan will be deflected by said flange back into the pan.



1,811,897. METHOD OF AND APPARATUS FOR FORMING CABLES. ERNEST MARTIN RUNQUIST, Cicero, and THORNTON MCDUFFEY YANCEY, Oak Park, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 30, 1926. Serial No. 151,655. 10 Claims. (Cl. 117—50.)

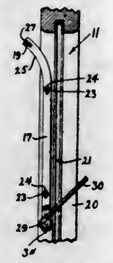
1. In an apparatus for forming stranded cables, means for twisting a plurality of strands, means for drawing the strands through the twisting means, means for forming the twisted strands drawn therethrough and a second forming means disposed at an acute angle with respect



to the first mentioned forming means in a direction similar to the direction of twist imparted to the strands and in tandem to the first forming means.

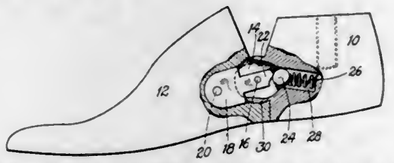
1,811,898. METERING APPARATUS. MILTON O. SCHUR and ERNEST P. COOK, Berlin, N. H., assignors to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Sept. 18, 1928. Serial No. 306,674. 3 Claims. (Cl. 221—106.)

1. Apparatus of the class described comprising a container for liquid, a discharge receptacle, and means for conveying fluid from said container to said discharge receptacle at a predetermined rate, said means comprising a paddle wheel having equispaced paddles and mounted for rotation on a horizontal axis, an arcuate wall concentric with said axis and extending from the bottom of said container to said discharge receptacle, said wall being engageable successively by the outer edges of the paddles and being of sufficient arcuate length to be engaged by two paddles simultaneously, means for preventing leakage around the edges of the paddles when in contact with the wall, and means for rotating the wheel at a predetermined speed.



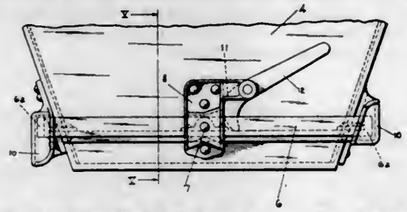
1,811,899. REENFORCEMENT FOR POLES. GEORGE B. SPRING, Newtonville, Mass. Filed Feb. 5, 1927. Serial No. 166,213. 8 Claims. (Cl. 20—100.)

1. A reenforcement for poles comprising a reenforcing member constructed and arranged to be set into the earth



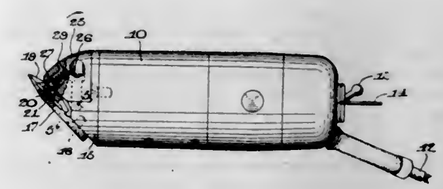
opposite one side of a pole, means for clamping the reenforcing member to the pole above the earth, and means relatively movable with respect to said member and constructed and arranged to be driven into the embedded portion of a pole for locking said member to said pole and by which the tilting force applied to the reenforcing member in resisting movement of the pole is transmitted to the embedded portion of the pole.

1,811,900. AWNING. DEE C. SPURGEON, Los Angeles, Calif. Filed Aug. 13, 1927, Serial No. 212,654. Renewed Nov. 29, 1930. 1 Claim. (Cl. 156—44.)



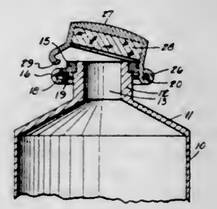
A bracket for use in a window opening, said bracket including a body having a straight main portion and having one end portion curved and extending away from said main portion, the other end portion being laterally offset and parallel to the main portion, there being an aperture in said offset portion and an open ended slot in said curved portion.

1,811,901. HINGE LAST. CARL L. STURGIS, Brockton, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 10, 1928. Serial No. 311,686. 2 Claims. (Cl. 12—136.)



1. A hinge last comprising a forepart, a heel part having a cylindrical knuckle on its front surface spaced from its tread surface, the forepart having a cylindrical concavity in its rear surface fitting said knuckle, bonding means between the last parts consisting of a single link mounted in the forepart and pivoted at the axis of the knuckle, and a spring mounted in the heel part and arranged to be compressed by the rear end of the link as the last parts are relatively moved from extended position.

1,811,902. LATCHING MECHANISM FOR HOPPER DOORS. KENNETH J. TOBIN and AXEL WASBERG, Chicago, Ill., assignors to Camel Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 29, 1929. Serial No. 358,806. 5 Claims. (Cl. 105—308.)

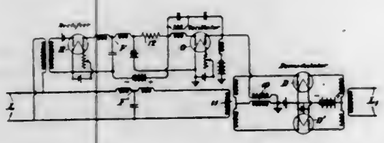


1. In a car having a hopper, a door for closing said hopper, a swingable latch bar pivoted intermediate its ends to said door, keepers secured to the ends of the hopper for receiving the ends of the latch bar, said keepers and latch bar having overlapping parts to tie the ends of the hopper together and a cam lever pivoted to said door for engaging said latch bar for maintaining the same in horizontal position.

1,811,903. HAIR CLIPPER. HUBERT VAN BREE, Racine, Wis., assignor to Racine Universal Motor Company, Racine, Wis., a Corporation of Wisconsin. Filed Apr. 18, 1929. Serial No. 356,065. 3 Claims. (Cl. 30—1.)

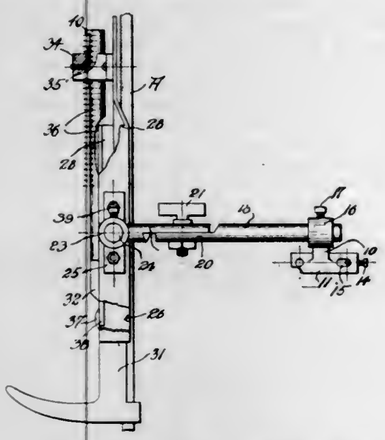
1. A hair clipper comprising a handle containing a motor-driven shaft, a wrist-pin thereon, a stationary knife blade on the handle at an angle to the shaft, a movable knife blade on the stationary knife blade, there being a cut-away portion in the movable knife blade to receive the wrist-pin, and bearing springs on the movable knife blade on either side of the cut-away portion bent to form closed spring loops parallel to each other and extending into the cut-away portion and receiving the wrist-pin between them and forming a way in which the wrist-pin slides.

1,811,904. CAPTIVE CAP. ALBERT WEIDMANN, Buffalo, N. Y. Filed Feb. 20, 1929. Serial No. 341,318. 8 Claims. (Cl. 221—60.)



1. In a closure device for containers having an outlet neck, a cap for closing said outlet neck and a single length of wire mounted about the neck and supported thereon for movement solely in a plane perpendicular to the axis of the neck, said wire pivotally supporting the cap and being adapted for locking engagement therewith and having open ends whereby the cap may be released.

1,811,905. MEANS TO CONTROL CROSS TALK. HERMAN A. AFFEL, Ridgewood, N. J., and ALLEN CARPE, New York, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed June 26, 1928. Serial No. 288,467. 9 Claims. (Cl. 179—78.)

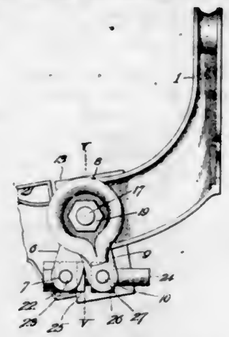


1. In a transmission system, a circuit to transmit carrier currents modulated in accordance with speech signals, a demodulating arrangement associated with said circuit, means to render said demodulating arrangement normally substantially ineffective to produce demodulated currents corresponding to signals of small volume,

means to produce a direct current whose amplitude is determined by the amplitude of the received modulated currents, and means controlled by said direct current to control the effectiveness of said demodulating arrangement to produce demodulated currents in accordance with

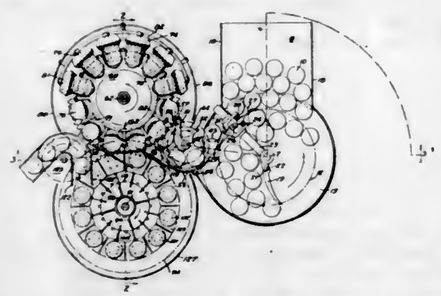
the amplitude of said direct current, whereby the effectiveness of said demodulating arrangement to produce demodulated currents will be substantially less in response to induced cross-talk and other interfering currents than in response to carrier currents modulated by normal voice signals.

1,811,906. BAND SAW GUARD. EMANUEL ANDRE, Green Bay, Wis. Filed May 4, 1928. Serial No. 275,025. 7 Claims. (Cl. 143—159.)



1. A band saw guard comprising a breast plate adapted to confront a saw band, means for adjustably supporting the plate in confronting relation to said band, a post adjustably connected with the plate forwardly of the same, and a foot eccentrically pivoted to the lower end of the post to gravitate in the direction of the saw band.

6. A band saw guard comprising a breast plate for partially enclosing a saw band, a foot adapted to gravitate toward the band, means carrying the foot and adjustably associated with the plate for raising and lowering the said foot, means for latching the means in adjusted position relative to the plate, means for limiting the swinging movement of the foot in the direction of the band, and means for adjustably supporting the breast plate relative to the saw band.

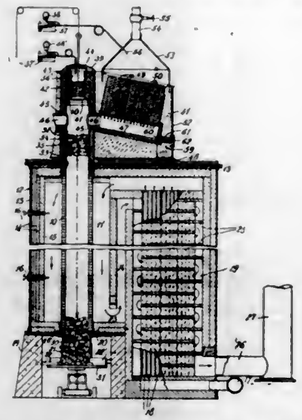


1,811,907. ASSEMBLY SUPPORT FOR LATERAL ARM AWNINGS. FREDERICK A. ANTON, Topeka, Kans. Filed May 26, 1930. Serial No. 455,729. 5 Claims. (Cl. 156—44.)

4. In a store front awning, a hanger having a horizontal tubular head provided with notches in the ends of the head, a pair of rings fitting in the respective ends of the head and having arms extending through said notches and preventing rotatable movement of the rings, a cap and a bracket fitted at opposite ends of the head at the outer sides of the rings and projecting beyond the periphery of the head, a collar pivotally mounted between and on the arms of the rings, a second collar between and pivotally mounted on the cap and bracket, a bolt extending through said collars and bearing a swivelled relation to one of them and a threaded relation to the other, said cap and bracket having extensions interlocked together

within the head, as regards rotatable movement, a headed bolt extending through the bracket, the hanger head, the said rings and said cap, and a retaining nut engaging the bolt for effecting approaching movement of the bracket and cap and for securing said parts in rigid relationship to the hanger.

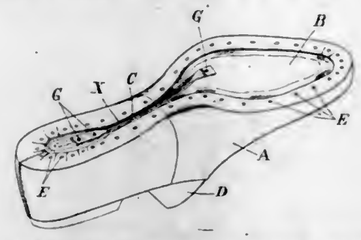
1,811,908. COMBINED DRAINER AND SIRUPER. WILLIAM DE BACK, San Leandro, Calif., assignor to Sprague-Sells Corporation, Hoopeston, Ill., a Corporation of Delaware. Filed June 11, 1928. Serial No. 284,539. 18 Claims. (Cl. 225—22.)



2. In a canning machine, a rotatable wheel comprising a plurality of turrets for receiving and holding the cans and having gear teeth formed thereon for driving the wheel.

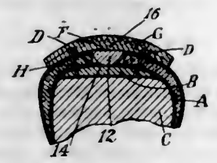
1,811,909. PROCESS FOR TREATING METALLIC ARTICLES. ORIN A. BASSETT, Oklahoma City, Okla., assignor to The National Industrial Laboratories Corporation, Oklahoma City, Okla., a Corporation of Delaware. Filed Nov. 6, 1925. Serial No. 67,453. 9 Claims. (Cl. 148—7.)

7. A process of treating metal coated with a more fugitive metal, which comprises applying a fixative agent including a cyanide, borax, sodium carbonate and carbon, to the coated metal, and then heating.



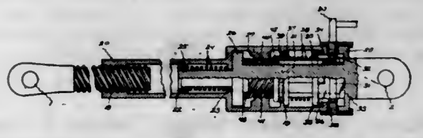
1,811,910. REDUCTION OF ZINCIFEROUS MATERIAL. FRANK G. BREYER, Palmerton, Pa., assignor to The New Jersey Zinc Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 1, 1927. Serial No. 180,107. 9 Claims. (Cl. 75—28.)

1. The improvement in the method of reducing a porous charge of zinciferous and reducing materials and recovering zinc metal in an externally heated reducing chamber operatively connected with a condenser and having a residue discharge outlet permitting ingress and egress of gas,



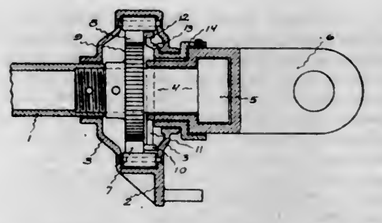
which comprises inducing the flow of evolved gases into the condenser by controlled stack draft and thereby substantially inhibiting the ingress and egress of gas through said discharge outlet.

1,811,911. SHOE AND SHANK STIFFENER THEREFOR. MICHAEL F. BROGAN, Lawrence, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 14, 1929. Serial No. 347,103. 10 Claims. (Cl. 36—76.)



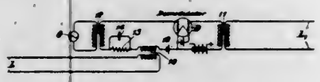
8. In a shoe of the type in which the upper materials are lasted over the insole and the outsole is directly secured to the lasted over margins of the upper, a shank stiffener of semi-elliptical cross-sectional contour arranged substantially to fill the space between said lasted over margins for a substantial portion of the length of the stiffener, the stiffener engaging both soles throughout the greater portion of its length, the insole engaging portion of the stiffener being transversely convex and the opposite side of the stiffener being correspondingly transversely concave.

1,811,912. SHOE AND SHANK STIFFENER THEREFOR. MELBOURNE W. WHITE, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 14, 1929. Serial No. 347,088. 10 Claims. (Cl. 36—76.)



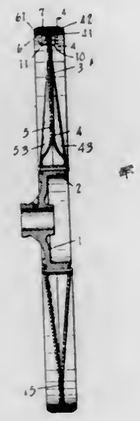
9. A shoe comprising, in combination, an insole, an outsole, upper materials having lasted-over margins interposed between the soles, a shank stiffener located within the space between the soles and between the lasted-over margins of the upper materials and engaging both soles, the stiffener having a surface substantially flush with the exposed surfaces of the lasted-over upper materials at the outsole-engaging side of the stiffener and having a transversely convex surface at its insole-engaging side, and staples straddling the stiffener at its opposite end portions and securing the stiffener to the insole, the points of the staples being clinched within the material of the insole without passing therethrough.

1,811,913. AUTOMATIC SLACK ADJUSTER FOR BRAKES. BERT HENRY BROWALL, Malmo, Sweden, assignor to Svenska Aktiebolaget Bromsregulator, Malmo, Sweden, a Corporation of Sweden. Filed Apr. 22, 1930, Serial No. 446,335, and in Germany July 10, 1929. 2 Claims. (Cl. 188—202.)



1. In an automatic slack adjuster of the character described, means adapted for actuation of the adjuster in a direction for reduction of the slack when it is too great, means actuated by the braking stress when braking and adapted for actuation of the adjuster in an opposite direction when the slack is too small, locking means adapted for interruption of the last mentioned actuation, means adapted for actuation of the said locking means at a moment corresponding to a predetermined length of idle stroke of the brake piston, and a driving means adapted for actuation of the adjuster in a direction for reduction of the slack, such driving means being arranged so that it gets the movement, which is to be transmitted to the adjuster for the purpose mentioned, by means of a relative displacement of its parts caused by the braking stress when braking.

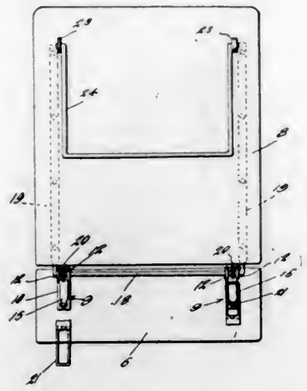
1,811,914. AUTOMATIC SLACK ADJUSTER FOR BRAKES ON RAILWAY CARS AND THE LIKE. BERT HENRY BROWALL, Malmo, Sweden, assignor to Svenska Aktiebolaget Bromsregulator, Malmo, Sweden, a Corporation of Sweden. Filed May 13, 1930, Serial No. 452,088, and in Germany June 24, 1929. 5 Claims. (Cl. 188—202.)



1. In an automatic slack adjuster of the character described, an actuating means adapted to actuate the slack adjuster in a direction for increasing the slack, another actuating means adapted for actuation of the adjuster in an opposite direction for reduction of the slack, the said two actuating means being arranged independent of each other in such a manner that both of them may actuate the slack adjuster when braking, the result being dependent on the difference between the actuations thus performed.

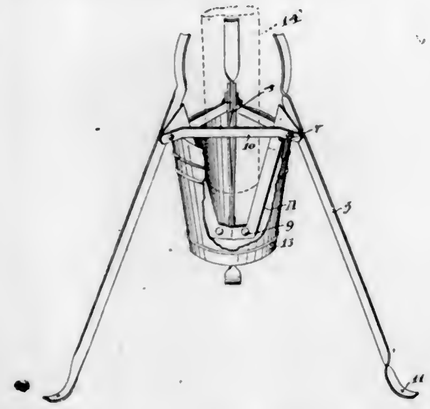
1,811,915. MEANS TO CONTROL CROSS TALK. ALLEN CARPE, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 26, 1928. Serial No. 288,331. 5 Claims. (Cl. 179—78.)

1. In a transmission system, a transmission circuit, a vacuum tube device associated with said circuit, and means to render the gain of said vacuum tube device appreciably less in response to small received current than in response to normal speech signals, said means comprising a capacity shunted by a resistance in the grid circuit of said tube and cooperating with the rectifying action of the grid filament path in the tube to produce a one-way biasing potential in the grid circuit, said resistance and condenser being so proportioned as to change the bias of said grid in accordance with the amplitude of the received current.



1,811,916. BAND SAW WHEEL. ANDREW G. CARTER, Grand Rapids, Mich., assignor to Carter Products Company, Inc., Grand Rapids, Mich. Filed May 31, 1930. Serial No. 458,809. 7 Claims. (Cl. 143—30.)

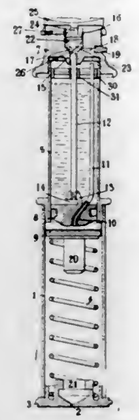
1. A band saw wheel comprising a hub with recessed broad peripheral flange, a wheel made of exactly opposed symmetrical convexed sheet metal disks embracing the said flange and having precisely similar meeting radial depressions spot welded together and spot welded at the periphery, one of said disks being extended into a peripheral flange having an engaging lip for the tire, the other of said disks being cut off within its periphery, an angular flange symmetrical with the integral flange portion and having an engaging lip for the tire, bolts with lock nuts through the flanged periphery and ring to couple the parts together, and a cushion tire for the said wheel having flat reinforced slitted metallic rim embedded therein.



1,811,917. RECLINING SEAT BACK. PHILLIP COTA, Kankakee, Ill. Filed Aug. 20, 1930. Serial No. 476,687. 2 Claims. (Cl. 155—7.)

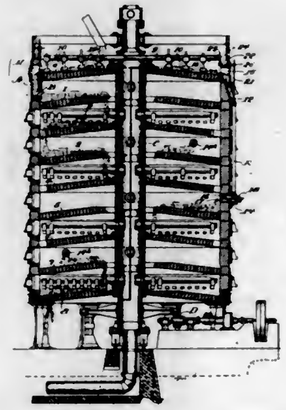
1. A structure of the character described comprising a seat, a back section, a plate secured to the seat and provided with a pair of ears thereon, a rod on the back section passing through the ears, a ratchet wheel on the rod arranged between said ears, said ears being provided with notches, and a pawl member pivoted to the seat and adapted

to be swung to a position engaged within the notches in the ears and also between certain teeth of said ratchet wheel to hold the back section against swinging.



1,811,918. CHRISTMAS TREE SUPPORT STAND. JOHN J. DANNER, St. Paul, Minn. Filed Dec. 31, 1928. Serial No. 329,333. 4 Claims. (Cl. 248—38.)

1. A tree support stand comprising a central triangular framework having a plurality of notches near the upper end thereof, a container adapted to fit over the lower end of said framework and having a portion thereof adapted to enter said notches to support said container and a plurality of supporting legs pivotally connected to said framework to pivot in converging planes whose axis of convergence is vertically above said container, the upper ends of said legs being positioned to supportingly engage the trunk of a tree supported in said framework.

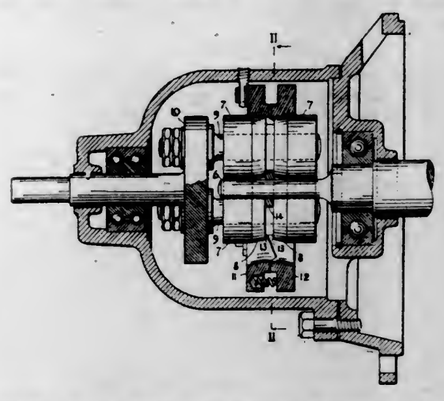


1,811,919. POCKET PERFUME SPRAYER. MARIE PIERRE LOUIS DARDEL, Paris, France, assignor to Société Marcas & Dardel, Paris, France. Filed July 25, 1929, Serial No. 380,982, and in France Apr. 15, 1929. Renewed May 11, 1931. 3 Claims. (Cl. 299—89.)

1. In a pocket perfume sprayer of the container-piston type, a removable plug closing the outer end of the container piston and having a discharge passage communicating with the interior of said container and terminating in a spray orifice, a liquid discharge tube removably

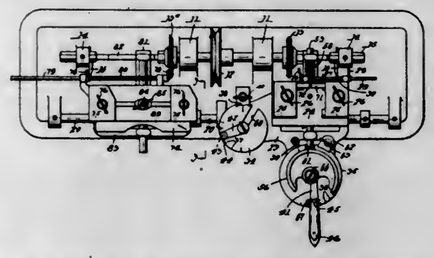
secured at its inlet end in the bottom of said container and having its outer end free, said outer end being disposed within said passage and spaced from the walls thereof.

1,811,920. METHOD AND APPARATUS FOR TREATING SOLIDS. THOMAS A. DICKSON, Denver, Colo., assignor to Colorado Iron Works Company, Denver, Colo., a Corporation of Maine. Filed Feb. 6, 1928. Serial No. 252,230. 5 Claims. (Cl. 263—26.)



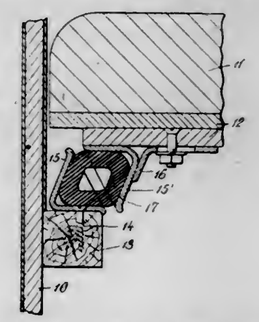
1. In a process of roasting or the like wherein the solids are caused to traverse enclosed spaces, the method of feeding the solids graded from coarse to fine successively into the line of traverse and at successive points therealong whereby the coarse solids are subjected to roasting conditions for a longer time than the fine.

1,811,921. CHANGE SPEED GEARING. HOWARD MAURICE EDMUNDS, New York, N. Y., assignor to Crocker-Wheeler Electric Manufacturing Company, Ampere, N. J., a Corporation of New Jersey. Filed June 9, 1930. Serial No. 459,931. 4 Claims. (Cl. 74—34.)



1. A speed changing system of adhesion gearing comprising an intermediate cylindrical member, cooperating

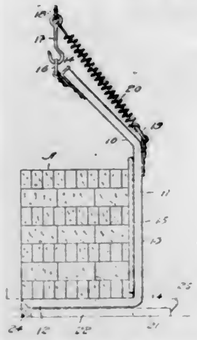
cylindrical members with shoulders, and a ring freely carried by the intermediate member and engaging the



shoulders of the cooperating members, whereby their relative displacement in the direction of their axes is prevented.

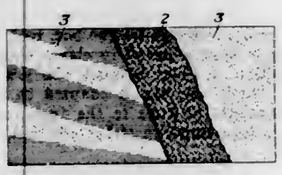
1,811,922. KEY-CUTTING MACHINE. MORRIS FALK, Fitchburg, Mass. Filed Dec. 5, 1927. Serial No. 237,603. 2 Claims. (Cl. 90—13.2.)

1. In a key cutting machine, the combination of a rod, a carriage pivotally mounted on the rod, a bar on the carriage, a pair of clamps on the bar, each clamp having front and rear jaws adapted to clamp different kinds of keys in position, a pivot between the jaws on the carriage about which the bar is adapted to be reversed to present either pair of jaws to the front, and means for clamping the jaws down in either position.



1,811,923. FLEXIBLE SUPPORT. GERHARD FLINTERMANN, West Orange, N. J. Filed Aug. 19, 1927. Serial No. 214,129. 6 Claims. (Cl. 267—35.)

1. A flexible support comprising an elongated resilient member, means connected to a load engaging the member

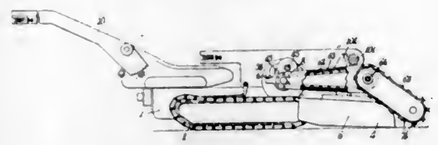


longitudinally, and means for holding the member longitudinally, said means being spaced transversely of the direction of the load for relative movement in the direction of the load.

1,811,924. BRICK HANDLING HOIST. ROBERT A. FONTAINE, Martinsville, Va. Filed May 2, 1929. Serial No. 359,915. 19 Claims. (Cl. 294—63.)

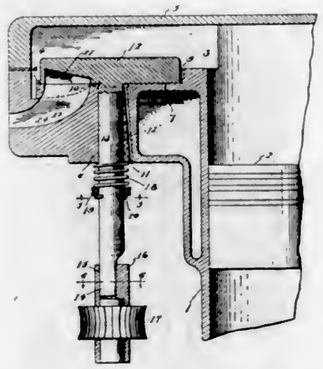
1. A brick stack handling hoist comprising a fork-like structure of substantially L-shape and including horizontal and vertical portions, the horizontal portion being formed as a plurality of arms adapted to engage beneath a stack of bricks and the vertical portion having a plate constituting a back against which the stack may rest when lifted, said vertical portion leading to an integral inclined upper portion of substantially the same width, suspension elements at the top of said inclined portion and other suspension elements at the juncture of said inclined portion with the vertical portion.

1,811,925. COATED FIBROUS MATERIAL. RAYMOND E. GARRETT, Lancaster, Pa., assignor to Armstrong Cork Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 9, 1927. Serial No. 173,927. 2 Claims. (Cl. 154—46.)



1. A sheet of fibrous material having applied thereto a homogeneous coating mixture including unvulcanized rubber and granulated cork, the amount of granulated cork in the mixture predominating over the amount of rubber present therein, the rubber being present in the mixture to the extent of about 24% by weight.

1,811,926. PHOTOGRAPHIC ROLL FILM SPOOL. PAUL GOLDACKER, Berlin-Treptow, Germany, assignor to Agfa Ansco Corporation, Binghamton, N. Y., a Corporation of New York. Filed Nov. 30, 1928, Serial No. 322,830, and in Germany Dec. 16, 1927. 3 Claims. (Cl. 242—71.)

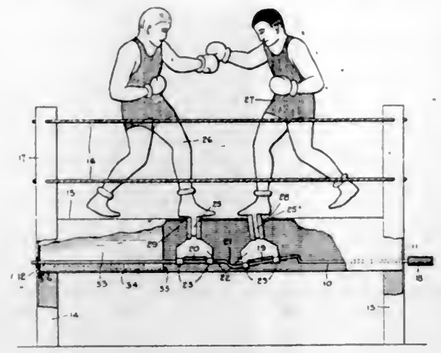


1. A photographic roll film spool having a cylindrical sheet metal core, which core has two longitudinal slots placed opposite to each other, one of which is broader than the other.

1,811,927. LOADING MACHINE. FRANK A. HALLECK, Michigan City, Ind., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed June 10, 1927. Serial No. 197,951. 20 Claims. (Cl. 262—9.)

4. In a loading machine, a portable body having conveying means thereon, and material gathering mechanism on said body and cooperating with said conveying means comprising a motor, a rotary gathering member adjustably mounted on said body and disposable closely adjacent said conveying means and mechanism driven by said motor for effecting rotation of said gathering member at will in either of opposite directions while said conveyor continues to operate in the same direction and without reversing said motor.

1,811,928. ROTARY VALVE FOR INTERNAL COMBUSTION ENGINES. ALFRED L. HARDING, Branson, Mo., assignor of one-third to Lee Moore, Branson, Mo. Filed May 15, 1929. Serial No. 363,259. 2 Claims. (Cl. 123—190.)



1. The combination with an internal combustion engine cylinder, of a casing carried thereby and communicating therewith, said casing having a seat therein, a valve rotatably mounted on the seat, means for rotating the valve, said casing having main inlet and exhaust ports and auxiliary inlet and exhaust ports, said valve having an opening therein communicating with a bypass, said opening and bypass being adapted to successively register with the respective inlet and exhaust ports during rotation of the valve.

1,811,929. MECHANICAL TOY. WILLIAM W. HARRIS, Brockton, Mass. Filed Apr. 7, 1928. Serial No. 268,297. 5 Claims. (Cl. 46—40.)

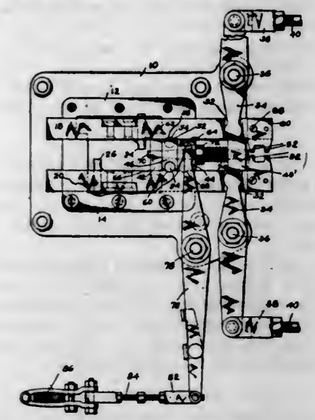
1. In a toy, the combination of a platform provided with slot means, a crankshaft rotatably mounted below said platform, said shaft having a plurality of connecting

rod-bearing portions disposed at an angle to the longitudinal axis of said crankshaft, clip means attached to said bent shaft portions and projecting through said slot

means, and toy means supported by said clip means so as to reciprocate in vertical planes disposed on opposite sides of the longitudinal axis of said crankshaft.

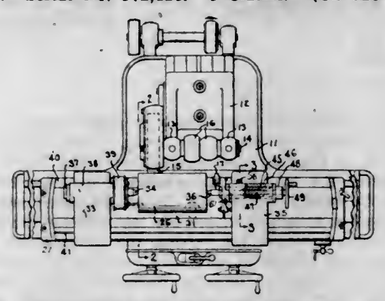
1,811,930. TURNTABLE OR TRANSFER TABLE AND TRUCK CONSTRUCTION THEREFOR. MEIER G. HILPERT, Bethlehem, Pa. Filed Jan. 5, 1929. Serial No. 330,673. 16 Claims. (Cl. 104—35.)

1. A movable structural span of the class described including main load supporting members, and transverse bracing means for said members which are located with respect to the depths of the latter so as to permit relative flexing of parts of said members about predetermined axes of flexure.



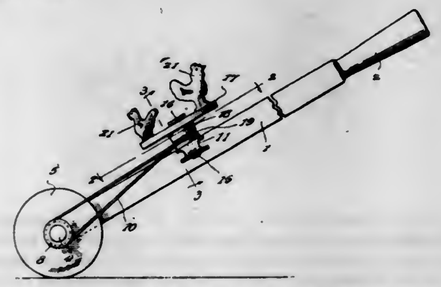
1,811,931. EQUALIZING TRUCK CONSTRUCTION. MEIER GEORGE HILPERT, Bethlehem, Pa. Filed Jan. 5, 1929. Serial No. 330,674. 20 Claims. (Cl. 104—35.)

1. A movable structural span of the class described, including a pair of main load supporting members, bracing means for said members for determining an axis of flexure for the end portions of the same, and a truck associated with an end of the span for permitting the end portions of the said members to flex independently.



1,811,932. PNEUMATIC GEAR SHIFT LOCK. ALBERT A. HODGKINS, Leonia, N. J., assignor to Universal Gear Shift Corporation, New York, N. Y., a Corporation of Delaware. Filed May 9, 1928. Serial No. 276,227. 13 Claims. (Cl. 74—88.)

1. In an apparatus of the class described, means for shifting the gears of a car comprising two separately movable elements, each element having positions corresponding to neutral and two gear engagements, a combination lock comprising means for selectively engaging either shifting element and immobilizing it while permitting free movement of the other shifting element and

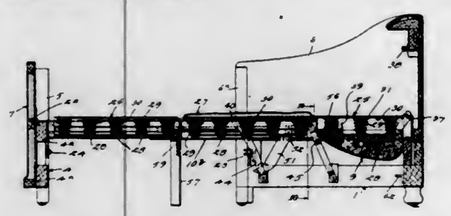


means on said lock for engaging and immobilizing said other shifting element when the gears controlled thereby are in mesh.

1,811,933. MECHANISM FOR TRUING AND DRESSING GRINDING WHEELS. FERDINAND J. HOHNHORST and FERDINAND J. KROEGER, Covington, Ky. Filed June 20, 1929. Serial No. 372,416. 6 Claims. (Cl. 125—11.)

6. In a machine of the character described, the combination with the grinding wheel, the tail-stock and tail-spindle, said tail-stock provided with an inwardly extending annular flange about said tail-spindle, a pivoted frame about said annular flange, an abrading part on said pivoted frame arranged to coact with said grinding wheel, radial clamping means on said pivoted frame about said tail-spindle, and arcuate clamping means between said pivoted frame and said tail-stock.

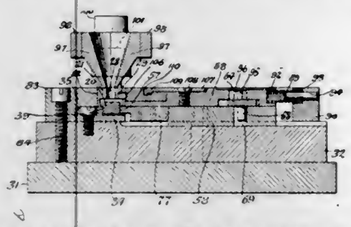
1,811,934. TOY. REX L. HUDSON, Jackson, Tenn. Filed July 12, 1929. Serial No. 377,875. 3 Claims. (Cl. 272—85.)



1. A toy comprising a staff, a wheel rotatably mounted at one side of said staff near the lower forward end

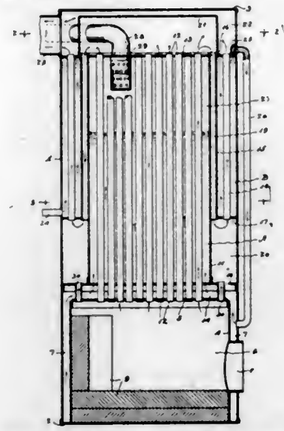
thereof, a drum turning with the wheel, a bracket secured upon said staff and extending from one side thereof with its outer portion bent to form upper and lower leaves, a turntable over said staff and bracket, a shaft for said turntable extending through the leaves of said bracket, a drum turning with said turntable, and a belt trained about the drums of the wheel and turntable for transmitting rotary motion from the wheel to the turntable.

1,811,935. PROCESS FOR MANUFACTURING AGGLOMERATED PRODUCTS. MARCEL HIPPOLYTE HUE, Bois-Guillaume, France. Filed Apr. 29, 1929, Serial No. 359,167, and in France Mar. 18, 1929. 1 Claim. (Cl. 44—23.)



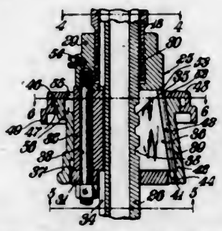
A process for the manufacture of agglomerated products from coal dust, comprising the steps of mixing the coal dust with an agglomerating material composed of 65% petroleum pitch, 24% mazout, and 6% nonoxidizing vegetable oil; then agglomerating the mixture; and finally coking the agglomerate thus obtained.

1,811,936. FOLDING BED. ROBERT H. HUTCHINS, Memphis, Tenn. Filed July 12, 1930. Serial No. 467,567. 12 Claims. (Cl. 5—44.)



1. A folding bed, comprising an open frame, a foot located at the front side of the frame, a foot bottom section secured to the foot and located above the frame, means by which the foot bottom section is mounted for movement forwardly beyond the frame, an intermediate bottom section arranged within the frame below the foot bottom section, means for raising the intermediate bottom section into alinement with the foot bottom section during the movement of the latter forwardly beyond the frame, a head bottom section extending upwardly from the rear side of the frame, means by which the head bottom section may be lowered from the upwardly extending raised position into alinement with the intermediate bottom section after the latter has been raised, and means releasably supporting the head bottom section in the upwardly extending raised position.

1,811,937. CASTING APPARATUS. MARSDEN C. HUTTO, Detroit, Mich., assignor to Hutto Engineering Company, Inc., a Corporation of Michigan. Filed June 13, 1928. Serial No. 284,941. 24 Claims. (Cl. 22—122.)

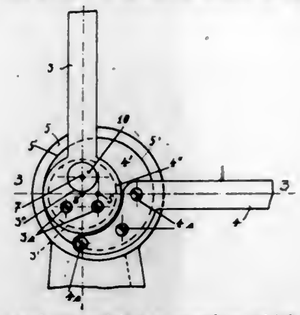


1. An apparatus for securing an abrasive member to a holder by a self-hardening fluid; comprising a plurality of enclosure walls adapted to engage the abrasive member and the holder and to support the same in spaced relation to form a mold cavity between said walls, holder and abrasive member for receiving said self-hardening fluid.

1,811,938. BOILER. GEORGE H. IRWIN, Chicago, Ill. Filed Nov. 26, 1928. Serial No. 321,865. 7 Claims. (Cl. 122—37.)

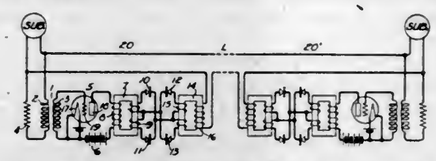
2. In a vertical fire tube boiler, the combination of a main boiler section having up-draft tubes, an economizer boiler section entirely surrounding said main boiler section and having up-draft tubes, a continuous annular down draft passage separating said sections, a fire box below said main boiler section, a stack communicating with the upper ends of said economizer section tubes, and means for causing all the products of combustion passing through said main section tubes to flow down through said passage and then up through said economizer section tubes.

1,811,939. DRILLING APPARATUS. HARRY C. JOHANSEN, Michigan City, Ind., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Feb. 16, 1927. Serial No. 168,804. 24 Claims. (Cl. 279—74.)



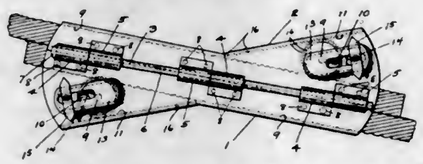
1. A grief stem chuck for a drill feeding mechanism of the character wherein a grief stem is employed comprising a body having means for engaging and driving a grief stem, and means for connecting a grief stem to said body including chuck jaws slidably mounted in said body, means including an adjusting member surrounding and movable relative to said body and connected to said jaws for sliding the latter inwardly into engagement with a grief stem and for releasing said jaws, and means including a member carried by and movable relative to said adjusting member and engageable with said body for locking said adjusting member against movement relative to said body to maintain said jaws in one position, said locking member being releasable from said body to permit adjustment of said adjusting member relative to said body.

1,811,940. PARALLELOGRAM-TYPE PANTOGRAPH. PAUL KÄPPLER, Dresden, Germany. Filed Aug. 30, 1929, Serial No. 389,366, and in Germany Apr. 10, 1929. 5 Claims. (Cl. 33—25.)



1. In a pantograph of the parallelogram type, a fixed pivot for one of the links of the parallelogram comprising

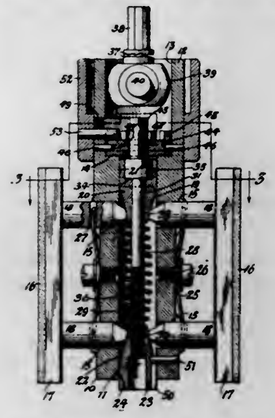
a member attached to said link and rotatably embracing the adjacent link joint of the parallelogram, said link joint having its axis of rotation eccentric to, but within,



said member and comprising a member which rotatably embraces a reproducing element, eccentric to its axis of rotation.

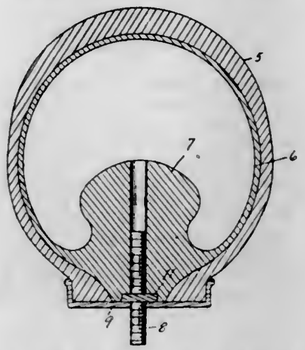
1,811,941. APPARATUS FOR REDUCING DISTURBING CURRENTS. CLYDE R. KEITH, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed June 20, 1928. Serial No. 286,848. 15 Claims. (Cl. 179—78.)

1. In combination with a transmission circuit, a device introducing varying attenuation into said circuit dependent upon the current amplitude in the circuit, said device having an attenuating region for currents of small amplitudes in said circuit, and means responsive to large current flow in said circuit for removing the current attenuation of said device in the region corresponding to small amplitudes.



1,811,942. CABLE CLAMP. CHARLES W. KEMPER and JOHN T. KEMPER, Hayward, Calif. Filed Feb. 4, 1930. Serial No. 425,780. 6 Claims. (Cl. 24—136.)

1. A cable clamp comprising a pair of elongated shells U-shaped in cross section arranged in confronting relation to afford a passage for a plurality of cables, means on the shells interlocking same against longitudinal movement and permitting lateral separation of the shells, means cooperating with both shells locking same against lateral separation, and means within the shells for clamping the cables against withdrawal.

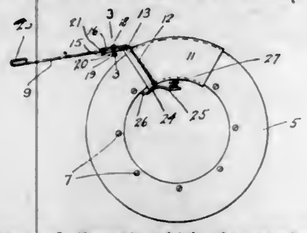


1,811,943. ADJUSTING DEVICE FOR CYLINDER GRINDERS. FRED M. KERN, Detroit, Mich., assignor to Hutto Engineering Company, Inc., Detroit, Mich., a Corporation of Michigan. Filed Jan. 31, 1928, Serial No. 250,889. Renewed Nov. 22, 1929. 7 Claims. (Cl. 51—184.2.)

6. A grinding device comprising rotatable supporting means, abrasive carriers mounted on said supporting means and movable toward and from the axis thereof; and adjusting means for moving said abrasive carriers relative to the axis of said supporting means including an adjusting disk operatively connected with said abrasive carriers and rotatable within said supporting means but

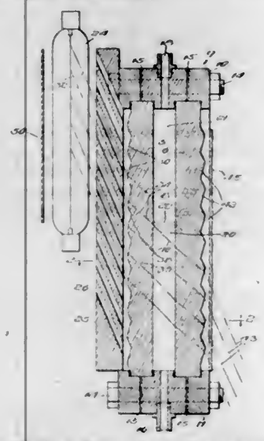
held against longitudinal movement relative thereto and provided with an annular row of teeth; and an adjusting sleeve rotatable on the exterior of said supporting means and movable lengthwise relative thereto and having a projection adapted to engage with one or another of said teeth of the adjusting disk.

1,811,944. TUBE SECURING MEANS. FREDERICK W. KRONE, San Francisco Calif. Filed Jan. 14, 1928. Serial No. 246,836. 1 Claim. (Cl. 152—10.)



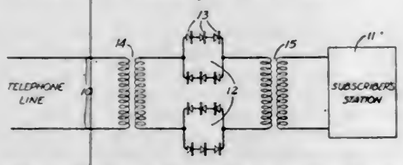
In a tire structure of the type in which a casing is associated with an inner tube in the casing and is also associated with a rim having a valve stem extending therethrough, an inner tube having secured thereto adjacent its rim portion an internal cushion projecting towards the tube perimeter, an anchor plate threadedly engaging the valve stem and detachably secured to the rim on the inner periphery thereof, and a band substantially embedded in the cushion element of the inner tube and having its free ends secured to said anchor plate, said anchor plate and band providing a continuous ring within the body of the internal cushion to prevent said tube and cushion element from creeping.

1,811,945. STEEL TAPE REEL. EMIL G. LANGE, Sedalia, Mo. Filed July 30, 1928, Serial No. 296,287. Renewed May 12, 1931. 3 Claims. (Cl. 242—84.8.)



1. A reel of the character described comprising a reeling member composed of a pair of rings having a spacing mem-

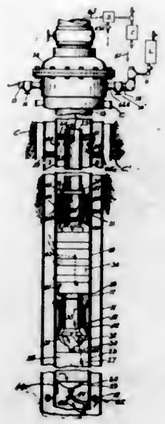
ber therebetween securing the outer periphery of the rings in spaced relation, a hand grip disposed about a portion of



said member and through which the member is freely movable, a brake device for the reel carried by said hand grip and a tape guide also attached to said hand grip.

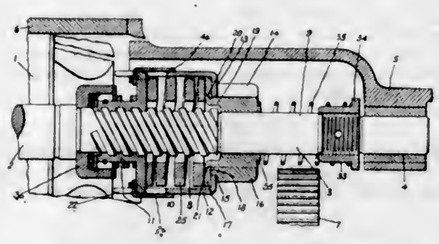
1,811,946. LEVEL INDICATOR. ANDREW R. LE BAILLY, Chicago, Ill. Filed June 13, 1927. Serial No. 198,630. 19 Claims. (Cl. 116—118.)

16. The method of determining the relative positions of fluids with different critical refracting angles which comprises directing parallel rays of light against said fluids at an angle between the critical refraction angles of the fluids to produce reflected rays where one fluid is encountered and refracted rays through the other fluid.



1,811,947. NOISE SUPPRESSING CIRCUIT. VICTOR E. LEGG, Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed May 14, 1929. Serial No. 362,903. 11 Claims. (Cl. 178—44.)

1. The combination with a telephone line of means for suppressing crosstalk currents while transmitting speech currents, said means comprising resistive material in series in the line, the impedance of which decreases with increasing applied voltages.

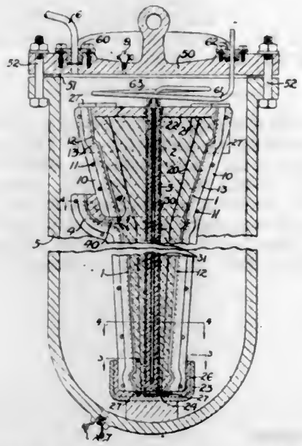


1,811,948. DEEP WELL PUMP AND SYSTEM. WALTER A. LOOMIS and SYLVESTER E. BURTON, Los Angeles, Calif. Filed Jan. 26, 1925. Serial No. 4,774. 13 Claims. (Cl. 103—5.)

1. An organization of the character described which includes an engine, a pump therebelow, a stationary tubing extending above said engine, a packer carrying said tubing, a pipe extending within said tubing and to a point above said packer, and a vertical hollow shaft between said engine and said pump, and in which said engine and

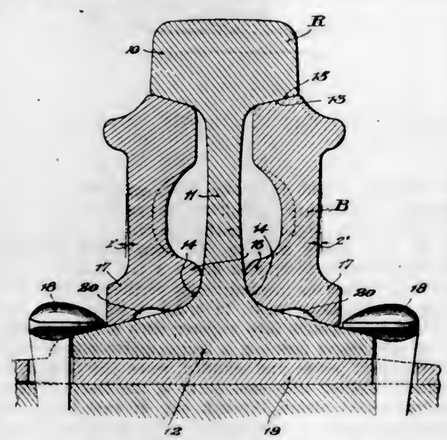
said pump both include stationary elements secured to said stationary tubing and said vertical hollow shaft constitutes means for delivering a pumped liquid into said pipe.

1,811,949. ENGINE STARTING APPARATUS. CHARLES MARCUS, New York, N. Y., assignor, by mesne assignments, to Eclipse Machine Company, Elmira Heights, N. Y., a Corporation of New York. Filed Oct. 28, 1918. Serial No. 260,048. Renewed Aug. 3, 1927. 30 Claims. (Cl. 74—7.)



1. An engine starter including a rotatable shaft, a driving member mounted thereon and adapted to engage and drive a member of the engine to be started, a control member also mounted on the shaft and adapted to control the position of the driving member and to drive it, and means whereby the control member urges the driving member into cooperation with the engine member and then transmits a gradually increasing torque to such driving member and thence to the engine member, such means including a barrel separate from but connected rigidly with said driving member and loosely with said control member for positive rotary movement therewith and for relative movement of such control member with respect to the barrel.

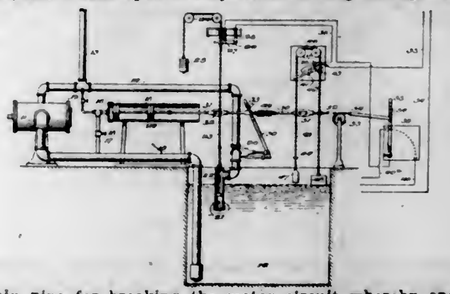
1,811,950. METHOD OF AND APPARATUS FOR PRESSURE CONCRETE MOLDING. WILLIAM M. MEACHAM, Seattle, Wash. Filed Aug. 11, 1928. Serial No. 298,944. 10 Claims. (Cl. 25—1.)



7. The method of molding concrete under pressure which consists in applying pressure to the concrete in the mold, placing the interior of the concrete within the mold in communication with a lesser pressure, supplying surplus

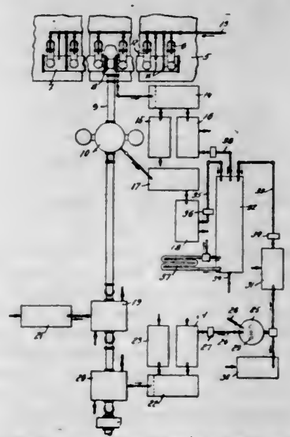
grouting at points which are directly exposed to the pressure fluid and separating this surplus grouting from the body of the mold by a thin layer of material which will not unite with the concrete, to thereby provide a plane of cleavage.

9. An apparatus for molding concrete objects comprising a mold, a pressure chamber adapted to receive the mold, means for applying pressure to the interior of said pressure chamber, the mold having openings permitting application of pressure within the chamber to the mass within the mold, and a water drain at lower pressure communicating with the interior of the mold.



1,811,951. TOELESS RAIL JOINT BAR. JOHN NELSON MEADE, Denver, Colo., assignor to The Rail Joint Company, New York. N. Y., a Corporation of New York. Filed Aug. 13, 1929. Serial No. 385,487. 10 Claims. (Cl. 238—243.)

1. In a rail joint, the rail, and a joint bar adapted to have fulcrum engagement with the base fillet of the rail, and adjustable fishing engagement with the head of the rail.

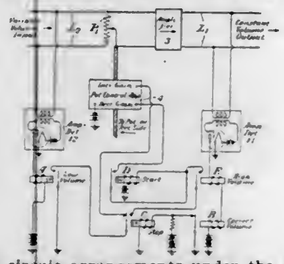


1,811,952. CONTROL DEVICE FOR PUMPING APPARATUS. SAMUEL J. MERRITT, Central City, Ky. Filed Mar. 19, 1930. Serial No. 437,157. 8 Claims. (Cl. 103—26.)

1. In a pump control mechanism, a pump having an intake pipe and a discharge pipe, a motor for said pump, an electrical circuit including said motor, a drain pipe communicating with said discharge pipe, means rendered operative by operation of the pump to close said drain pipe, and means operative by water flowing through said

drain pipe for breaking the motor circuit whereby operation of said motor can not be initiated while water is draining through the drain pipe.

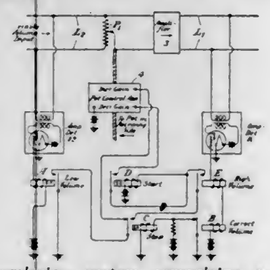
1,811,953. FUEL COMPOSITION AND METHOD OF PREPARING THE SAME. STUART PARMELEE MILLER, Glen Ridge, N. J., assignor to The Barrett Company, New York, N. Y., a Corporation of New Jersey. Filed July 16, 1927. Serial No. 206,369. 4 Claims. (Cl. 44—8.)



1. A new fuel composition comprising pitch and neutral oil constituents normally contained in coal tar in a substantially undecomposed condition, said composition being free from the greater part of the tar acid constituents normally contained in the tar but containing neutral oils having boiling points corresponding to those of the tar acids, and said composition being substantially free from decomposition products of the normal tar constituents.

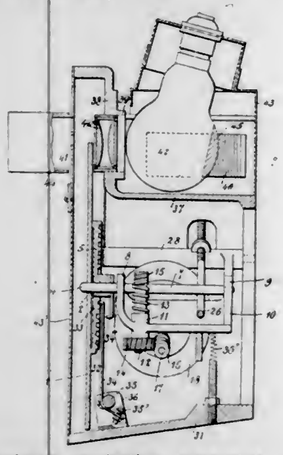
2. The method of producing a fuel composition from hot coke oven gases, which comprises subjecting the gases to a regulated cooling to condense pitch constituents therefrom while leaving tar acid oils in the form of vapors, subjecting the gases to a cleaning treatment to separate suspended pitch particles therefrom at a temperature such that tar acid oils will be kept in the form of vapors, cooling the cleaned gases to separate tar acid oil therefrom, extracting tar acid from such oil, and blending the resulting neutral oil with the pitch directly separated from the hot coke oven gases.

1,811,954. TRANSMISSION VOLUME CONTROL. DOREN MITCHELL, New York, and HAROLD C. SILENT, Larchmont, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 17, 1928. Serial No. 326,597. 12 Claims. (Cl. 178—44.)



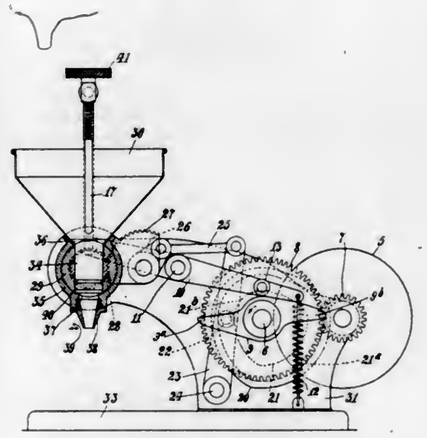
1. A transmission system comprising a one-way line section, a device included in said line section for controlling the volume of transmission over said line section, relay means associated with said line section on the incoming

and outgoing sides of said device, said relay means being responsive to currents of different values in said line



section, and circuit arrangements under the joint control of said relay means for operating said volume control device.

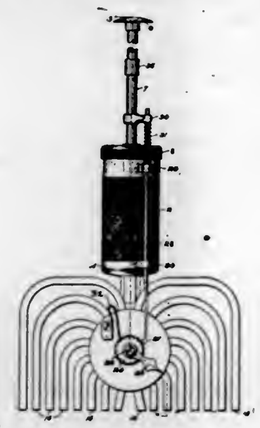
1,811,955. TRANSMISSION VOLUME CONTROL. DOREN MITCHELL, New York, and HAROLD C. SILENT, Larchmont, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 17, 1928. Serial No. 326,598. 4 Claims. (Cl. 178—44.)



2. A transmission system comprising a one-way line section, a gain control device included in said line section, automatic control apparatus for adjusting the setting of said gain control device in accordance with the volume of the signals sent over said line section, and auxiliary relay means associated with said line section on the incoming side of said gain control device and responsive to the amplitude of the incoming signal wave for controlling the initial setting of said gain control device.

1,811,956. PROJECTION ARRANGEMENT FOR ADVERTISING PURPOSES. ERIK MOERCH, Paris, France. Filed May 20, 1929. Serial No. 364,581. 4 Claims. (Cl. 88—27.)

4. A luminous projecting apparatus comprising a transparent disk having characters thereon in spiral formation, projecting and illuminating elements arranged to project a beam of light through the characters on the disk, a pivoted frame, a rotatable carrier disk receiving and carrying the transparent disk and having a spiral groove in its under side, means on the frame for supporting and rotating said carrier disk, an arm mounted adjacent the carrier disk and extending over the same with its free end engaging the groove therein, and means on the carrier disk to engage the arm for positioning the disk.



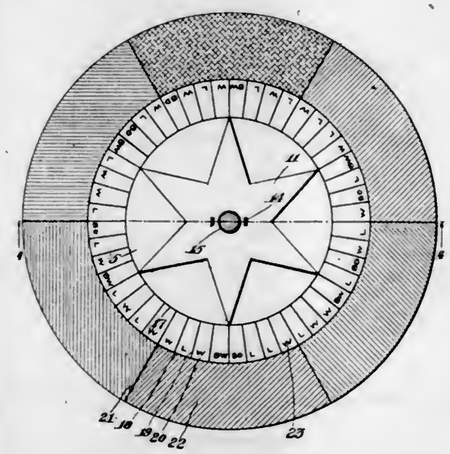
1,811,957. DEVICE FOR MEASURING AND DEPOSITING MEASURED QUANTITIES OF LIQUID, PLASTIC, GRANULAR, AND OTHER SIMILAR SUBSTANCES. JAMES MORTON, Wishaw, Scotland; William Morton, executor of said James Morton, deceased, assignor to Robert Henry Morton, Wishaw, Scotland, and himself. Filed Jan. 8, 1930, Serial No. 419,340, and in Great Britain Feb. 16, 1929. 5 Claims. (Cl. 221—103.)

1. A device of the type aforesaid, comprising in combination, a stationary cylindrical sleeve member having two diametrally opposite ports therein, a drum turnable in said sleeve member, an open ended diametral cylindrical receptacle in said drum, a free piston in said receptacle, means for intermittently oscillating said drum through substantially 180°, in order to bring each open end of said receptacle into register with a corresponding port in said sleeve member, a reciprocative plunger separate from said piston and adapted, when the ends of the receptacle register with said ports in the sleeve member, to actuate said piston through one of said ports, and means for supplying the substance to be deposited and measured to the port when the piston is actuated, said plunger reciprocating in synchronism with the oscillation of said drum.

1,811,958. LUBRICATING SYSTEM. HOWARD J. MURPHY, Reading, Mass., assignor, by mesne assignments, to Alemite Corporation, Chicago, Ill., a Corporation of Delaware. Filed Aug. 25, 1925. Serial No. 52,404. 4 Claims. (Cl. 184—35.)

1. A centralized lubricating system comprising a lubricant reservoir, a high pressure cylinder integral therewith, a thrust operated plunger extending through said reservoir and co-operating with said cylinder, a rotary valve communicating with said cylinder, conduits leading from said valve to the bearings to be lubricated, and means secured to and reciprocable with said plunger for rotating said valve.

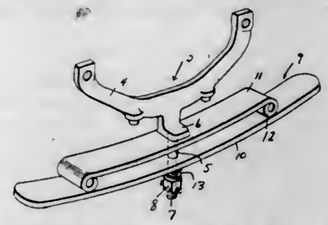
1,811,959. VINYL DERIVATIVES OF ACETYLENE AND METHOD OF PREPARING THE SAME. JULIUS A. NIEUWLAND, Notre Dame, Ind., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 13, 1928. Serial No. 305,866. 22 Claims. (Cl. 260—171.)



2. In the process of preparing vinyl derivatives of acetylene the step of reacting acetylene in the presence of a non-alkaline catalyst comprising cuprous chloride.

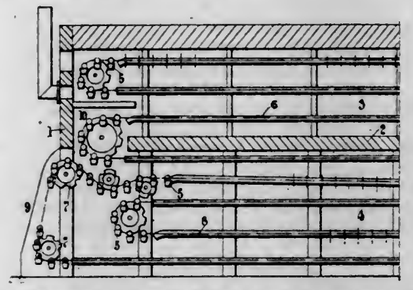
17. Divinyl acetylene.

20. A catalyst mixture comprising a saturated aqueous acid reacting solution of cuprous chloride and an ammonium compound of the class consisting of ammonium salts and the cyclic nitrogen bases.



21. A non-benzenoid polymer of acetylene having the empirical formula C_8H_8.

1,811,960. GAME. MELVILLE LUDWIG ORR, Cincinnati, Ohio. Filed May 16, 1930. Serial No. 453,017. 4 Claims. (Cl. 273—142.)



1. Apparatus for playing a game of chance comprising a base, a vertical spindle disposed centrally of said base, a spinner, and a hanger for suspending said spinner on said spindle consisting of a metal strip bent intermediate its ends and terminating in tabs bent into engagement with said spinner, the intermediate portion of the strip being concaved to provide a bearing for the upper end of the spindle.

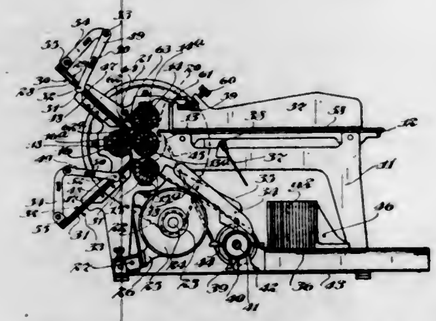
1,811,961. MOTOR SUSPENSION SPRING MEANS. ALBERT PARTIN, Portales, N. Mex. Filed Apr. 21, 1930. Serial No. 446,035. 2 Claims. (Cl. 248—14.2.)

1. As a new product of manufacture, a spring suspension device for use and association with a strut-like bracket of the class described comprising a relatively long curvate leaf spring constructed to rest on a motor vehicle frame, a relatively short upper leaf spring having its ends curled and resting on the end portions of said first named spring, both of said springs being formed with vertically alined leg receiving holes for the purpose specified.

1,811,962. TRAVELING OVEN. JOHANNES HERMANUS NIEULANT PELKMAN, London, England, assignor to Naamlooze Vennootschap Bakovenbouw Voorheen H. P. Den Boer, Dordrecht, Netherlands. Filed Mar. 25, 1926, Serial No. 97,344, and in Great Britain Nov. 19, 1925. 4 Claims. (Cl. 107—57.)

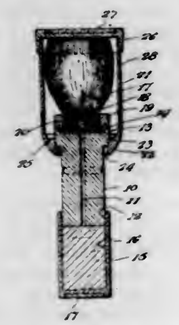
1. A baking oven comprising a unitary chamber structure, a horizontal partition which divides said structure into two horizontal compartments, said partition having at one end an upstanding wall which is parallel with the adjacent outer wall, the opposite end wall of the oven having on substantially the same plane an inwardly extending and horizontal wall, the lower compartment forming a prover and the other a baking oven, conveying means for receptacles into which the products to be baked are charged at the forward end of the structure, being then conducted backwards and forwards in said prover and then into the forward end of the baking oven in which they are moved backwards and forwards and again backwards to the rear end of the structure.

1,811,963. APPARATUS FOR REDUCING CROSSTALK CURRENTS. EUGENE PETERSON, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed June 20, 1928. Serial No. 286,773. 15 Claims. (Cl. 179—78.)



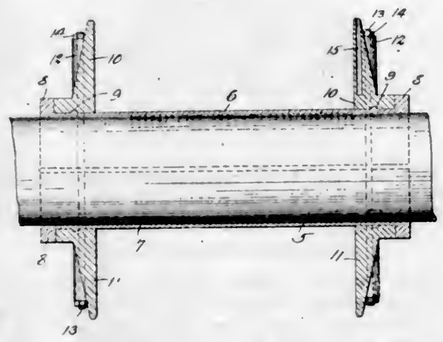
2. The combination with a circuit for the transmission of signal waves of a transmission element associated with

said circuit having the property of bilaterally freely transmitting said signal waves practically undistorted while suppressing the transmission of disturbing currents having



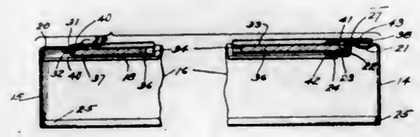
amplitudes small in comparison with said signal waves and a source of biasing potential for said transmission element for determining the point at which discrimination occurs.

1,811,964. LETTER FOLDING MACHINE. ROY N. PIERSON and CHARLES H. CARLSON, Minneapolis, Minn., assignors, by mesne assignments, to American Multigraph Co., Wilmington, Del., a Corporation of Delaware. Filed Sept. 14, 1929. Serial No. 392,598. 8 Claims. (Cl. 270—68.)



1. A folding machine comprising a group of folding rollers arranged as a central roller, an upper roller, a lower roller and a rear roller, a sheet guideway normally receiving the sheet from between said central and upper roller and having a stop for causing the said sheet to buckle downward between said central and rear roller, and lower sheet guideway receiving the sheet from between said central and rear roller and having a stop for causing said sheet to buckle between said central and lower roller, an inclined deck receiving the folded sheet from between said central and lower roller, a receiving table, and a packer operative on the folded sheets delivered from said deck and serving to pack the same on said receiving table.

1,811,965. FOUNTAIN SHAVING BRUSH AND RECEPTACLE. HARRY R. PRIEST, Loudonville, Ohio. Filed July 12, 1930. Serial No. 467,606. 8 Claims. (Cl. 132—80.)

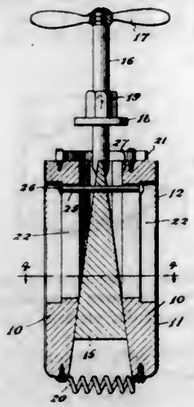


1. The combination of a shaving brush, and a receptacle adapted to house the bristles, and comprising a cylindrical wall open at both ends and having one end restricted to provide a reduced neck, the bore of said neck being wedge shaped in contour to frictionally engage the shaving brush, there being openings in the receptacle to ventilate the interior thereof, and a cap closing the open end of the receptacle opposite the reduced neck and provided with a mirror in the outer face thereof.

1,811,966. BULL WHEEL SHAFT FLANGE. JOHN PROPER, Seminole, Okla. Filed Nov. 29, 1929. Serial No. 410,621. 2 Claims. (Cl. 242—117.)

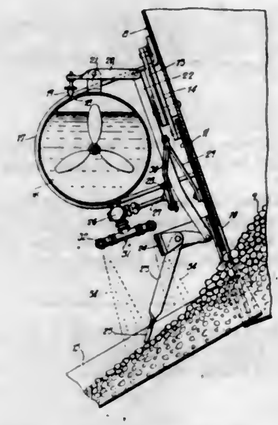
1. A flange for bull wheel shafts, including a sectional hub, enlargements at the ends of the sections, sectional flange members positioned on the sectional hub and engaging the enlargements to restrict lateral movement of the flanges, and means for securing the flanges and hub to the shaft.

1,811,967. CONTAINER COVER. HENRY T. REYNOLDS, Lombard, Ill., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 2, 1928. Serial No. 316,635. 6 Claims. (Cl. 220—82.)



5. In a display cover for containers, a closure frame, a transparent member removably held within said frame and a locking device adapted to engage part of said member to removably lock the same in position and to slidingly move into and out of locking position.

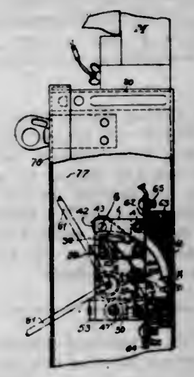
1,811,968. BUSHING PULLER. WALLACE R. RODZIKINAS, Hatley, Wis. Filed June 26, 1930. Serial No. 464,082. 5 Claims. (Cl. 29—88.2.)



1. A tool for removing bushings and the like comprising jaws having semi-cylindrical outer faces and having flat inner faces inclined with respect to the longitudinal axis of the tool, said outer faces having an obliquely

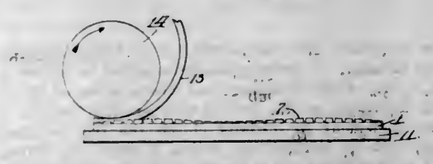
threaded portion and a longitudinally threaded portion, the leading ends of the jaws being rounded to permit

easy entry of the tool in the bore of the bushing, and a wedge movable longitudinally between the flat inclined faces of the jaws to wedge the jaws in the bushing.



1,811,969. MATERIAL SPRAY APPARATUS. JOSEPH P. ROSENFELD, Newark, N. J. Filed Sept. 18, 1929. Serial No. 392,453. 5 Claims. (Cl. 298—7.)

1. In a structure of the class described, in combination, a vehicle body having a discharge opening, a delivery chute connected with said opening, a sliding door for said opening, a water containing tank supported on said vehicle body over said chute, valved distributing means on the bottom of said tank, and an operating connection between said valved means and said door, whereby the door controls said valved means to open the valve when the door is open, and to close the valve when the door is closed, and means on the tank and operable by the material passing through the chute for controlling the discharge of the water from the tank through the valved means.

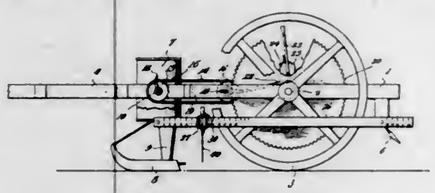


1,811,970. AUTOMATIC CIRCUIT BREAKER. JOSEPH SACHS, West Hartford, Conn. Filed June 5, 1928, Serial No. 283,060. Renewed Sept. 8, 1930. 30 Claims. (Cl. 200—88.)

1. In an automatic circuit breaker, the combination of a pivotally movable contact member biased toward its open-circuit position, an actuating member also pivotally movable and normally adapted to move the contact member to open or close the circuit, and an electro-responsive means comprising an element inherently responsive to abnormal current conditions in the circuit and constituting at least a part of a movable mechanical connection between the aforesaid members normally operative to prevent independent pivotal circuit opening movement of

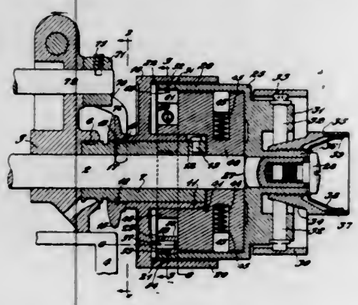
the contact member, the said element upon the attainment of an abnormal current condition in the circuit and by reason of its own inherent electro-responsive characteristics being movable relatively to the aforesaid members so as to render the said mechanical connection ineffective and to thereby permit the contact member to pivotally move to its open-circuit position independently of the actuating member.

1,811,971. PRINTING FORM AND METHOD OF PREPARING THE SAME. ERNST SAUER, Schloss Kaibitz, Germany, assignor to The Ernst Sauer Process, Inc. Filed Nov. 26, 1927, Serial No. 236,021, and in Germany Dec. 7, 1926. 5 Claims. (Cl. 41—25.)



1. In the process of preparing printing forms from a gelatine copy relief that has been developed, hardened and swollen with water, the steps that comprise placing a solvent of celluloid upon the gelatine copy relief, forcing a plate of celluloid into intimate contact with the copy relief and solvent whereby it is rendered plastic by the solvent and takes a sharp impression of the copy relief and drying the celluloid plate.

1,811,972. PROCESS FOR THE PRODUCTION OF ARTIFICIAL HORN. FRITZ SCHMIDT, Troisdorf, near Cologne, Germany. Filed Feb. 20, 1925, Serial No. 10,693, and in Germany Nov. 27, 1924. 1 Claim. (Cl. 106—38.)

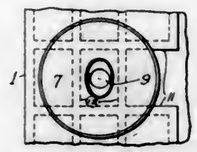


The process for the production of artificial horn, consisting in first mixing about 30 parts in weight of a cellulose derivative with about 20 parts of alcohol and some water; then mixing separately about 60 parts of unchanged commercial casein with about 10 parts of water and 5 parts of alcohol; and lastly thoroughly kneading together the two mixtures until a homogenous mass is obtained; said cellulose derivatives being selected from the group consisting of nitrocellulose, acetylcellulose, ethylcellulose and benzylcellulose.

1,811,973. CHECK ROWER. WILLIAM SCOTT, Mount Vernon, Ohio. Filed Dec. 28, 1928. Serial No. 329,014. 1 Claim. (Cl. 111—16.)

In a check row planter, the combination with a planter frame, of a graduated rail secured on the side of the frame and extending longitudinally thereof, a slide loop fitted around the rail and having an open outer side, a pointer formed on the slide at the top of the open side thereof and overlapping the rail, a pointer rod suspended on the bottom of the slide in vertical alinement with the pointer, and a line mounted on the top of the slide in vertical alinement with the pointer.

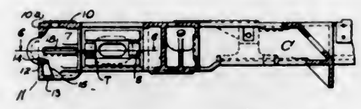
1,811,974. CLUTCH. CHESTER F. SEARLE, Cranston, R. I., assignor to Universal Winding Company, Boston, Mass., a Corporation of Massachusetts. Filed July 26, 1929. Serial No. 381,248. 28 Claims. (Cl. 192—52.)



1. In a clutch, the combination of a driving-member, a driven-member, an inertia-element adapted to be set in motion by one of said members, and means operated by the relative movement of the driving-member with respect to the inertia-element to initially clutch the two members together with an intermittent action to start the driven-member at slow speed and to finally clutch the two members together to drive the driven-member at the same speed as the driving-member.

1,811,975. RAILWAY CAR UNDERFRAME. WILLIAM M. SHEEHAN, St. Louis, Mo., assignor, by mesne assignments, to General Steel Castings Corporation, Granite City, Ill., a Corporation of Delaware. Filed Apr. 18, 1928. Serial No. 270,950. 24 Claims. (Cl. 105—247.)

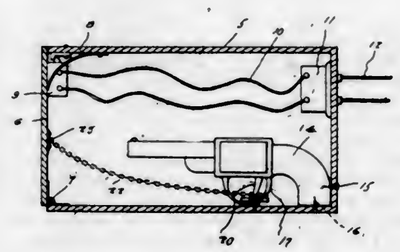
1. In a car underframe, side sills terminating short of the end of the car, bolsters connecting said sills, and draft sills extending outwardly from said bolsters, all of said sills being box-shaped in cross section and co-operating to provide a continuous vertical outer wall for the underframe.



1,811,976. CAR STRUCTURE. WILLIAM M. SHEEHAN, St. Louis, Mo., assignor, by mesne assignments, to General Steel Castings Corporation, Granite City, Ill., a Corporation of Delaware. Original application filed Apr. 18, 1928, Serial No. 270,950. Divided and this application filed Apr. 5, 1929. Serial No. 352,817. 25 Claims. (Cl. 105—415.)

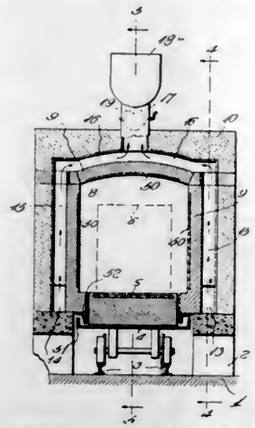
1. A railway vehicle frame member having an integral center plate portion, the lower face of said portion being provided with a non-circular element for engaging a separate wear member.

2. A railway vehicle body bolster including an integral center plate, the lower face of which is provided with a non-circular recess for engaging a separate wear member.



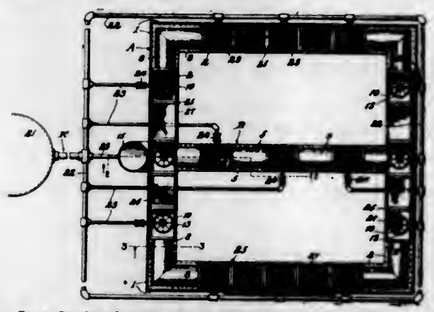
1,811,977. RAILWAY CAR DRAFT SILL. WILLIAM M. SHEEHAN, St. Louis, Mo., assignor, by mesne assignments, to General Steel Castings Corporation, Granite City, Ill., a Corporation of Delaware. Original application filed Apr. 18, 1928, Serial No. 270,950. Divided and this application filed Apr. 5, 1929. Serial No. 352,818. 16 Claims. (Cl. 105—415.)

1. In a railway car draft framing, draft sills, and a channel-shaped coupled carrier element integral with said draft sills.



5. In a railway car draft framing, box-shaped draft sills each having outside and inside walls, there being elongated openings in the outer walls of said sills for insertion of draft keys, and draft lugs integral with the inner walls of said sills.

1,811,978. HOLD UP PROTECTOR. HENRY A. SHINE, Sausalito, Calif. Filed Jan. 14, 1930. Serial No. 420,806. 8 Claims. (Cl. 42—1.)

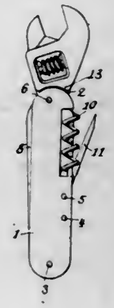


1. In an apparatus of the class described, a box, a pistol anchored in the box, one end of the box being open, a door for said open end of the box, spring hinges for mounting the door and normally holding it in an open position, a lever rockable in the box and engageable with the trigger, a chain connecting the lever with the door so that when the door is open, the lever is rocked to actuate the trigger of the pistol.

1,811,979. FURNACE OR HEAT TREATMENT CHAMBER COOLING MEANS. EDWIN L. SMALLEY, Whitefish Bay, Wis., assignor to Hevi Duty Electric Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 9, 1928. Serial No. 253,199. 11 Claims. (Cl. 263—44.)

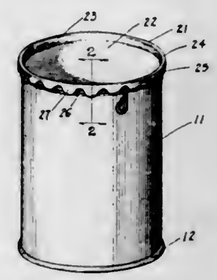
2. In a heat treatment apparatus, a chamber for material to be subjected to heat treatment, a plurality of flues positioned in lateral planes along the length of said chamber, manifolds interconnecting said flues at opposite ends thereof, and means for forcing a cooling mixture through said flues at a predetermined rate.

1,811,980. DRYING HOUSE. FORREST H. SMITH, Ayden, N. C. Filed Aug. 7, 1929. Serial No. 383,994. 13 Claims. (Cl. 34—18.)



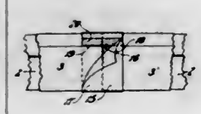
1. In a drying house, the combination with a substantially horizontal flue extending adjacent to and inside of the walls of said house; of a plurality of spaced openings in the bottom of said flue; a fluid fuel burner positioned under each of said openings; and means for supplying fluid fuel to said burners.

1,811,981. SPEED BOAT. WILLIAM J. SNADECKI, Westover, Va., assignor of one-third to Fred L. Pigeon and one-third to Roy W. Pigeon, Boston, Mass. Filed May 21, 1928. Serial No. 279,477. 5 Claims. (Cl. 114—66.5.)



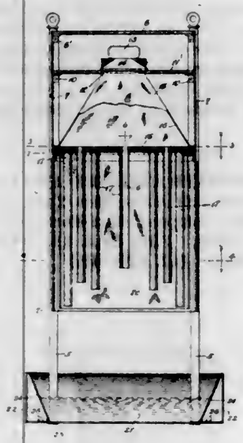
1. In a boat shell formed with lap strakes and with contour of sides generally oval from keel to gunwhale, strakes from the water line to the keel on either side, substantially parallel with the water line, and conforming for the major part of their length from the stern, to the surface of a cone with apex on the median line of the boat in advance of the bow and near the water line.

1,811,982. KNIFE ADAPTED FOR MULTIPLE USES AND COMPRISING A MONKEY WRENCH. JEAN ALBERT SOUSTRE, Cendrieux, France. Filed June 6, 1928, Serial No. 283,285, and in France Dec. 13, 1927. 1 Claim. (Cl. 7—11.)



The combination in a pocket knife having two compartments, a middle partition adapted to separate the two compartments and carrying at one of its ends a monkey wrench in one piece with the said partition. two outer walls for closing the compartments externally, spacing members at both ends of the said compartments, the head of the said monkey wrench being provided with shoulders on both sides, these shoulders being adapted to bear on the said spacing members at the corresponding end of the knife.

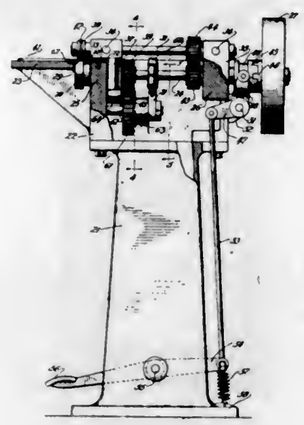
1,811,983. CONTAINER CLOSURE AND OPENING DEVICE. CHARLES STOLLBERG, New York, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 19, 1928. Serial No. 307,008. 1 Claim. (Cl. 220—49.)



In a wire-opening container the combination of a body having an outwardly bent lip and a wire-supporting outward bead below said lip, said bead and lip forming a groove for the wire, a pulling and cover-releasing wire arranged around the can in said groove. a cover having a shoulder inserted down within the can so as to be opposite to said groove, the flange of the cover being bent tightly over the lip of the body and the contained wire and down at the outer side of the wire to a point opposite said head, the margin of the cover flange being formed with notches and bendable lugs, and an annular gasket arranged under said flange of the cover.

1,811,984. JACKET FOR COVERINGS FOR STEAM OR OTHER PIPES. PATRICK M. TAFT, Holyoke, Mass. Filed Feb. 2, 1931. Serial No. 512,773. 5 Claims. (Cl. 154—45.)

1. An insulating covering comprising a plurality of abutting sections of insulating material, jackets for said sections, said jackets being secured to said sections and an extension upon one of said jackets overlying but not secured to an end upon an adjacent jacket to cover closely the abutting ends of said sections and permit expansion and contraction thereof without uncovering said abutting ends.

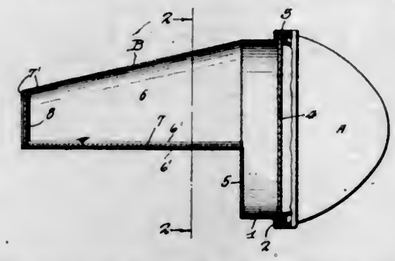


1,811,985. SOUND RESONATING AND AMPLIFYING DEVICE. CHRISTIAN A. VOLF, Jr., Weehawken, N. J., assignor to Murray T. Quigg, New York County, N. Y. Filed Dec. 1, 1928. Serial No. 323,019. 31 Claims. (Cl. 181—27.)

1. A sound amplifying device comprising in combination a relatively shallow container for a liquid, having a side wall sloping inwardly and downwardly, independently mounted sound generating means for directing sound waves downwardly therefrom onto the surface of the liquid, whereby the sound waves move along the surface of the liquid and then over the sides of the liquid container.

1,811,986. METHOD OF AND MACHINE FOR SCORING CAN ENDS. JOHN M. YOUNG, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 9, 1924. Serial No. 685,120. 9 Claims. (Cl. 113—15.)

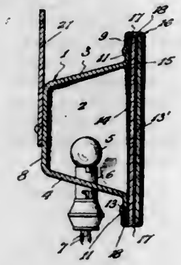
1. The method of scoring circular can ends which consists in rotating a cutting edge relative to the can end and thereby cutting a score in the can end, without penetrating through the metal of the same, at a predetermined distance from the edge of the end, and at the same time



causing the rotation of the can end by the scoring direction and pressure, and confining the rotation of the can end to a circular direction.

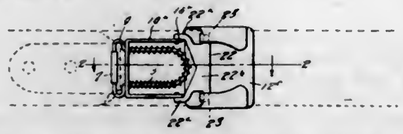
1,811,987. SPRING MOUNTING FOR PRESSES AND THE LIKE. GEORGE F. WALES, Buffalo, N. Y. Filed Mar. 14, 1928. Serial No. 261,500. 2 Claims. (Cl. 267—1.)

1. A spring unit for use between two relatively movable members, comprising a retainer including a bolt having a thread at one end adapted to engage one of said members and a head at its other end a disk on the threaded end of said bolt, a sleeve enclosing said head and having its bore of angular form to fit the head of the bolt and thereby compel this sleeve and bolt to turn together but permitting the same to move lengthwise relatively to one another and provided on its inner end with an internal shoulder adapted to engage the underside of said head and at its outer end with an enlarged pocket, a screw nut secured in said pocket, a screw adapted to connect said nut with the other member, and a spring surrounding said bolt and sleeve and bearing at its opposite ends against said disk and pocket.



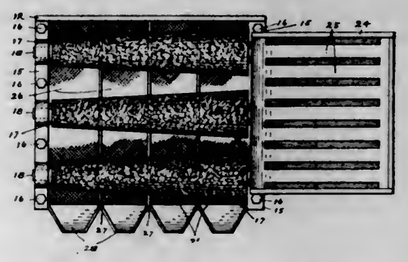
1,811,988. HEADLIGHT. REX F. WHITTEMORE, Pomona, Calif. Filed July 23, 1928. Serial No. 294,726. 1 Claim. (Cl. 240—48.4.)

A visor for a headlight comprising a semi-conical portion and a cylindrical portion, the cylindrical portion having an annular flange formed on its rear edge for attachment to a headlight, an opaque semi-circular plate formed on the front edge of the cylindrical portion and closing the lower half of the latter, the semi-conical portion having its rear end formed on the front end of the front edge of the cylindrical portion and the upper edge of said plate, said elongated semi-conical member tapering from its rear end towards its front end, spaced horizontal flanges formed on the longitudinal edges of the semi-conical shaped member and terminating short of the forward end thereof, spaced arcuate shaped flanges formed on the



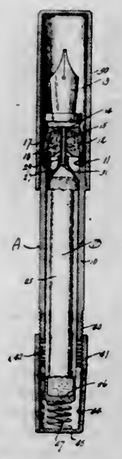
forward end of the semi-conical shaped member, a colored glass closing the front end of the semi-conical shaped member and carried by the arcuate shaped flanges, and a clear glass carried by the horizontal flanges and underlying the colored glass to retain the latter in the arcuate shaped flanges and closing the under side of the semi-conical shaped member by extending from the colored glass to the plate.

1,811,989. ILLUMINATED LICENSE HOLDER. DANIEL WILLMAN, Hartford City, Ind. Filed Mar. 20, 1929. Serial No. 348,545. 1 Claim. (Cl. 40—132.)



A combined tail light and number display for motor vehicles comprising a casing having an open side and an outwardly disposed flange at the open side in which is formed a crimp to provide a groove upon the forward side and a projection upon the rear side of said flange, a packing in the groove, a panel placed against the said outer flange and extending over the open side of the casing, a sectional clamp frame of channel formation embracing the outer edge portions of the panel and casing flange, and means connecting and drawing together the sections of the clamp frame to cause the rear flange of the channel clamp frame to ride upon the said rear projection to clamp the panel against the outer flange of the casing.

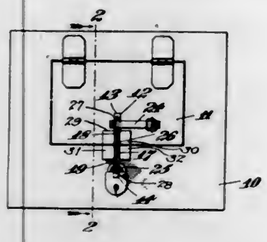
1,811,990. BELT BUCKLE. DORSEY M. WIRTH, Bucyrus, Ohio. Filed July 7, 1930. Serial No. 466,245. 4 Claims. (Cl. 24—191.)



1. A belt buckle of the class described comprising a buckle body, and an expanding belt connector assembly pivotally connected to said buckle body, said belt connector assembly comprising a yoke, means pivotally connecting said yoke to the buckle body, an elongated belt connector slidably carried by the yoke, a belt connecting portion at one end of the connector and a spring on the connector and reacting against the other end of the connector and the bight portion of the yoke for yieldably resisting opposite relative longitudinal movement of the connector and yoke, and a belt engaging jaw carried by said assembly for cooperating with said buckle body for adjustably retaining the free end of the belt.

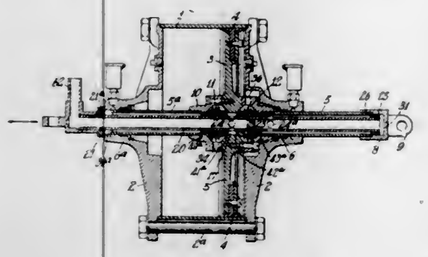
1,811,991. FRUIT SORTER AND CLEANER. GEORGE G. BATES, Kingston, N. Y. Filed Jan. 11, 1928. Serial No. 245,927. 1 Claim. (Cl. 146—193.)

A combined fruit sorter, grader and cleaner, comprising in combination with an inclined feed hopper, of a pair of end frames formed with alined bearings in the upper part thereof, shafts rotatably mounted therein, grooved pulleys secured on said shafts, a belt mounted on said pulleys including one complete wrap around the central pulley, and means for applying rotary movement to the central shaft, tapered rolls secured on said shafts, and adapted to rotate in the same direction, a cleaning material carried by said rolls, a series of combined receiving and delivery troughs mounted below said rolls at right angles thereto and in an inclined position, fabric forming the bottom thereof and adapted to receive the fruit as it passes between said rolls.



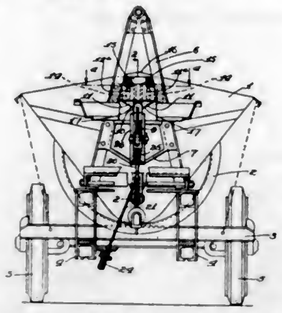
1,811,992. FOUNTAIN PEN. BENJAMIN R. BELL, Bartow, Fla. Filed Oct. 7, 1929. Serial No. 397,973. 1 Claim. (Cl. 120—42.)

In a fountain pen of the class described a barrel including a pen point holding structure having a feed tube



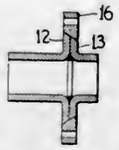
extending freely into the barrel for a substantial distance, and a removable cartridge for the barrel including a tapered neck with a restricted mouth into which the feed tube may snugly fit and a removable stopper in said mouth, the cartridge when fully inserted in the barrel with the feed tube therein having a space between the feed tube at its free end and the lateral walls of the cartridge which is greater measured in any radial direction than the diameter of the mouth of said cartridge, whereby the stopper when pushed into the cartridge during the assemblage of the latter into the barrel and on the feed tube will lie laterally of the tube after assemblage of parts to prevent obstruction of flow of ink into the feed tube.

1,811,993. FASTENER. JOHN VALENTINE BERRY, Johnstown, Pa., assignor to Bethlehem Steel Company, a Corporation of Pennsylvania. Filed Nov. 30, 1929. Serial No. 410,739. 8 Claims. (Cl. 70—14.)



1. A fastener comprising a pair of members mounted in spaced relation to each other and having passageways therein, a connecting member slidably mounted within the passageways of said members said connecting member being capable of slidable movement in either direction for disconnecting said members and locking means adapted to engage the connecting member to restrain said member against movement in either direction.

1,811,994. POWER ACTUATOR. CALEB S. BRAGG, Palm Beach, Fla., and VICTOR W. KLIESRATH, Port Washington, N. Y., assignors to Bragg & Kliesrath Corporation, Long Island City, N. Y., a Corporation of New York. Filed Nov. 5, 1925. Serial No. 66,961. 2 Claims. (Cl. 121—41.)

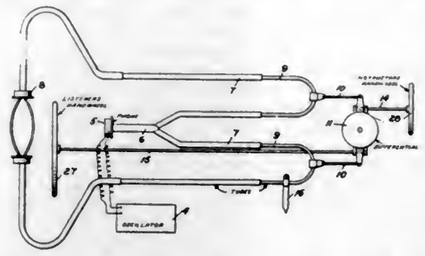


1. In a brake system for automotive vehicles having an internal combustion engine provided with a throttle controlled suction passage, the combination with a power actuator including a cylinder closed at both ends, a piston in said cylinder, a normally unrestricted passage from the suction passage to the cylinder, means including the piston hub and valve members for connecting the cylinder on both faces of the piston with the suction passage by restricted passages when the piston is in normal or off position, to submerge the piston in vacuum, and gradually deliver the air withdrawn from the cylinder to said suction means, and for connecting the cylinder on one face of the piston with said suction passage by an unrestricted passage of greater area than said restricted passages, and admitting higher pressure fluid to the cylinder on the opposite face of the piston, to effect a non-retarded movement of the piston without admitting material quantities of air to the suction passage.

1,811,995. AUTOMATIC LOCK FOR TILTING BODIES. CHARLES G. CLEMENT, Edgerton, Wis., assignor to Highway Trailer Company, Edgerton, Wis., a Corporation of Wisconsin. Filed Sept. 7, 1926. Serial No. 133,791. 3 Claims. (Cl. 298—38.)

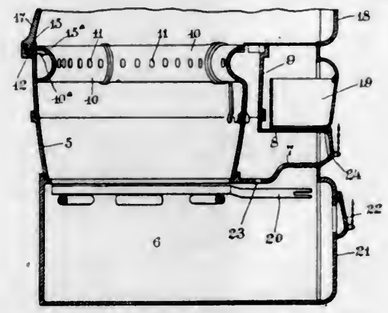
1. In combination with a vehicle frame and a tiltable body mounted thereon, means for locking the body to the frame comprising a pair of transversely spaced, vertically movable latches carried on the body, spring means normally urging said latches into operative position, a bell crank pivotally mounted on said frame for movement about a horizontal axis, and including an upwardly extending arm serving as an abutment adapted to normally engage between the opposing faces of said latches, the other arm of said bell crank extending in lateral direction, means connected to said laterally extending arm for moving the abutment out of operative position with said latches, and yielding means reacting against such movement of the bell crank.

1,811,996. METHOD OF MAKING HUBS. CAROLUS L. EKSERGIAN, Detroit, Mich., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 4, 1929. Serial No. 368,350. 5 Claims. (Cl. 29—159.3.)



1. The method of making hubs which consists in separately flanging a pair of tubular sections, abutting the flanges, and joining the flanges together by butt welding commonly to them a ring of material.

5. As an article of manufacture a hub comprising a barrel having a radial flange, the root of which is divided into two parts in a plane at right angles to the axis of the hub, and the outer portion of which is constituted by a ring welded in common to the divided root portion.

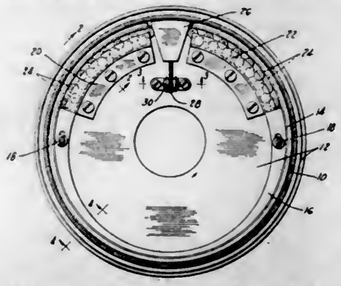


1,811,997. METHOD AND MEANS FOR TRAINING OPERATORS OF SOUND LOCATING DEVICES. HIRAM B. ELY, Philadelphia, Pa. Filed Dec. 4, 1928. Serial No. 323,741. 10 Claims. (Cl. 181—26.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

2. The method of training in binaural comparison which consists in establishing a source of sound, transmitting the sound through a single receiver and thence by separate paths to each ear of a listener, arbitrarily varying said paths to create an impression of lateral direction, having

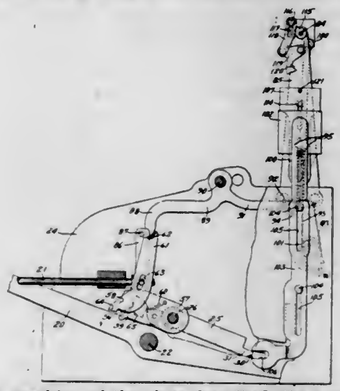
the listener equalize the paths to perceive an impression of central direction and measuring any failure to equalize the paths.

1,811,998. MEANS FOR SUPPORTING HOT AIR RINGS IN FURNACES OR STOVES. GEORGE C. EMRICH, Columbus, Ohio. Filed Sept. 28, 1928. Serial No. 309,034. 3 Claims. (Cl. 126—146.)



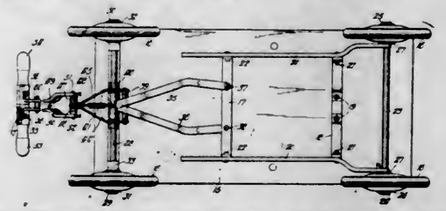
1. In a stove or furnace having a fire pot and a separable dome therefor, a tongue and groove connection between said fire pot and dome, a plurality of hanger members each consisting of a shank portion and a portion having a horizontally elongated eye portion, the shank portions of said hanger members secured in said tongue and groove connection, and said eye portion extended into the fire pot chamber, and a plurality of removable air supplying ring members for the fire pot provided with pins engaging said elongated eyes.

1,811,999. METHOD OF MAKING BRAKE DRUMS. GORDON M. EVANS, New York, N. Y., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 29, 1928. Serial No. 257,815. 1 Claim. (Cl. 29—152.)



The method of making a brake drum or like article, comprising the forming of said drum from a flat plate into a substantially flat web with a circumferential flange extending from said web in the form of a frustro-conical shape, and exerting radially inward pressure on said flange and retaining said flange free of interior support during the period of exertion of said inward pressure.

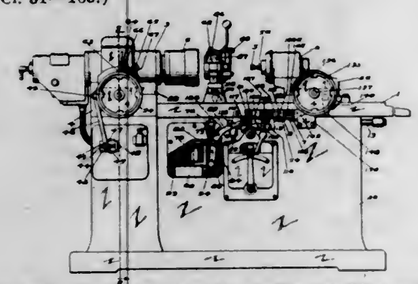
1,812,000. BRAKE. RUDOLPH A. GOEPFRICH, South Bend, Ind., assignor to Bendix Brake Company, South Bend, Ind., a Corporation of Illinois. Filed Mar. 11, 1929. Serial No. 345,947. 16 Claims. (Cl. 188—78.)



1. A brake comprising, in combination, a drum, a friction device engageable with the drum and backed by a plurality of disconnectedly-engaging thrust elements, and means for crowding the thrust elements together to cause them to react on each other to force the friction device outwardly against the drum.

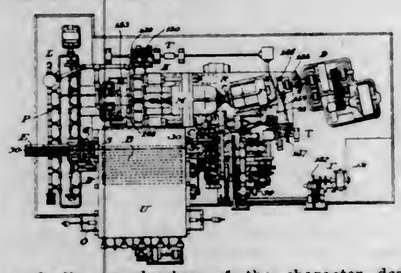
1,812,001. CASH REGISTER. MAXIMILIAN M. GOLDBERG, Dayton, Ohio, assignor to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Original application filed Jan. 5, 1922, Serial No. 527,265. Divided and this application filed July 23, 1926. Serial No. 124,443. 26 Claims. (Cl. 235—23.)

1. In a machine of the class described, the combination of a series of keys, indicators corresponding thereto and moved thereby, having a plurality of sets of figures of different values on one face thereof and a single movable means for always concealing all but one of the sets of figures at the completion of each operation.



1,812,002. CONVERTIBLE VEHICLE. HARRY S. GOODMAN and CARL ROEHRI, Chicago, Ill. Filed May 14, 1928. Serial No. 277,614. 6 Claims. (Cl. 280—87.5.)

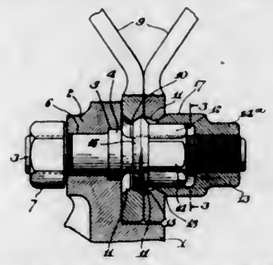
1. A convertible chassis for use in a two wheeled and four wheeled vehicle consisting of wheels, front and rear axles, a pair of side frames secured to the rear axle, handle means, a pair of radius rods, and means for connect-



ing the parts to accommodate any one of a plurality of vehicle bodies with the frames either below or above the axis of rotation of the supporting wheels, said connecting means including a draw bar structure and means for pivoting said structure on a vertical axis to either the handle or the radius rods.

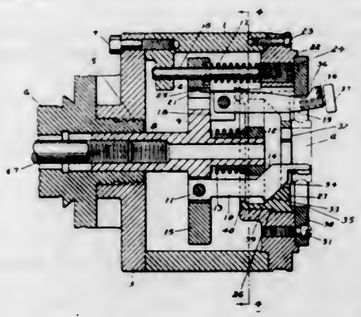
1,812,003. GRINDING MACHINE. WALDO J. GUILD, Worcester, Mass., assignor to The Heald Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed May 31, 1928. Serial No. 281,700. 7 Claims. (Cl. 51—165.)

1. The combination with a grinding machine comprising means for supporting the work, means for supporting a grinding wheel, means for producing a reciprocating motion of one of said before mentioned means with relation to the other, means to so control said motion as to cause a relative traversing motion between the wheel and the work, one past the other in contact, or to cause the withdrawal of one from contact with the other and subsequent restoration to contact, a tool for dressing the grinding wheel so mounted that it is engaged by said wheel when the contact between the work and grinding wheel has been so interrupted, feeding mechanism to feed the workpiece transverse to the said traversing motion to maintain grinding contact, and separate feeding mechanism to feed the grinding wheel transverse to said traversing motion and toward said dressing tool; of devices operated directly by said first named feeding mechanism and operable on said motion controlling means to cause the withdrawal motion and then to restore the contacting traversing relation of work and grinding wheel, and means for periodically moving the feeding mechanism that feeds the grinding wheel, whereby the grinding may proceed by a succession of uninterrupted traversing motions confined to the surface to be ground and at a stage determined directly by the movement of the feeding mechanism the contact of grinding wheel and work is automatically interrupted, the grinding wheel being dressed despite wear because of its periodic advance toward the dressing tool, the traversing contact with the work being then resumed.



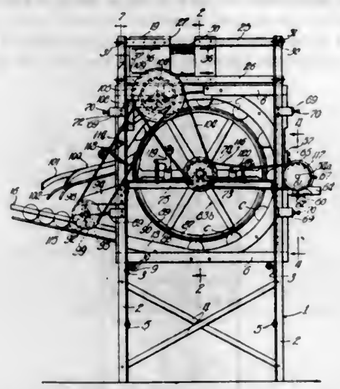
1,812,004. BAR STOCK FEED FOR ROLLING MILLS. JAMES W. HUGHES, Philadelphia, Pa., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 23, 1927. Serial No. 242,064. 28 Claims. (Cl. 29—34.)

1. A feeding mechanism of the character described comprising means to support the bar and opposed cut-off jaws on opposite sides of the bar and means for substantially simultaneously giving the jaws a combined cut-off and bar feeding movement on a path entering the bar behind its end a distance equal to the length of the portion to be fed and leaving the bar in the original plane of the advance end of the portion to be fed.



5. An automatic feeding mechanism of the character described comprising means to support the bar longitudinally and a pair of opposed jaws on opposite sides of the bar each having a bar feeding and cut-off movement on a path initially entering the bar in a plane removed from the initial plane of the end of the bar a distance equal to the length of the portion to be fed and leaving the substantially severed bar in the initial plane of the advance end, together with a transfer mechanism having a transfer movement on a path arranged at 90° to the bar and a receiving seat adapted to give longitudinal support to the portion of the bar being fed and cut off, whereby the substantially severed portion to be fed is upon movement of the transfer mechanism transferred with its axis parallel to the bar from which it has been severed.

1,812,005. SECURING MEANS FOR DEMOUNTABLE WHEELS. J. HAROLD HUNT, Detroit, Mich., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 15, 1926. Serial No. 135,506. 2 Claims. (Cl. 301—9.)

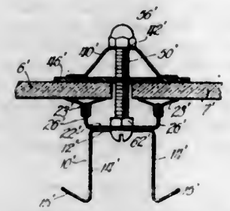


1. A dual wheel construction comprising a hub having a plurality of studs projecting laterally therefrom, a pair of wheels mounted on said hub and having apertures through which said studs project, a pair of nuts threaded directly on each stud, the outer nut having a skirt adapted to surround the other nut, the inner nut having a portion adapted to engage the inner wheel, and the skirt of the outer nut having a portion adapted to engage the outer wheel.

1,812,006. CHUCK. RICHARD H. JELLICOE, Worcester, Mass., assignor to The Heald Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 27, 1926. Serial No. 157,144. 19 Claims. (Cl. 279—106.)

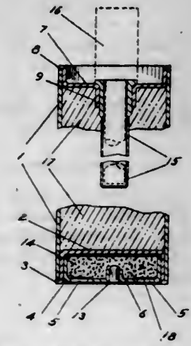
1. In a chuck, a set of work-centering fingers, each having a pivotal mounting, a set of work-holding fingers, and a single actuating means for both said sets of fingers.

1,812,007. CAN LABELING MACHINE. CHRISTIAN CARL KRONE, Momence, Ill., assignor of one-half to Alfred H. Murray, Momence, Ill. Filed Apr. 24, 1929. Serial No. 357,698. 9 Claims. (Cl. 216—58.)



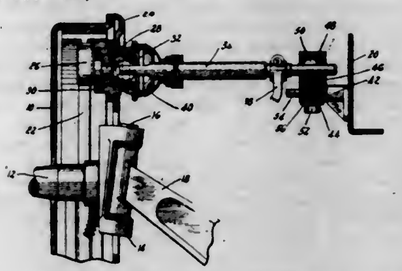
1. In a labeling machine of the character described, a label receiving hopper, means in the hopper for supporting a stack of labels for withdrawal therefrom from the bottom of the stack, a paste pan beneath the hopper, a roller dipping into the pan and disposed to contact the lap end of the bottom label, said roller revolving oppositely to the direction of feed of the labels to the cans, means in advance of the hopper for spotting the cans with adhesive, and means for feeding the cans past the spotting means and beneath the hopper in position to cause the adhesive to contact the bottom label adjacent the other end thereof, the feeding means acting to rotate the cans and subject them to pressure radially thereof as they pass beneath and beyond the hopper for wrapping and smoothing the labels about the cans.

1,812,008. DENTAL IMPRESSION BAND. WILLIAM P. LACE, Denver, Colo. Filed Dec. 19, 1929. Serial No. 415,336. 1 Claim. (Cl. 32—6.)



Dental impression band comprising a relatively short cylindrical tube and an outwardly flared extremity formed on said tube.

1,812,009. SKYLIGHT CONSTRUCTION. GEORGE H. LENKE, Cicero, Ill. Filed June 4, 1928. Serial No. 282,625. 2 Claims. (Cl. 108—16.)

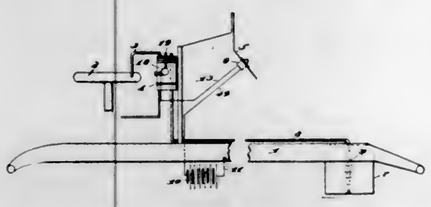


1. As an article of manufacture, a seating strip for glass skylight panes comprising a relatively thin strip of sheet metal having a mounting fold extending longitudinally and generally medially thereof, said fold forming a downwardly opening groove for straddling a relatively thin parallel sided flange on a channel-shaped gutter and the top of the fold being adapted for seating down directly upon the upper edge of the gutter flange, substantially similar upwardly extending and outwardly diverging side wings extending from the fold and having their outer edges terminating in a common plane and adapted for seating engagement with the same surface of the glass pane upon opposite sides of the fold, the top of said fold being disposed below the outer edges of said wings to be spaced from and out of engagement with the pane when the outer edges of said side wings are in engagement with the pane and the sides of the fold being disposed wholly externally of the supporting member and unconfined to free said side wings throughout the entire depth of the fold when said strip is in position upon the gutter flange.

1,812,010. SHELL CONSTRUCTION. LEWIS M. McBRIDE, Fort Sill, Okla. Filed Dec. 3, 1930. Serial No. 499,686. 14 Claims. (Cl. 102—29.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757).

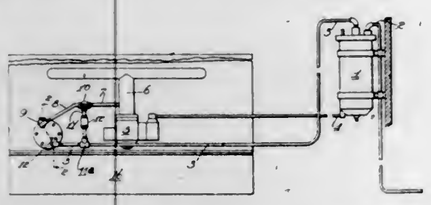
1. A projectile comprising a tubular body member, a forward closure member, a rearward closure member adapted to contain a propellant powder charge, a cover member for said rear closure member, said members being secured to each other by press fits, and means for firing the projectile associated therewith.

1,812,011. BRAKE OPERATING MEANS. GUS F. MICHAEL, South Bend, Ind., assignor to Bendix Brake Company, South Bend, Ind., a Corporation of Illinois. Filed Mar. 25, 1929. Serial No. 349,677. 5 Claims. (Cl. 308—72.)



1. A control for a front automobile brake comprising, a bracket mounted on the chassis frame, a support swiveled on the bracket, and a shaft rotatably and universally supported at one end by the swiveled support.

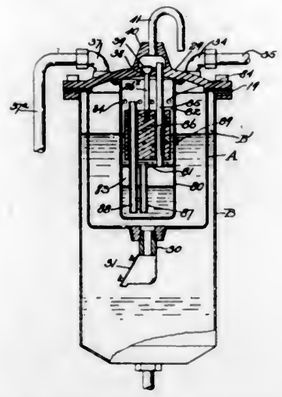
1,812,012. GASOLINE RESERVE SIGNAL FOR AUTOMOBILES. WILLIAM H. MUZZY, Evanston, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a Corporation of Virginia. Filed July 2, 1925. Serial No. 41,141. 5 Claims. (Cl. 177—311.)



5. In an automobile, in combination with an engine and main fuel tank, an auxiliary fuel receptacle and a

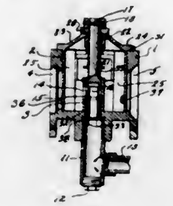
fuel supply line from the main tank to the auxiliary receptacle, intermittently operated fuel feeding means for moving fuel from the main tank to the auxiliary receptacle, a reserve fuel warning signal for the driver including means operated by the fuel feeding means, for controlling the signal so that the occurrence and duration of the signal corresponds to the occurrence and duration of the intermittent fuel feeding periods; means for

affecting the duration of said feeding periods consisting in mean for partially obstructing the flow of fuel from the main tank through the supply line, said means consisting of a float in the main tank and flow-obstructing means associated with the intake of the fuel supply line arranged to be operated for limitedly obstructing the flow at a predetermined low level of the fuel in the tank.



1,812,013. FUEL FEEDING SYSTEM FOR INTERNAL COMBUSTION ENGINES. WILLIAM H. MUZZY, Evanston, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a Corporation of Virginia. Filed July 2, 1928. Serial No. 289,692. 5 Claims. (Cl. 158—36.1.)

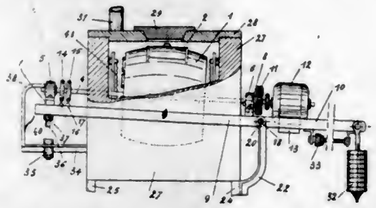
1. In combination with an internal combustion engine, a fuel feeding system comprising a vacuum pumping device having a vacuum chamber, an engine-driven pump having intake and discharge check valves, a conduit connecting the intake of the engine-driven pump with the vacuum chamber of the vacuum pumping device, a conduit connecting the discharge of the pump with the intake manifold of the engine, whereby communication is provided from the vacuum chamber of the vacuum pumping device through the engine-driven pump to the intake manifold of the engine, and a by-pass pipe connecting the first mentioned conduit between the intake check valve and the vacuum chamber of the vacuum pumping device with the second mentioned conduit between the discharge check valve and the manifold, and a check valve in said by-pass opening for fluid flow toward the second mentioned conduit.



1,812,014. LIMITED SUCTION FEED DEVICE. WILLIAM H. MUZZY, Evanston, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a Corporation of Virginia. Filed Sept. 21, 1929. Serial No. 394,152. 8 Claims. (Cl. 103—236.)

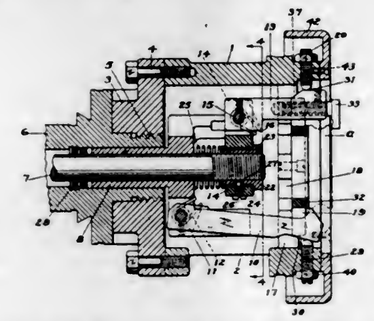
1. In a liquid feeding system in which liquid is lifted from a low level supply to a chamber at a higher level by the creation of a partial vacuum in said chamber and in which means is provided for periodically releasing the elevated liquid for discharge by gravity, said means including an atmosphere valve to vent the chamber, and a float connected for opening said valve upon accumulation of liquid in the chamber; means to prevent an excessive degree of vacuum in the chamber, comprising a supplemental passage for supplying additional fluid thereto against resistance to the movement of such fluid flow, the resistance of said passage being adapted to be overcome by the suction when the vacuum in the chamber exceeds a predetermined value; a supplemental chamber within the vacuum chamber having an inlet for liquid dis-

posed below the lower limit of movement of the float and a transfer passage extending from the lower portion of said supplemental chamber to a point above the normal maximum liquid level in the vacuum chamber, said supplemental chamber being constantly open to the atmosphere, whereby excessive vacuum tends to transfer liquid from said supplemental chamber to the vacuum chamber for satisfying the excess of vacuum.



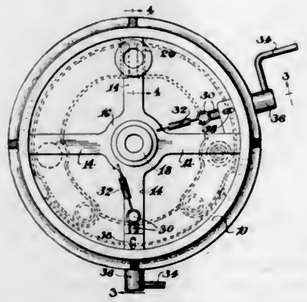
1,812,015. PROPORTIONING VALVE. GEORGE F. NAAB, Cleveland, Ohio, assignor to The North American Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 14, 1927. Serial No. 233,159. 7 Claims. (Cl. 277—19.)

1. In a device of the class described, a casing having a cylindrical valve chamber with a lateral port opening thereinto, a segmental valve in said chamber, secured with said casing against longitudinal movement and rotatable to open and close said port, the valve having a longitudinally extending edge for the purpose, and adjacent said edge a segmental skirt member associated with said valve for movement therewith and longitudinally adjustable independently of said valve to provide a secondary adjustment of the effective port area, independent of the setting of said valve.



1,812,016. ELECTRICALLY HEATED APPARATUS FOR DRYING COFFEE AND THE LIKE. CHARLES NIÉLOUD, Marseille, France. Filed Aug. 25, 1928, Serial No. 302,036, and in Germany Sept. 1, 1927. 3 Claims. (Cl. 219—19.)

1. Apparatus for drying and roasting coffee and like grains, comprising a fixed oven, a movable receptacle located within said fixed oven, means for electrically heating said receptacle, a pivotally mounted frame, means for supporting said movable receptacle on said frame, an electric heating circuit, a contact on said frame connected with said circuit, a projection on said fixed oven, a contact connected with said circuit carried by said pro-

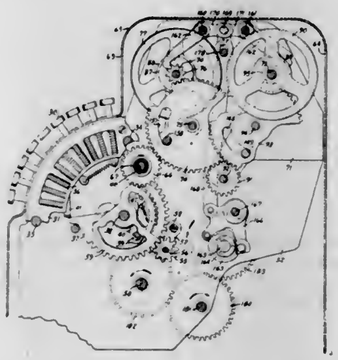


jection, the weight of material in said movable receptacle closing said contacts and means for opening said contacts when the contact carrying frame is shifted due to loss of weight of the material being roasted and means for rotating said receptacle.

1,812,017. CHUCK. DWIGHT C. PAGE and RICHARD H. JELLICOE, Worcester, Mass., assignors to The Heald Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 12, 1927. Serial No. 174,940. 11 Claims. (Cl. 279—106.)

2. In a chuck, an operating rod, a set of work-clamping devices attached to said rod, a member mounted to slide in said chuck, a set of work-centering fingers pivotally attached to said member and adapted to swing in radial planes, and resilient means urging said centering fingers together when said rod is drawn inwardly of said chuck.

1,812,018. BRAKE-ADJUSTING FIXTURE. JOHN W. PETERSON, South Bend, Ind., assignor to Bendix Brake Company, South Bend, Ind., a Corporation of Illinois. Filed Aug. 1, 1928. Serial No. 296,807. 3 Claims. (Cl. 29—84.)

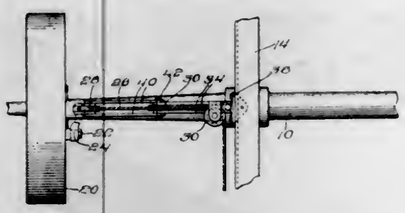


1. A fixture for adjusting brakes comprising, in combination, a part having a surface simulating the braking surface of a brake drum and arranged to be centrally mounted on a wheel spindle, and devices carried thereby for forcing the shoes of a brake firmly against said surface while the anchors of said shoes are being tightened.

1,812,019. CUSHION FILLER. JESSE R. POWELL, MADISON L. SHEELY, and ROBERT SMITH, Chicago, Ill., assignors to Armour & Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 15, 1928. Serial No. 326,176. 8 Claims. (Cl. 154—54.)

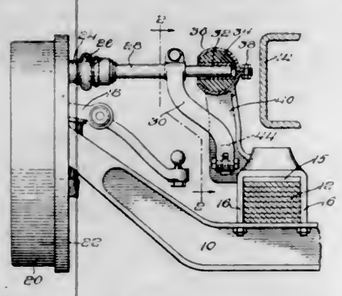
1. A pad for insertion in the pipe of a cushion, consisting of a core of curled hair, a covering of less resilient but softer material, and means for preventing the curled hair from working through the softer material.

1,812,020. CASH REGISTER. WILLIAM H. ROBERTSON, Dayton, Ohio, assignor to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed Aug. 31, 1928. Serial No. 303,249. 14 Claims. (Cl. 235—23.)



1. In a machine of the class described, the combination with a plurality of indicator-supporting shafts; of a set of indicators mounted on each shaft; an auxiliary shaft associated with each indicator-supporting shaft; a set of gear members mounted on each auxiliary shaft to drive their respective indicators on the indicator-supporting shafts; means to differentially position one set of gear members; and means to transmit motion from the set of differentially positioned gear members to the remaining gear members.

1,812,021. BRAKE OPERATING CONNECTION. ROY S. SANFORD, South Bend, Ind., assignor to Bendix Brake Company, South Bend, Ind., a Corporation of Illinois. Filed May 2, 1928. Serial No. 274,531. 7 Claims. (Cl. 188—194.)

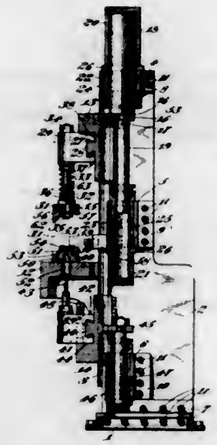


1. A vehicle having an axle and a frame supported by a spring upon the axle and having a wheel swiveled at one

end of the axle and provided with a brake, and comprising, in combination therewith, a linkage connecting the frame and the end of the axle adjacent the brake and an operating

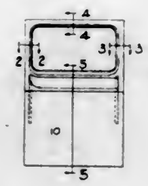
connection for the brake supported by the linkage, the linkage being arranged to maintain the effective length of said connection substantially constant regardless of the deflections of the spring.

1,812,022. BRAKE-OPERATING MECHANISM. ROY S. SANFORD, South Bend, Ind., assignor to Bendix Brake Company, South Bend, Ind., a Corporation of Illinois. Filed May 16, 1928. Serial No. 278,099. 7 Claims. (Cl. 188—194.)



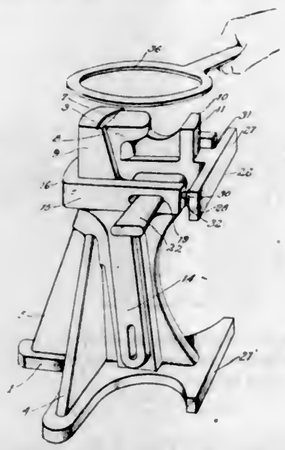
1. Operating mechanism for a front automobile brake comprising an operating shaft having a universal joint at one end and a ball and socket supporting the other end, the ball being resilient and slidably receiving the shaft.

1,812,023. PUNCHING AND UPSETTING MACHINE. ELMER S. SEAVEY, Bethlehem, Pa., assignor to Bethlehem Steel Company. Original application filed Mar. 10, 1926, Serial No. 93,614. Divided and this application filed June 1, 1927. Serial No. 195,619. 16 Claims. (Cl. 29—34.)



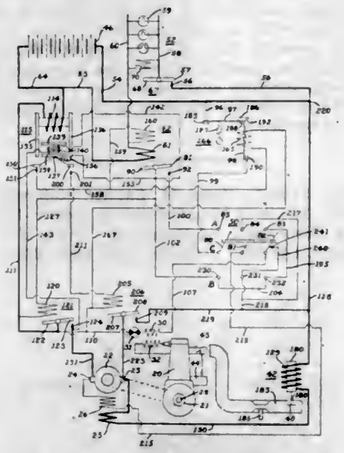
1. In a machine for perforating metal shapes, the combination of a stationary frame, slide-ways thereon, a work-receiving table mounted upon the frame, a carriage mounted upon the slide-ways on either side of the work-receiving table, a plurality of punches adjustably mounted on each carriage, the axes of the punches on one carriage at one side of the work-receiving table being in alignment with the axes of the punches on the carriage at the opposite side of the work-receiving table, means for simultaneously advancing both carriages toward each other until the ends of the punches contact with each other and for partially retracting one carriage by continued movement of the other carriage, and means for retracting the carriages.

15. In a machine for perforating metal shapes, the combination of a pair of opposed reciprocating carriages, a plurality of punches adjustably mounted on each carriage in spaced relation to each other, the punches mounted on one carriage being in alignment with the punches mounted on the opposite carriage, a shoulder formed on the punches mounted on one carriage, means for adjusting the punches on the carriages in spaced relation to each other, a stationary die mounted between the carriages, a resiliently mounted movable die carried by one of the carriages and cooperating with the stationary die to clamp a shape to be punched, perforations through the dies in alignment with the punches, the perforations in the die



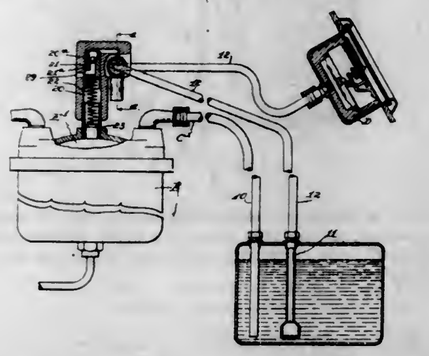
through which the punches having a shoulder pass being of larger diameter than the perforations in the die on the opposite side of the table, a recess around each perforation of larger diameter on the inside of the die in contact with the shape to be punched, means for advancing the punches and perforating the shape by extruding the metal in forming the holes around the holes punched into the recesses, means for advancing the punches having the shoulders until they engage and compress the extruded metal around the holes punched, and means for retracting the carriages.

1,812,024. CONSTRUCTION AND METHOD OF ASSEMBLY OF SHEET METAL DOORS. GEORGE TRAUTVETTER, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 27, 1928. Serial No. 288,712. 8 Claims. (Cl. 296—44.)



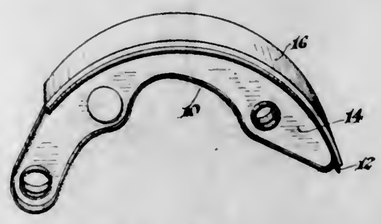
1. A unitary sub-assembly for sheet metal doors having a window opening therein comprising a unitary face panel stamping extending around the window opening, combined with a unitary glass run channel stamping also extending around the window opening and forming one side of a glass run, and joined to the panel in the margin of the opening.

1,812,025. TOOL DRESSING FORM. FRED SWAN, Wichita, Kans., assignor to The Bridgeport Machine Company, Wichita, Kans., a Corporation of Delaware. Filed Jan. 8, 1929. Serial No. 331,141. 8 Claims. (Cl. 29—89.)



1. A tool dressing form comprising a casting, a tool engaging portion on the casting, a tool receiving rest at an angle to the face of the tool engaging portion, the casting having a relief groove at the angle of intersection of the outer face of the tool engaging portion and the tool rest and means for clamping the tool to the casting.

1,812,026. ELECTRICAL APPARATUS. WESLEY E. WENDT, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Feb. 28, 1930. Serial No. 432,094. 3 Claims. (Cl. 290—30.)

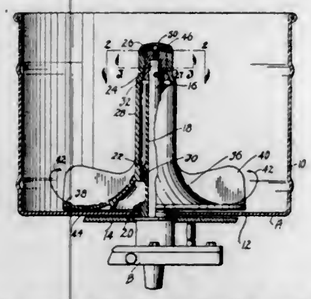


1. An electrical generating system comprising in combination an internal combustion engine, a work circuit, a generator having a field, said generator being adapted to operate as a motor for cranking the engine and as a generator for supplying current to the work circuit when driven by the engine, and electrical apparatus adapted to be positioned for rendering the engine operative upon a demand for current of a predetermined value by the work circuit, said electrical apparatus having a second position whereby said engine may be rendered operative irrespective of a demand for current by said work circuit, and said electrical apparatus having a third position for interrupting the generator field while maintaining said engine operative.

1,812,027. PUMPING MEANS FOR GASOLINE GAUGES. LEONARD H. WHEELER, Chicago, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a Corporation of Virginia. Refiled for abandoned application Serial No. 182,698, filed May 11, 1927. This application filed May 19, 1930. Serial No. 454,111. 4 Claims. (Cl. 230—50.)

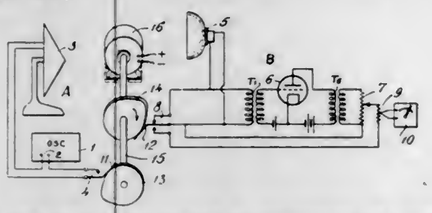
1. An air pumping device for the purpose indicated consisting of a body having a cavity adapted for connection with a source of intermittent suction; a movable member for expanding and reducing the cavity; means yieldingly holding said member against movement in response to the suction through said connection, said body having an outlet from the cavity adapted for connection to transmit air pressure from the pumping device, and having an air inlet to the cavity positioned for admitting air thereto at the opposite side of the movable element from the suction connection, the passage from said air inlet to the outlet comprising a descending part succeeded by an ascending part forming a trap for liquid interposed in the line of pressure communicated from the pump to the outlet, and an air-permeable obstruction interposed between the trap and the outlet, and liquid occupying the trap to which said obstruction is impermeable.

1,812,028. BRAKE SHOE. STANLEY WHITWORTH, South Bend, Ind., assignor to Bendix Brake Company, South Bend, Ind., a Corporation of Illinois. Filed July 19, 1929. Serial No. 379,352. 6 Claims. (Cl. 29—152.)



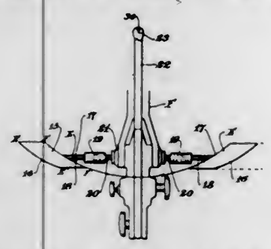
5. That method of manufacturing a brake shoe which comprises partially embedding, within an arcuate friction band, metallic inserts, and attaching a correspondingly shaped supporting rim to those portions of the metallic inserts which project from the body of the lining.

1,812,029. WASHING MACHINE DOLLY. DONALD P. WILSON, Omaha, Nebr., assignor to L. M. Decker Co., Omaha, Nebr. Filed Apr. 24, 1930. Serial No. 446,982. 3 Claims. (Cl. 259—101.)



1. A dolly for washing machines comprising a central hub-shaped member open at its upper end, a bushing

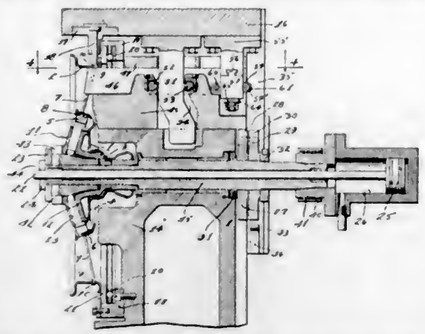
mounted within said hub near its upper end, means for sealing the upper end of said hub, said last means being fastened to the bushing and serving also to retain said



bushing in assembled relationship to the hub, an annular base formed on the hub having its upper surface curved downwardly and outwardly, and wings extending upwardly from said base.

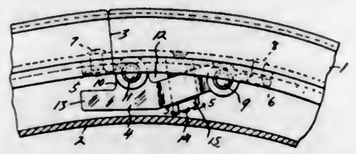
1,812,030. ACOUSTOMETER. CLARENCE A. ANDREE, Madison, Wis., assignor to C. F. Burgess Laboratories, Inc., Madison, Wis., a Corporation of Delaware. Filed Sept. 13, 1929. Serial No. 392,350. 22 Claims. (Cl. 181—0.5.)

1. The step in the method of determining the period of reverberation of a room which comprises causing the average intensity of sound to be suitably indicated during a predetermined period of time when the sound is varying logarithmically.



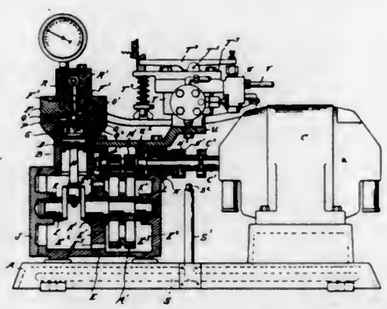
1,812,031. COMPENSATING CONDYLE CORD. ABNER G. BJORKLUND, St. Paul, Minn. Filed Nov. 16, 1927. Serial No. 233,596. 8 Claims. (Cl. 32—1.)

1. A compensating condyle cord including, a rod portion, and means on said rod adapted to indicate the point of marking of the condyle on a patient's face, said means being of a compensating nature to automatically locate the condyle axis in accordance with the actual condyle of a patient's jaw.



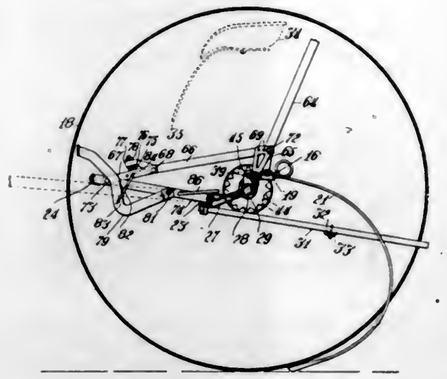
1,812,032. MACHINE FOR RIVETING SPOKES OF VEHICLE WIRE WHEELS. WILLIAM N. BOOTH, Detroit, Mich., assignor to Kelsey-Hayes Wheel Corporation, Detroit, Mich., a Corporation of New York. Filed July 18, 1927. Serial No. 206,757. 9 Claims. (Cl. 78—16.)

2. In a riveting machine for wire wheels, the combination with a base, of means for supporting a wheel assembly upon said base, a reciprocable member, means carried by said reciprocable member for riveting the spokes of the wheel assembly to the rim member thereof, and means ac-



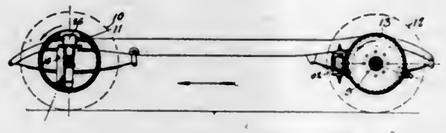
tuated by said reciprocable member for gripping the portions of the spokes adjacent to the rim member while the spokes are being riveted.

1,812,033. TIRE CARRYING RIM. WILLIAM N. BOOTH, Detroit, Mich., assignor to Kelsey-Hayes Wheel Corporation, Detroit, Mich., a Corporation of New York. Filed July 16, 1928. Serial No. 293,150. 2 Claims. (Cl. 301—34.)



1. The combination with a transversely split rim, of a link pivotally connected to the rim ends and comprising resilient bars with an opening therebetween, and a stud extending inwardly from one rim end and adapted to extend through the opening between the bars, said stud having a lateral shoulder adapted to have a snap engagement with said link to secure the same in predetermined position relative to the stud.

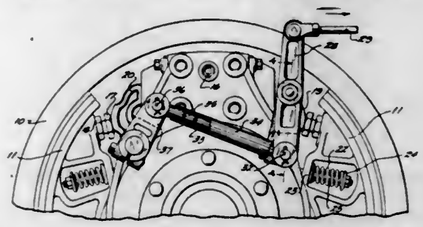
1,812,034. PUMP. JOHN H. BROWN, Hollywood, Calif., assignor, by mesne assignments, to Instant-Ice Corporation, a Corporation of Delaware. Filed May 2, 1927. Serial No. 188,309. 1 Claim. (Cl. 230—234.)



In a compressor, the combination of a crank case having a partition therein dividing the space enclosed into a crank chamber and a gear chamber, said partition having apertures affording communication between the chambers, the gear chamber also having an opening at the top, and a bracket member also forming a closure for said opening.

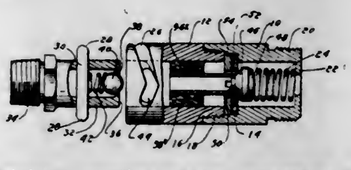
1,812,035. SULKY HAY RAKE. OSCAR F. CARLSON, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Mar. 26, 1927. Serial No. 178,535. Renewed Dec. 9, 1929. 20 Claims. (Cl. 56—391.)

3. In a sulky hay rake, the combination with a rake head carrying rake teeth, and a frame relative to which said rake head has swinging movement between gathering and dumping positions, of multiple link mechanism connected between said rake head and said frame, and a pair of toggle links connected between said frame and said link mechanism, one of said toggle links comprising a foot pedal for actuating said link mechanism.



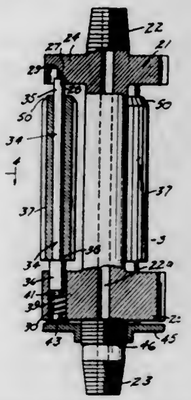
1,812,036. VEHICLE BRAKING APPARATUS. NIELS A. CHRISTENSEN, Milwaukee, Wis. Filed Dec. 15, 1924. Serial No. 755,988. 1 Claim. (Cl. 188—152.)

In vehicle braking apparatus, the combination with the front wheel and its brake drum, the rear wheel and its brake drum, of brake mechanism for said wheels, respectively, each brake mechanism including a fluid-pressure-operated motor, a brake engageable with its associated drum upon the actuation of said motor, and a support for each band including an anchor pin, the fluid-pressure-operated motors being of substantially equal capacity, that portion of the band of the front wheel on its advancing side between the anchor pin and its free end being less than that of its trailing side and having a less surface for braking engagement through self-application than that portion of the band for the rear wheel on its advancing side between its anchor pin and its free end, which advancing portion is greater than its trailing side, upon the forward travel of the vehicle so that for substantially equal pressure from said motors a greater braking force is applied to the rear wheel than to the front wheel.



1,812,037. BRAKE MECHANISM. NIELS A. CHRISTENSEN, Cleveland, Ohio. Filed Apr. 30, 1928. Serial No. 273,900. Renewed Nov. 17, 1930. 3 Claims. (Cl. 188—106.)

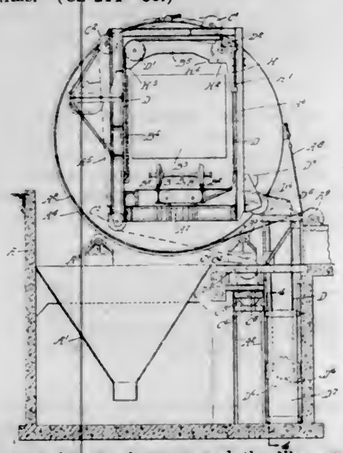
1. In a wheel brake mechanism, the combination with the brake drum and brake members engageable therewith, of a pivoted lever associated with each brake member, an actuator associated with said levers for moving them to a brake application position, and means associated with the



pivot shafts of said levers for moving them to a brake application position, said means including a lost motion connection permitting independent movement of said levers by said first-named actuator.

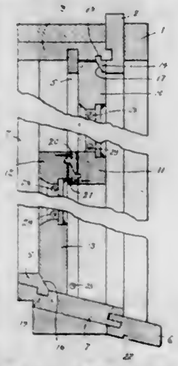
1,812,038. COUPLING. ERNEST W. DAVIS, Oak Park, Ill., assignor to Alemite Corporation, Chicago, Ill., a Corporation of Delaware. Original application filed Mar. 18, 1926, Serial No. 95,688. Divided and this application filed May 12, 1927. Serial No. 190,696. 9 Claims. (Cl. 284—19.)

2. A lubricant coupling member comprising a sleeve having an inlet end and an outlet end, a check valve element intermediate said ends, a seat for said valve, a spring pressing said valve toward its seat, a sealing element comprising a cork cylinder compressed into and having a friction fit in the outlet end of said sleeve, and a stem carried by one of said elements and having contact engagement with the other.



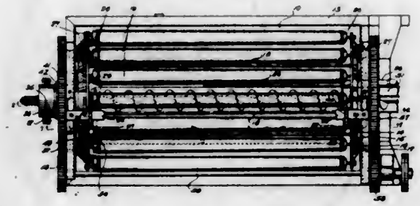
1,812,039. UNDERREAMER. GROVER C. DEAKINS, Anaheim, Calif., assignor, by mesne assignments, to John Grant, Los Angeles, Calif. Filed Dec. 6, 1927. Serial No. 238,016. 20 Claims. (Cl. 255—75.)

1. An underreamer comprising: a body; flanges formed on said body; an extension extending from said body; a member slidable on said extension; a cutter support carried by said body, one end of said cutter support engaging an inclined face in one of said flanges and having



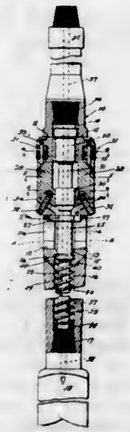
an opposite end portion passing through the other of said flanges, said cutter support having a retracted and extended position, the end of said cutter support being swung outward by said inclined face when it is moved into extended position, and the opposite end of said cutter support being supported by said slidable member so as to move substantially parallel to the axis of said body; means for actuating said slidable member to move said cutter support from retracted to extended position; and a cutter carried by said cutter support.

1,812,040. EXTERNAL COUNTERWEIGHT FOR CAR DUMPERS. WILLARD E. ERICKSON, Chicago, Ill., assignor to Link-Belt Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 8, 1927. Serial No. 159,802. 11 Claims. (Cl. 214—55.)



1. A clamp for car dumpers and the like comprising a vertical track, a carriage adapted to slide vertically therealong having a car engaging shoulder, a clamp beam pivoted on the carriage extending across the car and having a shoulder adapted to engage the opposed side of the car, positive means for limiting the rotary movement of the clamp beam with respect to the sliding carriage to permit the car engaging shoulder on the end of the beam when in the inoperative position to occupy a position below the car engaging shoulder on the carriage, means for raising and lowering the clamp connected directly to the carriage and means for locking the clamp comprising a cable and sheaves over which the cable travels one on the end of the beam, the other on the carriage.

1,812,041. WINDOW. PER H. ESBJORNSON, Duluth, Minn. Filed July 29, 1929. Serial No. 381,818. 1 Claim. (Cl. 20—52.)

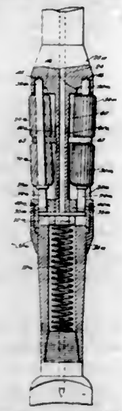


A double sash window assembly of the type described having means cooperatively engageable with the sashes for causing them to uniformly impinge the parting strip of the window, said means characterized by being scarfed into the supports therefor, and removably attached to said supports.

1,812,042. CONTINUOUS FILTER. ALBERT L. GENTER, Baltimore, Md., assignor to The Bartlett Hayward Company, Baltimore, Md., a Corporation of Maryland. Filed Oct. 2, 1929. Serial No. 396,625. 27 Claims. (Cl. 210—201.)

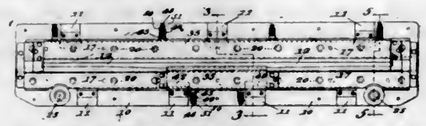
1. A filter apparatus comprising, in combination: a rotatable carrier; a plurality of horizontally extending filtering elements arranged around the circumference of the carrier, said filter elements being separated from each other to receive filtered material and filtrate on substantially their whole outer area; a tank for material to be filtered through which the filter elements pass as the carrier is rotated; and means for rotating said carrier with a progressive oscillatory movement.

1,812,043. REAMER AND UNDERREAMER. JOHN GRANT, Los Angeles, Calif. Filed July 19, 1927. Serial No. 206,817. 9 Claims. (Cl. 255—75.)



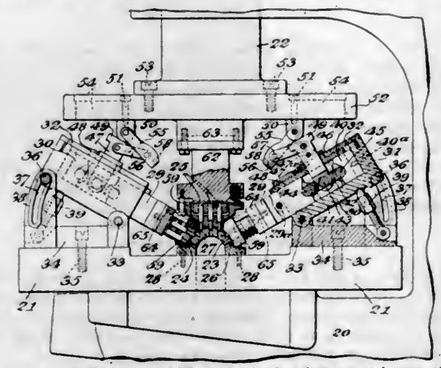
1. In a well reamer, the combination of a hollow tubular body with longitudinally slotted walls, a removable mandrel within the body, and cutters removably mounted in and filling the wall slots longitudinally and bearing inwardly against the mandrel, the cutters having flanges bearing outwardly against the inner wall surface of the body and the body wall slots having enlargements at one end to allow outward removal of the flange.

1,812,044. EXPANDING UNDERREAMER. JOHN GRANT, Los Angeles, Calif. Filed July 31, 1928. Serial No. 296,597. 12 Claims. (Cl. 255—75.)



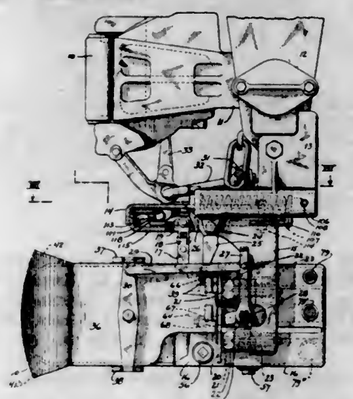
1. An expansive reamer, comprising the combination of a vertically slotted body, a vertically extending cutter located in the body slot, mounting means for the lower end of the cutter on the body allowing vertical movement and oscillatory movement of the cutter, coacting means

on the body and on the upper end of the cutter acting to cause outward tilting movement of the upper end of



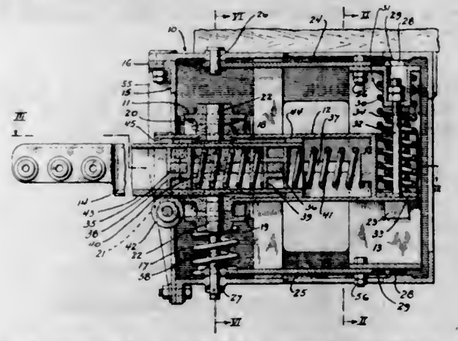
the cutter upon upward movement thereof, and a back bearing for the cutter intermediate its ends inwardly against the body.

1,812,045. APPARATUS FOR SHAPING SHEET METAL. OTTO J. GROEHN, Grosse Pointe Park, and LAWRENCE S. LAMB, Grosse Pointe, Mich., assignors to Hudson Motor Car Company, Detroit, Mich., a Corporation of Michigan. Original application filed Dec. 28, 1927, Serial No. 243,030, Patent No. 1,708,615, dated Apr. 9, 1929. Divided and this application filed Feb. 8, 1929. Serial No. 338,466. 3 Claims. (Cl. 153—13.)



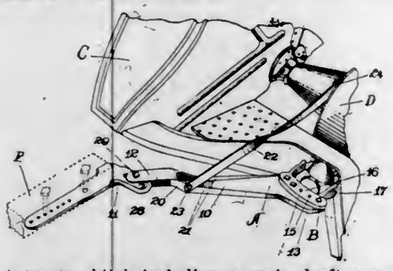
1. In an apparatus for shaping sheet metal previously bent with a flange, the combination of a member for supporting the body of said bent metal, a mandrel movable towards said member against the body of the metal, a die movable in a path inclined to said member, means for movably supporting said die, and means for urging said die simultaneously in perpendicular directions thereby imparting a resultant movement thereto in a direction inclined to said member to move said flange against said mandrel and the body of the metal on said member.

1,812,046. DIE PRESS. OTTO J. GROEHN, Grosse Pointe Park, Mich., assignor to Hudson Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed June 17, 1929. Serial No. 371,650. 10 Claims. (Cl. 153—34.)



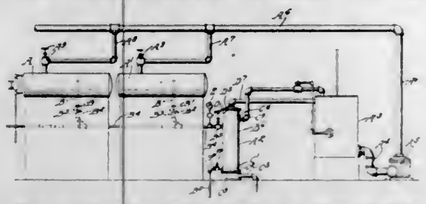
1. The combination with a press having a reciprocating ram, of dies having relatively movable cooperating members, and mechanism associated with said press for converting at least a portion of the pressure of said ram into pressure through said dies in a direction transverse to the direction of movement of said ram, said mechanism having provision for varying the angle of said transverse pressure.

1,812,047. TRAIN PIPE COUPLER. EDWARD O. HERMANN, Mill Valley, Calif., assignor to Cobb Connector Company, Los Angeles, Calif., a Corporation of Arizona. Filed Oct. 18, 1927. Serial No. 226,878. 15 Claims. (Cl. 284—12.)



1. In a train pipe coupler system, a coupler head having ports adapted to cooperate with similar ports upon a cooperating coupler head, a fluid pressure responsive means adapted to force said heads into sealed engagement with the ports of one head in register with the ports of the other head, a valve adapted to control the flow of fluid to said pressure responsive means, means for automatically opening said valve to admit fluid pressure to said pressure responsive means when said ports are in alignment, and manually operable means for rendering said valve opening means inoperative.

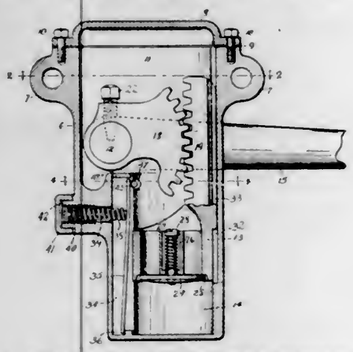
1,812,048. TRAIN PIPE COUPLER SUPPORT. EDWARD O. HERMANN, Mill Valley, Calif., assignor to Cobb Connector Company, Los Angeles, Calif., a Corporation of Arizona. Filed Sept. 12, 1928. Serial No. 305,462. 8 Claims. (Cl. 285—58.)



1. A hanger for train pipe couplers comprising an enclosed housing member adapted to be secured to a car frame, a vertically movable spring supported cradle mounted within said housing member, a horizontally movable spring centered cradle also mounted within said housing, and a drawbar pivotally connected to said vertically movable cradle and projecting into and cooperating with said horizontally movable cradle, whereby substantially universal movement may be imparted to said drawbar with respect to said hanger.

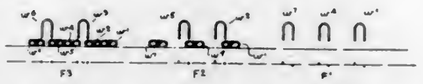
1,812,049. TRACTOR HITCH. ELLSWORTH W. JOHNSON, Hector, Minn., assignor to Midwest Motor Supply, Hector, Minn. Filed Sept. 23, 1927. Serial No. 221,505. 2 Claims. (Cl. 280—33.44.)

1. A tractor hitch including, a main draft arm having a formation to offset the draft point to extend to one side of the center of a tractor, a tongue connecting link, and a short projecting tongue and notched portion formed in said link to engage the tongue of an implement by said short tongue and notched portion.



1,812,050. APPARATUS FOR CONTINUOUS BLOW DOWN FOR BOILERS. LOUIS D. KENSIO, Western Springs, Ill., assignor to National Aluminate Corporation, Chicago, Ill., a Corporation of Illinois. Filed Aug. 9, 1928. Serial No. 298,421. 12 Claims. (Cl. 122—1.)

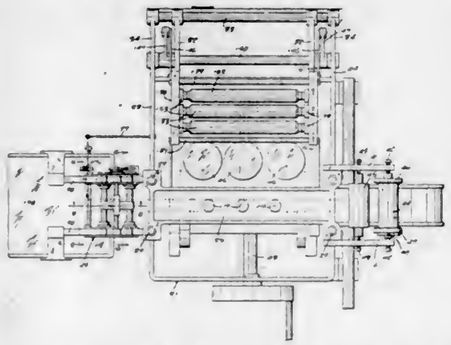
1. The combination with a boiler, a blow-off pipe and feed-water supply means, of a heat exchanger tank through which the blow-off and supply water circulate, a vapor chamber in the tank wherein the pressure on the blow-off water is reduced, and a vapor pipe leading therefrom to the feed-water supply, a control valve for the vapor pipe and a float adapted to operate the valve responsive to the position of the water level in the vapor chamber.



4. The combination with a plurality of boilers, of a blow-off pipe and a variable orifice control valve for each, a blow-off manifold to receive water from such pipes, a spring loaded adjustable blow-down valve controlling the flow of water from such manifold.

1,812,051. SHOCK ABSORBER. JAMES A. KNIGHT, Halifax, Nova Scotia, Canada. Filed May 28, 1928. Serial No. 281,076. 9 Claims. (Cl. 188—88.)

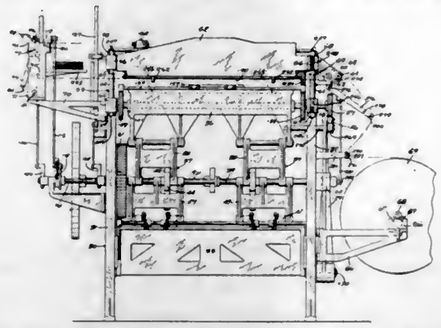
1. In a shock absorber of the class described, a fluid containing cylinder, a piston mounted therein, a longitudinal slot in the side of the cylinder to form a by-pass communicating with opposite sides of said piston, a movable plate adjacent said slot, said plate forming a gradual incline to vary the area of the by-pass, and resilient means to hold said plate in position.



1,812,052. METHOD OF MAKING CHAINS AND APPARATUS THEREFOR. CHARLES M. LAMB, Pasadena, Calif., assignor to American Chain Company, Inc., a Corporation of New York. Filed Sept. 28, 1927. Serial No. 222,462. 48 Claims. (Cl. 59—18.)

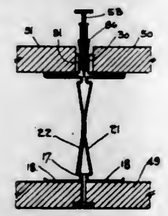
35. A die for use in making a chain of the type including twisted links each composed of a length of wire having its ends bent toward its central portion, forming loops at each side of said central portion, said die having two adjacent series of arcuate cavities, the cavities of one series being staggered relatively to the cavities of the other series, with adjacent ends of the cavities in one series disposed near the middle of the arcs occupied by opposite cavities in the other series.

39. In a machine for fabricating chains, means for simultaneously forming a plurality of twisted links in spaced relation, and means for forming a twisted link in interlinking relation with said spaced links, connecting the same, to constitute a complete section of chain, by a series of strokes less than the total number of links.



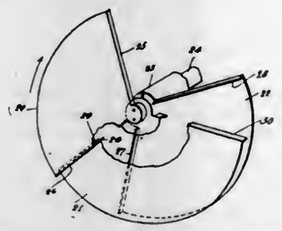
1,812,053. PRINTING PRESS. GEORGE E. LEE, Cleveland, Ohio, assignor, by mesne assignments, to Mahoning Savings and Trust Company, trustee, Youngstown, Ohio, a Corporation of Ohio. Filed Mar. 7, 1927. Serial No. 173,360. 54 Claims. (Cl. 101—197.)

1. In a printing press: impression mechanism for impressing a web; and means for feeding said web through said impression mechanism comprising a roller positioned just ahead of said impression mechanism and provided with sides for alining said web laterally, one of said sides being adjustable on said roller to provide for variations in web width, and said roller being axially adjustable as a unit to aline said web accurately with said impression mechanism.



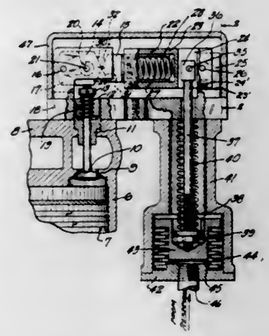
1,812,054. PRINTING PRESS. GEORGE E. LEE, Cleveland, Ohio, assignor, by mesne assignments, to Mahoning Savings and Trust Company, trustee, Youngstown, Ohio, a Corporation of Ohio. Filed May 2, 1927. Serial No. 188,327. 8 Claims. (Cl. 101—197.)

1. In a printing press: impression mechanism for impressing a web; relatively fixed means for severing said web transversely; and a power-driven feeding means unit, for drawing said web through; said impression mechanism and feeding said web to said severing means, movable as to position to vary the length of the path of said



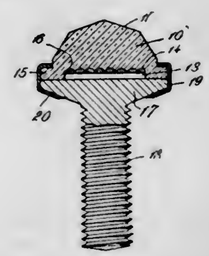
web from said impression mechanism to said severing means to register said severing means with said impression mechanism, all without any shifting of said severing means.

1,812,055. BUILDING CONSTRUCTION. JAMES H. MAHER, Montreal, Quebec, Canada. Filed Nov. 8, 1928. Serial No. 316,936. 3 Claims. (Cl. 72—46.)



1. In building construction, surfacing boards and frame members and a beam of sheet metal forming aligning flanges folded inwardly from either side and projecting outwardly in contiguous grips to flaring edges and nails inserted in said grips and spreading them to sink said flaring edges in the boards.

1,812,056. DISSOLVING SHUTTER. GEORGE A. MITCHELL, Los Angeles, Calif., assignor to Mitchell Camera Corporation, a Corporation of Delaware. Filed Aug. 10, 1929. Serial No. 384,949. 5 Claims. (Cl. 88—19.3.)

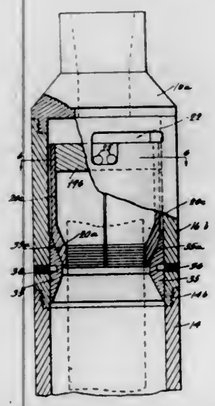


4. A shutter mechanism for a motion picture camera embodying two overlapping shutter leaves each less than 180 degrees in angular dimension mounted on one axis of rotation, means for rotating said two shutter leaves either in unison or differentially, a third shutter leaf mounted on the same axis of rotation as the first two shutter leaves, means confining the leading edge of said third leaf to float between the leading and trailing edges of one of said first two leaves, and means confining the trailing edge of said third leaf to float between the leading and trailing edges of the other of said first two leaves.

1,812,057. COMPRESSOR CONTROL APPARATUS. FRED NEALE, Cleveland, Ohio, assignor, by mesne assignments, to The Midland Steel Products Company, Cleveland, Ohio. Filed Mar. 28, 1927. Serial No. 179,066. 3 Claims. (Cl. 230—30.)

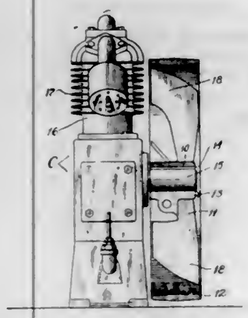
1. In a compressor control, the combination with the compressor and the pressure system supplied thereby, said compressor having an inlet valve controlling passage to atmosphere, of a pair of pivoted latches having inclined contacting surfaces and a lost motion connection relative to each other, spring means for holding said latches in engagement with each other under the action of said lost motion connection, one of said latches being operatively connected with the inlet valve of the compressor and moved by the other latch to hold said inlet valve in open position under maximum pressure conditions in said system, and means responsive to pressure changes in the system supplied by the compressor for moving the other latch to effect the movement of the first-named latch.

1,812,058. LUMINOUS DEVICE. JOHN E. PAUL, Newark, N. J., assignor to United States Radium Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 11, 1929. Serial No. 398,952. 2 Claims. (Cl. 240—2.25.)



1. In a luminous locator the combination of a lens having a convex surface and a relatively flat surface opposite thereto, a plurality of facets on said convex surface, at least a portion of said flat surface being formed of contiguous indentations which form a light dispersing surface and a luminous material upon said dispersing surface.

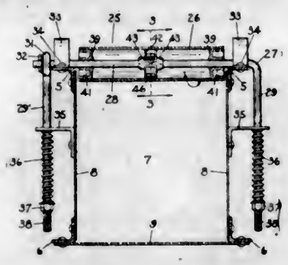
1,812,059. COMBINATION TRIP SOCKET FOR FISHING TOOLS. ELMER E. PRYOR, Fullerton, Calif. Filed Feb. 6, 1929. Serial No. 337,859. 10 Claims. (Cl. 294—102.)



1. In a tool of the character described, a vertically extending barrel, a supporting member mounted within the barrel and vertically movable relative thereto, a gripping element loosely mounted on said member said element

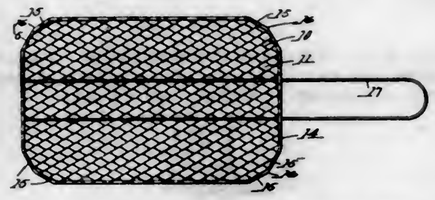
being radially movable relative to said member at the point of connection therewith, and wedge means whereby rela-

tive vertical movement of said supporting member and the barrel causes said gripping element to move radially inward from the barrel.



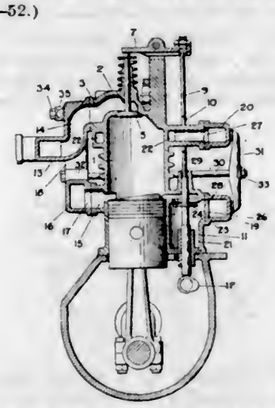
1,812,060. FAN STRUCTURE. FREDERICK J. RAYFIELD, Chicago, Ill., assignor to Champion Pneumatic Machinery Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 15, 1929. Serial No. 407,385. 1 Claim. (Cl. 230—135.)

A combined flywheel and fan comprising a hub, a rim, flat spokes radiating from said hub to said rim, said spokes being entirely within the side planes of said rim and being in planes at diagonals with said hub and rim, the outer sections of said spokes for a distance radially inwardly from their outer ends being of a width to extend from side to side of said rim to form vanes, said spokes at their inner ends extending only a short distance along said hub from one end thereof and gradually expanding in width to the outer sections.



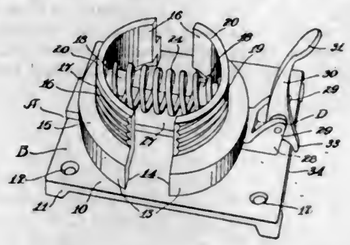
1,812,061. TUCKER FOR HAY PRESSES. ALVAH E. RUTTER, Ottumwa, Iowa, assignor to Dain Manufacturing Company of Iowa, Ottumwa, Iowa, a Corporation of Iowa. Filed Jan. 3, 1928. Serial No. 244,078. 8 Claims. (Cl. 100—30.)

1. A tucker adapted for association with the bale chamber of a hay press, comprising a hollow roller, non-rotatable means supporting said roller so that it can move inwardly and outwardly relatively to said bale chamber, heads closing the ends of said roller, and means carried



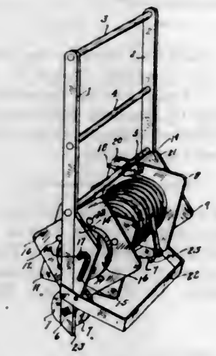
by said non-rotatable means confined within said roller between said heads cooperating with the roller for preventing rotation of the latter in one direction.

1,812,062. KITCHEN UTENSIL. EUGENE H. RYERSON, Worcester, Mass. Filed Aug. 22, 1929. Serial No. 387,742. 2 Claims. (Cl. 146—180.)



2. As an article of manufacture, a kitchen utensil, comprising a rectangular frame having sides and ends in the same plane, and a piece of expanded metal welded at its edges to said frame and lying in a plane for use as a grater, the corners of said frame being bent out of the plane thereof to constitute legs for supporting the frame on a flat surface, so that it will be suitable for use as a supporting device as well as a grater.

1,812,063. ENGINE MANIFOLD CONSTRUCTION AND ARRANGEMENT. OWEN H. SPENCER, Indianapolis, Ind. Filed June 11, 1929. Serial No. 369,997. 3 Claims. (Cl. 123—52.)

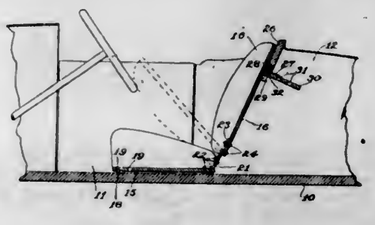


1. The combination with the cylinders of an engine, each having an exhaust port at one side thereof, and air receiving openings on the opposite side thereof from the exhaust port, of an exhaust manifold for cooperation with said exhaust ports, a pair of air conveying manifolds for cooperation with said air receiving openings, and means extending transversely of the engine for clamping all of said manifolds in engagement with the cylinders of an engine.

1,812,064. NOZZLE HOLDER. WALTER R. STEIN, Brainerd, Minn. Filed Apr. 6, 1929. Serial No. 353,082. 7 Claims. (Cl. 248—29.)

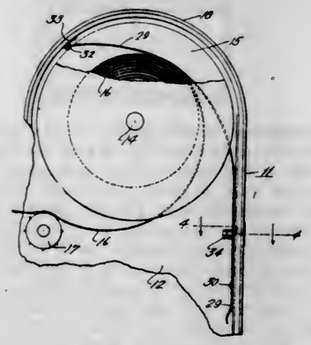
2. A support for a fire hose nozzle comprising, collar sections having threads for engaging the nozzle formed thereon, means for holding said sections spread apart against said nozzle, and means for moving said engaging sections together in a manner to release the fire hose nozzle virtually instantly from said holder.

1,812,065. HOSE REEL. ERIC SVADE, Portland, Oreg. Filed Dec. 11, 1928. Serial No. 325,216. 2 Claims. (Cl. 242—88.)



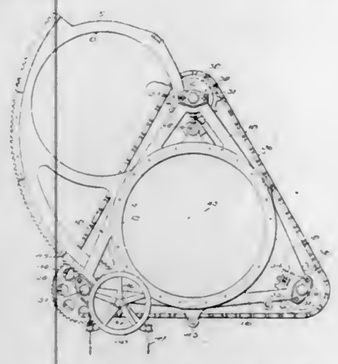
1. In a device of the class described, the combination of a pair of frame members, spreader bars disposed between the frame members and secured thereto, gusset plates secured to the lower ends of the frame members, said plates having hook shaped slots, stub shafts, supporting wheels disposed upon the stub shafts adjacent the lower ends of the frame members, a central shaft rotatably and slidably disposed between the frame members within the slots disposed within the gusset plates, a hose reel secured to the central shaft, said reel having pairs of end members to form V-shaped indentations which act as brakes when the central shaft is placed within the return of the slots and mounting wheels secured to the side of the hose reel in registerable alignment with the supporting wheels disposed adjacent the lower ends of the frame adapted to be placed into and out of engagement with the supporting wheels.

1,812,066. ELECTRIC DETECTOR AND FREQUENCY CHANGING SYSTEM. FREDERICK EMMONS TERMAN, Stanford University, Calif. Filed Mar. 7, 1927. Serial No. 173,419. 5 Claims. (Cl. 250—27.)



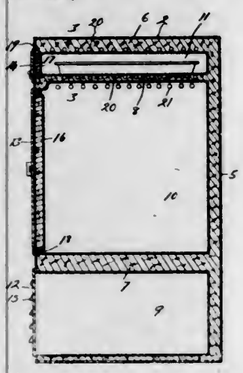
4. An apparatus of the class described comprising a vacuum tube having grid, filament and plate electrodes, a circuit interconnecting the grid and filament electrodes including means for passing a small direct current, means in said circuit for bringing said circuit in resonance with the rectified current to be produced, means in said circuit for by-passing the frequency to be converted, and means for imposing the rectified current from the plate circuit upon said first mentioned circuit.

1,812,067. VEHICLE SEAT. MILLARD H. TONCRAY, Detroit, Mich., assignor to Hudson Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 9, 1928. Serial No. 253,067. 3 Claims. (Cl. 296—65.)



1. In a vehicle body, in combination, an open passenger compartment and a closed storage compartment, a ledge projecting from the edge of said storage compartment, a seat detachable as a unit from said passenger compartment and having a seat bottom and a seat back pivotally secured together, said seat bottom having openings therein, studs on the floor of said body adapted to engage said openings, and an adjustable support on said ledge adapted to engage said seat back.

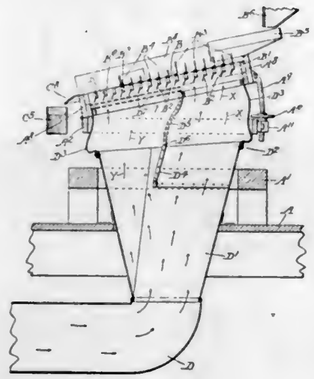
1,812,068. FOOTAGE INDICATOR FOR MOTION-PICTURE CAMERAS. ALEXANDER FERDINAND VICTOR, New York, N. Y. Filed May 17, 1929. Serial No. 363,767. 6 Claims. (Cl. 33—169.)



6. The combination with a film receiving roll, and a housing within which said roll is rotatably mounted, said housing being provided with a viewing aperture in one of its walls, of a guide structure extending upon opposite sides of said aperture, a scale plate slidable in said guide behind said aperture, and an elongated flat spring hingedly secured at one end to the housing and connected to said scale plate at the other end, an intermediate portion of said spring being bowed and adapted to contact with the film on the roll, whereby the unwinding of the film from the roll tends to straighten the spring and thereby changes the position of the scale with respect to the aperture.

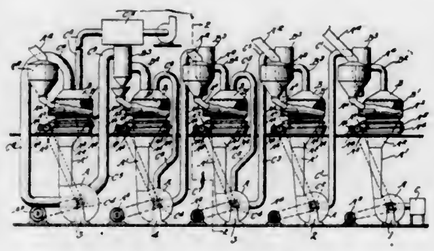
1,812,069. VALVE. CARL J. WESTLING, Chicago, Ill. Filed Apr. 20, 1929. Serial No. 356,676. 18 Claims. (Cl. 251—51.)

1. In a valve, the combination of a valve member adapted for controlling a passage and a pair of seats for said valve member, one of said seats being removable while said valve is in service.



1,812,070. TRAY COMPARTMENT FOR REFRIGERATING CABINETS. THOMAS C. WHITEHEAD, Detroit, Mich. Filed Oct. 14, 1929. Serial No. 399,536. 1 Claim. (Cl. 62—95.)

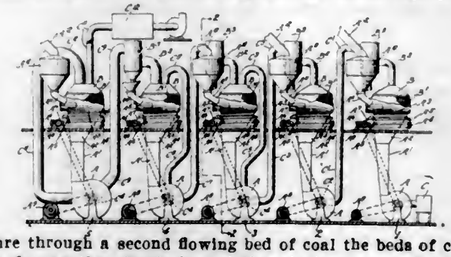
In combination, a refrigerator cabinet having a front wall provided with vertically spaced openings and provided between said openings with a substantially horizontal partition that projects rearwardly from said front wall and cooperates with the top, back and side walls of the cabinet to form upper and lower chambers, the upper chamber being designed to receive ice trays, and the lower chamber being designed to receive food, and means for cooling said chambers including refrigerant tubing embedded in the top and side walls of the cabinet and in said partition, whereby such tubing encircles the ice tray chamber, and having coiled portions arranged in substantially a horizontal plane below said partition but above the opening to the food chamber whereby such coils may cool said chamber but are out of the path of food being placed therein or removed therefrom through the opening thereto in the front wall aforesaid of the cabinet.



1,812,071. APPARATUS FOR CONTROLLING AIR IN DRY SEPARATING TABLES. RAY W. ARMS, Chicago, Ill., assignor to Roberts & Schaefer Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 30, 1926. Serial No. 84,834. 20 Claims. (Cl. 209—467.)

1. In an air separating table, a pervious deck, means for reciprocating it, means for discharging air upwardly through it, riffles projecting upwardly from it, extending in the direction of reciprocation and decreasing in height from one end to the other, means for feeding material to be treated to the deck and a plurality of high riffles of constant height throughout their length extending in the same direction as, of substantially greater height than, and located at the high end of, the tapering riffles.

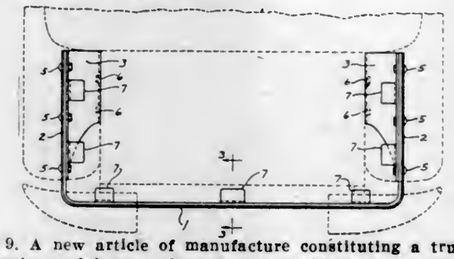
8. In an air separating table, a pervious deck, means for discharging air upwardly though it, means for propelling a sheet of finely divided material across it, and means independent of the deck for concentrating a part of the air flow and discharging it through the deck to give an area of increased air activity.



1,812,072. APPARATUS FOR DISTRIBUTING AND CIRCULATING AIR. GEORGE LYMAN ARMS, Chicago, Ill., assignor to Roberts and Schaefer Company, Chicago, Ill., a Corporation of Illinois. Filed May 18, 1928. Serial No. 278,684. 16 Claims. (Cl. 209—502.)

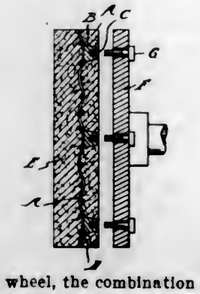
1. The combination with a plurality of air cleaning tables all of which are pervious to air and impervious to solids of an air system therefor, comprising separate means for discharging air under pressure through the deck of each table, hoods overlying each table, a conduit leading from the hood of one table to the air discharging means for the next table.

1,812,073. METHOD OF DISTRIBUTING AND CIRCULATING AIR FOR AIR CLEANING TABLES. GEORGE LYMAN ARMS, Chicago, Ill., assignor to Roberts and Schaefer Company, Chicago, Ill., a Corporation of Illinois. Filed May 18, 1928. Serial No. 278,685. 11 Claims. (Cl. 209—502.)



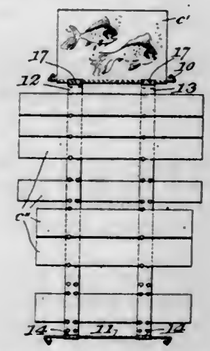
1. The process of cleaning coal by air which consists in forcing a high pressure stream of air through a flowing bed of coal adding a supply of additional air to the dust laden air above the bed, withdrawing the resultant air from above the bed and forcing such air under high pressure through a second flowing bed of coal the beds of coal as far as the circulation of the air is concerned being arranged in series.

1,812,074. EMULSION. FREDERICK WILLIAM ATACK, Kingston, Ontario, Canada, assignor to Industrial Processes Development, Limited, Toronto, Ontario, Canada, a Corporation of Canada. Filed Mar. 6, 1928, Serial No. 259,593, and in Great Britain Apr. 19, 1927. 3 Claims. (Cl. 87—5.)



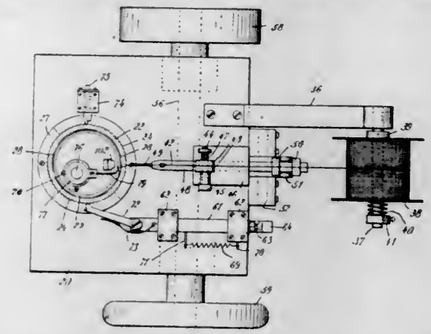
3. A stable liquid emulsion instantly miscible with water, containing water, a liquid grease solvent substantially immiscible with water, a primary emulsifying agent which is a sulphonated product derived from a glyceride and capable of forming a transient emulsion instantly miscible with water, and bentonite as a stabilizer of said emulsion.

1,812,075. COMBINED BUMPER AND TRUNK CARRIER. EROS V. BARKER, Bellevue, Ohio, assignor to The Bellevue Mfg. Company, Bellevue, Ohio, a Corporation of Ohio. Filed Nov. 26, 1930. Serial No. 498,325. 13 Claims. (Cl. 293—55.)



9. A new article of manufacture constituting a trunk carrier and bumper formed of a U-shaped bar, and an intermediate shock-absorbing member.

1,812,076. GRINDING WHEEL. ALAN P. BEEBE, Detroit, Mich., assignor to The Peninsular Grinding Wheel Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 22, 1930. Serial No. 483,618. 5 Claims. (Cl. 51—209.)

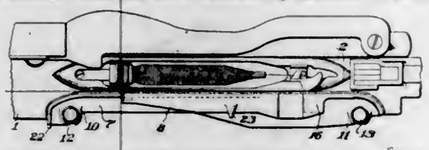


1. In a grinding wheel, the combination of an open mesh metallic reinforcement, an anchor member rigidly attached thereto and an abrasive body in which both of said members are imbedded.

1,812,077. CARD HOLDER. CONSTANTINE A. BELASH, Boston, Mass. Filed Apr. 3, 1930. Serial No. 441,380. 6 Claims. (Cl. 40—124.)

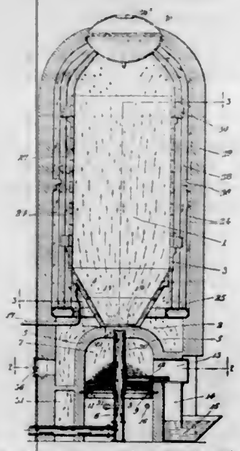
1. In a card holding device, a strip of sheet material, spaced pairs of ears on said strip, each ear being adapted to hold an edge of a card, one ear of each pair depending from the other ear and extending in the opposite direction to position adjacent cards in substantially abutting relation.

1,812,078. MESH ATTACHING MACHINE. RICHARD H. BERKLEY, Plainville, Mass., assignor to Whiting & Davis Company, a Corporation of Massachusetts. Filed June 6, 1925. Serial No. 35,433. 18 Claims. (Cl. 112—2.)



1. A machine for attaching link mesh fabric to a frame or other similar article having a series of apertures formed therein, which comprises the combination of a support for the frame and the piece of mesh to be attached thereto, the mesh being held with a row of links in registry with the apertures in the frame, means for holding a supply of wire, power-driven tools for drawing wire from the supply and inserting a loop of wire through each link and the aperture in registry therewith successively, means independent of the tools for bending the loop so inserted to a position in which it will be entered by the loop inserted through the next succeeding link and aperture, the said bending means disengaging the loop prior to the next loop-inserting operation of the said tools, and means for giving the support a step-by-step relative movement to said tools and said means, the tools and said means being actuated during the periods of rest of the said step-by-step relative movement.

1,812,079. REPLENISHING SHUTTLE BOXES. HORACE H. BURDETT, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed July 7, 1930. Serial No. 465,914. 10 Claims. (Cl. 139—183.)

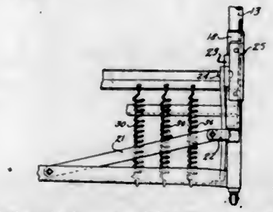


1. A shuttle box for looms having a front plate provided with an open ended thread slot extending longitudinally

thereof in line with the threads groove in a boxed shuttle and dividing the front plate into a lower anchoring member and an upper member supported at the outer end of and shorter than the lower anchoring member to provide

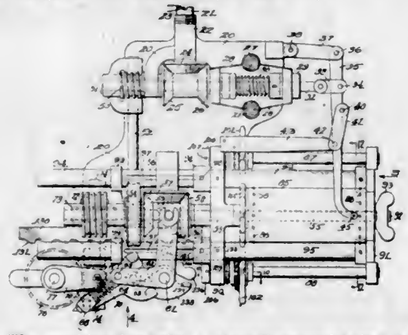
an upwardly open space above the inner end portion of the anchoring member that on the occurrence of a balloon in the thread as the shuttles comes to rest the thread will not be trapped between the shuttle and front plate of the shuttle box.

1,812,080. APPARATUS FOR BURNING GRANULATED COAL. WILLIAM B. CHAPMAN, Jackson Heights, N. Y. Filed Apr. 1, 1925. Serial No. 19,786. 3 Claims. (Cl. 122—235.)



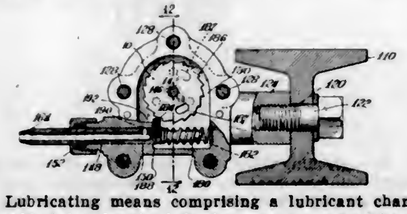
1. In combination an annular upstanding set of boiler tubes enclosing a combustion chamber, means for projecting a blast of air upwardly into said combustion chamber to suspend fuel therein, an auxiliary combustion chamber located beneath said first mentioned chamber, means for conducting the gases of combustion downwardly past said tubes from said first mentioned combustion chamber, and a gathering chamber for the spent gases surrounding said auxiliary chamber.

1,812,081. HAIR WAVING DEVICE. PAUL CHAUMIER, Dallas, Tex. Filed Jan. 30, 1931. Serial No. 512,353. 6 Claims. (Cl. 132—38.)



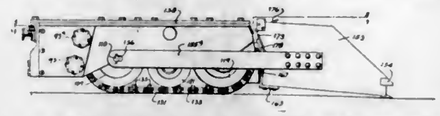
1. A hair waving device including a frame having a series of independently movable combs and a pair of stationary combs, the said independently movable combs being arranged for movement in concentric relationship with said stationary combs.

1,812,082. FOLDING BED. EDGAR COCKS, South Pasadena, Calif., assignor to Los Angeles Wall Bed Company, Los Angeles, Calif., a Corporation of California. Filed May 22, 1929. Serial No. 365,042. 17 Claims. (Cl. 5—136.)



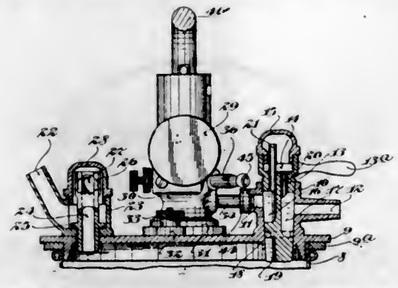
1. A folding bed, comprising in combination: a base; standards embodied in the base; a frame pivotally mounted on the standards to swing in a vertical arc from a vertical to a horizontal position, and vice versa, said frame presenting surfaces in frictional engagement with said standards; and yielding means connecting the base and the frame and adapted to progressively increase the frictional engagement between the standards and said surfaces by pressing the standards against said surfaces as the frame moves downward.

1,812,083. SPEED RECORDING MECHANISM. MARK H. DAMERELL, Worcester, Mass. Filed Jan. 6, 1928. Serial No. 244,986. 12 Claims. (Cl. 234—1.)



1. The combination with a recording mechanism having a record sheet, a recording element, means to cause said record sheet to travel longitudinally relative to said recording element, and means to reverse the direction of travel, of means to shift said sheet transversely relatively to said recording element at each reversal of travel of said sheet.

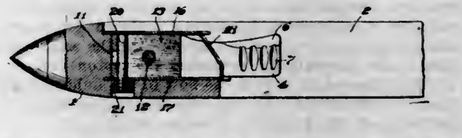
1,812,084. PRESSURE LUBRICATION SYSTEM. ERNEST W. DAVIS, Oak Park, Ill., assignor, by mesne assignments, to Alemite Corporation, Chicago, Ill., a Corporation of Delaware. Filed Apr. 11, 1925. Serial No. 22,491. 26 Claims. (Cl. 184—7.)



1. Lubricating means comprising a lubricant chamber, a movable inlet thereto, injection means operated by force exerted against said movable inlet, the force necessary to operate said injection means being greater than that necessary to move said inlet, a distributor for the lubricant in said chamber, and connections for step by step actuation of said distributor upon successive movements of said inlet.

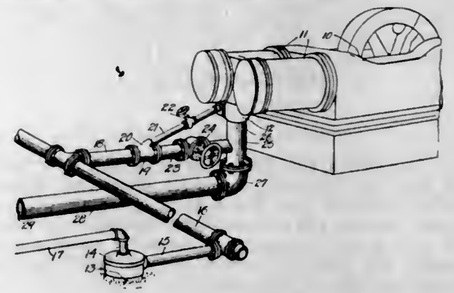
1,812,085. AUTOMOTIVE MACHINE AND DISTANT CONTROL THEREFOR. KENNETH DAVIS, St. Benedict, Pa., assignor to Rembrandt Peale, St. Benedict, Pa., W. Sanders Davies, New York, N. Y., and William B. Oakes, Rutherford, N. J., as trustees. Filed Sept. 8, 1926. Serial No. 134,219. 8 Claims. (Cl. 180—9.2.)

1. A distant control for a dirigible, traction-propelled automotive machine having a plurality of traction devices including in combination a distant station, a plurality of fluid pressure conduits extending from the station to the traveling machine, and means at the station including a plurality of interconnected and simultaneously operable valves for controlling the action of the pressure fluid on the mechanism of the automotive machine to forwardly or reversely drive any one of the traction devices irrespective of the drive of the other traction devices.



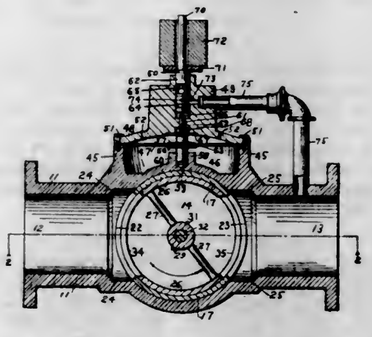
1,812,086. MILKING APPARATUS. LAURITS DINESEN, Minneapolis, Minn. Filed Feb. 21, 1929. Serial No. 341,639. 6 Claims. (Cl. 31—58.)

2. In a milking apparatus, a milk container having a removable cover, an upright valve casing on said cover having circumferentially spaced milk and air ports, a valve working in said casing and provided with milk and air ports for co-operation, respectively, with the milk and air ports of said casing, the milk port of said valve being in constant communication with the interior of said milk container, said valve having a chamber in its upper portion, the upper portion of said milk port of said valve being connected to the upper chamber of said valve, a tubular conduit leading from the upper portion of the air port of said valve to a point in said valve chamber materially above the bottom thereof, a pulsator applied on said cover and having an air nipple connected to the air port of said valve casing, a cluster of double-chambered teat cups, and flexible milk and air tubes connecting the inner and outer chambers of said teat cups, respectively to the milk port of said valve casing and to said pulsator.



1,812,087. FILLING REPLENISHING SHUTTLE. FREDRIC E. DOUGLAS, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed May 14, 1930. Serial No. 452,359. 7 Claims. (Cl. 139—207.)

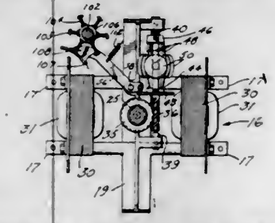
1. A filling replenishing shuttle having a bobbin holding spring comprising two bobbin holding jaws, and an integral shank connecting the jaws and provided with a slot in each leg of the shank which extends to and about the bend of the shank to form a yielding zone for the



jaws during replenishment, a transverse bolt passing through the slots, and a bolt passing vertically through the shank inside the bend thereof.

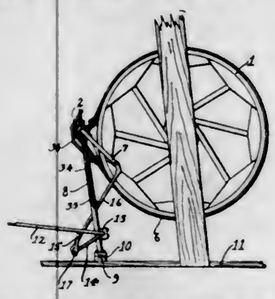
1,812,088. MEANS FOR REGULATING A GAS MIXTURE FOR INTERNAL COMBUSTION ENGINES. IRWIN L. DUNN and LESLIE C. MINGUS, Tulsa, Okla., assignors, by mesne assignments, to Dunn & Lewis, Tulsa, Okla., a partnership composed of Irwin L. Dunn and James O. Lewis. Filed Aug. 2, 1926. Serial No. 126,565. 1 Claim. (Cl. 123—120.)

In combination with an internal combustion engine including a fuel intake chamber having an automatic valve, an air line having an intake open to atmosphere and communicating with said chamber, a gas line communicating with the air line between said intake and said chamber whereby gas is supplied to the air line to enrich the air with the gas between intake strokes of the engine, a branch leading from the gas line to said chamber, and valves in the gas line and branch for selectively controlling supply of gas to the air line or chamber.



1,812,089. GAS MIXING APPARATUS. EUGENE OSCAR ENGELS, Saginaw, Mich., assignor to Baker Perkins Company, Saginaw, Mich., a Corporation of New York. Filed Oct. 27, 1926. Serial No. 144,535. 6 Claims. (Cl. 48—184.)

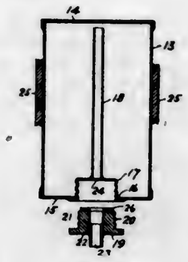
1. A gas mixing apparatus, comprising in combination a gas receiving chamber, means for supplying two or more



gases in predetermined proportions to the chamber, a valve for adjusting the quality of at least one of said gases admitted to the chamber, and means for adjusting the valve in accordance with the pressure of the gaseous mixture, comprising a cylinder, a piston mounted in the cylinder, a connection between the piston and valve for adjusting the valve, a pipe leading into the said cylinder, fluid under pressure for operating the piston therein, and a valve adapted to control the flow of the fluid under pressure into and out of the said cylinder and actuated by the pressure of the produced gaseous mixture.

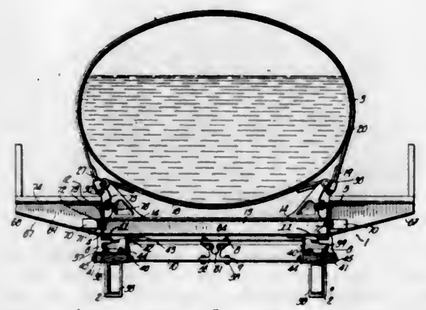
1,812,090. PERIODIC CIRCUIT MAKER. WILLIAM A. GAMMACK and DONALD G. KNOX, Long Beach, Calif., assignors, by mesne assignments, to Jordan & Taylor, Inc., Los Angeles, Calif., a Corporation of California. Original application filed July 5, 1928, Serial No. 290,410. Divided and this application filed July 11, 1927. Serial No. 204,999. 14 Claims. (Cl. 200—81.)

1. In a switch, the combination of: a distributor carrying contacts; contacting means for successively contacting said contacts, said means breaking contact with one of said contacts and instantaneously making contact with the next of said contacts; and means for simultaneously varying the time of contact between said contacting means and each of said contacts.



1,812,091. NONKICKING BRAKE APPARATUS. LEROY G. GATES, Bakersfield, Calif., assignor to Standard Oil Company of California, San Francisco, Calif., a Corporation of California. Filed July 14, 1926. Serial No. 122,339. 27 Claims. (Cl. 188—77.)

3. In brake-apparatus, the combination of a brake member to frictionally engage a wheel, a tightener, a floating support pivotally supporting said tightener enabling the same to rock on its own axis, said tightener having a pair of wrists connected respectively with the ends of the brake member, and a brake lever rotatably mounted on the floating support and connected with the tightener to rock the same to apply the brake.

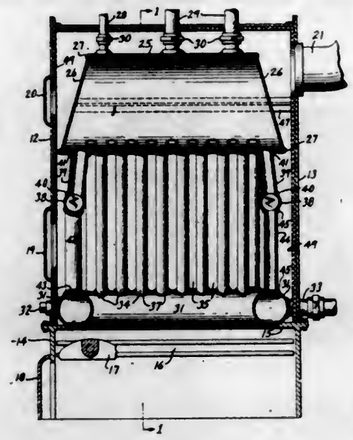


1,812,092. FUEL ADJUNCT DEVICE FOR GAS ENGINES. JAMES H. GRAVELL, Elkins Park, Pa., assignor to American Chemical Paint Company, Ambler, Pa., a Corporation of Delaware. Filed Nov. 12, 1926. Serial No. 148,092. 1 Claim. (Cl. 123—198.)

A device for introducing volatile fuel adjuncts into a gas engine comprising an intake conduit for a gas engine, a replaceable air tight chamber for holding fuel adjuncts, said chamber having an inwardly extending threaded neck provided with a seal having a puncturable spot, a tube

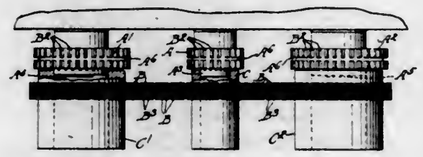
extending inwardly from said seal, an air tight passage connecting the cavities of said conduit and said chamber, and mechanical means coacting with the said threaded neck to secure said chamber to said conduit.

1,812,093. TRUCK TANK MOUNTING. OTTO N. GREDELL, Kansas City, Mo., assignor to Standard Steel Works, North Kansas City, Mo., a Corporation of Missouri. Filed Mar. 27, 1929. Serial No. 350,209. 13 Claims. (Cl. 280—5.)



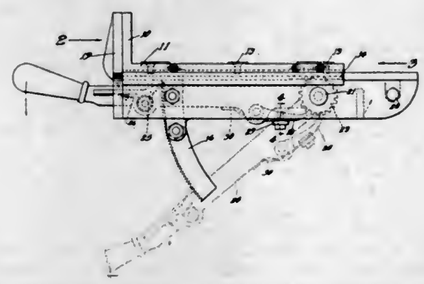
1. In a truck tank mounting, in combination with a tank and parallel sills of a truck chassis, a pair of supplemental sills supported by said chassis sills, bolsters extending between the supplemental sills and spaced downwardly from the upper edges of said sills, brackets supported by said bolsters, saddle members pivotally connected with said brackets for supporting the tank, and a band having ends connected to said brackets for anchoring the tank to the saddle members.

1,812,094. BOILER. LOUIS HARTUNG, Jr., Kearny, N. J. Filed July 11, 1929. Serial No. 377,527. 3 Claims. (Cl. 122—325.)



1. A device of the character described having in combination, a substantially rectangular casing, and a heating unit removably mounted in said casing, said heating unit comprising an upper drum of substantially large diameter located in the upper part of said casing, said upper drum having its ends slabbed off to substantially increase the space between the upper part of said upper drum and

the end walls of said casing for the free passage of the heat, and a lower drum of smaller diameter supported

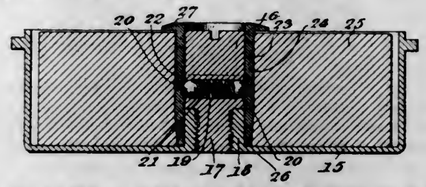


adjacent the walls of said casing, said drums being connected by a plurality of riser tubes, all the connections between said riser tubes and said drums being welded.

1,812,095. SILENT CHAIN DRIVE. HENRY E. HAYWARD, Indianapolis, Ind., assignor to Link-Belt Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 5, 1929. Serial No. 352,677. 11 Claims. (Cl. 74—31.)

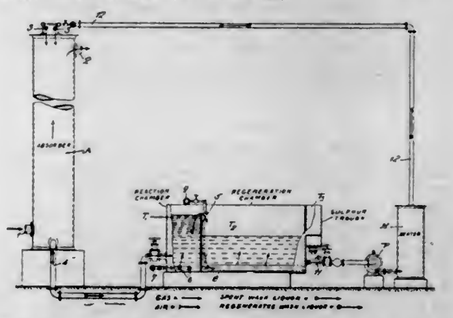
1. In a silent chain drive, a plurality of toothed peripherally grooved sprockets and a chain comprising a plurality of articulated toothed links in mesh with the sprocket teeth, means for preventing transverse movement of the chain comprising a single guide link, adapted to penetrate the sprocket and engage the ends of the sprocket teeth forming the sides of the groove.

1,812,096. QUICK ACTING VISE. ALBERT J. JAMESON, Worcester, Mass. Filed Oct. 20, 1930. Serial No. 489,775. 3 Claims. (Cl. 81—27.)



1. In a vise, the combination with a stationary jaw in vertical position and a plate on which said jaw is mounted and located horizontally, a horizontal rack on the bottom of said plate, a slide guided on the bottom of said plate and movable parallel with the direction of the rack, a second jaw mounted on said slide for cooperating with the first jaw, a pinion rotatably mounted on the slide and meshing with the rack, a handle oscillatably mounted on the slide, a pawl on the handle for engaging the teeth of the pinion, a plate carried by said handle and extending into a position to force the pawl out of the pinion teeth when the handle is moved to its limiting position and a spring for forcing the pawl into the teeth of the pinion when the pawl is free to move in that direction.

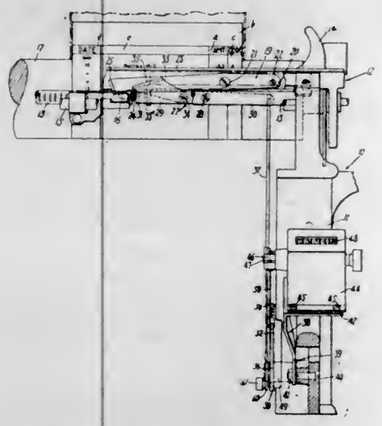
1,812,097. MEANS FOR TRANSPORTING VEHICLES AND THE LIKE. IRVING H. JUDD, Detroit, Mich., assignor to Whitehead & Kales Company, River Rouge, Mich., a Corporation of Michigan. Filed May 6, 1929. Serial No. 360,908. 12 Claims. (Cl. 280—33.1.)



2. Transportation means of the class described including a trailer having two frames, one constituting an elevated extension of the other, and vehicle carrying means pivoted upon the elevated frame.

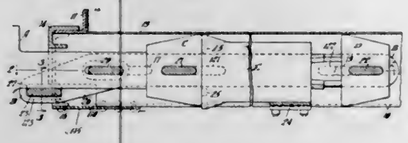
1,812,098. SEWING MACHINE SHUTTLE. NATHAN D. KEITH, Dedham, Mass., assignor to The West End Thread Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 2, 1930. Serial No. 472,550. 3 Claims. (Cl. 112—232.)

2. In a sewing machine shuttle, in combination, a thread-supporting post, a sleeve substantially fitting said post and having a tapered inner end adapted to be forced into the central opening of a thread cop and a flanged outer end adapted to engage the outer face of said cop, and cooperating detent means on said post and sleeve for yieldingly resisting both rotary and axial movement of the latter with respect to the former.



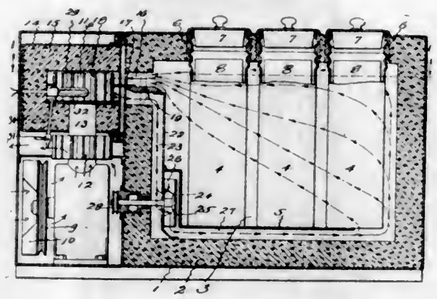
1,812,099. GAS PURIFICATION PROCESS AND APPARATUS. ALLISON A. KOHR, Maplewood, N. J., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 18, 1925. Serial No. 43,347. 9 Claims. (Cl. 23—225.)

5. In a gas purification process comprising a hydrogen-sulphide absorption-phase and an actification-phase where-



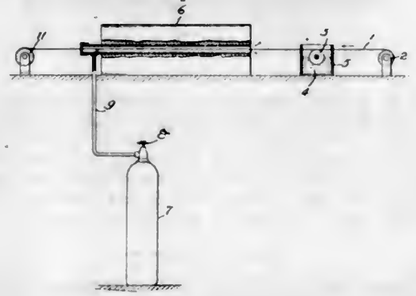
in an alkaline solution containing a compound of a metal whose sulphide is insoluble is circulated to absorb the hydrogen-sulphide impurities in the absorption phase and the spent liquor is regenerated in the actification phase, the improvement comprising causing the reactions between the alkaline solution and the metal compound for the formation of metallic sulphide to come to substantial completion before the spent liquor enters the actification phase.

1,812,100. TYPEWRITING MACHINE. ADOLPH G. KUPETZ, New Rochelle, N. Y., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 25, 1924. Serial No. 739,807. 4 Claims. (Cl. 235—103.)



1. In a register-operating mechanism for a typewriter-carriage, a counter, a lever pivoted intermediate its ends, and having an end portion thereof provided with a pivoted extension, operating connections between the other end of the lever and the counter, and an obstruction element for use upon the carriage and effective during letter-feed movement of the carriage to pass beneath said extension; and upon return movement of the carriage to ride upon said extension to actuate said lever and thereby cause the counter to index.

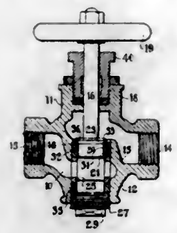
1,812,101. RAILWAY DRAFT RIGGING. HARVEY J. LOUNSBURY, Glen Ellyn, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Dec. 9, 1927, Serial No. 238,752. Renewed Dec. 23, 1929. 5 Claims. (Cl. 213—66.)



5. In a draft rigging for railway cars, the combination with a coupler; of yoke means including side arms having forwardly extending portions forming spaced walls between which the shank of the coupler is accommodated; a key extending through said side walls and coupler for connecting the latter to the yoke means, said side walls being extended forwardly of said keyed connection; and a supporting member connecting said side walls and engaging underneath and slidably supporting the shank of the coupler forwardly of the keyed connection thereof with the yoke.

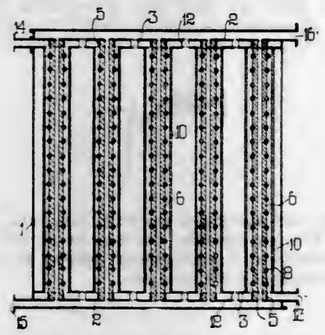
1,812,102. REFRIGERATOR. IVAR LUNDGAARD, West Hartford, Conn., assignor, by mesne assignments, to Devon Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 8, 1926. Serial No. 100,485. 10 Claims. (Cl. 62—95.)

2. A refrigerator comprising a hermetically closed casing containing a refrigerating chamber and a food receiving chamber, said food chamber being accessible from the exterior but hermetically closed from the refrigerating chamber, a heat exchange engine with its cold head within said casing, and a gaseous refrigerating medium sealed within the refrigerating chamber and designed to circulate in good heat conductive relation with the wall of the food chamber and surface of said cold head.



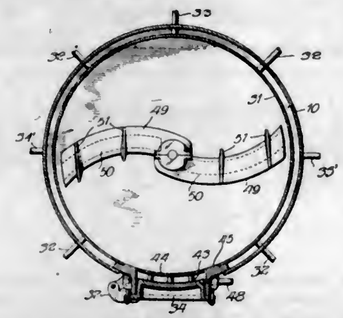
1,812,103. ELECTRON EMITTING DEVICE AND METHOD OF MAKING. DUNCAN MACRAE, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Sept. 11, 1922. Serial No. 587,270. 5 Claims. (Cl. 250—27.5.)

1. The method of preparing electron-emitting filamentary material comprising coating the same with a suspension containing a mixture of alkaline-earth carbonates and a soluble salt of an alkaline-earth metal and heating the same to cause a firm adherence on the filament.



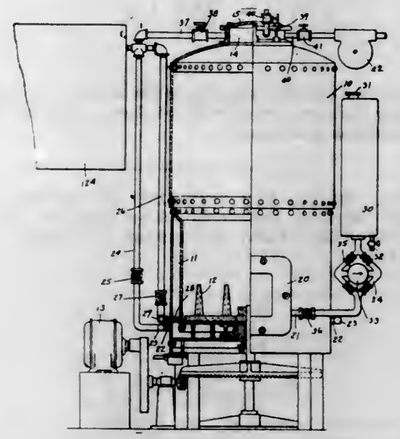
1,812,104. STOP VALVE FOR STEAM OR OTHER FLUIDS AND LIQUIDS. HAROLD LYALL MASON, London, England. Original application filed Nov. 24, 1926, Serial No. 150,590, and in Great Britain Dec. 1, 1925. Divided and this application filed Aug. 24, 1929. Serial No. 388,168. 4 Claims. (Cl. 251—167.)

1. A valve for steam and other fluids having an annular seating member in the form of a ring or washer supported and rendered fluid tight by an adjustable yielding packing compressible from without and forming the end of the packing unit and abutting on the diaphragm of the valve, the opening in the diaphragm being slightly enlarged to allow of the seating ring or washer overlapping the opening, the annular seating member and packing being so disposed relative to a gland that when the gland is



loosened or opened pressure on the seating member by movement in a direction of the valve member beyond its closing position is capable of partially or wholly displacing the seating member and its supporting packing.

1,812,105. APPARATUS FOR THE STERILIZATION OF LIQUIDS. WINCENTY MATZKA, London, England. Filed Sept. 4, 1926, Serial No. 133,692, and in Great Britain Sept. 5, 1925. 9 Claims. (Cl. 204—24.)

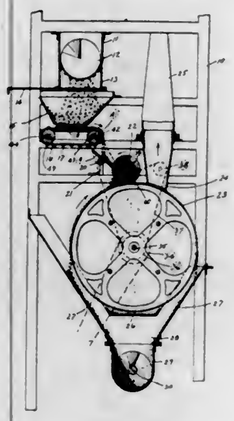


1. Apparatus for sterilization of liquids comprising a vessel, a plurality of tubes of a metal less electro-positive than hydrogen within the said vessel, means to circulate the liquid to be sterilized through said tubes, metal tubes more electro-positive than hydrogen coaxial therewith and forming cellular chambers within the said vessel, and means to circulate heating fluid through said chambers.

1,812,106. GARBAGE REDUCER. ERVIN W. MCCULLOUGH, Indianapolis, Ind. Filed July 23, 1923. Serial No. 653,403. 2 Claims. (Cl. 87—13.)

1. In a tank for cooking and draining organic material such as garbage, or the like, the combination of a side wall having an opening therein adjacent the tank bottom, a single metallic and perforated plate substantially conforming to the side wall conformation, a door for said opening in spaced relation to the plate, passage forming means communicating with said opening and forming a chamber with the door and plate and having restricted communication with the tank interior through said plate when the latter substantially completes the side wall, and means other than opening the door for draining said chamber, said plate including a plurality of dissimilar sized openings which extend entirely through the plate and provide the aforesaid restricted communication, said openings including a relatively large number of small openings and a smaller number of relatively larger openings.

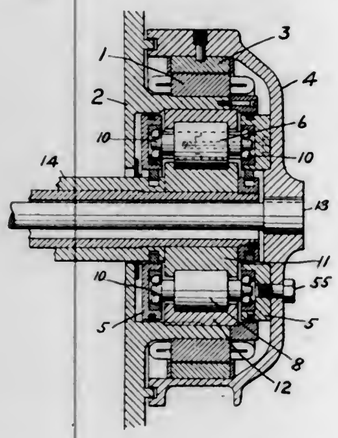
1,812,107. GARBAGE TANKAGE EXTRACTION. ERVIN W. MCCULLOUGH, Indianapolis, Ind. Filed Oct. 17, 1925. Serial No. 63,163. 8 Claims. (Cl. 87—6.)



2. The process of garbage tankage extraction consisting of completely permeating in a container a mass of substantially stationary tankage normally non-percolatable in the mass and including a solvent removable component by injecting a solvent thereto from the bottom of the mass while stationary to eliminate packing thereof, to arrange said mass for subsequent solvent withdrawal and to pass completely through said mass, thereafter withdrawing the solvent from the entire mass by withdrawing the same from the bottom of said mass, and thereafter drying the substantially solvent free tankage in the same container.

7. A process of extraction as defined by claim 2, characterized by the addition of the application of steam pressure to the top of the mass for pressing the tankage and forcing the solvent from the bottom of said mass, and thereafter passing steam upwardly through the mass from the bottom of the mass for distilling the solvent in the mass and removing the same therefrom, the vaporized solvent passing upwardly through and from said mass.

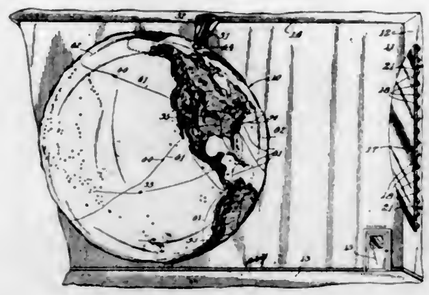
1,812,108. SEPARATOR. ERVIN W. MCCULLOUGH, Indianapolis, Ind. Filed Nov. 1, 1926. Serial No. 145,388. 1 Claim. (Cl. 209—36.)



In a pneumatic separator the combination of a cylindrical, perforated, continuously rotating horizontal screen, an oppositely rotating parallel brush positioned immediately thereabove and slightly offset from the vertical plane including the screen axis and upon the approach side of the screen, a superposed pneumatic separating spout similarly positioned but oppositely offset and having its mouth terminating adjacent the screen surface, and means for

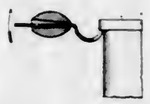
supplying a measured quantity of material to the brush whereby the latter particularizes the material and throws

the same in a direction opposite to the direction imparted thereto by the screen when projected thereon whereby four-way separation is obtained.



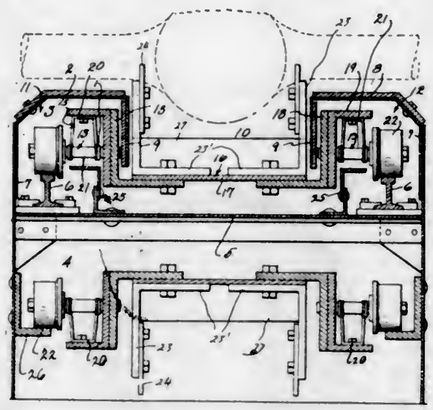
1,812,109. MEANS FOR SECURING ECCENTRIC MOTION. WILLIAM MESSINGER, Philadelphia, Pa. Filed May 14, 1930. Serial No. 452,261. 1 Claim. (Cl. 74—14.)

Mechanism of the type recited comprising in combination eccentrically arranged inner and outer circular races of which the outer one is fixed and of which the inner one gyrates around the axis of the fixed race, a cage rotatable about the axis of the fixed race as a center, rolling elements of different diameters arranged between the races and mounted in the cage for revolution about their own axes, the axes of the rolling elements being spaced different radial distances from the axis of the cage, and means for driving the cage.



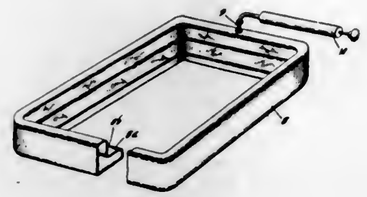
1,812,110. EDUCATIONAL DEVICE. JACOB MEYERHOFF, Chicago, Ill. Filed Aug. 13, 1930. Serial No. 474,899. 15 Claims. (Cl. 35—5.)

1. In an educational device in combination a globe simulating the earth, means for supporting and rotating said globe on an inclined axis, a relatively large source of light simulating the sun to produce the appearance of day and night on said globe upon rotation of the same, said globe having an irregular surface simulating the surface of the earth and bed of the ocean, means for causing the



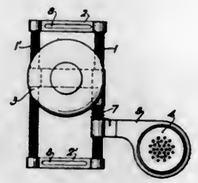
surface simulating the ocean bed to appear blue, means simulating automotive objects movably mounted on the globe and positively driven means for moving said objects along predetermined paths.

1,812,111. KEY CAN OPENER. HUGO MOCK, New York, N. Y. Filed Dec. 14, 1929. Serial No. 413,970. 7 Claims. (Cl. 220—52.)



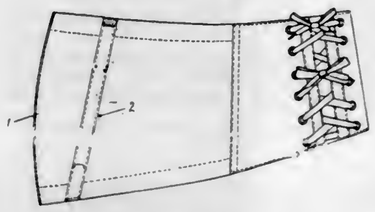
1. A key for opening a rip strip can, said key being provided with an aperture, the interior of said aperture being provided with engaging means adapted to engage and grip the tongue of a rip strip can.

1,812,112. PAINT GUARD FOR CONVEYERS. HORACE H. MORGAN, Detroit, Mich., assignor to Palmer-Bee Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 22, 1926. Serial No. 149,990. 7 Claims. (Cl. 198—189.)



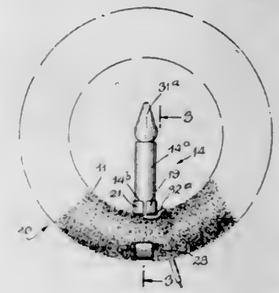
2. In a conveyer, the combination with spaced longitudinally extending chains including attachment members, cross bars carried by said chains, axles extending through said attachment members and cross bars and rollers upon said axles.

1,812,113. REFRIGERATING APPARATUS. OWEN F. NELSON, Grosse Pointe, Mich., assignor to Copeland Products, Incorporated, a Corporation of Michigan. Filed Apr. 1, 1929. Serial No. 351,812. 8 Claims. (Cl. 248—16.)



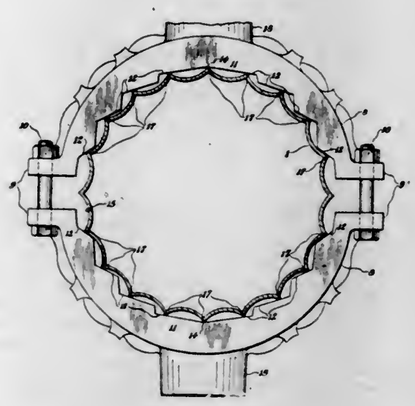
1. As a new article of manufacture, a shock-absorbing support, having the form of an endless pneumatic tube forming an opening and comprising a seat-forming portion projecting into said opening, and an upstanding portion adapted to embrace a seated member.

1,812,114. CHEEK MICROPHONE. ERNST NÖLKE, Berlin Halensee, Germany, assignor to Siemens & Halske Aktiengesellschaft, Wernerwerk Siemensstadt, near Berlin, Germany. Filed Sept. 23, 1929, Serial No. 394,433, and in Germany Jan. 22, 1929. 5 Claims. (Cl. 179—156.)



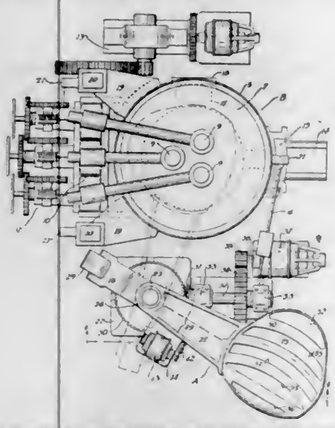
1. In combination with a support for connection with a head piece, a telephone receiver adjustably connected to said support, so that the receiver may be brought into close proximity with the ear of the wearer of the head piece, a telephone transmitter also adjustably connected to said support so that the transmitter may be brought against the cheek of the wearer, and auxiliary means for removing the transmitter away from the cheek while not in use.

1,812,115. ABDOMINAL SUPPORT. ISAAC M. PEASE, Cincinnati, Ohio, assignor to The Ohio Truss Company, a Corporation of Ohio. Filed Apr. 5, 1928. Serial No. 267,733. 1 Claim. (Cl. 2—41.)



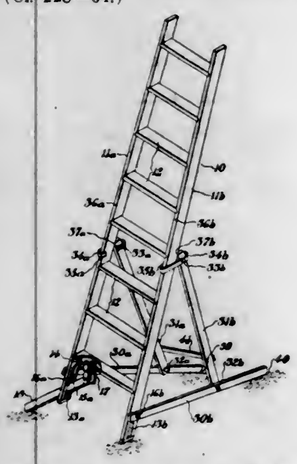
In combination with a belt of the character described, a stiffening rib for said belt, a tape stitched to said belt so as to form a channel thereon for said rib substantially coextensive therewith and having one of its ends open, a piece of material secured to said belt and extending into the open end of said channel and having its side edges stitched therein to form a pocket, said pocket being adapted to receive the end of the rib to retain same in said channel.

1,812,116. DECORATIVE DEVICE. LOUIS PROPP, New York, N. Y. Filed Apr. 4, 1930. Serial No. 441,503. 10 Claims. (Cl. 240—10.)



1. In combination, an annular body, a candle simulating a tubular member, and means for mounting said member on said body, said means comprising a member having a portion frictionally receiving one end of said tubular member and contacting a portion of said body and a hook portion extending partially around an opposite portion of said body, whereby said body is clamped between said first portion of said member and said hook portion of said member.

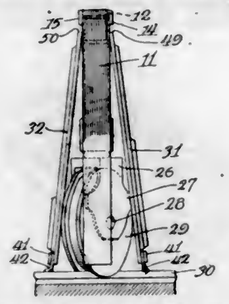
1,812,117. CLAMP COLLAR. HARRY O. RASTETTER, Canton, Ohio, assignor to The Union Metal Manufacturing Company, Canton, Ohio, a Corporation of Ohio. Filed Feb. 24, 1928. Serial No. 256,573. 6 Claims. (Cl. 287—52.03.)



4. A clamp member for a fluted pole, having four or more faces for contacting with the pole, and all of said faces being located in planes converging to intersect each other at a line common to all of the planes.

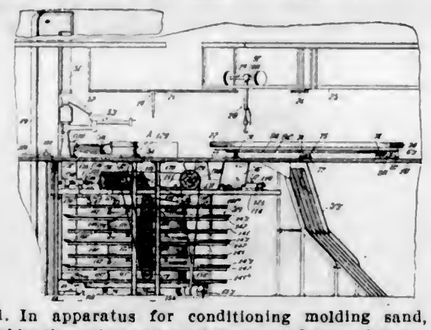
1,812,118. METHOD OF AND APPARATUS FOR CHARGING ELECTRIC FURNACES. ALEXANDER G. RIPBERGER, Philo, Ohio. Filed Nov. 11, 1930. Serial No. 494,975. 7 Claims. (Cl. 266—1.5.)

1. The method of charging raw materials into an electric furnace which consists in creating a limited space between the roof and shell of the furnace, moving a charge of raw material horizontally into the space, and then vertically dropping the charge onto the furnace hearth.



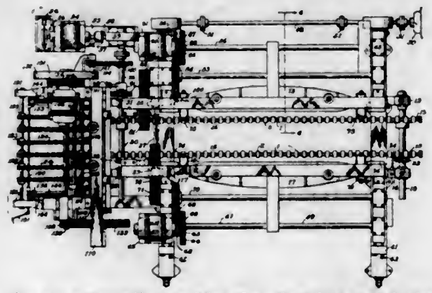
1,812,119. UNIVERSAL LADDER. JOHN C. RUSE, Hartville, Ohio, assignor of one-half to Albert Mori, Hartville, Ohio. Filed May 31, 1929. Serial No. 367,326. 10 Claims. (Cl. 228—64.)

1. A ladder including longitudinally extending transversely spaced side members, and transversely extending, longitudinally spaced step members connected at their ends with the side members, the side members and step members comprising a frame, a plurality of base supporting members extending laterally of the frame, means pivotally connecting one end of each base supporting member with the frame, and self-clamping means for individually maintaining each base supporting member in selective angular positions with respect to the frame.



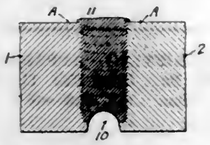
1,812,120. DOOR CONSTRUCTION. JOHN E. SCOTT, Danville, Ill., assignor to Allith-Prouty Company, Danville, Ill., a Corporation of Delaware. Filed May 24, 1930. Serial No. 455,202. 18 Claims. (Cl. 16—100.)

1. The combination of a door including a recess, a roller swiveled in said recess about an axis transverse to its axis of rotation for supporting the door along a trackway, a weathering plate covering said recess, and means for



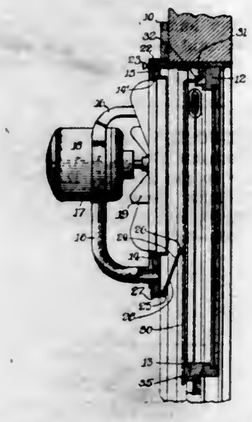
hingedly connecting said plate to the door along the upper edge of said recess for accommodating swiveling movements of said roller.

1,812,121. METHOD OF AND APPARATUS FOR MAKING CASTINGS AND HANDLING AND CONDITIONING THE MOLDING SAND THEREFOR. MAX SKLOVSKY, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Aug. 2, 1926. Serial No. 126,492. 35 Claims. (Cl. 22—217.)



1. In apparatus for conditioning molding sand, the combination of a series of superposed imperforate trays all rotating together, and means for mixing the sand on said trays and for causing it to fall successively between said trays.

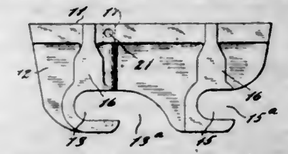
1,812,122. CONTINUOUS AUTOMATIC SHEARING MACHINE. FRANK H. STREINE, New Bremen, Ohio, assignor to The Streine Tool and Manufacturing Company, New Bremen, Ohio, a Corporation of Ohio. Filed Sept. 7, 1928. Serial No. 304,526. 18 Claims. (Cl. 164—48.)



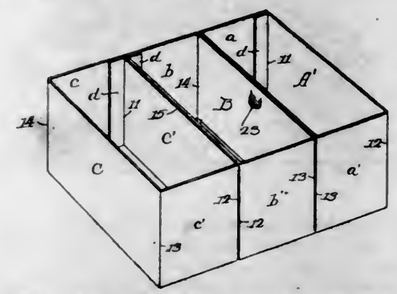
1. In an automatic machine for shearing metal sheets, shearing devices for trimming the side edges from said sheets, and caterpillar hold-down conveyors in parallelism with said shearing devices to longitudinally engage the sheets along their side edges to maintain them in correct alinement with the shearing devices at all times.

1,812,123. METHOD OF ELECTRICALLY WELDING THICK METAL PLATES. RICHARD STRESAU, Wauwatosa, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Feb. 12, 1929. Serial No. 339,293. 10 Claims. (Cl. 219—10.)

1. The method of electric arc welding thick metal plates which comprises providing a welding groove or recess between the edges to be welded, said groove being closed at the bottom and having its side walls diverging to compensate for the contraction of the fusing welding metal during the welding operation and to thereby maintain a substantially uniform minimum width of deposited metal, fusing welding metal into said groove to partially fill the same, then cutting away the metal which formed the bottom of the groove to provide an auxiliary welding groove, and finally completing the weld by filling said grooves with fused welding metal.



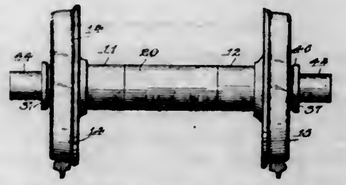
1,812,124. PORTABLE VENTILATING OUTFIT. ARTHUR G. SUTCLIFFE, Chicago, Ill., assignor to Ilg Electric Ventilating Company, Chicago, Ill., a Corporation of Louisiana. Original application filed Mar. 19, 1928, Serial No. 262,608. Divided and this application filed May 15, 1930. Serial No. 452,535. 3 Claims. (Cl. 98—94.)



1. A portable ventilating appliance of the character described, comprising in combination a panel adapted to be mounted opposite a window and formed with an opening, a fan motor and fan mounted on said panel over said panel opening, means for mounting said panel on the window frame, means for raising and lowering the upper window sash extending downwardly behind said panel, and a closure strip hinged on the lower portion of said panel; the free edge of said closure strip slidably engaging said raising and lowering means and being thereby held out of contact with the upper sash as the latter is lowered and raised.

1,812,125. LINK FOR CHAIN GRATE STOKERS. JAMES EDWARD TRAINER, Barberton, Ohio, assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Nov. 14, 1922. Serial No. 600,796. 7 Claims. (Cl. 110—40.)

1. In a chain grate stoker, a link having a transverse open-mouthed slot extending longitudinally of the link and adapted to receive a stoker chain rod, said link having an opening extending from the fuel supporting edge of the link to said slot, and a metallic pin in said opening and extending across the slot for locking the link in position on the chain rod, said link having a transverse opening opposite the end of said pin, and the top of the pin extending laterally into said transverse opening to hold the pin in position.

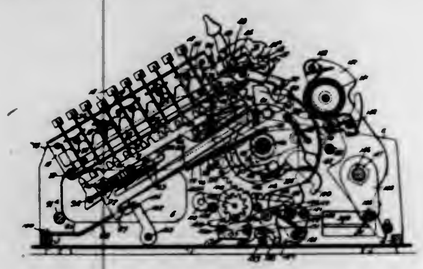


1,812,126. LINER AND DIVIDER FOR CARTONS. PAUL WALKER, Chicago, Ill., assignor to Morris Paper Mills, Morris, Ill., a Corporation of Illinois. Filed July 14, 1928. Serial No. 292,744. 13 Claims. (Cl. 229—15.)

1. A liner and divider for cartons, consisting of a plurality of collapsible cells open at top and bottom and each consisting of connected sides and ends individual thereto with the adjacent sides of adjacent cells integrally united.

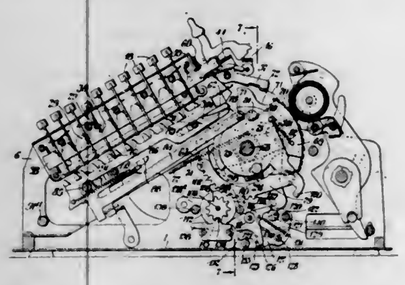
1,812,127. WHEEL UNIT. ABRAM C. WISNER, Jackson, Mich., and CASPER L. REDFIELD, Chicago, Ill. Filed Feb. 12, 1930. Serial No. 427,665. 15 Claims. (Cl. 295—36.)

1. A tubular axle transversely divided into two sections, a wheel secured to each section, a tie extending thru said axle and serving to hold the sections together, and a rolling bearing between the tie and the part of the tubular axle where the sections come together.



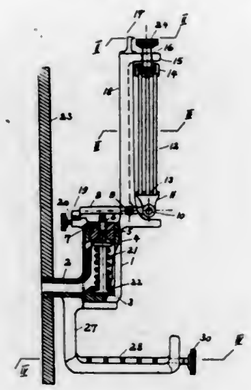
1,812,128. WHEEL UNIT. ABRAM C. WISNER, Jackson, Mich., and CASPER L. REDFIELD, Chicago, Ill. Filed Oct. 2, 1930. Serial No. 485,909. 10 Claims. (Cl. 295—36.)

1. A stationary axle having its ends adapted to enter the standard railway box without modification and to



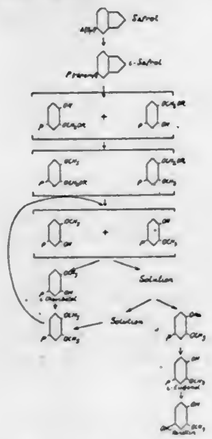
support the load resting on such boxes, a tubular axle transversely divided into two sections and surrounding the stationary axle between the parts which extend into the boxes, wheels secured to the outer ends of said sections, roller bearings inside of the hubs of the wheels and between the two axles, and rolling thrust bearings located between the roller bearings.

1,812,129. CALCULATING MECHANISM FOR ADDING AND LISTING MACHINES. GLENN J. BARRETT, Evanston, Ill., assignor to Portable Adding Machine Company, Chicago, Ill., a Corporation of Illinois. Original application filed Aug. 14, 1925, Serial No. 50,219. Divided and this application filed Oct. 7, 1927. Serial No. 224,616. 11 Claims. (Cl. 235—60.)



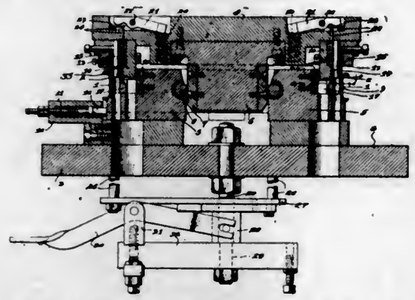
4. In a calculating machine, a main frame; an accumulator frame pivotally mounted in the main frame; an accumulator pinion in said shifting frame; a transfer-control member pivotally mounted on said shifting frame and having a stop portion normally located adjacent the pivotal axis of said frame in position to engage an adding sector irrespective of the position of said frame to limit movement of said sector in adding direction; a transfer trip rotatable with the pinion, a latch pivoted on the shifting frame to swing into and out of interlocked relation with the transfer control member; a spring connecting the latch with its associated control member, and stationary means on the main frame engageable by the latch during pinion-demeshing movement of the shifting frame.

1,812,130. ADDING AND LISTING MACHINE. GLENN J. BARRETT, Evanston, Ill., assignor to Portable Adding Machine Company, New York, N. Y., a Corporation of Illinois. Original application filed Aug. 14, 1925, Serial No. 50,219. Divided and this application filed Jan. 18, 1930. Serial No. 421,738. 8 Claims. (Cl. 235—60.)



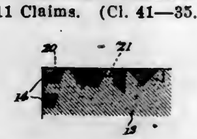
1. In a key-set adding machine, the combination with a transversely extending main shaft carrying adding sectors and type segments; a universal bail rotatably mounted on said main shaft and normally holding said adding sectors and type segments in normal position against rotation by their driving spring when released; a handle mounted on the main shaft; and means operated on the forward stroke of the handle to move the universal bail to free the adding sectors and type segments for movement by their driving springs, and operated on the return stroke of the handle to restore the sectors and segments to normal position and to place the driving springs under tension.

1,812,131. HUMIDIFYING APPARATUS. WILHELM BOCK, Gwynedd, Pa. Filed Feb. 11, 1929. Serial No. 338,963. 14 Claims. (Cl. 236—44.)



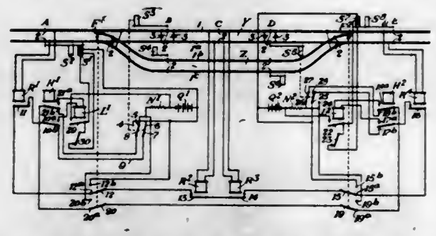
1. A humidifier for radiators comprising an external casing, a valve, means for controlling the valve in dependency upon the humidity of the atmospheric air, a valve stem guide, said guide having a conical inlet and outlet opening for complete expansion of the discharged steam.

1,812,132. PRODUCTION OF VANILLIN AND I-VANILLIN. FRIEDRICH BOEDECKER, Berlin-Dahlem, Germany, assignor to the Firm J. D. Riedel Aktiengesellschaft, Berlin-Britz, Germany. Filed Nov. 6, 1926, Serial No. 146,850, and in Germany Nov. 10, 1925. 18 Claims. (Cl. 260—137.)



1. Process of producing vanillin, comprising treating 1-2-dihydroxybenzene methylene ether substituted in the 4-position by an univalent unbranched alkylene radical C_nH_n at elevated temperatures with alcoholic alkali, methylating the reaction product beating the resulting mixture of methyl-alkoxymethyl ethers with an acid, removing from the resulting mixture of the propenyl-ortho dihydroxybenzene-monomethyl ethers the i-chavibetol by freezing out, converting the remaining more soluble propenyl-orthodihydroxybenzene monoethers into their alkali metal salts, thereby removing from them the less soluble alkali metal salt of the i-eugenol, decomposing the said salt by an acid, and oxidizing the resulting i-eugenol to vanillin.

1,812,133. MACHINE FOR PERFORATING RIM LUGS. WILLIAM N. BOOTH, Detroit, Mich., assignor to Kelsey-Hayes Wheel Corporation, Detroit, Mich., a Corporation of New York. Filed Apr. 3, 1926. Serial No. 99,638. 15 Claims. (Cl. 153—2.)

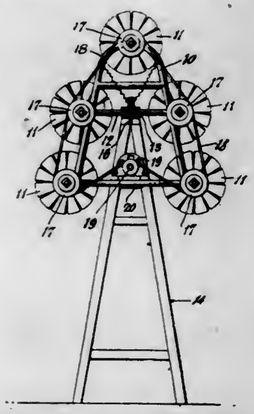


1. In a machine for perforating lugs attached to a rim, the combination with means for holding the rim true to size and shape, of means for perforating the attached lugs while the rim is held true to size and shape.

1,812,134. ORNAMENTAL MATERIAL, INSERT FOR SAME, AND METHOD OF MAKING SAME. WILLIAM B. BRAGOER, Exeter, Me., and VICTOR F. NEKARDA, Jersey City, N. J., assignors to Pearl Art, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 10, 1930. Serial No. 419,995. 11 Claims. (Cl. 41—35.)

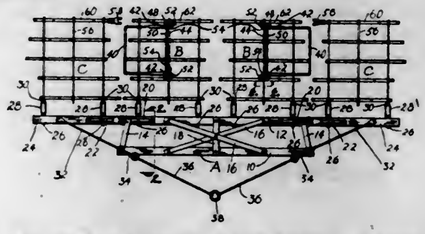
1. An ornamental material comprising a base and laminated structures imbedded in the base, an exposed facet of a laminated structure imbedded in the base being at an angle to the layer formation of the laminated structure having such exposed facet.

1,812,135. RAILWAY SIGNALING. CHARLES A. BROOKS, Swissvale, and JOHN M. PELIKAN, Pittsburgh, Pa., assignors to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 29, 1929. Serial No. 403,199. 3 Claims. (Cl. 246—3.)



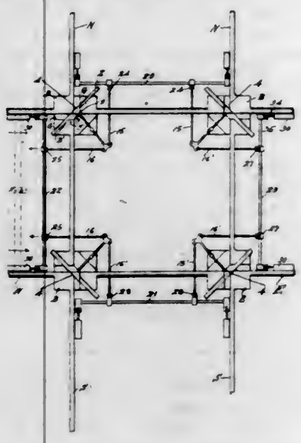
1. In combination, a stretch of railway track, a signal adjacent one end of said stretch, a second signal adjacent the other end of said stretch, a main relay, a second main relay, a signal relay, a second signal relay, a pole-changer, a second pole-changer, a circuit for said first signal relay including a front contact of said first main relay and a back contact of said second main relay as well as said second pole-changer and a source of current and the winding of said first signal relay in series, a circuit for said second signal relay including a front contact of said second main relay and a back contact of said first main relay as well as said first pole-changer and a second source of current and the winding of said second signal relay in series, means controlled by said first signal relay for controlling said first signal, and means controlled by said second signal relay for controlling said second signal.

1,812,136. CITRIC ACID MANUFACTURE. FRANK J. CAHN, Whiting, Ind. Filed Feb. 16, 1929. Serial No. 340,649. 20 Claims. (Cl. 260—120.)



1. The method of producing acids by fungicidal action which comprises impregnating plant tissue material with carbohydrates, inoculating said material with a selected acid-producing fungus strain and growing said fungus thereon to convert carbohydrates present to the desired acid.

1,812,137. ARRANGEMENT OF WINDMILLS. CHARLES EDWARD CARROLL, Newport, Ark. Filed July 13, 1922. Serial No. 574,817. 2 Claims. (Cl. 170—38.)

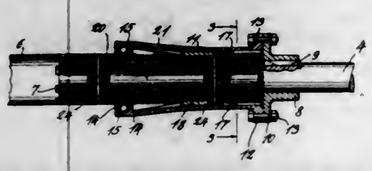


2. The combination of a suitable support, a group of wind wheels, a frame work for such wheels mounted on such support with the center of gravity below the point of support and a dynamo mounted on said frame work in driving connection with the wind wheels.

1,812,138. FOLDING HARROW EVENER. FRANK W. CIHAK and WILLIAM D. CIHAK, Creston, Iowa. Filed May 5, 1928. Serial No. 275,460. 7 Claims. (Cl. 55—84.)

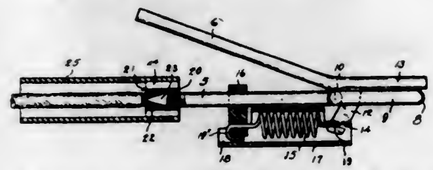
1. For use with a folding harrow evener, a plurality of harrow sections, means on one of the partially folded sections for holding another of the sections in position, said means comprising a prop member adapted to engage beneath one of the fore and aft connector bars of such other section whereby said last mentioned bar is retained thereagainst by gravity.

1,812,139. RAILWAY CROSSING. CLAIBORN CLARK, Los Angeles, Calif. Filed Aug. 27, 1929. Serial No. 388,691. 8 Claims. (Cl. 246—273.)



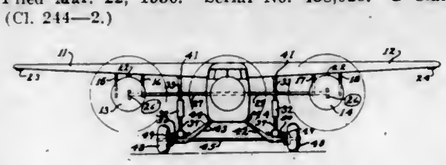
1. A sound-reducing railway crossing including a set of blocks with right angular flange gaps for passing wheel flanges, diagonal slides in said blocks having triangular bridgers shiftable diagonally at the intersection of the gaps of respective blocks to close the gaps in line of wheel passage a diagonal lever pivoted on each block and connected to its slide, and treadle actuated means connected to the levers.

1,812,140. RAIL FASTENER. MATT CRYM, Wattis, Utah. Filed Mar. 6, 1930. Serial No. 433,644. 1 Claim. (Cl. 238—336.)



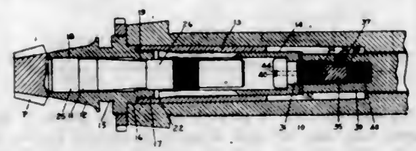
In a device of the class described the combination of a metal tie having slots adjacent the rail positions thereof; rail braces secured to said tie adjacent said slots; rail braces carried over said slots having bolts passed therethrough securing said braves slidably and rotatively on said ties; a spring, having the end turned downward adapted to fit into said slot, carried on said braces and secured thereto by a rivet, said spring adapted to be raised from said slot to allow said braces to be moved away from the rail or to be inserted in said slot to hold the rail braces in fixed relation to said rail tie and rail.

1,812,141. FLEXIBLE SHAFT COUPLING. TIMOTHY C. DOBBINS, Denver, Colo. Filed Oct. 21, 1929. Serial No. 401,292. 7 Claims. (Cl. 64—96.)



3. A flexible coupling for transmitting rotary motion from one axis to an angularly related intersecting axis which comprises, a drive shaft having one end provided with an axial opening, a driven shaft having one end provided with a coupling member having a cylindrical opening, a flexible cylindrical power transmitting member having one end located in the opening in the drive shaft and the other located in the opening in the coupling member, means for holding the power transmitting member from rotation with respect to the drive shaft and the coupling member and means carried by the coupling member and encircling the adjacent end of the drive shaft for supporting the latter, said last named means comprising a tubular member nonrotatably and slidably connected with the coupling member and provided at its free end with an inwardly extending flange adapted to serve as a support for the adjacent end of the drive shaft.

1,812,142. WELDER'S TONGS. FRANK B. DREYER, Seattle, Wash. Filed Aug. 7, 1929. Serial No. 384,099. 8 Claims. (Cl. 219—8.)

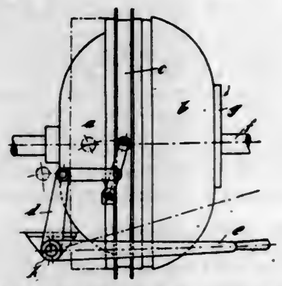


1. A welder's tong, embodying a tong member having a slot near its outer end, another tong member lying alongside said first named tong member having a substantially perpendicular finger extending through said slot and cooperating in pivotally connecting said two tong members, and a spring connected with the outer end of said finger and with said first named tong member to the rear of said slot for holding said tongs in a closed position.

1,812,143. AIRPLANE. THOMAS DUGAN, Wichita, Kans., assignor of one-half to Robert B. Davis, Wichita, Kans. Filed Mar. 22, 1930. Serial No. 438,023. 2 Claims. (Cl. 244—2.)

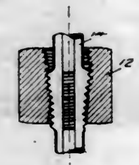
1. In an airplane, a landing gear hinged to the body of the airplane, a shock absorber positioned between the landing gear axle and the body of the airplane, a shaft as a part of the shock absorber and adapted to telescope in an upper part of the shock absorber, spiral grooves in said shaft and thread like lugs on the upper part of said shock absorber as a means of rotating the shaft, a gear wheel on the lower end of said shaft, a ground wheel and a clutch therein and a gear wheel on said clutch, said gear wheel being in mesh with the gear wheel on said shaft, as a connecting means for the delivery of power for rotating the ground wheel substantially as shown and described.

1,812,144. CHUCK. SCHUYLER H. EARL, Rochester, N. Y., assignor to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed May 14, 1929. Serial No. 363,039. 6 Claims. (Cl. 279—51.)



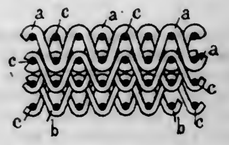
1. In a chucking device for securing a gear or similar article in a spindle, the combination with a collapsible collet adapted to be actuated on axial movement thereof in the spindle to grip the stem of the article to be chucked and clamp the same in the spindle, of a guide member mounted in the spindle having a bore ground to provide two spaced cylindrical guide surfaces corresponding to two ground surfaces on the stem for positively centering the stem in the spindle when held in the gripping device.

1,812,145. CELLULOSE ESTER LACQUER. HANS FINKELSTEIN, Uerdingen Niederrhein, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed July 13, 1928. Serial No. 292,595. 5 Claims. (Cl. 134—26.)



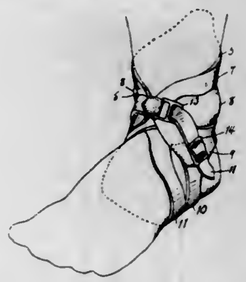
1. A composition of matter comprising cellulose nitrate, an artificial cyclic ketone resin, and a solvent therefor containing a substantial proportion of a propylene glycol monoalkyl ether corresponding to the general formula $HO—C_3H_6OR$ (in which R indicates an alkyl group with from 1 to 5 carbon atoms.

1,812,146. ROTARY MIXING MACHINE. CONSTANT FORVILLE, Seraing, Belgium. Filed Apr. 14, 1930, Serial No. 444,269, and in Belgium Apr. 26, 1929. 1 Claim. (Cl. 259—3.)



In a rotary mixing machine, the combination of a horizontal rotatable shaft, two bowl-shaped vessels facing one another and keyed on said shaft, a central feeding opening in one of said vessels, a ring space of constant width for discharging purposes between the edges of both bowl-shaped vessels, a cylindrical hoop slidably mounted on the outer circumference of one of said bowl-shaped vessels, said hoop being movable parallel to the shaft and adapted to tightly abut against the front edge of the second one of said bowl-shaped vessels so as to tightly close said ring space, an annular guide-way on the outside of said hoop, two diametrically opposed rollers engaging said guide-way, a pair of swivelling arms carrying said rollers, a hand lever for operating said swivelling arms, a transverse shaft carrying said hand lever, and means transmitting the oscillating movement of said transverse shaft to said swivelling arms.

1,812,147. MEANS FOR PRODUCING CURVE-THREADED NUTS. ELIS HELIN, Stockholm, Sweden, assignor to Carl Kindstrom, Stockholm, Sweden. Filed Oct. 22, 1929, Serial No. 401,442, and in Sweden July 5, 1929. 2 Claims. (Cl. 10—141.)



1. A screw-tap for cutting curve-threaded nuts, said tap provided with cutting teeth extending over a portion having a wider base and a narrower top with its greatest core diameter at the base, the tops of the cutting teeth of the tap lying on arcs of a curvature at least equally as great as the desired curvature of the thread.

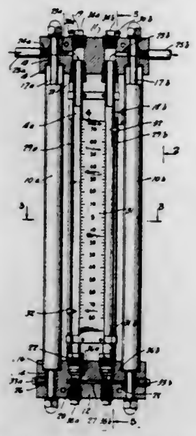
1,812,148. PAPER MAKER'S DRIER FELT. THOMAS HINDLE, Hashingden, England. Filed Jan. 28, 1930. Serial No. 424,077. 2 Claims. (Cl. 139—408.)

1. An improved drier felt comprising a working face wholly of worsted warp yarns coarser and thicker than the back cotton warp yarns, a back of cotton warp yarns finer and thinner than the worsted face yarns and a weft wholly of cotton yarn finer than the worsted warp yarns constituting a dense or crowded worsted face of warp yarn for the working surface and an open or porous cotton back.

1,812,149. COMBINED ANKLE-BRACE AND ARCH-SUPPORT. WILLIAM J. HOGGSON, New York, N. Y. Filed Oct. 11, 1929, Serial No. 398,889, and in Great Britain July 12, 1929. 1 Claim. (Cl. 128—166.5.)

A combined ankle-brace and arch-support comprising an ankle-piece extending above and below the ankle at the rear, and formed with clearance-openings for the ankle-bones, a band connecting the lower forward ends of the ankle-piece, a strap connected with said band, one end of the strap being provided with a loop, and a fastening device secured to one side of the ankle-piece, the looped-end of the strap passed through one ankle-opening, the other end of the strap passed through the other ankle-opening and through the loop and into engagement with the said fastening device.

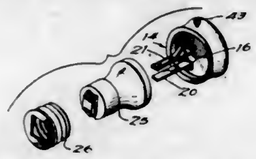
1,812,150. METHOD OF MAKING WATCHCASES. ELLISON S. IRELAN, Elgin, Ill., assignor to Illinois Watch Case Company, Elgin, Ill., a Corporation of Illinois. Filed Feb. 27, 1930. Serial No. 431,709. 7 Claims. (Cl. 29—179.)



1. The method of producing watch case members which consists in forming a blank into a cup shape, drawing the ends thereof, and setting the sides to increased thickness and forcing surface metal over the ends of said sides.

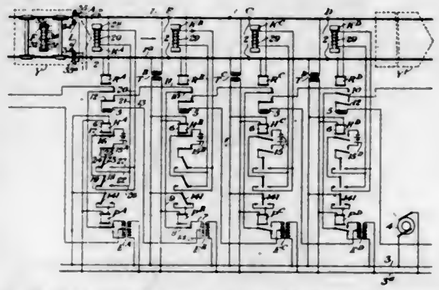
1,812,151. METHOD OF WELDING. GEORGE T. JACOCKS, Brooklyn, N. Y., assignor, by mesne assignments, to Alco Products Incorporated, New York, N. Y., a Corporation of Delaware. Filed Jan. 27, 1928. Serial No. 249,922. 3 Claims. (Cl. 78—82.)

1. In a metal article having a fluid proof jointure comprising overlapping margins of sheets of metal; a plurality of spaced mortises in the margin of one of the sheets, each mortise being a perforation through said margin; a plurality of tenons projecting from the margin of the other sheet and interfitted in the mortises to hold the sheets against relative movement in their respective parallel planes, each of said tenons being disposed inwardly of the edge of the margin of the tenoned sheet, terminating short of the depth of its mortise thereby providing a pit, and being an unsevered extumescence of the tenoned margin; a pit at the rear of each tenon; and a filler of metal in each of the pits, said filler in the pit at the front end of the tenons being welded to the peripheral walls of the mortise and to the front end of the tenon.



1,812,152. MANOMETER GAUGE. MILTON O. JENSEN, Huntington Park, Calif. Filed May 11, 1929. Serial No. 362,236. 3 Claims. (Cl. 73—31.)

1. A gauge of the character described comprising a frame including side stiles formed of non-fragile material, end rails formed of non-fragile material, and a pair of manometer limbs disposed intermediate said stiles and extending between said rails: said stiles being tubular, said end rails being blocks and one having connection passages communicating with the manometer limbs and having outer ends adapted to be sealed or to be connected to a source of pressure to be measured, the other of said rails having a junction passage therein connecting the manometer limbs, and said other rail having bores communicating with said manometer limbs and adapted to be sealed or to be connected to a source of pressure to be measured.

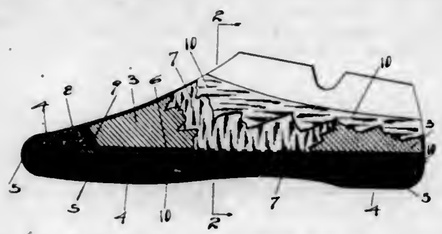


1,812,153. ELECTRICAL PLUG CONNECTION. CLIFF C. JONES, Los Angeles, Calif., assignor of one-fourth to George W. Dick, Bournemouth, England. Filed Feb. 11, 1929. Serial No. 339,045. 2 Claims. (Cl. 173—343.)

1. An electrical plug assembly embodying: a head member having contact posts; a plug member having contact means adapted to engage said contact posts; and releasable locking means including a substantially fixed finger in said plug and a yieldable lever associated with one of

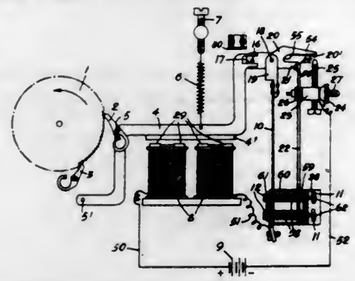
said posts for holding said head member in fixed relation with said plug member, the contact posts on said head member being also adaptable for insertion into a conventional plug member.

1,812,154. RAILWAY TRAFFIC CONTROLLING APPARATUS. RALPH R. KEMMERER, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed July 19, 1928. Serial No. 293,948. 15 Claims. (Cl. 246—63.)



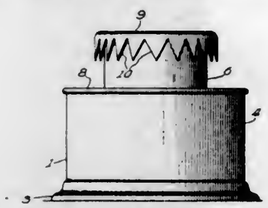
1. Railway traffic controlling apparatus comprising means for supplying current to the track rails, an inductor located in the trackway and provided with a winding, means for supplying said winding with current of one polarity or the other or for de-energizing said winding in accordance with traffic conditions, and train carried governing means controlled jointly by said inductor and by the current in the track rails.

1,812,155. A STRUCTURAL STEEL. ADOLF KLINKENBERG, Wittbraucke, near Herdecke, Germany, assignor to the Firm Vereinigte Stahlwerke Aktiengesellschaft, Dusseldorf, Germany. Filed Mar. 8, 1929, Serial No. 345,601, and in Germany Mar. 10, 1928. 4 Claims. (Cl. 75—1.)



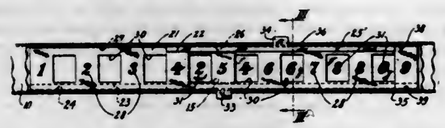
1. A structural steel having a low A_3-point, a high elastic limit and considerable toughness, containing about 0.1 to 0.2% carbon, and copper and chromium totaling 0.75 to 2.%, the ratio of copper to chromium being comprised between 1 to 1 and 3 to 1.

1,812,156. ARTIFICIAL FOOT. EARNEST R. LEAF, Portland, Oreg. Filed Mar. 23, 1929. Serial No. 349,354. 3 Claims. (Cl. 3—7.)



1. In an artificial foot: a yieldable sole; a body above said sole; a fibrous cushion member above said sole at the toe of said foot; a leather strip intermediate said sole and said parts thereabove, said leather strip being cemented to said parts adjacent thereto upon each side thereof; and a raw hide covering for said body and said cushion, said covering extending over the edge of said leather strip to protect the cemented joints thereof with the parts immediately adjacent thereto upon either side.

1,812,157. ELECTRIC SWITCH. GEORGES LÉOPOLD, Geneva, Switzerland. Filed Oct. 29, 1927, Serial No. 229,763, and in Switzerland Apr. 8, 1927. 1 Claim. (Cl. 200—68.)

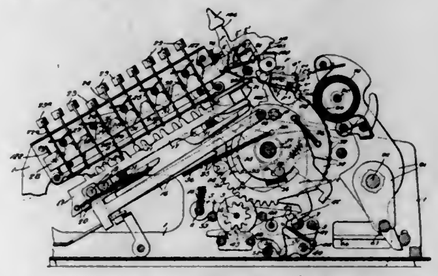


An electric circuit-closing device, comprising a fixed support, a contact member mounted for adjustment on said support, a flexible member disposed in parallelism with said fixed support, a lever pivotally mounted on said flexible member and carrying a contact member adapted to cooperate with said fixed contact to close a circuit, means for swinging said lever on its pivot, and means operative during pivotal movement of the lever to move said lever in the direction of its longitudinal axis.

1,812,158. ASH TRAY. EDWIN HERBERT LEWIS, Oak Park, Ill. Filed Nov. 12, 1930. Serial No. 495,156. 2 Claims. (Cl. 131—51.)

1. An ash receiver comprising an ash compartment for the burned portion of the cigarette, a stub compartment for the unburned portion, and means mounted above the ash compartment and having saw-teeth for separating the burned portion from the unburned portion.

1,812,159. ADJUSTABLE PRICE INDICATOR. JOHN G. LUKAS, Bayonne, N. J. Filed Mar. 14, 1930. Serial No. 435,701. 4 Claims. (Cl. 40—65.)

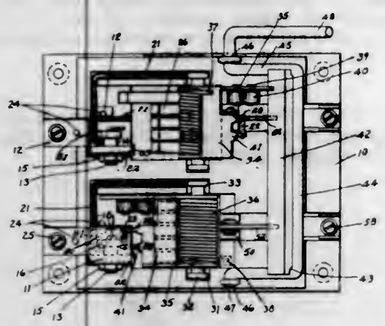


1. A combined shelf edging and indicating device for a shelf extending between partitions comprising a face plate of substantially the same width as the shelf edge, means for attaching the face plate in spaced relation to the shelf edge, said face plate having a window, a forward and a rear character bearing strip disposed in slidable relation between said face plate and said shelf edge; characters in close spaced relation on said rear strip and characters on said forward strip spaced from each other by apertures to expose characters on said rear strip; said strip being adjustable to expose different combinations of characters through said window.

1,812,160. SHOVEL. CHARLES SIDNEY MACKENZIE, Gananoque, Ontario, Canada. Filed Jan. 2, 1930. Serial No. 418,055. 1 Claim. (Cl. 294—49.)

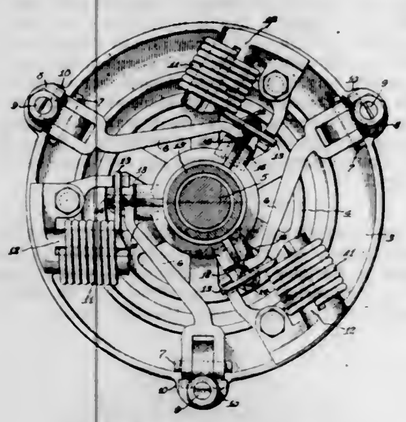
A shovel comprising a shovel blade having a substantial transversely flat central portion extending to the upper margin of the blade, a handle in the form of a tube split longitudinally at its rear, a frog formed integral with the handle the side edges of the split merging into the upper edge of the frog to form a V shaped rear recess, and a tongue formed integral with the blade and extending from the upper edge thereof and having its marginal edges fitting the marginal edges of the recess a welded joint being formed between such edges and between the frog and the face of the shovel.

1,812,161. PRINTING MECHANISM FOR CALCULATING MACHINES. CLARENCE ORIN MAPEL, Chicago, Ill., assignor to Portable Adding Machine Company, Chicago, Ill., a Corporation of Illinois. Filed July 15, 1926. Serial No. 122,610. 4 Claims. (Cl. 101—93.)

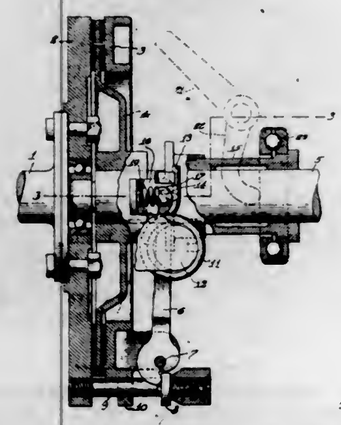


1. A zero printing control device comprising a movable cipher stop; a locking stop pivoted thereon; means operatively and directly connecting the locking stop with the cipher stop to cause the former to move in unison with the latter to inactive position; and means carried by a locking stop of higher decimal order to move the said locking stop of lower decimal order to inactive position without moving the associated cipher stop.

1,812,162. THERMOSTATIC CIRCUIT BREAKER. ROY H. MAPLE, Indianapolis, Ind. Filed Sept. 25, 1922, Serial No. 590,237. Renewed Nov. 10, 1930. 18 Claims. (Cl. 200—116.)

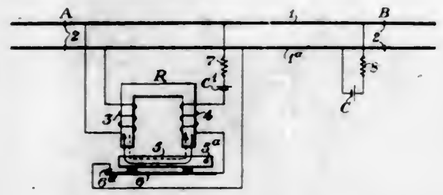


1. An electric switch construction including in combination a plurality of thermally operable switches, each hav-

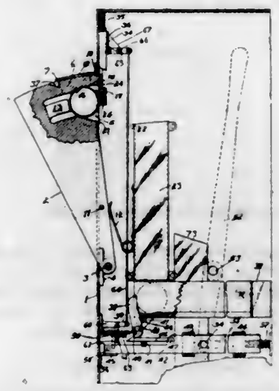


ing a current conducting and movable switch controlling member, a plurality of manually operable switches each in

series with one of the other switches, and a single common means differentially associated with both types of switches at the same time.



1,812,163. CLUTCH. SAMUEL M. D. MILLER, Detroit, Mich. Substitute for application Serial No. 28,343, filed May 6, 1925. This application filed Nov. 17, 1930. Serial No. 496,319. 2 Claims. (Cl. 192—89.)

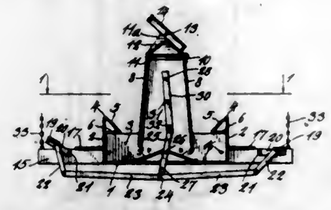


2. In combination with a clutch including relatively movable friction members adapted to be brought into frictional contact to transmit motion from one to the other, and a main spring for normally holding said friction members in frictional contact; of a lever pivotally supported adjacent said main spring and having an arm to oppose said main spring and an end portion to move one of said friction members, an operating lever, means operated by said operating lever to move said lever member, and a spring carried by said means to oppose the action of said main spring.

1,812,164. RAILWAY TRACK CIRCUITS. BENJAMIN MISHELEVICH, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed July 17, 1930. Serial No. 468,500. 2 Claims. (Cl. 246—41.)

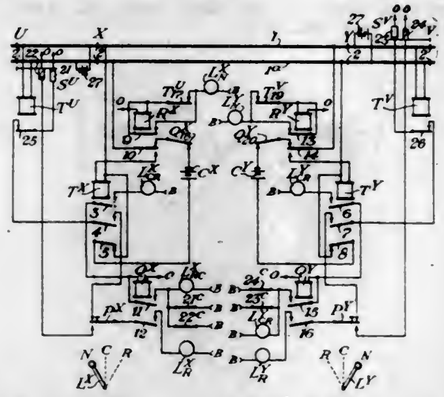
1. In combination, a section of railway track, a source of current connected across the rails at one end of said section, a relay having two cooperating windings, a connection across the rails at the other end of said section including one of said windings, and a second connection across the rails at the latter end of said section including the other of said windings and a second source of current as well as a front contact of said relay.

1,812,165. COIN SELECTOR. FRED C. MYER, Sacramento, Calif. Filed Nov. 12, 1929. Serial No. 406,619. 7 Claims. (Cl. 194—100.)



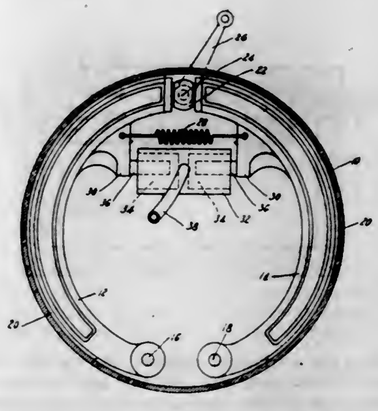
1. A coin selector of the class described comprising a coin chute having an adjustable side wall, means to feed a coin to said chute, means to propel said coin through the chute, and means to control said adjustable side wall by the insertion of the coin, to prevent vibrations of the coin as it travels through the chute.

1,812,166. POULTRY FEEDER. JOHN C. PALMER, Edgewater, Colo. Filed Feb. 17, 1930. Serial No. 428,999. 2 Claims. (Cl. 119—55.)



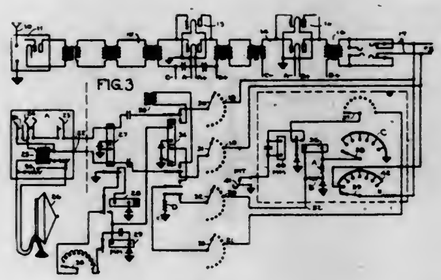
1. A poultry feeder comprising, in combination, a substantially rectangular box open at the top, the two oppositely located sides being provided with guard members

whose upper surfaces are upwardly and outwardly inclined, a feed hopper extending between the ends of the box and substantially parallel with the sides having the guards, a supporting bar secured to each of the ends of



the box, the ends of the bars projecting beyond the sides of the box, a roost bar mounted for oscillation between the supporting bars, an agitator located within the feed hopper, and means for operating the agitator when the roost bar moves about its pivot.

1,812,167. RAILWAY SIGNALING. EASTON E. PARRILL, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 18, 1929. Serial No. 400,542. 8 Claims. (Cl. 246—26.)

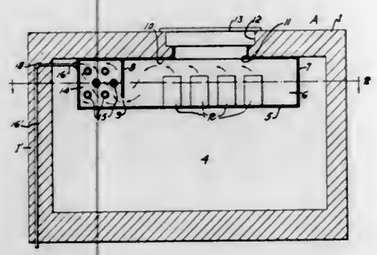


1. In combination, a stretch of railway track made up of a main section and an approach section at each end of the main section, a track circuit including a track relay for each approach section, a track battery and a track relay at each end of said main section, two relays R and Q at each end of said main section, a manually operable lever at each end of said main section and each having a normal and a reverse position, two signals governing traffic in opposite directions through said stretch, a pick-up circuit for each relay R closed when the associated lever is in the normal position and the track relay for the associated approach section is energized, a stick circuit for each relay R closed when the relay is energized and the associated lever is in normal position, means operating to connect each main section track battery with the rails of the section when the associated relay R is energized provided the associated relay Q and the associated track relay are de-energized, means operating to connect each main section track relay with the rails of the section when the associated relay R is de-energized, a pick-up circuit for each relay Q closed when the associated lever is in the reverse position and the associated main section track relay is energized, means for clearing each signal when the associated track relay and the associated relay Q are energized and the associated lever is in the reverse position, and a stick circuit for each relay Q including a contact closed when the associated signal indicates proceed.

1,812,168. BRAKE MECHANISM. HENRI PERROT, Paris, France, assignor, by mesne assignments, to Bendix Aviation Corporation, New York, N. Y., a Corporation of Delaware. Original application filed Jan. 29, 1924, Serial No. 689,218. Divided and this application filed Nov. 5, 1927. Serial No. 231,314. 13 Claims. (Cl. 188—106.)

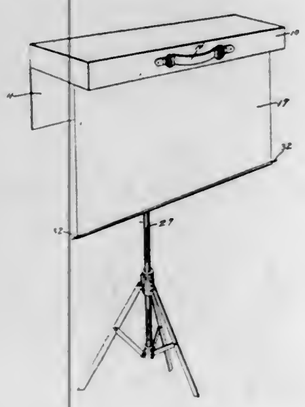
7. In brake mechanism of the class described, the combination with a brake-drum, of a brake engageable with said drum, a brake-cylinder, opposed pistons working in said cylinder and operatively connected to the ends of the brake to move said brake into braking engagement with said drum, other means for applying said brake to said drum including a lever moved by the operator, and means to release said brake.

1,812,169. SELECTIVE PROGRAM SERVICE SYSTEM. WINFRED T. POWELL, Rochester, N. Y., assignor to Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 19, 1929. Serial No. 341,091. 12 Claims. (Cl. 179—1.)



1. The method of transmitting programs from program sources to subscribers which comprises automatically selectively extending channels to any desired program source under subscribers' remote control, and automatically compensating for the varying number of channels connected to any program.

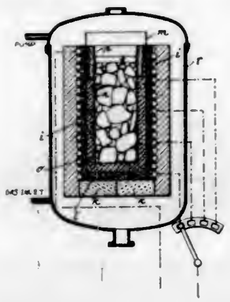
1,812,170. REFRIGERATING APPARATUS. FREDERICK W. RABE, St. Louis, Mo., assignor to Anheuser-Busch, Inc., St. Louis, Mo., a Corporation of Missouri. Filed Sept. 13, 1929. Serial No. 392,289. 5 Claims. (Cl. 62—91.5.)



1. A refrigerating apparatus comprising a housing providing a refrigerated compartment, a refrigerant cham-

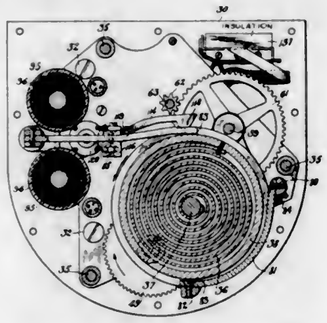
ber within said refrigerated compartment arranged to receive a refrigerant of the solidified gas type which gives off gas on sublimation, a gas chamber disposed adjacent to said refrigerant chamber and likewise located within said refrigerated compartment, said gas chamber being in communication with said refrigerant chamber whereby gas resulting from sublimation of the refrigerant may

pass from the refrigerant chamber into the gas chamber, means for discharging gas from said gas chamber, a conduit extended through said gas chamber and disposed in the path of gas moving therethrough, said conduit being arranged in communication with said refrigerated compartment so as to provide a passageway for air within said refrigerated compartment.



1,812,171. DISPLAY DEVICE. JOHN LESLIE RICE, Dayton, Ohio. Filed Sept. 4, 1930. Serial No. 479,667. 7 Claims. (Cl. 40—83.)

1. A device for carrying and displaying charts including a case; means in the case to support a plurality of rolls, each roll having a chart wound thereon; means on the case to receive a support rod; and means on the case to cooperate with said rod to brace said case.

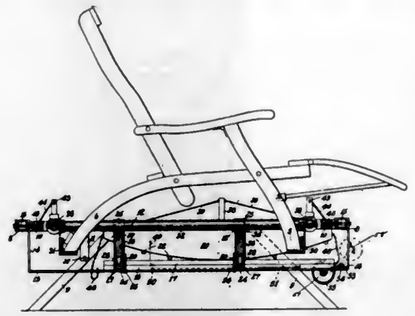


1,812,172. PRODUCTION OF CASTINGS FREE FROM PIPES AND BLOW-HOLES. WILHELM ROHN, Hanau-on-the-Main, Germany. Filed Sept. 16, 1927, Serial No. 220,054, and in Germany Dec. 28, 1925. 9 Claims. (Cl. 22—200.)

1. The method of producing castings free from pipes and blow-holes in smelting furnaces, which consist in melting the metal in the furnace, particularly in electrically heated furnaces such as resistance furnaces or in-

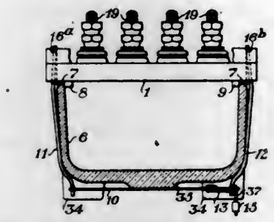
duction and high-frequency furnaces and gradually solidifying the entirely molten metal from the bottom upwards in the smelting vessel.

1,812,173. NON-INTERFERENCE SIGNAL TRANSMITTER. CHARLES M. SACKMAN, Cleveland, Ohio, assignor, by mesne assignments, to The Paramount Fire Alarm Engineering Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 21, 1925. Serial No. 76,929. 3 Claims. (Cl. 177—361.)



1. A non-interfering signal box including a signal wheel, a drum for rotating the wheel and having a notch in its periphery, means normally urging the drum to rotate, a stop lever normally engaging the notch to hold the drum against rotation, means for disengaging the stop lever from the notch to permit the drum to rotate, signal transmitting mechanism including a circuit controlling device and a signal lever for operating the circuit controlling device adapted to be operated by the signal wheel, a magnet in the box, an armature for the magnet, means for urging the armature out of range of the magnet, an armature controlling lever cooperating with the notch in the drum for momentarily moving the armature into the range of the magnet as the drum starts to rotate and at each rotation thereof, means upon the armature for holding the signal lever inoperative when the armature is away from the magnet and cooperating means upon the stop lever and armature for preventing the stop lever from engaging the notch in the drum when the armature is out of the range of the magnet.

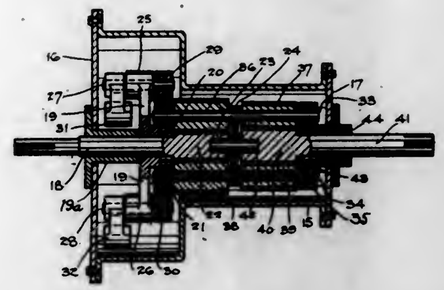
1,812,174. STABILIZING DEVICE. FREDERICK D. W. SEARING, Newark, N. J. Filed Jan. 6, 1930. Serial No. 418,769. 6 Claims. (Cl. 114—194.)



1. The combination with an outer frame and a pair of longitudinally disposed tracks carried thereby, and elastic material facing the tracks, of an intermediate frame, a

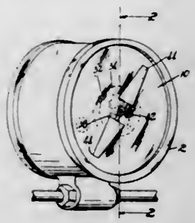
pair of longitudinally curved supports dependent therefrom and supported on the tracks carried by the outer frame, a pair of transversely disposed tracks carried by

the intermediate frame, and elastic material facing the tracks, an inner frame and a pair of transversely curved supports dependent therefrom and supported on the tracks carried by the intermediate frame.



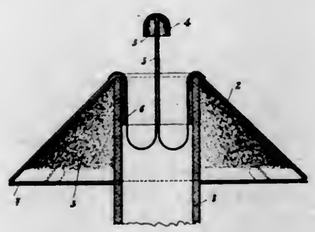
1,812,175. ELECTRICAL RELAY. NOBLE C. SHAW, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 14, 1930. Serial No. 488,609. 1 Claim. (Cl. 215—82.)

An electrical relay having an insulating top plate provided with two peripheral niches and with a plurality of metallic lugs projecting from the undersurface, a glass case coacting with the undersurface of said top plate and prevented from sliding by said lugs, a spring having a U-shaped opening in one end and having in the other end a transverse opening and a longitudinal opening and a hole, a key in said longitudinal opening assembled to slide in said opening but not to be disengaged therefrom, a first and a second side strap each having two grooves at one end for hooking such end in each of said niches and each having at the other end a transverse opening and two notches, the end of said first strap projecting through said U-shaped opening in said spring and secured thereto, the end of said second strap projecting through said transverse opening in said spring, and the end of said key in said longitudinal opening in said spring being passed through said transverse opening in said second strap.



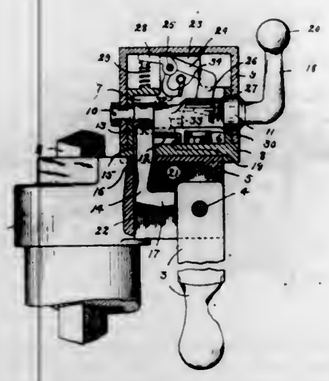
1,812,176. VARIABLE SPEED MECHANISM. LESLIE MITCHELL SHERIDAN, Coppercliff, Ontario, Canada. Filed May 3, 1930. Serial No. 449,585. 1 Claim. (Cl. 74—34.)

A variable speed mechanism comprising a casing having covered plates closing in the ends thereof, bearing members in each of said covered plates, a driving shaft journalled in one of said bearing members, a frame fixedly secured to said driving shaft and having enlarged bosses forming bearing members, a spur gear mounted on said driving shaft, a main gear secured to the extremity of said driving shaft, a pair of short shafts journalled on said frame and having at their other ends eccentric balance weights, a driven shaft journalled in the other of said covered plates and having a gear at its inner extremity, a



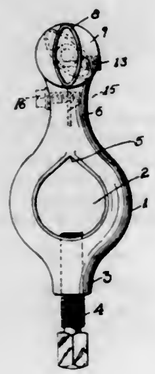
pair of shafts journalled at one end of said spur gear and at the other end to the end plate, and another gear journalled on said pair of shafts intermeshing with said main gears.

1,812,177. GLARE ELIMINATOR. MACK SMITH, Santa Monica, Calif. Filed May 20, 1930. Serial No. 453,969. 8 Claims. (Cl. 240—45.)



1. In a glare eliminator for use in connection with the reflected light of a light source, a transparent member through which the rays of said light source are adapted to pass, means on the inside of said transparent member for shearing said light rays, and means on the outside of said member for propelling said last mentioned means.

1,812,178. FLY CATCHER. ADOLF SPRINGMANN, Schramberg, Germany. Filed Oct. 27, 1928, Serial No. 315,546, and in Germany May 24, 1928. 1 Claim. (Cl. 43—139.)

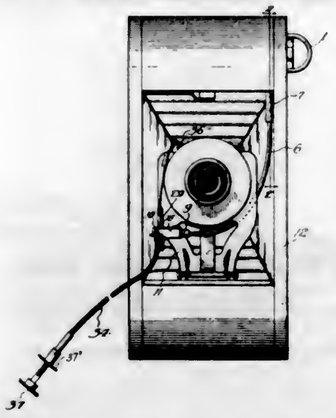


A fly or like catcher for a suction device, comprising an open-ended, upright glass tube, a conical glass shell having a centrally disposed, downwardly directed nipple adapted to fit inside the upper end of the tube, a bait cap, and means for supporting said bait cap on the shell above the orifice of the tube.

1,812,179. SWITCH STAND LOCK. PETER SWANSON, Ely, Minn. Filed Oct. 23, 1930. Serial No. 490,670. 10 Claims. (Cl. 246—414.)

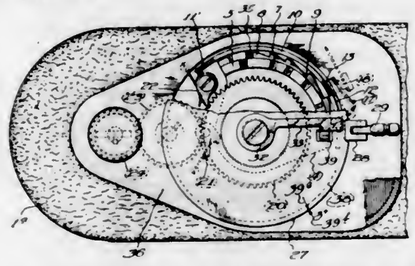
1. A switch stand lock comprising a housing having a key hole therein, a rotatable shaft mounted within said housing, a locking dog eccentrically mounted on said shaft, and a gravity and spring actuated pawl for normally holding said shaft against rotation.

1,812,180. LATHE DOG. CHARLES R. TAGGART, San Francisco, Calif. Filed Oct. 7, 1929. Serial No. 397,813. 2 Claims. (Cl. 82—41.)



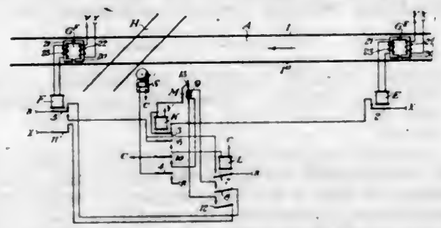
1. A lathe dog having a tail swiveled in its head and means for setting said tail in adjusted angular positions.

2. A lathe dog having a head with a hole therethrough, a tail having a stud rotatably engaging said hole, and means for locking said tail in adjusted angular positions.



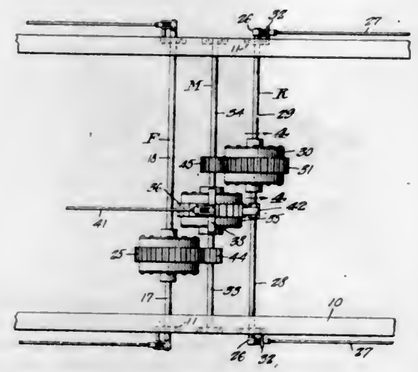
1,812,181. SHUTTER LOCKING DEVICE FOR CAMERAS. EUGENE C. THOMPSON, Los Angeles, Calif. Filed Feb. 23, 1928. Serial No. 256,111. 5 Claims. (Cl. 95—32.)

1. In a camera adapted to receive roll films, the combination with a film spool-winding key and shutter actuating mechanism, of means for placing said shutter actuating mechanism in operative or inoperative position, comprising a vertically movable locking member, a spline upon the locking member, means for moving the locking member downwardly and actuating the shutter, means for moving the locking member upwardly, and a horizontally



slidable element adapted to engage the spline when the said locking member is in upward position and additional means for releasing the said engagement.

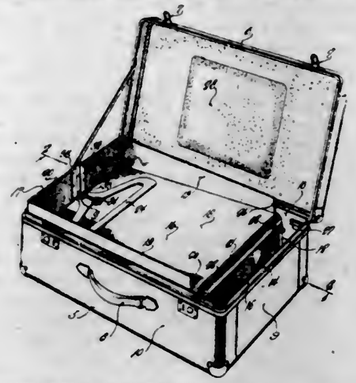
1,812,182. COMPENSATING WINDING GEAR FOR CAMERAS. EUGENE C. THOMPSON, Los Angeles, Calif. Filed May 16, 1929. Serial No. 363,940. 11 Claims. (Cl. 242—71.)



11. In a compensating winding mechanism, a gear wheel, a crank and one way clutch, means permitting a plurality of continuous revolutions of said gear, means for limiting the movements of the crank and gear to predetermined fractions of a full revolution, and means for varying the succeeding fractions of a full revolution relative to each other.

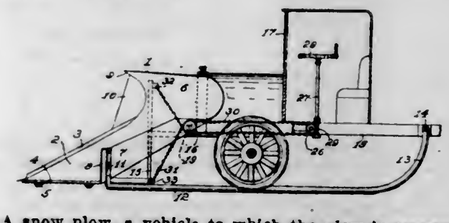
1,812,183. APPARATUS FOR THE CONTROL OF HIGHWAY CROSSING SIGNALS. HARRY C. VANTASSEL, Pittsburgh, and GEORGE R. PELASTEREA, Swissvale, Pa., assignors to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed June 4, 1930. Serial No. 459,155. 5 Claims. (Cl. 246—125.)

1. In combination, a railway track intersected by a highway, two normally closed relays E and F, means controlled by a train moving along said track for opening relay E as it approaches said highway and for opening relay F as it crosses the highway, a signal relay K, a stick relay L, a thermostat having a winding and a normally open contact, a stick circuit for relay K including a front contact thereof and a front contact of relay E, a pick-up circuit for relay L including a back contact of relay F and a back contact of relay K, a stick circuit for relay L including a front contact thereof and a back contact of relay K, a circuit for said thermostat winding including a front contact of relay F and a front contact of relay L as well as a back contact of relay K, a pick-up circuit for relay K including a front contact of relay F and a front contact of relay L as well as said thermostat contact, and a highway crossing signal controlled by relay K.



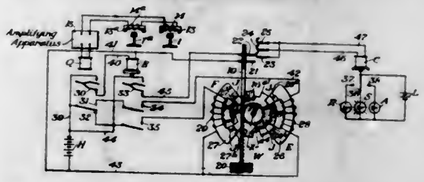
1,812,184. BRAKE EQUALIZER. FRANK W. WALSH, Vancouver, British Columbia, Canada. Filed Mar. 1, 1929. Serial No. 343,824. 1 Claim. (Cl. 188—204.)

In a brake equalizing mechanism, a pair of spaced parallel rock shafts adapted to have their outer ends connected with the brakes, each shaft including alined sections, differential mechanism geared to the adjacent ends of the sections of each shaft, and including a housing receiving said sections, a gear arranged exteriorly of each housing, a main operating rock shaft arranged between the first mentioned shafts, relatively small gears carried by the main shaft and meshing with the gears of said housing, said main shaft including alined sections, differential mechanism connecting the adjacent ends of said sections and including a housing receiving said sections, ratchet teeth arranged exteriorly of the latter mentioned housing, a yoke supported by said sections and straddling said housing, and including a centrally located depending tubular portion, a spring pressed pawl slidable in said portion and engageable with the ratchet teeth and an operating rod connected with the yoke for operating the latter at a remote point for the purpose specified.



1,812,185. LUGGAGE CARRIER. GEORGE HENRY WHEARY and BENJAMIN M. HAMLIN, Racine, Wis., assignors to Wheary Trunk Company, Racine, Wis., a Corporation of Wisconsin. Filed Apr. 2, 1928. Serial No. 266,802. 2 Claims. (Cl. 190—41.)

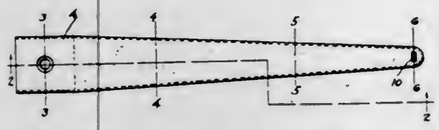
1. Readily portable hand luggage of the case type comprising a main section and a cover therefor, a readily removable partition mounted in the main section adjacent one end thereof, a wardrobe receiver hingedly connected with the partition to normally form a cover for the main section and adapted to be swung to a vertical position, the end of the wardrobe receiver opposite its hinged connection with the partition having an increased depth, and garment supporting means mounted in said deep end of



the receiver and adapted to receive garments the lower ends of which are draped over the removable partition when the garment receiver is in its normal position.

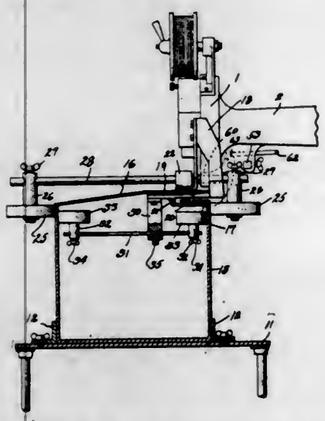
1,812,186. SNOWPLOW. LEO E. WOOD, Cerro Gordo, Iowa. Filed Apr. 4, 1930. Serial No. 441,632. 1 Claim. (Cl. 37—44.)

A snow plow, a vehicle to which the plow is connected for vertical adjustments, and mechanism mounted on said vehicle and connected to said plow for vertically adjusting it, comprising a rotatable transverse shaft on the vehicle having a worm-wheel thereon, a worm-shaft meshing therewith, a parallel rotatable shaft on the vehicle, said shafts having sprocket-wheels on their outer ends and the second-mentioned shaft having grooved sheaves thereon within its pair of sprocket-wheels, a pair of like chains each having its ends connected respectively to an upper and lower part of the plow on one side thereof, the lower reach of the chain including an elastic element, one reach of each chain passing about both sprocket-wheels on its side, thence around the sheave on that side, and sled runners rigidly connected to the lower rear parts of the plow, extending rearwardly and having their rear ends bent upwardly toward and hinged to said vehicle.



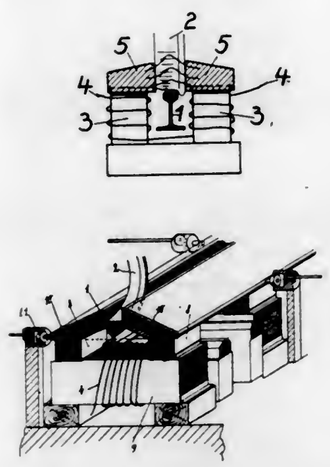
1,812,187. RAILWAY TRAFFIC CONTROLLING APPARATUS. DONALD G. ACKERLY, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Feb. 24, 1927. Serial No. 170,492. 2 Claims. (Cl. 177—353.)

1. In combination, a relay Q, means for supplying said relay with groups of energy impulses of variable number



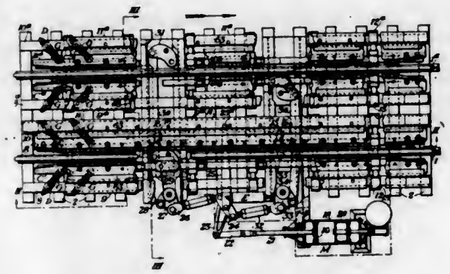
of impulses in the groups, the time interval between groups being relatively long and the time interval between the impulses in each group being relatively short, a momentary bridging contact operated by the armature of said relay, a relay B having a release period longer than said interval between impulses of a group and shorter than said interval between groups, a circuit for relay B including said bridging contact, a step-by-step motor having a movable member biased to an initial position and two windings arranged when alternately energized to move said member step-by-step away from initial position, a circuit for one of said weldings including front contacts of relays G and B connected in series, a circuit for the other winding including a back contact of relay Q and a front contact of relay B, whereby said motor member is moved two steps away from its initial position for each impulse in each group and returns to its initial position between each two groups of impulses, and signaling means selectively controlled by the relay B upon its release at the end of each group of impulses and by the position assumed by the movable member at the end of the impulse group in response to the number of impulses in the group.

1,812,188. FABRICATED BLADE ANVIL. HOWARD G. ALLEN, Niagara Falls, N. Y., assignor to H. R. Bliss Company, Inc., Niagara Falls, N. Y., a Corporation of New York. Filed Jan. 19, 1929. Serial No. 333,643. 6 Claims. (Cl. 1—15.)



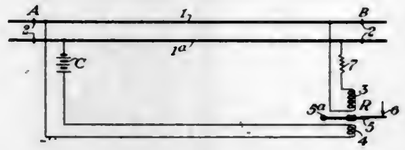
1. A fabricated blade anvil comprising upper and lower members both of which are of sheet metal construction and one of which is arcuate in cross section, said members being fitted together with their edges in close proximity, a weld connection extending around the edges, said members both uniformly tapering substantially from end to end, thus to form a relatively small end and a relatively large end, and a filler block disposed within the hollow anvil at the large end for securing purposes.

1,812,189. STAPLING MACHINE FOR FIBER BOARD BLANKS. HOWARD G. ALLEN, Niagara Falls, N. Y., assignor to H. R. Bliss Company, Inc., Niagara Falls, N. Y., a Corporation of New York. Filed Jan. 24, 1929. Serial No. 334,677. 13 Claims. (Cl. 1—11.)



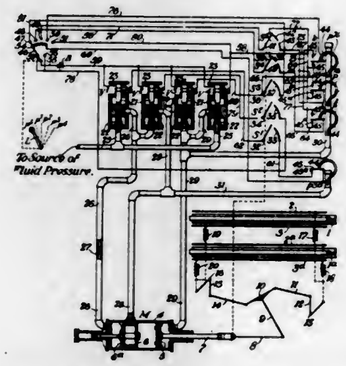
1. The combination with a stitcher head, and an open head blade anvil adapted to underlie overlapping fiber board flaps or the like through which one or more stitches are to be taken, of means carried by the anvil and positioned so as to be disposed within the hollow form of a fiber board blank set up substantially into case shape for supporting the vertically disposed parts of the blank, and a table below the anvil and said means for supporting the blank.

1,812,190. RAILWAY TRACK BRAKE. WOLFGANG BÄSELER, Munich, Germany. Filed Feb. 5, 1926, Serial No. 86,222, and in Germany Feb. 9, 1925. Renewed May 19, 1930. 5 Claims. (Cl. 188—62.)



3. A railway brake comprising a U-shaped electromagnet located in the trackway with its legs on opposite sides of a rail, and pole shoes mounted on the upper ends of said legs to slide horizontally toward and away from each other to engage the opposite sides of a wheel on said rail when the magnet is energized, each pole piece being inclined upwardly from its associated magnet leg toward the position occupied by a wheel on the rail.

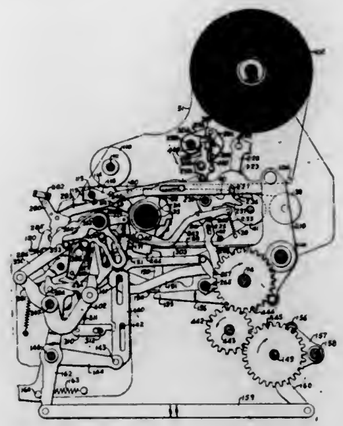
1,812,191. RAILWAY BRAKING APPARATUS. HERBERT L. BONE, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Sept. 24, 1928. Serial No. 307,895. 25 Claims. (Cl. 188—62.)



1. Railway braking apparatus comprising a braking bar located in the trackway, a cylinder, a first piston reciprocable in said cylinder and operatively connected with said braking bar, a second piston in said cylinder, and means for selectively operating said second piston to regulate the stroke of said first piston.

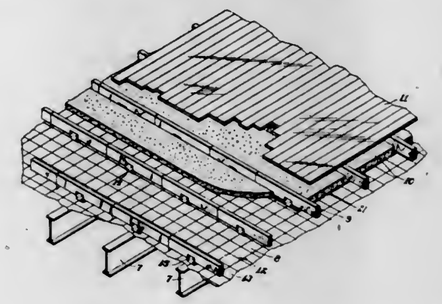
1,812,192. RAILWAY TRACK CIRCUITS. HERBERT L. BONE, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed June 4, 1930. Serial No. 459,224. 3 Claims. (Cl. 246—41.)

1. In combination, a single insulated track section, a relay having an armature biased by gravity to the open position and a main winding for closing said armature as well as an auxiliary winding for assisting the force of gravity in opening said armature, a connection across the rails of said section including said main winding, and a second connection across the rails of said section including said auxiliary winding and a source of current.



1,812,193. RAILWAY BRAKING APPARATUS. HERBERT L. BONE, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Aug. 21, 1930. Serial No. 476,862. 30 Claims. (Cl. 303—20.)

1. In combination, a railway braking bar located in the trackway, a cylinder, a first piston movable in said cylinder between one end of the cylinder and an intermediate point in the cylinder, a second piston operatively connected with said braking bar and movable in said cylinder between the other end of the cylinder and said first piston, a first valve for controlling the admission of fluid pressure to the region between said first piston and said one end of the cylinder, a second valve, means controlled jointly by said first and second valves for at times admitting fluid pressure to the region between said pistons, a third valve for controlling the admission of fluid pressure to the region between said second piston and said other end of the cylinder, a manually controlled device for selectively controlling said three valves, and a fourth valve controlled by said device for controlling the exhaust of fluid pressure from selected regions of said cylinder depending upon the condition of at least one of said first three valves.

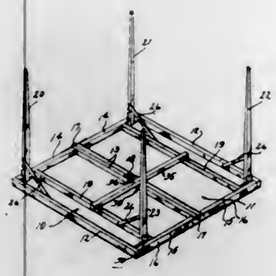


1,812,194. CASH REGISTER. SAMUEL BRAND, Dayton, Ohio, assignor to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed Jan. 26, 1929. Serial No. 335,337. 32 Claims. (Cl. 235—3.)

1. In a machine of the class described, the combination with a printing element; means to take impressions therefrom on an issuing record material; means to take impressions from said printing element on an inserted record material, and on another record material; of means to feed the issuing record material; means normally operable on

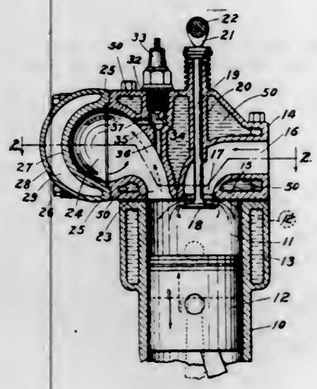
each operation of the machine to render said feeding means ineffective; and means to disable the normally operable means, said disabling means adapted to be rendered ineffective by the insertable record material.

1,812,195. BUILDING STRUCTURE. LEWIS BRANDT, Pittsburgh, Pa., assignor to Pittsburgh Steel Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 8, 1928. Serial No. 311,008. 1 Claim. (Cl. 72—101.1.)



Building structure comprising sleepers, floor beams, reinforcing fabric composed of a wire mesh backed by a paper form sheet disposed against said beams and extending across the spaces between adjacent beams, and sheet metal chairs each having a flat body portion straddling said beams and downwardly-extending pointed wing portions to permit them to be forced through the paper backing and bent around the flanges of the floor beams and having upwardly-extending side portions affording vertical and lateral support to the sleepers in vertically spaced relation to the said beams.

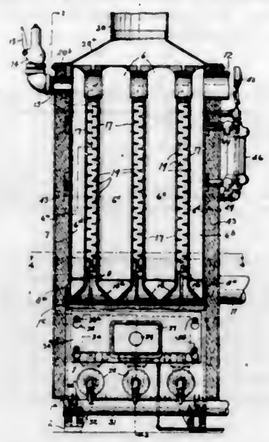
1,812,196. FOLDABLE TABLE. NEWTON N. BROWN, Racine, Wis., assignor to Gold Medal Camp Furniture Mfg. Co., Racine, Wis., a Corporation of Wisconsin. Filed Aug. 6, 1928. Serial No. 297,729. 3 Claims. (Cl. 45—116.)



1. A foldable table comprising a top including a pair of hingedly connected sections, each section including a

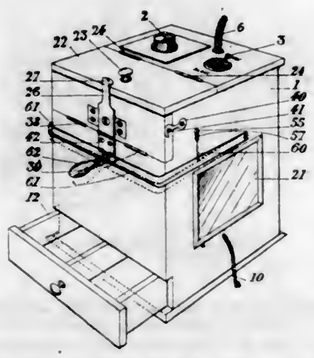
frame and a top plate, a transverse bar associated with the frame of each section, legs pivotally supported on the frame and on the transverse bars and a locking bar piv-

otally mounted on the frame of one of the sections and engageable with the frames of both sections and with the transverse bars when the table is set up.



1,812,197. ISOTHERMAL FUEL INLET MEANS FOR INTERNAL COMBUSTION ENGINES. FRANK A. BULLINGTON, Kansas City, Mo., assignor to Bullington Engine Heads, Kansas City, Mo., a Common-Law Trust consisting of Louis R. Ash, Howard P. Treadway, and Frank A. Bullington. Filed Feb. 12, 1927. Serial No. 167,755. 16 Claims. (Cl. 123—191.)

1. In an internal combustion engine, a cylinder chamber, a combustion chamber communicating therewith and a closed air chamber contacting a portion of the wall surface of said combustion chamber.

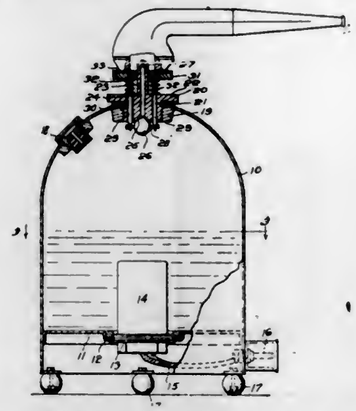


1,812,198. APPARATUS FOR HEATING OR VAPORIZING FLUID. MARK M. CLAYTON, La Porte, Ind., assignor to Bastian-Morley Co., La Porte, Ind., a Corporation of Indiana. Filed June 4, 1927. Serial No. 196,606. 1 Claim. (Cl. 122—210.)

In a fluid heater, the combination of a fire chamber, a plurality of fluid containing sections disposed in spaced side by side relation, a discharge flue above said sections, the spaces between said sections being in communication with said fire chamber and said flue, said fluid containing sections having on their opposing walls integral solid fins to reduce liming, said fins being closely spaced apart on their respective walls and disposed with the fins of one section vertically offset a distance equal substantially to the horizontal depth of the fins from the fins of an adjacent section to deflect the gases toward the wall of the opposing section, the fins of one section slightly overlap-

ping at their outer ends the outer ends of the fins of an adjacent section to decrease the tendency of pocket forming and prevent stratification on the surfaces.

1,812,199. PRESS FOR OBTAINING PHOTOGRAPHIC PRINTS BY MEANS OF ELECTRIC LIGHT. LÉON CRAYSSAC, Sete, France. Filed Oct. 20, 1928, Serial No. 313,819, and in France Oct. 27, 1927. 6 Claims. (Cl. 95—73.)



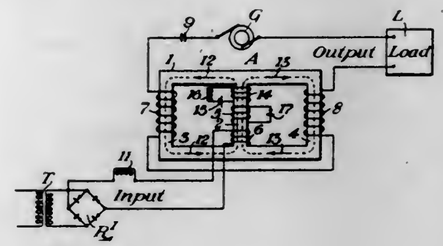
1. In an apparatus for obtaining photographic prints, the combination of: a light tight casing, a cover on said casing, illuminating means arranged within said casing, a frame arranged above said illuminating means so as to be slidable within said casing, a platen forming part of said cover and adapted to cover the upper part of said frame, a transparent panel on the top of said frame upon which panel the negative is placed, a rim fixed to said cover located below the platen and projecting over said frame, a hinged front on said casing, a rim on said hinged front and means for pressing said frame upwards towards said rims in such manner as to hold both the negative and said panel firmly in position between said frame and said rims even during the changing of the print.

1,812,200. PIPE CLEANING DEVICE. PETER DAHLEN, New York, N. Y. Filed Aug. 30, 1929. Serial No. 389,578. 12 Claims. (Cl. 131—13.)

1. A tobacco pipe cleaning device comprising a boiler, an electrical heater for the same, a coupling connected with the boiler and having an outwardly projecting stationary tube and a valve seat at the intake end of the

bore of the tube, said coupling having openings formed therein, a valve to engage the valve seat, rods slidable within the openings and connected with the valve, an actuating plate arranged adjacent to the tube and connected

with the rods the arrangement being such that the outlet end of the tube projects above the actuating plate when the actuating plate is depressed by engagement with the bowl of the pipe, and springs surrounding the rods to oppose the downward movement of the actuating plate.



1,812,201. PAPER SORTING MACHINE. PETER F. DENNER and JOB C. ESTES, Kalamazoo, Mich. Filed Aug. 30, 1928. Serial No. 302,974. 9 Claims. (Cl. 214—11.)

1. In a paper sorting machine, the combination of a main frame with endless main conveyor of parallel conveyor belts extending from end to end thereof, a paper feed table with means for maintaining it at proper level and sheet reversing means above said main conveyor, a feed carriage, suitable guides to carry the said feed carriage from the paper feed table upwardly and forwardly to a point above the said reverse means, actuating means for said carriage, pneumatic suction heads with suction tips for engaging the top sheet of the pile of paper being inspected, a header with suction connection for said suction heads and tips, automatic control means for the suction connection comprising a slide valve with a connection to the suction hose and having a port opening to break the suction, a timed cam for actuating the said slide valve, and means for deflecting sheets from said main conveyor after inspection, as specified.

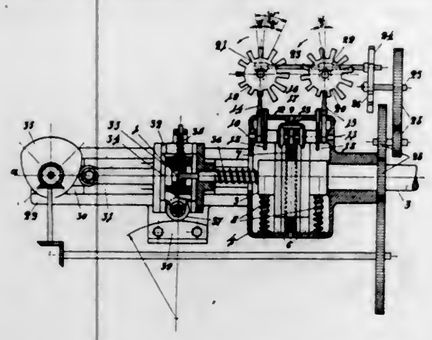
1,812,202. ELECTRICAL TRANSLATING APPARATUS. PHILIP H. DOWLING, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Original application filed June 20, 1928, Serial No. 286,984. Divided and this application filed July 9, 1929. Serial No. 376,988. 15 Claims. (Cl. 171—119.)

1. In combination, a magnetizable core having a bridging member, two windings on said core, a circuit including a source of alternating current and said two windings in series in such manner that the alternating fluxes created by the windings in said bridging member normally balance each other, means for at times creating in said bridging

member a unidirectional flux which varies the impedances of said windings and destroys the normal balance between said alternating fluxes, means responsive to an alternating flux in said bridging member for varying said unidirectional flux, and a load receiving energy from said circuit.

1,812,203. SUPPORT FOR BOXES AND THE LIKE. ROBERT J. GASKILL, Fort Wayne, Ind. Filed Mar. 26, 1928. Serial No. 264,925. 5 Claims. (Cl. 248—20.)

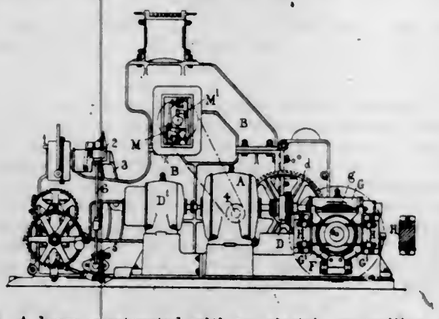
5. A support for boxes having a flat face, comprising a flat plate, outwardly and rearwardly inclined flanges at opposite side edges of the plate and an apertured lateral flange at the side edge of each inclined flange attachable to a fixed object and having its rear face concaved, the plate having apertures with slots communicating therewith adapted to receive bolts carried by the box.



1,812,204. PROCESS IN WHICH VISCOSE SILK IS SUBJECTED TO THE ACTION OF CAUSTIC ALKALIS. ARCHIBALD JOHN HALL, Congleton, England, assignor to The Silver Springs Bleaching & Dyeing Company Limited, Timbersbrook, Congleton, England. Filed June 23, 1928, Serial No. 287,894, and in Great Britain July 9, 1927. 3 Claims. (Cl. 8—20.)

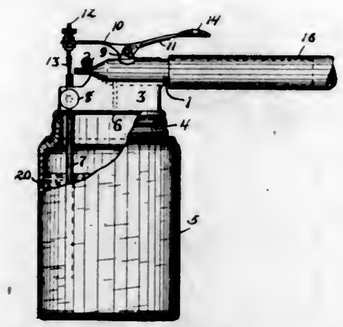
1. A process for mercerizing textile fabrics containing desulfurized viscose silk consisting in treating such materials with a solution of caustic potash under conditions of time, temperature, and concentration which are adjusted so that the cotton is mercerized to the desired degree whilst the desulfurized viscose silk is not deleteriously affected.

1,812,205. METHOD FOR MANUFACTURING CURVE THREADED NUTS AND MEANS THEREFOR. ELIS HELIN, Liljeholmen, Stockholm, Sweden. Filed Feb. 24, 1928, Serial No. 256,531, and in Sweden Aug. 9, 1927. 12 Claims. (Cl. 82—5.)



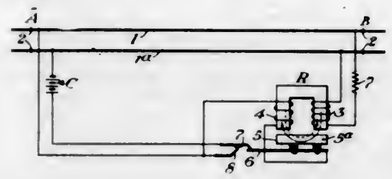
1. A method of cutting a curved threaded nut from an apertured nut-blank by means of a cutting member in engagement with the bore of said nut-blank, consisting in rotating said cutting member and simultaneously impart-

ing to one of said members a translatory movement corresponding to the desired curve of the thread.



11. A machine for cutting curved threaded nuts, comprising a chuck mounted to rotate a holder for the cutter mounted in the chuck, a cutter secured to the holder, a screw shaft in the chuck arranged to turn, a nut portion on the holder engaged by the screw to reciprocate the holder, a gear on the screw, a pair of gears mounted in the chuck engaging said gears on opposite sides to turn the screw, a shaft for each said two latter gears, a ratchet wheel on each said shaft, an arm projecting from the chuck that turns on each said two shafts, a pawl in each said arm arranged to engage said ratchet wheels respectively, a toothed disc for each said pawl arranged to engage the pawl intermittently by the teeth to cause the pawl to engage the ratchet wheel and turn the said gears and screw and shift the holder and cutter, means for rotating the chuck, means for turning the tooth discs and cause them to alternately engage a pawl and swing the holder in opposite directions the several teeth on each disc being arranged to progressively increase the swinging of the pawl and resulting movement of the screw, and a support for a nut-blank that is shifted from the driving means for the chuck to advance the nut-blank to cause its bore to be engaged by the cutter.

1,812,206. DRIVING AND CONTROLLING MECHANISM OF LOOMS FOR WEAVING. JOHN HENRY HINDLE and THOMAS HINDLE, Haslingden, England. Filed Feb. 19, 1930, Serial No. 429,726, and in Great Britain Apr. 25, 1929. 4 Claims. (Cl. 139—341.)



1. A loom constructed with an electric controlling circuit, a magnetic driving clutch and an electro-mechanically released brake in the same circuit functioning simultaneously, contactors to make and break the circuit, means to operate the contactors alternately at successive boxings of the shuttle timed to break the circuit when the shuttle should enter its respective shuttle box an auxiliary by-pass circuit leading to each shuttle box, and a switch thereon closed by the entry of the shuttle into the box to maintain the circuit intact.

1,812,207. ATOMIZER ATTACHMENT FOR VACUUM CLEANERS. CHARLES KELLER, Warren, Ind. Filed Aug. 19, 1927. Serial No. 214,042. 2 Claims. (Cl. 299—89.)

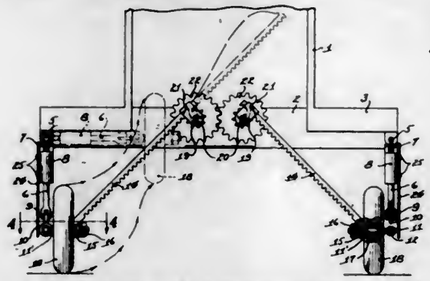
2. An atomizing device comprising a vessel for containing the material to be atomized; a liquid discharge tube extending from within the lower part of the vessel through the top thereof and provided with a valve for regulating the flow of liquid therethrough; a tubular member having a nozzle positioned on said vessel with its nozzle spaced from and directed at approximately right angles across the upper end of said discharge tube, there being an air duct connecting said vessel and tubular member; and an operating valve extending into and normally closing the discharge end of said liquid discharge tube, disposed in front of the tip of said nozzle, and having an operating lever in connection therewith for its support and by which it is actuated independently of the other valve.

1,812,208. RAILWAY TRACK CIRCUITS. BRANKO LAZICH, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed June 4, 1930. Serial No. 459,131. 3 Claims. (Cl. 246—41.)

1. In combination, a section of railway track, a relay having a single magnetic circuit including an armature biased by gravity to the open position, said magnetic circuit being provided with a main winding for closing said armature as well as an auxiliary winding for creating in said magnetic circuit and in said armature a flux which opposes and is weaker than the flux created therein by said main winding, a connection across the rails of said section including said main winding, and a second connection across the rails of said section including said auxiliary winding and a source of current in series.

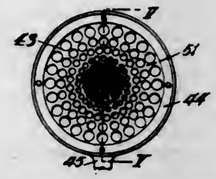
1,812,209. DISPLAY SIGN. CHARLES L. LEWIS, Monrovia, Calif. Filed Jan. 28, 1930. Serial No. 423,991. 3 Claims. (Cl. 40—86.)

1. A display sign comprising a shell, said shell being formed in two complementary halves, and said shell being substantially spherical in shape, a curtain in each of said halves, each of said halves having a sight opening in the



top thereof and manual means to move said curtain whereby various signs on the curtains are displayed in the sight openings.

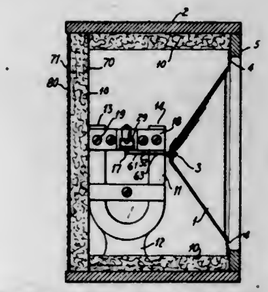
1,812,210. DRILLING BIT. GEORGE B. LOUDERBACK, Compton, Calif. Filed May 28, 1928. Serial No. 281,267. 6 Claims. (Cl. 255—75.)



1. A drilling bit comprising; a body; cutting blades adapted for being advanced from the body obliquely to its axis; a ram adapted for advancing said blades; longitudinally slidable plunger rods normally projecting from the end of said bit; and means whereby an hydraulic pressure may be exerted upon said ram by the longitudinal sliding of said rods.

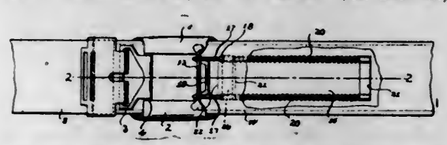
1,812,211. RETRACTABLE LANDING GEAR FOR FLYING MACHINES. GEORGE E. MCCREA, San Francisco, Calif. Filed June 26, 1929. Serial No. 373,709. 6 Claims. (Cl. 244—2.)

1. In a flying machine, a supporting structure; a pair of spaced landing wheels; a frame connecting each landing wheel with said structure; and means for swinging said frames toward each other and upwardly to substantially horizontal positions in proximity to said structure, said wheels remaining substantially vertical during the movement of said frames.



1,812,212. MOTION PICTURE PROJECTOR. WILLIAM H. MEYER, St. Louis, Mo. Filed Aug. 1, 1925. Serial No. 47,606. 18 Claims. (Cl. 88—17.)

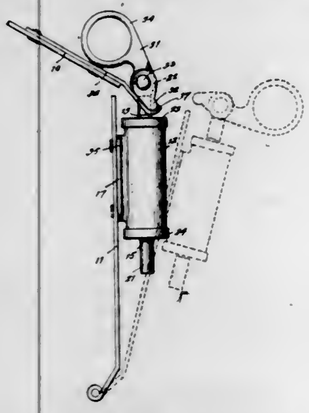
3. In a motion picture projector, the combination of a movable fire shutter, a revolving shutter having a pivotal blade structure, a shaft to which said revolving shutter is rigidly secured, an element cooperable with the blade structure of said revolving shutter slidably mounted on said shaft, and means actuated by said element for moving said fire shutter into the projecting light ray of said projector.



18. The combination of a source of light directed upon an object and a perforated plate positioned between the source of light and the object transversely of the light beam from said light source, the arrangement of the perforations and contours and sizes of said perforations of said plate comprising a means for suppressing the heat rays in the light beam so as to provide a substantially uniform amount of heat over the entire cross sectional area of the light beam at and adjacent to said object.

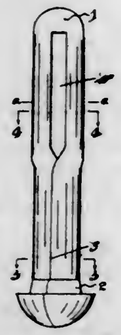
1,812,213. LOUD SPEAKER. JOHN P. MINTON, White Plains, N. Y., assignor, by mesne assignments, to United Reproducers Corporation, Rochester, N. Y., a Corporation of New Jersey. Filed Mar. 30, 1927. Serial No. 179,433. 15 Claims. (Cl. 179—115.)

1. A sound reproducer for voice and music comprising a housing having an opening in one face thereof, a stiff vibratile diaphragm mounted in said housing and having one side exposed directly to unconfined air through said opening and having the other side exposed only to air within said housing, said housing having an opening of substantial area in back of said diaphragm and said opening being covered with a layer of sound-absorbing material and means for supporting and driving said diaphragm, comprising an electromagnetic unit.



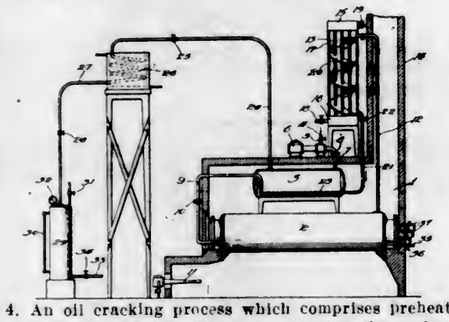
1,812,214. BELT FOR PERSONAL WEAR. EDWIN S. MIX, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y. Filed Sept. 16, 1927. Serial No. 219,898. 1 Claim. (Cl. 241—8.)

The combination with a belt, and belt buckle secured at one end to the belt, the belt having adjacent its oppo-



site end a pocket between its side edges opening on the rear face of the belt end in which the pocket is formed and in spaced relation to the last mentioned end, of a guide in the pocket, two guide bars movable on the guide, spring means in the pocket opposing the movement of the guide bars, an anchoring device connected to the guide bars and lying behind that belt end in which the pocket is formed, and an anchoring device on the buckle with which the anchoring device carried by the guide bars cooperates to hold the belt end to the buckle.

1,812,215. AUTOMOBILE HOOD CLAMP. RAYMOND G. MOORE, Bridgeport, Conn., assignor to The Bassick Company, Bridgeport, Conn., a Corporation of Connecticut. Original application filed Oct. 28, 1924, Serial No. 746,294. Divided and this application filed Oct. 25, 1926. Serial No. 143,946. 3 Claims. (Cl. 292—165.)

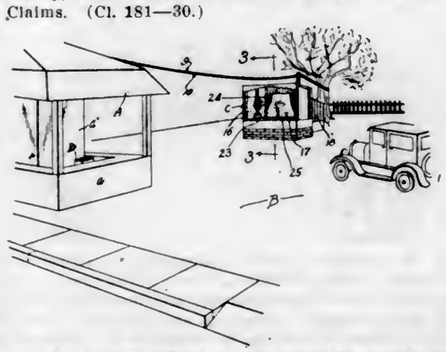


1. In a clamp, a tubular barrel formed of sheet metal bent transversely into tube form, integral extensions extending transversely from each side of said barrel adapted for attachment to a part of the clamped structure, integral projecting lugs at the upper and lower ends of said barrel, and end closure caps engaged over the ends of the barrel to secure the tubular relation thereof and having slots engaged by said lugs, said lugs being bent over upon said caps to secure them.

1,812,216. KEY BOLT. JOHN P. NORTHEY and RODNEY V. NORTHEY, Toronto, Ontario, Canada, assignors to Consolidated Bolt Company Limited, Toronto, Canada. Filed Feb. 3, 1928. Serial No. 251,590. 1 Claim. (Cl. 85—7.)

A slotted bolt comprising a slotted portion; and a longitudinally divided non-slotted stem in which the plane of division lies at an acute angle to the median plane of the slot, and includes a divided twisted portion forming a connection between the two parts aforesaid and in which the plane of division turns through the acute angle aforesaid.

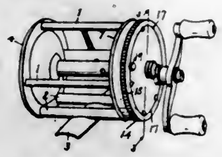
1,812,217. PROCESS AND APPARATUS FOR HEATING PETROLEUM OIL. ALFRED OBERLE, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Apr. 19, 1923, Serial No. 633,099. Renewed Sept. 14, 1928. 5 Claims. (Cl. 196—48.)



4. An oil cracking process which comprises preheating the oil in an initial heating zone, passing the preheated oil to a second heating zone and subjecting the same to cracking temperature therein, removing vapors from said second heating zone and subjecting the same to dephlegmation, passing the dephlegmated vapors and condensate formed in the dephlegmation to said initial heating zone, and removing and condensing vapors from said initial heating zone.

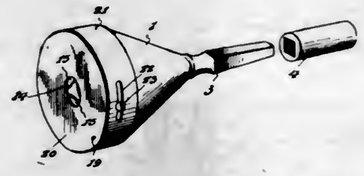
1,812,218. LIFT TRUCK PLATFORM. ELMER J. POWELL, Hubbard, Ohio, assignor to The Powell Pressed Steel Company, Hubbard, Ohio, a Corporation of Ohio. Filed Nov. 20, 1930. Serial No. 496,915. 2 Claims. (Cl. 248—41.)

1. A lift truck platform comprising integral sheet metal top and side members, and means to prevent distortion of the edges of the side members comprising a combined runner and bumper for each of said side members having a metal channel embracing the lower and both end edges of the side member.



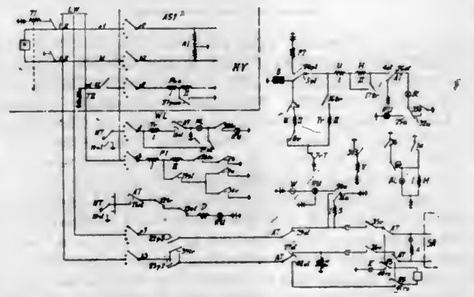
1,812,219. SOUND REPRODUCTION. LEWIS I. REED, Berkeley, Calif. Filed Oct. 2, 1928. Serial No. 309,839. 2 Claims. (Cl. 181—30.)

1. A stage for amplifying sound comprising a relatively wide and shallow front portion and a relatively narrow



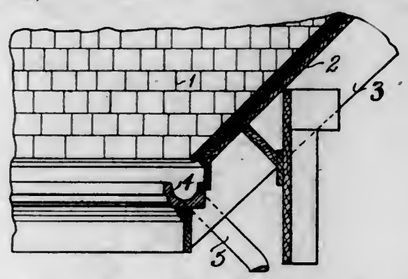
and deep rear compartment opening at its front into said front portion, the rear, side and upper walls of said compartment being constructed and arranged to form a sound amplifier.

1,812,220. FISHING REEL. WILLIAM SHAKESPEARE, Jr., Kalamazoo, Mich., assignor to Shakespeare Company, Kalamazoo, Mich. Filed Oct. 1, 1928. Serial No. 309,578. 7 Claims. (Cl. 242—84.1.)



5. A fishing reel frame comprising a plurality of pillars, a head member having holes therein to receive said pillars, a locking ring rotatably mounted in said head member and having notches adapted to be brought into register with the said openings to receive the pillars, and transversely disposed cam portions adjacent said notches to be engaged with said pillars by rotative movement of the ring for clamping the head upon said pillars.

1,812,221. DRILL CHUCK. FREDERICK W. SPENCER, Chicago, Ill. Filed June 21, 1929. Serial No. 372,698. 4 Claims. (Cl. 279—33.)

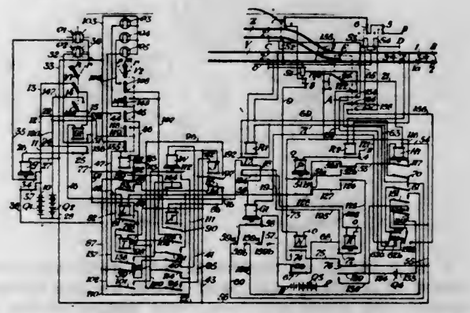


1. A chuck comprising a hollow body, a shank extending rearwardly from said body, a seat in said body to receive the rear end of a bit, a head for the front end of said body formed with a central opening, a ring fitting against said head, jaws pivoted to said ring and extending towards said opening and pivotally and slidably connected with said head for movement towards and away from the opening as the ring is rotated, means between the ring and opening to guide movement of the jaws, and means to rotate said ring.

1,812,222. TELEPHONE SYSTEM. JOHANNES STICH, Berlin, Germany, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt bei Berlin, Germany. Filed May 13, 1930, Serial No. 452,087, and in Germany June 6, 1929. 9 Claims. (Cl. 179—27.)

1. In a private branch exchange, subscribers' lines, a trunk incoming from a main exchange and terminating in a switch having access to said lines, means for marking a called line, means for operating said switch to hunt for the marked line, two test wipers on said switch, means controlled over the first of said wipers for stopping the switch on the called line, and means controlled over the second of said wipers for determining the idle or busy condition of said line.

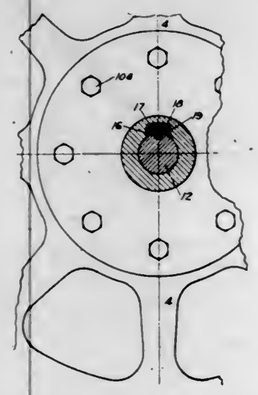
1,812,223. SHINGLE. JOHN V. TATLOW, Beaver, Wash. Filed Apr. 28, 1928. Serial No. 273,446. 1 Claim. (Cl. 108—8.)



A roof structure having a continuous or non-interrupted surface and comprising rows of overlapping shingles in which each shingle has upper and lower feather edges, an inclined lap face and a beveled exposed face terminating in an apex, and said lap face and exposed face being arranged at varied angles and of different lengths.

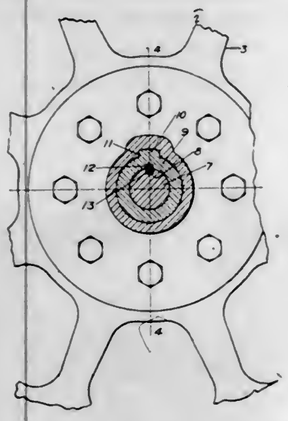
1,812,224. ELECTRODE FOR UNIPOLAR HIGH-FREQUENCY CURATIVE TREATMENT. ERNST TREIBMANN, Leipzig, Germany. Filed Oct. 12, 1928, Serial No. 312,017, and in Great Britain July 17, 1928. 6 Claims. (Cl. 174—89.)

1. In an apparatus for unipolar high frequency curative treatment, a deformable holder of insulating material, a plurality of electrodes mounted on said holder and spring means electrically interconnecting said electrodes.



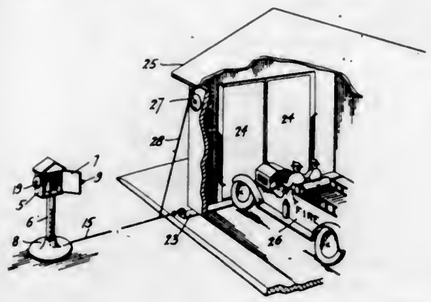
1,812,225. REMOTE CONTROL APPARATUS. JAMES J. VANHORN, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Apr. 22, 1929. Serial No. 357,013. 14 Claims. (Cl. 246—3.)

1. In combination, a railway traffic governing device, a pair of conductors, a manually operable lever, an indica-



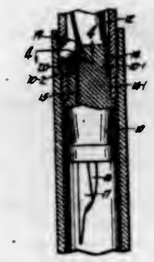
tion means, a relay for controlling said device, a circuit including said conductors and said relay, a branch path around said relay in said circuit and controlled by said device, means controlled by said lever for supplying said circuit with current for operating said relay, and means controlled by said lever for supplying to said branch path current for controlling said indication means.

1,812,226. METAL WHEEL. EDWARD E. WALKER, Erie, Pa., assignor to Erie Malleable Iron Company, Erie, Pa., a Corporation of Pennsylvania. Filed Nov. 24, 1926. Serial No. 150,589. 1 Claim. (Cl. 287—53.)



A metal wheel hub formed of relatively soft malleable cast metal having an axle opening therein with a key-sustaining insert of relatively hard metal permanently secured in the walls of the opening and provided with key shoulders on its inner face, the walls of the opening including the inner face of the insert forming an all-metal seating surface for the opening.

1,812,227. WHEEL. EDWARD E. WALKER, Erie, Pa., assignor to Erie Malleable Iron Company, Erie, Pa., a Corporation of Pennsylvania. Filed Nov. 26, 1926, Serial No. 150,781. Renewed June 18, 1929. 2 Claims. (Cl. 287—53.)

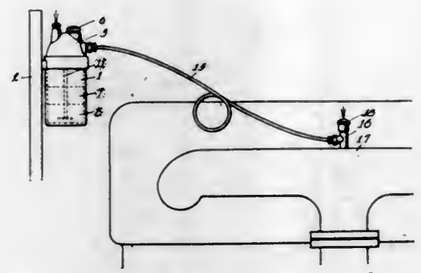


1. In a wheel, the combination of a metal wheel hub formed of relatively soft metal having an axle opening therein; and a relatively hard metal bushing secured in the opening, said bushing having key shoulders on its inner periphery.

1,812,228. TOY CALL BOX. FRED W. WARNER, Denver, Colo., assignor of one-half to Eva A. Warner. Original application filed Oct. 8, 1925, Serial No. 61,238, Patent No. 1,693,128, dated Nov. 27, 1928. Divided and this application filed Nov. 19, 1928. Serial No. 320,290. 6 Claims. (Cl. 46—37.)

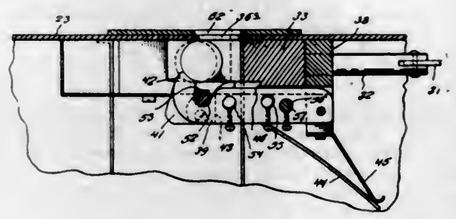
1. A toy call-box for the operation of a toy fire-house at a distant point, comprising a portable stand having a foot for its loose support in an operative condition on a surface, an element adapted for the operation of an actuated part of the toy fire-house, means on the stand for the operative support of the element, and an alarm operatively associated with said means.

1,812,229. NON-LEAKING FOUNTAIN PEN. ROBERT H. WHITEHEAD, Salt Lake City, Utah, assignor of one-tenth to Charles S. Merrill, Salt Lake City, Utah. Filed Dec. 23, 1929. Serial No. 416,171. 6 Claims. (Cl. 120—48.)



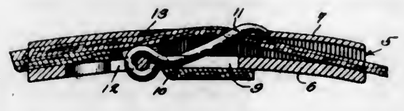
1. A fountain pen, including in combination an ink sac of resilient material, a feed member having a valve seat disposed to contact the inside of said sac, a valve on the outside of said ink sac, said valve being positioned to register with the said valve seat, and a barrel around said ink sac, said barrel having an opening in which said valve is positioned so as to have in and out motion.

1,812,230. PROCESS FOR PREPARING ACTIVE, ELEMENTARY CARBON FROM SUBSTANCES SUCH AS CARBONMONOXIDE AND CARBONMONOXIDE CONTAINING GASES. HENDRIKUS CORNELIS JOSEPHUS AARTS, Dongen, Netherlands, assignor to The General Carbonalpha Company, Wilmington, Del. Filed May 4, 1929, Serial No. 360,604, and in the Netherlands May 4, 1928. 1 Claim. (Cl. 252—3.)



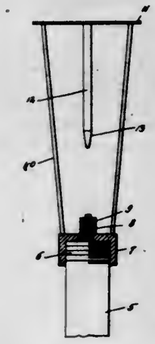
A process for preparing active elementary carbon from substances, such as carbonmonoxide and carbonmonoxide containing gases, characterized in applying as a catalyst carbon obtained by decomposition of carbonmonoxide and in starting the reaction by means of an extraneous catalyst and maintaing the gases after their leaving the space containing said extraneous catalyst at a temperature suitable to the autocatalytical action of carbon.

1,812,231. COMBINED GAS SAVING AND LUBRICATING MEANS. WILLIAM P. AGNEW, San Francisco, Calif. Filed June 28, 1929. Serial No. 374,498. 1 Claim. (Cl. 123—25.)



A gas saver for internal combustion engines comprising a vessel adapted for supporting a stratum of lubricating oil above a body of water, a conduit extending into the vessel above the stratum of oil and connecting with the intake manifold of the engine, a tube connecting with the atmosphere and extending into the body of water for allowing air to enter, and a disc at the end of the tube forcing the air to spread as it leaves the tube.

1,812,232. VENDING MACHINE. JOSEPH BERLAND, Cleveland, Ohio, assignor to Isaac Berland, Cleveland, Ohio. Filed Nov. 13, 1929. Serial No. 406,808. 12 Claims. (Cl. 194—57.)



1. In a vending machine, a coin-controlled mechanism including a reciprocating coin receiver and mover, a plurality of coin-released pivoted detents, certain of said detents being normally spring-pressed into position to arrest movement of said coin receiver and mover, and means to selectively connect certain or all of said detents in any various relations for independent movement or movement in unison, whereby the mechanism may be set for causing release of said detents from the path of the coin receiver and mover upon insertion of any desired one of several coins of different denominations.

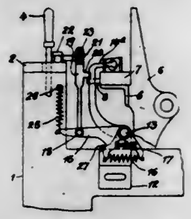
1,812,233. BELT BUCKLE. RANDOLPH BOYD, Galva, Ill. Filed Sept. 30, 1929. Serial No. 396,345. 1 Claim. (Cl. 24—178.)

In a belt, a buckle embodying an elongated body portion having spaced outer and inner walls, the outer wall being cut away providing a tongue opening, a tongue pivotally connected with the inner wall and extending through the cut away portion, one end of the belt extending into the buckle, through one end thereof and having an opening to receive the tongue near the base of the tongue, to secure said end of the belt to the buckle, and the opposite end of the belt being passed through the buckle from the opposite end of he buckle, and the latter end of the belt having an opening to receive the tongue.

1,812,234. SPRAY DEVICE. EDWIN HAROLD BRAATELIEN, Phoenix, Ariz. Filed Sept. 10, 1929. Serial No. 391,596. 1 Claim. (Cl. 299—127.)

A spraying device comprising a cap having means for attachment to the discharge end of a water supply pipe, a discharge nipple on the said cap, a frame projecting from the cap and consisting of side members and a cross member connecting the outer end of the side members, and a deflector consisting of an elongated pin of plastic material projecting inwardly from the cross member of the frame and having its lower end tapered, said pin being capable of being bent for alinement with the discharge opening of the said nipple to produce a uniform spray.

1,812,235. ARTIFICIAL BAIT. LELAND ESTYN CARR, Lopez, Wash. Filed Oct. 24, 1929. Serial No. 402,124. 4 Claims. (Cl. 43—42.)



3. An artificial bait of the character described comprising an elongated, longitudinally curved, hollow body portion of substantially ovate cross-section, an integral neck of circular cross section on one end of the body portion providing a fluid inlet opening, said body portion being further provided with a comparatively small fluid outlet opening at its other end.

1,812,236. SHUTTLE-GUARD FOR LOOMS. EDUARD EGLI and EDWIN SCHOCH, Ruti, Switzerland, assignors to Maschinenfabrik Rüti Vormals Caspar Honegger, Ruti, Switzerland. Filed Nov. 18, 1929, Serial No. 408,109, and in Switzerland Nov. 30, 1928. 2 Claims. (Cl. 139—341.)

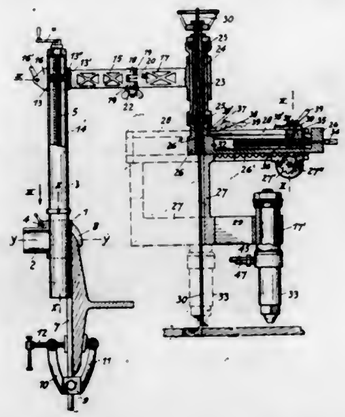
1. A device of the kind described, comprising a shaft rotatably supported in bearings and extending from side

to side of the loom, two vertical feeler arms fixed to the said shaft and extending to both sides within the shuttle box in the path of swing of the shuttle when not completely entered, a vertically movable lever in driving connection with the said feeler arms, a vertical push

rod pivoted to the said lever and having a push knob capable of being aligned with a push knob of the lathe when lowered by one of the feeler arms and by the said lever, and a horizontal connection between the push rod and the weft fork lever which connection admits vertical movements of the push rod.

1,812,237. MOBILE MOORING APPARATUS. JOSÉ ANCIRA GARCIA, Los Angeles, Calif. Filed Nov. 9, 1929. Serial No. 405,995. 1 Claim. (Cl. 244—2.)

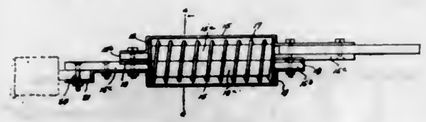
In a mobile mooring apparatus for dirigibles, a wheel carriage having a frame, an elongated turntable mounted for rotative movement on said frame, winches on the turntable and arranged in pairs at opposite ends thereof, cables on the winches, and a pair of motors on the turntable one for each pair of winches, each motor being operatively connected to the two winches for rotating the latter simultaneously and in either direction to wind or unwind the respective cables.



1,812,238. PROCESS FOR PREPARING COMPRESSED IODINE IN THE FORM OF RODS, PENCILS OR THE LIKE. FRITZ HAMMER, Hessen-Nassau, Germany, assignor to the Firm B. Braun, Melsungen (Hessen-Nassau), Germany. Filed Oct. 17, 1929, Serial No. 400,462, and in Germany Apr. 18, 1929. 13 Claims. (Cl. 23—245.)

1. A process for preparing compressed iodine in shaped form, comprising the steps of dissolving the iodine in an aqueous solution of an alkali metal iodide, mixing the resulting solution into a paste with at least one binding agent for reducing the volatility of the iodine and compressing the paste into the desired form.

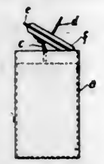
13. As new articles of manufacture, compressed shaped pencils or rods composed of 75 parts of iodine, 75 parts of potassium iodide, 25 parts of kaolin, 100 parts of milk sugar and 12.75 parts of talc.



1,812,239. METHOD OF AND MACHINE FOR CUTTING HOLES. HERMANN HENTSCHEL and HANS GRIGGERSEN, Hamburg, Germany, assignors to the Firm Autogen Gasaccumulator Aktiengesellschaft, Berlin, Germany. Filed May 6, 1927, Serial No. 189,416, and in Germany June 15, 1926. 4 Claims. (Cl. 148—9.)

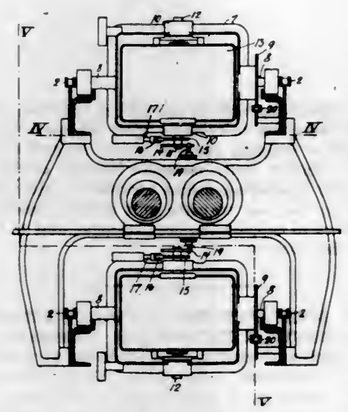
1. A method for autogenously cutting holes involving the use of a cutting nozzle and a relatively annular heating nozzle, consisting in delivering a suitable mixture of oxygen and fuel gas through both nozzles for heating the

point of the material to be perforated, and then delivering oxygen through both nozzles to cause perforation of the material.



1,812,240. TRAILER COUPLING. DAVID G. HOTTMANN, Tolstoy, S. Dak. Filed July 8, 1930. Serial No. 466,549. 1 Claim. (Cl. 280—33.9.)

A coupling device comprising bars of semi-circular form in cross section arranged with their flat sides in opposed relation and having flat end portions, the flat end portion of one bar being adjacent one end of the device, and the flat end portion of the other bar being adjacent the opposite end of the device, a spring coiled about the semi-circular portion of the bars, washers surrounding the bars and opposed to the ends of the spring, wear plates arranged in endwise relation to the washers and disposed at the inner sides of the end portions of the said bars, the plates immediately adjacent the end portions of the bar being connected to said end portions, shouldered members abutting against and connected to the plates remote from the end portions of the bars, a longitudinal strap arranged opposite the convolutions of the spring and having one end portion connected to the end portion of one bar and also having another end portion connected with one of said members and adapted to cooperate therewith in connecting the device to the shaft of a trailer, and another strap arranged opposite the convolutions of the spring and having an end portion connected with the end portion of the other bar and also having another end portion connected with the other member and adapted to cooperate therewith in connecting the device to a motor vehicle; the said longitudinal strap also having shoulders opposed to the outer sides of said washer.

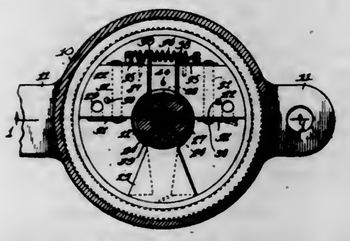


1,812,241. ELECTRICAL CONDENSER. ALOIS JAYET, Yverdon, Switzerland, assignor to Leclanche S. A., Yverdon, Switzerland. Filed Feb. 10, 1928, Serial No. 253,447, and in Germany Feb. 12, 1927. 1 Claim. (Cl. 175—41.)

In an electrical condenser, an outer-casing, a dielectric filling as means for insulating the armatures and reaching up near to the border of the casing, two slender lugs forming the connecting means of the armatures and extended over the surface of said filling, a cover for the casing, comprising a central insulating body, terminals imbedded therein with a corrugated portion and having

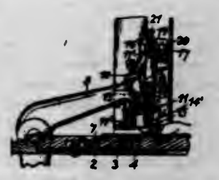
portions projecting from the bottom of the central body and soldered to said slender lugs and a sheet-metal frame embedded into said central body and fitting inside the walls of the upper free space of the casing and soldered thereto so as to form an air and water-tight joint.

1,812,242. MACHINE FOR THE MANUFACTURE OF HOLLOW ARTICLES. JENS JOHANNES JENSEN, Copenhagen, Denmark, assignor to Messrs. Boggild & Jacobsen, Copenhagen, Denmark. Filed Oct. 26, 1929, Serial No. 402,654, and in Germany Nov. 5, 1928. 3 Claims. (Cl. 107—8.)



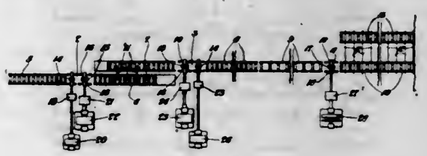
1. A machine for casting hollow articles of chocolate comprising endless belts, frames connected with the belts, molds connected with the frames by pins, certain pins having star wheels fixed thereto, pins fixed to the machine adapted to engage the star wheels to effect intermittent rotation of the molds, square disks fixed to the mold pins, a spring pressed rod carried by the mold assembly and having a roller thereon engageable with the periphery of the disk and serving to maintain the star wheels in positions to positively position the arms thereof for engagement with the pins fixed to the machine.

1,812,243. THERMIC CONTAINER. ALOYS JOST, The Hague, Netherlands. Filed Mar. 25, 1930, Serial No. 438,910, and in Belgium Apr. 26, 1929. 2 Claims. (Cl. 23—5.)



1. A thermic container consisting in a receptacle containing a salt with negative heat of solution and water, said receptacle being made of a hard inflexible material and hermetically sealed by soldering, the salt solution containing at least one solid body.

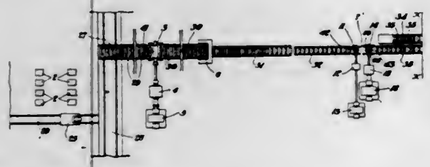
1,812,244. VEHICLE SHOCK ABSORBER. ENOS H. KREIDER, Lancaster, Pa. Filed Aug. 6, 1929. Serial No. 383,798. 6 Claims. (Cl. 188—89.)



1. In a vehicle shock-absorber of the hydraulic type embodying a rock-shaft carrying a vane-piston and means forming a pressure-chamber at each side thereof, an inwardly-opening valve for each of these pressure chambers, devices for normally holding these valves open to thereby permit a free-center movement of the vane-piston, and devices whereby a major vibration of the unsprung portion of the vehicle will rock the said shaft sufficiently to positively close one of said valves while holding the other open.

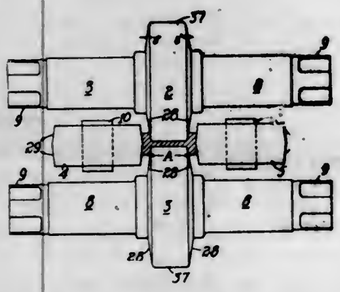
1,812,245. SAFETY APPLIANCE. JOSEPH KRELL, Berlin-Zehlendorf, Germany. Filed Apr. 25, 1929, Serial No. 358,079, and in Germany May 3, 1928. 7 Claims. (Cl. 74—105.)

1. A safety appliance for address printing or similar printing machines with a printing head moving up and down, for preventing the nipping of the operator's fingers by the descending printing head, comprising in combination a protective body, means for hanging the body in the path of the printing head when the printing head is raised, means pivotally suspended from a stationary part of the machine and pivotally connected to the hanging means for controlling the body so that during the down stroke of the printing head the body is rocked forwards, that is towards the person in charge and out of the path of the printing head.



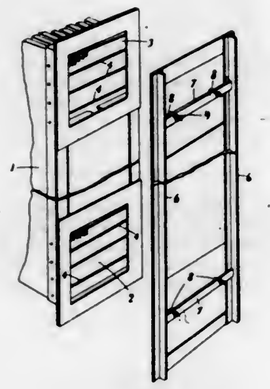
1,812,246. METHOD OF MAKING FLANGED SHAPES. WILLIAM C. OBERG, Munhall, Pa. Filed Dec. 27, 1928. Serial No. 328,813. 11 Claims. (Cl. 80—66.)

10. The method of rolling flanged shapes which consists in initially rolling a shape having web and flange portions with parallel, outwardly inclined side surfaces and edge surfaces at right angles to said side surfaces on the flange portions, making the thicknesses of the web and flange portions in the same proportion to each other as in



the finished shape, making the area of the web portion which lies within the rectangle formed by the side surfaces thereof and lines at right angles to said side surfaces that bisect the fillets of the shape at the ends of the web portion, and the area of the flange portions which lie in the rectangle formed by the side and end surfaces thereof and lines at right angles to the inner surfaces of the flange portions that bisect said fillets, in the same proportion to each other as the same portions of the finished shape, and then further rolling the shape and maintaining such thickness ratio and area ratio of the web and flange portions in the further rolling operations and bending the outwardly inclined flange portions into normal position in the final rolling pass.

1,812,247. ROLLING MILL PLANT AND METHOD OF OPERATING SAME. WILLIAM C. OBERG and ANDREW W. SODERBERG, Munhall, Pa. Filed Dec. 27, 1928. Serial No. 328,814. 18 Claims. (Cl. 80—36.)



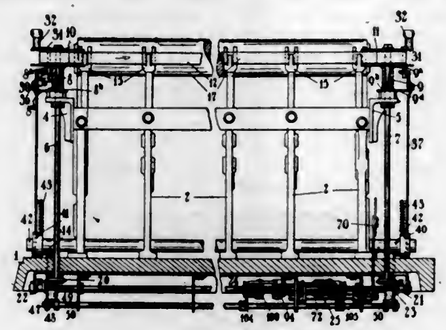
18. In the rolling of flanged shapes the steps comprising first rolling a flanged bloom in a series of back and forth passes in a roughing roll train having a reversing edging roll stand and tandem reversing universal roll stand and then further rolling the partly reduced shape in a series of back and forth passes in a second roughing roll train having a reversing universal roll stand and tandem reversing edging roll stand and finally reducing the flange and web thickness and finishing the shape in the universal finishing roll stand, first reducing the flange width of the bloom before reducing the flange and web thickness in the initial pass in the roughing roll train, shaping the bloom with its flanges out of normal position in the reducing passes in the roughing roll train, reducing the flange and web thickness and afterward rolling the edges of the partly rolled shape in the final pass in the second roll train, maintaining the flanges out of normal position in rolling the shape in the second roughing roll train and finally reducing the flange and web thickness and bending the flanges to normal position in finishing the shape in the universal finishing roll stand of the mill.

1,812,248. ROLL. WILLIAM C. OBERG, Munhall, Pa. Filed Dec. 29, 1928. Serial No. 329,195. 20 Claims. (Cl. 80—66.)

1. In a rolling mill for rolling flanged shapes, a tandem roll train comprising a universal roll stand and an edging roll stand, each of said roll stands having horizontal top and bottom rolls with frusto-conical end surfaces on the bodies thereof and the ends of said edging roll bodies having flange edging collars thereon, each end of the edging roll bodies being frusta-conical and the frusto-conical surfaces adjoining the peripheries of the body portions flaring at a greater angle relative to the peripheries than the frusto-conical surfaces adjoining the edging collars.

1,812,249. HEAT EXCHANGE APPARATUS. WILLIAM HENRY OWEN, London, England. Filed Oct. 4, 1929, Serial No. 397,368, and in Great Britain Dec. 21, 1928. 5 Claims. (Cl. 257—245.)

1. In combination with a conduit, a heat transfer unit having spaced ports to register with the ports formed in the conduit, a framing carried by the conduit to receive the heat transfer unit, members loosely engaging the framing, and tensioning means located in said ports and connected to the heat transfer unit and cooperating with said members to support the heat transfer unit in fixed relation to the framing.



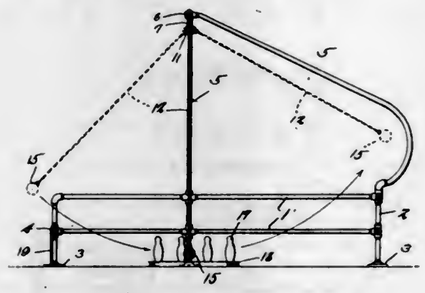
1,812,250. MANUFACTURE OF BARIUM HYDROXIDE AND STRONTIUM HYDROXIDE. BERNHARD CONRAD STUER, Aachen, Germany, assignor to the Firm Rhenania Verein Chemischer Fabriken Aktien-Gesellschaft, Aachen, Germany, a Corporation of Germany. Filed Mar. 29, 1924. Serial No. 702,965, and in Germany Apr. 6, 1926. 7 Claims. (Cl. 23—186.)

7. Process for the preparation of substantially sulphide-free barium hydroxide consisting in treating a 9% hot solution of barium sulphide with about 20% of ammonia, cooling said solution thereby precipitating crystals of barium hydroxide therefrom and washing repeatedly said crystals with aqueous ammonia.

1,812,251. RIBBON FEEDING MECHANISM. ARTHUR THOMAS, Thornton Heath, England, assignor to The Accounting & Tabulating Corporation, Great Britain, Limited, London, England. Filed Mar. 8, 1928. Serial No. 260,099. 7 Claims. (Cl. 197—160.)

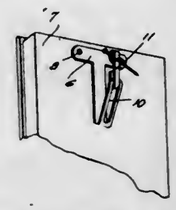
1. In a ribbon feed, the combination of a pair of ribbon spools; a first-motion shaft; means for driving one of said spools to wind the ribbon thereon and unwind it from said other spool; means for driving said other spool to wind the ribbon thereon and unwind it from said first-mentioned spool, parts of said driving means, including said first-motion shaft, being common to both said driving means; means for changing over from one of said driving means to the other; means actuated from said first-motion shaft

for operating said changing-over means; means for holding said actuating means normally in an inoperative posi-



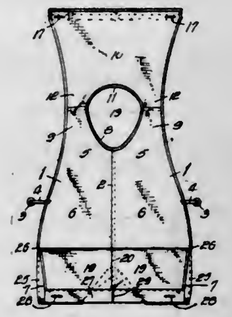
tion; and means including a spool-carried member movable under the pull of the ribbon for bringing said actuating means into the operative position.

1,812,252. DIRIGIBLE SLEDGE OR SLEIGH. FRANZ WELS, Schloss Harta, near Hohenelbe, Czechoslovakia, assignor of one-half to Christian Kronig, Schloss Harta, near Hohenelbe, Czechoslovakia. Filed Dec. 3, 1929, Serial No. 411,358, and in Austria Nov. 29, 1928. 2 Claims. (Cl. 280—21.)



1. In a dirigible sledge, sleigh, boat and the like the provision of a paddle-wheel with vanes rotatably attached to the vehicle substantially about its longitudinal axis, steering means for rotating said paddle-wheel and means transmitting the rotation of said steering means to the shaft of said paddle-wheel.

1,812,253. GAME. GUY L. BONHAM, West Hartford, Conn. Filed Sept. 17, 1928. Serial No. 306,299. 1 Claim. (Cl. 273—40.)

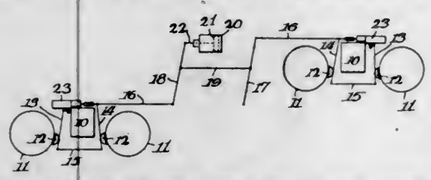


A game apparatus including connected rails and frame members providing an enclosure, a tongue supported by the frame members above the enclosure and provided with an opening having a bottom recess, a link extending loosely through the opening and downwardly from the tongue, a tooth within the link and bearing in the recess for holding all portions of the link normally spaced from the tongue, a flexible supporting element depending from the link, a ball, a stem on which the ball is mounted for rotation, means for connecting the stem to said flexible connection, and game pieces in the enclosure adapted to be struck by the ball.

1,812,254. PICTURE HANGER. ROSCOE C. BOSWELL, New Hartford, N. Y. Filed Oct. 27, 1927. Serial No. 229,135. 1 Claim. (Cl. 40—145.)

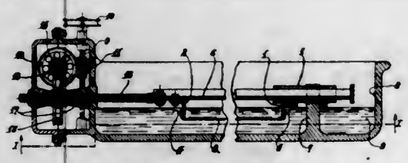
A picture hanger, a substantially T-shaped frame, an attaching member of bendable material having its laterally disposed ends at the head of the member secured to the frame and its lower end free and adapted to be turned upwardly and outwardly with respect to the picture frame at a predetermined point intermediate its ends, said free end being open between its side edges whereby to receive a picture supporting hook.

1,812,255. COMBINATION UNDERGARMENT FOR CHILDREN. MARTHA BRAZZELL, St. Louis, Mo. Filed Feb. 15, 1929. Serial No. 340,070. 1 Claim. (Cl. 2—80.)



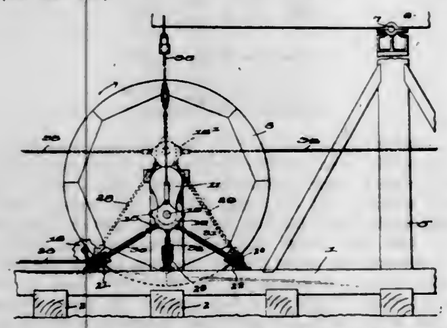
A combination undergarment for children comprising a pants portion and a waist portion, the front part of the waist portion being continuous with the front part of the pants portion and the back part of the waist portion being continuous with the front waist portion and said front and back waist portions being provided with a neck opening, the upper half of the back part of the pants portion being non-connected to the front part of the pants portion to provide a flap portion, the lower corners of the back waist portion being provided with button holes, a pair of buttons connected with the side edges of the upper front part of the pants portion for the button holes at the lower corners of the back waist portion, the upper corners of the flap portion of the back part of the pants portion being provided with button holes for the same buttons as the corner button holes of the back part of the waist portion, the upper edge of the flap portion of the back part of the pants portion being provided with a button hole midway the corner button holes thereof and a button sewed to the lower edge portion of the back part of the waist portion midway the corner button holes thereof for the button hole midway the corner button holes of the back flap portion.

1,812,256. BRAKE SLACK ADJUSTER FOR RAILWAY CARS. PERCY B. CAMP, Maywood, Ill., assignor to Universal Draft Gear Attachment Co., a Corporation of Illinois. Filed Jan. 17, 1929. Serial No. 333,047. 13 Claims. (Cl. 188—200.)



1. In a brake mechanism, a lever, a rack operatively connected with the lever, a relatively fixed guide for the

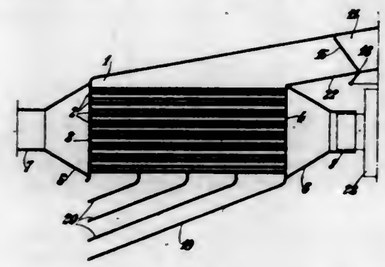
rack, a holding pawl on the guide engaging the rack, an adjuster moving with respect to the guide upon excess brake movement, a spring resisting such movement of the



adjuster and automatically restoring it upon release of the brakes, a driving pawl on the adjuster engaging the rack, and means operated by the adjuster for securing the holding pawl in engagement with the rack.

1,812,257. PROCESS AND APPARATUS FOR TANNING LEATHER. RENÉ CHAVAND, Lyon, France. Filed Jan. 13, 1930, Serial No. 420,536, and in France Jan. 12, 1929. 4 Claims. (Cl. 149—4.)

1. A process for the manufacture of leather for belts and the like, comprising the step of tanning a hide while progressively stretching it in one direction.

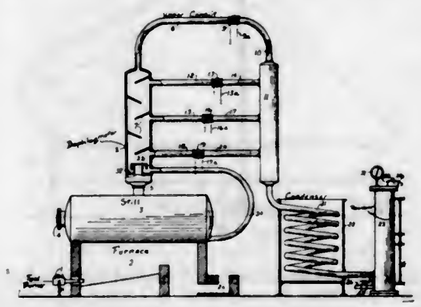


1,812,258. POWER UNIT. JAMES R. COLE, Tulsa, Okla. Filed Nov. 11, 1927. Serial No. 232,679. 10 Claims. (Cl. 74—14.)

1. A power unit comprising a base member, a vertically extending post secured thereto and having a rocker arm mounted on the top thereof, a power driven band wheel on said base member, a horizontal shaft supporting said wheel and rotatable therewith, a crank lever fixed on each end of said shaft and provided with a wrist pin at its free end, a vertical connecting plate rotatable on each of said wrist pins, pull deflectors, comprising sprocket wheels, mounted on said base on either side of said band wheel, and sprocket chains connected to said plates on the wrist pins, and engaging said deflector sprocket wheels, from whence they run to a plurality of well pumps located at different points around said unit, and with a pitman connecting one of said plates with said rocker arm.

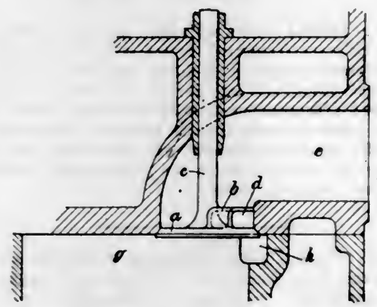
1,812,259. PLANT FOR HEATING MOTOR VEHICLES. CHRISTIAN DE LA BARRE DE NANTEUIL, Versailles, France. Filed Aug. 28, 1926, Serial No. 132,260, and in France Feb. 4, 1926. 5 Claims. (Cl. 257—241.)

1. In a heat exchange device for use in heating vehicles, a casing, headers connected to the opposite ends thereof, parallel tubes connecting the headers together and positioned within the casing, one of the headers being connected to a source of heated fluid and the other header being provided with a discharge opening, said casing having openings in the top and bottom walls which extend from one header to the other longitudinally of the casing, an air inlet member connected about the bottom opening including a bottom wall inclined forwardly from



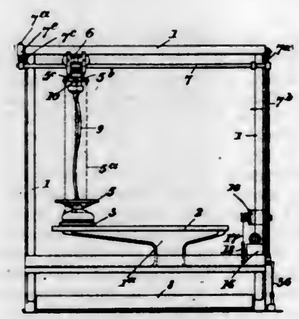
the rear header and having an open front transversely disposed, inclined partitions within said air admitting member and forming conduits, each of which direct the incoming air to different zones of the tubes, a rearwardly inclined pipe leading from the upper wall of the casing and provided in its lowermost portion adjacent the casing with an orifice, and a valve located adjacent the orifice in said exit pipe and mounted to close either the orifice or the pipe.

1,812,260. PROCESS FOR THE SEPARATION OF SUBSTITUTED α-AND β-AMINO ANTHRAQUINONES. HUGH ALBERT EDWARD DRESCHER, WILLIAM SMITH, and JOHN THOMAS, Grangemouth, Scotland, assignors to Scottish Dyes, Limited, Grangemouth, Scotland. Filed July 20, 1926, Serial No. 123,792, and in Great Britain July 21, 1925. 2 Claims. (Cl. 260—60.)



1. As an article of manufacture, 2-amino-3-chloranthraquinone in such a state of purity as to have a melting point of about 310° C. to 311.5° C.

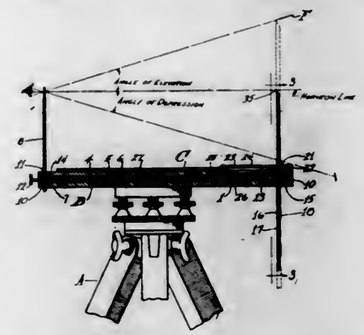
1,812,261. DEPHLEGMATING APPARATUS. GUSTAV EGLOFF and HARRY P. BENNER, Independence, Kans., assignors to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed June 28, 1920. Serial No. 392,476. 1 Claim. (Cl. 196—99.)



In an apparatus for cracking hydrocarbon oils, a vertically elongated dephlegmator, having a series of baffles therein vertically disposed with respect to each other, a vapor inlet at the bottom of said dephlegmator, a liquid outlet adjacent the bottom of said dephlegmator, means for preventing liquid from passing out through said vapor inlet, a plurality of vertically spaced vapor outlet conduits communicating with said dephlegmating column intermediate the baffles therein, independently operable valves positioned in said conduits, to control the passage of vapors through said conduits and permit taking off of the vapors through any desired conduit, and means for maintaining a superatmospheric pressure on the vapors in the dephlegmator.

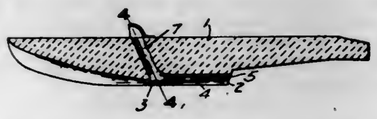
1,812,262. INLET VALVE OF INTERNAL COMBUSTION ENGINES. JOSEPH GARDNER and JOSEPH HUGH STOTT GARDNER, Patricroft, near Manchester, England, assignors to L. Gardner & Sons Limited, Patricroft, near Manchester, England, a British Company. Filed May 10, 1930, Serial No. 451,468, and in Great Britain Oct. 12, 1929. 6 Claims. (Cl. 123—188.)

1. An inlet valve of an internal combustion engine having a raised platform like part at one side of the back of the valve in order to provide a permanent closure for that side of the valve throughway and to direct the incoming air or charge to the unshielded or unbaffled side of the valve.



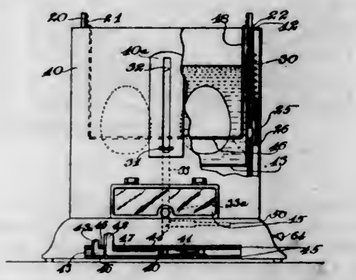
1,812,263. IRONING MACHINE. ARTHUR HAMMER, Berlin, Germany. Filed Oct. 7, 1927, Serial No. 224,661, and in Germany Oct. 25, 1926. 15 Claims. (Cl. 68—9.)

1. An ironing machine of the character described, comprising a sad-iron mounted rotatably within a bearing body, supporting means, and a plurality of suspension members connected to said bearing body and to said supporting means and having their upper as well as their under connecting points distanced from each other.



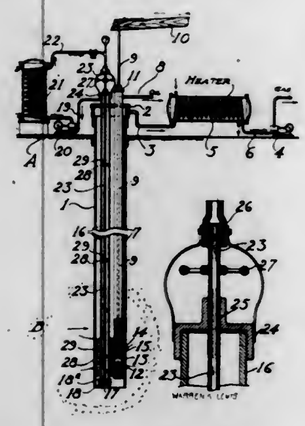
1,812,264. PANORAMIC DRAWING BOARD. WILLIAM J. HELMER, Fort Kamehameha, Territory of Hawaii. Filed July 16, 1928. Serial No. 293,159. 6 Claims. (Cl. 33—64.)

1. A sketching device comprising a drawing board, a fixed sight thereon and a movable sight finder pivotally mounted on said board on the vertical axis of the fixed sight and being swingable about the fixed sight as a center, said movable sight being movable in a vertical and a horizontal plane, and means bearing a scale movable horizontally with the movable sight for determining points on the board spaced horizontally from each other on



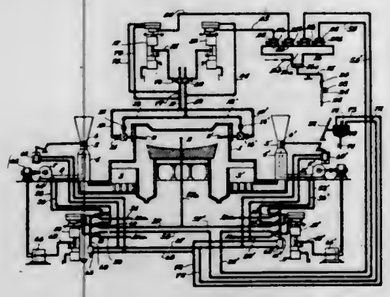
the object being drawn, there being a vertical scale carried by said movable sight and graduated the same as the first named scale.

1,812,265. PONTOON FOR SEAPLANES AND LIKE BODIES. JOHN HONE, Flin Flon, Manitoba, Canada. Filed May 31, 1930. Serial No. 458,496. 1 Claim. (Cl. 244—2.)



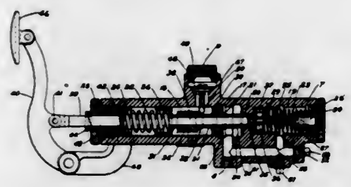
In a seaplane pontoon body having a horizontal stepped bottom, of an open groove or channel extending forward from the rise of the step at each side of the longitudinal centre of the pontoon, and a duct communicating with each groove extending through the pontoon body to the upper face thereof, and means for directing air into the upper end of each duct as the pontoon body travels forward.

1,812,266. TIMING MECHANISM FOR EGG BOILERS AND THE LIKE. FREDERICK E. HUMMEL and JOHN J. NOETH, Chicago, Ill. Filed Dec. 11, 1924, Serial No. 755,260. Renewed Sept. 20, 1928. 1 Claim. (Cl. 161—16.)



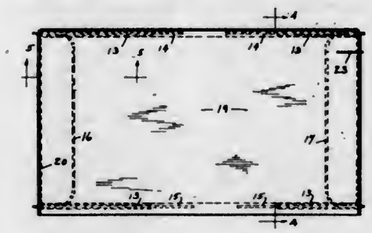
A timing device for an egg-boiler, or the like comprising an elevator, a latch to detain the latter, a main sweep-arm normally driven in one direction and manually movable in the opposite direction, a graduated segmental ledge to guide and indicate the movement of the main sweep-arm, an accessory sweep-arm operative in advance of the main sweep-arm along said ledge, a stop carried by the accessory sweep-arm and adjustably engageable with said ledge to limit the manual stroke of the main sweep-arm, and a tripper for said latch carried by the main sweep-arm and operative on the driven stroke to effect the release of the latch.

1,812,267. PROCESS FOR OPERATING OIL AND GAS WELLS UNDER REDUCED PRESSURE. WARREN K. LEWIS, Newton, Mass., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed July 28, 1928. Serial No. 296,008. 2 Claims. (Cl. 166—21.)



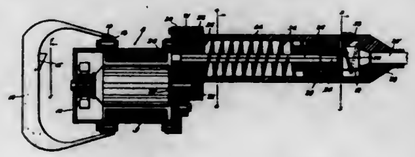
1. The method of obtaining natural gas from a well, which comprises introducing a refrigerating agent into a well to cool the gases in the lower portion of the well to condense the vapors therein, and withdrawing the residual gases by suction.

1,812,268. OPEN HEARTH FURNACE CONTROL. JAMES K. MAWHA, Maplewood, N. J., assignor to Smoot Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed Apr. 9, 1930. Serial No. 442,793. 11 Claims. (Cl. 236—15.)



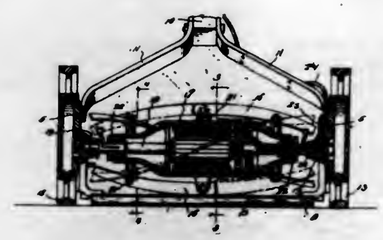
1. In combination with a reversing furnace of the type wherein a pair of continuously operating blowers supply air under pressure into damper controlled Venturi sections of a pair of stacks and the furnace is reversed by reversing the positions of the dampers in the stacks to cause the air delivered by one blower to be deflected at the closed damper and to thereupon pass into the melting chamber to which fuel is supplied and from which the air from the other blower induces withdrawal of the gases of combustion, a control system including a regulator for each blower and means associated therewith for applying to the regulator for the blower supplying air to the furnace a differential pressure varying with the rate of flow of air to the furnace and for applying to the regulator for the blower inducing the withdrawal of gases from the furnace a pressure differential varying with the pressure in the furnace.

1,812,269. FLUID PRESSURE BRAKE CONTROL. ERNEST G. MCCAULEY, Dayton, Ohio. Filed Aug. 13, 1928. Serial No. 299,385. 7 Claims. (Cl. 303—54.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)



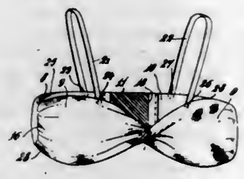
1. In a control valve for fluid pressure control devices, a pressure regulating device, a manual means for operating said device, a resilient member intermediate said manual means and said device, said device comprising two spaced piston elements adapted to receive the fluid pressure between them and be balanced thereby and a third piston element connected with said device and movable therewith for controlling the pressure and for releasing of same from said valve.

1,812,270. IRON REST. FREDERICK R PLAXCO and IRA L. FOSTER, Long Beach, Calif. Filed Oct. 19, 1929. Serial No. 400,898. 3 Claims. (Cl. 68—27.)



1. An iron rest comprising a substantially rectangular bottom member provided around three sides with an upstanding flange, guideways extending along the upper face of the bottom wall of said bottom member near each end of the longitudinal edges thereof; substantially U-shaped clamping members slidably mounted in said guideways to slide lengthwise of said member, having their free ends adapted to engage the underside of an ironing board; a sheet of heat resistant material supported upon the said bottom wall between said guide ways: and a top member of a configuration to conform with the said bottom member having upstanding flanges adapted to snugly surround the flanges of the bottom member and having its open end bent to snugly surround the open edge of the bottom wall of the bottom member.

1,812,271. ELECTRIC HAMMER. ELWIN GEORGE QUELLHORST, Cleveland, Ohio. Filed Dec. 20, 1929. Serial No. 415,447. 1 Claim. (Cl. 78—38.)

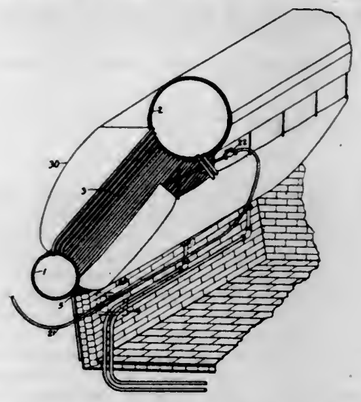


In an electric hammer of the class described, a cylindrical barrel having one end formed with a conical guide and having the opposite end open and internally and externally screw threaded, a bearing and gearing assembly detachably mounted on the externally screw threaded portion of said barrel, a follower ring adjustably mounted on the interior of the barrel and engaged with the internal screw threads, a shaft mounted for rotation in the bearings and operatively connected with the gearing, a rotatable and reciprocatory plunger in the opposite end portion of the barrel including a reduced stem slidable through said conical guide, and also including a body portion having a socket receiving slidably, the adjacent end of said shaft, an intermediate portion integrally formed with the plunger and reduced stem, a spiral thread formed on said intermediate portion, said thread having its ends longitudinally spaced, a guide and releasing screw mounted in said barrel, and cooperating with the spiral threads for permitting intermittent reciprocation of the plunger, and a coil spring bearing at one end against the follower plate and at the opposite end against the body portion of the plunger.

1,812,272. LAWN MOWER. CHARLES R. STEINMETZ, Oklahoma City, and HAROLD F. MCKINNEY, Okmulgee, Okla. Filed Nov. 20, 1928. Serial No. 320,639½. 1 Claim. (56—26.)

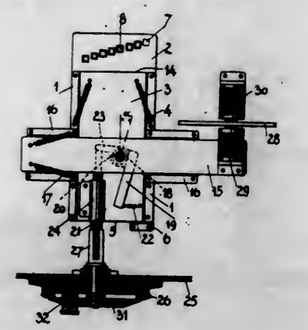
A lawn mower comprising a frame, ground engaging wheels carried by the frame, a stationary shaft, an electric armature carried by said shaft, an electric field casing surrounding the armature and cutter blades carried by the field casing, side plates journaled in the wheels, reduced end portions on the shaft for detachably connecting with the side plates, threads on the ends of the shaft for receiving clamping nuts adapted to maintain the shaft and side plates in rigid relationship to each other.

1,812,273. BRASSIÈRE. ELIZABETH MINOR TABB, Mahwah, N. J. Filed Nov. 5, 1925. Serial No. 67,161. 3 Claims. (Cl. 2—42.)



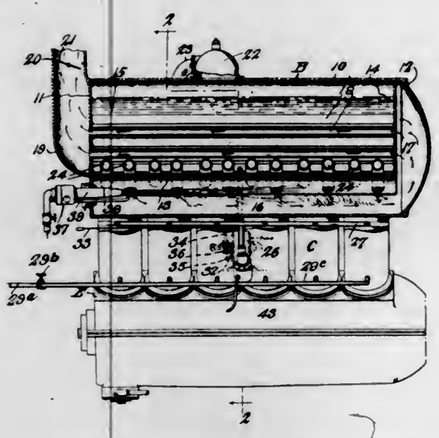
1. In a garment comprising a band to confine the bust, adapted to be worn in twisted formation as by rotation of the ends of a section thereof about a central longitudinal line of said section, said band comprising in developed formation two opposite longitudinal edges thereof; means adapting said band to be worn in said twisted formation, said means comprising a shoulder strap connection adjacent one of said edges, and a second shoulder strap connection adjacent the other of said edges.

1,812,274. PROCESS OF PREPARING 2-CHLOR-ANTHRAQUINONE. JOHN THOMAS, Carlisle, England, assignor to Scottish Dyes, Limited, Carlisle, England. Filed June 6, 1925, Serial No. 35,482, and in Great Britain Sept. 8, 1924. 4 Claims. (Cl. 260—57.)



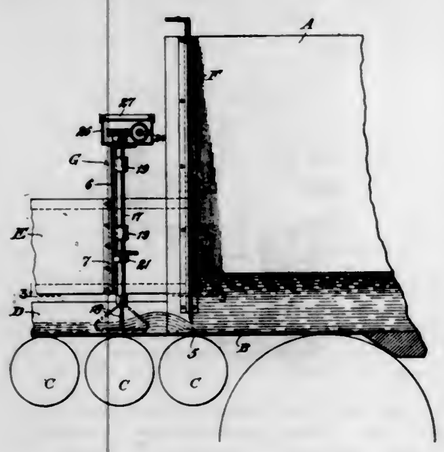
3. In the process of preparing 2-chlor-anthraquinone, the step which comprises treating para-chlor-benzoyl-benzoic acid with 85–90% sulphuric acid at an elevated temperature until the formation of a 2-chlor-anthraquinone is substantially complete.

1,812,275. METHOD OF CLEANING BOILERS. BERIAH M. THOMPSON, Cheyenne, Wyo. Filed June 24, 1927. Serial No. 201,268. 12 Claims. (Cl. 122—392.) (Granted under the act of Mar. 8, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)



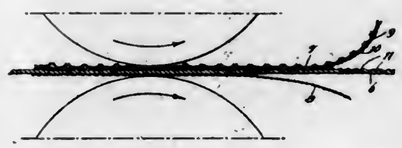
1. The method of cleaning boiler tubes which includes the steps of washing the solid deposits therefrom by impacting a heated liquid thereon at an angle and preventing said liquid from contacting parts that might be damaged thereby.

1,812,276. MECHANISM FOR PRODUCING LINEAR DISPLACEMENTS AND IN PHOTOGRAPHICAL TYPESETTING MACHINES IN CONNECTION WITH THEM. EDMUND UHER, Jr., Budapest, Hungary, assignor to Uhertype Aktiengesellschaft, Glarus, Switzerland. Filed Mar. 14, 1930, Serial No. 435,916, and in Germany Mar. 18, 1929. 10 Claims. (Cl. 95—4.5.)



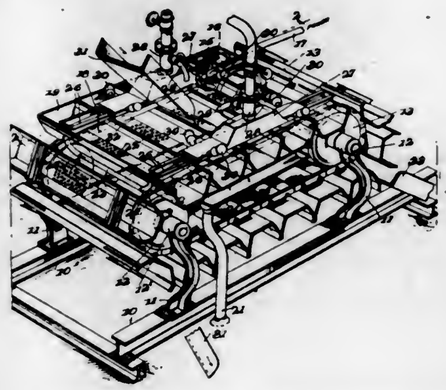
1. A mechanism for producing linear displacement by various steps of predetermined lengths, comprising a controller slide ndapted to reciprocate in a straight line, a support for said slide, guidings on said support for said slide, means for limiting the movements of said slide in one direction to selected distances, and means for transmitting at a variable ratio the movements of said slide in one direction only to the element to be displaced by steps.

1,812,277. APPARATUS FOR GENERATING MOTIVE FLUIDS. JOSEPH G. YONKESE, Brooklyn, N. Y. Filed Jan. 22, 1927. Serial No. 162,785. 6 Claims. (Cl. 60—14.)



1. In combination, a motive fluid generating apparatus comprising a boiler having a water space and a firebox in heat conducting relation to the water space, and an internal combustion engine having an exhaust conduit from its cylinders extending through said water space so as to be exposed to water in the latter, and opening into said firebox, so that when the engine is in operation, heat from the exhaust gases of the engine traversing the exhaust conduit will be directly absorbed by the water in the water space from that portion of the exhaust conduit disposed in the water space, and the heat remaining in the exhaust gases as discharged into the fire-box, absorbed by water in the water space from the heated wall of the firebox, to thereby effect a maximum removal of heat units from the exhaust gases and convert the water in the water space into steam.

1,812,278. PAPER MAKING MACHINE. GEORGE S. WITHAM, Sr., Hudson Falls, N. Y. Filed Mar. 21, 1928. Serial No. 263,290. 9 Claims. (Cl. 92—44.)

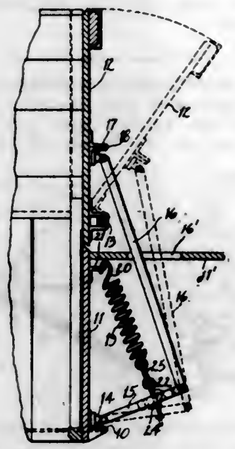


1. In a paper making machine, including a screen, the combination of a slice box having an outlet through which pulp will be discharged upon the screen, a plurality of pulp agitating devices located above the screen and in cooperative relation therewith in advance of the opening and supported on vertical axes for rotary movements in a horizontal plane, and means for rotating said devices.

1,812,279. ELASTIC MATERIAL. EDWARD S. AXLINE, New York, N. Y., assignor to Associated Apparel Industries, Inc., Chicago, Ill., a Corporation of Illinois. Filed Aug. 20, 1930. Serial No. 476,521. 4 Claims. (Cl. 154—48.)

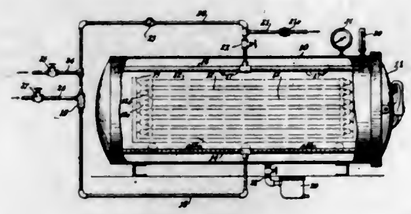
2. An elastic fabric comprising a layer of stockinet having alternate loosely knit portions enabling same to stretch and closely knit portions limiting the amount of stretch, and a sheet of rubber pressed into said stockinet and united with the loosely knit and closely knit portions thereof.

1,812,280. METHOD AND APPARATUS FOR CLEANING GRAVEL OR THE LIKE. GUY B. BEBOUT, Zanesville, Ohio. Filed Nov. 15, 1928. Serial No. 319,558. 9 Claims. (Cl. 209—424.)



1. A method for washing and cleansing gravel or the like which comprises separating the gravel into relatively small batches, maintaining the batches of gravel in a settled and unagitated state, causing water at relatively lower pressure to flow upwardly through each batch of gravel and at the same time permitting the water rising through the gravel to flow freely away therefrom whereby all objectionable matter washed from the gravel, together with all light particles separated therefrom by the water will be pushed away from the gravel by the water when flowing in its last mentioned course.

1,812,281. PRESS BOX DOOR COUNTERBALANCING DEVICE. JOSEPH BEHLE and HUGO LINNARTZ, Dallas, Tex., assignors to The Murray Company, Dallas, Tex., a Corporation of Texas. Filed Aug. 13, 1928. Serial No. 299,315. 2 Claims. (Cl. 100—19.)



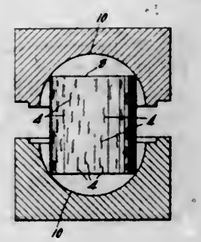
1. In a counterbalancing device for a vertically disposed cotton press box door, a strut pivoted at its upper end to the door above its hinge and extending downwardly below the hinge of the door and below the press platform, an arm pivoted to the lower end of the press box and lying entirely below the press platform and to which the lower

end of the strut is pivoted, and a coiled spring lying entirely below the hinge of the door and having its upper

end attached to the press box and its lower end attached to the arm and free from connection with the pivotal connection between the strut and the arm.

1,812,282. VULCANIZER AND METHOD OF VULCANIZING. ERNEST BLAKER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed July 19, 1928. Serial No. 293,910. 6 Claims. (Cl. 18—53.)

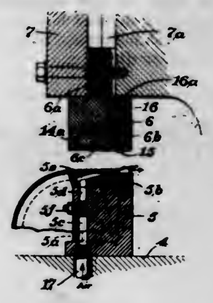
4. In a vulcanizer the combination of a vulcanizing receptacle having an inlet and outlet, a piping circuit connecting said inlet and outlet, and means for admitting fluid pressure to said circuit, said means being so arranged that the admission of said fluid induces a circulation of fluid through the vulcanizing receptacle and piping circuit.



1,812,283. MANUFACTURE OF COLORED IMITATION MOTHER OF PEARL. AMERIGO F. CAPRIO, Newark, N. J., assignor, by mesne assignments, to Celluloid Corporation, a Corporation of New Jersey. Filed Dec. 27, 1926. Serial No. 157,431. 7 Claims. (Cl. 106—37.)

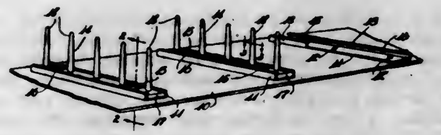
3. A thermo plastic sheet containing the silky variety of lead iodide.

1,812,284. MANUFACTURE OF COLORED IMITATION MOTHER OF PEARL. AMERIGO F. CAPRIO, Newark, N. J., assignor to Celluloid Corporation, a Corporation of New Jersey. Original application filed Dec. 27, 1926, Serial No. 157,431. Divided and this application filed Jan. 26, 1928. Serial No. 249,775. 4 Claims. (Cl. 134—79.)



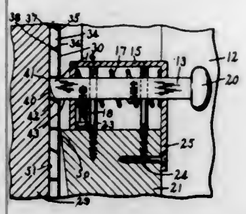
1. A liquid pyroxylin composition adapted for coating material or articles comprising approximately 25 parts of silky lead iodide, ten to fifteen parts of proxylin and 100 to 150 parts of a volatile solvent for the pyroxylin.

1,812,285. GOLF BALL AND METHOD OF MANUFACTURING SAME. JOHN A. CHRISTIE, Akron, Ohio. Filed Oct. 12, 1929. Serial No. 399,135. 5 Claims. (Cl. 154—17.)



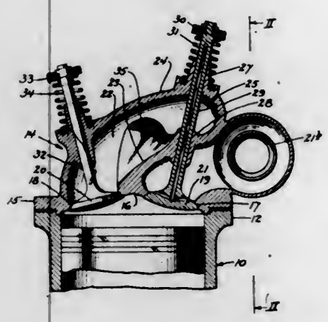
2. The process of manufacturing golf balls or the like, comprising compounding rubber, a vulcanizing agent, and an active accelerator, sheeting the said compound, rolling a sheet so obtained into a tight cylinder, placing a section of the cylinder in a mold, and curing for a period sufficient to form a hard rubber outer shell with a softer rubber core.

1,812,286. MEANS FOR PRESSING AND TRIMMING TAPE REENFORCED SEAMS OF SHEET RUBBER ARTICLES. ARTHUR E. COLLINS, Cuyahoga Falls, Ohio, assignor, by mesne assignments, to The Miller Rubber Company, Inc., Wilmington, Del., a Corporation of Delaware. Filed Dec. 20, 1929. Serial No. 415,543. 4 Claims. (Cl. 164—47.)



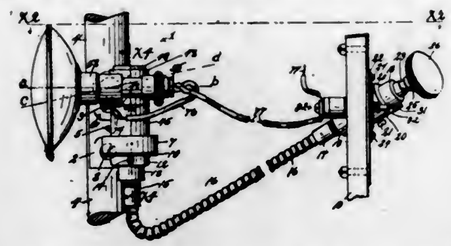
1. Apparatus for the purpose described comprising an anvil having a relatively narrow seam supporting portion and lateral shoulders adjacent one end thereof, a presser member cooperating with said anvil, and a cutter yieldably carried by said presser member and alined with the inner faces of said shoulders.

1,812,287. CONVEYER. GEORGE C. DAVIS, Dallas, Tex., assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Feb. 21, 1929. Serial No. 341,648. 5 Claims. (Cl. 19—78.)



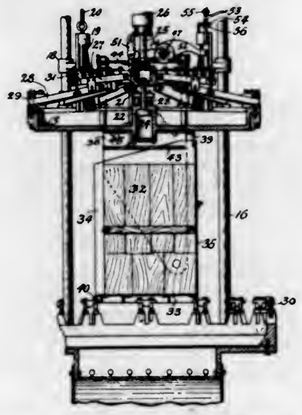
1. The combination of a conveyer belt and a work-engaging member mounted thereupon, said work-engaging member comprising a base portion of relatively hard rubber composition and upstanding pegs integral therewith and comprising a softer rubber composition.

1,812,288. SAFETY CATCH FOR WINDOWS AND THE LIKE. ALEXANDER J. DRAPEAU, Woodbridge, Conn. Filed Jan. 28, 1930. Serial No. 423,951. 2 Claims. (Cl. 292—175.)



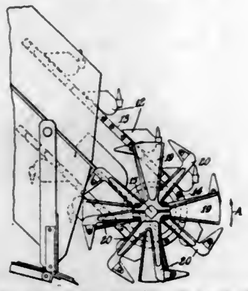
1. In a catch, a catch bolt, means to slidably mount said bolt upon one of a pair of members that are disposed to slide relatively past each other, a sheet metal catch bolt plate secured upon a face of the other of the pair of relatively slidable members, said plate having a series of spaced apart openings in the face thereof, each opening being formed by displacing portions of the material of said plate, one portion of the displaced material being of a length substantially equal to the thickness of said plate and directed inwardly substantially at right angles to the face of said plate to engage the face of the slidable member to which it is secured and to form, an upper wall for each of the aforesaid openings a support for the face of said plate and an abutment engageable by said bolt to prevent relative movement of the members in one direction, and the other portion of the displaced material being directed inwardly at an angle to form, a lower inclined wall for each of the aforesaid openings, and an abutment engageable by said bolt to retract the same when the relatively slidable members are moved relatively to each other in another direction.

1,812,289. CYLINDER HEAD FOR INTERNAL COMBUSTION MOTORS. RALPH FRIEDL, Alameda, Calif. Original application filed Aug. 30, 1927, Serial No. 216,362, Patent No. 1,726,217, dated Aug. 27, 1929. Divided and this application filed May 7, 1928. Serial No. 275,588. 1 Claim. (Cl. 123—122.)



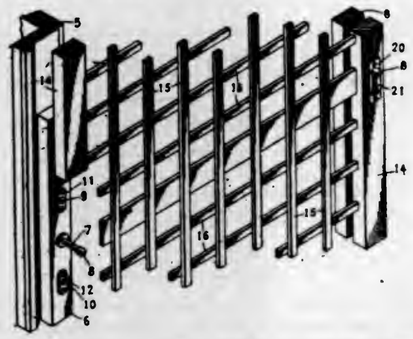
In a cylinder head for the cylinder of an internal combustion engine, said cylinder head having an intake and exhaust port, an intake and an exhaust chamber communicating respectively with said ports, the intake chamber having a portion overlying the exhaust port and chamber, a heat radiating wall separating the intake chamber from the exhaust chamber, an intake valve controlling the intake port, an exhaust valve controlling the exhaust port, a valve stem guide formed in the wall separating the intake chamber from the exhaust chamber, the stem of said exhaust valve extending through said guide and through said intake chamber and being exposed in the latter in the path of fuel entering the intake chamber, whereby fuel condensate accumulating on the exposed portion of the stem may enter the guide upon reciprocation of the stem, and fins projecting within the intake chamber from the wall separating the intake chamber from the exhaust chamber.

1,812,290. ADJUSTABLE SPOTLIGHT. WILLIAM W. GEHERSKY, Riverside, Calif., assignor of one-fourth to Fern Emard, Los Angeles, Calif. Filed Nov. 10, 1924. Serial No. 748,895. 13 Claims. (Cl. 240—61.13.)



1. The adjustable spot light set forth comprising a support adapted to be connected to the exterior of a vehicle top; a lamp connected to said support for swinging movements in vertical and horizontal arcs; a worm drive for moving said lamp in the vertical arc; a gear and pinion drive separate from the worm drive for moving said lamp in the horizontal arc; a clutch interposed between said drives that is disengaged from said drives when the clutch is held in a neutral position; and means within the vehicle that is adapted to move said clutch into engagement with either of said drives to thus actuate one or the other of said drives.

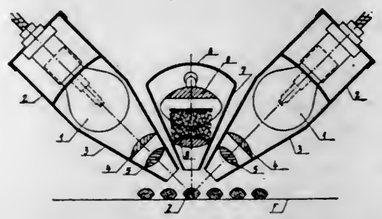
1,812,291. APPARATUS FOR IMPREGNATING BUNDLES OF SHINGLES AND THE LIKE. HARRY E. GOSCH, North Tonawanda, N. Y., assignor to Creo-Dipt Company Inc., North Tonawanda, N. Y., a Corporation of New York. Filed Jan. 18, 1929. Serial No. 333,422. 9 Claims. (Cl. 91—46.)



8. An apparatus for impregnating bundles of shingles and the like, comprising a tank adapted to contain the impregnating liquid and having an upper inlet, a cover movable toward and from said tank for closing and opening said inlet, a basket mounted on the underside of said cover and having a bottom adapted to support said bundles while dipping them in the liquid, and means for holding down said bundles in the baskets while submerged in the liquid, comprising a vertically movable guide rod sliding through said cover and connected at its lower end with said presser, a rock lever pivotally mounted on said cover, a link connecting one arm of said lever with said guide rod, a shifting rod connected with the other arm of said lever, spaced stops on said shifting rod, and a stationary stop adapted to be engaged alternately by said spaced stops.

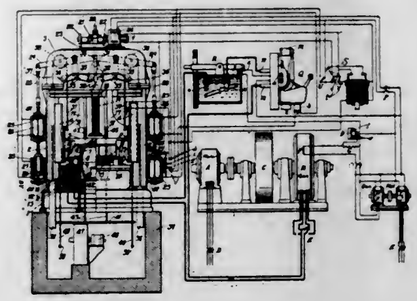
1,812,292. WAGON LOADER AND EXCAVATOR. ALFRED W. HAISS, New York, N. Y., assignor to George Haiss Manufacturing Co. Inc., New York, N. Y., a Corporation of New York. Filed July 3, 1930. Serial No. 465,499. 7 Claims. (Cl. 37—190.)

1. In a machine of the character described, a combined digging and feeding mechanism comprising a rotatable shaft, a plurality of laterally spaced propeller blades carried by said shaft at opposite ends thereof, and a plurality of picks associated with each of such blades and arranged in advance thereof.



1,812,293. PROTECTIVE GRATING. SIMON B. HESS, New York, N. Y. Filed Apr. 12, 1923. Serial No. 631,738. 6 Claims. (Cl. 177—314.)

2. A burglary preventing device comprising a grating adapted to be removably attached to a window frame, interlocking pin and slot members on the frame and the grating for holding the grating in place, the pins being provided with heads, a pair of contacts carried by the grating, a pair of contacts carried by the frame, a pair of springs holding the frame-carried contacts in engagement with the grating-carried contacts, said springs serving also to maintain the grating in firm engagement with the heads of the pins, an electrical conductor passing through the grating and connected with the grating-carried contacts, and a protective circuit extending through grating and connected with the frame-carried contacts.



1,812,294. MEANS FOR DRESSING CIGARETTES AND THE LIKE PROVIDED WITH IMPRINTS. MAX PAUL ERNST HOHN, Dresden, Germany, assignor to the Firm "Universelle" Cigarettenmaschinenfabrik J. C. Muller & Co., Dresden, Germany. Filed Aug. 30, 1928, Serial No. 302,984, and in Germany Sept. 5, 1927. 18 Claims. (Cl. 226—5.)

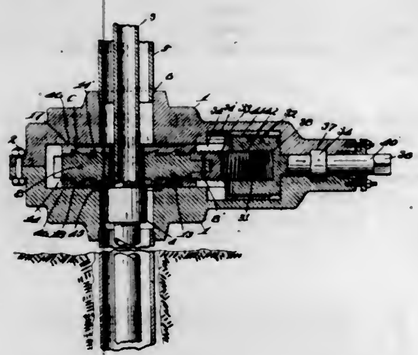
1. Means for dressing cigarettes and like goods provided with imprints comprising in combination with feeding means and cigarettes disposed parallel to one another on said feeding means, an illuminating means for illuminating the imprints of the cigarettes, a medium highly sensitive to light and heat disposed above said feeding means and adapted to receive light reflected from said imprints, said illuminating means comprising high candle-power projectors, said projectors mounted in a casing, said casing having conical tapering portions directed towards the

imprints of the cigarettes and said light sensitive medium being arranged adjacent the projector casing and itself mounted in a casing said last mentioned casing tapering conically with its conical portion directed towards the cigarettes, an electric circuit controlled by the effect of said reflected light on said sensitive medium and means for rotating cigarettes, said means controlled by said electric circuit.

1,812,295. ELECTRIC WELDING APPARATUS. HENRY S. HOLMES, New York, N. Y., assignor to Thomas E. Murray, Brooklyn, N. Y.; Joseph Bradley Murray, Thomas E. Murray, Jr., and John F. Murray, executors of said Thomas E. Murray, deceased, assignors to Metropolitan Engineering Company, a Corporation of New York. Filed Feb. 1, 1924. Serial No. 689,878. 5 Claims. (Cl. 219—4.)

1. An electric welding apparatus for the complete welding of an article in one welding operation, said apparatus comprising a butt welding machine adapted to take heavy currents from the secondary winding of a transformer for a much shorter period of time than that required to remove a welded article and to insert new pieces in combination with an alternating current generator of a capacity which is less than the normal capacity for carrying the primary current, means for storing energy between welding operations to be delivered to the generator during the weld and means acting instantaneously for applying an increased exciting current to the field of the generator at the start of the weld.

1,812,296. ROAD MACHINE. JAMES B. JARMIN, Dallas, Tex. Filed Apr. 20, 1928. Serial No. 271,609. 11 Claims. (Cl. 37—176.)

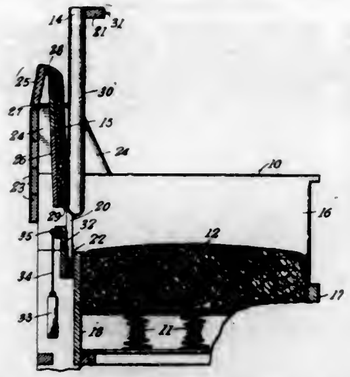


2. In a motor driven road machine, the combination of a wheel supported main frame, a hanger frame suspended from the main frame and adjustable thereon, a sub-frame

carried by the hanger frame and comprising pivoted members for shifting in a horizontal plane with its members in parallelism, and a pair of parallel scraping blades

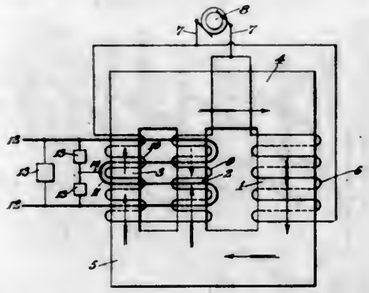
pivotally mounted on the sub-frame, and means for maintaining said blades in their parallel relation when the sub-frame is shifted and also for maintaining them uprightly.

1,812,297. BLOW OUT PREVENTER. BERTEL M. JENSEN, Huntington Beach, Calif., assignor to W. D. Shaffer, Brea, Calif. Filed Oct. 20, 1926. Serial No. 142,915. 10 Claims. (Cl. 137—139.)



1. A blow-out preventer comprising a housing adapted to be mounted upon a well casing and having an opening therethrough for the reception of a drill pipe, closure forming members slidably mounted within the housing upon opposite sides of said opening, an actuating shaft rotatably mounted within the housing, an internally and externally threaded socket carried by said shaft, said threads corresponding in pitch and running in opposite directions, and means connecting each of said closure forming members to one of said sets of threads.

2. A blow out preventer comprising a housing having a vertical opening therethrough for the reception of a drill pipe, rigid opposed members movable in the housing presenting surfaces which are inclined to the direction of movement, and rigid members associated with said movable members and presenting surfaces adapted to be engaged by the first mentioned surfaces whereby the movable members may move the rigid members into engagement with the drill pipe in the opening and then force them against the housing, and means for moving the movable members.



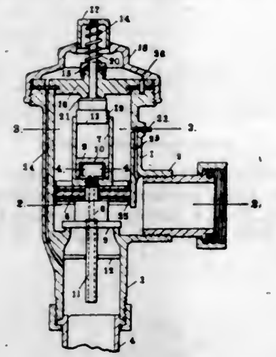
1,812,298. BED. HORACE G. KIMBLE, Brooklyn, N. Y. Filed Dec. 17, 1928. Serial No. 326,654. 6 Claims. (Cl. 5—59.)

1. A combination bed and seat having a fixed support for a mattress, a screen arranged to extend over said bed providing a seat and mounted adjacent a longitudinal edge portion of said support to be swung to an upstanding position exposing said bed, a stationary back near the edge of said support adjacent which said screen is mounted and extending above the screen in its lowered position, a movable back pivotally attached to said screen and stationary back and movable upwardly and toward said stationary back when the screen is raised, said movable back extending well over the rear longitudinal edge portion of said bed to constitute a back rest for the seat and make the seat

of less depth than the width of the bed, and said movable back also being in a position to the rear of the fixed mattress support when raised, and said screen being substantially out of the way of a person getting in and out of bed.

1,812,299. ELECTRIC CONTROLLING APPARATUS. HAROUTIUN K. KOUYOUMJIAN, Providence, R. I., assignor to Ward Leonard Electric Company, a Corporation of New York. Filed Sept. 15, 1928. Serial No. 306,259. 27 Claims. (Cl. 171—119.)

1. An alternating current controlling apparatus comprising a core having three legs, a main exciting winding on one of said legs, a primary alternating current winding on each of the other two legs respectively, one of said alternating current windings tending to create a flux in opposition to the flux created by said main winding, and the other alternating current winding acting cumulatively with said main winding, and an output winding around the two legs of the core having the said alternating current windings thereon.



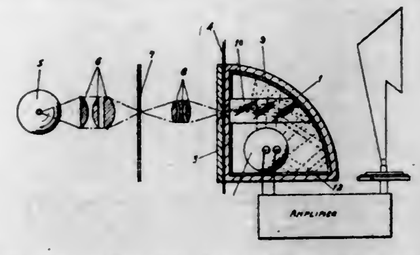
1,812,300. CONCRETE BLOCK GROIN OR SEA WALL. CHARLES T. LEEDS and WILFRED K. BARNARD, Los Angeles, Calif. Filed June 12, 1929. Serial No. 370,271. 6 Claims. (Cl. 61—4.)

1. A groin or sea wall comprising a series of concrete blocks contiguously positioned, said blocks being upwardly and rearwardly inclined toward the shore, and having upwardly converging sides.

CARNEGIE LIBRARY OF ATLANTA

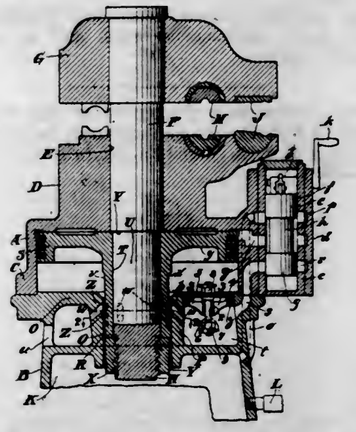
1,812,301. FLUSH VALVE. CHARLES SYDNEY NASMYTH, Sydney, New South Wales, Australia. Filed Sept. 4, 1929. Serial No. 390,403. 2 Claims. (Cl. 137—93.)

1. Flushing apparatus comprising in combination a cylindrical casing, a plunger reciprocable therein, a valve connected to the plunger adapted to close the opening to a flush pipe, a cylinder connected to the plunger provided with portways, a piston valve within the cylinder adapted to close a passage through the plunger and also the portways in the cylinder, a piston reciprocable within the cylinder and having a bypass passage, a rod to which the piston is connected, a push button upon the end of the rod, and a spring sleeved upon the rod, the casing having a passage way extending from above the plunger to the main water supply pipe substantially as and for the purpose specified herein and illustrated.



1,812,302. SANITARY KNIFE SCABBARD. ARNOLD V. NIES, Cincinnati, Ohio. Filed Nov. 27, 1929. Serial No. 410,241. 5 Claims. (Cl. 224—2.)

1. A sanitary knife scabbard comprising a leather back, rigid side members attached thereto and each having a recess in its upper end, a leather front having rigid members adapted to fit between said side members, means on each rigid member adapted to enter said recesses, respectively, whereby said front is detachably mounted and means for removably holding the lower end of said front in engagement with said rigid side members.

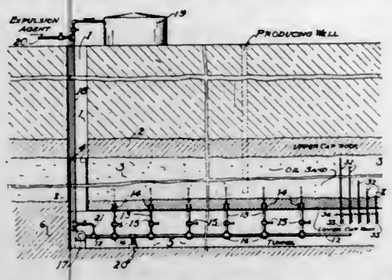


1,812,303. SOUND REPRODUCING MEANS. FREEMAN H. OWENS, New York, N. Y., assignor to Owens Development Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 23, 1929. Serial No. 357,591. 2 Claims. (Cl. 179—100.3.)

1. A sound-reproducing apparatus, including in combination a closed housing having an opening for the admission of light, means for supporting a travelling film carrying a photographic sound record adjacent to said opening, means for projecting light rays into said housing through said opening and sound record, an elongated light-sensitive element disposed in said housing out

of the path of said rays, and reflecting means disposed in the path of said projected rays and adapted to reflect them on to said light-sensitive element over substantially the entire length thereof.

1,812,304. DRILL SHARPENER. ARTHUR E. PETERS, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Apr. 1, 1930. Serial No. 440,719. 5 Claims. (Cl. 76—5.)

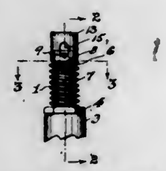


1. In a drill sharpener, the combination of an anvil block and a cross head reciprocable with respect to the anvil block, a base having a bore to form a guide, a clamping cylinder, a clamping piston in the clamping cylinder connected to the cross head having a stem reciprocating in the bore, said base having relief ports to communicate the bore with the atmosphere, there being a recess in the stem affording communication between the clamping cylinder and the relief ports, pressure actuated means for raising the cross head and the piston, and means on the stem to cooperate with the bore for cutting off the flow of the compression to the relief ports during the clamping stroke of the piston, thereby entrapping air in the clamping cylinder to cushion the final clamping stroke of the piston.

1,812,305. RECOVERY OF OIL FROM THE EARTH BY MINING OPERATIONS. LEO RANNEY, Greenwich, Conn., assignor to Standard Development Company, a Corporation of Delaware. Filed Aug. 5, 1926. Serial No. 127,233. 5 Claims. (Cl. 262—1.)

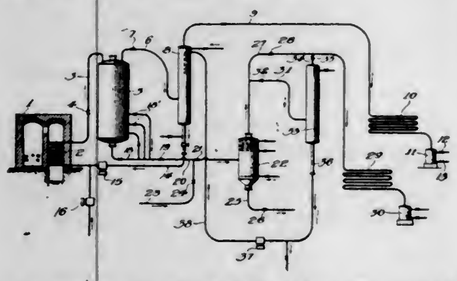
1. In the recovery of oil from an oil-bearing stratum, the improvement which comprises forming a mine gallery along the margin of the tract to be worked, the gallery being adjacent said stratum but spaced therefrom by

material substantially impervious to fluid, tapping said stratum from the gallery by a large number of closely spaced openings, drilling a surface well to the stratum within the area defined by the gallery, and introducing



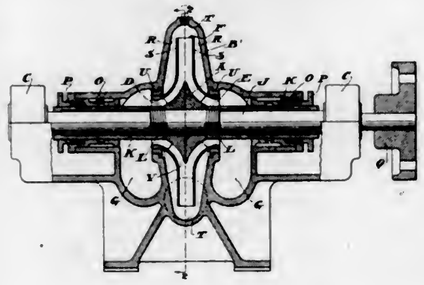
a fluid oil-expelling agent through said closely spaced openings, thereby forming a fluid barrier moving inwardly from the margin of the tract to force the oil therein through the surface well.

1,812,306. INSULATING MATERIAL. ARTHUR J. RUSS, Oakdale, Pa., assignor to Armstrong Cork Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 8, 1926. Serial No. 107,790. 17 Claims. (Cl. 106—18.)



1. An insulating material comprising a mixture of an alkaline earth, diatomaceous earth and an exfoliated vermiculite mineral.

1,812,307. TERMINAL CONNECTION FOR ELECTRIC CIRCUIT WIRES. ADOLF SCHNEIDER, Brooklyn, N. Y. Filed May 22, 1928. Serial No. 279,731. 4 Claims. (Cl. 173—259.)



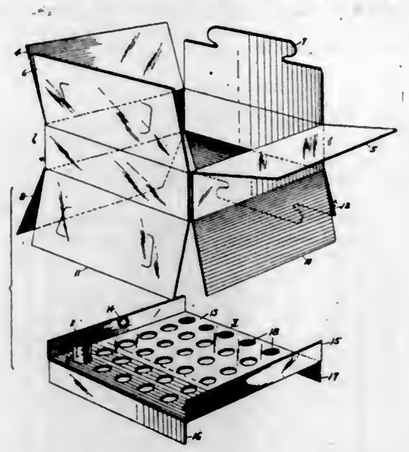
1. In a device of the kind described, a post having an opening therethrough to receive a circuit wire end or the like, a compression spring around said post, said spring having its upper end portion extending diametrically through said post opening, said end portion being adapted to thrust upwardly toward said wire end to bind the same in gripped relation to said post.

1,812,308. PROCESS OF TREATING HYDROCARBON OIL. JEAN D. SEGUY, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Dec. 19, 1928. Serial No. 327,004. 2 Claims. (Cl. 196—49.)

1. A process of cracking hydrocarbon oil, comprising subjecting the oil to cracking temperature under pressure, thereafter separating the vapors from non-vaporous residue, removing, condensing and collecting the vapors, removing the liquid residue from the cracking zone before it contains objectionable amounts of sludge and coke, and admixing with said residue a quantity of pressure distillate bottoms so controlled as to amount and temperature as to cool said residue to below cracking temperature, thereafter reducing the pressure on the mixture of residue and pressure distillate bottoms so as to cause partial vaporization thereof and additional partial cooling.

1,812,309. CENTRIFUGAL PUMP. ALLEN F. SHERZER, Ann Arbor, Mich., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 22, 1927. Serial No. 177,335. 8 Claims. (Cl. 103—104.)

1. A centrifugal pump comprising an impeller and a casing having a circular portion adjacent to the periphery of the impeller, the distance from the sides of the casing to the sides of the impeller at the periphery thereof being not less than six-tenths nor greater than nine-tenths of the width of the impeller at its periphery, the adjacent side walls of said casing and impeller being divergent toward the axis of the impeller so that longitudinal cylindrical sections of the clearance provided between the casing and impeller increases from the periphery of the impeller toward the axis of the impeller, and means to prevent substantial longitudinal movement of the impeller with respect to the casing.



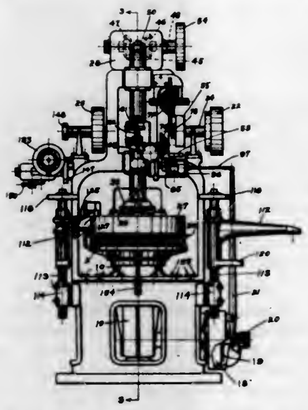
1,812,310. PROCESS FOR THE SEPARATION OF SODIUM SULPHATE FROM SULPHURIC ACID. JOHANN JOSEPH STOCKLY and RICHARD BARTUNEK, Teltow, near Berlin, Germany, assignors to the Firm Vereinigte Glanzstoff-Fabriken A-G., Elberfeld, Germany. Filed Oct. 10, 1928, Serial No. 311,707, and in Germany Oct. 13, 1927. 10 Claims. (Cl. 23—121.)

1. For the separation of sodium sulphate from sulphuric acid, the process consisting in concentrating the salt-containing sulphuric acid by evaporation to a concentration of 70–85% at which the acid, when cooled to ordinary temperature will possess the lowest coefficient of solubility for sodium sulphate, setting up crystallization and separating the acid from the masses of salt crystallized out.

1,812,311. PACKAGE FOR FIREWORKS DEVICES. BENEDIKT WOLF, Newark, N. J., assignor to Essex Specialty Co., Inc., Berkley Heights, N. J., a Corporation of New Jersey. Filed May 11, 1928. Serial No. 276,876. 2 Claims. (Cl. 206—65.)

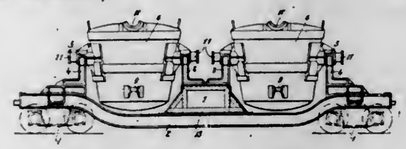
1. In a carton for carrying vertically disposed fireworks said carton having inner and outer overlapping flaps at its top and bottom, a rack conforming to the carton interior, said rack comprising, a body provided with apertures for frictionally receiving and supporting the

vertically disposed fireworks, flanges formed on said body, one of said flanges resting upon an inner flap at the top of the carton and another of said flanges resting upon



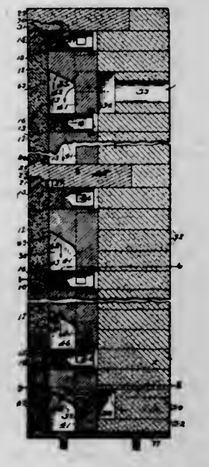
an inner flap at the bottom of the carton, the outer flaps of the carton being interlocked to retain the carton in a closed condition.

1,812,312. CIRCUIT BREAKING CONTACTS PROVIDED WITH CONDENSERS. ARLE YTTERBERG, Hogberget, Sweden, assignor to Allmänna Svenska Elektriska Aktiebolaget, Vasteras, Sweden, a Swedish Corporation. Filed May 8, 1929, Serial No. 361,506, and in Sweden Dec. 14, 1928. 5 Claims. (Cl. 175—294.)



2. In combination, a pair of contacts, a condenser in parallel thereto, and two band-shaped conductors of special resistance alloy lying flat together at the major portion of their length and connecting said contacts to said condenser.

1,812,313. GRINDING MACHINE. WILLIAM ARTER, Worcester, and WARREN F. FRASER, Westboro, Mass.; said Fraser assignor to Arter Grinding Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Feb. 14, 1925. Serial No. 9,107. 24 Claims. (Cl. 51—131.)

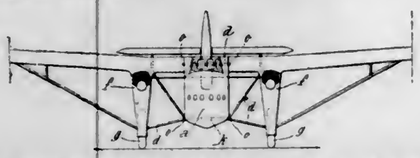


3. In a grinding machine, the combination of a grinding wheel mounted to rotate in a horizontal plane, a presser head mounted above said wheel for up and down movement and operative to press the work against said wheel, means for guiding said head for vertical movement toward or from said wheel, a part connected with said head to move up and down therewith, a stop arranged to be engaged by said part, a horizontally movable wedge supporting said stop, a screw shaft bearing against said wedge, and power operated mechanism for rotating said shaft to move said wedge in a direction to permit said stop to settle gradually and thereby limit the rate of approach of said head toward said wheel.

1,812,314. TANDEM HOT METAL CAR. CARL P. ASTROM, East Orange, N. J., assignor to M. H. Treadwell Company, New York, N. Y., a Corporation of New York. Filed Apr. 23, 1929. Serial No. 357,590. 2 Claims. (Cl. 105—270.)

1. A tandem hot metal car comprising an under frame and a supporting truck at each end, pairs of aligned ladle supporting cradles carried by said frame, ladles supported by said cradles and having projecting crane trunnions to permit the ladles to be lifted on and off the car, the adjacent center cradles being spaced apart to permit independent access to the respective crane trunnions and thereby permit said ladles to be handled independently of each other.

1,812,315. AIR COOLED FURNACE WALL. HENRY H. BAUMGARTNER, Belleville, N. J., assignor to Brake Nonclinkering Furnace Block Company, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 16, 1926. Serial No. 135,925. 16 Claims. (Cl. 110—1.)



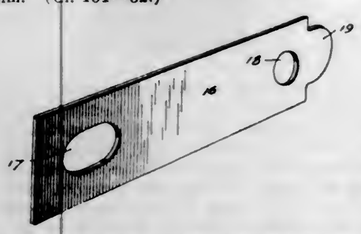
1. An air cooled furnace wall comprising a facing built up of refractory elements, and a backing spaced therefrom to leave interior air spaces outward of the rear surfaces of the face elements, said wall having air inlets and outlets arranged for air flow through said spaces for scrubbing or cooling of the face elements, and interior means tying the facing to the backing at intervals while allowing movements of the face elements in the plane of the walls; the face elements in each wall section being separated horizontally, lap jointed and packed, and interlocked vertically, with packing at the top of the wall section, and cover tiles above.

1,812,316. METHOD FOR MAKING ACTIVE CHARCOAL. ERNST BERL, Darmstadt, Germany. Filed Dec. 30, 1927, Serial No. 243,769, and in Germany Jan. 21, 1927. 13 Claims. (Cl. 252—3.)

1. A method for making active charcoal which consists in treating acid sludges derived from the treatment of hydrocarbons with neutralizing agents and heating the obtained mixture to a temperature of approximately 800° C. to 1200° C.

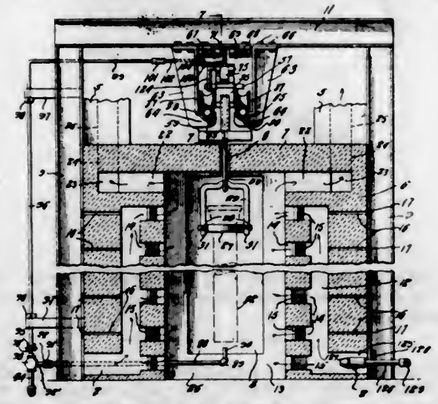
10. As a new article of manufacture an active charcoal derived from hydrocarbon acid sludges having by the methylene blue test an active surface of more than 700 sq. m. per g.

1,812,317. DETACHABLE FLOATING COMPARTMENT FOR AEROPLANES. LOUIS BLÉRIOT, Paris, France. Filed Jan. 2, 1930, Serial No. 418,031, and in Belgium Jan. 4, 1929. 6 Claims. (Cl. 244—2.)



1. In an aeroplane,—a pair of wing units,—a compartment interposed between said wing units,—and interengaging means connected to said wing units and compartment for maintaining the former and the latter in assembled relation, said means including a rotatable tie element extending transversely across said compartment between said wing units and operative to simultaneously liberate said wing units when rotated in a predetermined direction.

1,812,318. DISPLAY DEVICE. WILLIAM C. BOWER, Bell, Calif. Filed Apr. 1, 1929. Serial No. 351,717. 3 Claims. (Cl. 211—37.)



1. A display device of the type described comprising a pair of conjoined angle members, one of said members having its end rolled upon itself to form a resilient display engaging means, and the other member having a lip at an angle thereto, the corners of said lip being acuminate and upturned, said device being alternatively adapted to display articles both when positioned upright, as a rack, or on either side, when lying flat.

1,812,319. NUT LOCK. THOMAS ROBERT BRUMFIELD, Danville, Va. Filed Feb. 1, 1930. Serial No. 425,230. 1 Claim. (Cl. 151—32.)

A nut lock for fish-plates and the like in which the bolts extend in opposite directions comprising a plate of rectangular configuration having two spaced apertures therein, one of said apertures being of oval shape so as to secure a bolt having an oval portion from turning and the other of said apertures being round and of sufficient size to allow the threaded end of a bolt to pass freely therethrough and a flexible tongue upon the end of said plate adjacent said round aperture and said tongue being adapted to be bent against the side of a nut to keep the same from turning.

1,812,320. ANNEALING. FRANK G. CARRINGTON, Anniston, Ala., assignor to Ferric Engineering Company, Anniston, Ala., a Corporation of Delaware. Filed Nov. 7, 1928. Serial No. 317,818. 13 Claims. (Cl. 263—8.)

2. In an annealing process for bell-ended pipe comprising passing a pipe in a horizontal path while vertically suspended from its bell end with its bore open at both ends and progressively subjecting the pipe to zones of different temperatures.

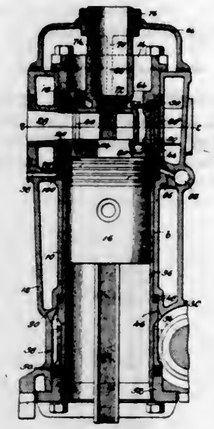
1,812,321. FINISH REMOVER. JOSEPH G. DAVIDSON, Yonkers, N. Y., assignor to Carbide and Carbon Chemicals Corporation, a Corporation of New York. Filed Feb. 26, 1927. Serial No. 171,383. 3 Claims. (Cl. 87—5.)

1. In a process of removing finish coatings from surfaces, the step of disintegrating the coating by attacking an organic constituent thereof by applying thereto a solvent containing a compound of the type formula

$$ROC_nH_{2n}O\text{----------}C_xH_{2x}OR_1$$

where R and R_1 are alkyl or aryl groups or hydrogen; n and x are integers greater than 1; and the dotted line is a simple bond or a divalent radicle.

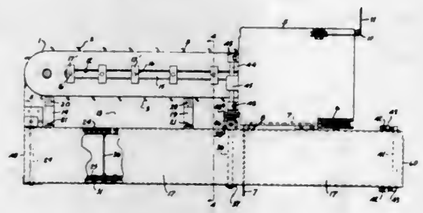
1,812,322. FINISH REMOVER. JOSEPH G. DAVIDSON, Yonkers, N. Y., assignor to Carbide and Carbon Chemicals Corporation, a Corporation of New York. Filed Feb. 26, 1927. Serial No. 171,384. 3 Claims. (Cl. 87—5.)



1. In a process of removing finish coatings from surfaces, the step of disintegrating the coating by attacking an organic constituent thereof by applying thereto a solvent containing a compound of the type formula

$$ROC_nH_{2n}\text{----------}C_xH_{2x}OR_1$$

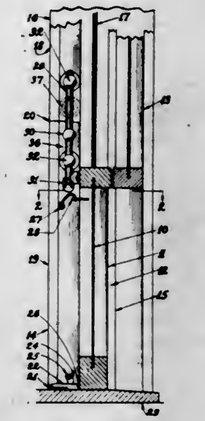
where R is an acidyl group; R_1 is an alkyl or aryl group; n and x are any integers; and the dotted line is a simple bond or a divalent radicle.



1,812,323. INTERNAL COMBUSTION ENGINE. DORSETT A. DAVISON and GEORGE E. DAVISON, Richmond, Va., assignors to The Davison Engineering Corporation, Richmond, Va., a Corporation of Virginia. Filed June 10, 1929. Serial No. 369,804. 14 Claims. (Cl. 123—80.)

1. In an internal combustion engine, a cylinder having intake and exhaust ports, a rotary valve within said cylinder controlling said ports, a valve seat surrounding said valve, means for driving said valve, and a series of superimposed sealing rings surrounding said valve and arranged in end to end abutting relation, some of said

rings having an expansion spring tension radially so as to seal outwardly against said valve seat and others having a contractile spring tension radially so as to seal inwardly against said valve.

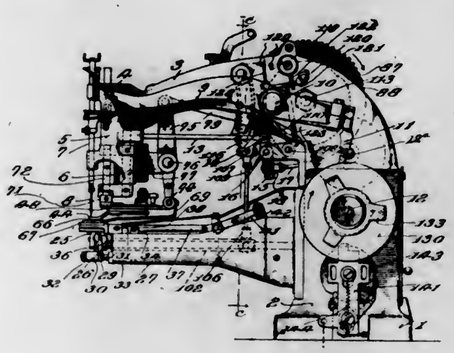


1,812,324. MATERIAL DISINTEGRATING AND CONVEYING MECHANISM. GUST DEGAND, St. Benedict, Pa., assignor, by mesne assignments, to Rembrandt Peale, St. Benedict, Pa., W. Sanders Davies, New York, N. Y., and William S. Wallace, Philadelphia, Pa., trustees. Filed Sept. 24, 1927. Serial No. 221,725. 8 Claims. (Cl. 262—30.)

1. In a material disintegrating and conveying apparatus the combination of a flight conveyor having endless chains and flights connecting the chains and material disintegrating devices mounted on one of the conveyor chains adapted to project into a pile of material to disintegrate the material and impel it onto the conveyor when the conveyor is sumped into the material.

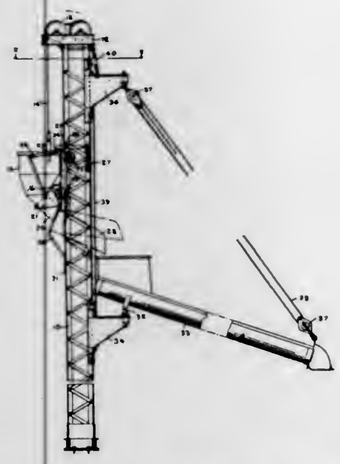
1,812,325. SLIDING AND SWINGING WINDOW. GEORGE DREWES, Jersey City, N. J., assignor of one-half to Adolph Berman, New York, N. Y. Filed Oct. 1, 1929. Serial No. 396,583. 3 Claims. (Cl. 20—45.)

1. In a window having a vertically sliding and inwardly swinging lower sash, the combination of rockable guide strips hinged to the sill about their lower front edges and a fixed horizontal guide strip having a sash engaging face projecting upwardly from the sill and being bevelled to allow the inward swing of the lower sash on its lower front edge while said front edge remains stationary in



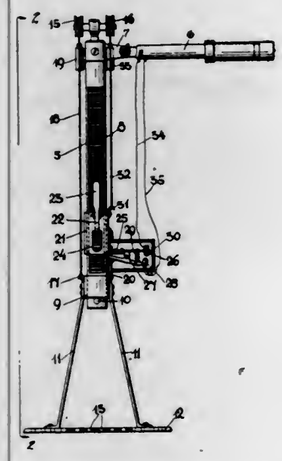
contact with the sill, and yielding means connecting said rockable strips and said sash to cause said sash to follow the movements of the said strips.

1,812,326. FRICTION ELEMENT AND METHOD OF MAKING THE SAME. JAMES DRISCOLL, Plainfield, N. J., assignor to Johns-Manville Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 21, 1930. Serial No. 430,447. 15 Claims. (Cl. 139—420.)



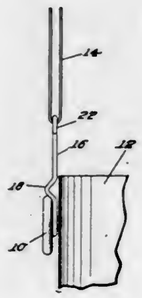
1. A method of manufacturing fibrous asbestos friction elements which comprises incorporating powdered zinc with the asbestos in sufficient quantity to substantially reduce the tendency of the element to score during use.

1,812,327. BUTTON SEWING MACHINE. ARVID ERICSSON, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed May 18, 1927. Serial No. 192,249. 10 Claims. (Cl. 112—110.)



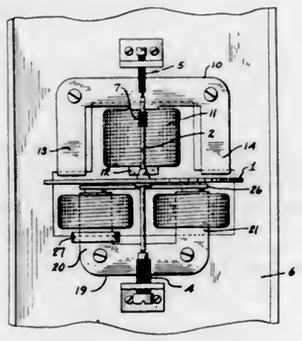
2. A button sewing machine including a button holder, a needle, means for vibrating said needle laterally, an oscillating thread carrying looper cooperating with said needle, a control disk, means operated thereby for shifting said button holder at predetermined intervals, said looper oscillating in a fixed working position, and a loop retainer for moving the needle thread loop back on the looper at each stitch formation.

1,812,328. APPARATUS FOR HOISTING AND DISTRIBUTING LOOSE MATERIAL. JOHN P. FABER, Dunellen, N. J., assignor to Ransome Concrete Machinery Company, Plainfield, N. J., a Corporation of New Jersey. Filed Aug. 5, 1924. Serial No. 730,161. 2 Claims. (Cl. 214—95.)



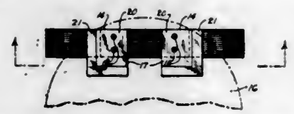
1. In a hoisting apparatus, a mast, a bucket mounted to travel along one side of the mast, a feed chute extending through the mast and adapted to receive material from the bucket and discharge the material at the other side of the mast, means for changing the vertical position of the feed chute in the mast, vertically spaced apart bracket members slidably mounted on the last-named side of the mast, means for maintaining the bracket members at a fixed distance apart, a delivery spout pivoted at its inner end to receive material from said feed chute, and a flexible supporting connection between the upper bracket and the outer end of the spout.

1,812,329. CIRCUIT MAKER OR BREAKER. HERMANN FLACH and GEORGE BARTHELMIE, Calumet City, Ill. Filed Aug. 20, 1928. Serial No. 300,702. 2 Claims. (Cl. 200—52.)



1. In a device of the class described a post, ratchet teeth on said post, a sleeve slidably mounted on said post, said sleeve having a hole therein, a ratchet lever pivotally mounted on said sleeve and adapted to engage said ratchet teeth through said hole, said teeth being formed to prevent downward movement of said sleeve when engaged by said lever, a second sleeve, slidably mounted on said post and below the first sleeve, an electric switch on said first sleeve, means for urging said switch into closed position, and means on said second sleeve for engaging said switch and forcing it into open position.

1,812,330. FASTENING LOOP FOR BUTTONS OR THE LIKE. GEORGE H. FRANCISCO, Los Angeles, Calif., assignor of one-half to Simon E. Davis, San Francisco, Calif. Filed Sept. 23, 1929. Serial No. 394,543. 1 Claim. (Cl. 24—222.)

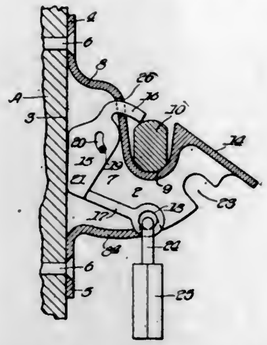


A button fastener comprising a V-shaped metal wire loop, and a hump in each arm, the hump being adjacent the point where the periphery of a button will cross said arm when in co-operative relation with the device, and with the upper ends of the arms bent outwardly, thence upwardly and finally inwardly to a welded joint.

1,812,331. INDUCTION METER. HANS FRÖHLICH, Zug, Switzerland, assignor to Landis & Gyr, A-G., a Joint-Stock Company of Switzerland. Filed Apr. 17, 1928, Serial No. 270,667, and in Switzerland Apr. 27, 1927. 3 Claims. (Cl. 171—264.)

1. An induction meter including a meter disc and driving mechanism therefor including a driving coil and core, a magnetic shunt plate cooperating with pole pieces of the core and a single ring of electrically conducting material encircling said core on the opposite side of the coil from said shunt plate.

1,812,332. INDUCTION METER. HANS FRÖHLICH and THEODOR HAUSCH, Zug, Switzerland, assignors to Landis & Gyr, A. G., Zug, Switzerland, a Corporation of Switzerland. Filed Apr. 8, 1930, Serial No. 442,528, and in Switzerland Apr. 11, 1929. 6 Claims. (Cl. 171—264.)

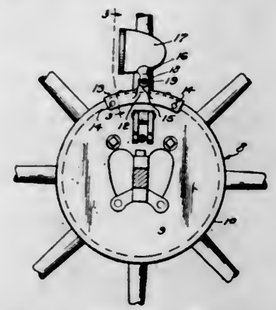


5. A pole enlarging plate comprising an iron plate having a border of an alloy the permeability of which decreases with rising temperature.

1,812,333. GAS METER. HEINRICH GERDES, Berlin-Schoneberg, Germany, assignor to Julius Pintsch Aktiengesellschaft, Berlin, Germany. Filed May 22, 1926, Serial No. 110,981, and in Germany May 29, 1925. 2 Claims. (Cl. 73—1.)

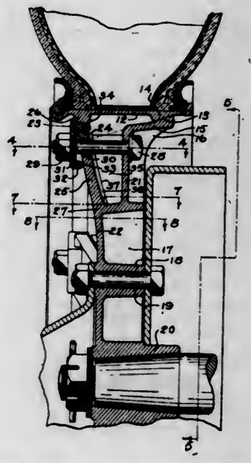
1. A dry gas meter comprising a meter casing having a cylindrical portion provided with an annular groove, a ring having a resilient annular ridge coacting with said annular groove, said ring being provided with an annular groove, a diaphragm positioned across said ring and means maintaining said diaphragm positioned, comprising a resilient ring frictionally holding said diaphragm in said annular groove of said ring.

1,812,334. LATCH CONSTRUCTION. JOHN EDWARD GLOEKLER, Pittsburgh, Pa. Filed July 10, 1930. Serial No. 466,907. 6 Claims. (Cl. 292—205.)



1. A bolt receiving keeper having a rear attaching base, a hollow interior, and a front concaved wall forming a socket and a swinging locking arm in the hollow interior having a bolt engaging finger operable through the front wall and a locking arm provided with a lock engaging terminal.

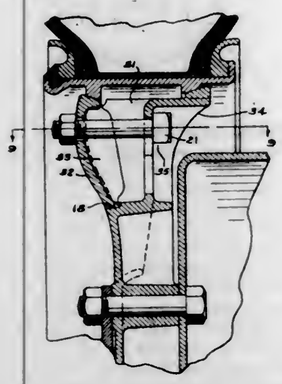
1,812,335. COATING COMPOSITION. FREDERICK C. HAHN, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed July 27, 1928. Serial No. 295,858. 5 Claims. (Cl. 134—79.)



1. A coating composition containing cellulose acetate, a resinous polybasic acid ester of a monoalkyl ether of glycerine, a softener and a solvent.

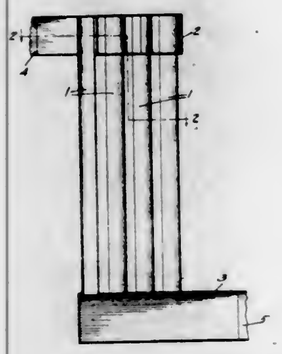
1,812,336. STEERING HEADLIGHT FOR AUTOMOBILES. JOSEPH G. HOLLAND, Edgefield, S. C. Filed Aug. 19, 1930. Serial No. 476,409. 1 Claim. (Cl. 240—62.)

The combination with brake mechanism connected with the front wheel of an automobile, said brake mechanism embodying a non-rotatable upstanding circular plate having a substantial diameter, of a base formed generally L-shaped in cross-section and longitudinally curved to conform to the curvature of the periphery of the plate, said base having generally horizontal and vertical flanges, the horizontal flange engaging with the periphery of the plate and the vertical flange engaging with the side of the same, means for rigidly attaching the flanges with the plate, a relatively short rigid bracket carried by the base and offset laterally in an inwardly direction from the same and extending above the base and provided with an apertured knuckle at its upper end, a lamp provided at its bottom with a pair of spaced apertured knuckles to engage upon opposite sides of the first knuckle, an adjustable bolt passing through the apertured knuckles so that the lamp may be angularly adjusted in a vertical plane and clamped to the bracket in a selected adjusted position, the arrangement being such that the combined length of the upper radius of the upstanding plate and the bracket serves to support the lamp at an elevation for projecting the light above the bumper, said bracket being arranged near the center of the horizontal arc within which the front wheel turns during the steering operation so that the turning movement of the lamp is reduced to the minimum.



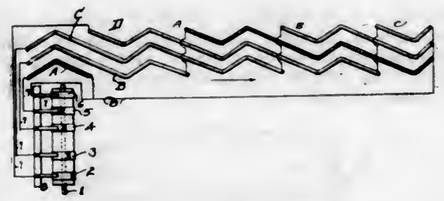
1,812,337. VEHICLE WHEEL CONSTRUCTION. JOHN W. HOLT, Cleveland, Ohio. Filed June 3, 1926. Serial No. 113,363. 9 Claims. (Cl. 301—12.)

1. In a vehicle wheel construction, a rim, spoke members having their terminal portions formed at their inner



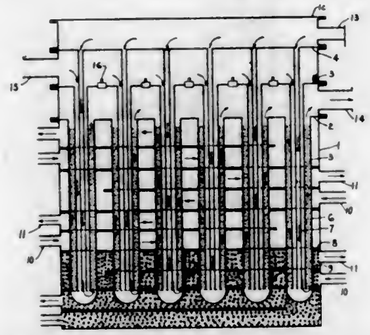
sides with inclined rim-receiving seats, and compound wedging means carried by the outer portions of the spoke terminal portions for forcing the rim into engagement with the seats, one portion of said compound wedging means being flexible, and extending at an angle to the plane of the wheel to exert an expanding force on the rim upon movement toward the plane of the wheel.

1,812,338. WHEEL RIM MOUNTING DEVICE. JOHN W. HOLT, Cleveland, Ohio. Filed Sept. 1, 1926. Serial No. 132,935. 1 Claim. (Cl. 301—12.)



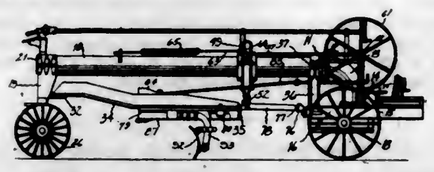
In a vehicle wheel, a removable rim having outer and inner oppositely tapered supporting flanges, spoke members terminating in tapered seats for engaging the inner supporting flange, shoulders on the outer faces of said spoke members, clip members adapted to be forced between the shoulders and the rim, bolts passing through the clip members and the spoke structure and laterally disposed flange members extending outwardly from the spoke members and substantially in line with the face of the outer supporting flange to provide clearance indicating means to facilitate accurate placing of said rim, said flange members being so positioned as to serve also as guides for the clip members.

1,812,339. APPARATUS FOR HEAT INTERCHANGING. GEORGE H. HORNE, Glendale, and MARCEL A. LISSMAN, Los Angeles, Calif., assignors to International Precipitation Company, Los Angeles, Calif., a Corporation of California. Filed Feb. 25, 1929. Serial No. 342,326. 2 Claims. (Cl. 257—224.)



1. A heat interchanging apparatus comprising a plurality of substantially parallel cylindrical tubes spaced apart sufficiently to permit access of fluid medium therebetween, an inlet header, all of said tubes extending within said inlet header at one end and being provided with inlet openings in the side walls of the portions extending within said header, and deflectors extending adjacent the inlet openings of the respective tubes and in position to direct fluid from said header through said inlet openings and substantially tangentially into said tubes, said tubes having fluid outlet openings at the end opposite said inlet header.

1,812,340. NEON LAMP FLASHER. JOSEPH HOTCHNER, San Francisco, Calif. Filed Nov. 9, 1927. Serial No. 232,095. 6 Claims. (Cl. 177—346.)

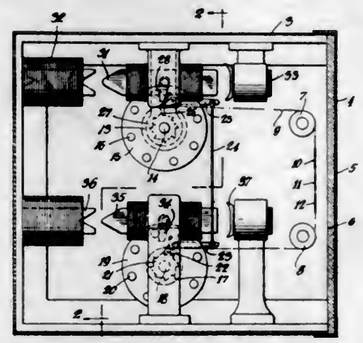


3. A lamp for traveling light effects on signs comprising a sign body, a series of overlapping zig zag gas tube lamps with one portion of the gas tube bent at a different angle than the next adjacent portion, and means to extinguish in sequence a lamp successively in the series to produce a traveling effect across and lengthways of the sign body.

1,812,341. CATALYTIC APPARATUS. ALPHONS O. JAEGER, Mount Lebanon, Pa., assignor, by mesne assignments, to the Selden Research & Engineering Corporation, Pittsburgh, Pa., a Corporation of Delaware. Filed Feb. 4, 1930. Serial No. 425,831. 10 Claims. (Cl. 23—288.)

1. A catalytic converter for carrying out catalytic vapor phase reactions comprising in combination a substantially vertical converter shell, substantially vertical catalyst containing compartments therein, a liquid bath medium in said converter surrounding the catalyst compartments and at least one substantially horizontal baffle fitting around the catalyst compartments, said baffle being provided with at least one central opening and with openings permitting vertical flow of bath fluid along the periphery of the converter shell wall but fitting sufficiently tightly around said catalyst-containing compartments to substantially prevent vertical flow of bath through the baffle at points other than its central and peripheral portions.

1,812,342. ROAD MACHINE. JAMES B. JARMIN, Dallas, Tex. Filed Jan. 10, 1929. Serial No. 331,605. 13 Claims. (Cl. 37—156.)

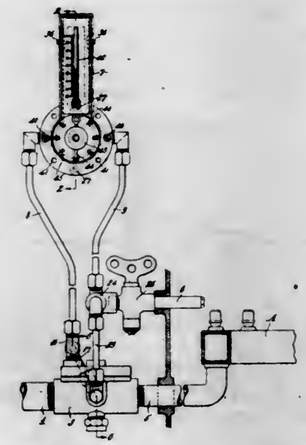


3. In a road machine, an upright front support mounted on wheels, an elongated pipe member clamped to the front support, a blade hanger clamped on the pipe member and held against rotation thereon, a rear platform supported on ground wheels, and means for securing the pipe member to the platform.

1,812,343. ELECTRICAL CONNECTING DEVICE. DAVID W. JOHNSON, Newington, and ARVID H. NERO, West Hartford, Conn., assignors to The Arrow-Hart & Hegeman Electric Company, Hartford, Conn., a Corporation of Connecticut. Filed May 11, 1929. Serial No. 362,402. 6 Claims. (Cl. 173—343.)

1. An electric connecting device having contact apertures in its face adapted to receive contact blades, a long and a short groove leading to each aperture.

1,812,344. STREET CAR SIGN. KARL KLUG, Brooklyn, N. Y. Filed Nov. 30, 1928. Serial No. 322,766. 2 Claims. (Cl. 40—55.)



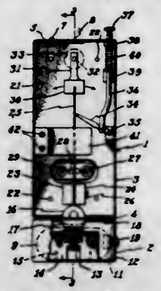
1. An apparatus for indicating streets crossed by a street car, comprising a casing, a strip, a pair of drum to which the ends of the strip are attached, a plurality of signs on the strip, a pair of shafts to which the drums are fixed, ratchet wheels fixed to the shafts, discs fixed to the shafts, said discs having a plurality of laterally projecting pins, pawls engaging the ratchet wheels, dogs adapted to engage the pins on the discs to rotate the latter and electromagnetic means to move the dogs in one direction.

1,812,345. COMPLEX CHROMIUM COMPOUNDS OF AZO DYESTUFFS. HANS KRZIKALLA, Mannheim, and FRANZ BLUEMMEL, Seckenheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Nov. 30, 1928, Serial No. 322,960, and in Germany Dec. 1, 1927. 1 Claim. (Cl. 260—12.)

As a new article of manufacture the complex chromium compound of the o-hydroxy-azo dyestuff obtainable by coupling diazotized 4-nitro-2-aminophenol-6-sulfonic acid and acetylacetone, dyeing wool yellow shades with a reddish tinge.

1,812,346. THERMOSTATIC VALVE MECHANISM. OTTO JOHN KUENHOLD, Cleveland, Ohio, assignor to H. M. Sheer Company, Quincy, Ill., a Corporation of Illinois. Filed Oct. 16, 1925, Serial No. 62,836. Renewed Nov. 24, 1930. 16 Claims. (Cl. 236—80.)

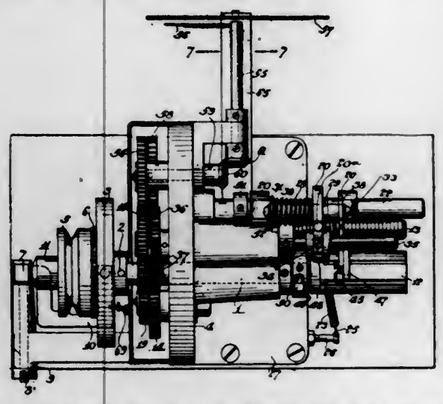
1. Thermostatic control mechanism for gas burners, comprising a gas burner, controlling valve mechanism therefor including a single flexible imperforate diaphragm valve operated by gas pressure directly thereon, relay valve mechanism also including a single flexible imperforate diaphragm valve and adapted for cooperation with said controlling valve mechanism, and a thermostatic element effective upon said relay valve mechanism.



1,812,347. METHOD OF PURIFYING BORAX. WALTER A. KUHNERT, Los Angeles, Calif. Filed Feb. 11, 1929. Serial No. 339,277. 3 Claims. (Cl. 23—59.)

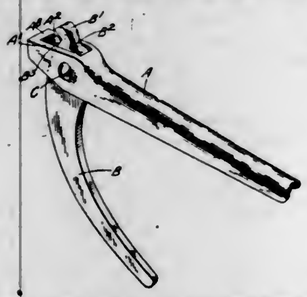
1. The method of separating water soluble silica from borax which comprises subjecting impure borax containing water soluble silica, in the presence of water, to the action of a water soluble aluminum bearing substance so as to obtain a solution containing borax and an insoluble precipitate containing silica, and separating said solution from said precipitate.

1,812,348. STROBOSCOPIC TESTING SYSTEM AND APPARATUS. WILLIAM D. LA RUE, Maple Shade, N. J., assignor to Victor Talking Machine Company, a Corporation of New Jersey. Filed June 14, 1928. Serial No. 285,380. 6 Claims. (Cl. 88—14.)



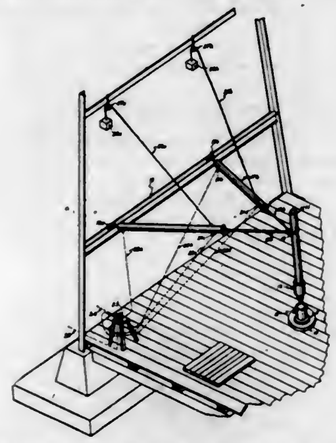
1. A portable stroboscopic testing unit comprising a casing including a plurality of hinged receptacles, a dry

cell and an incandescent lamp disposed in one of said receptacles, the wall structure of another of said receptacles having a slot traversed by a beam of light emanating from



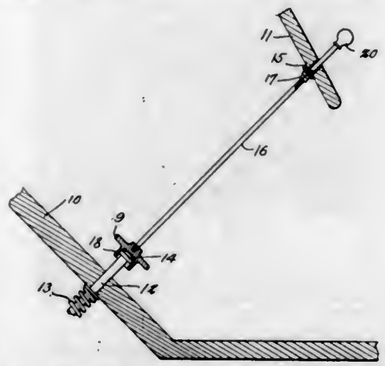
said incandescent lamp, and means comprising a spring reed mounted in one of said receptacles for periodically interrupting said beam of light.

1,812,349. COIL WINDING MACHINE. HOXSIE W. LILLIBRIDGE, Philadelphia, Pa., assignor to Atwater Kent Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 28, 1929. Serial No. 374,327. 15 Claims. (Cl. 242—9.)



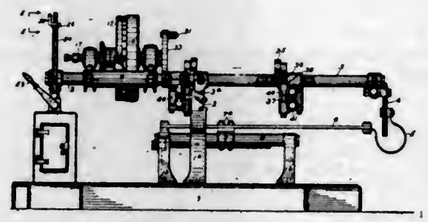
1. Mechanism for producing bank-wound coils comprising a rotating coil support, a conductor-guiding member, supporting structure therefor movable in one direction during a coil-winding operation, and means effecting intermittent movement of said member in an opposite direction during said winding operation.

1,812,350. PUNCHING OR CUTTING PLIERS. FREDERICK DONALD LINGWOOD, London, England, assignor to Manufax Limited, London, England, a Company of Great Britain. Filed Oct. 25, 1930, Serial No. 491,258, and in Great Britain Nov. 8, 1929. 7 Claims. (Cl. 164—81.)



1. A tool for cutting sheet material including in combination two arms, a slotted jaw carried by one arm forming a work-supporting anvil, a cutting jaw in the form of a head carried by the other arm and adapted to pass through the slot, a neck portion connecting the head to its arm and having its cross-sectional dimensions reduced so that the cutter can be turned in a slot already cut and the cut continued in any other desired direction, and a pivot connecting the arms disposed wholly below the work-supporting surface of the anvil.

1,812,351. PIPE RACKING DEVICE. HALLAN N. MARSH, Huntington Park, Calif. Filed Nov. 22, 1930. Serial No. 497,560. 11 Claims. (Cl. 214—1.)

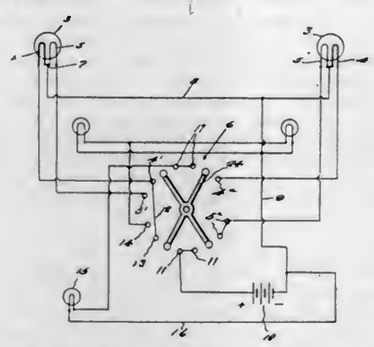


1. A device for racking pipe in a derrick, comprising: a pair of cylinders, the inner end of each said cylinder being swingingly attached to a suitable portion of said derrick; pistons working within said cylinders; rods attached to said pistons and passing through the outer ends of said cylinders; a pipe hook; an attachment of the outer end of each said rod to said hook, and means for controllably admitting an actuating fluid into either end of each said cylinder.

1,812,352. STARTER ATTACHMENT FOR AUTOMOBILES. ALEXANDER C. MCCURDY, Towson, Md. Filed Nov. 2, 1927. Serial No. 230,467. 1 Claim. (Cl. 74—39.)

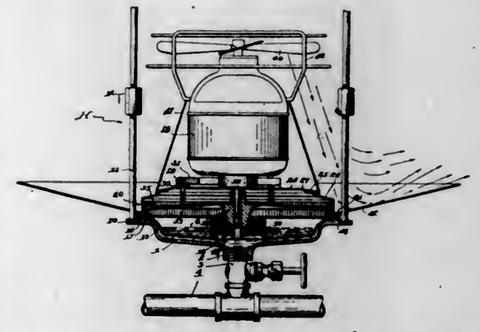
An automobile starter circuit closing attachment comprising a rod alined with the starter button and extending through the automobile dash, a hollow cap on said rod adapted to fit the button of a starter circuit closer, a head on the upper end of the rod above the dash, means for limiting upward movement of said rod, and a flange extending peripherally from the cap for engagement by the foot of an operator.

1,812,353. BALANCING MACHINE. FRANCIS T. MCDONOUGH, Madison, Wis., and AMOS F. MOYER, Minneapolis, Minn., assignors, by mesne assignments, to Precision Balancing Machine Company, a Corporation of Wisconsin. Filed May 2, 1924, Serial No. 710,595. Renewed Oct. 21, 1927. 34 Claims. (Cl. 73—51.)



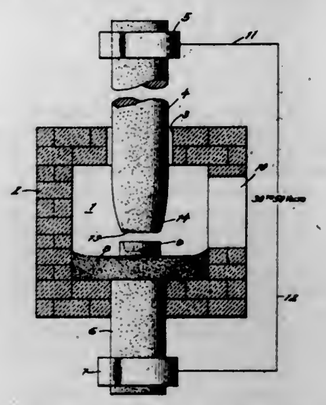
1. In a machine for balancing rotative bodies, having a resiliently mounted supporting means, a spring comprising a portion of the resilient mounting, and means for adjusting said spring as to the active length of elastic material between a point of fixed support and the point of attachment of said spring to said supporting means.

1,812,354. ROPE. HAROLD G. METCALF, Auburn, N. Y., assignor to Columbian Rope Company, Auburn, N. Y., a Corporation of New York. Filed June 25, 1927. Serial No. 201,339. 7 Claims. (Cl. 117—53.)



1. A rope or cordage structure formed of vegetable fibers having incorporated therein and substantially uniformly distributed between the fibers a compound of colloid rubber and cordage oil.

1,812,355. AUTOMOBILE LIGHT CONTROLLING SYSTEM. GEORGE Z. MICHAELS, New York, N. Y. Filed Mar. 9, 1929. Serial No. 345,846. 3 Claims. (Cl. 171—97.)

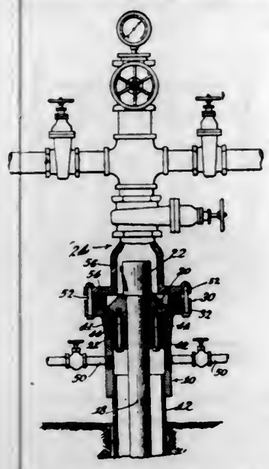


1. Lighting system for automobiles comprising a pair of headlights each including a high resistance filament and a low resistance filament, a source of current, circuits connecting; one side of each of said filaments to the source of current, a switch, circuits connecting the other side of each of said filaments to the switch, a circuit from said switch connected to the source of current, and said switch being adapted to close a circuit through said high resistance filaments or through said low resistance filaments or through one of said high resistance filaments and one of said low resistance filaments and the source of current.

1,812,356. HUMIDIFIER. BERTRAM M. MILLS, Pawtucket, R. I., assignor to The Standard Engineering Works, Pawtucket, R. I., a Corporation of Rhode Island. Filed Nov. 5, 1927. Serial No. 231,265. 18 Claims. (Cl. 261—91.)

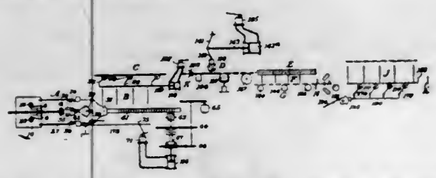
1. A humidifier having a basin-like base provided with a screw-threaded hollow boss for engagement with a supporting water supply pipe, a cylindrical grid seated on edge in said base, a cover member mounted on the grid, said cover having a series of circumferentially spaced marginal openings, a motor above the cover, the motor having a normally vertical shaft extending down through the cover, an atomizing disk on the shaft below the cover, the edge of the disk being in a plane intermediate the top and bottom of the grid, an annular deflector having its inner edge adjacent to the outer surface of the grid, and a fan on the motor shaft above the cover arranged to deliver air through the openings in said cover and also against the deflector.

1,812,357. PROCESS OF MANUFACTURING TUNGSTEN CARBIDE. OSCAR L. MILLS, Los Angeles, Calif., assignor to Mills Alloys Inc., Los Angeles, Calif., a Corporation of Delaware. Filed Jan. 21, 1930. Serial No. 422,314. 4 Claims. (Cl. 75—1.)



1. The process of manufacturing tungsten carbide, which comprises placing tungsten material from which the carbide is to be made in an open shallow work container, covering substantially all the exposed area of the material with the arcing end of a carbon electrode, and maintaining a short arc between the electrode and the material.

1,812,358. OIL WELL PACKING DEVICE. BURT S. MINOR, San Pedro, Calif. Filed Mar. 8, 1930. Serial No. 434,315. 3 Claims. (Cl. 166—14.)

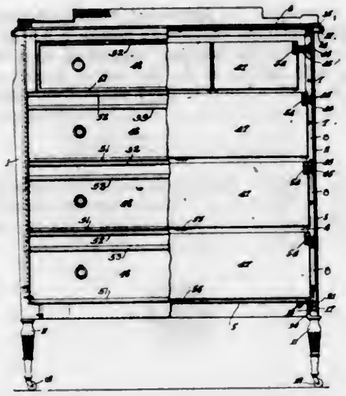


1. An oil well packing device comprising in combination with a control head, a member secured thereto by a plu-

rality of bolts and nuts, the bolts passing through openings in the control head flange and said member, a plurality of screws mounted in said member adapted to engage

packing slips placed in the control head, the bolts holding said member on said control head adapted to be removed and replaced by other bolts one at a time for connecting a "Christmas tree" to said member.

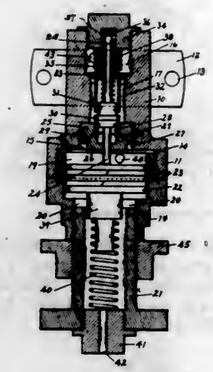
1,812,359. METHOD AND MEANS FOR THE PRODUCTION OF DRAWN METAL RODS. JAMES T. MOLTRUP, Beaver Falls, Pa. Filed Apr. 6, 1928. Serial No. 267,875. 39 Claims. (Cl. 29—33.)



1. The method of producing metal rods in a continuous manner, comprising drawing the rods to size, delivering the drawn rods to a receiver and maintaining them therein in a prearranged order, successively withdrawing the rods from the receiver and successively straightening them in said order, during the withdrawing.

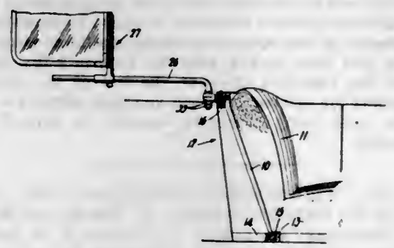
22. A metal working machine having two separate units side by side, each unit comprising a draw-bench having means for drawing rods through a die, a rod receiver below the line of draw of the rods, a rod straightener, means for actuating the straightener, means for delivering rods to the straightener, from said receiver, the path of travel of the rods through the straightener being in the plane of said receiver, a second receiver beyond the straightener and in a plane below the path of travel of the rods through the straightener, shearing means beyond the second receiver, means for actuating the shears, means for delivering rods from a receiver to a straightener, an operator's station adjacent the dies of the draw-benches, control means at said station for controlling the drawing means of both benches, a second operator's station between the first receivers and the straighteners, control means at the second station for controlling the straightener actuating means and the means for delivering rods to the straightener, a third operator's station between the second receivers and the shearing means, and control means at the third station for controlling the shear actuating mechanism and for controlling the means for delivering rods to the shears.

36. A metal working machine, having a draw-bench including a die, a rack bar, a draw-head connected to the rack bar, jaws on the draw-head, a pushing gripper, jaws on the pushing gripper for engaging a rod and pushing it through said die, means for closing the jaws on the pushing gripper, means for connecting the pushing gripper to the draw-head, means for releasing the pushing gripper from the draw-head after it has moved with the draw-head a predetermined distance, means for opening the jaws of the pushing gripper before it is released from the draw-head, and means for receiving drawn material from said draw-bench and performing a further operation thereon.



1,812,360. METAL FURNITURE. LOUIS H. MORIN, New York, N. Y., assignor to Doehler Die-Casting Co., a Corporation of New York. Filed June 30, 1927. Serial No. 202,617. 22 Claims. (Cl. 45—5.)

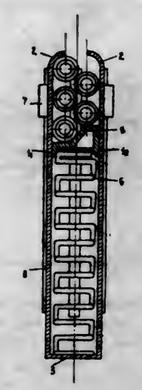
1. In a cabinet as an article of furniture comprising panels and a corner reinforcement at the joint between adjacent panels, the combination of an internally channeled metal frame part forming a rigid outer corner piece for the cabinet having a single inwardly opening inner channel defined and formed by lateral wings with their inner surfaces along their edges disposed at a flaring angle relatively to each other, adjacent sheet metal panels in planes at an angle to each other in line with the inner flaring surfaces formed by the wings of the channel along the edges of these wings and having adjacent bent edge margins shaped to conform to the contour of the channel in the corner piece and fitting into this channel in contiguous relation with one another, and securing means carried by the corner piece and engaging with the said bent edge margins to cooperate with the flaring wing portions of the channel for firmly holding these bent edge margins in the channel for thereby joining the panels together and reinforcing them at the corner joint.



1,812,361. FEED VALVE FOR AIR BRAKE SYSTEMS. ALEXANDER W. NICHOLSON, Dickerson Run, Pa. Filed Aug. 15, 1928. Serial No. 299,699. 3 Claims. (Cl. 50—35.)

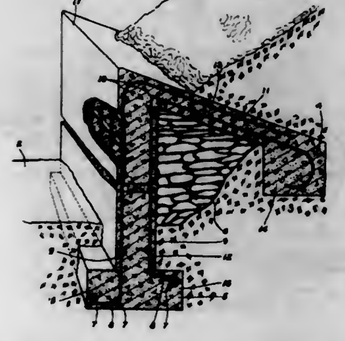
1. In a valve of the class described, a body having a cylinder chamber formed therein, a piston in said chamber, said body having an exhaust port leading from said chamber above said piston, said body having an upper chamber above the first and provided with an inlet port, said body having a passage affording communication between said chambers, a plug fitted in the lower end of said passage and having a recess extending downwardly from its upper end, said plug having ports extending downwardly from the recess to communicate with the lower chamber, a stem extending upwardly from the piston through the recess, a valve on said stem normally closing the upper end of said recess, said valve having its upper end reduced to form a shoulder, a sleeve fitting slidably on said upper end and provided with a valve at its upper end for closing the upper end of said passage, said sleeve being engageable by the shoulder to lift the last mentioned valve upon the

opening of the first valve, a spring associated with said stem and tending to maintain the valve which is carried by the stem in position of closure, and a second spring which is associated with said sleeve tending to maintain the sleeve in its valve-closing position.



1,812,362. TONNEAU WINDSHIELD SUPPORTING MEANS. THEODORE B. NISBET, Irvington, N. Y. Filed May 3, 1927. Serial No. 188,443. 2 Claims. (Cl. 296—85.)

1. In an automobile having a seat having a bottom and a back with a frame comprising openings extending from front to rear at the top thereof and at opposite ends of the back and upholstery at the front of said frame, the combination of said frame, body irons behind the upholstery in said back with their lower ends secured to the seat at the bottom thereof and with their upper ends against said frame at the front of said openings, said upper ends having threaded parts to register with said openings, and attachments to engage said frame at the rear and having threaded parts adapted to project into said openings and to be screwed to said threaded parts of said body irons.

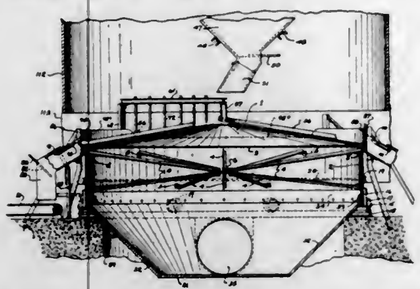


1,812,363. DEVICE FOR LOADING FIREARMS. LUIGI ORLANDO, Milan, Italy, assignor, by mesne assignments, to Metallurgica Bresciana Gia Tempini, Fiumegrande, Brescia, Italy, a Company of Italy. Filed Jan. 3, 1930, Serial No. 418,270, and in Italy Nov. 22, 1929. 5 Claims. (Cl. 42—50.)

1. A loading device for fire arms comprising a box-shaped cartridge magazine having in its middle plane parallel to the cartridge axis a longitudinal cut extending from the cartridge inlet mouth into proximity to the bottom dividing the magazine into two integral resilient parts, which recede from each other when a cartridge

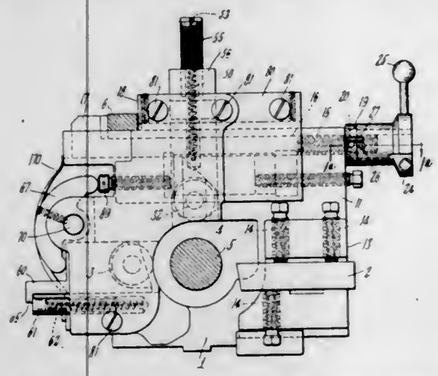
filler is introduced into the magazine and automatically close onto the filled in cartridges when the filler is withdrawn.

1,812,364. RETAINING WALL STRUCTURE. JAMES A. OURSLER, Steubenville, Ohio, assignor of one-half to George Oursler, Cincinnati, Ohio. Filed Nov. 29, 1927. Serial No. 236,535. 7 Claims. (Cl. 61—39.)



1. In a retaining structure for hillsides and the like comprising a vertical reinforced concrete wall having at its top an integral reinforced slab portion extending into the hillside and anchored therein, the slab portion of the structure being downwardly inclined toward the hillside at such angle as to direct weight thereon into a downward pressure which serves to anchor the structure more firmly in position, the reinforced slab extending uninterruptedly throughout the length of the vertical wall.

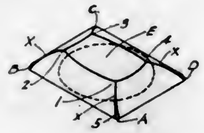
1,812,365. PROCESS AND MECHANISM FOR SEPARATING INTERMIXED DIVIDED MATERIALS. RICHARD PEALE, St. Benedict, Pa., assignor, by mesne assignments, to Peale-Davis Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 5, 1925. Serial No. 54,777. 29 Claims. (Cl. 209—467.)



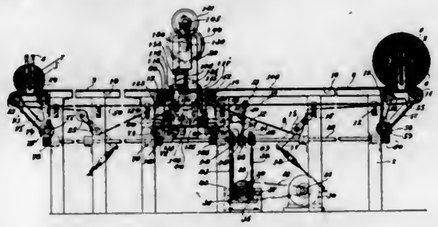
1. A mechanism for separating intermixed divided materials including in combination a rotatable air pervious table, the perviousness of which gradually changes toward its discharge edge, for supporting a bed of the materials undergoing separation, means for forcing air through the bed of materials, means for rotating the table,

and means for discharging at different levels at the periphery of the table both a heavier and lighter material after stratification and separation.

28. The process of separating intermixed divided materials which comprises rotating a bed of said materials to move the particles thereof radially outwardly by centrifugal force, passing lifting and loosening air currents simultaneously through substantially all parts of the bed, and continuously discharging both the settled heavier material and the flotant lighter material at the periphery of the rotating bed by centrifugal movement.



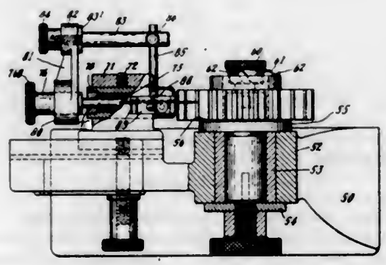
1,812,366. TAPER TURNER. GEORGE A. PERRY, Springfield, Vt., assignor to Jones & Lamson Machine Company, Springfield, Vt., a Corporation of Vermont. Filed Dec. 21, 1928. Serial No. 327,566. 4 Claims. (Cl. 82—17.)



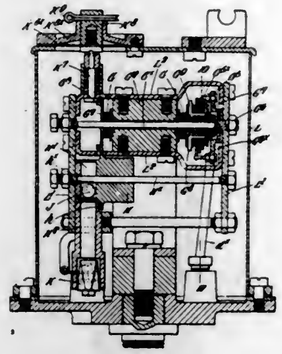
1. A taper turner comprising a work traversing member, a slide on said traversing member movable transversely to the direction of traverse of said member, a cam bar along which said member traverses for controlling the position of said slide, a tool carrier on said slide for holding a tool in operative relation to the work relative to the axis of which said member traverses, a work supporting device carried by said member and movable at an angle to the direction of movement of said slide, a pair of cooperating wedge elements one of which is carried by said device, means for operatively connecting or disconnecting the other of said elements to said slide, whereby movement of said slide to bring the tool toward said work causes said elements to effect the corresponding movement of said device, a spring normally pressing said device away from said axis, and an adjustable stop for limiting the extent of such movement in response to said spring.

1,812,367. ARTICLE OF MANUFACTURE FOR WRISTWATCH CRYSTALS. JOHN PIEF, Oklahoma City, Okla. Filed Feb. 4, 1929. Serial No. 337,479. 4 Claims. (Cl. 58—91.)

1. As an article of manufacture, a wrist-watch crystal, as described, comprising a rectangularly shaped body having oppositely concave surfaces on its lower and upper faces and having outer side and end convex edges its bottom edge portion flat, said outer convex edges having a small plane surface triangularly shaped beveled portion at the meeting corners of said side and end convex edges, said crystal being adapted to fit over a wrist-watch face.

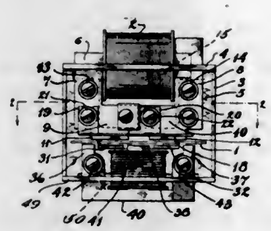


1,812,368. CLOTH MATCHING MACHINE. MARTIN E. POPKIN, New York, N. Y. Original application filed Dec. 8, 1927, Serial No. 238,711. Divided and this application filed July 5, 1929. Serial No. 376,258. 9 Claims. (Cl. 112—2.)



1. The combination in a cloth matching machine of a support for a web of cloth, means for temporarily securing layers of cloth in matched relation and a cloth fastening head mounted to move transversely of said support, means for moving the head, said head moving means being adapted to be released to permit the haed to be moved independently of the operating means, electrical means for driving said head and a stop for automatically disconnecting the electrical drive at the end of the traverse, said means for driving the head and said means for moving the head being connected together to operate synchronously.

1,812,369. PROJECTING MECHANISM AND GEAR STAGING DEVICE. RUSSELL W. PORTER and ROBERT O. BEARDSLEY, Springfield, Vt., assignors to Jones & Lamson Machine Company, Springfield, Vt., a Corporation of Vermont. Original application filed May 3, 1923, Serial No. 636,311. Divided and this application filed July 7, 1926. Serial No. 120,937. 11 Claims. (Cl. 33—175.)

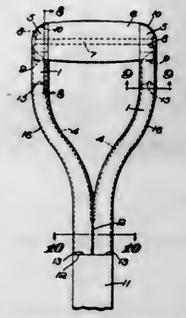


1. In an apparatus of the class described, a gear staging device comprising means for supporting a gear with capability of indexed rotation, means to hold the gear stationary in indexed position only, and a finder adjustable toward and from a side face of a tooth of the gear.

1,812,370. SUBMARINE MINE. HARTLEY BLYTH PRATT, Barrow-in-Furness, England, assignor to Vickers-Armstrong Limited, Westminster, England, a British Company. Filed Oct. 29, 1928, Serial No. 315,637, and in Great Britain Oct. 12, 1928. 7 Claims. (Cl. 102—3.)

1. A submarine mine of the kind set forth, wherein the circuit containing the electrode and the antenna has a moving coil which is geared to a rotary balance member so that these parts move in opposite directions, the balance member being so constructed that its rotary moment of inertia is equal to that of the moving coil with the result that any rotary impulse with respect to the mine exerted on the coil due to shock imparted to the mine is exactly balanced by the reaction of an equal rotary impulse given to the rotary balance member with respect to the mine.

1,812,371. INDUCTION METER. RICCARD PUDELKO, Zug, Switzerland, assignor to Landis & Gyr, A.-G., a Joint Stock Company of Switzerland. Filed Mar. 10, 1926, Serial No. 93,609, and in Switzerland Mar. 11, 1925. 12 Claims. (Cl. 171—264.)

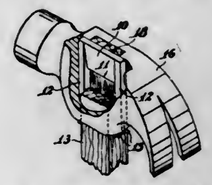


3. An induction meter including in combination a meter disc, a meter frame having a flat portion intermediate its sides and a horizontal part with a common aperture in said parts, a disc driving coil in said aperture and the core therefor fixed to said frame.

1,812,372. PROCESS OF OBTAINING AROMATIC HYDROCARBONS. ALEXANDER S. RAMAGE, Detroit, Mich., assignor to Coals and Chemicals, Ltd., a Corporation of Nevada. Filed May 18, 1928. Serial No. 278,916. 3 Claims. (Cl. 260—168.)

1. Process which comprises contacting a mixture containing olefinic gaseous hydrocarbons and the components of water gas with metallic iron at a temperature of from about 1000° F. to about 1500° F. at substantially atmospheric pressure, regulating the proportion of olefinic gases to water gas so that the iron is maintained in the active condition, and recovering liquid aromatic hydrocarbons from the resulting vapors.

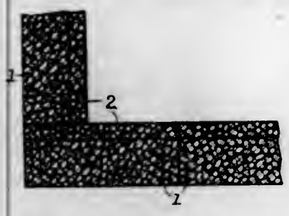
1,812,373. METHOD OF FORMING D-HANDLES. WILLIAM A. READY, Brookline, Mass. Original application filed Feb. 19, 1929, Serial No. 341,131. Divided and this application filed Oct. 8, 1929. Serial No. 398,201. 10 Claims. (Cl. 29—84.)



1. A method of producing a D-handle which comprises forming a metal part with two separate parallel hollow arms, dividing a portion of one end of a stem longitudinally to provide a pair of parallel wooden arms, inserting the wooden arms of the stem into the hollow metal arms and then bending the metal arms and the woden arms together into a substantially Y-shaped formation.

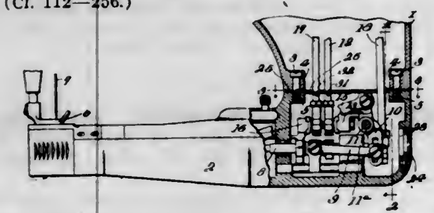
1,812,374. MOLDING COMPOSITION. KURT RIPPER, Berlin, Germany. Filed Mar. 15, 1928, Serial No. 262,052, and in Austria Mar. 18, 1927. 17 Claims. (Cl. 260—3.)

1. A molding powder comprising a condensation product resulting from the reaction of unaltered dicyandiamide and formaldehyde.



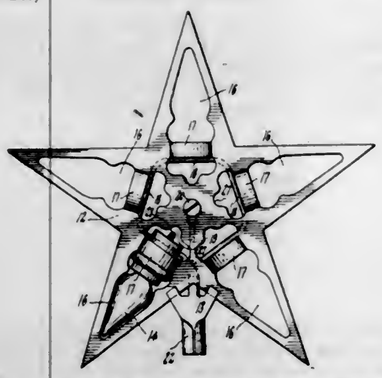
10. A process of making a molding powder, which comprises producing a mixed condensation product by reacting with formaldehyde under heat upon dicyandiamide in combination with another compound capable of forming with formaldehyde a resinous condensation product, whilst allowing the reaction to proceed until a hydrophobe resinous reaction product has been formed, which separates from the reaction mixture on cooling, bringing a watery liquid into contact with such condensation product, permitting the so treated product to undergo conversion into a fine powder, separating such powder from the bulk of the remaining liquid and washing and drying it.

1,812,375. MEANS FOR SECURING THE HEADS OF HAMMERS, PICKS, AXES AND SIMILAR TOOLS. ALBERT WILLIAM ROGERS, Santo Domingo City, Dominican Republic, West Indies. Filed Jan. 22, 1929. Serial No. 334,193. 2 Claims. (Cl. 306—33.)



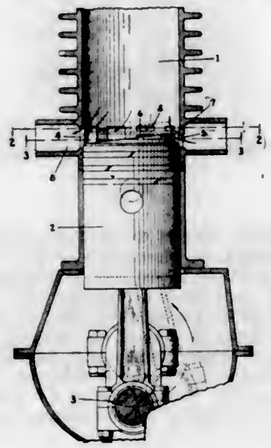
1. In a tool comprising a handle and a tool head mounted on one end thereof and having a hole formed therethrough to receive the handle, said tool head further having a pair of oppositely disposed grooves formed therein opening into said hole, a wedge driven into the tool-head carrying end of the handle, and a pair of legs extending from said wedge down said grooves in the tool head and having their inner ends laterally bent under the tool head, said legs serving to prevent the wedge pulling out unintentionally.

1,812,376. REFRACTORY HEAT INSULATING MATERIAL. DONALD W. ROSS and JAMES M. LAMBIE, Washington, Pa. Filed July 26, 1927. Serial No. 208,528. 14 Claims. (Cl. 106—9.)



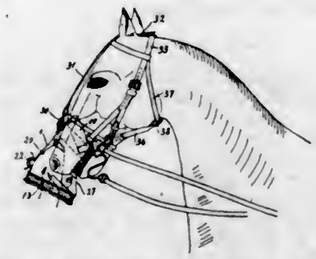
1. A heat-insulating body which includes a bonding material and grains of cyanite of such gradation of sizes as to result in minimum density of piling.

1,812,377. OIL COLLECTOR FOR SEWING MACHINES. CHARLES F. RUBEL, Chicago, Ill., and ELMER E. GRATSCH, St. Louis, Mo., assignors to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 27, 1928. Serial No. 257,532. 7 Claims. (Cl. 112—256.)



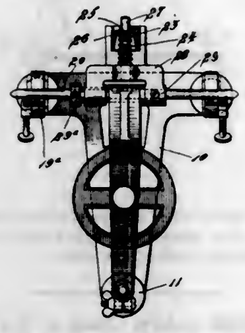
1. In a sewing machine a housing for the actuated parts, said housing having covered openings whereby access may be had to certain of said actuated parts and a collecting device attached to the housing above the covered openings, extending all the way across said openings and disposed relative to the inner wall of the housing so as to catch oil collecting on the inner wall of the housing and prevent the oil from escaping through said covered openings.

1,812,378. ELECTRICALLY ILLUMINATED ORNAMENT. ANTHONY J. SCANDURA, Malden, Mass. Filed Feb. 8, 1930. Serial No. 427,035. 2 Claims. (Cl. 240—10.)



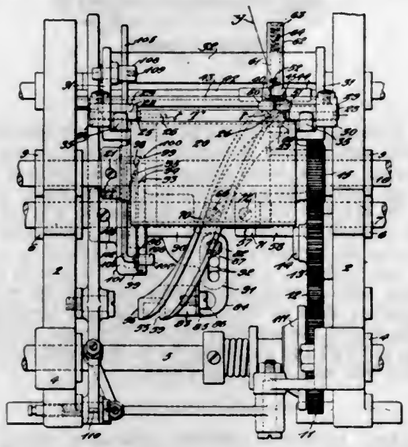
1. An electrically illuminated ornament comprising a body of sheet material having flat sides, an ornamental margin, an elongated opening shaped to receive and bear closely on opposite longitudinal side portions of a lamp socket and its bulb, and to interengage the same to prevent relative longitudinal movement thereof, an outer loop fixed to the body, projecting from one side thereof and extending across said opening, said loop being formed to bear on one side of a lamp socket inserted in the opening, and an inner loop fixed to the body, projecting from the opposite side thereof, extending across said opening, and formed to bear on the opposite side of the inserted lamp socket, said loops securing the socket and bulb against sidewise movement relative to the body and maintaining the bulb in position to illuminate both sides of the body.

1,812,379. ENGINE PORT CONSTRUCTION. OWEN H. SPENCER, Indianapolis, Ind. Filed May 3, 1929. Serial No. 360,273. 1 Claim. (Cl. 123—65.)



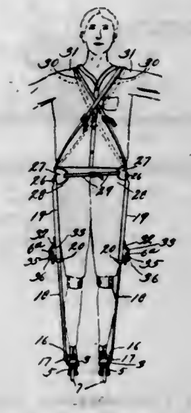
In an internal combustion engine, a cylinder, exhaust ports through the wall of said cylinder encircling substantially one half the circumference of said cylinder, additional exhaust ports around a portion of the remainder of the circumference of said cylinder and of a height less than the height of the first exhaust ports, an escape passage common to all of said exhaust ports, intake ports independent of the exhaust ports also encircling substantially one half the circumference of the cylinder and underlying the shorter exhaust ports and at that side of the cylinder opposite said escape passage, and solid walls entirely and permanently separating the intake ports from the exhaust ports, whereby the contents of the intake ports must pass into the cylinder before entering or contacting with any of the exhaust ports.

1,812,380. GAS PROTECTIVE MASK FOR ANIMALS, PARTICULARLY FOR HORSES. HERMANN STELZNER, Lubeck, Germany, assignor to Dr. Otto Heinrich Dräger, Lubeck, Germany. Filed Nov. 5, 1928, Serial No. 317,259, and in Germany Nov. 10, 1927. 7 Claims. (Cl. 128—140.)



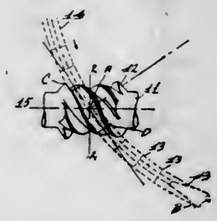
1. A gas protective mask for animals, particularly for horses, which is adapted to encompass the upper jaw and nose of the animal, said mask comprising a bag of material impermeable to gas and having an opening at each end, the opening at one end having a filter cartridge disposed therein and the edges of the bag at the free opening at the other end having a roll or strip of padding attached thereto and extending around the same, said strip of padding having a generally rectangular outline in side elevation and being shaped to conform to the contour of the upper jaw and nose of the animal and being made of a mantle filled with elastic material, the inner periphery of the padding being more yielding and more narrow than its outer periphery.

1,812,381. ARTICULATOR. JOSEPH A. STREKER, Providence, R. I. Filed May 1, 1929. Serial No. 359,558. 8 Claims. (Cl. 32—1.)



1. In a dental articulator, a base, a jaw-receiving member on said base, bearing standards on said base, a cross bar having its ends pivotally and slidably mounted in said bearing standards, a rearwardly positioned bearing standard on said base, a pivot pin mounted in said rearwardly positioned standard perpendicularly disposed to and secured to said cross bar, a movable element mounted on said cross bar, and a jaw-receiving element on said movable element.

1,812,382. TRAVERSE-MECHANISM FOR WINDING MACHINES. ERNEST R. SWANSON, Cranston, R. I., assignor to Universal Winding Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 3, 1928. Serial No. 316,968. 15 Claims. (Cl. 242—43.)

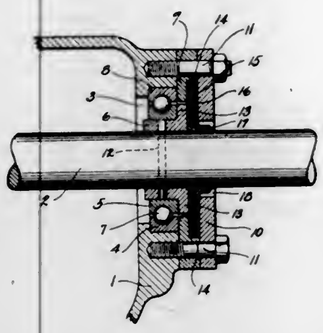


2. In a winding machine, the combination of means for traversing strand-material to wind a package, a rotating cam for actuating the traversing-means, and means automatically operative during the winding to adjust the cam to vary its angular relation with respect to its axis of rotation to alter the extent of its throw.

1,812,383. ROLLER SKATE. EARLY G. THOMPSON, Brewton, Ala., assignor of forty-nine one-hundredths to E. M. Blacksher, Brewton, Ala. Filed Sept. 15, 1930. Serial No. 482,095. 4 Claims. (Cl. 208—183.)

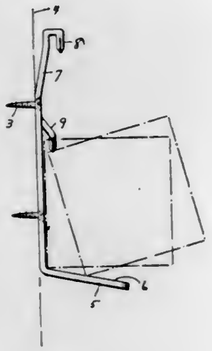
1. The combination with a roller skate, of a brace arm pivotally connected thereto and extending upwardly at the side of a leg of the operator, a plate to which said arm is pivotally connected, means for attaching said plate to the hip of the operator and means connecting said plate and the shoulder of the operator whereby the weight thereof is supported.

1,812,384. METHOD FOR GENERATING GEARS. NIKOLA TRBOJEVICH, Highland Park, Mich., assignor to The Timken-Detroit Axle Company, Detroit, Mich., a Corporation of Ohio. Filed Aug. 6, 1928. Serial No. 297,764. 5 Claims. (Cl. 90—4.)



1. A method of generating worms consisting in selecting a cutter of the face mill type having convex and concave generating surfaces, in placing the said cutter in a tangential relation relative to the work, in off-setting the center of the cutting circle relative to the axis of the worm to produce the required helical angle, in rotating the worm about its axis and in translating the worm in its axial plane, the two last named motions being in a timed relation relative to each other.

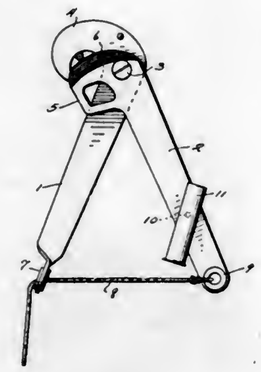
1,812,385. PACKING FOR SHAFTS. NELSON TROYER, Seattle, Wash., assignor to Continental Can Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 28, 1929. Serial No. 350,601. 3 Claims. (Cl. 286—7.)



1. The combination with a wall having an opening therein and a shaft extended through the opening, and having an encircling shoulder flush with the opening, of a flat washer fitted about the shaft and seated against

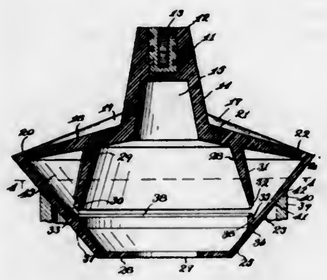
the collar and overlapping the wall about the said opening, another washer overlying the first washer and formed

with an inwardly yieldable sleeve portion fitted about the shaft and a ring overlying the washers and clamping them to the wall.



1,812,386. CAN PERFORATOR. ALONZO G. TURNER, McCammon, Idaho. Filed May 28, 1930. Serial No. 456,574. 7 Claims. (Cl. 164—119.)

1. A can perforator of the character described comprising a plate adapted for mounting on a support, an inclined extension on the lower end portion of the plate providing a cam surface, a perforating prong mounted on an upper portion of the plate in spaced opposed relation to the cam surface, said prong engageable with the upper end of the can and the cam surface engageable with the lower end of said can in a manner to force the can upwardly to cause the prong to penetrate same when the lower end of the can is forced inwardly on the cam surface, the distance between the perforating prongs and the cam surface being less than the length of the can to be perforated.



1,812,387. CUTTING IMPLEMENT. JOHN H. UPTON, Dunsmuir, Calif. Filed July 22, 1930. Serial No. 469,870. 3 Claims. (Cl. 30—11.)

1. As a new article of manufacture, a cutting implement comprising two connected members freely movable one with respect to the other, one of said members having work engaging means and the other being provided with

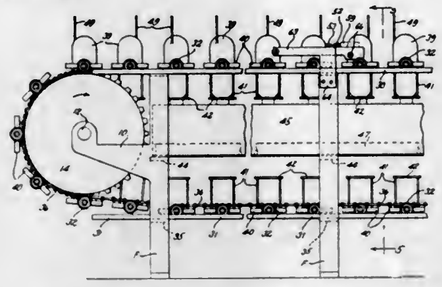
a cutting edge, and socket means pivotally carried by the second member for detachable engagement with the tip portion of a fishing pole or the like.

1,812,388. FLUSH VALVE. JACK E. WALKER, Los Angeles, Calif., assignor to Long-Turney Corporation, Los Angeles, Calif., a Corporation of California. Filed June 13, 1927. Serial No. 198,428. 17 Claims. (Cl. 4—56.)

9. A flushing valve having an inwardly and downwardly inclined wall adapted to engage a valve seat, a top wall connected to the outer periphery of the inclined wall, said top wall having an upward inclination, means to connect the top wall to a flushing mechanism, said top wall being depressible under liquid pressure, stretching and distorting the inclined wall to force same into close contact with part of the valve seat, a rim formed internally on the inclined wall, a partition depending from the top wall and terminating short of the inclined wall, said partition engaging behind the said rim on the downward movement of the top wall and distorting the inclined wall into close contact with part of the valve seat.

1,812,389. ACOUSTIC DEVICE. EDWARD C. WENTE, New York, N. Y., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Apr. 1, 1925, Serial No. 19,793. Renewed Sept. 11, 1930. 29 Claims. (Cl. 179—115.5.)

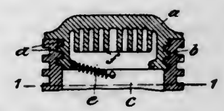
3. An acoustic device comprising a plunger type diaphragm having a W-shaped cross section and an air



chamber for which said diaphragm forms a closure member, said chamber being too large to cause resonance of the diaphragm above 100 cycles per second.

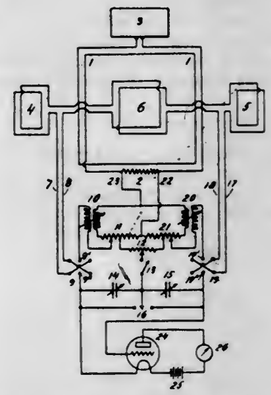
23. An acoustic device comprising a diaphragm, a coil secured thereto for driving the diaphragm, a pair of concentric pole-pieces separated by a gap in which said coil is positioned, one of said pole-pieces having an axial opening therein, and means in said opening for absorbing sound waves.

26. An acoustic device comprising a diaphragm having one face thereof exposed directly to the surrounding air, means attached to said diaphragm at points removed from the center thereof for driving it, means to prevent the sound waves radiated by the exposed face of the diaphragm from interfering with those radiated by the other face of said diaphragm, and means for damping the waves given off by said other face of the diaphragm.



1,812,390. BOTTLE CONVEYER. MINER P. WETMORE, Norwich, Conn., assignor to The American Thermos Bottle Company, Norwich, Conn., a Corporation of Ohio. Filed Aug. 2, 1928. Serial No. 296,955. 1 Claim. (Cl. 198—131.)

In a bottle conveyer, the combination of a frame having a pair of tracks at the bottom and a pair of tracks at the top, a plurality of cross-bars provided at the ends with rollers arranged to run over both pairs of tracks, each of said bars having an opening to receive a bottle, a pair of endless chains to which said bars are connected in transversely spaced relation, wheels at the ends of said frame for driving said chains, means carried by each bar below said opening to support a bottle in substantially vertical position, a pivoted arm supported at one side of said frame and arranged to be actuated by each bottle that passes by on the conveyer, a counting device operated by said arm, and resilient means at the opposite side of said frame for engaging each bottle and holding it firmly against the edge of the opening in the supporting cross-bar when the bottle actuates said counting arm.



1,812,391. PISTON FOR INTERNAL COMBUSTION ENGINES. WALTER ZECHLAU, Berlin, Germany. Filed Sept. 30, 1929, Serial No. 396,264, and in Germany Oct. 6, 1928. 1 Claim. (Cl. 74—108.)

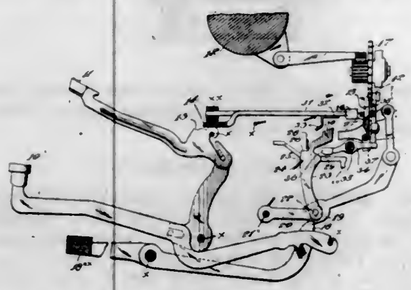
A motor piston, comprising, in combination, a piston head and a piston body connected with one another by screw-threads, the thread of the head and the thread of the body leaving gaps between them; and a tension spring having one end connected to said head and the other

end connected to said body whereby when the said head becomes unscrewed in service the spring tends to return the head to normal position.

1,812,392. METHOD OF AND APPARATUS FOR LOCATING TERRESTRIAL CONDUCTING BODIES. THEODOR ZUSCHLAG, New York, N. Y., assignor to Swedish American Prospecting Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 6, 1929. Serial No. 344,897. 20 Claims. (Cl. 175—182.)

2. A device for electromagnetically detecting and locating terrestrial conducting bodies, comprising an exciter coil adapted to generate a primary electromagnetic field to induce a secondary field in any conducting body located in the vicinity, a plurality of receiving coils adapted to be inductively influenced by said secondary field, said receiving coils being disposed in the same plane as said exciter coil, and compensating means for eliminating any inductive influence of said primary field on said receiving coils.

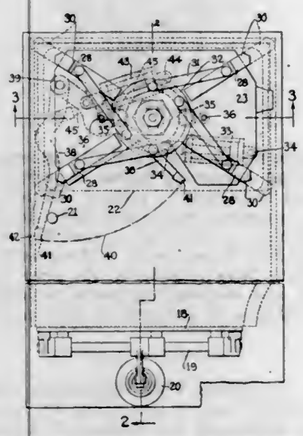
1,812,393. PROCESS FOR BREAKING PETROLEUM EMULSIONS. MELVIN DE GROOTE, St. Louis, LOUIS T. MONSON, Maplewood, and EDWARD H. KEISER, Clayton, Mo., assignors, by mesne assignments, to Tretolite Company, Webster Groves, Mo., a Corporation of Missouri. Filed Mar. 3, 1930. Serial No. 432,973. 10 Claims. (Cl. 196—4.)



1. A process for breaking a petroleum emulsion of the water-in-oil type, which consists in subjecting the emulsion to the action of a demulsifying agent containing an acetylated derivative of a hydroxylated fatty acid.

10. A process for breaking a petroleum emulsion of the water-in-oil type, which consists in subjecting the emulsion to the action of a demulsifying agent containing acetyl sulforicinoleic acid.

1,812,394. VARIABLE ESCAPEMENT FOR TYPEWRITERS. BENJAMIN M. DES JARDINS, West Hartford, Conn. Filed Mar. 12, 1926. Serial No. 94,178. 5 Claims. (Cl. 197—84.)



4. In a machine of the kind described, the combination with space and character keys, an escapement wheel and a

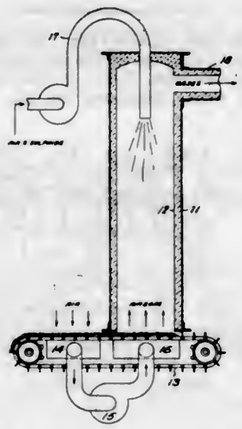
rocker having a rigid pawl cooperating therewith, of a pawl pivoted on said rocker and having a tooth normally coacting with said wheel to limit the movement thereof, a stop limiting the movement of said pivoted pawl under pressure exerted thereon by the escapement wheel, said pivoted pawl having a tail extending from said tooth

in a plane offset therefrom and a second tooth on said tail extending laterally into the plane of the first tooth, and means, actuated by the simultaneous depression of space and character keys, for controlling the swinging of said pawl to carry the first tooth out of and bring the second tooth into operative relationship with the escapement wheel.

1,812,395. METHOD AND APPARATUS FOR CLINCHING DOORS. CAROLUS L. EKSERGIAN, Detroit, Mich., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 16, 1929. Serial No. 363,668. 5 Claims. (Cl. 153—1.)

1. In combination, complemental door overlap clinching dies each forming a substantially continuous die face throughout the door overlap, and door aligning devices mounted within the continuous die face and engaging the door from between its inner and outer walls.

4. The method of clinching double walled automobile doors in the overlap thereof, which consists in aligning the door walls by aligning engagement from within and between its inner and outer walls, and clinching by simultaneous die engagement throughout the overlap.



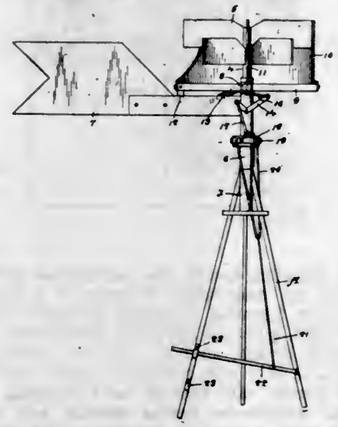
1,812,396. TERMINAL OUTLET FITTING. REUBEN ECKSTEIN, New York, N. Y. Original application filed Apr. 22, 1925, Serial No. 24,940. Divided and this application filed Nov. 7, 1925. Serial No. 67,645. 3 Claims. (Cl. 173—334.)

1. An outlet fitting for joining a plurality of circuits in parallel, comprising a two part body portion, a plurality of through passages in each of said parts, a through passage in one of said parts being adapted to mate with a passage in the other part, a current carrying member

received in said mating passages, said member comprising a pair of contact members having foot portions adapted to be clamped together by said body portions for retaining said current carrying member against any movement.

1,812,397. PROCESS OF AND APPARATUS FOR OXIDIZING METAL SULPHIDES AND MAKING SULPHUR DIOXIDE. HORACE FREEMAN, Shawinigan Falls, Quebec, Canada, assignor to The Sulphide Research Corporation Limited, Montreal, Canada, a Corporation of Canada. Filed Jan. 17, 1929. Serial No. 333,222. 24 Claims. (Cl. 75—60.)

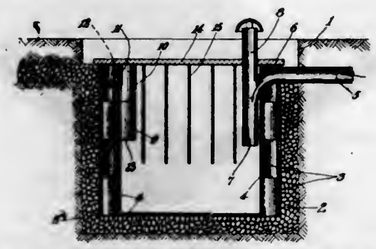
1. A process of oxidizing metal sulphides which comprises introducing the sulphide in finely divided form into a preheated combustion chamber with an amount of air insufficient for complete oxidation, and introducing a countercurrent of air in amount sufficient to substantially complete the oxidation.



1,812,398. PROCESS FOR THE CONVERSION OF HYDROCARBONS OF HIGH BOILING POINT INTO OTHERS OF LOW BOILING POINT. ERNST GALLE, Ludwigshafen-on-the-Rhine, and HERMANN ZORN, Mannheim, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Dec. 19, 1928, Serial No. 327,179, and in Germany Feb. 4, 1928. 11 Claims. (Cl. 196—52.)

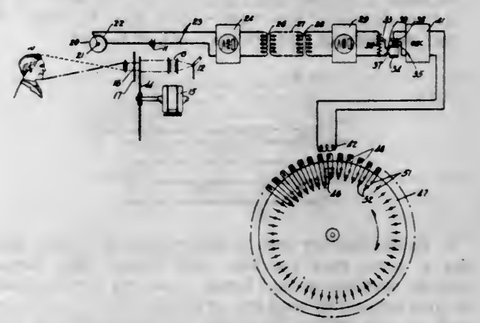
1. In the process of splitting hydrocarbons of high molecular weight into such of lower molecular weight by the action of heat, the step of carrying out the said treatment in the presence of a catalyst comprising a salt of metaphosphoric acid at a temperature high enough to promote the conversion.

1,812,399. PRODUCTION OF METAL CARBONYLS. WILHELM GAUS, Ludwigshafen-on-the-Rhine, ALWIN MITTASCH, Mannheim, and LEO SCHLECHT, Ludwigshafen-on-the-Rhine, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed June 29, 1929, Serial No. 374,938, and in Germany July 5, 1928. 10 Claims. (Cl. 23—203.)



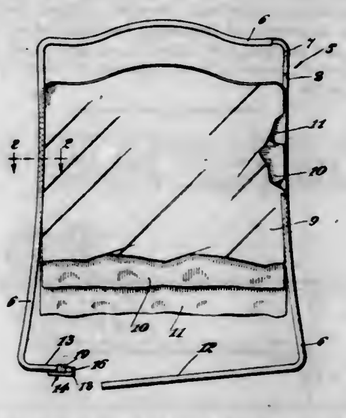
1. The process of producing metal carbonyl which comprises acting on a metal capable of forming metal carbonyl, in mixture with an inert liquid which is a solvent for carbon monoxide, with a gas containing carbon monoxide, while keeping the said metal and the said liquid in motion against each other.

1,812,400. WINDMILL. ARTHUR C. GILLEY, White, S. Dak. Filed July 10, 1929. Serial No. 377,209. 1 Claim. (Cl. 170—15.)



A windmill including a horizontally arranged wheel and a support, an inner sleeve mounted on the support and having a wheel journalled thereon, an outer sleeve journalled on the inner sleeve, pairs of oppositely disposed and connected arms journalled on the inner sleeve between the outer sleeve and the wheel, a semi-circular shield carried by certain ones of said arms and positioned to receive a portion of the wheel therein, a main vane secured to the outer sleeve, a stop on one of the arms, and tension means between one of the arms and the vane to normally urge the stop against the vane, an auxiliary vane secured to one of the arms, and a control having a portion thereof splined to the outer sleeve and connected to the auxiliary vane for moving the latter relative to the main vane for controlling the operation of the wheel.

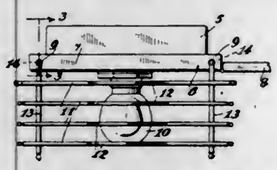
1,812,401. SEPTIC TANK. ALBANUS W. GOULDING, Trenton, N. J., assignor of one-half to Clifton Reeves, New York, N. Y. Filed Dec. 19, 1928. Serial No. 326,956. 8 Claims. (Cl. 210—6.)



1. A septic tank, including in combination, a side wall of open construction made fluid tight on the inside thereof, an inlet leading through one side of said wall and having the end thereof located a substantial distance from the top of said tank, and a vent and tell-tale connection extending upwardly from said inlet, a discharge conduit secured to the other side of said tank and having the inlet end thereof located in a plane above the plane of the discharge end of the inlet connection, said discharge conduit having communication near the upper end thereof with the interior of said open side wall, a lid or cover for said tank, and a plurality of staggered baffle screens located in the upper portion of said tank, the lower edges of which terminate below the lower ends of said inlet and discharge connections.

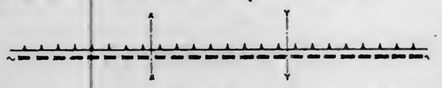
1,812,402. ELECTROOPTICAL TRANSMISSION SYSTEM. FRANK GRAY, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 30, 1929. Serial No. 396,098. 16 Claims. (Cl. 178—6.)

1. In combination, a source of continuously varying signaling current, a resonant circuit, light control means in said circuit, a source of alternating current for supplying current to said resonant circuit, and means responsive to said signaling current for controlling the resonance characteristics of said circuit to vary the amplitude of the current flowing therein in accordance with the variations of said signaling current.



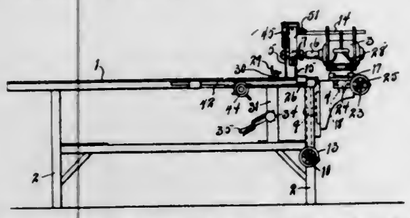
1,812,403. MIRROR AND METHOD OF FRAMING THE SAME. SAMUEL HAMMER, Brooklyn, N. Y., assignor to United Metal Box Co. Inc., Brooklyn, N. Y., a Corporation of New York. Filed Jan. 23, 1930. Serial No. 422,779. 4 Claims. (Cl. 45—18.)

1. A method of framing mirrors which consists in first bending a channel shaped metal strip to form a frame



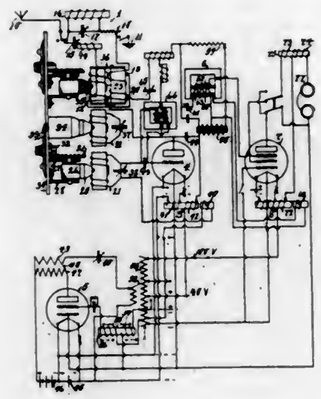
with the channel opening on the inner side thereof and unconnected end sections of the strip extending inwardly from the opposite sides of the frame, then assembling a mirror with a back plate and a sheet of packing material interposed between said plate and the mirror, then while holding the backing material under compression inserting one end and the opposite side edges of the back plate and mirror into the channels of said frame, then bending the opposite sides of the frame inwardly to position said end sections thereof in alignment and engage the other end of the mirror assembly within the channels of said end sections, then rigidly securing said aligned end sections of the strip to each other, and finally releasing the compressing pressure on the mirror assemblage to permit expansion of said yieldable packing material whereby the backing plate and the mirror are urged in opposite directions into frictional contact with the rear and front flanges respectively of the mirror frame.

1,812,404. CABINET. SAMUEL HAMMER, Brooklyn, N. Y., assignor to United Metal Box Co. Inc., Brooklyn, N. Y., a Corporation of New York. Filed Mar. 14, 1930. Serial No. 435,819. 10 Claims. (Cl. 312—113.)



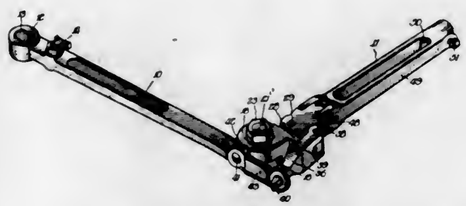
1. In combination with a cabinet having a front frame and a towel rack provided with spaced rods inserted through openings in said frame, attaching devices mounted upon the cabinet structure at the rear side of said frame, each of said devices including relatively yieldable parts between which the end of one of said rods is received and clampingly held in assembled relation to the cabinet frame.

1,812,405. ELECTROOPTICAL TRANSMISSION SYSTEM. HERBERT E. IVES, Montclair, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed May 25, 1929. Serial No. 365,908. 15 Claims. (Cl. 178—6.)



1. The method of signaling which comprises scanning a field of view of different tone values, producing from said scanning a composite electric current containing a plurality of groups of frequency components of large amplitude, and cutting said plurality of groups of frequency components between adjacent groups to form a plurality of sub-groups.

1,812,406. CLOTH CUTTING MACHINE. PETER JENKINS, Forth Worth, Tex. Filed Apr. 8, 1929. Serial No. 353,332. 3 Claims. (Cl. 164—76.)



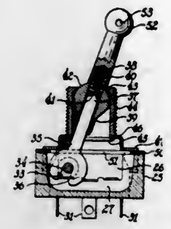
1. A cloth cutting machine comprising a platform, means for gaging the cloth thereon to be cut, means for clamping the cloth down on said platform, a revolving knife for cutting the cloth, means for vertically and longitudinally adjusting said knife relative to said platform, and means for driving said knife in its different positions.

1,812,407. RADIO APPARATUS. AUGUST J. KLONECK, New York, N. Y. Filed June 5, 1923. Serial No. 643,505. 12 Claims. (Cl. 250—20.)

1. In a signaling system the combination with receiving circuits and cooperating elements, of a plurality of electron tubes including operating electrodes, input and output circuits, a voltage supplying transformer for operating certain of said electron tubes for amplifying signals by means of a high frequency current therefrom, a source of current, said electron tubes including an oscillator, said transformer having primary and secondary coils, said primary being in connection with said source of current and with said oscillator, means for producing reactions of said oscillator of a frequency preferably above the range of frequencies of a received signal current but not necessarily at a higher harmonic of a signal current, said reactions of said oscillator energizing said primary of said transformer and by the latter said secondary, the latter having a plurality of different voltage terminals for operating said amplifying electron tubes at any desired voltage, said amplifying electron tubes having output circuits operating at different frequencies regardless of the operating high frequency current from said oscillator and transformer by conventionally bypassing the higher frequency currents in said output circuits.

1,812,408. FUSIBLE TYPE HOLD OPEN ARM. DAVID R. LASIER, Chicago, Ill., assignor to Norton-Lasier Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 5, 1929. Serial No. 344,213. 2 Claims. (Cl. 189—45.)

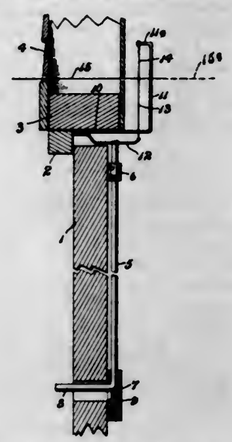
1. A holding device adapted to be pivotally connected between a door and door sill respectively, comprising in



combination, a link having a friction face at one end, an element having a cooperating friction face pivotally connected to the end of said link, a second element pivoted to said first element, on an axis parallel with the pivotal axis between said link and first element, a lug on said first element, a dog pivoted to said second element, adapted for locking engagement with said lug, and a fusible link for holding said dog in engagement with said lug.

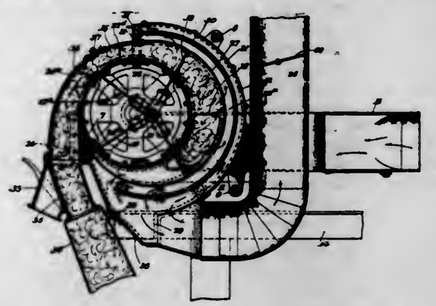
1,812,409. METHOD AND APPARATUS FOR PREVENTING ADHERENCE OF MOLTEN METAL. HERBERT V. LECKIE, Cleveland, Ohio, assignor to Steel and Tubes, Inc., Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 24, 1929. Serial No. 388,092. 6 Claims. (Cl. 219—6.)

1. In apparatus for manufacturing tubing from strip metal, the combination of means for forming a strip into the shape of a tube, means for heating and welding the edges of the strip to complete the tube, and fluid pressure means for chilling any metal particles which may fall from the heated portion of the tub into the interior thereof.



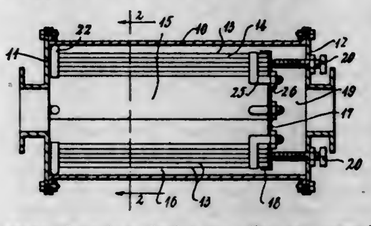
1,812,410. ELECTRIC SWITCH. GEORGE J. MEUER, Milwaukee, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a Corporation of Delaware. Filed Apr. 11, 1930. Serial No. 443,335. 18 Claims. (Cl. 200—16.)

1. In an electric switch, in combination, a molded insulating base having a substantially rectangular recess in the upper face thereof, contacts secured within said recess on opposite sides of the longitudinal center line of said base, said base being further provided with a relatively narrow but relatively deeper recess coincident with said center line thereof, a roller contactor movable longitudinally of said base into and out of bridging relation to said base contacts, and an actuating element engaging said contactor and extending into said relatively narrow recess to be guided by the side walls of the latter.



1,812,411. DOOR LATCH. CHARLES M. NORTON, Grand Rapids, Mich. Filed Mar. 18, 1929. Serial No. 347,765. 6 Claims. (Cl. 292—175.)

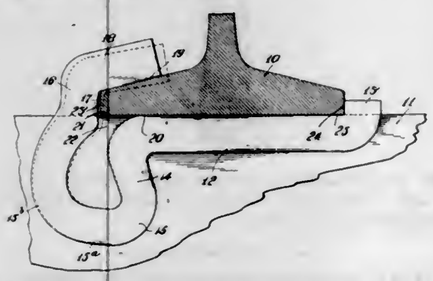
1. In combination, a door, a door frame around the door, a vertical rod mounted on the door, a spring member attached at one end to the door frame over said door and extending over said rod and having means with which said rod engages, a cable attached at one end to the free end of the spring member and at its opposite end having a permanent connection, and a second cable secured to the first cable between its ends and extending away there-



from at substantially a right angle, whereby on pulling on said second cable the spring member may be lifted to disengage from said rod.

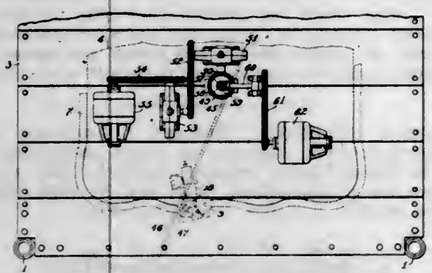
1,812,412. MACHINE FOR HANDLING FIBROUS MATERIAL. ALEX H. OLSON, Evanston, Ill., assignor to Droll Patents Corporation, Chicago, Ill., a Corporation of Delaware. Filed June 3, 1929. Serial No. 368,035. 17 Claims. (Cl. 19—75.)

1. In a machine of the character described, the combination of a casing provided with an outlet, means for delivering fibrous material with air under pressure into the casing, means for positively conveying the fibrous material through the casing and positively discharging it from the casing through said outlet, and means for separating air from the material in transit to the outlet.



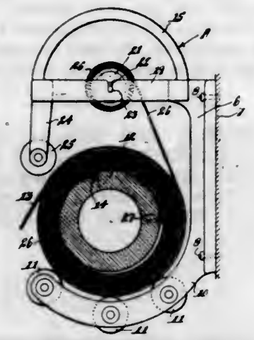
1,812,413. SILENCER. KENNETH J. REYNOLDS, East Hartford, Conn., assignor, by mesne assignments, to The Maxim Silencer Company, Hartford, Conn., a Corporation of Connecticut. Filed Jan. 24, 1929. Serial No. 334,882. 4 Claims. (Cl. 137—160.)

1. A wave damping device or silencer comprising a casing, and a structure within the casing comprising a



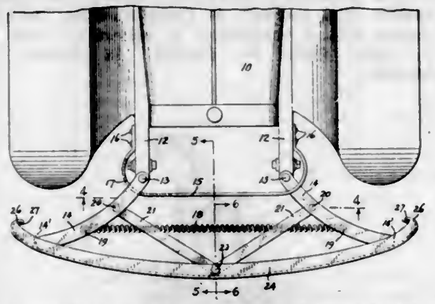
plurality of spirally arranged internested sheets spaced apart radially one from another to form a plurality of spiral passageways, the sheets having a plurality of sets of radially aligned notches formed in their end edges, and a plurality of radial tie rods each passing through a set of notches and being secured individually to each sheet as by welding or soldering, certain of the rods extending beyond the sheets to furnish support for the structure within the casing and to space it radially therefrom.

1,812,414. RAIL ANCHOR. CHARLES B. SHEPHEAD, New York, N. Y., assignor to The P & M Company, a Corporation of Illinois. Filed Mar. 1, 1930. Serial No. 432,419. 5 Claims. (Cl. 238—330.)



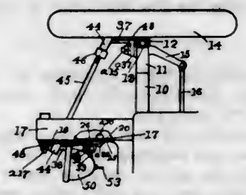
1. A rail anchor comprising a body provided at one end with means for engagement with one edge of a rail base and at the other end with a clamp including an inwardly extending jaw bearing against the inclined top surface of the rail base at one side of the rail, a depending vertically flexible portion connected to the jaw, a vertically disposed and relatively rigid portion connected with said vertically flexible portion and bearing against the bottom surface of the rail base at a location intermediate the end of said jaw and the adjacent edge of the rail base, the said rigid and vertically flexible portions being positioned to provide a space between them adapted to receive the lower corner of the base flange during the initial application of the anchor to the rail.

1,812,415. MIRROR MITERING MACHINE. GEORGE SIMONEL, Bloomington, and WILLIAM H. JOHNSON, Terre Haute, Ind., assignors to The Nurre Mirror Plate Company, Bloomington, Ind., a Corporation of Indiana. Filed Apr. 2, 1925. Serial No. 20,122. 7 Claims. (Cl. 51—100.)



1. In a machine for grooving glass plate, the combination with a stationary support for the glass plate to be grooved, of a carriage arranged to be moved in an irregular path over the surface of said plate, a templet for guiding said carriage in said path, a grinding wheel shaft carried by said carriage, a grinding wheel mounted on said shaft, and means engaging opposite vertical walls of said templet at one and two points respectively for maintaining said grinding wheel shaft in fixed angular relation to the vertical walls of said templet.

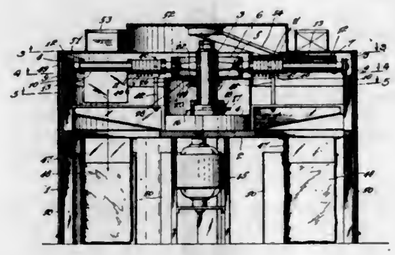
1,812,416. AWNING SUPPORT AND PROTECTOR. JOHN A. SMITH, Chicago, Ill. Filed Dec. 17, 1928, Serial No. 326,468. Renewed Nov. 21, 1930. 7 Claims. (Cl. 156—44.)



4. An awning center support comprising, in combination, a supporting frame, rollers rotatably mounted upon said frame, a drum adapted to be rotated upon said rollers and carrying an awning windably mounted thereon, and a spring actuated spool carrying a strip of protective material adapted to be interleaved with said awning and also adapted to be interposed between said awning and said rollers during the winding and unwinding of said drum.

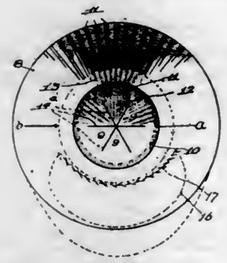
1,812,417. AUTOMOBILE BUMPER. ADOLPH A. THOMAS, New York, N. Y. Filed Apr. 17, 1930. Serial No. 444,955. 16 Claims. (Cl. 293—55.)

1. A bumper structure for automobiles comprising a pair of outwardly diverging levers pivoted to the car, a pair of toggle links connected to said levers and converging forwardly, a bumper bar connected to said toggle links for spreading the same and said levers under the force of an impact, and elastic means arranged crosswise of the car and so mounted as to be expanded when said links and levers are spread apart.



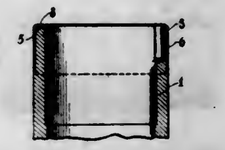
1,812,418. DIRIGIBLE GUIDE-LIGHT MOUNTING MECHANISM FOR AUTOMOBILES. WILLIAM V. VAN ETTEN, Bellingham, Wash. Filed Nov. 29, 1930. Serial No. 499,018. 1 Claim. (Cl. 240—62.62.)

In a mounting mechanism for automobile dirigible guide lights a vertical-shaft bearing bracket flange having



an opening therein for extending therethrough the front spring hinge bolt of said automobile said opening larger than said spring hinge bolt also having other openings therein for extending therethrough bolts engaged with the housing wall of the spring, and a cylindroangular nut on said spring hinge bolt bearing on said bracket flange with the cylindrical portion thereof extended in the larger opening around the spring hinge bolt as a bushing thereto.

1,812,419. MAIL DISTRIBUTING DEVICE. JACOB WEINER, Newark, N. J., assignor to Jacob Weiner Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Nov. 8, 1929. Serial No. 405,835. 3 Claims. (Cl. 214—11.)

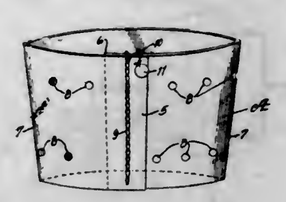


3. In an assorting device, a member having a plurality of radiated stub shafts, means for rotating the member step by step, article receiving plates rotatably mounted on the stub shaft, a plurality of collars rotatably mounted on each stub shaft, means for rotating a selected collar at a predetermined point, and means associated with the collar to tilt the plate downwardly.

1,812,420. CAP. SAMUEL E. WEINER, Chicago, Ill., assignor to Herman H. Newberger, Chicago, Ill. Filed Feb. 12, 1930. Serial No. 427,703. 2 Claims. (Cl. 66—171.)

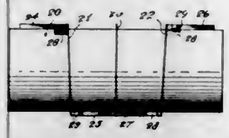
1. A cap composed of knitted tubular material, the end sections of which are composed of rib stitches and in the form of sector-like portions, the edges of which are united by stitches, the middle section of said tubular material being composed of rib stitches and the sections being the middle section and end sections being composed of cardigan stitches, said tubular material being doubled upon itself midway between its ends whereby a central opening is provided from which run inner and outer rib stitch sections followed by inner and outer cardigan stitch sections which terminate in the middle of the cap in inner and outer rib stitch sections.

1,812,421. CORE CAP. WALTER H. WICKWARE, Ottawa, Ontario, Canada, assignor to International Paper Company, a Corporation of New York. Filed June 27, 1929. Serial No. 374,005. 9 Claims. (Cl. 242—68.)



1. A core cap comprising an inner sleeve having an outwardly extending flange at one end thereof, a concentric outer sleeve having an inwardly extending flange at one end thereof, said flanges being associated in overlapping relation and integrally joined to form a web of double thickness between said sleeves, and a portion of the inner sleeve being bent laterally into engagement with the outer sleeve to form a stud-receiving cavity.

1,812,422. SAFETY RAZOR. FRANZ WIESE, Berlin-Wilmersdorf, Germany, assignor to the Firm: Gillette Safety Razor Ges. m. b. H., Vienna, Austria. Filed Nov. 9, 1925, Serial No. 67,999, and in Germany Dec. 16, 1924. 5 Claims. (Cl. 30—12.)

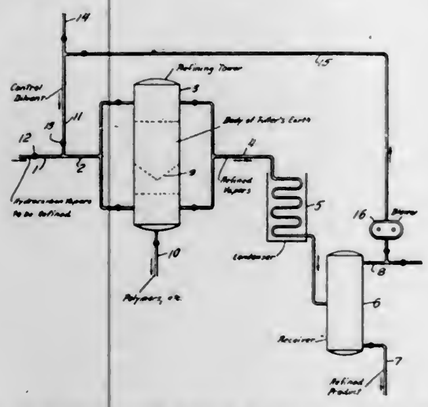


1. A safety razor comprising a thin wafer-like blade and cap and guard members adapted to clamp the blade between them so as to flex it transversely of its cutting edge, in which the guard is provided with projections at both ends extending above the remainder of the guard, curved reversely as compared to the blade curvature and shaped to make contact with the blade only over the width of the bevel at both ends of the cutting edge, thus protecting the ends of the edge.

1,812,423. BASKET LINER. ARTHUR H. WOOD, Adrian, Mich., assignor to Simplex Paper Corporation, Adrian, Mich., a Corporation of Michigan. Filed Oct. 2, 1929. Serial No. 396,633. 4 Claims. (Cl. 217—3.)

1. A basket liner for accommodating fruit and the like which consists of a strip of material bendable into circular form with its two ends connected by a cord stitched into a chain extending the length of the ends and diametrically opposed thereon, one end of the cord being extended beyond the proximate end of the liner for manipulation when the stitching is to be raveled.

1,812,424. APPARATUS FOR PRODUCING SHINGLE STRIPS. HENRY R. WOOD, Sierra Madre, Calif., assignor, by mesne assignments, to The Patent and Licensing Corporation, Boston, Mass., a Corporation of Massachusetts. Filed May 15, 1929. Serial No. 363,322. 3 Claims. (Cl. 164—68.)

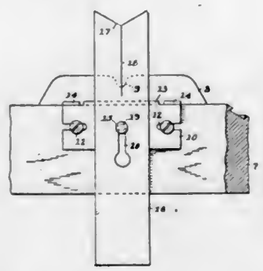


1. In mechanism for cutting sheet material to sever therefrom roofing elements of curvilinear butt-edge configuration, the combination of a rotatable cylinder and a circular knife fixed to the surface of the cylinder, said knife lying entirely in a single plane extending at an angle to the axis of said cylinder, and cutting blades fixed to the surface of the cylinder and extending in parallelism with the axis thereof on opposite sides of said circular knife, said blades being located at substantially diametrically opposed points on the cylinder.

1,812,425. EYEBROW STENCIL. GERD WOSSE, Chicago, Ill. Filed Aug. 30, 1929. Serial No. 389,395. 8 Claims. (Cl. 132—1.)

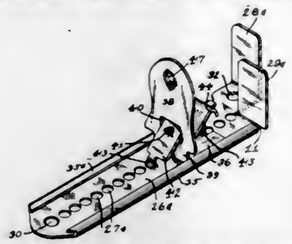
1. An eyebrow stencil comprising a stencil plate having a tapered eyebrow stencilling slot formed therein, and a dished extension integrally formed on one end of said plate for holding the same in position to permit an eyebrow to be painted.

1,812,426. ART OF REFINING HYDROCARBONS. FRANK A. APGAR, East Chicago, Ind., assignor to Sinclair Refining Company, New York, N. Y., a Corporation of Maine. Filed Feb. 29, 1928. Serial No. 258,098. 2 Claims. (Cl. 196—96.)



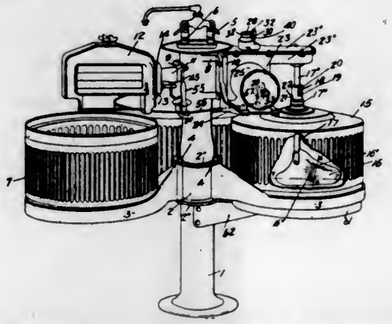
1. In a vapor phase refining of hydrocarbons by passage of the hydrocarbon vapors through a charge of an adsorptive catalyst, the improvement which comprises passing the hydrocarbon vapors through the adsorptive catalyst in admixture with a relatively inactive gaseous diluent and controlling the ratio between the hydrocarbon vapors and the diluent to decrease or increase the proportion of hydrocarbon vapors present in the mixture, respectively, as the activity of the adsorptive catalyst increases or decreases.

1,812,427. WEED KILLER. WILLIAM H. BERGMANN, Cleveland, Ohio, assignor to The American Fork & Hoe Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 26, 1928. Serial No. 264,642. 8 Claims. (Cl. 47—49.)



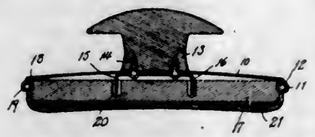
5. In a weed cutting and root destroying device, a support for a blade, a blade on the support, a cutting edge on the blade adapted to be thrust into the ground, a fluid duct associated with the blade and extending to a point adjacent the cutting edge, the blade and duct being adapted to be forced into the earth, a discharge opening for the duct positioned to permit discharge of fluid from the duct in a direction transverse to the direction of movement of the duct when shoved into the ground whereby clogging of the discharge opening is prevented.

1,812,428. SLUB DETECTOR. EDWARD BLOOM, Paterson, N. J. Filed Oct. 25, 1930. Serial No. 491,125. 15 Claims. (Cl. 28—70.)



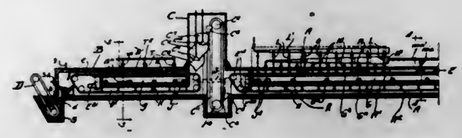
1. In combination, a support and a slub detector carried thereby and having an aperture to receive the yarn and normally held in a given position but yieldable therefrom on the support in opposite directions crosswise of and to the yarn while the latter is drawn lengthwise of itself.

1,812,429. WINDOW SHADE AND CURTAIN BRACKET. LEONARDO BRUNO, Waterbury, Conn. Filed Nov. 1, 1930. Serial No. 492,656. 2 Claims. (Cl. 156—24.)



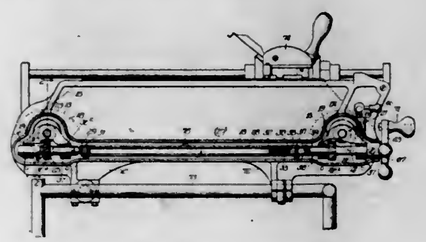
2. In a shade bracket, a base for attachment to a window frame, an adjustable angle member having an outstanding plate and a base plate slidable on said bracket base, said outstanding plate having an aperture, a lever passing through said aperture and having selective interchangeable engagement with said base at a plurality of points along its length, said aperture having a lug extending thereinto to form a pivot for said lever, and a spring located between said base plate and the outer end of said lever for pressing the lower end of said lever against said bracket base.

1,812,430. DOMESTIC LAUNDRY EQUIPMENT. THOMAS WILLIAM CHADBURN, Toronto, Ontario, Canada. Filed Mar. 15, 1930. Serial No. 436,196. 1 Claim. (Cl. 68—15.)



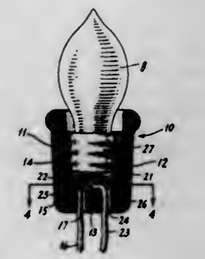
In a domestic laundry equipment the combination with a main standard support, a tub and tub supporting bracket carried by the support, of a tub lid having a central orifice, a vertical bearing secured in the orifice, a lower shaft member extending through the bearing and having a paddle on its lower end, means for supporting the shaft from longitudinal downward movement in the bearing, a gear box carried by the main standard and having a vertical bearing therein in alignment with the aforesaid vertical bearing, an upper shaft member journalled in said bearing, a coupling detachably connecting the upper and lower shaft members, and means for driving the upper shaft member from a suitable driving source.

1,812,431. MANICURIST'S BUFFER. NORTON W. CHAPMAN, Guilford, Conn., assignor to The Guilford Manufacturing Company, Guilford, Conn., a Corporation. Filed Mar. 27, 1930. Serial No. 439,310. 3 Claims. (Cl. 132—78.)



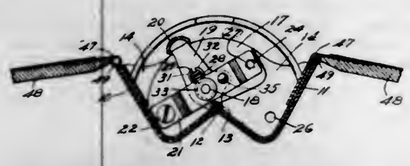
1. A manicurist's buffer comprising a shell formed with an integral annular flange, and a block covered with a suitable material and adapted to be entered into and frictionally held in engagement with the flange of the said shell.

1,812,432. METHOD OF PREPARING FUEL. PHILIP D'HUC DRESSLER, Cleveland, Ohio, assignor, by mesne assignments, to Swindell-Dressler Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 15, 1925. Serial No. 37,077. 14 Claims. (Cl. 44—10.)



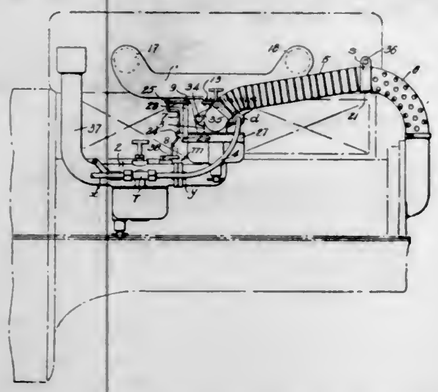
1. The method of preparing fuel which consists in passing a stream of plastic blocks of oil wet fine coal through a chamber in which they are heated and in which they are subjected to an oxidizing action.

1,812,433. WINDING AND TIGHTENING MECHANISM. JAMES K. DUNCAN and RUDOLPH WEIDE, Chicago, Ill., assignors to Ditto, Incorporated, Chicago, Ill., a Corporation of West Virginia. Filed Oct. 8, 1930. Serial No. 487,225. 25 Claims. (Cl. 242—55.)



1. In winding and tightening mechanism, in combination, an axially movable rotatable shaft, a pair of spiral gears secured to said shaft, a pair of second spiral gears adapted to mate alternately with said first mentioned spiral gears, and overrunning clutch means for controlling the rotation of said second spiral gears.

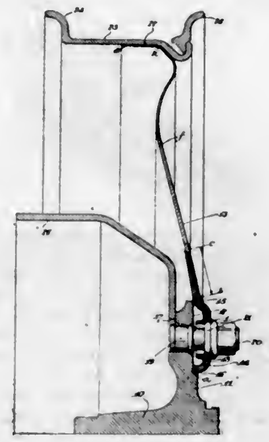
1,812,434. ELECTRIC LAMP SOCKET. REUBEN ECKSTEIN, New York, N. Y. Filed Apr. 16, 1927. Serial No. 184,279. 4 Claims. (Cl. 173—358.)



3. In an electric lamp socket, the combination of a contact shell having an inwardly extending basal rim portion and a terminal plate for connecting said shell to one side of the electrical supply, said plate having a rim portion seated on said shell rim.

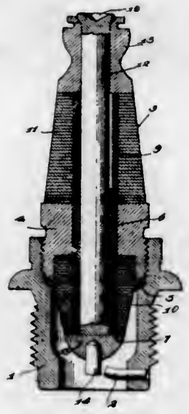
1,812,435. LOOSE LEAF BINDER. ROY E. HAMILTON, Kansas City, Kans., assignor, by mesne assignments, to Wilson-Jones Company, Chicago, Ill., a Corporation of Massachusetts. Filed July 2, 1928. Serial No. 289,800. 12 Claims. (Cl. 129—17.)

1. In a loose leaf binder, a pair of back members, a pintle pivotally connecting said back members, a latching mechanism having interengaging parts carried by the back members to secure the back members against opening, and means carried by the pintle operable in two directions from a neutral position to disengage the interengaging parts of the latching mechanism.



1,812,436. CARBURETING AND LUBRICATING DEVICE FOR INTERNAL COMBUSTION ENGINES. CARL FRED HUDDLE, Napoleon, Ohio. Filed Jan. 28, 1927. Serial No. 164,323. 1 Claim. (Cl. 123—127.)

The combination with an internal combustion engine having a crank case, of an intake manifold having a terminal inlet and an intermediate inlet, a main carbureter connected with the terminal inlet, a high speed carbureter operable with the main carbureter and connected with the intermediate inlet, a fuel supply pipe connected with said carbureters, a main air supply pipe connected with the main carbureter, an air supply pipe connecting the high speed carbureter with the crank case and provided at an intermediate point between the high speed carbureter and the crank case with apertures communicating with the atmosphere and adapted to decrease the vacuum of the engine, controlling means for the main carbureter, and separate controlling means for the high speed carbureter automatically operable by the first mentioned controlling means when the engine has attained a predetermined speed.

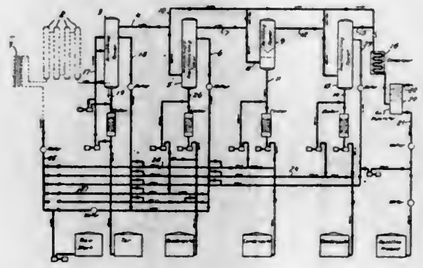


1,812,437. WHEEL DISK. J HAROLD HUNT, Detroit, Mich., assignor to Budd Wheel Company, Detroit, Mich., a Corporation of Pennsylvania. Filed Apr. 2, 1926. Serial No. 99,192. 1 Claim. (Cl. 301—63.)

A vehicle wheel comprising in combination, a hub having a radial flange formed thereon, a wheel body in the form of a metal disk having a relatively thick central portion adapted to abut said radial flange and be secured thereto, a zone of substantially uniform taper extending outwardly from the portion of said disk abutting said hub flange for a considerable part of the radial extent of

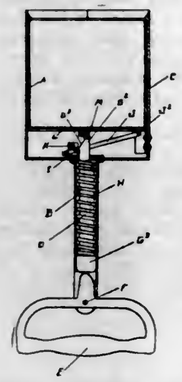
said wheel, a second zone extending outwardly from said first named zone, said second zone being of a slighter taper relative to the taper of said first zone and extending substantially to the rim-engaging portion of the disk.

1,812,438. SPARK PLUG. ROY T. HURLEY, Dobbs Ferry, N. Y., assignor to Hurley-Townsend Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 15, 1930. Serial No. 488,790. 3 Claims. (Cl. 123—169.)



1. In a spark plug, the combination with a shell, of a nut threaded in the shell, a central electrode, and a body of flexible insulating material interposed between the central electrode and the nut, said nut having a lower thermal coefficient of expansion than the central electrode.

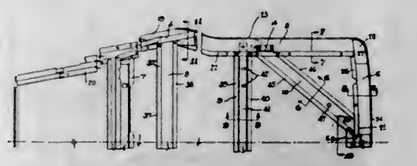
1,812,439. ART OF REFINING HYDROCARBONS. EDWARD W. ISOM, Scarsdale, N. Y., assignor to Sinclair Refining Company, New York, N. Y., a Corporation of Maine. Filed Feb. 29, 1928. Serial No. 257,959. 4 Claims. (Cl. 196—96.)



4. An improved method of producing gasoline which comprises taking off from a cracking operation a vapor mixture including vapors of the gasoline product, bringing the concentration of gasoline components in this vapor

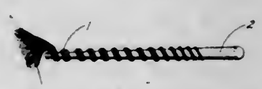
mixture to a point such that condensed it forms a condensate containing not less than 50% and not more than 75% of the gasoline product, passing this gasoline-containing vapor mixture while at a temperature materially below the cracking temperature through an adsorptive catalyst, subjecting the vapor mixture remaining after passage through the adsorptive catalyst to a fractionating

operation and therein condensing all constituents of boiling point higher than suitable as components of the gasoline product, returning condensate produced in this fractionating operation to the cracking operation, and condensing the vapors escaping from this fractionating operation prior to further contact with the adsorptive catalyst to form the gasoline product.



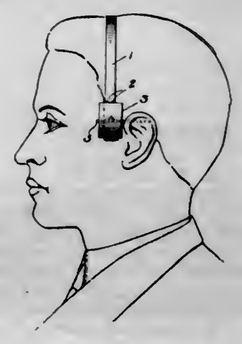
1,812,440. HOLDER FOR CONTAINERS. MACK D. JEFFRIES, Boston, Mass. Filed Apr. 15, 1930. Serial No. 444,419. 2 Claims. (Cl. 226—19.)

1. A device of the character described, comprising a container holding receptacle having a cutting edge adapted to be forced into plastic material, said receptacle being composed of a pair of sections, one of which is movable to open and closed positions with respect to the other, a handle on the other section, a member slidably carried within said handle and provided with a cam surface thereon, a link pivotally connected with said movable section and a pair of circular members positioned adjacent said link and said slidable member to effect a cam action on said link whereby said sections are forced into engagement with each other.



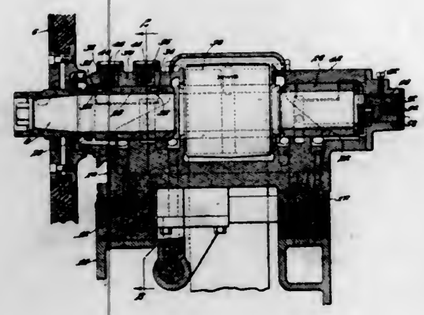
1,812,441. AUTOMOBILE BODY. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 15, 1926. Serial No. 154,884. 6 Claims. (Cl. 296—28.)

4. In a vehicle body construction, a rear sill, a channel member having its ends connected to said sill and extending upwardly at a forward incline with the channel presenting inwardly, diagonal braces connected to said sill beneath the point of its connection with the channel member, and an inwardly facing channel member



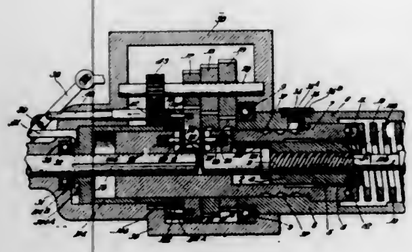
secured in vertical position to said braces and having its upper end nested within the first named channel adjacent the end thereof, whereby a vertical brace for the rear deck housing and a support for the spare tire carrier is provided.

1,812,442. METHOD OF WAVING HAIR. WILBUR S. LEWIS, Lakewood, Ohio, assignor to The Nestle-Le Mur Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 25, 1930. Serial No. 484,302. 4 Claims. (Cl. 132—33.)



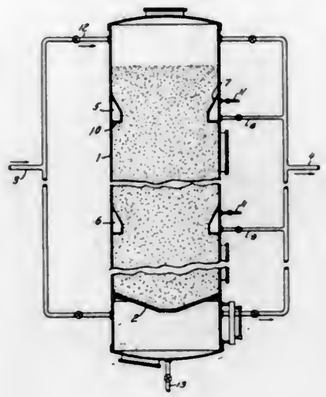
1. A method of permanently waving hair comprising winding a strand of hair on a rod, removing said hair from said rod in the form of a flat coil, folding a pad about said coil to hold it in coiled position and to substantially enclose the coil and applying heat and pressure to the coil.

1,812,443. SHAVING GUIDE. FARD MASON, Lansdale, Pa. Filed Jan. 8, 1931. Serial No. 507,453. 2 Claims. (Cl. 132—45.)



1. As a new article of manufacture a device of the kind and for the purpose described comprising in combination a flexible member adapted to engage the head, a member attached to the head member and being perforated a number of times transversely in order to admit the insertion of a sliding rod, a sliding rod to be inserted selectively in said holes and protruding to rest upon the upper junction of either ear and the head, the choice of the hole in which the rod is inserted determining the level of the lower edge of the gauge as it rests on the side of the head and in front of the ear and thus enabling the shaver to secure a neat edge of the hair immediately in front of the ear at the level desired.

1,812,444. GRINDING MACHINE. MAXWELL I. MATHEWSON, Providence, and ARTHUR BROWN, Cranston, R. I., assignors to Brown and Sharpe Manufacturing Company, a Corporation of Rhode Island. Filed June 22, 1927. Serial No. 200,623. 8 Claims. (Cl. 308—121.)

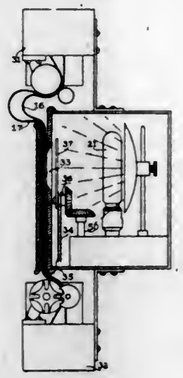


1. A grinding machine having, in combination, a grinding wheel spindle and a radial thrust bearing for the spindle comprising a fixed bearing, a radial bearing block, trunnions on the block, guideways engaging therewith to position the block with relation to the fixed portion of the bearing, and spring means for forcing the block yieldingly into engagement with the spindle.

1,812,445. TORQUE CONTROLLED GEAR CHANGING MECHANISM. FRED W. MAYER, Chicago, Ill. Filed Aug. 27, 1927. Serial No. 215,878. 2 Claims. (Cl. 74—59.)

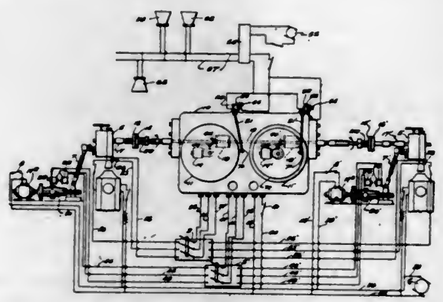
1. In a device of the class described, driving and driven shafts, variable gear ratio changing mechanism between the driving and driven shafts, an intermediate sleeve threaded on one of said shafts, a gear changing sleeve oppositely threaded on said intermediate sleeve, yielding means bearing against said gear changing sleeve for positioning said sleeve in accordance with the torque on said shafts, and connections on said gear changing sleeve for engaging said gear mechanism.

1,812,446. ART OF REFINING HYDROCARBONS. WILLIAM MENDIUS, Chicago, Ill., assignor to Sinclair Refining Company, New York, N. Y., a Corporation of Maine. Filed Feb. 10, 1928. Serial No. 253,372. 2 Claims. (Cl. 196—96.)



2. An apparatus for contacting hydrocarbon vapors with an adsorptive catalyst comprising a vertically arranged tower, means for supporting a charge of the adsorptive catalyst therein, a series of annular members sloping downwardly from said shell at spaced intervals within the region normally occupied by the charge of the adsorptive catalyst, auxiliary vapor connections having valves therein communicating with the space within the shell beneath said annular members, a vapor inlet to an end of said shell only, and a vapor outlet from the other end of said shell.

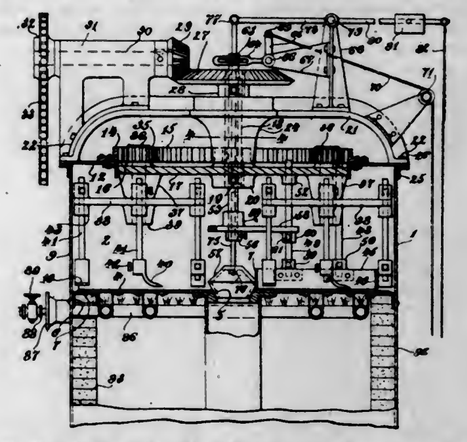
1,812,447. TYPEWRITING MACHINE. LOUIS A. NEMCOVSKY, New York, N. Y., assignor, by mesne assignments, to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Original application filed July 15, 1924, Serial No. 726,063. Divided and this application filed Sept. 29, 1927. Serial No. 222,700. 5 Claims. (Cl. 197—159.)



1. A ribbon-vibrating mechanism including a stationary type-bar segment and a type-bar driven universal bar on said segment, a shift-frame mounting a platen for case-shift movement, a two-color ribbon, a ribbon-vibrator formed with a wide base, spaced-apart pivots on said frame to rockably support said base between them to stabilize the swing of the ribbon-vibrator, a plate slidably mounted upon said base, tongues on said plate that vary in length to vary the rocking extent of said base by the universal bar and settable to present either color of the ribbon to the platen, and a manually-operable train having connections with said plate to set either tongue.

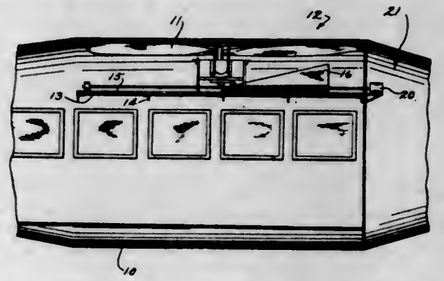
1,812,448. PHOTOGRAPHY. JOHN J. REILLY, Weehawken, N. J., and WILLIAM A. GILMARTIN, New York, N. Y. Filed Oct. 19, 1927. Serial No. 227,145. 4 Claims. (Cl. 95—75.)

1. The method of printing which consists in arranging a negative in contact with sensitized print stock for printing and exposing the whole negative to a plurality of light values selected in accordance with their power to print through selected tones in the said negative.



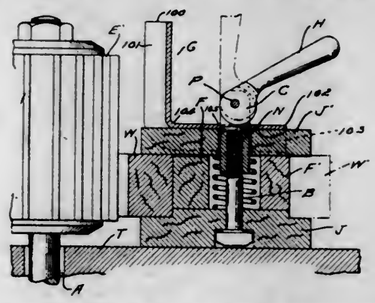
1,812,449. SYNCHRONIZED SOUND AND PHOTOGRAPHY. HARRISON W. ROGERS, New York, N. Y. Filed Oct. 31, 1928. Serial No. 316,197. 3 Claims. (Cl. 88—16.2.)

1. In an apparatus of the character described, the combination of two motor driven motion picture projectors, a sound reproducing machine having a driving motor, said latter machine being interposed between the two motion picture projectors, a synchronizing device, a common shaft drive from one side thereof, two one way clutches one to each projector connecting the projectors to said shaft said clutches being of the type that when one is being driven by the projector the other clutch is free or in reverse, and means connecting the motor of the sound reproducing machine to the other side of the synchronizing device.



1,812,450. MIXER. AUGUSTUS J. SACKETT, Anne Arundle County, Md., assignor to The A. J. Sackett and Sons Company, a Corporation of Maryland. Filed July 14, 1928. Serial No. 292,614. 15 Claims. (Cl. 259—102.)

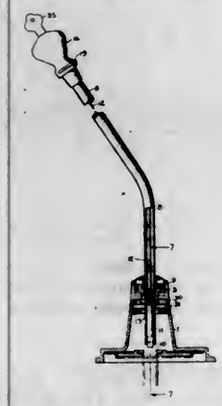
1. A mixing machine comprising a stationary container and stirrer blades therein with means for operating and supporting the stirrer blades to impart a planetary motion to the stirrer blades, a central discharge opening and scrapers for moving the mixed material to the discharge opening, the scrapers having a rotary motion about the discharge opening and being free to move vertically so that



they can rest on the material and on the bottom of the container when the material is removed, and means for raising the scrapers during the operation of the machine.

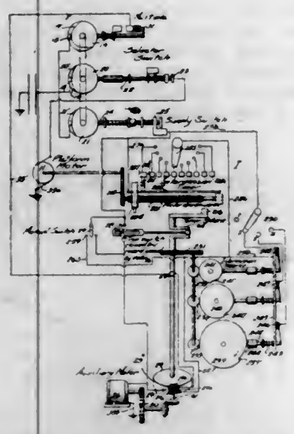
1,812,451. SAFETY PROPELLER. KARL SCHAPEL, North Hollywood, Calif. Filed Feb. 8, 1930. Serial No. 426,836. 5 Claims. (Cl. 244—15.)

2. In combination with an air plane safety propeller of the helicopter type, means to cause said propeller to be vertically actuated, and means associated with the elevation of said propeller to cause an opening in said fuselage through which said propeller may be projected prior to the ejection of said propeller.



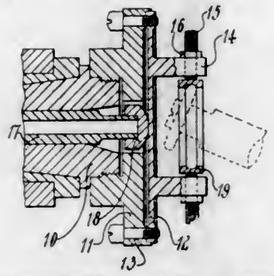
1,812,452. GUARD DEVICE FOR WOOD SHAPERS. ROBERT A. SHAW, Detroit, Mich. Filed June 28, 1930. Serial No. 463,340. 8 Claims. (Cl. 144—251.)

2. In combination, a work holder comprising relatively movable jaws for clamping the work, means for clamping



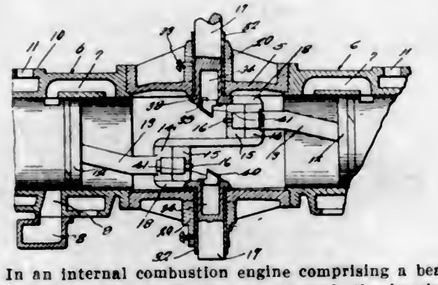
the jaws together, and a guard for protecting the operator, said guard being removably secured to the holder by the clamping means and being substantially of L-shape with a portion engaging one jaw and a portion projecting away from the jaw.

1,812,453. AUTOMOBILE LOCK. ANTHONY R. SMITH, Elyria, Ohio, assignor to Steel and Tubes, Inc., Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 7, 1928. Serial No. 297,968. 12 Claims. (Cl. 70—128.)



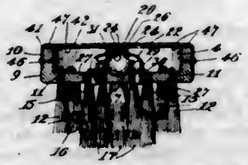
1. A transmission locking device comprising a shift lever, an assembly movable longitudinally of the lever to engage with and be withdrawn from a gear shift element, means for normally forcing the assembly longitudinally of the lever into position for operative engagement with the gear shift element, and a latch operative to automatically secure the assembly longitudinally with respect to the lever in the last mentioned position.

1,812,454. PHONOGRAPH. JACK POTTER STOCKTON, Spring Lake, N. J., assignor to Stromberg-Carlson Telephone Manufacturing Company, a Corporation of New York. Filed June 14, 1928. Serial No. 285,247. 40 Claims. (Cl. 274—10.)



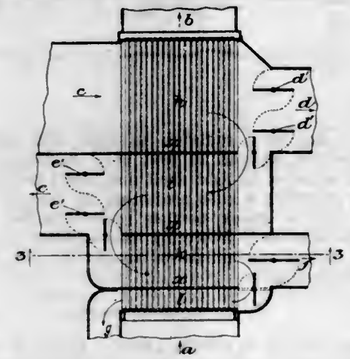
6. An automatic phonograph having a record support, a driving motor therefor, a movable reproducer and stylus cooperative with records on the support, an auxiliary motor automatically set into operation upon the completion of the playing of a record, mechanism operated thereby for effecting a record change and restoring the reproducer and stylus into position to commence playing another record after which the auxiliary motor is stopped, and means under the control of the driving motor for interrupting the cycle of operations of the auxiliary motor to arrest the mechanism whereby the time between successive renditions may be controlled.

1,812,455. DIAPHRAGM CHUCK. BYRON F. STOWELL, Springfield, Mass., assignor to Van Norman Machine Tool Co., Springfield, Mass., a Corporation of Massachusetts. Filed July 5, 1928. Serial No. 290,386. 7 Claims. (Cl. 279—46.)



1. A chuck comprising a plurality of members arranged in a circular series, means for imparting to the members simultaneous radial movements, a plurality of supports mounted independently of the members and so as to be unaffected by their radial movements, and article stops adjustable on the supports in a radial direction for limiting the position of an object in a direction axially of the members.

1,812,456. INTERNAL COMBUSTION ENGINE. WILLIAM C. TAPP, Louisville, Ky., assignor of one-half to Robert N. Hart, Louisville, Ky. Filed Aug. 28, 1929. Serial No. 389,009. 2 Claims. (Cl. 123—73.)

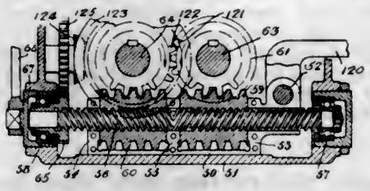


1. In an internal combustion engine comprising a bearing, a hollow drive shaft disposed through the bearing, said bearing being provided with an opening, a supply pipe secured to the bearing over the said opening, and being communicable with the said drive shaft, and means on the said urive shaft whereby the fluid delivered therethrough may be deflected in a predetermined direction, said means comprising a collar, a flange on the collar for engaging the adjacent end of the drive shaft, and an obliquely disposed construction on the collar from which the fluid is deflected.

1,812,457. BRUSH. SAMUEL TAVALIN, Astoria, N. Y. Filed May 15, 1930. Serial No. 452,552. 10 Claims. (Cl. 15—128.)

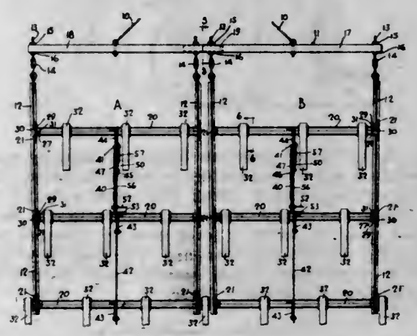
1. In a brush, the combination of a block having bristles permanently secured therein, a plurality of apertures in said block, brush members disposed in said apertures, said members comprising a tube having bristles circumferentially secured thereabout, and a pipe member connected to a supply of water by suitable means, said pipe having a plurality of branches adapted to engage said conduits within said brush members, whereby water may be ejected through said brush members.

1,812,458. AIR HEATER. GEORGE TURKUS, London, England, assignor to Babcock & Wilcox Company, New York, N. Y. Filed July 20, 1928, Serial No. 294,259, and in Great Britain July 26, 1927. 5 Claims. (Cl. 257—224.)



1. An air heater adapted to be heated by hot gases comprising ducts for the passage of the hot gases and air passages for the flow of the air around said ducts, said air passages formed with an outlet opening intermediate the air inlet and outlet at a point spaced in relation to the flow of the air, and a damper controlling such openings.

1,812,459. FERMENTATION OF TOBACCO. KARL VIERLING, Ludwigshafen-on-the-Rhine, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Feb. 17, 1928, Serial No. 255,188, and in Germany Feb. 24, 1927. 2 Claims. (Cl. 131—6.)



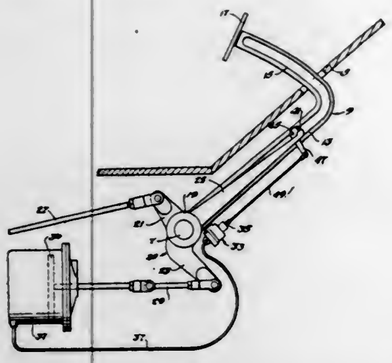
2. A process of fermenting tobacco which comprises spraying tobacco-leaves with a solution of 9 parts of mono-potassium phosphate and 1 part of di-potassium phosphate.

1,812,460. DEVICE FOR TRANSMITTING MOTION FROM A RECTILINEARLY RECIPROCATING MEMBER TO A ROTATABLE MEMBER. OTTO GOTTFRIED WELLTON, Trollhattan, Sweden. Filed Feb. 2, 1927, Serial No. 165,254, and in Sweden Feb. 18, 1926. 9 Claims. (Cl. 74—53.)

1. In a motion transmitting device the combination of a reciprocating member, a rotatable member, a self-stopping screw gearing interposed between said reciprocating member and said rotatable member and acting upon movement of said reciprocating member in the one direction as an ordinary toothed gearing to rotate said rotatable member, said self-stopping screw gearing comprising a screw wheel gearing comprising a screw wheel connected to said rotatable member, and a screw cooperating with said screw wheel and connected to said reciprocating member, a guide guiding said screw to move in a rectilinear path tangential to said screw wheel, and a gearing also interposed between said reciprocating member and said rotatable member and acting upon movement of said reciprocating member in the opposite direction to rotate said screw of said self-stopping screw gearing back to a new position of engagement with said screw wheel of such gearing.

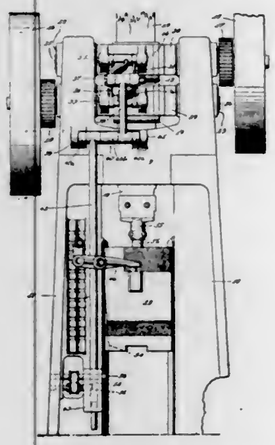
1,812,461. HARROW. ISAAC ALLAN BABCOCK and ARTHUR W. REYNOLDS, Leonardsville, N. Y., assignors to The Babcock Manufacturing Company, Leonardsville, N. Y., a Corporation of New York. Filed Apr. 25, 1928. Serial No. 272,585. 12 Claims. (Cl. 55—104.)

1. In a harrow or the like, the combination of a drawbar, a pair of spaced side bars extending rearwardly therefrom, flexible means for connecting each side bar to said drawbar, brackets on said side bars, each of said brackets being formed with a bearing eye, and means at the rear of said drawbar for connecting said side bars; said means consisting of a plurality of tooth-carrying cross-bars the ends of which extend into said bearing eyes, and flanged bearing means fitting loosely within each bearing eye for rotatably holding said cross-bars in said bearing eyes, the flanges on said bearing means being spaced throughout their length from the sides of said brackets so as to loosely embrace the same.



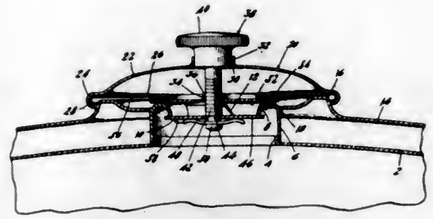
9. In a harrow or the like, the combination of a drawbar comprising a plurality of tubular members, a tubular connecting member inserted in adjacent ends of said tubular members, a plurality of side bars, and means to connect said drawbar to said side bars, said means serving to unite the drawbar members and the tubular connecting member.

1,812,462. TWINE CUTTER. RUDOLPH BEAVER, Watertown, Mass., assignor to Gillette Safety Razor Company, Boston, Mass., a Corporation of Delaware. Filed Aug. 22, 1927. Serial No. 214,651. 5 Claims. (Cl. 30—14.)



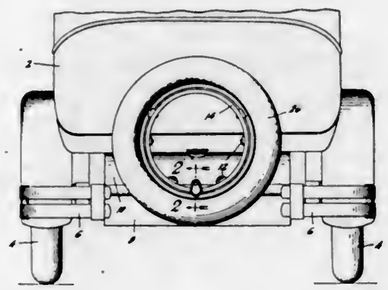
5. A twine cutter comprising a transversely forked blade-holding member having at its base an out-turned flange for supporting said member in upright position, the flange having a plane upper blade-positioning face, a blade provided with a flat back and a curved sharpened edge arranged to project above the lower fork of the blade-holding member when the back of the blade is supported by the face of said flange, and a blade-clamping plate shaped for interlocking engagement with the blade-holding member and edge engagement with said flange.

1,812,463. VACUUM BRAKE CONTROL ON PEDAL. GEORGE P. BEARY, Detroit, Mich., assignor to General Motors Research Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 19, 1928. Serial No. 262,824. 11 Claims. (Cl. 188—152.)



1. In a vacuum operated brake, a manually operable member, a power operated device, movable means through the instrumentality of which said power operated device is adapted to apply brakes, a control device for said power operated device, a lever movably mounted on said manually operable member and engaging said movable means, connecting means between said control device and said movably mounted lever.

1,812,464. DROP HAMMER. FREDERIC C. BILLINGS, Hartford, Conn., assignor to The Billings & Spencer Company, Hartford, Conn., a Corporation of Connecticut. Filed Aug. 30, 1923. Serial No. 660,129. 12 Claims. (Cl. 78—29.)

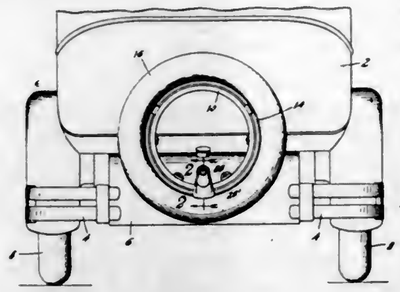


1. In a board drop hammer the combination of a hammer, and hammer board, board-lifting rolls, movable supporting means therefor, a rock link pivoted on the machine frame independently of any roll-supporting means, a friction bar having its lower part guided on the machine frame adjacent the path of the hammer and connected at its upper end to said rock link, a connection between said roll-supporting means and said rock link and means connected with the hammer for automatically moving said bar to produce sustained hammer operation.

1,812,465. RADIATOR CAP. LLOYD BLACKMORE, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Oct. 4, 1928. Serial No. 310,254. 8 Claims. (Cl. 220—24.)

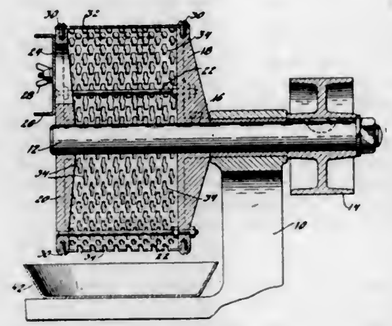
5. In a cap for a radiator, an outer shell portion, an insert portion secured to said shell portion, a handle turnably mounted in said shell and insert portions, said handle comprising a knob projecting out beyond the shell portion, and a shank portion screw-threaded into the insert portion and projecting therebeyond, and means on the end of the handle to secure the cap over the radiator opening.

1,812,466. TIRE CARRIER LOCK. LLOYD BLACKMORE, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Oct. 19, 1928. Serial No. 313,505. 5 Claims. (Cl. 70—122.)



1. In a tire lock, a frame permanently secured to a vehicle, a tire rim removably mounted over the frame, a lock member having one end secured to the frame and its other end overlapping the frame side and having its extremity engaging the tire rim, a bolt passing through said overlapping end and having a threaded connection with said frame, a second lock member fitting the first named lock member and concealing said bolt, and means engaging in said frame and locking said lock members together.

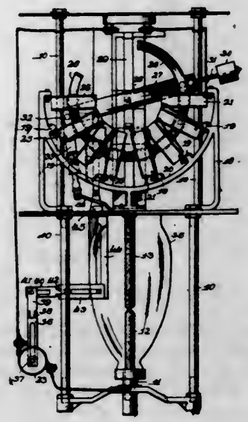
1,812,467. TIRE CARRIER LOCK. LLOYD BLACKMORE, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Oct. 19, 1928. Serial No. 313,506. 3 Claims. (Cl. 70—122.)



1. In a lock ..r tires mounted on a frame rigidly positioned on a vehicle, a rim for said tire, a pair of clamping arms engaging the tire rim and extending over

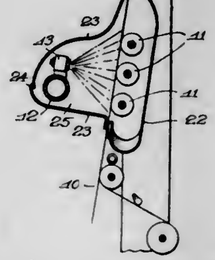
the frame and overlapping each other, means extending through the overlapped portions to rigidly hold said

frame, rim, and arms together, a covering member extending over the overlapped portions and concealing said means, and a lock for said covering member.



1,812,468. LOCK WASHER UNTANGLING DEVICE. ARTHUR O. BROOKE, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Apr. 28, 1928. Serial No. 273,758. 2 Claims. (Cl. 209—397.)

1. A device of the class described comprising a movable member having a plurality of slots formed therein, each of said slots having one side cut away angularly from one end to a point slightly past the transverse center line of said slot, and having the other side cut away angularly from the opposite end to a point slightly past the transverse center line of the slot, whereby the slots are of greater width at their center than at their ends, for the purposes set forth.

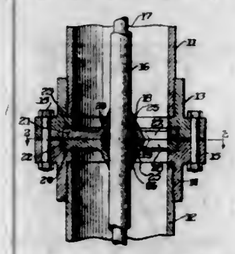


1,812,469. ARC LAMP. HAROLD J. BRUNK, Chicago, Ill., assignor, by mesne assignments, to The C. F. Pease Company, a Corporation of Delaware. Filed Sept. 28, 1927. Serial No. 222,537. 6 Claims. (Cl. 176—99.)

1. An arc lamp having an adjustable carbon and a stationary carbon, a fixed open center coil in series with said carbons, a fixed open center shunt coil across the same, a single arcuate core passing through both of said coils, and means for transmitting motion from said core to said adjustable carbon, said core and said means being balanced about a pivotal support, said shunt coil tending to move said core in a direction to reduce the arc gap, and said series coil opposing such movement whereby fluctuations in voltage and current values due to a slightly increased gap between the carbons will reduce the effectiveness of the series coil on the core

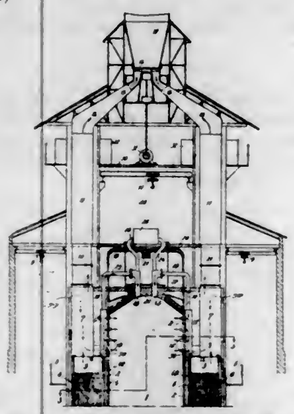
and permit movement of the latter by the shunt coil in a direction to reduce the gap, thus insuring a stable arc.

1,812,470. MEANS FOR WASHING BLUE PRINTS AND OTHER PHOTOPRINTS. HAROLD J. BRUNK, Chicago, Ill., assignor to C. F. Pease Company, a Corporation of Delaware. Filed Feb. 18, 1928. Serial No. 255,482. 2 Claims. (Cl. 95—94.)



1. In a print washing machine, a plurality of nozzles spaced to deliver overlapping sprays, means for delivering liquid to said nozzles, means for moving a sheet of light sensitive material through said sprays, a series of rollers behind and in contact with said sheet for supporting the same against the action of said nozzles, and complementary enclosure members for said nozzles and rollers, said members being positioned with their upper and lower edges disposed adjacent the portion of the paper being washed but spaced sufficiently to permit the passage of the paper between the same.

1,812,471. GUIDE-BEARING. WILLIAM H. CATER, Chicago, Ill. Filed May 3, 1929. Serial No. 360,147. 4 Claims. (Cl. 308—168.)

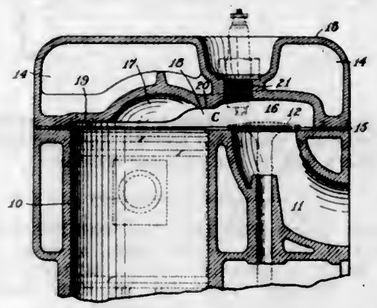


1. The combination of a sectional column-pipe, a coupling joining said sections together, a well-pipe in said column-pipe, and a guide-bearing for said well-pipe comprising a pair of apertured reversely-arranged clamping-members with mating oppositely-flaring recesses through which the well-pipe extends, and a packing in

said recesses designed to be wedged around said well-pipe upon movement of said members toward one an-

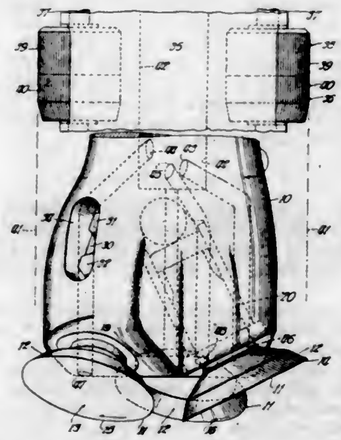
other, said pipe coupling holding said clamping-members together and with the packing wedged around said well-pipe.

1,812,472. PARTICULAR CONSTRUCTION OF TUBULAR BOILERS. MARTIN EULE, Spandau, near Berlin, Germany, assignor to Siemens-Schuckertwerke Aktiengesellschaft, Berlin-Siemensstadt, Germany, a Corporation of Germany. Filed Apr. 3, 1928, Serial No. 266,944, and in Germany Apr. 8, 1927. 4 Claims. (Cl. 122—235.)



1. A tubular boiler composed of a vertical shaft heated from the top and containing the generating tubes, two vertical casings disposed on opposite sides of the shaft, each casing containing in its lower portion superheating tubes and in its upper portion an air heater, means for conducting the flue gases in a single reversal of direction from the shaft bottom into the lower portion of each vertical casing whereby the gases traverse seriatim the superheater and air heater contained therein, before they are discharged from the boiler.

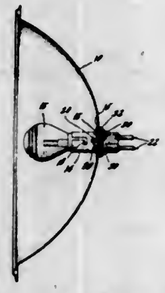
1,812,473. ANIMAL-RACING DEVICE. ALPHEUS FAY and JOHN L. ZEHNDER, Louisville, Ky. Filed Nov. 7, 1927. Serial No. 231,609. 17 Claims. (Cl. 104—244.)



1. In combination with a race course, a lure, a motor having a shaft, a wheel fixed on said shaft, a rail along said course, along which said wheel drives said motor, a second wheel rotatably connected with said motor, turning on an inclined axis, a second rail along said course supporting said second wheel and having an upright part against which said second wheel bears to prevent sidewise displacement of said motor from said rails, and an extension from said motor to said lure.

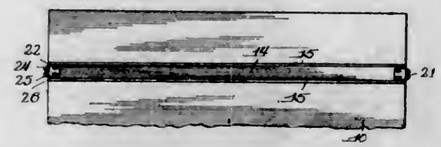
1,812,474. INTERNAL COMBUSTION ENGINE HEAD. GEORGE H. FREERS, Indianapolis, Ind., assignor to Marmon Motor Car Company, Indianapolis, Ind., a Corporation of Indiana. Filed Feb. 28, 1930. Serial No. 432,004. 2 Claims. (Cl. 123—191.)

1. The combination, with a cylinder and inlet and exhaust passages of an internal combustion engine, of a cylinder head having a combustion chamber formed therein, said combustion chamber comprising a portion overlying the inner ends of the inlet and exhaust passages, a dome portion overlying the cylinder and offset from the axis thereof toward the valve chamber, a throat connecting the valve chamber and dome chamber and overlying that portion of the cylinder wall nearest the valve chamber and having a minimum effective cross-section at least equal to the maximum effective inlet valve opening, and a dome extension, extending to the full diameter of the cylinder and having a dimension axially of the cylinder substantially less than the depth of the dome.



1,812,475. DRILLING DEVICE. ARTHUR M. GILDERSLEEVE and CHARLES L. DEAN, Denver, Colo., assignors to The Universal Rotary Bit Company, Denver, Colo., a Corporation of Colorado. Filed Mar. 19, 1927. Serial No. 176,610. 4 Claims. (Cl. 255—71.)

1. A bit for deep well drilling through earth and rock comprising in combination a rotary bit body of generally

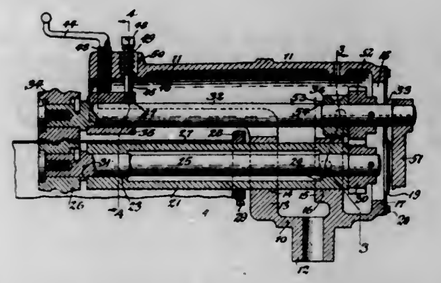


cylindrical outline, a plurality of circular cutters having shafts carried in holes in said body and arranged to support said cutters so that they engage the material to be cut at a cutting angle substantially less than ninety degrees, said cutters being made of hard steel so as to cut or chip hard rock as well as softer materials, said cutter shafts each being provided with a retaining recess, a locking pin projecting into said recess to hold the shaft and cutter in place, the end of said pin being arranged to conform substantially to the contour of said recess, said pin being provided at its outer end with an eccentric retaining element, and a fastening element on said bit body constructed and arranged to cooperate with said retaining element to hold said pin in place when said pin is properly positioned but which will not register with said retaining element when said pin is improperly positioned.

1,812,476. LAMP SOCKET MOUNTING. CHARLES E. GODLEY, Ypsilanti, Mich., assignor to General Motors Research Corporation, Detroit, Mich., a Corporation of Delaware. Filed May 22, 1929. Serial No. 365,114. 3 Claims. (Cl. 240—41.)

3. The combination of a reflector having an aperture therein, a tubular sheet metal socket provided with an abutment to engage the reflector to limit the extent of insertion of the socket in the reflector, said socket being provided at the other side of the reflector with outwardly pressed lugs of wedge form having their free ends projecting toward the reflector, and a coil spring in the form of an annulus bearing against the reflector and bearing against the ends of the lugs for holding the socket in position, said spring being normally stressed when in position so as to tend to contract and wedge between the ends of the lugs and the reflector and clamp the abutment in engagement with the reflector, the edge of the reflector and the socket being provided with an interfitting lug and notch to prevent rotation of the socket when locked in position.

1,812,477. DRAWING BOARD ATTACHMENT. CHARLES A. GREEN, Chicago, Ill., assignor, by mesne assignments, to C. F. Pease Company, a Corporation of Delaware. Filed Apr. 9, 1927. Serial No. 182,454. 8 Claims. (Cl. 33—80.)

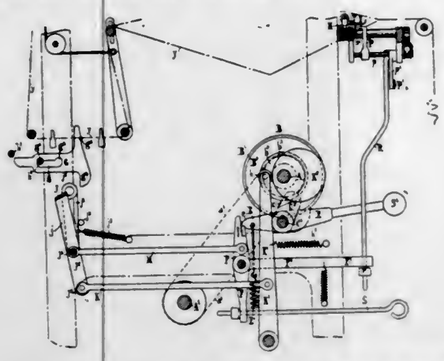


8. The combination with a drawing board of a ruler movable over the upper surface thereof, a pair of brackets, each having a flat inwardly extending portion secured to a face of said ruler, and an intermediate portion extending downwardly adjacent the edge of said board and having its lower end projecting inwardly beneath said board, and means beneath said board to which said lower ends of said brackets are secured for holding said ruler in positions of parallelism as it is moved over said board.

1,812,478. AUTOGRAPHIC REGISTER. LOUIS F. HAGEMANN, Niagara Falls, N. Y., assignor to American Sales Book Company, Limited, Toronto, Ontario, Canada, a Corporation of Canada. Filed Sept. 11, 1920, Serial No. 409,572. Renewed June 20, 1928. 22 Claims. (Cl. 282—16.)

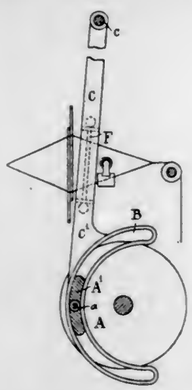
1. In a machine of the character described, in combination, a feed roller and cooperative member adapted to grip and feed a web, a portion of the periphery of said roller being of a width to enter apertures in the web and thereby cause cessation of feed, and fixed pins separate from the feed roller adapted to engage apertures in the web to longitudinally register the web relative to the machine.

1,812,479. SHEET METAL WORKING MACHINE. PAUL R. HAHNEMANN, Buffalo, N. Y., assignor to Niagara Machine and Tool Works, Buffalo, N. Y., a Corporation of New York. Filed Sept. 25, 1928. Serial No. 308,183. 5 Claims. (Cl. 153—9.)



1. A metal working machine comprising a frame having a hollow rear part forming a housing and an overhanging arm projecting forwardly from the upper part of said housing, the lower part of said housing having a front wall, an intermediate inner transverse bracket and a rear wall provided with an opening; a separate lower horn passing at its rear end through said front wall and bracket and supported thereby; a lower shaft journaled in said horn and provided at its front end with a lower forming roll; an upper shaft passing through the upper part of the housing and under said arm and provided at its front end with an upper forming roll, an upper front bearing which is mounted on the front end of the arm and in which the front part of the upper shaft is journaled; an upper rear bearing which is mounted on the upper part of the housing; and intermeshing gear wheels which are secured to the rear ends, respectively, of the upper and lower shafts and which are insertable and removable through the rear opening of said housing.

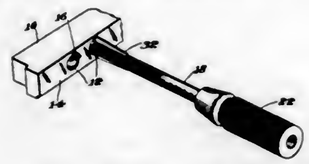
1,812,480. DRIVING GEAR OF NARROW FABRIC LOOMS. HUBERT HAYWOOD, Wirksworth, England, assignor to The Haywood Narrow Fabric Loom Company Limited, The Hague, Broadbottom, Chester, England. Filed Sept. 14, 1929, Serial No. 392,547, and in Great Britain Nov. 10, 1928. 4 Claims. (Cl. 139—361.)



1. In a loom for weaving narrow width fabrics the combination with a driving shaft, of a driven shaft, one

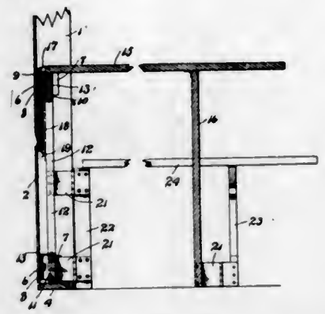
member of a friction clutch mechanism affixed on said driving shaft to rotate therewith but free to slide thereon, a second member of the friction clutch mechanism mounted on said driving shaft so that it can rotate thereon, means for preventing the second clutch member from sliding on said driving shaft, gearing connecting the second

clutch member with the driven shaft, a spring normally pressing the two clutch members together, a rocking arm which when rotated separates the two clutch members to stop the loom, a warp stop motion which actuates the rocking arm on breakage of a warp yarn and weft stop motion which also actuates the rocking arm on breakage of a weft yarn or on exhaustion of a shuttle.



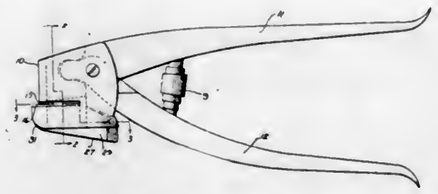
1,812,481. LOOM REED MOTION AND MECHANISM. HUBERT HAYWOOD, Wirksworth, England, assignor to The Haywood Narrow Fabric Loom Company Limited, The Hague, Broadbottom, Chester, England. Filed Oct. 26, 1929, Serial No. 402,764, and in Great Britain Feb. 16, 1929. 1 Claim. (Cl. 139—190.)

In a reed motion of the type referred to for smallware looms the combination with the slotted swinging arms, the continuously rotating discs and the pins working in the slots at the ends of the arms of a curved slide pivotally mounted in relation to the disc and carried on each pin, the curvature of the slide being the same as that of the slot in the swinging arm to prevent vibration of the pin therein.



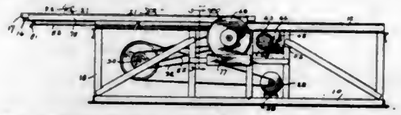
1,812,482. SCRAPING TOOL. JOHN H. HILL, Wollaston, Mass., assignor to Gillette Safety Razor Company, Boston, Mass., a Corporation of Delaware. Filed Mar. 22, 1930. Serial No. 438,123. 5 Claims. (Cl. 145—47.)

1. In a scraping tool, a handle rod with mandrel portion containing a transverse slot, a scraping blade inserted within said slot, and having parallel arms contacting with said rod to prevent displacement within the slot of the blade, and a shoulder on the blade having a radially-dis-



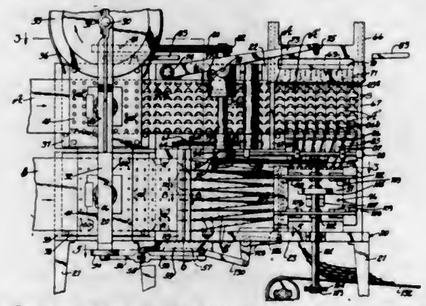
posed scraping edge formed at the base of one of said arms and projecting laterally from said mandrel portion of the rod.

1,812,483. FOLDING TABLE AND BENCH. CHARLES W. HORTON, Grand Rapids, Mich., assignor, by mesne assignments, to John E. Strong, Grand Rapids, Mich. Filed Sept. 26, 1927. Serial No. 221,941. 6 Claims. (Cl. 45—51.)



1. In combination, a vertical support, a table supporting member, means for mounting said table supporting member on said vertical support for limited vertical movement, a table having hinged connection adjacent one end to said member for swinging movement about a horizontal axis, a leg hinged to the under side of said table toward its other end, means projecting rearwardly from the hinged end of said table and means on said vertical support cooperating therewith when the table is swung from vertical to horizontal position to permit lowering of said table supporting member and when the table is swung from horizontal to vertical position to elevate said supporting member.

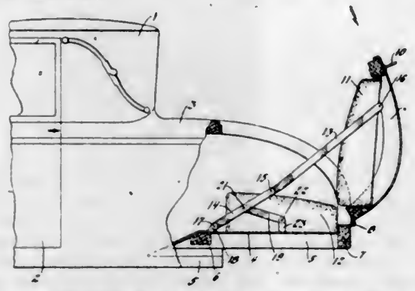
1,812,484. TOOL FOR CUTTING BOX STRAPPING AND THE LIKE. LEON S. HOWE, New Britain, Conn., assignor to The Stanley Works, New Britain, Conn., a Corporation of Connecticut. Filed Apr. 5, 1929. Serial No. 352,689. 4 Claims. (Cl. 164—81.)



1. An improved tool for cutting box strapping and the like comprising means for cutting the box strapping, and a receptacle hinged to the lower portion of the tool below said cutting means and biased to the closed position, said receptacle having an inclined bottom portion.

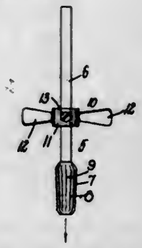
1,812,485. MACHINE FOR CUTTING DESIGNS IN GLASS. PARKER H. JAMES and HARRY C. WOODSMALL, Indianapolis, Ind. Filed July 15, 1929. Serial No. 378,409. 5 Claims. (Cl. 51—92.)

3. For cutting designs on glass, the combination of a frame, a table maintained on the frame in fixed vertical relation thereto but adapted to be moved in a horizontal plane thereover, a shaft below the table and projecting at one end beyond the side of the table, a grinding wheel on said end of the shaft, and means for adjusting said shaft in a vertical plane and maintaining said shaft in that plane to permit the cutting edge of said wheel to be raised and lowered in relation to the top of said table, glass elevating means along an edge of the table, power means for reciprocating said table past said wheel, and hand means for reciprocating the table independently of the power means.



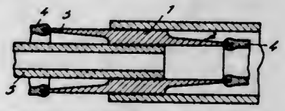
1,812,486. EGG CASE FILLER MACHINE. E. JOSEPH KANABAY, Chicago, Ill., assignor to Leon Benoit, Chicago, Ill. Filed Nov. 15, 1928, Serial No. 319,479. Renewed Dec. 22, 1930. 34 Claims. (Cl. 93—37.)

1. In a machine of the class described, the combination with an assembling frame formed with two intersecting sets of guideways for the reception of material, of feeding and inserting mechanism entirely exterior of said guideways and operating to insert the material into the intersecting guideways of the assembling frame.



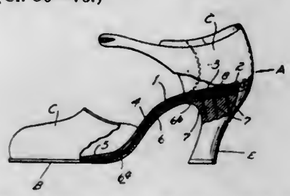
20. In an egg case filler machine, the combination of co-acting strip feeding rolls having means for bending the strips into troughlike form, and means for intermittently rotating said feed rolls.

1,812,487. AUTOMOBILE BODY. DAVID M. KLAUSMEYER, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 15, 1928. Serial No. 261,935. 4 Claims. (Cl. 296—66.)



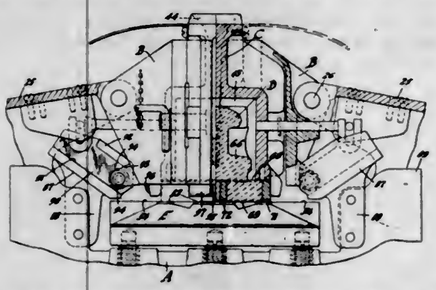
1. In an automobile body, the combination with a rear deck having an opening therein, of a hinged closure door for said opening, folding links adapted when extended to hold said door in open position, a cushion carried by said door forming a back rest, a seat cushion slidable on the floor of the deck, and a connection between one of said links and said seat cushion for sliding said cushion in unison with the movement of said door.

1,812,488. ABRADING TOOL. ARTHUR F. KRAUSZ, Boston, Mass. Filed June 5, 1930. Serial No. 459,390. 5 Claims. (Cl. 132—73.)



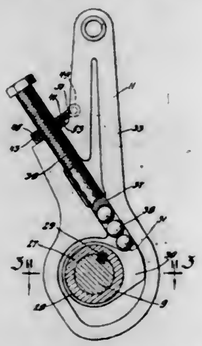
5. An abrading tool comprising a cylindrical member, the periphery of one end portion thereof being roughened to form an abrading surface, the remainder of said member constituting a shank adjacent said abrading surface, and a fan on said shank spaced apart from said abrading surface there being an unobstructed space between said fan and said abrading surface.

1,812,489. ELECTRON TUBE. ALBERT KRÜGER, Berlin, Germany, assignor to Siemens-Schuckertwerke Aktiengesellschaft, Berlin-Siemensstadt, Germany, a Corporation of Germany. Filed Jan. 26, 1928, Serial No. 249,579, and in Germany Jan. 31, 1927. 1 Claim. (Cl. 250—27.5.)



In an electron tube, a leading-in device through the wall of the tube consisting of a metal ring fused to portions of the wall of the tube at both ends to form a portion of the wall, said ring being considerably thicker in its central portion than at the ends for sealing the ring to the wall of the tube, and an internal and an external tubular conductor threaded to the enlarged central portion of said metal ring.

1,812,490. SOLE CONSTRUCTION FOR APPAREL SHOES. JOHN W. LAKE and WILLIAM T. FINKS, St. Louis, Mo., assignors, by mesne assignments, to Campello Shank Company, Campello, Mass. Filed May 7, 1928, Serial No. 275,584. Renewed May 5, 1931. 3 Claims. (Cl. 36—76.)

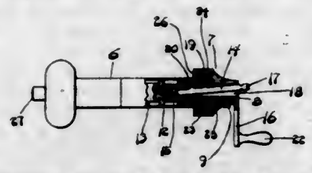


1. An apparel shoe comprising an outsole, an insole, a fibre-board secured to said insole to provide a pocket, an arch shank located within said pocket, and a heel, said insole having separable portions arranged one above the other at the heel portion thereof, and fastening devices extended through the lowermost of said separable portions of said insole through said arch shank and fibre-board and through said outsole into said heel.

1,812,491. CORE FOR METAL CASTING MOLDS. CHARLES L. LEE, Dayton, Ohio, and THOMAS C. VAN DEGRIFT, Detroit, Mich., assignors to General Motors Research Corporation, Detroit, Mich., a Corporation of Delaware. Original application filed Apr. 22, 1925, Serial No. 24,968. Divided and this application filed Nov. 12, 1928. Serial No. 318,708. 4 Claims. (Cl. 22—165.)

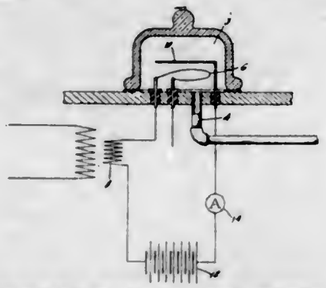
1. In a casting apparatus, a non-metallic core body having a flange-like base combined with a metallic body having a rim and spoke-like members, the space between the spoke-like members being filled with core body material.

1,812,492. ADJUSTABLE BRAKE LEVER. WILLIAM S. LEE and THERON P. CHASE, Detroit, Mich., assignors to General Motors Research Corporation, Detroit, Mich., a Corporation of Delaware. Filed May 17, 1929. Serial No. 363,950. 4 Claims. (Cl. 287—52.)



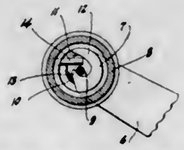
1. In combination, a shaft, a lobed hub rigid therewith, an adjustable lever arm comprising a pair of mating stampings, said stampings, when assembled, having aligned parts encompassing said shaft and engaging opposite faces of said hub, said arm also having mating radial arms, said stamping also shaped to form, when assembled, a tangential tubular passage, and means axially adjustable in said passage to engage said lobe and predetermine the angular relation of said lever arm relative to said shaft.

1,812,493. SUCTION CLEANER ATTACHMENT. EUGENE F. MARTINET, Cleveland, Ohio., assignor to The P. A. Geier Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 8, 1928. Serial No. 252,787. 3 Claims. (Cl. 15—158.)



1. In combination with a vacuum cleaner nozzle terminating in lip walls forming a mouth, a brush for said nozzle including bristle members forming an offset extension for a lip wall and terminating in a face for contact with a surface to be cleaned, and means forming an extension for said lip walls mounted for free movement with respect to said lip walls and brush for directing air currents entering said mouth along a path adjacent said face.

1,812,494. SPRING WINDING AND SETTING TOOL. CURTIS MCFARLAND, Felicity, Ohio. Filed Apr. 20, 1929. Serial No. 356,863. 1 Claim. (Cl. 81—7.5.)

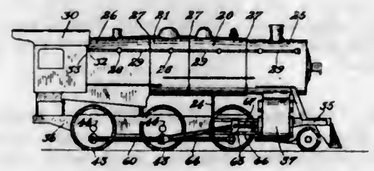


In a combined spring winding and setting tool, the combination of a spring setting element to receive a spring, and a winding element for cooperation therewith, said winding element consisting of a crank, an adjustable shaft therein slotted to receive a lugged latch, said shaft having more than one offset of varying diameter with the slot extending into each offset, and a lugged latch pivoted therein extending beyond the crank for movement, the lugs of the latch cooperating in said movement with the offsets on said shaft, whereby movement of said latch engages or releases a spring located in said setting element.

1,812,495. ELECTRICAL CONTACT. HECTOR RABEZZANA, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Jan. 31, 1929. Serial No. 336,470. 4 Claims. (Cl. 200—166.)

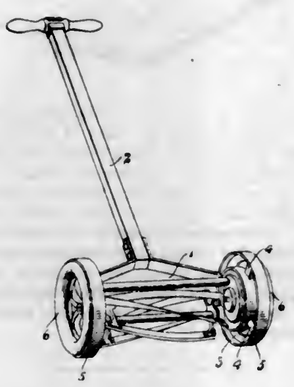
1. An electrical contact composed entirely of metal of high work function.

1,812,496. SIDE WIRE GAP WRENCH FOR SPARK PLUGS. HECTOR RABEZZANA, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Nov. 25, 1929. Serial No. 409,607. 6 Claims. (Cl. 81—15.)



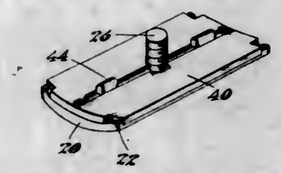
1. In a tool for adjusting the gap between electrodes of a spark plug or the like, including a hand lever, a boss on the hand lever insertable into the central opening thru the plug shell and engageable with the wall of the shell to provide a fulcrum for the lever, whereby the lever may be swung about the axis of the plug, and a part engageable with one of the electrodes to bend the same when the lever is swung.

1,812,497. RECOVERY OF POTASSIUM SULPHATE FROM POLYHALITE. GEORGE FLETCHER RANSOM, San Angelo, Tex., assignor to Humble Oil & Refining Company, Houston, Tex., a Corporation of Texas. Filed June 22, 1927. Serial No. 200,767. 1 Claim. (Cl. 23—40.)



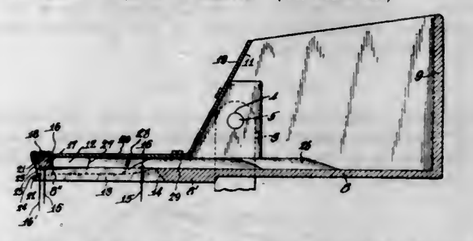
The process of recovery of potash salts from polyhalite comprising grinding and comminuting the ore, mixing lime therewith in amount approximately equivalent to the magnesium content of the ore, digesting the mixture in its original condition with hot water to dissolve the potash salts, simultaneously precipitating the magnesium sulphate, removing the precipitate, treating the solution with carbon dioxide to precipitate a portion of the lime, and then evaporating the remaining solution.

1,812,498. STRUCTURAL TOY LOCOMOTIVE AND THE LIKE. RALPH H. SHEPARD, Bronxville, N. Y. Filed Jan. 23, 1928. Serial No. 248,663. 13 Claims. (Cl. 46—48.)



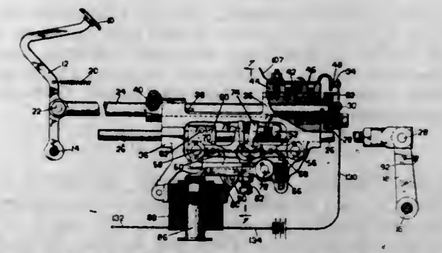
1. In a toy locomotive, a plurality of typical boiler sections, means for mounting them end to end on a supporting frame, and means for detachably connecting them together and to the frame.

1,812,499. GUARD FOR LAWN MOWER WHEELS. HAROLD WHEELER SMITH, Utica, N. Y., assignor of one-half to William A. Ainsworth. Filed Nov. 5, 1929. Serial No. 404,905. 5 Claims. (Cl. 56—249.)



1. A lawn mower having wheels to run over the ground, and a yieldable hollow protective guard attached at the outer side of each of said wheels near its outer periphery and extending beyond the outer edges thereof.

1,812,500. SAFETY RAZOR. THEODORE L. SMITH, Concord, Mass., assignor to Gillette Safety Razor Company, Boston, Mass., a Corporation of Delaware. Filed May 20, 1930. Serial No. 454,115. 6 Claims. (Cl. 30—12.)

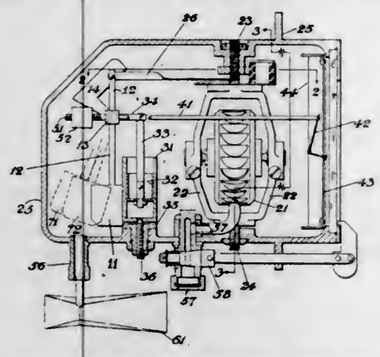


1. A safety razor comprising a holder having a blade-positioning rib and a removable plate having in one face a groove to fit upon the rib and upon the other a blade-positioning projection of a shape different from said rib.

1,812,501. PIN SORTER AND DISPENSER. FERDINAND R. STROBEL, Philadelphia, Pa. Filed June 10, 1929. Serial No. 369,875. 3 Claims. (Cl. 312—73.)

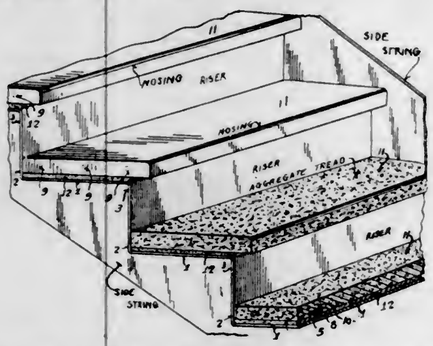
1. A pin sorter, comprising a container having a bottom wall and adapted to be tilted into an abnormal position, longitudinally extending slots in said wall, slanting surfaces upon the opposite sides of and operative to direct pins into said slot, and means bridging the forward portion of said slot to arrest the forward movement of pins above said slot, and the upper forward portion of said slot sloping beneath said means and being widened to permit the heads of pins in said slot to pass freely beneath said means.

1,812,502. BRAKE RELEASE DEVICE. GEORGE H. TABER, Los Angeles, Calif. Filed Aug. 16, 1928. Serial No. 299,900. 6 Claims. (Cl. 188—181.)



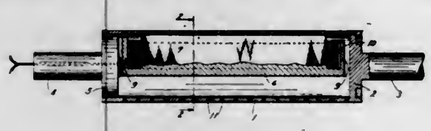
1. In braking apparatus for a rotating wheel, in combination, a brake, means for applying said brake to decelerate the rotation of the wheel, an electrical device, and means operable automatically to energize said electrical device in case the wheel ceases to rotate, whereby said device disables said applying device and releases said brake, substantially as described.

1,812,503. INCLINOMETER. MORRIS M. TITTERINGTON, Brooklyn, N. Y., assignor, by mesne assignments, to Pioneer Instrument Company, Incorporated, Brooklyn, N. Y., a Corporation of New York. Filed Dec. 10, 1923. Serial No. 679,571. 16 Claims. (Cl. 33—220.)



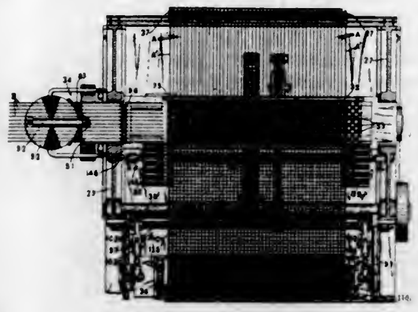
1. In combination, a pendulum and means mounting it to swing about an axis, a gyroscope and means mounting

it for precession about an axis at an angle to the axis of the swinging pendulum, connecting means established between said pendulum and said gyroscope, and indicating



means connected with said pendulum, said means indicating the angular displacement of said pendulum relative to its mounting means.

1,812,504. METHOD AND MEANS FOR SECURING TREADS TO STEEL SUBTREADS. LOUIS DEL TURCO, Newark, N. J. Filed Jan. 24, 1930. Serial No. 423,052. 19 Claims. (Cl. 72—96.)

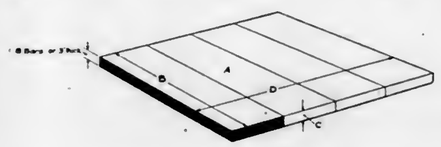


1. The method of securing a tread to a sub-tread which consists in forming a dovetail shaped indentation on the under surface of such tread, mounting a securing means on the upper face of the sub-tread and filling around said securing means and into said dovetail shaped indentation a cementitious material.

1,812,505. MEANS FOR CONVEYING MAGNETIC MATERIAL. ROY O. WERTZ, Cleveland, Ohio, assignor to The Ohio Electric Manufacturing Co., Cleveland, Ohio, a Corporation of Ohio. Filed May 9, 1929. Serial No. 361,559. 11 Claims. (Cl. 198—41.)

1. A conveyor for elongated magnetic articles which comprises a stationary multi-polar magnet extending transversely to the direction of travel of the articles, and a non-magnetic shell rotatable about the magnet for conveying the articles, the shell having means for concentrating the magnetic lines of force at the outside surface of the shell and above the poles of the magnet.

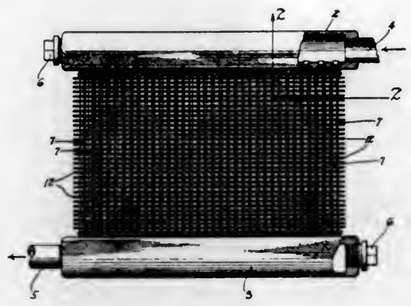
1,812,506. WOVEN WIRE FABRIC MACHINE. FREDERICK E. WILLITS, Fairport, N. Y. Filed Nov. 15, 1927. Serial No. 233,354. 50 Claims. (Cl. 139—28.)



1. In a wire fabric machine, in combination, means for supporting a plurality of warp strands, means for simultaneously positioning a plurality of filler strands in intermeshing relation with the warp strands with their ends projecting adjacent to a selvage warp strand, and means for looping said projecting strand ends over said selvage warp strand.

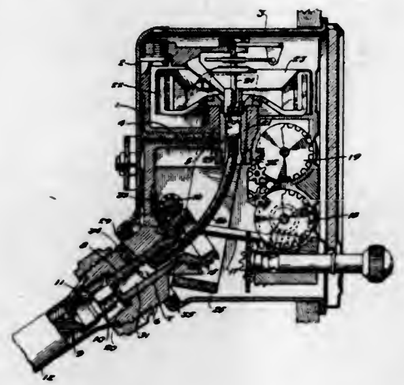
1,812,507. DETERGENT COMPOSITION. WILLIAM J. ZICK, Heathcroft, London, England, assignor to Standard Oil Development Company. Filed Nov. 1, 1926. Serial No. 145,716. 3 Claims. (Cl. 87—5.)

3. A detergent composition comprising a soap, substantially free from alkali, containing substantially 4% by weight of a free naphthenic acid and substantially 0.25% by weight of kerosene.



1,812,508. METHOD OF MAKING SHEETS AND PLATES. CHARLES W. BENNETT, Pittsburgh, Pa., assignor to American Sheet and Tin Plate Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed June 21, 1927. Serial No. 200,423. 17 Claims. (Cl. 29—18.)

1. The method of making sheets and plates, which consists in cutting long metal slabs of known width and thickness into slabs of the length and weight necessary to make a predetermined number of packs of sheets or plates, rolling the cut slabs into long thin flexible strips of known width and gage, and then cutting each rolled strip into a predetermined number of duplicate sections, matching a plurality of the strip sections and rolling the matched sections into sheets or plates of the desired length and gage and determining from the overall length of the long, flexible strip the length into which the individual sections are cut.

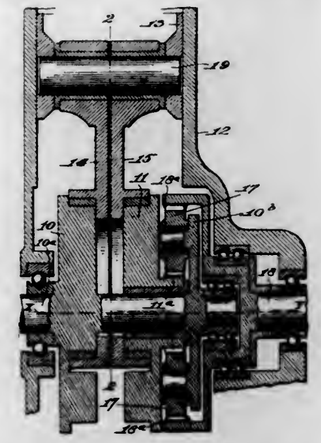


1,812,509. HEAT EXCHANGER. MERRILL L. BENSON, Minneapolis, Minn., assignor, by mesne assignments, to Super Radiator Corporation, Minneapolis, Minn., a Corporation of Minnesota. Filed June 27, 1928. Serial No. 288,651. 1 Claim. (Cl. 257—154.)

A heat exchanger comprising a plurality of tubes, a plurality of relatively thin sheet-like fins disposed in parallel spaced relation, each fin having a plurality of apertures, a flange surrounding each aperture of each fin, each fin having all of the tubes passing through its apertures, each tube being outwardly expanded so that each fin adjacent each aperture is frictionally held to each tube

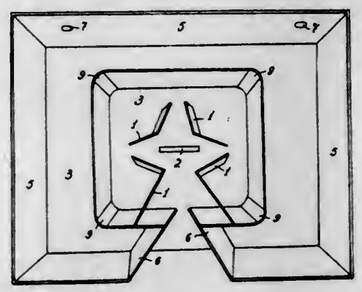
to provide a substantially rigid unitary heat exchanger with the fins, and the interior of each tube throughout that portion of its length surrounded by said fins having a uniform smooth bore to minimize frictional resistance to fluid circulation therethrough.

1,812,510. SPEEDOMETER DRIVE MECHANISM. JOSEPH BERGE, Montclair, N. J., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Original application filed May 16, 1921, Serial No. 470,062. Patent No. 1,670,836, dated May 22, 1928. Divided and this application filed Mar. 1, 1928. Serial No. 258,272. 11 Claims. (Cl. 64—30.)



1. In combination, two members rotatable in fixed positions about axes at an angle to each other, and a built-up flexible wire cable connecting said members to drive the one from the other, said cable being free to move axially thereof between said members and to accommodate itself to the form naturally imposed thereon by the transmission of driving torque.

1,812,511. TWO SPEED POWER TRANSMISSION. WILLIAM A. CALDWELL, Los Angeles, Calif. Filed Aug. 13, 1927. Serial No. 212,709. 31 Claims. (Cl. 74—34.)

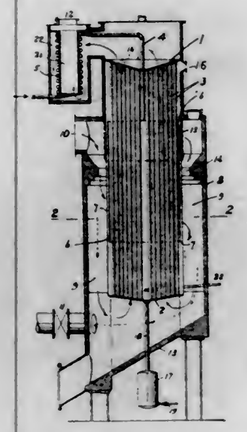


1. In a power transmission, in combination, a planetary set comprised of gearing controlled by a plurality of co-

axial members and a frame supporting all of said members for independent rotation, a reciprocation member also supported by said frame for reciprocation, means

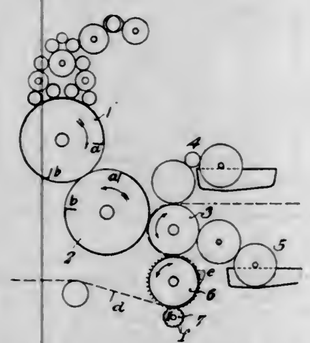
connecting said reciprocation member to one of said gear controlling members and means connecting said reciprocation member to another one of said gear controlling members.

1,812,512. INSECT TRAP. RAUL JUAN CARBALLO, Buenos Aires, Argentina. Filed Dec. 20, 1928. Serial No. 327,443. 1 Claim. (Cl. 43—119.)



An insect trap of the character described, comprising a main housing provided with an inlet, a secondary trapping box arranged within the main housing and also provided with an inlet of considerably smaller size than the inlet of the main housing, partition walls between the box and the housing and cooperating with the openings to form a converging entrance, a prism within the box opposite the inlet opening, angularly disposed and spaced reflecting partitions within the box and on opposite sides of the prism, the space between the housing and the box constituting an insecticide receiving chamber, and the inner box being provided with openings permitting insects to pass from the box to the insecticide chamber.

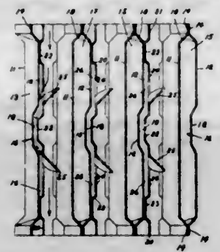
1,812,513. VERTICAL FIRE TUBE BOILER. CHARLES S. CHRISMAN, West Chester, Pa., assignor to The U. G. I. Contracting Company, Philadelphia, Pa., a Corporation of Delaware. Filed Dec. 10, 1926. Serial No. 153,754. 1 Claim. (Cl. 122—7.)



A fire tube boiler, adapted to be heated alternatively by two kinds of gases one of which is injurious to the tubes of the boiler, comprising in combination, a vertical cylindrical boiler shell, a boiler setting surrounding

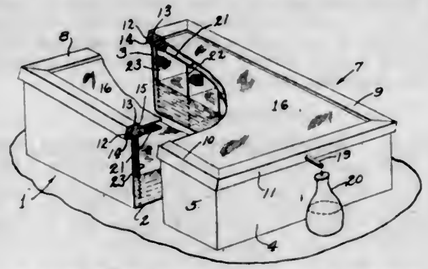
said boiler shell and spaced therefrom to form a gas passage, a gas inlet to said passage near the top of the setting, a smoke box above the top of said boiler shell, a gas chamber below said shell in communication with

said gas passage, a plurality of vertical fire tubes extending through said shell connecting the smoke box with said gas chamber, means for withdrawing the injurious gas from the gas chamber and offtake means for the other gases from said smoke box.



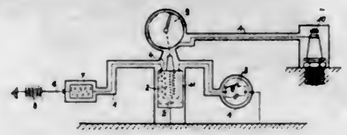
1,812,514. VARNISHING AND PRINTING MACHINE FOR BANDS. KUNO CHRISTIAN, Bad Soden on Taunus, Germany. Filed Apr. 23, 1930, Serial No. 446,602, and in Germany June 25, 1928. 1 Claim. (Cl. 101—217.)

In combination with a printing machine, means for perforating and guiding a continuous web of stiff sheet material, comprising disks having peripheral teeth and counter-disks having a plurality of recesses registering with the teeth of the first named disks, an impression cylinder, a rubber cylinder and means for successively rotating the said impression cylinder and perforating mechanism forwardly and reversely.



1,812,515. AUTOMOBILE RADIATOR CORE. NELSON T. CORCORAN, Cincinnati, Ohio, assignor to The Corcoran Manufacturing Company, Norwood, Ohio, a Corporation of Ohio. Filed July 11, 1929. Serial No. 377,456. 4 Claims. (Cl. 257—130.)

2. An automobile radiator core comprising a plurality of flattened endless corrugated bands the opposed walls of said bands cooperating with the walls of adjacent bands for forming water tubes the outer walls of said tubes having depressions therein and a spacer strip inserted within each band and having bosses cooperating with the

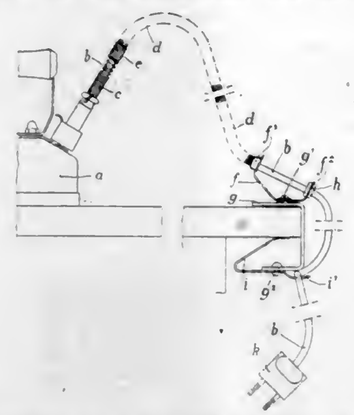


depressions in the outer walls of a pair of adjacent resulting water tubes and providing transverse air passages.

1,812,516. MEANS FOR PURIFYING WATER. GEORGE W. DOOLEY, Huntington Park, Calif. Filed Dec. 21, 1927. Serial No. 241,663. 4 Claims. (Cl. 202—234.)

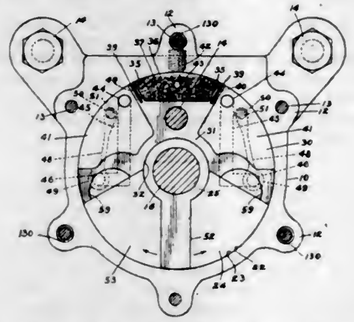
1. A solar water purifier comprising a chamber, the lower portion of which constitutes a container for a supply body of water; a sheet of bibulous material positioned in the chamber above the container for the water capillary; means extending downward from the bibulous material for elevating water to the sheet; and a cover above and spaced from the sheet and penetrable by solar rays and serving as a condenser and collector for the condensate.

1,812,517. BATTERY IGNITION APPARATUS. WALTER DORN, Stuttgart, Germany, assignor to Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Filed June 23, 1930, Serial No. 463,225, and in Germany July 4, 1929. 5 Claims. (Cl. 123—148.)



1. In a screened battery ignition apparatus which includes an induction coil connected through a series resistance to a battery and an earthed metallic screen extending around the apparatus, the provision of an earth connection from that end of said induction coil which is nearest the battery and a condenser in said earth connection.

1,812,518. GUIDE FOR THE CURRENT SUPPLY CABLE OF ELECTRIC IRONS. CLÄRE DRÜPPEL, Bottrop, Germany, assignor to Bernhard Quendt, Essen-Ruhr, Germany. Filed May 10, 1929, Serial No. 362,054, and in Germany June 30, 1927. 4 Claims. (Cl. 248—30.5.)

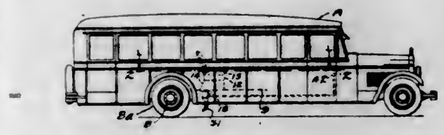


3. A guide for the current feed cable of electric irons, comprising a table clamp, a lever mounted on said table clamp to swing about a vertical axis, and having an arm

extended upwardly and out of alinement with the swinging axis of the lever, an elastic guide tube having one end fixed to the iron, means formed with the free end

of the extended arm of said lever for securely fixing the remaining end of said guide thereto, whereby to cause the arm through said guide to follow the movements of the iron.

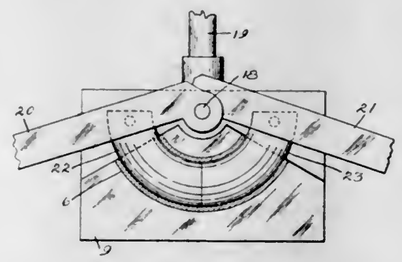
1,812,519. FLUID OR HYDRAULIC SHOCK ABSORBER. JOHN ECKHARD, Cincinnati, Ohio. Filed Oct. 31, 1929. Serial No. 403,800. 15 Claims. (Cl. 188—89.)



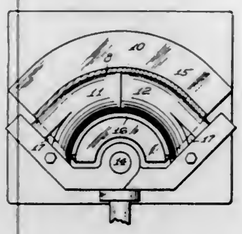
1. In a fluid shock absorber of the class described, the combination of a housing having a cavity therein for containing a fluid said housing being provided with fluid passages, means disposed within the cavity of the housing for dividing the cavity into a piston chamber and a fluid reservoir having fluid communication through the passages of the housing, a bored boss on the housing having an annular fluid collecting groove and a communicating channel, a filter in the housing in which said communicating channel terminates for conveying fluid from the collecting groove to the filter, a piston shaft extending through the bore in the boss, a piston on the shaft disposed within the piston chamber, said piston being actuatable for creating pressure in the piston chamber for displacing fluid through the passages of the housing into and from the fluid reservoir, said pressure serving also to force fluid into the filter by way of the collecting groove and its communicating channels.

1,812,520. IGNITION COIL. ADOLF ELLWANGER, Stuttgart, Germany, assignor to Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Filed Feb. 23, 1928, Serial No. 256,413, and in Germany Apr. 2, 1927. 4 Claims. (Cl. 175—356.)

1. An ignition coil for battery ignition apparatus in internal combustion engines comprising in combination a yoke comprising a plurality of bundles of bent rectangular strips of sheet metal, all the laminæ in a bundle being of the same length, the lengths of the laminæ in the respective bundles being substantially proportional to the average radius of curvature of each bundle, and a core the ends of which are located between the ends of the yoke and spaced therefrom.

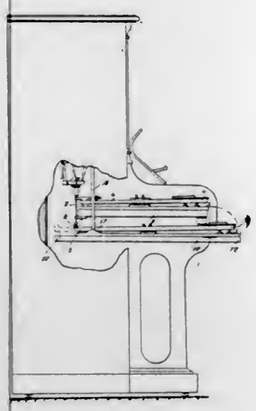


1,812,521. SANDER FOR BUSSES AND OTHER VEHICLES. RUE R. ELSTON, Minneapolis, Minn. Filed Apr. 11, 1929. Serial No. 354,258. 15 Claims. (Cl. 291—23.)



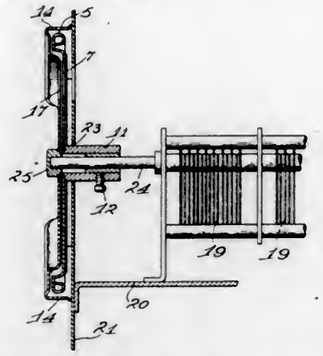
1. A sander for vehicles, comprising a sand box adapted to be mounted on the vehicle, said box having an opening therethrough, a conduit mounted below said opening and projecting downwardly therefrom, a spray nozzle secured to the lower end of said conduit, a valve normally closing the opening in said box but adapted to be operated to move out of said opening to permit sand carried in said box to run downwardly into said conduit, a spray nozzle and deflector plates in said nozzle dividing the same at the center thereof to cause the sand to be discharged from said nozzle in two streams, one stream for each tire of a double tired wheel.

1,812,522. PROCESS OF AND APPARATUS FOR MANUFACTURING METAL PIPE FITTINGS. FRED C. FANTZ, Webster Groves, Mo., assignor to Widwest Piping & Supply Co. Inc., St. Louis, Mo., a Corporation of Missouri. Filed Mar. 25, 1931. Serial No. 525,133. 3 Claims. (Cl. 113—38.)



1. The process of forming pipe fittings which consists in providing a suitable blank of metal having an excess above that desired for the walls of the finishing fitting, bending the blank into an arcuate form U-shaped in cross section thereby upsetting its sides, fitting a hinged mandrel into said U-shaped piece pressing the sides of said blank towards each other over said mandrel until their edges abut, thereby distributing the metal to the required places, welding said edges, reheating said fitting, compressing same and between dies of the exact size required.

1,812,523. PROCESS OF MANUFACTURING METAL PIPE FITTINGS WITH TANGENTIAL ENDS. FRED C. FANTZ, Webster Groves, Mo., assignor to Midwest Piping & Supply Co. Inc., St. Louis, Mo., a Corporation of Missouri. Filed Apr. 18, 1931. Serial No. 531,220. 9 Claims. (Cl. 113—51.)



1. The process of forming pipe fittings which consists in providing a suitable blank of metal having an excess above that desired for the walls of the finished fitting, bending the blank into an arcuate form U-shaped in cross section, having tangential portions at each end, inserting a mandrel formed in halves and having its outside arcuate in its center portion but which terminates in tangents, its inner side being formed on a true radius, the sides of the outer ends of said mandrel being substantially flat, closing said dies, thereby pressing the sides of the U towards each other over the arcuate portion until their edges abut forming a circle, and the tangential portion into an oval, removing said mandrel, compressing said fitting in a pair of dies until it is circular in cross section throughout its length, and welding the adjoining edges of said fitting.

1,812,524. AUXILIARY KEYBOARD FOR PIANOS. ARTURO FRASCANI, Rome, Italy. Filed Aug. 22, 1929, Serial No. 387,748, and in Italy Dec. 22, 1928. 3 Claims. (Cl. 84—425.)

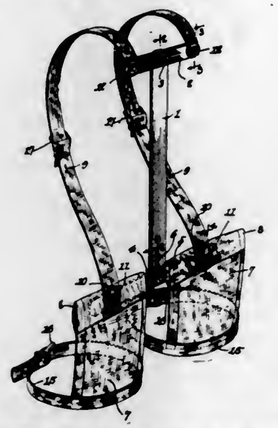
2. A piano having an unobstructed chamber under its keyboard, a closure for the front end of the chamber, actuating pins associated with the keyboard, an auxiliary keyboard slidably mounted in the chamber, the inner ends of the keys of the auxiliary keyboard being adapted to be moved under the pins when the auxiliary keyboard is moved outwardly from the chamber, and locking means for holding the auxiliary keyboard in its outermost or playing position.

1,812,525. RADIO TUNING MECHANISM. WINSLOW GOODWIN, Chicago, Ill., assignor to Crowe Name Plate & Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Oct. 11, 1930. Serial No. 488,134. 2 Claims. (Cl. 116—124.3.)

1. In radio receiving apparatus, the combination of a panel, tuning mechanism comprising a shaft by the rotation of which the tuning is effected and extending crosswise of said panel, said panel containing an aperture in alinement with said shaft and a disk extending crosswise of said panel and having a dial portion and a sleeve portion extending rearwardly through said aperture and into which said shaft extends and operatively engaged with said shaft, and a plate between which and said panel said disk is located, said plate being secured to said panel and extending over the face of said disk and exposing a portion of the periphery of said disk for the application of turning force thereto.

1,812,526. PROCESS OF PURIFYING HYDROGEN. OTTO GROSS and FRIEDRICH JOST, Sodingen, Germany, assignors, by mesne assignments, to Firm Patentverwertungs A. G. "Alpina," S. A. pour l'Exploitation de Brevets "Alpina," Patents Exploitation Cy. "Alpina," Ltd., Basel, Switzerland. Filed Aug. 23, 1927, Serial No. 214,988, and in Germany Aug. 26, 1926. 1 Claim. (Cl. 23—210.)

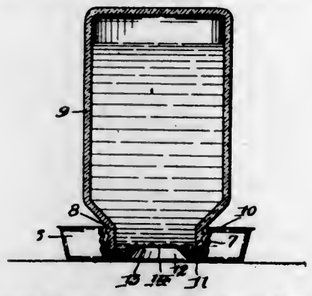
The process of purifying hydrogen comprising acting on the gas with an agent of alkaline reaction to eliminate carbon dioxide, hydrogen sulfide, and sulfur dioxide, conducting the gas thus treated at an elevated temperature and under increased pressure in contact with a catalyst, thereafter subjecting the gas to another treatment with an agent of alkaline reaction and finally bringing the gas at an elevated temperature and under increased pressure in contact with a catalyst.



1,812,527. PROCESS OF PURIFYING HYDROGEN. OTTO GROSS and FRIEDRICH JOST, Sodingen, Germany, assignors, by mesne assignments, to Firm Patentverwertungs A. G. "Alpina," S. A. pour l'Exploitation de Brevets "Alpina," Patents Exploitation Cy. "Alpina," Ltd., Basel, Switzerland. Filed Aug. 26, 1927, Serial No. 215,758, and in Germany Aug. 30, 1926. 9 Claims. (Cl. 23—210.)

1. In the process of freeing hydrogen from gaseous organic impurities not absorbed by alkalies, the step which comprises passing the hydrogen at elevated temperature and a pressure up to about 100 atms. over a catalyst containing a heavy metal having an atomic weight of 51 to 65, other than copper, associated with an alkaline compound of a light metal to decompose the organic impurities into inorganic hydrogen compounds easily absorbed by alkalies.

1,812,528. PHARMACEUTICAL PRODUCT. REINHOLD GRÜTER, Berlin-Charlottenburg, Germany. Filed May 19, 1927, Serial No. 192,802, and in Germany Aug. 29, 1924. 11 Claims. (Cl. 260—34.)

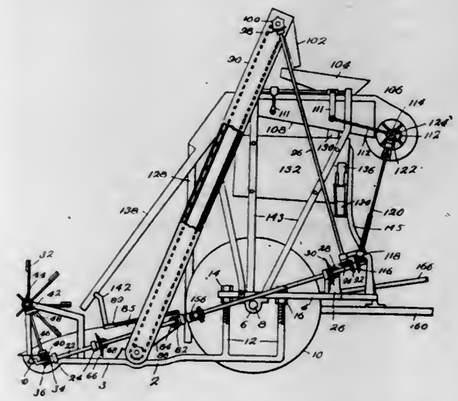


1. As a new composition of matter, the complex compound resulting from the interaction of one molecule of dimethyl amido dimethyl phenyl pyrazolon and a simple salt and a complex salt of an aromatic hydroxy-acid containing a carboxyl group linked to the nucleus.

1,812,529. BRACE. ROBERT W. HAULBROOK and WILLIAM J. COTTON, Maysville, Ga. Filed Mar. 24, 1930. Serial No. 438,590. 1 Claim. (Cl. 2—44.)

A back reinforcement for persons who must stoop, and use legs and arms while in a stooping posture, the reinforcement comprising a resilient main strip, of a length to extend from a point adjacent the wearer's shoulders to a point slightly above the buttocks, a transverse head pivoted intermediate its ends to the upper end of the main strip, a transverse foot pivoted intermediate its ends to the lower end of the main strip, shoulder straps having their upper ends connected to the head on opposite sides of the pivotal mounting of the head, and having their lower ends connected to the foot on opposite sides of the pivotal mounting of the foot, the head being somewhat shorter than the foot, to keep the upper ends of the straps close enough together so that the straps can pass down under the arms, clear of the arm pits, and impede the action of the arms to a minimum extent, and depending leg-engaging means mounted on the foot, the pivotal mounting of the foot and the head giving the reinforcement a lateral flexibility from its extreme upper end to its extreme lower end.

1,812,530. DRINKING FOUNTAIN FOR POULTRY. JOHN A. HEALY, Langdon, Minn. Filed July 21, 1926. Serial No. 123,896. 1 Claim. (Cl. 119—77.)

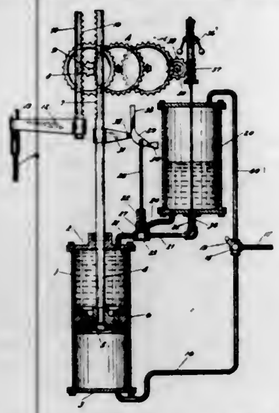


In a drinking fountain, the combination with a reservoir and a trough adapted to be supplied with water from said reservoir, said trough being formed with a filling opening in its base and a fine mesh screen extending across said opening and adapted to prevent the escape of water from said reservoir when the fountain is in use, said screen being offset upward from the base of said trough and the fountain being adapted to be inverted for filling through said opening and screen.

1,812,531. PRODUCING POTASSIUM NITRATE. PAUL HÖFER, Berlin, Germany. Filed June 17, 1929, Serial No. 371,706, and in Germany July 26, 1927. 5 Claims. (Cl. 23—102.)

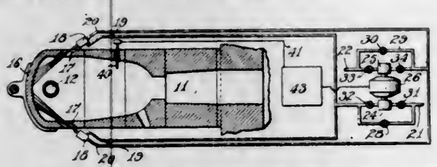
1. The method of producing potassium nitrate comprising acting on a nitrate of a readily hydrolyzable metal with potassium chloride by adding one of these salts to a hot solution of the other salt, allowing the mixture to cool to separate potassium nitrate, removing same, evaporating the liquor and developing hydrochloric acid gas, adding water, potassium chloride and a nitrogen oxide to restore the original composition of the solution, and proceeding further as in the original operation.

1,812,532. COMBINED HARVESTER AND THRASHER. ERVIN F. HOGAN, Beloit, Kans. Filed Sept. 30, 1927. Serial No. 223,052. 11 Claims. (Cl. 56—122.)



7. In a combined harvester and thrasher having cutting mechanism at the forward portion thereof, thrashing mechanism paralleling and located close to the rear of said cutting mechanism, a rack located close to the rear of said thrashing mechanism, a grid hinged to the thrashing mechanism and overlapping the adjacent portion of said rack, and a conveyor underlying said grid and paralleling the thrashing mechanism.

1,812,533. FEED MECHANISM FOR DRILLING MACHINES AND THE LIKE. WILSON P. HUNT, Moline, Ill., assignor to Moline Tool Company, Moline, Ill. Filed Oct. 17, 1929. Serial No. 400,232. 3 Claims. (Cl. 121—45.)

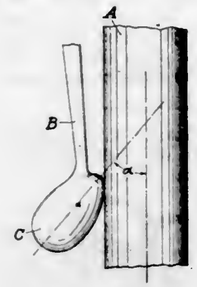


1. In combination with a tool organism including a tool to be carried thereby, a cylinder, a piston in said cylinder, a piston-rod for said piston, operatively connected with said tool organism, means for introducing a fluid force on one side of said piston, an auxiliary container in proximity to said cylinder, and united therewith by passages of varying capacity, means for closing the larger of said passages, means carried by said piston-rod for actuating the last-named means at the end of a predetermined movement of said rod, a fluent non-elastic medium contained in said cylinder on the opposite side of the

piston from the fluid force, and releasable into said auxiliary container through said passages, and means for

controlling the release of said medium automatically from the movement of said tool organism, through the smaller of said passages.

1,812,534. METHOD OF AND APPARATUS FOR FEEDING MOLTEN GLASS. FRED E. JEWETT, Muncie, Ind., assignor to Ball Brothers Company, Muncie, Ind., a Corporation of Indiana. Filed June 11, 1928. Serial No. 284,364. 7 Claims. (Cl. 49—55.)

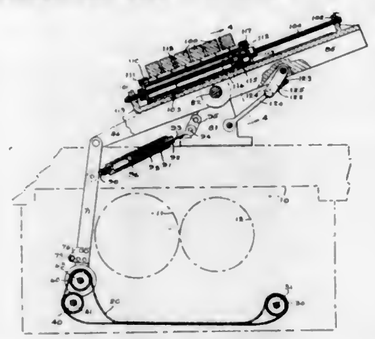


7. The combination of a source of molten glass, a covered flow spout communicating therewith and having a submerged outlet near its outer end, a refractory tube, having an external diameter in excess of the submerged outlet, arranged vertically above said outlet with its lower end submerged in the molten glass, means by which said tube may be vertically adjusted, means by which alternate plus and minus air pressures may be established within the upper end of said tube, means by which heat may be applied locally to the surface of the glass around said tube, and means by which the delivery of fluid fuel to said local heating means may be controlled, said means comprising a thermo-couple projected into the flow spout closely adjacent the surface of the glass therein at a point between the source of supply and the submerged orifice, and a baffle projected into the flow spout above the surface of the glass between said thermo-couple and the local heating means.

1,812,535. METHOD AND MEANS FOR APPLICATION OF PARADICHLOROBENZENE TO FRUIT TREES. MORRIS Y. KACHLINE, Bango, Pa. Filed May 26, 1930. Serial No. 455,915. 1 Claim. (Cl. 43—125.)

A means for treating fruit trees with paradichlorobenzene which comprises a tubular fabric carrier uniformly charged with the material throughout its length, and a sinuous line of stitching extending through the tube to maintain uniform distribution of the material.

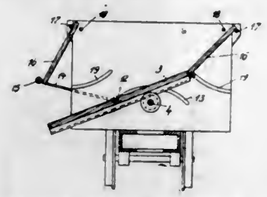
1,812,536. CLIP FOR SECURING ARTICLES TO CLOTH. THEODON KOVACS, Berlin, Germany. Filed Apr. 4, 1930, Serial No. 441,586, and in Germany Apr. 9, 1929. 2 Claims. (Cl. 24—11.)



1. A clip for securing articles to cloth comprising a resilient shank adapted to be secured to the article, and a boss fixed rigidly to the free end of said shank, said boss having the shape of an oblong closed body the axis of which is arranged at an acute angle to the axis of the article, and the vertex of said angle pointing in the direction in which the article is detached from the cloth.

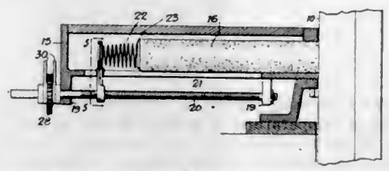
1,812,537. PRODUCTION OF GLASS IN STRIP FORM AND APPARATUS THEREFOR. ERNEST BRISTOW LE MARE, St. Helens, England, assignor to Pilkington Brothers Limited, Liverpool, England, a Limited Liability Company. Original application filed Apr. 27, 1929, Serial No. 358,439, and in Great Britain May 1, 1928. Divided and this application filed May 21, 1930. Serial No. 454,292. 5 Claims. (Cl. 198—127.)

1. Process of gradually reducing the speed of a hot glass strip travelling on a roller-bed by turning some of the rollers supporting the strip in a forward direction and others in a backward direction.



1,812,538. RUBBER MILL. WILBUR H. LOCKERT and PARK E. WELTON, Cuyahoga Falls, Ohio; said Lockert assignor to said Welton. Filed Apr. 7, 1928. Serial No. 268,322. 31 Claims. (Cl. 18—2.)

6. The combination with a mill roll, an endless belt adapted to coact therewith, a roller extending through the belt and adapted to support it, a pair of links connected with the ends of the roller leading upwardly therefrom, a walking beam mounted on the mill frame and connected at one end with one of the links, an arm



connected with the other link, a shaft on which the walking beam and arm are mounted, and means for giving said shaft a partial rotation in one direction or the other as desired, comprising a counterweight and means for causing the counterweight to act on the walking beam on one side or the other of the vertical plane through the shaft.

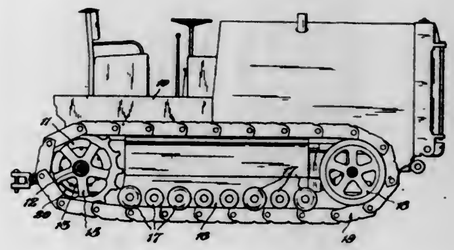
1,812,539. SELF-DISCHARGING WAGON. WILHELM LUDOWICI, Munich, Germany. Filed Aug. 24, 1929, Serial No. 388,163, and in Germany Dec. 20, 1927. 5 Claims. (Cl. 105—260.)

1. Self-discharging wagon comprising two fixed end walls, a shaft having its ends supported in said walls, a bottom supported by said shaft and parallelly displaceable thereon, side walls pivotally suspended from said end walls and links pivotally connecting said side walls with the edges of said bottom which adjoin said end walls.

1,812,540. ELEVATOR LUBRICATOR. EDWARD ROSELL MCKINZIE, Memphis, Tenn. Filed Aug. 19, 1929. Serial No. 386,886. 1 Claim. (Cl. 184—22.)

An elevator guide lubricator adapted to be mounted upon a reciprocating member and comprising a hollow casing provided with a slot in one end for receiving the member to be lubricated, tapered lubricant passages extending from the interior of the casing along the sides of the slot, a removable cover for said casing, a follower in said casing for advancing a lubricant stick, a slot in said casing, a threaded shaft journaled in parallel relation to the slot in the casing, a split nut on said shaft having operating means projecting through the last-named slot into the casing and engaging the follower, and automatic means for rotating said shaft.

1,812,541. RESINOUS PRODUCT AND PROCESS OF PREPARING THE SAME. JULIUS A. NIEUWLAND, Notre Dame, Ind., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Jan. 4, 1929. Serial No. 330,415. 25 Claims. (Cl. 260—2.)



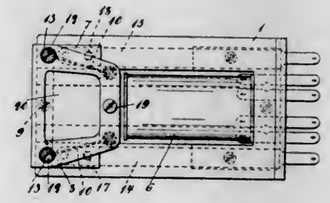
4. A polymerization product of a non-benzenoid low-boiling non-viscous polymerizable polymer of acetylene obtainable by exposing said polymer of acetylene in the presence of oxygen to a temperature of substantially 85°–87° C. for at least 16 hours.

15. The process of obtaining a polymerizable unsaturated hydrocarbon from acetylene which comprises passing acetylene into a mixture of ammonium chloride, water, cuprous chloride and copper powder to obtain a mixture of volatile non-viscous liquid acetylene polymers, separating the divinylacetylene from the resulting mixture by distillation and thereafter heating the divinylacetylene in the presence of air to effect the further polymerization of the divinylacetylene.

1,812,542. CATALYTIC PROCESS FOR THE PREPARATION OF VINYL CHLORIDE. JULIUS A. NIEUWLAND, Notre Dame, Ind., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 12, 1927, Serial No. 225,848. Renewed Mar. 22, 1930. 16 Claims. (Cl. 260—162.)

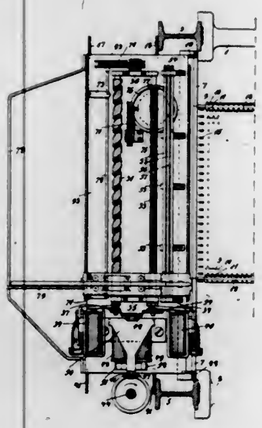
1. The process of preparing vinyl chloride which comprises reacting upon acetylene with hydrochloric acid, in the presence of a cuprous compound.

1,812,543. TRACTOR. ROLLIN H. WHITE, Cleveland Heights, Ohio. Filed Mar. 17, 1930. Serial No. 436,556. 3 Claims. (Cl. 180—91.)



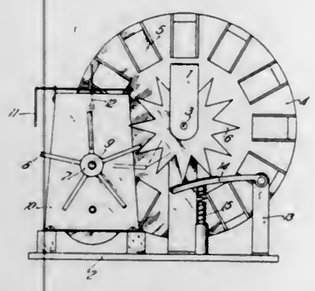
1. In a track laying tractor, a transmission casing having a laterally extending axle supporting portion, an endless track driven in proximity to the laterally projecting portion of the casing, and a shield depending from and extending forwardly of the laterally projecting portion of the casing, said shield lying in a portion of the plane of the track.

1,812,544. COATING COMPOSITIONS AND ARTICLES COATED THEREWITH. ARNOLD M. COLLINS, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Aug. 7, 1929. Serial No. 384,239. 13 Claims. (Cl. 134—26.)



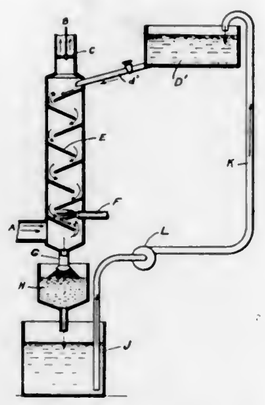
1. A coating composition mixture including as an ingredient a preformed drying oil which is a liquid non-volatile open chain polymerization product of acetylene.

1,812,545. ELECTROMAGNETIC RELAY. CARL ERIK JEAN NILSON, Stockholm, Sweden, assignor to Telefonaktiebolaget L. M. Ericsson, Stockholm, Sweden, a Company of Sweden. Filed Aug. 22, 1929, Serial No. 387,739, and in Sweden Aug. 24, 1928. 9 Claims. (Cl. 200—104.)



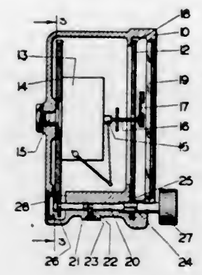
1. An electromagnetic relay comprising a flat iron core having three legs arranged with their broad sides parallel with a plane through said legs, a coil on the middle one of said legs, and a flat iron armature mounted on the one side of the legs and swingable about an axis parallel with the core plane and perpendicular to the legs.

1,812,546. AUTOMATIC AND SEMIAUTOMATIC TELEPHONE SYSTEM. CARL ERIK JEAN NILSON and DAVID LAURENTIUS LIENZÉN, Stockholm, Sweden, assignors to Telefon Aktiebolaget L. M. Ericsson, Stockholm, Sweden, a Company of Sweden. Filed Nov. 2, 1929, Serial No. 404,325, and in Sweden Nov. 8, 1928. 6 Claims. (Cl. 179—27.5.)



1. An arrangement in automatic and semiautomatic telephone exchanges provided with selectors of the kind in which the multiple contact field is composed of wires or the like disposed in parallel rows and the selector arms are displaceable in planes perpendicular to said wires in such a manner that they may be moved at first outside the contact field to select a line group and thereupon into the contact field to select a particular line in the group, characterized by that the contact field is common to two groups of selectors disposed on opposite sides of said field and characterized in that the opposing selector groups are displaced in relation to each other in the longitudinal direction of the wires so that the plane of motion of each selector in the one group extends between the planes of motion of two adjacent selectors in the other group and vice versa.

1,812,547. ADVERTISING DEVICE. WILHELM NOWACK, Berlin, and HANS BUWERT, Berlin-Wilmersdorf, Germany. Filed Mar. 14, 1929, Serial No. 347,119, and in Germany Sept. 4, 1928. 1 Claim. (Cl. 88—27.)



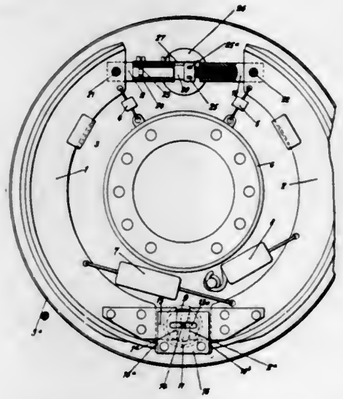
Apparatus for projecting changing advertisement and other pictures, comprising a carrier in the form of a composite rotatable disc consisting of a transparent disc and two sheets of paper formed with window-like notch-shaped openings registering with one another, the paper sheets being stuck together except round the margins of the notch-shaped openings and being stuck on to one side of the transparent disc, slides bearing the pictures to be projected, adapted to rest in the compartments formed by the free margins of the notch-shaped openings in the paper discs, and a ratchet mechanism adapted to feed the carrier forward intermittently at regular intervals of time through a distance equal to the distance between two adjacent pictures.

1,812,548. METHOD OF PRODUCING A CONSTANT DEGREE OF HUMIDITY IN AIR OR OTHER GASES. JULIUS OBERMILLER, Munich-Gladbach, Germany. Filed Aug. 22, 1923, Serial No. 658,836, and in Germany Aug. 22, 1922. 4 Claims. (Cl. 183—121.)

4. The process of producing, independent of normal variations in temperature, a definite degree of relative humidity in air or other gas, which consists in selecting a substance, a saturated water solution of which will draw moisture from the gas if above such degree or add moisture to the gas if below such degree, bringing such saturated solution into contact with the gas and maintaining the saturation of the solution.

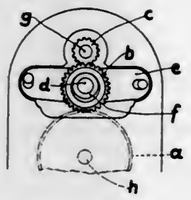
1,812,549. INDICATING INSTRUMENT. JOHN D. PEACE, Jr., Flushing, N. Y., assignor to Pioneer Instrument Company, Incorporated, Brooklyn, N. Y., a Corporation of New York. Filed Sept. 6, 1929. Serial No. 390,708. 10 Claims. (Cl. 116—129.)

1. The combination with an indicating instrument having a casing, operating mechanism, a needle actuated thereby, and a dial, of common means for displacing said operating mechanism and said dial relative to said casing.



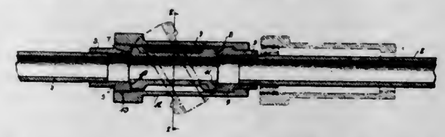
1,812,550. PHONOGRAPH DISK. ARMANDO ALVARES PENTEADO, Paris, France. Filed July 8, 1929, Serial No. 376,698, and in France June 12, 1929. 5 Claims. (Cl. 274—42.)

1. As a new article of manufacture a recorded phonographic disk consisting of a thin flexible sheet of xanthogenate of cellulose, provided with an indented spiral groove.



3. A process of recording ultra light phonographic disks of xanthogenate of cellulose which comprises softening the disk by dipping the same in a liquid which does not dissolve it, stretching the softened disk in a frame, directly recording the disk in the frame while in a soft state and letting the disk dry in the frame.

1,812,551. BRAKE FOR MOTOR VEHICLES. EDOUARD POULET, Courbevoie, France. Filed Feb. 21, 1929, Serial No. 341,669, and in Belgium Feb. 28, 1928. 1 Claim. (Cl. 188—78.)



A brake for motor vehicles operating in both directions of running, comprising in combination in a brake drum: two brake segment parts connected together through an arrangement of adjustable caps; a stationary stop which maintains in the radial direction and guides in the tangential direction the two ends of the said two parts of brake segments; a cam disposed between the said ends of the said brake segment parts, and an intermediate part upon which slides the said cam; the said intermediate part of itself sliding perpendicularly to the direction of sliding of the cam in a plate connected with the driving shaft.

1,812,552. GEARING. MAX RALL and ERNST DURST, Stuttgart, Germany, assignors to Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Filed Sept. 21, 1928, Serial No. 307,497, and in Germany Oct. 17, 1927. 3 Claims. (Cl. 74—7.)

1. A set of gears including a pair of gear wheels, one pinion only having a hole therethrough interposed between and in mesh with said wheels, a pin located within the hole in said pinion and of diameter smaller than the diameter of the hole, a plate supporting said pin, and means for adjusting said plate in a plane perpendicular to the axis of the pin..

1,812,553. PIPE UNION. THEODORE H. REDFIELD, Princeton, N. J. Filed Aug. 18, 1927. Serial No. 213,889. 5 Claims. (Cl. 285—124.)

1. A pipe connection comprising seating elements secured to the adjacent ends of pipes, a filler formed as the center of the middle zone of a sphere having a diameter substantially greater than the maximum diameter of the filler constituting a separating device mounted between the pipe sections and having interfitting engagement with the seating elements, said filler having end faces of spherical shape to permit it to be rocked to disengage it from the seating elements, and a casing threadedly secured to at least one of the pipe sections and enveloping the filler when in operative position.

1,812,554. METHOD OF CROSS-DYEING FABRICS. ARTHUR S. ROBERTS, Hendersonville, N. C. Filed Dec. 17, 1927, Serial No. 240,919. Renewed Dec. 11, 1930. 8 Claims. (Cl. 8—5.)

1. That method of dyeing a fabric composed of viscose and cotton which comprises wetting the fabric with water, subjecting the fabric to a dyebath containing neutral dyeing acid dyes selected from the group consisting of wool yellow extra, Schultz Number 23, wool blue R. Schultz Number 188, and new red 5R, Schultz Number 248, and glycerine, rinsing the fabric in water, then subjecting tthe fabric to a dyebath containing substantive dyes selected from the group consisting of direct yellow S 2 G, Schultz Number 10, direct rubine B concentrated, Schultz Number 313, and direct blue 6 G extra, Schultz Number 415 and sulphonated oil, and then rinsing the dyed fabric in water.

1,812,555. METHOD OF CROSS DYEING FABRICS. ARTHUR S. ROBERTS, Hendersonville, N. C. Filed Dec. 17, 1927, Serial No. 240,920. Renewed Dec. 11, 1930. 6 Claims. (Cl. 8—5.)

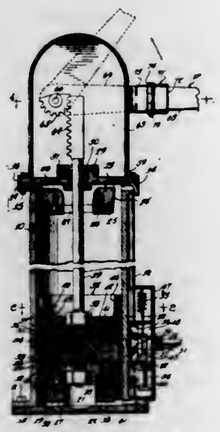
1. That method of dyeing a fabric composed of viscose and cotton which comprises subjecting the fabric to a dyebath containing a basic dyestuff selected from the group consistsing of Schultz Numbers 606, 596, 515, and 499, sulphuric acid and sodium sulphate at a temperature of 180° F. and then subjecting the fabric to a dyebath containing substantive dyes selected from the group consisting of Schultz Numbers 10, and 313 at a temperature of approximately 120° F.

1,812,556. METHOD OF CROSS-DYEING FABRICS. ARTHUR S. ROBERTS, Hendersonville, N. C. Filed Dec. 17, 1927, Serial No. 240,921. Renewed Dec. 11, 1930. 2 Claims. (Cl. 8—5.)

1. That method of cross-dyeing a fabric composed of viscose and cotton fibers which comprises subjecting the fabric to a dye-bath containing dyes that are capable of being developed selected from the group consisting of Schultz Numbers 616, 198, 474, direct dyestuffs selected from the group consisting of Schultz Numbers 10, 313, and 415 together with sodium hydroxide at a temperature of approximately 140° F. then subjecting the fabric to a bath containing a diazotizing agent at ordi-

nary room temperature, then subjecting the fabric to a bath containing the developing agent, to produce two separate colors on the fabric.

1,812,557. METHOD OF CROSS-DYEING FABRICS. ARTHUR S. ROBERTS, Hendersonville, N. C. Filed Apr. 6, 1928, Serial No. 268,073. Renewed Dec. 11, 1930. 6 Claims. (Cl. 8—5.)



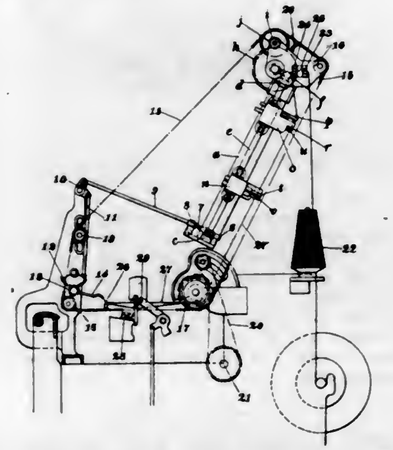
5. The method of cross-dyeing a textile fabric comprising both cotton and viscose silk which comprises subjecting the fabric to the action of a direct dyestuff selected from the group consisting of Schultz Numbers 323—343—194—616—319—426—241—436 and 462 with a preferential affinity for viscose silk in the presence of cotton at a temperature near the boiling point of the dyebath and subjecting the fabric to the action of a direct dyestuff selected from the group consisting of Schultz Numbers 313—10—326—273—471—274—9—11—456—337 and 470 with a preferential affinity for cotton in the presence of viscose silk at a lower temperature.

1,812,558. VACUUM TUBE DEVICE. JAMES ROBERT ROBERTSON, London, England. Filed Jan. 11, 1928, Serial No. 246,056, and in Great Britain Jan. 22, 1927. 14 Claims. (Cl. 176—122.)

1. A compound vacuum tube comprising a plurality of tubes sealed one within another wherein an inner tube is of such nature that, when warmed, it gives off radio-active particles which act upon the gas contained in another of the tubes.

1,812,559. RAILWAY CROSSING GATE. CHARLES R. SAMPSON, Cheswold, Del. Filed June 20, 1928. Serial No. 286,940. 12 Claims. (Cl. 39—8.)

1. A device of the character described comprising a pressure chamber, a member mounted in said chamber and movable by differential pressure on opposite sides thereof, a gate operatively connected to said member to be moved thereby to operative and inoperative positions, and means in said chamber actuated by pressure therein for locking said gate in either position.

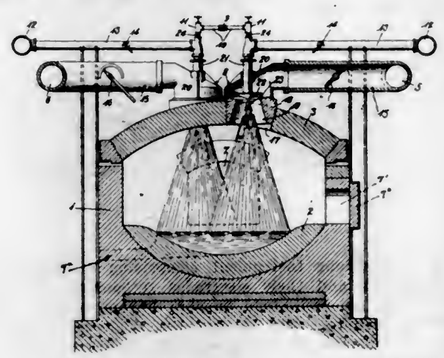


1,812,560. ARTIFICIAL MINERAL WATERS AND METHOD OF PRODUCING SAME. WALTER SCHOELLER, Berlin-Westend, Germany, assignor to Schering-Kahlbaum A. G., Berlin, Germany. Filed Nov. 16, 1927, Serial No. 233,745, and in Germany Nov. 23, 1926. 2 Claims. (Cl. 167—55.)

1. In the reproduction of natural mineral waters containing iron, the process which comprises supplying the iron content of said reproduced waters by dissolving therein water soluble ferrous salts of inorganic anions which occur in said natural waters, and stabilizing the said iron content by bottling said water under a high pressure of carbon dioxide; the said reproduced waters being saturated with carbon dioxide, free from constituents foreign to said natural waters and free from oxygen.

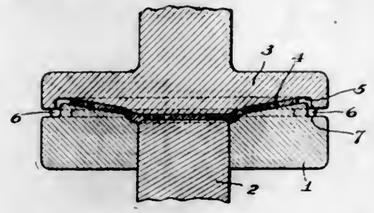
1,812,561. METHOD OF PRODUCING THYMOL. WALTER SCHOELLER, Berlin-Charlottenburg, HANS JORDAN, Berlin-Steglitz, and REINHARD CLERC, Berlin, Germany, assignors to the Firm Schering-Kahlbaum A. G., Berlin, Germany. Filed Nov. 22, 1928, Serial No. 321,266, and in Germany Nov. 24, 1927. 5 Claims. (Cl. 260—154.)

1. The method of producing thymol comprising acting with hydrogen at 120–170° C. in the presence of a hydrogenation catalyst on hydroxythymol, until 2 atoms hydrogen have been combined.



1,812,562. SHUTTLELESS LOOM FOR WEAVING. OLIVER SHIMWELL, Manchester, England, assignor, by mesne assignments, of one-half to Gawsworth Patents Limited, Manchester, England, a British Company, and one-half to Platt Brothers & Company Limited, Oldham, England. Filed Aug. 20, 1929, Serial No. 387,171, and in Great Britain Oct. 17, 1928. 11 Claims. (Cl. 139—126.)

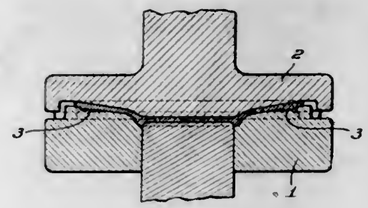
1. In a shuttleless loom, weft gripping and severing devices, means for drawing out the weft thread stretched between the gripping and severing devices into looped form, a weft carrier for carrying the weft thread through the warp shed, frames supporting the drawing out means and a slot and pin connection between the gripping and severing devices and the frame permitting adjustment of said devices for varying the length of the weft loop.



1,812,563. METALLURGICAL PROCESS. KENNETH M. SIMPSON, New York, N. Y., assignor to International Chromium Process Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 24, 1931. Serial No. 517,945. 7 Claims. (Cl. 263—43.)

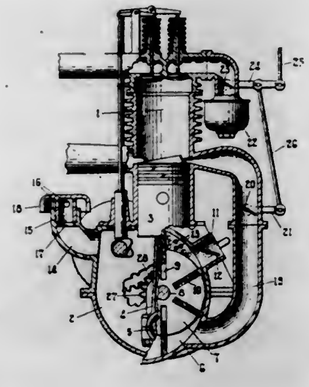
7. A process of treating material in a furnace comprising placing a charge on a hearth, generating flame from an intimately commingled combustible mixture of fluid fuel and air at a point above the hearth, projecting such flame downwardly in an unobstructed path toward the hearth, regulating combustion conditions to pro-

duce intense flame temperature at points adjacent the hearth, and impinging such flame when moving under a substantial velocity onto the hearth over at least substantially the major portion of the entire surface of the charge.



1,812,564. METHOD OF PRESSING GLASSWARE. THEODORE H. SLOAN, Charleroi, Pa., assignor to Macbeth-Evans Glass Company, a Corporation of Pennsylvania. Filed Apr. 9, 1930. Serial No. 442,773. 3 Claims. (Cl. 49—85.)

3. The method of manufacturing finished pressed glassware, consisting of providing between cooperating mold and plunger members of a glass press an article-forming cavity as thick throughout its main body as at and adjacent to its edge, placing in the center of the mold a body of molten glass of less volume than said article-forming cavity; and forming from said glass an article, having a central base portion and a body portion extending upwardly therefrom and as thick throughout its body portion as at and adjacent to its edge, solely by pressing the glass between said press members and thereby causing it to flow towards but not to the outer boundary of the body-forming portion of said cavity and to chill with a permanent convexly rounded and completely finished edge.



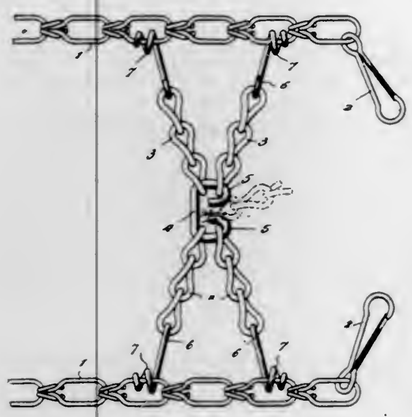
1,812,565. METHOD OF FREE-PRESSING GLASSWARE HAVING IRREGULAR EDGES. THEODORE H. SLOAN, Charleroi, Pa., assignor to Macbeth-Evans Glass Company, a Corporation of Pennsylvania. Filed Apr. 9, 1930. Serial No. 442,774. 2 Claims. (Cl. 49—85.)

2. The method of manufacturing finished pressed glassware having an irregular edge, consisting of forming between plunger and mold members of a glass press a mold cavity of different thicknesses along different lines of flow of glass between said members, placing in the center of the press mold a body of molten glass of less volume than the article-forming cavity between the mold and plunger, and forming an article from said glass solely by pressing the glass between said members and thereby causing it to flow towards but not to the outer boundary of said cavity and to chill with a permanent convexly rounded and completely finished edge, the glass

flowing farther along the thicker paths of flow in said cavity to form said edge irregular in its longitudinal extent.

1,812,566. ENGINE CONTROL AND VENTILATING MEANS. OWEN H. SPENCER, Indianapolis, Ind. Filed Mar. 21, 1929. Serial No. 348,907. 3 Claims. (Cl. 123—75.)

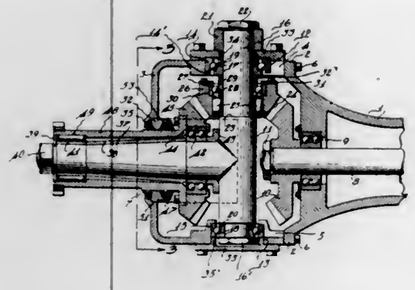
1. The combination with the cylinder and crank case of an engine, said crank case having openings for receiving and discharging air, of a charger chamber attached to the crank case and over the discharge openings in the crank case, a rotatably mounted charger mechanism within said charger chamber, an air passage leading from said charger chamber to said cylinder, a choke valve in said air passage, a carbureter connected with said cylinder, a controlling valve for said carbureter, and means connecting said controlling valve with said choke valve for causing said choke valve to operate coincident with said controlling valve.



1,812,567. SOLDER FOR ALUMINUM AND ITS ALLOYS. FREDERIC STRASSER, New York, N. Y. Filed Feb. 10, 1930. Serial No. 427,430. 3 Claims. (Cl. 75—1.)

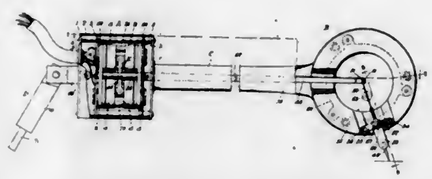
1. A solder for articles of aluminum and aluminum alloys containing 10 to 30% zinc, 7 to 15% aluminum, 1 to 5% copper and 1 to 8% bismuth and the rest tin.

1,812,568. TIRE CHAIN. MILTON E. STREEPY, Altoona, Pa. Filed Apr. 5, 1928. Serial No. 267,731. Renewed Nov. 21, 1930. 2 Claims. (Cl. 152—14.)



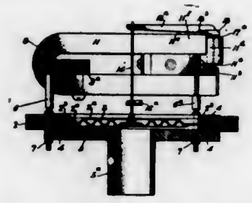
1. An anti-skid device comprising side chains, pairs of short chains arranged in X formation between the side

chains, a S link engaged by and connecting the inner converging ends of the pairs of chains and having ter-



minals normally preventing disengagement of said chains, and links detachably connecting the outer diverging ends of the short cross chains with the side chains.

1,812,569. FRONT WHEEL DRIVE. HOMER B. STUART, Detroit, Mich. Filed June 7, 1929. Serial No. 369,187. 2 Claims. (Cl. 180—43.)

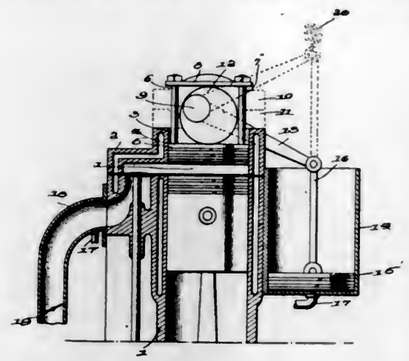


1. A front wheel drive mechanism comprising a semi-circular housing having counter-sunk circular openings formed in the top and bottom walls thereof, a slot formed in the upper wall of said housing and opening into said circular opening, a steering knuckle having its ends projecting into said circular openings, bearing members mounted in the counter-sunk portions of said circular openings and supporting said steering knuckle, a nut mounted upon a screwthreaded portion on the lower end of said steering knuckle and butting against the bearing member received in the counter-sunk opening in the lower wall of said housing whereby upward movement of said spindle is prevented, a cover plate secured to the outer face of the lower wall of said housing to cover said circular opening therein, a cover plate mounted upon the upper wall of said housing and having a circular opening therein permitting the upper end of the steering knuckle to project therethrough, a nut mounted upon the upper end of said steering knuckle and adapted to prevent downward movement thereof by reason of the cover plate on the top wall of said housing, and a spindle formed on said steering knuckle and adapted to project through an elongated opening in the front vertical wall thereof.

1,812,570. MULTIPLEX TRANSMITTER. WILLIAM P. STUNZ, Lansdowne, Md., assignor to Safe Deposit and Trust Company of Baltimore, a Corporation of Maryland, as trustee under the will of George R. Webb. Filed Jan. 6, 1928. Serial No. 244,930. 3 Claims. (Cl. 179—100.41.)

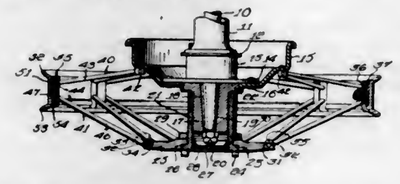
3. A telephone instrument comprising a plurality of transmitters and their electrodes responsive to receive vibrations, an oscillatory member having sets of transmitters, including four in each set, disposed at opposite faces of said member and operatively connected therewith, a Wheatstone circuit in which the transmitters are included, and means for oscillating said member to increase the resistance in a plurality of the transmitters disposed at one face of the member and reduced resistance in a plurality of the transmitters at the opposite face of said members, in alteration, whereby an increased output of current to line, alternating between negative and positive current, is effected.

1,812,571. TELEPHONIC INSTRUMENT. WILLIAM P. STUNZ, Lansdowne, Md., assignor to Safe Deposit and Trust Company of Baltimore, a Corporation of Maryland. Filed May 9, 1928. Serial No. 276,361. 3 Claims. (Cl. 179—108.)



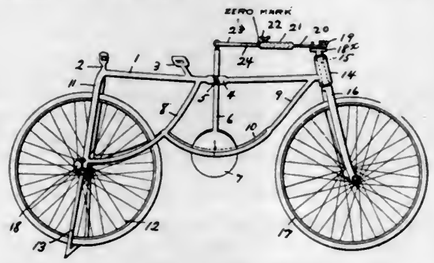
1. In a telephonic instrument, a vibratable diaphragm from which wave producing vibrations are transmitted, a plurality of armatures each fulcrumed on a permanent magnet, lever-arms extending from said armatures and having their free ends connected with the vibratable diaphragm to exert a pull in opposite directions thereon for balancing the diaphragm, and electro-magnets having their cores spaced by an air gap from the magnetically fulcrumed armatures, the windings of one electro-magnet being connected in opposite polarity to the other for action in unison and in the same direction on the diaphragm.

1,812,572. ADJUSTABLE COMBUSTION CHAMBER CONTROL. FRANK A. TALBOT, Greenville, S. C., assignor of forty-four one-hundredths to Henry H. Harris, Greenville, S. C., and eleven one-hundredths to Grahame H. Powell, Washington, D. C. Filed May 11, 1927, Serial No. 190,558. Renewed Oct. 17, 1930. 10 Claims. (Cl. 123—48.)



3. In an internal combustion engine having a cylinder and a combustion chamber therein, a movable member bounding a portion of said combustion chamber and adjustable to contract or expand the latter, a suction intake conduit in connection with said chamber, a device having a chamber in connection with said conduit whereby said device is contracted in dependence upon vacuum increases

in the conduit, and a motion transmitting connection between said device and said movable member whereby movements of said device in dependence upon vacuum

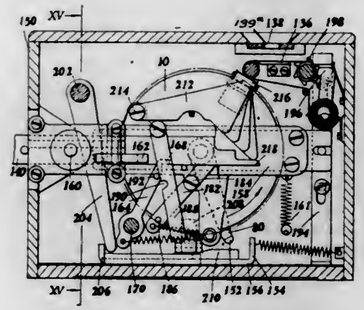


increases in the conduit are positively imparted to the movable member to contract the combustion chamber without the assistance of any force extrinsic to the engine.

1,812,573. VEHICLE WHEEL. MILTON W. THOMPSON, Atlanta, Ga. Filed Aug. 21, 1929. Serial No. 387,426. 1 Claim. (Cl. 301—16.)

In a wheel structure comprising axially relatively movable hub elements, an inboard and an outboard spokes series connected to said hub elements, each of said series comprising spoke elements, and a plurality of rim engaging members having pivotal engagement with the outer radial ends of the spoke elements of each series, each spoke element being provided with a substantially circumferentially arranged end portion, each rim engaging member being provided with a pair of axially spaced substantially circumferentially arranged openings in which the end portions of adjacent spoke elements of each series are received.

1,812,574. WHEELED DEVICE FOR LAYING OFF LAND. GEORGE WASHINGTON THURMOND, Sr., Warrenville, S. C. Filed Aug. 5, 1926. Serial No. 127,427. 2 Claims. (Cl. 33—141.)



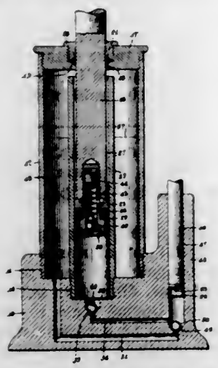
1. A device for use in laying off land, comprising a main frame, a wheel mounted in the rear portion of said frame, handles on the upper rear portion of the frame, a lever fulcrumed at an intermediate point in its length

to the frame, and having a weight on its lower arm, a wheel carrier journaled in the forward portion of the frame and having a lever at its upper end, a wheel carried by said carrier, a rod pivotally connected to said lever and having a sleeve portion equipped with a set screw, a calibrated rod pivotally connected to the upper arm of the weighted lever and telescopically arranged in said sleeve and adapted to be detachably engaged by said set screw, and means carried by the frame and arranged to receive and guide the said weight.

1,812,575. PROCESS OF MANUFACTURING PAPER PULP. HAMILTON D. WAGNON, Palouse, Wash. Filed Feb. 19, 1929. Serial No. 341,277. 1 Claim. (Cl. 92—13.)

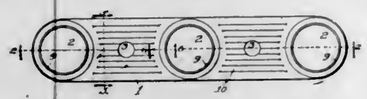
The process of manufacturing paper pulp by first cooking the raw material for approximately two hours in a digesting liquid composed of four parts of sal soda to one part of quick lime, diluted to substantially a specific gravity test of two Baumé scale to which is added approximately one gallon of a hydrocarbon oil to each ton of material to be cooked; second subjecting the cooked material to a mechanical separation of the fibrous particles of the material, and thus produce pulp ready for use.

1,812,576. APPARATUS FOR RECORDING THE DELIVERY OF MEASURED QUANTITIES OF LIQUIDS. DANIEL LESLIE WRAY, Shoreham-by-Sea, and HAROLD GUY CHRISMAS, Cranleigh, England. Filed Sept. 8, 1930, Serial No. 480,546, and in Great Britain Sept. 5, 1929. 8 Claims. (Cl. 234—34.)



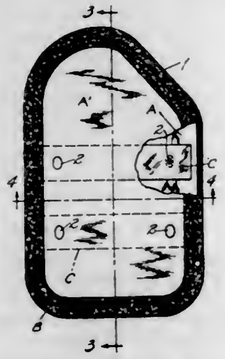
1. In combination with a liquid-measuring delivery pump, recording mechanism comprising a type wheel, means for rotating said type wheel step-by-step against resilient restraint to set the type thereof, a pivoted lever constituting a manually operable actuating member and adapted when operated to move the type wheel bodily, a detent for the lever, a notch in the lever to receive the detent, a spring urging said detent into a non-detaining position, a projection on the type wheel adapted to engage said detent when the type wheel is in the zero position and to hold it in lever detaining position and a paper support to receive the impress of the type when the type wheel is moved bodily as aforesaid.

1,812,577. LIFTING JACK. HERMAN ALBERTINE, East Rutherford, N. J., assignor to Rogers Products Company, Inc., a Corporation of New Jersey. Filed Apr. 27, 1928. Serial No. 273,190. 8 Claims. (Cl. 138—9.)



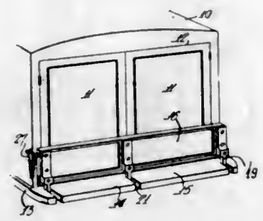
1. A jack, including an oil reservoir, a cylindrical member constituting the inner wall of said reservoir, a piston in said cylindrical member having a stem guided in said reservoir, a pump for delivering oil from the reservoir

to the interior of said cylindrical member, a safety valve in the lower end of said piston to permit escape of oil when the pressure exceeds a predetermined limit, and means for regulating said safety valve to determine the



pressure at which it is to be operated, said safety valve and regulating means being a removable unit structure so that it can be separately adjusted for the desired pressure limit while removed from the jack.

1,812,578. GASKET. CLAUDE B. BAILEY, Wyandotte, Mich., assignor to McCord Radiator & Mfg. Co., Detroit, Mich., a Corporation of Maine. Filed May 20, 1926. Serial No. 110,322. 2 Claims. (Cl. 288—1.)



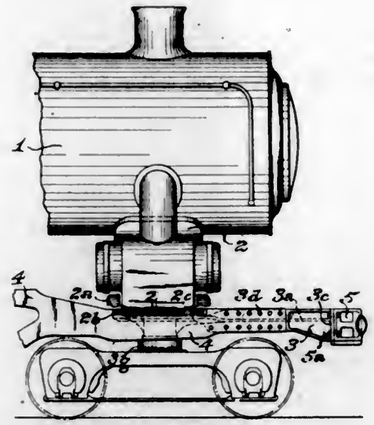
1. A manifold gasket having an elongated body portion of a single layer of sheet metal with stud openings and port holes therein spaced apart lengthwise of the body layer, means carried by the body layer immediately about the respective port holes and formed entirely of sheet metal to provide the pressure receiving and joint sealing sections of the gasket, and corrugations in the body layer between and entirely outside of said sections to stiffen the layer against bending and distortion.

1,812,579. ATHLETIC GUARD. WALTER E. BISCHOFF, St. Louis, Mo., assignor to Rawlings Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Dec. 2, 1929. Serial No. 411,080. 3 Claims. (Cl. 2—22.)

3. An athletic guard composed of a plurality of members curved in transverse cross section and arranged in nested relation, said members being formed of relatively hard, non-metallic sheet material, and a metallic reinforcing means arranged wholly on the interior of the guard between adjacent curved members and attached to one of said members.

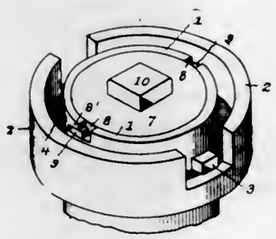
1,812,580. VEHICLE AND TAILBOARD CONSTRUCTION. FREDERICK O. BLACK, Jersey City, N. J. Filed Mar. 5, 1929. Serial No. 344,242. 4 Claims. (Cl. 296—57.)

1. In a vehicle body construction, the combination with the floorboard, of a tailboard hingedly mounted thereto, hinge sections for said tailboard connected to said tailboard and floorboard, respectively, said sections including a common pivot inwardly of the rear end of the floorboard, guiding the inner edge of the tailboard in substantially close contact with the end of the floorboard in the horizontal position of the tailboard to form a smooth and continuous surface and locating the tailboard inwardly of the floorboard rear end in the vertical position of the tailboard whereby the floorboard end forms a bumper or guard for the tailboard.



1,812,581. TIMEPIECE WINDING MECHANISM. MARCEL BLOCH, Paris, France. Filed July 12, 1929, Serial No. 377,743, and in Switzerland June 25, 1929. 4 Claims. (Cl. 58—80.)

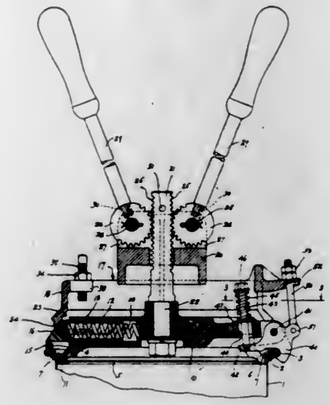
1. A time-piece comprising a movement and a rotatable winding stem having a portion thereof provided with a screw thread, and a casing within which said movement is mounted, said casing comprising a relatively stationary member and a relatively movable member, a nut engaged on said screw threaded portion of the winding stem, means preventing the nut from turning on the screw thread but permitting the nut to move axially therealong, and means provided on said relatively movable member of the casing and arranged to act on the nut to cause rotation of the winding stem when the member is moved.



1,812,582. LOCOMOTIVE FRAME. JAMES G. BLUNT, Schenectady, N. Y. Filed July 12, 1928. Serial No. 292,191. 8 Claims. (Cl. 105—172.)

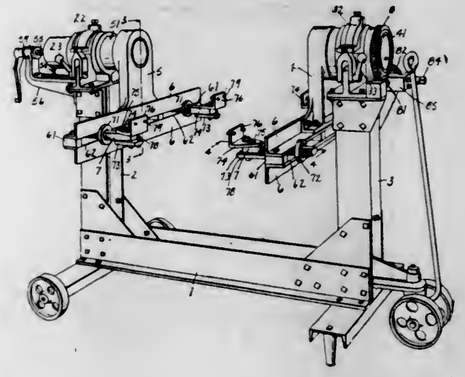
8. In a locomotive the combination of a cylinder saddle; and an under frame comprising frame main side members, a transverse plate tying the side members together disposed in advance of the saddle, a plate extending from the first plate rearwardly thereof beneath the saddle for supporting the saddle and of less width than the distance between

the side members providing open spaces between the sides of said extending plate and the respective side members, and a center pin depending from the extending plate.



1,812,583. HOUSE DRAIN FITTING. SILVESTRO CAVALIERI, Chicago, Ill. Filed Apr. 9, 1930. Serial No. 442,977. 1 Claim. (Cl. 281—31.)

In a house drain, the combination of a drain pipe having an expanded annular inlet head adapted for arrangement with its top surface on a level with the floor surface, the vertical wall of said expanded inlet head being cut away at points to form passages therethrough, a drain fixture the main housing of which is of a circular form and of a less diameter than the inner diameter of said entry head to provide an annular space for the reception of a body of connecting concrete having bonding engagement through the aforesaid wall openings with the concrete material of the floor of the house, said main housing having lugs extending from its perimeter for bearing upon the offset bottom wall of the aforesaid inlet head.

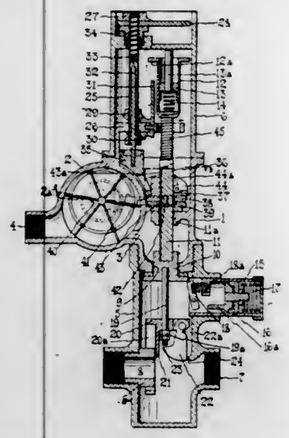


1,812,584. CONTAINER CLOSING MACHINE. ALFRED J. CHAMBERLAIN, Milwaukee, Wis. Filed Oct. 6, 1927. Serial No. 224,330. 11 Claims. (Cl. 113—18.)

1. A machine for securing a cover to a container by appropriately bending securing elements and comprising a base, dies slidable on the base for initially bending the securing elements, an actuating member for the dies, cooperating means between the dies and actuating member for imparting operative movement to the dies when the

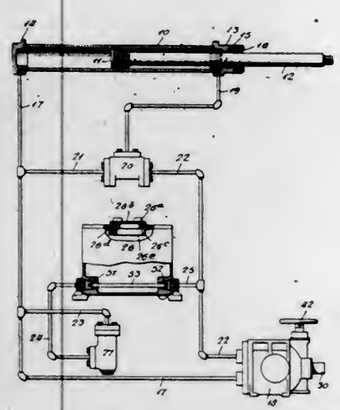
actuating member is appropriately moved, and a die on the actuating member for imparting final bending movement to the securing elements.

1,812,585. ENGINE STAND. JAMES G. COLLINS, Kalamazoo, Mich., assignor to Atlas Press Company, Kalamazoo, Mich. Filed Sept. 21, 1928. Serial No. 307,367. 3 Claims. (Cl. 29—89.)



3. In an engine stand, the combination of a suitable base with standards, trunnion clamping crossheads each comprising a pair of clamp jaws carried thereby the trunnions of one of which is adjustable longitudinally, and an axially disposed adjusting screw for such adjustment, as specified.

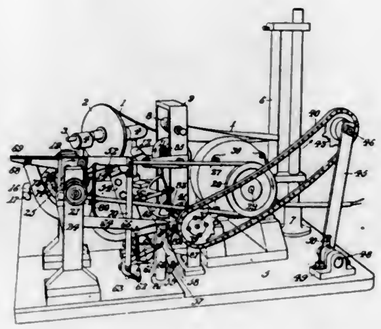
1,812,586. APPARATUS FOR CONTROLLING THE PASSAGE OF WATER TO SPRAYERS AND THE LIKE. DONALD ELDER, Onehunga, New Zealand. Filed May 21, 1928. Serial No. 279,510. 31 Claims. (Cl. 137—144.)



31. In an automatic water cut-off device, a body with a passage therethrough affording a water inlet and an outlet, a valve across said passage, means rotated by water flowing through said passage arranged for automatically

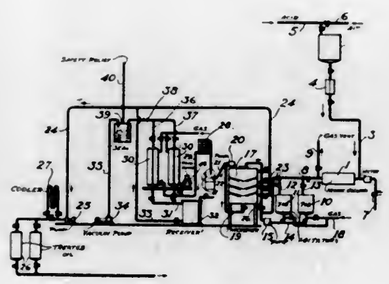
closing said valve after a predetermined time of opening, and a hydraulic plunger operatively associated with said

valve in a manner to slow down the final closing movement of said valve and for stopping the rotation of said means by closure of the valve.



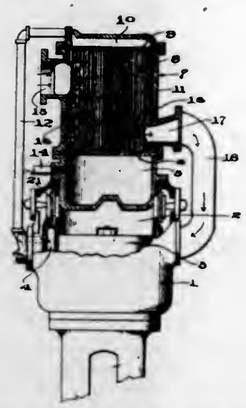
1,812,587. DRIVING MECHANISM. ARTHUR L. ELLIS, New Rochelle, N. Y., assignor to The Waterbury Tool Company, Waterbury, Conn., a Corporation of Connecticut. Filed Apr. 27, 1929. Serial No. 358,599. 9 Claims. (Cl. 60—52.)

1. In a hydraulic drive for a reciprocating member, a fluid pressure cylinder and differential piston adapted to develop a working stroke in the direction of its larger end, a reversible pump for supplying fluid under pressure to either end of said cylinder, pipe lines connecting said pump and cylinder, and a spring pressed valve located in the pipe line under suction during the working stroke of the piston to maintain a back pressure on said piston during said working stroke and thereby insure a smooth working action of said piston.



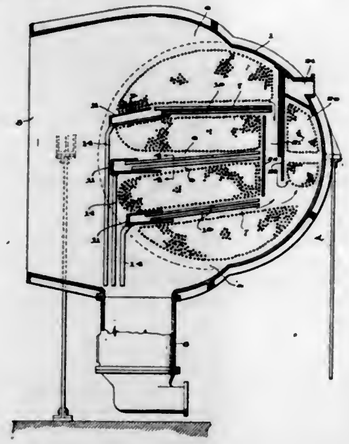
1,812,588. INK RIBBON WINDING AND MEASURING MECHANISM. ARTHUR L. FOSTER, Middletown, N. J., assignor to Manifold Supplies Company, Brooklyn, N. Y., a Corporation of New York. Filed July 7, 1927. Serial No. 203,960. 15 Claims. (Cl. 33—137.)

4. In ink ribbon winding and measuring mechanism; the combination with a winding shaft; of a ribbon spool; a clutch carried by said shaft; means on said shaft arranged to detachably engage and turn the ribbon spool; a motor arranged to turn said shaft; a chain driving wheel; a roller arranged to be traversed and turned by the ribbon being wound; and means operatively connecting said roller with said chain driving wheel; whereby said chain driving wheel is arranged to be driven by power from said motor, conveyed by the ribbon being wound; an idle chain wheel; an endless chain supported by said chain wheels; means, including a lever linkage and a stop link in said chain,



arranged to stop the winding operation of said shaft, at intervals determined by the circumferential length of said chain, and thereby determine the length of ribbon wound by said spool; a movable ribbon gauge permitting passage of a normal ribbon without movement of said gauge, but movable by engagement with an abnormal portion of the ribbon; and means operatively connecting said gauge with the winding shaft stop mechanism; whereby the winding operation is stopped upon presentation of a defective portion of ribbon at said gauge.

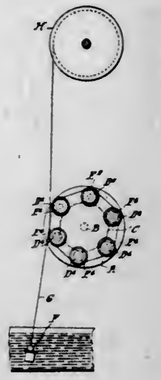
1,812,589. CARBONACEOUS PRODUCT. RALPH T. GOODWIN, Elizabeth, N. J., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed Feb. 18, 1926. Serial No. 89,059. 7 Claims. (Cl. 196—149.)



1. As a new article of manufacture, carbonaceous material precipitated by a dilute acidic reagent from heavy residues of hydrocarbon oil cracking, characterized by a fusing point between about 160° and 230° C., and being about 15 to 30% soluble in carbon disulfid.

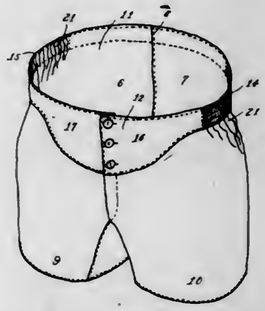
1,812,590. PRECOOLER FOR VACUUM PUMPS. JOHN F. GRACE, Arlington, N. J., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Oct. 18, 1930. Serial No. 489,501. 8 Claims. (Cl. 230—208.)

1. The combination, of a vacuum pump having a water jacket, a precooler of the surface type embodying circulating cooling water tubes for cooling air or gas prior to its entrance into the pump, said precooler having water chambers at the ends of the tubes, one of said water chambers being a part of the water jacket of said pump.



1,812,591. CONDENSER. JOHN F. GRACE, Arlington, N. J., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Nov. 26, 1930. Serial No. 498,233. 14 Claims. (Cl. 257—43.)

1. In a steam condenser, a shell having an exhaust steam inlet, a plurality of water circulating tubes in said shell and a plurality of condensate collecting and conducting channels in the shell for leading condensate towards said steam inlet.

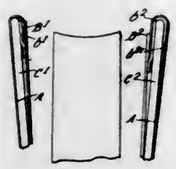


1,812,592. MEANS FOR STRETCH-SPINNING ARTIFICIAL FILAMENTS. CONRAD HERRMANN, Wuppertal-Elberfeld, Germany, assignor to American Glanzstoff Corporation, New York, N. Y. Filed May 8, 1930, Serial No. 449,413, and in Germany Apr. 29, 1930. 5 Claims. (Cl. 18—8.)

4. An apparatus for conditioning artificial silk, comprising a spinning nozzle, a thread assembling device, three or more drawing rollers between the spinning nozzle and the assembling device, said drawing rollers having individual driving gears contacting with a common circular driving

gear and being adapted to be rotated by said circular driving gear at progressively increasing peripheral speeds around the group.

1,812,593. GARMENT. PETER K. KARBERG, Dubuque, Iowa, assignor to H. B. Glover Company, Dubuque, Iowa, a Corporation of Iowa. Filed Apr. 27, 1929. Serial No. 358,475. 5 Claims. (Cl. 2—237.)

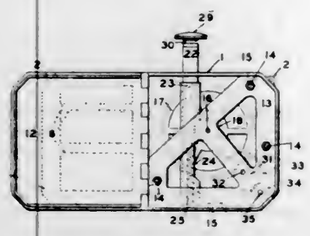


1. In an article of the character described having a waist portion of inelastic fabric, a waistband for said waist portion comprising inelastic fabric back and front portions, and elastic web members superimposed on the outside of the waist portion between said back and front portions arranged to lie at the sides of the waist portion, the normal length of said waistband being less than the corresponding length of the waist portion, the excess of fabric in the waist portion being gathered between the ends of each of said elastic members, longitudinal stitches smoothly connecting the elastic members and the fabric of the waist portion when the former are in their stretched condition, the fabric being drawn up thereby in a gathered manner when the elastic members are in their normal condition, whereby the fabric is caused to fold and unfold with contraction and extension of the elastic members.

1,812,594. REMOVABLE BOOK COVER. LEWIS GEORGE KITCAT, London, England. Filed May 27, 1930, Serial No. 456,046, and in Great Britain June 24, 1929. 7 Claims. (Cl. 281—34.)

1. A removable book over, comprising a sheet of flexible material adapted for disposal around the permanent covers and back of a book, and stiffening elements on the terminal parts of said removable cover for disposal inside of said

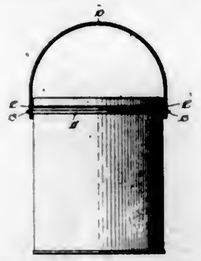
permanent covers, the removable cover being of such a size as to permit one of the stiffening elements being turned



underneath that part of the removable book cover which lies on the inner side of the permanent cover of the book when the removable cover is in position.

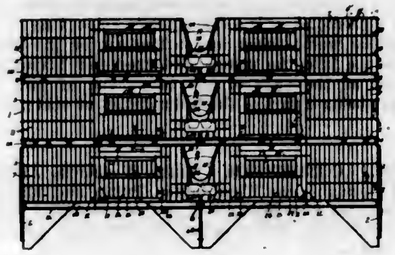
1,812,595. SASH VENTILATOR. CARL H. LARSON, Elkhart, Ind., assignor to The Adlake Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 6, 1928. Serial No. 310,754. 7 Claims. (Cl. 98—97.)

1. In a sash ventilator, a hollow sheet metal sash rail provided with openings in the walls thereof, two spaced sheet metal plates positioned in the rail against the walls thereof and provided with openings therein for registration with the openings in the walls of the rail, spring means for maintaining the plates against the walls of the rail independent of the distance between the walls, and means for shifting the plates to move the openings therein into or out of register with the openings in the walls of the rail.



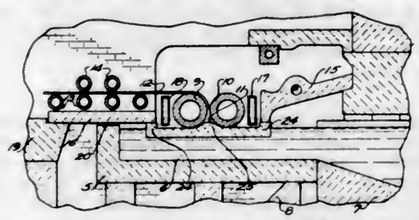
1,812,596. FAN. ADAM LEIMBACH, St. Louis, Mo. Filed Jan. 20, 1930. Serial No. 422,001. 2 Claims. (Cl. 230—241.)

2. In a device of the class described, the combination with an oblong flat casing forming a vanity case and adapted to be grasped in the palm of the hand, of driving gearing contained in one end of said casing, a compartment for a fan in the other end of said casing, a detachable fan driven by said gearing and adapted to be stored in said casing, a reciprocating operating stem projecting from one side of said casing, and a thumb button said stem, said button being rotatable to lock the stem in retracted position.



1,812,597. BAIL AND METHOD OF APPLYING SAME. WALTER F. LUSK and WILLIAM H. POTTER, Chicago, Ill., assignors to Armour & Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 29, 1929. Serial No. 350,972. 8 Claims. (Cl. 140—93.)

1. As a new article of manufacture, a bail having elongated loops adjacent the ends thereof, which loops are adapted to be forced into circular shape, and pail-embracing means having portions which are adapted to



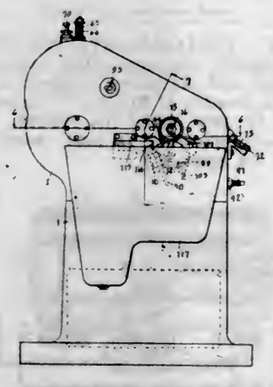
interlock with the loops, when the latter are made circular to permit the bail to be swung into any position without disturbing the interlock.

1,812,598. CAGE OR COOP. LYNN W. MACOMBER, Battle Creek, Mich., assignor to United Steel & Wire Company, Battle Creek, Mich. Filed July 18, 1929. Serial No. 379,129. 16 Claims. (Cl. 119—17.)

1. In a structure of the class described, the combination of front, rear and end walls pivotally connected at their corners to permit collapsing, the front and rear walls comprising vertically spaced panels, each including slats and horizontal bars, foraminate floors provided with supporting bars having hooks at their ends engageable with horizontal bars of said front and rear walls, said horizontal bars being adapted to be sprung to permit engagement of said hooks whereby the floors are detachably supported and the walls retained in erected position, dropping board supporting rods having hooks at their ends engageable with horizontal bars of the front and rear walls and disposed in a rearwardly inclined position, dropping boards supported by said rods below said floors, and cleaning troughs mounted on the rear wall in operative relation to said dropping boards.

1,812,599. APPARATUS FOR PRODUCING SHEET GLASS. LUKE C. MAMBOURG, Lancaster, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 6, 1927. Serial No. 217,585. 20 Claims. (Cl. 49—33.)

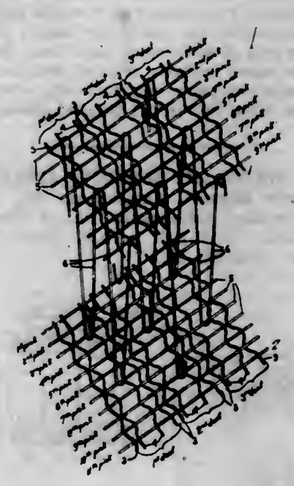
1. In sheet glass apparatus, a receptacle containing a mass of molten glass, a pair of rotatable rolls mounted



thereover and arranged to create a sheet forming pass, and a pair of non-metallic refractory members arranged within the molten glass contained in said receptacle, one of said members being positioned under the rolls at one side of the receptacle and the other of said members being placed in a similar position at the opposite side of the receptacle, said refractory members being provided for controlling the movement of glass toward the ends of the sheet forming pass between the rolls.

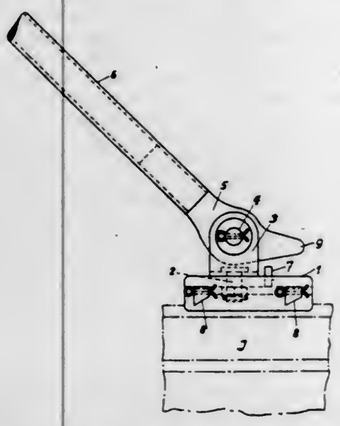
1,812,600. STOCK QUOTATION INDICATOR. HARRISON S. MARTIN, Brooklyn, N. Y. Filed Apr. 12, 1930. Serial No. 443,697. 5 Claims. (Cl. 40—96.)

1. An indicator for quotation of stocks and the like comprising a face plate having an elongated opening therein, two bracket arms extending rearwardly from the face plate on opposite sides of the opening, two shafts spanning the bracket arms parallel to the face plate, one immediately back of the face plate and the other spaced rearwardly therefrom, a plurality of polygonal pulleys loosely mounted on the front shaft and a corresponding number of like pulleys loosely mounted on the rear shaft, the front and rear pulleys being disposed in aligned pairs and each front pulley having a continuous flange at one end projecting through the opening in the face plate and available for manipulating the pulley, and a belt composed of linked sections disposed over each pair of pulleys and spaced from the adjacent belt by said flange, the linked sections corresponding in length to the polygonal faces of the pulleys.



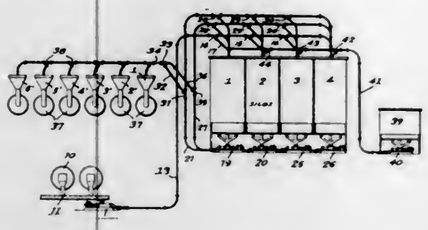
1,812,601. MILLING AND DRILLING MACHINE. GEORGE MELLING, Jackson, Mich. Filed Nov. 19, 1928. Serial No. 320,241. 30 Claims. (Cl. 29—33.)

1. In a machine of the class described, the combination of a rockshaft provided with an arm, an oscillating work holder carried by said rockshaft, a cutter unit comprising a shaft disposed parallel with said rockshaft, a drilling unit and a reaming unit, each comprising axially movable spindles disposed on opposite sides of said cutter shaft and parallel therewith, feed levers for said spindles, a cam shaft, cams on said cam shaft coacting with said levers whereby their actuation is timed, means for driving said cam shaft comprising a worm gear thereon, a shaft carrier pivotally mounted on said cutter shaft, a shaft carried by said carrier and provided with a worm coacting with said worm gear, said worm and cutter shafts having coacting beveled gears thereon, a spring acting to return said carrier to worm disengaging position, a toggle comprising a pair of pivotally connected links, one of which is pivotally connected to said carrier and provided with a projecting arm, the other being pivoted to a support, a pivoted lever, a link connecting said lever to said arm on said rockshaft, a cam on said cam shaft coacting with said lever and having portions acting to quickly shift the work holder from one tool unit position to another, dwell portions giving the work holder periods of rest in drilling and reaming positions, and eccentric portions imparting a feeding movement to the work holder in cutter unit position, manually operated means for actuating said toggle, and a trip carried by said cam shaft coacting with said arm on said toggle link.



26. The combination of a movable work holder, a plurality of tool units operatively associated with said work holder and disposed along the path thereof, means for actuating said work holder comprising a cam having portions acting to shift the work holder from one tool unit position to another, a dwell portion permitting the work to rest in operative relation to one of said tool units and a portion imparting a feeding movement to said work holder relative to another of said tool units.

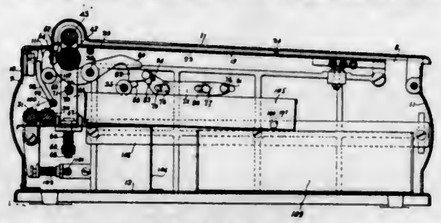
1,812,602. PILE FABRIC AND METHOD OF MAKING THE SAME. HORACE MELLOR, Sanford, Me., assignor to Sanford Mills, Sanford, Me., a Corporation of Maine. Filed Dec. 30, 1929. Serial No. 417,339. 3 Claims. (Cl. 139—397.)



1. The method of making a double pile fabric containing both tight warp threads and slack warp threads in each fabric, which consists in arranging both the tight warp threads and the slack warp threads in pairs with the pairs of slack warp threads alternating with those of the tight warp threads, interweaving the tight warp threads and slack warp threads with filling threads and in so doing forming the successive sheds in the two fabrics so that in each shed of both fabrics all the slack warp threads will be in one part of the shed and all the tight warp threads in the other part of the shed and in the corresponding sheds in the two fabrics both the slack warp threads and the tight warp threads of one fabric will be in the opposite part of the shed from what they are in the other fabric, and passing the pile warp threads from one fabric to the other so that each pile thread will be looped about every fourth filling thread in each fabric between the slack warp threads of a pair.

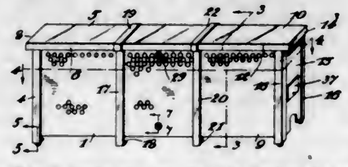
1,812,603. IMPLEMENTS FOR MOVING RAILWAY WAGON. GOTTFRIED MEYER, Zurich, Switzerland, assignor to Arnold Krebs, Zurich, Switzerland. Filed Nov. 8, 1928, Serial No. 317,932, and in Switzerland June 26, 1928. 1 Claim. (Cl. 254—36.)

A device for moving railway cars, comprising a slide plate, a bracket therefor, a two armed lever, a horizontal shaft journaled in said bracket and about which said lever oscillates, and two stop members trapezoidal in cross section and disposed transversely of the slide plate, the front member being positioned nearer the middle plane passing through the axis of rotation of said lever than the rear member, the upper surfaces of both members lying in a common horizontal plane and both rear surfaces of the top members being in vertical parallel planes.



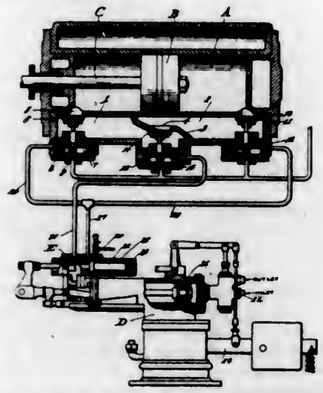
1,812,604. MIXING AND BLENDING SYSTEM. JOSEPH HUMPHREYS MORROW, Catasauqua, Pa., assignor to Fuller Company, Catasauqua, Pa., a Corporation of Pennsylvania. Filed Oct. 3, 1928. Serial No. 310,011. 30 Claims. (Cl. 83—78.)

1. A method of mixing and blending pulverulent materials which comprises delivering materials to a plurality of bins consecutively to form a series of relatively thin horizontal layers of varying analysis in each bin, withdrawing materials simultaneously from a pair of said bins and delivering them to a discharge bin to form a relatively thin horizontal layer therein, and varying the withdrawal to include all of said bins first mentioned in consecutive pairs.



1,812,605. AUTOGRAPHIC REGISTER. FRANK E. PFEIFFER, Dayton, Ohio, assignor to The Egry Register Company, Dayton, Ohio, a Corporation of Ohio. Filed July 24, 1929. Serial No. 380,502. 12 Claims. (Cl. 282—16.)

2. In an autographic register, a pair of spaced, separated, knurled ejecting rolls, a pair of spaced yieldingly positioned aligning pins associated with a pair of said knurled rolls and adapted to turn freely with respect thereto, cam associated with said pins for engaging portions of the other of said rollers to spread said roller one from the other, means to cause said rollers to turn together, an operating means therefor, yielding means for yieldingly resisting the relative rotation between said pins and associated knurled rollers, movable stop mem-



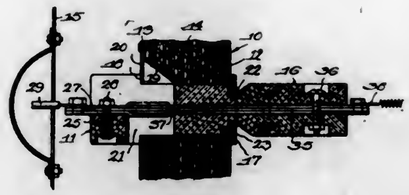
bers arranged in the path of said cam members to maintain them in spreading position, an operating handle for said rolls, cam means associated therewith for rendering said cam stopping means inoperative at a predetermined point in the cycle of operation and an independent manually operated means for rendering said stopping means inoperative for a complete cycle of operation.

1,812,606. RADIATOR INCLOSURE. KENNETH L. PORTER, New Rochelle, N. Y. Filed Nov. 1, 1928. Serial No. 316,492. 11 Claims. (Cl. 237—79.)

1. A radiator inclosure of the character described, including in combination, a plurality of sections adapted to telescope one within the other, a leg formation at the telescoping end of one of said sections, and means for securing said sections together.

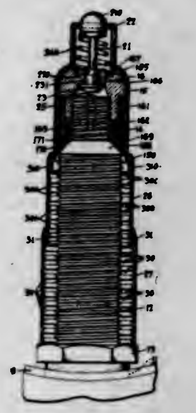
1,812,607. VARIABLE CAPACITY COMPRESSOR. MICHAEL RIESNER, Cincinnati, Ohio, assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Original application filed Sept. 17, 1926, Serial No. 136,008. Divided and this application filed Sept. 26, 1928. Serial No. 308,359. 5 Claims. (Cl. 230—21.)

1. In a variable capacity compressor, the combination with a cylinder, of a plurality of clearance chambers, and



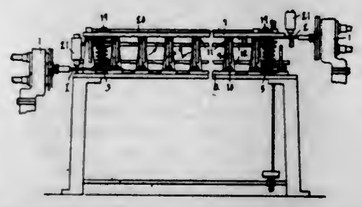
pressure controlled means for partially unloading said cylinder by simultaneous opening of said clearance chambers to the cylinder, and for wholly unloading the cylinder by opening the clearance chambers to each other.

1,812,608. ELECTRO-SURGICAL INSTRUMENT AND CONTROL. DONALD E. ROBERTS, Milwaukee, Wis. Filed Oct. 24, 1929. Serial No. 402,137. 1 Claim. (Cl. 174—89.)



An electro-surgical instrument and control consisting of a suitable instrument handle to which is hinged an insulated arm carrying a wiping contact which slides in contact with a rheostat which is secured approximately at right angles to the instrument handle, in combination with a magnetically operated spark-gap; and operated by manual pressure of the surgeon's operating hand pressing upon the insulated arm of the rheostat, thereby opening the spark-gap, allowing current to flow to the operating instrument.

1,812,609. SEPARABLE ELECTRIC CONNECTER. FREDERICK W. ROGERS, Beaver Dam, Wis. Filed June 24, 1929. Serial No. 373,275. 8 Claims. (Cl. 173—361.)

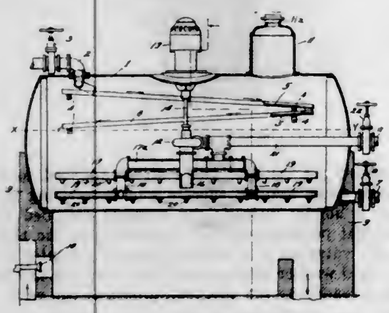


1. A plug receptacle comprising an insulating body having an enlarged rear end forming abutment shoulders, a portion of said end intermediate said shoulders being removed to provide a transverse support, said receptacle having a vertical opening therethrough, the forward portion of said receptacle having a horizontal passage extending rearwardly from the forward end and terminating at said vertical opening in alignment with a stationary contact, and a removable plug member having an extended contact adapted to be passed through said passage into said opening for connection with said stationary contact member.

1,812,610. AUXILIARY APPARATUS FOR TIRE VALVES. WILLIAM R. ROYER, Wyoming, Pa. Filed Aug. 10, 1929. Serial No. 384,909. 3 Claims. (Cl. 152—12.)

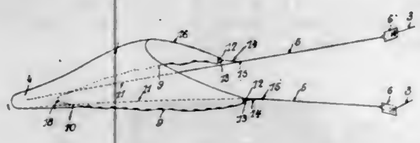
1. A valve cap for tire valve stems adapted to seal a valve stem when applied thereto and comprising in combination, a hollow metallic cap member provided with a threaded nut portion adapted to screw upon the threaded nipple of a valve stem, a resilient washer mounted in said member, said washer having a normally smooth bore adapted to be threaded by the threaded nipple of the valve stem to which the cap member is applied, a slidable valve rod mounted in said cap member, extending through said washer and guided in its sliding movements by said washer and adapted when depressed to open the valve within the tire valve stem to which the cap member is applied, to permit inflation of the tire without removal of the cap member from the stem, and a valve member on said valve rod within the cap member and adapted to seat against said washer normally to prevent escape of air through said washer.

1,812,611. MACHINE AND METHOD FOR ASSEMBLING SPRINGS. GEORGE A. STACKHOUSE, Oakland, Calif., assignor to L. A. Young Spring & Wire Corporation, Detroit, Mich. Filed Mar. 5, 1930. Serial No. 433,245. 7 Claims. (Cl. 140—3.)



1. The method of assembling helical springs having end coils terminating in laterally disposed tie members and having offsets in such end coils opposite the tie members consisting of wrapping the tie members about the offsets of adjacent springs in open spiral coils, disposing the offsets of the connected springs in a chuck with the reaches of their offsets in alined relation, the chucks having spiral grooves therein, and rotating and advancing a spiral spring cross member in said chuck whereby it is engaged with the said offsets, the coils of the time member being spaced to receive the coils of the cross member between them.

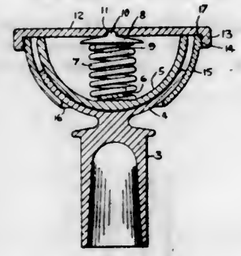
4. In a spring assembling machine, the combination of chucks adapted to receive a plurality of connected spaced pairs of springs, one spring of each pair having an offset therein and the other a tie member spirally wound about



said offsets, said chucks comprising outer chuck members having longitudinal channels therein, and a plurality of coacting chuck members pivotally mounted between said outer chuck members to swing to a transverse position between said outer chuck members, said chucks being spirally grooved and adapted to receive and guide a helically coiled spring cross member rotated and advanced therein into engagement with the offset portions and tie members of said body springs within the chuck.

1,812,612. PROCESS AND APPARATUS FOR REFINING OILS. CHARLES WALCOTT STRATFORD, San Francisco, Calif. Filed Nov. 24, 1926. Serial No. 150,488. 5 Claims. (Cl. 196—68.)

5. An oil still comprising a circulating system entirely contained therein operating at relatively higher pressure than the still, an inlet oil supply line and a discharge pipe connected with the pressure circulating system.

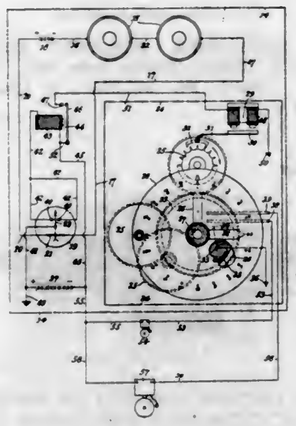


1,812,613. TRAWLING GEAR. JEAN BAPTISTE JOSEPH ALPHONSE VIGNERON, La Rochelle, France, assignor to V. D. Limited, London, England. Filed Nov. 22, 1929, Serial No. 409,065, and in France Dec. 4, 1928. 8 Claims. (Cl. 43—9.)

2. A sea bottom trawling gear comprising in combination: towing means, two shear boards connected with said towing means for spreading the gear in width, two dragging cables of great length connected with said shear boards, a net connected to said dragging cables, said net comprising a rear pocket and a covering sheet and having no belly nor foot rope, traction cables attached to said rear pocket at one end to said dragging cables at the opposite end, and weighted slack cables bordering the lower edges of said covering sheet and so connected with said traction cables as to be relieved from traction stresses.

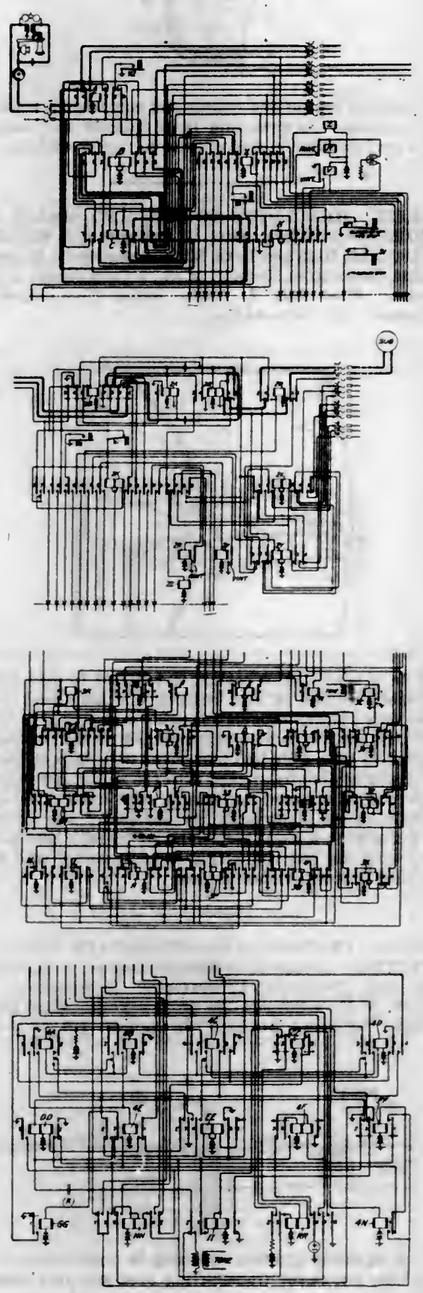
1,812,614. TRIPOD HEAD PARTICULARLY ADAPTED FOR USE IN CONNECTION WITH A PORTRAIT CAMERA. ANTONIUS J. VIKEN, Jackson Heights, New York, N. Y., assignor to Underwood & Underwood, Inc., New York, N. Y., a Corporation of Delaware. Filed Oct. 22, 1928. Serial No. 314,128. 2 Claims. (Cl. 248—47.)

1. In a portrait camera tripod the combination of a shank terminating at its upper end in a segmental spherical cup, a semi-spherical cup member seated in said first cup, a projecting nib in the center of the interior of said cup member, a heavy compression spring mounted over said nib, a bearing cap carried on the upper end of said



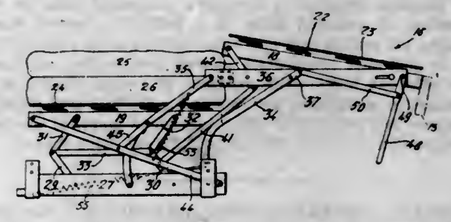
spring, said cap seating in a bearing in the center of a circular cover plate, a downturned edge on said plate internally threaded and engaged by an externally threaded semi-spherical cup member with its lower portion cut away.

1,812,615. SULPHONATED SUBSTANCES AND PROCESS OF PREPARING THE SAME. EUGENE WOLGAMUTH WALL, Philadelphia, Pa., assignor to Kali Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 23, 1929. Serial No. 349,522. 8 Claims. (Cl. 87—16.)



1. The process of producing a substance which will form a soluble compound with salts of the alkaline earth of hard waters, consisting in adding ethanolamines to sulphonated oils.

1,812,616. AUTOMATIC SOUND SIGNALING AND REGULATING SYSTEM FOR MICROPHONES USED IN ELECTRIC ALARM SYSTEMS. JOHN P. WILLIAMS, Bayside, N. Y., assignor to Duplex Electric Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 8, 1927. Serial No. 218,351. 3 Claims. (Cl. 177—314.)

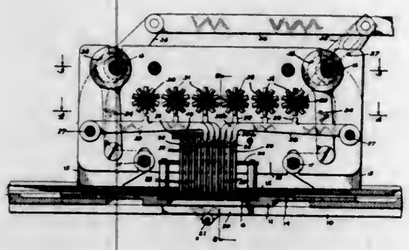


1. A microphone protective system of the class described for a structure to be protected, comprising a microphone sound detector located in a position to be actuated during a burglarious attack, a relay in circuit with said microphone, movable means controlled by said relay responsive to both intermittent and continuous vibrations of said sound detector, and an alarm circuit controlled by said means to actuate said alarm only after a predetermined movement of said means.

1,812,617. TELEPHONE EXCHANGE SYSTEM. JOHN H. E. BAKER, Aldwych, London, England, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 20, 1930, Serial No. 429,945, and in Great Britain Feb. 21, 1929. 24 Claims. (Cl. 179—18.)

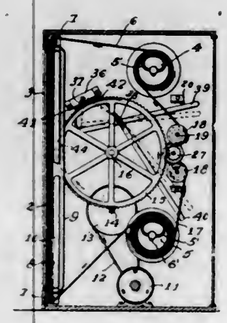
2. In an automatic telephone system, a first switch having a plurality of wiper sets, a second switch having a plurality of wiper sets, a first control circuit associated with said first switch, a second control circuit associated with said second switch, means for registering in said first control circuit two digit series dialed thereinto, means for selecting a wiper set in said first switch in accordance with the registration of the second digit of said two digit series, a trunk line connecting said first switch with said second switch over said selected wiper set, means in said first control circuit for transmitting special signals over said trunk in accordance with the registration of said two digits, means in said second control circuit for registering said special signals and means in said second control circuit for selecting a wiper set in said second switch in accordance with the registration of said signals.

1,812,618. FOLDING BED. HERMAN BLASE and KENNETH B. COWAN, New York, N. Y.; said Cowan assignor to said Blase. Filed Aug. 2, 1929. Serial No. 383,044. 3 Claims. (Cl. 5—22.)



2. In a foldable bed comprising a base, a collapsible bed section, including a frame, collapsible links disposed between said base and said frame, a second bed section having a frame and an arm pivoted thereto, a pair of struts terminally pivoted on said base and on said arm, said second bed section being upwardly swingable on said struts, a lever pivoted on said arm, one arm of said lever pivoted on said latter frame, and a link terminally pivoted on said collapsible links and on the opposite arm of said lever for rocking said latter frame on swinging movement of said second bed section, substantially as and for the purpose described.

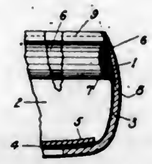
1,812,619. SOUND REPRODUCTION. DAVID G. BLATTNER, Bogota, N. J., assignor to Bell Telephone Laboratories, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 24, 1928. Serial No. 256,502. 7 Claims. (Cl. 181—24.)



1. The combination with a phonograph pick up device adapted to be held in the hand of an operator, of acoustic stethoscopic means for conducting the sound waves set up in the device to the ears of the operator.

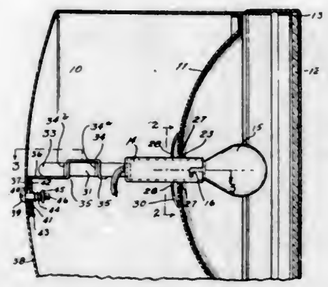
1,812,620. PUNCHING DEVICE. OTTO E. BRAITMAYER, New York, N. Y., assignor to The Tabulating Machine Company, New York, N. Y., a Corporation of New Jersey. Filed July 5, 1923. Serial No. 649,415. 6 Claims. (Cl. 164—111.)

1. A punching device comprising a plurality of groups of punches adapted to designate numerical data by the location of punched holes in a field of a record sheet, means for setting and operating said punches consecutively to perforate consecutive number designating punchings on adjacent index point columns of record sheets, upon successive operations, and means for shifting said punches transversely relative to the record sheet material whereby the punching may be effected in different fields thereon.



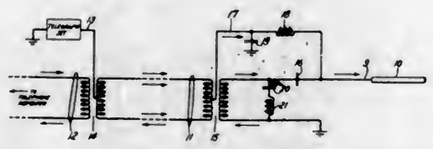
1,812,621. MOVABLE SIGN EXHIBITOR. SOLOMON CALLER, Chicago, Ill. Filed Mar. 29, 1928. Serial No. 265,547. 12 Claims. (Cl. 40—31.)

1. In an advertising device, the combination of a casing having an opening, a pair of spools within the casing, a sign strip connected to the spools and adapted to be wound off one spool and on the other, means for intermittently driving said spools, this sign strip bearing characters disposed thereon forming a series of messages, guides for directing the sign strip across the opening, whereby said messages will be displayed through said opening, an electric circuit, a switch for controlling said circuit and means for automatically reversing the direction of movement of said driving means, said last mentioned means including a pair of pivotally mounted levers adapted to be actuated by said driving means, said levers being operative to actuate said switch to place the latter in position to be operated by the driving means for reversing the direction of movement of the latter.



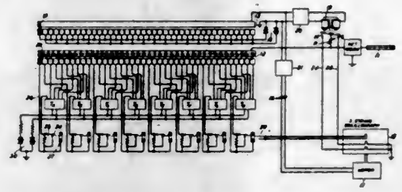
1,812,622. SHOE. PAUL S. COSTELLO, Philadelphia, Pa., assignor of one-third to Dominic B. George and Frank E. Mitulski, St. Louis, Mo. Filed Dec. 30, 1929. Serial No. 417,327. 2 Claims. (Cl. 36—58.6.)

1. In an article of the kind described, the combination with a shoe having an inner and outer quarter with a counter therebetween, of means for preventing the accidental slipping movement between the heel portion of the



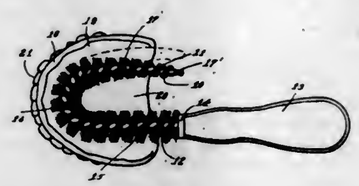
shoe and the foot of the wearer and comprising a resilient pad positioned between said inner quarter and counter; and a seat provided in said counter to receive said pad.

1,812,623. HEADLIGHT SOCKET AND MEANS FOR MOUNTING SAME. GUY H. COULTER and SAMUEL F. ARBUCKLE, Highland Park, Mich., assignors to Monogram Lens Corporation, Detroit, Mich., a Corporation of Delaware. Filed July 7, 1927. Serial No. 203,883. 2 Claims. (Cl. 240—44.2.)



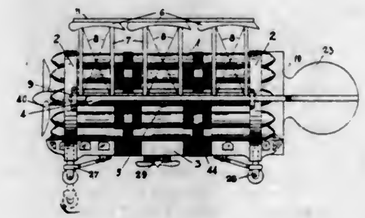
1. In a headlight, a casing; a reflector in said casing; a socket mounted in said reflector for movement in one plane only; means cooperating with said socket to impart a vertical motion thereto and mounted on said casing and adapted to have a limited movement with respect thereto; and a member axially aligned with the socket and separably connecting said socket and means, said member being unbendable in the plane in which said socket has movement but bendable in a plane perpendicular thereto, said member comprising the sole connecting means between said socket and said first mentioned means.

1,812,624. TELEPHONE AND TELEGRAPH SIGNALING SYSTEM. GEORGE C. CUMMINGS, Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 6, 1929. Serial No. 344,745. 11 Claims. (Cl. 179—3.)



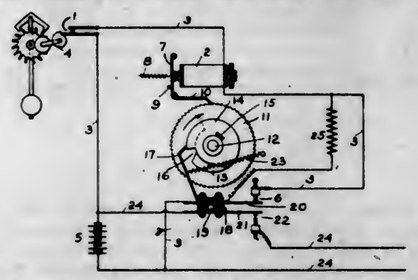
1. A signaling system comprising in combination, a two-wire line, means for transmitting over said line messages of one frequency as a two-wire circuit, and messages of another frequency over both sides of said line in parallel, a second line connected in circuit with said two-wire line, and means for transmitting both of said messages over a single conductor included in said second line.

1,812,625. SIGNAL MONITORING DEVICE. AUSTEN M. CURTIS, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed June 13, 1930. Serial No. 460,846. 9 Claims. (Cl. 178—68.)



1. In a multi-channel impulse transmission system, a monitoring device common to all channels thereof, characterized in this, that means are provided for indicating a definite point in any channel in the monitor record of a plurality of channels.

1,812,626. DENTURE BRUSH. SYLVAN MAURICE EDISON, Rockford, Ill. Filed Oct. 9, 1929. Serial No. 398,286. 1 Claim. (Cl. 15—206.)

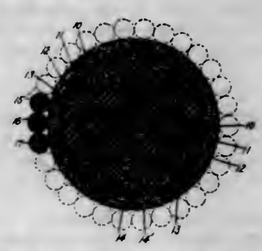


A brush for artificial dentures which includes, a twisted wire brush frame having a free end and a handle end, said frame being bent through substantially a horseshoe bend intermediate its ends to provide a curved portion and two parallelly disposed legs, a handle on said handle end coaxial with respect to one of said legs, bristles of uniform length distributed upon said frame from the end in said handle to a point beyond said bend, adapted to be employed in cleaning the gum grooves and surfaces of a full denture, bristles from said point to said free end of progressively shorter length to provide a cone shaped end, and a tuft of bristles positioned directly over said free end, said tuft and said bristles of progressively shorter length being adapted to be employed for the cleaning of the clasps and grooves of a partial denture.

1,812,627. TRIHYDRO DIRIGIBLE AND AIRPLANE. VAN EVERY EDWARDS, Springfield, Ill. Filed May 16, 1930. Serial No. 452,990. 5 Claims. (Cl. 244—6.)

2. An airplane and dirigible airship combination comprising a plurality of parallel metallic cylindrical gas containers, a frame support therefor and a control cabin operatively secured to said frame, airplane wings operatively secured to said gas containers and frame so as to extend substantially beyond the sides of the containers, a plurality of navigating motors centrally disposed in alignment and a plurality of driven propellers aligned on a shaft in spiral fitting relation thereon to be operated by wind force from said navigating propellers, a pair of longitudinal side elevator fins rigidly secured at the forward end along the side of said containers and adjustably mounted at the rear end thereof; means for varying the speed of said secondary propellers and means for controllably adjusting said elevator planes and the rudders of the airship.

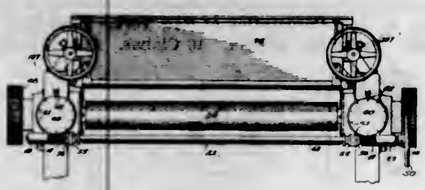
1,812,628. AUTOMATIC BATTERY CHARGING SYSTEM. EDWARD F. GEIGER, Binghamton, N. Y., assignor to International Time Recording Company of New York, Endicott, N. Y., a Corporation of New York. Filed Sept. 27, 1928. Serial No. 308,674. 10 Claims. (Cl. 171—314.)



1. In combination, a storage battery, a charging circuit therefor, time controlled means actuated by said battery and means controlled by said time controlled means to connect the battery either with the charging circuit or with said time controlled means.

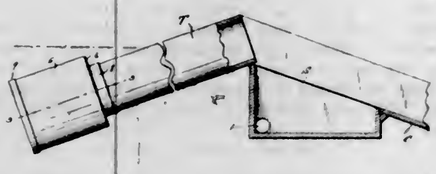
1,812,629. TREATMENT OF CRUDE PETROLEUM TO PREVENT CORROSION. CHARLES D. GIFFORD, Los Angeles, Calif., assignor, by mesne assignments, to Cannon-Prutzman Treating Processes, Ltd., Los Angeles, Calif., a Corporation of California. Filed May 28, 1928. Serial No. 281,361. 8 Claims. (Cl. 196—147.)

2. A method of rendering crude petroleum containing inorganic salts noncorrosive to metals, comprising: heating said petroleum substantially free from emulsion to a temperature of fluidity; adding to and intimately disseminating throughout said petroleum a sufficient quantity of water to dissolve the salt contained therein; passing said petroleum and said added water through a layer of finely pulverized porous material, and separating the efflux from said layer into an oil portion and a brine portion.



1,812,630. CABLE ARMORING. JOHN J. GILBERT, Douglaston, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 28, 1929. Serial No. 343,312. 6 Claims. (Cl. 173—266.)

1. A submarine telephone or carrier frequency cable having incoming and outgoing conductors enclosed with-



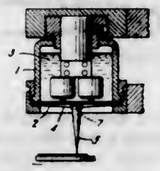
in armor wire, characterised in this, that the armor wire is freely exposed to the magnetic field set up by currents in the conductors, but for the purpose of reducing losses in the armor wire as a result of eddy currents therein the armor wire is finely subdivided.

1,812,631. FORMING APPARATUS FOR PLASTIC MATERIALS. FRANCIS W. HARNEY, Lockport, N. Y., assignor to The Upson Company, Lockport, N. Y., a Corporation of New York. Filed Oct. 10, 1930. Serial No. 487,813. 20 Claims. (Cl. 154—1.)

1. Mechanism for forming wallboard and the like comprising a pair of substantially parallel rolls, means for supplying plastic material to the space between said rolls, screw means associated with each end of one of said rolls to move said roll toward and away from the axis of the other of said rolls, mechanism for operating each of said screw means independently to move each end of one of said rolls independently of the other end, and mechanism for operating both of said screw means simultaneously to shift both ends of said one of said rolls simultaneously toward and away from the axis of the other of said rolls.

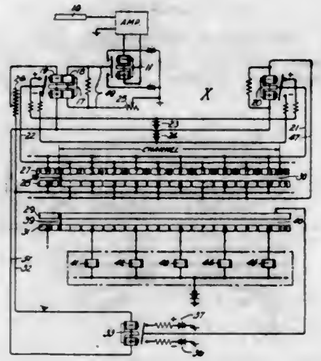
1,812,632. FISHING APPARATUS. ALBERT H. HARRINGTON, Brighton, Boston, Mass. Filed June 10, 1930. Serial No. 460,249. 2 Claims. (Cl. 43—4.)

1. In a fishing apparatus, an elongated tube adapted to be mounted upon a boat with one end portion in submergence, a sleeve carried by the submerged end portion of the tube, the wall of said sleeve being transparent, and means for directing light rays through said wall of the sleeve.



1,812,633. WEIGHING SCALE. FRANK F. HEITZ, Dayton, Ohio, assignor to Toledo Scale Manufacturing Company, Toledo, Ohio, a Corporation of New Jersey. Filed Apr. 8, 1929. Serial No. 353,316. 2 Claims. (Cl. 265—27.)

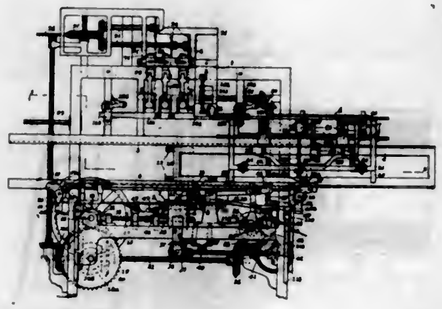
1. In a weighing scale, in combination, a lever system, a load receiver mounted thereon, pendulum load counterbalancing mechanism including a relatively movable chart and indicating hand, and means, including a shock absorbing device, for operatively connecting said lever and said load counterbalancing mechanism, said shock



absorbing device consisting of a plurality of metallic plates, two of said plates compressively engaging a plurality of resilient pads.

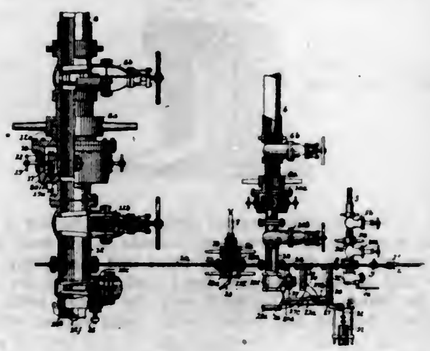
1,812,634. SOUND REPRODUCER. WARREN C. JONES, Flushing, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed June 23, 1928. Serial No. 287,722. 4 Claims. (Cl. 274—38.)

1. A reproducer needle comprising a conical shell of metal with a hard metal surface at its point and a mounting member at its base.



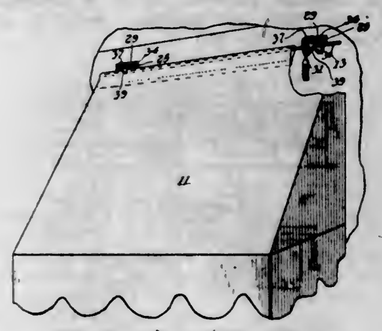
1,812,635. SIGNALING SYSTEM. WILLIAM A. KNOOP, Hempstead, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed June 29, 1929. Serial No. 374,734. 7 Claims. (Cl. 178—88.)

1. In a telegraph system, a signaling line, a plurality of receiving magnets, a device for repeating impulses



of reversed polarity to said magnets, a distributor, electromagnetic means operating in conjunction with said distributor for operating said device, other electromagnetic means, said means being arranged to control each other, and means responsive to impulses received over said line for controlling the second mentioned electromagnetic means independently of said distributor and the first mentioned electromagnetic means.

1,812,636. SAW FILING MACHINE. SINIBALDO LEONE, Paterson, N. J. Filed Dec. 31, 1927. Serial No. 243,842. 13 Claims. (Cl. 76—40.)

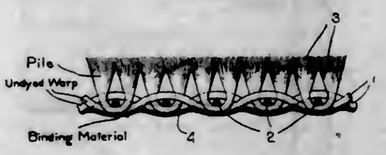


1. A machine for performing operations successively on the teeth of a saw comprising a frame, a saw-holding carriage slidable therein back and forth, reciprocatory means to operate on the saw, means to slide the carriage in one direction and simultaneously reciprocate the reciprocatory means including a rotary actuating member, means, also including a rotary actuating member, to slide the carriage in the opposite direction while the reciprocatory means is at standstill, and driving means shiftable into driving engagement with one or the other of said members.

1,812,637. APPARATUS FOR ASSISTING THE CREW OF A SUNKEN SUBMARINE. SINIBALDO LEONE, Paterson, N. J. Filed Sept. 17, 1929. Serial No. 393,253. 6 Claims. (Cl. 114—16.4.)

1. Apparatus for assisting the screw of a sunken submarine comprising a tubular structure having its passage affording communication between the interior and exterior of the submarine and also having a shut-off valve, a tubular conductor adapted to be delivered and supported at one end from a rescue craft and having a shut-off valve at the other end, said structure and the latter end of said conductor being enterable one telescopically into the other and having a coacting pawl and catch shoulder to interlock them against separation and also having means thereupon to form a sealed joint between them, and means extending to the exterior of the apparatus for disengaging the pawl from said shoulder.

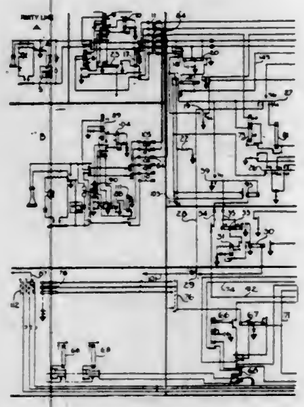
1,812,638. WINDOW AWNING. HUGH WALTER MCCURDY, Chicago, Ill. Original application filed Sept. 24, 1930, Serial No. 484,055. Divided and this application filed Dec. 29, 1930. Serial No. 505,359. 5 Claims. (Cl. 156—15.)



4. Means for detachably securing the top of an awning having a rod therein in place on a casing support consisting of a pair of base plates permanently secured to the casing support, each of said base plates having a threaded aperture therein and a lug projecting outwardly therefrom, a pair of clamping members for the rod for each of the base plates, each of the rear clamping members being provided with a pair of apertures therethrough, one co-operating with the lug on the base plate and the other registering with the threaded aperture in the base, means for opening and closing the pairs of clamping members, and a screw passed through the aperture in the rear clamping member registering with the threaded aperture and screwed into it so that the awnings with the clamping members still secured to the rod can be removed, leaving the base plates in place.

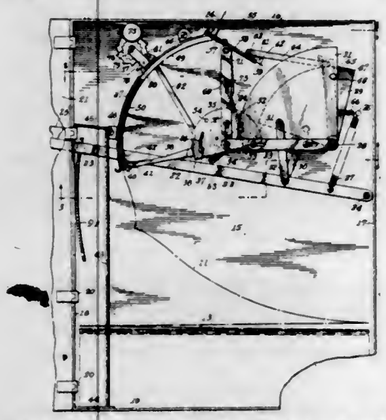
1,812,639. SYNTHETIC RESIN COMPOUND AND PROCESS OF PREPARING THE SAME. CHARLES G. MOORE, Lakewood, and MILTON ZUCKER, Cleveland, Ohio, assignors to The Glidden Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 1, 1929. Serial No. 375,320. 12 Claims. (Cl. 260—8.)

1. A synthetic resin, comprising the reaction product of an organic polybasic acid, a polyhydric alcohol, and the fatty acids of rubber seed oil.



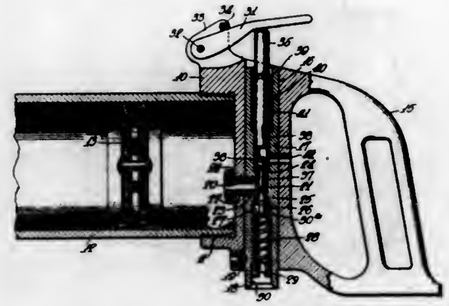
1,812,640. PILE FABRIC AND METHOD OF MAKING THE SAME. WILLIAM S. NUTTER, Sanford, Me., assignor to Goodall Worsted Company, Sanford, Me., a Corporation of Maine. Filed Feb. 4, 1928, Serial No. 252,029. Renewed Jan. 12, 1931. 10 Claims. (Cl. 139—391.)

1. A pile fabric having pile threads interlocked with interwoven filling threads and undyed warp threads, there being a deficiency of warp threads for binding the pile



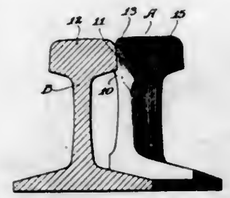
threads into the fabric, the back face of the fabric having a coating of colored pyroxylin applied thereto which by its adherence to the exposed portions of the pile threads and warp threads not only binds the pile threads into the warp threads but also colors the portions of the undyed warp threads that are exposed on the back of the fabric.

1,812,641. REMOTE CONTROL MAGNETO TELEPHONE SYSTEM. WINFRED T. POWELL, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed May 31, 1930. Serial No. 457,826. 5 Claims. (Cl. 179—27.)



1. In a telephone system, an automatic exchange, a plurality of telephone lines and a toll line terminating at said exchange, means including automatic switches for interconnecting said telephone lines and said toll line, means including impulse-controlled devices for effecting the operation of said automatic switches, a distant exchange including an operator's position, an operating trunk and said toll line terminating in said position, said impulse-controlled devices being normally governed over said operating trunk, and means at the automatic exchange actuated from said operator's position for transferring the control of said impulse-controlled devices from said operating trunk to said toll trunk.

1,812,642. TICKET DISPENSING AND REGISTERING MACHINE. FRANK SIMOND, New York, N. Y. Filed May 18, 1926. Serial No. 109,857. 5 Claims. (Cl. 271—2.5.)

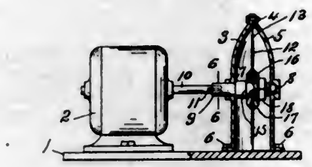


1. In a ticket dispensing machine, a narrow upright rectangular casing having a hinged door to cover one side, a pair of spring supported key levers pivoted in said casing to extend through its front wall, a large segmental cam operated by one of said levers, a small segmental cam operated by the other lever, a pivoted plate actuated by each cam independently, and an arm adjustably carried by said plate to engage a ticket to advance the same through an opening in the casing top.

1,812,643. GREASE GUN CONTROL MECHANISM. HERMAN ALBERTINE, Rutherford, N. J., assignor to Rogers Products Company, Inc., a Corporation of New Jersey. Filed June 26, 1929. Serial No. 373,720. 13 Claims. (Cl. 221—47.3.)

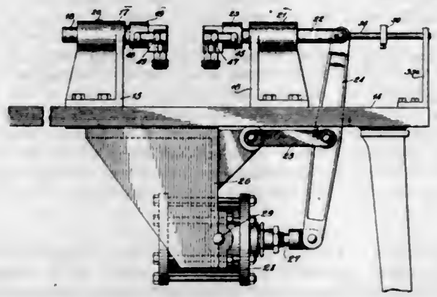
1. In a grease gun of the character in which fluid under pressure acting in a working chamber supplies the motive force for expelling grease, a control handle, at the rear end of said working chamber, a transverse passage, open at both ends, arranged between the handle and the working chamber and means associated therewith for controlling the admission and exhaust of motive fluid to and from said chamber, said means comprising a unitary valving assemblage bodily applicable to and removable from said transverse passage.

1,812,644. MULTIANGULAR SWITCH POINT. DAVID E. ANDERSON, St. Paul, Minn. Filed Sept. 18, 1930. Serial No. 482,768. 12 Claims. (Cl. 246—435.)



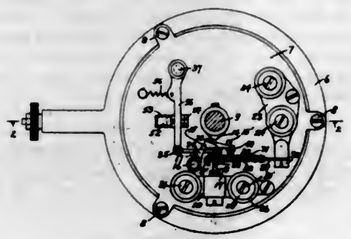
1. A switch point formed from a rail having a rail head, a beveled face formed on one side of said head down to the tip end of the switch point and converging into the body of said head, said bevel conforming to the flare of the wheel flange operated over the switch point, the opposite face of said switch point being formed with a main rail engaging recess to provide a thin beveled point at the rail tip and extending to the rail head body for wheel flange wear.

1,812,645. FABRIC CUTTING MACHINE. CARL B. BERGSON, Kansas City, Mo. Filed Oct. 17, 1929. Serial No. 400,248. 2 Claims. (Cl. 164—60.)



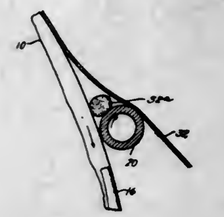
1. In a fabric cutting machine, a base having a horn provided at its inner end and upper side with a vertical groove, a housing on said base having an opening adapted

to receive the goods to be cut and into which said grooved portion of said horn extends, a horizontal shaft rotatably mounted in said housing, a circular blade in said housing fastened to and rotatable with said shaft and extending



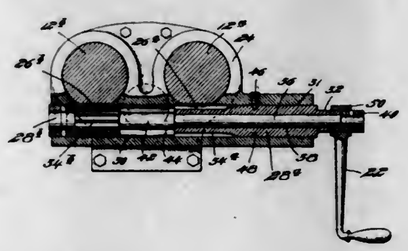
into said groove and into said opening, a motor on said base having a driving shaft alined with said horizontal shaft, and means for releasably drivingly connecting said two shafts.

1,812,646. METHOD OF APPLYING FITTINGS TO STRANDED STRUCTURES. GORMAN C. BURD, Adrian, Mich., assignor to American Cable Company, Inc., a Corporation of Delaware. Filed Apr. 3, 1930. Serial No. 441,289. 7 Claims. (Cl. 29—148.5.)



1. In the method of cutting off sections from a stock of stranded structure and applying fittings to the cut ends, the steps which consist in applying a bushing about the stock where it is to be severed, clamping the bushing thereon, severing the bushing and the stock to leave a portion of the bushing on each cut end, separating the bushed ends, and applying a fitting on each of said bushed ends separately.

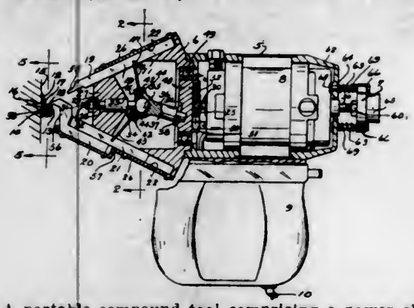
1,812,647. CONTROL SWITCH MECHANISM. LOUIS O. FRENCH, Milwaukee, Wis. Filed Sept. 26, 1929. Serial No. 395,365. 5 Claims. (Cl. 200—31.)



1. In control switch mechanism, the combination of a pair of relatively movable contacts, a lever associated with one of said contacts to move the same, engine-controlled means for actuating said lever, and a shiftable member interposed between said lever and said contact for varying the action of said lever on said contact to vary the relative duration of the circuit-closing period of said contacts.

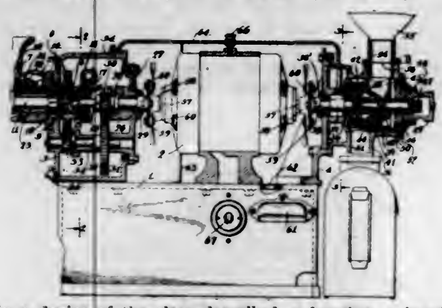
1,812,648. FILTER DISCHARGING MECHANISM. WILLIAM GARDELLA, Flushing, Long Island, N. Y., assignors to Oliver United Filters Incorporated, San Francisco, Calif., a Corporation of Nevada. Filed Jan. 3, 1929. Serial No. 329,971. 4 Claims. (Cl. 210—199.)

2. The combination in a rotary drum continuous filter of a discharge roller, comprising a smooth metallic cylinder spaced from the filtering surface of said drum, and means to rotate said roller so that the surface nearest the drum moves in a direction opposite to the rotation of said drum to strip the filter cake from said drum without wear on said filter surface.



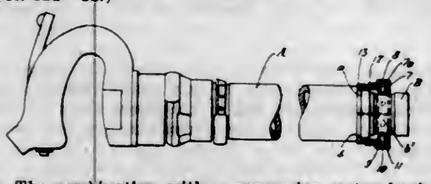
1,812,649. ADJUSTING MEANS FOR OVERHANGING ARMS. BENJAMIN P. GRAVES, Cranston, R. I., assignor to Brown & Sharpe Manufacturing Company, Providence, R. I., a Corporation of Rhode Island. Filed Sept. 11, 1928. Serial No. 305,167. 2 Claims. (Cl. 90—18.)

1. In a milling machine, a column, two parallel horizontally disposed overhanging arms adapted to receive a cutter arbor yoke on the front end thereof for mounting a cutter arbor between said yoke and column having rack gear teeth formed thereon on a portion thereof normally contained within the column, a transverse bearing bore in said column adjacent said gear teeth, a sleeve shaft having a reduced end projecting from said bore and the opposite end toothed to engage the rack teeth on the adjacent overhanging arm, a shaft having a toothed end to engage the rack teeth on the further overhanging arm, a portion projecting through said sleeve shaft bore and terminating in an end beyond said sleeve shaft end of substantially the same diameter as that of the projecting sleeve shaft end and a central portion of larger diameter than the sleeve shaft contained portion to form a shoulder to prevent inward movement of the sleeve shaft and an actuating handle for said shafts slidable from a position engaging the end of the sleeve shaft to adjust the projecting length of one overhanging arm to a position engaging both the end of the shaft and the sleeve shaft to adjust the projecting lengths of both overhanging arms together and to a position engaging the projecting end of the shaft to adjust the projecting length of the other overhanging arm.



CARNEGIE LIBRARY OF ATLANTA

1,812,650. POWER HAMMER. JAY HIRAM GREENLEY, Buffalo, N. Y. Filed June 12, 1929. Serial No. 370,357. 10 Claims. (Cl. 81—3.)

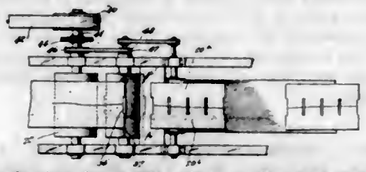


1. A portable compound tool comprising a power shaft, a plural hammer mechanism mounted upon one end of said shaft, means for successively impelling the hammers in converging lines to a common area, and flexible connections between a source of power energy and said power shaft to actuate the latter.

1,812,651. DUPLEX MOTOR DRIVE ASSEMBLY FOR KITCHEN APPLIANCES. ROY KARL GULLBERG, Dayton, Ohio, assignor to Dayton Scale Company, Dayton, Ohio, a Corporation of New Jersey. Filed June 3, 1925. Serial No. 34,570. 1 Claim. (Cl. 74—7.)

In a device of the class described, a housing, a bearing frame secured thereto, a motor-driven shaft journalled in the bearing frame, a member constantly drivingly connected to a food instrumentality extending coaxial with said shaft and having a socket for rotatably receiving the shaft, said member being rigidly provided with a clutch element, a coacting clutch and driving element geared to the motor driven shaft, said latter clutch element freely embracing aforesaid member, a bearing frame for the latter rigid with said housing and on the side thereof opposite the first-mentioned bearing frame, and means for slidably actuating aforesaid member at will to connect and disconnect the clutch element thereof from the coacting clutch element.

1,812,652. TOOL RETAINER. GEORGE T. HARCOURT, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 22, 1929. Serial No. 357,161. 10 Claims. (Cl. 121—32.)

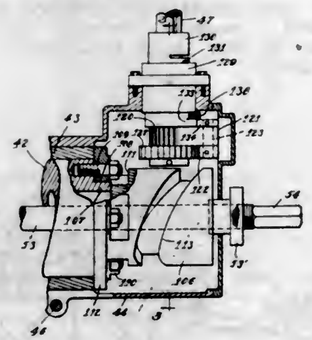


1. The combination with a percussive motor having a barrel into which a working tool is to be inserted, of retaining means for the tool engaging said barrel, and means comprising a sleeve having inwardly projectable members, an annulus in telescoping engagement with the exterior of said sleeve, and resilient means having the dual function of holding said sleeve on said barrel and of yieldingly maintaining said annulus in position to hold said members in tool engaging position.

1,812,653. MULTIPLE SUTURE YARN CONTROL. EDWARD C. HINCHLIFF, Rockford, Ill., assignor to Burson Knitting Company, Rockford, Ill., a Corporation of Illinois. Filed Apr. 25, 1930. Serial No. 447,145. 12 Claims. (Cl. 66—126.)

1. In a straight knitting machine, the combination with a bed of needles and a guide extending lengthwise of the throat of the machine and adapted to have yarn carriers reciprocate thereon lengthwise of the bed, of a plurality of yarn retainers disposed in an out of the way position with respect to the bed of needles in alignment with one another lengthwise of the bed and parallel with the guide, the said retainers being spaced from one another at suture points, there being needles in the bed constituting suture needles at the suture points from which yarn is arranged to extend past one or more intervening retainers to the yarn carrier associated therewith when the latter is inactive, and means arranged in the reciprocation of a yarn carrier on the guide to thread the yarn extending from the suture needle onto the one or more yarn retainers between the said suture needle and the yarn carrier associated therewith.

1,812,654. MECHANISM FOR CUTTING SHEET MATERIAL. LESTER KIRSCHBRAUN, Leonia, N. J., assignor, by mesne assignments, to The Patent and Licensing Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 8, 1928. Serial No. 311,017. 8 Claims. (Cl. 164—68.)



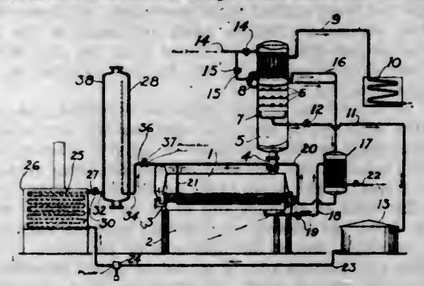
1. Mechanism for cutting sheet roofing material to produce shingle elements of varying butt-edge configuration, comprising means for slitting the sheet longitudinally along a sinuous line the pattern of which is repeated at regular intervals by the continued operation of said means, and means for severing the sheet transversely thereof at predetermined intervals, said last named means operating out of phase with the first named means.

1,812,655. DENTAL ROLL AND METHOD OF MAKING THE SAME. JOHN W. B. LADD, West Roxbury, Boston, Mass. Filed May 2, 1928. Serial No. 274,594. 17 Claims. (Cl. 32—33.)

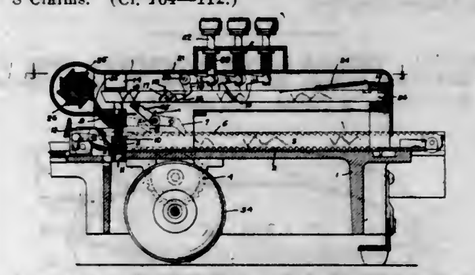
1. As a new article of manufacture, a dental roll for absorbing saliva in the mouth, the same comprising a sheet of absorbent material rolled upon itself in the approximate form of a cylinder, and a binder of comparatively insolvent adhesive material on and about the cylindrical surface of said cylinder.

1,812,656. FEED MECHANISM FOR MACHINE TOOLS. ALBERT B. LEET, Rockford, Ill., assignor to Rockford Machine Tool Co., Rockford, Ill., a Corporation of Illinois. Filed Nov. 3, 1926. Serial No. 145,942. 2 Claims. (Cl. 74—53.)

1. A feed mechanism for a machine tool comprising the combination with a continuously rotated element, and a feed shaft disposed in crosswise relation therewith and arranged to be intermittently rotated in one direction, of a housing, a cylindrical peripherally conformed cam in said housing turning with the aforesaid element, a rocker arm having operative connection with said cam to be positively oscillated back and forth in the continuous rotation thereof, a gear sector arranged to oscillate with said rocker arm, a gear element meshing with said sector and having a lever extending therefrom, a pawl mounted on said lever, a ratchet arranged to turn the feed shaft and having said pawl arranged for operating the same, a normally stationary but rotatably adjustable cam for holding the pawl disengaged from the ratchet through a portion of its stroke, a hand crank outside the housing for turning said cam, and means for locking said crank in various positions of adjustment.



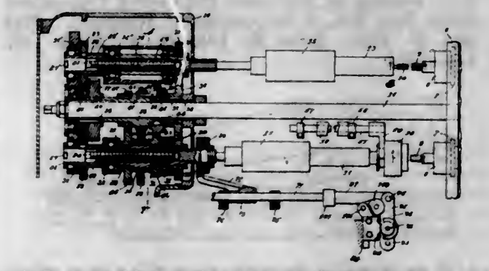
1,812,657. ATTACHABLE WASHER. REINHARD LEITZKE, Beaver Dam, Wis. Filed Dec. 21, 1929. Serial No. 415,760. 1 Claim. (Cl. 85—51.)



A washer with a substantially circular circumference having a radial slit, the circular circumference being cut away at right angles and directly opposite the slit on a chord between the inner and outer peripheries and intersecting the outer periphery only to remove a segmental portion of the washer providing a reduced hinged connection for the opposite sides of the washer.

1,812,658. APPARATUS FOR CRACKING HYDROCARBONS. NATHANIEL E. LOOMIS, Elizabeth, N. J., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed July 22, 1925. Serial No. 45,195. 1 Claim. (Cl. 196—51.)

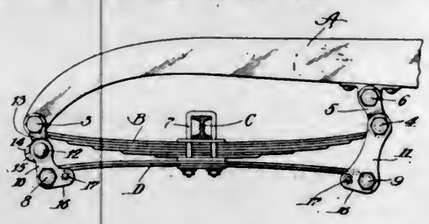
Apparatus for cracking hydrocarbon oil, comprising a cracking coil, a thermally insulated digesting drum connected thereto, means for maintaining pressure on said coil and drum, a still, internal heating flues therein, a bubble tower adapted to receive vapors from the still, a vapor heat exchanger in the upper portion of the tower, means for passing feed oil through said vapor heat exchanger, whereby the oil is preheated, a tar heat exchanger connected to the still and adapted to receive hot tar therefrom, means for passing the preheated feed stock through the tar heat exchanger and thence into the still, means for conveying heavy condensate formed in the tower to an accumulator tank and thence through the cracking coil and digesting drum, a pipe for withdrawing the oil from said drum and passing it directly to the still, and a pressure release valve in such withdrawal pipe.



1,812,659. MOTOR DRIVEN PUNCH. ADELBERT C. MABY, Richmond Hill, N. Y., assignor to The Tabulating Machine Company, Endicott, N. Y., a Corporation of New Jersey. Filed June 13, 1925. Serial No. 36,798. 8 Claims. (Cl. 164—112.)

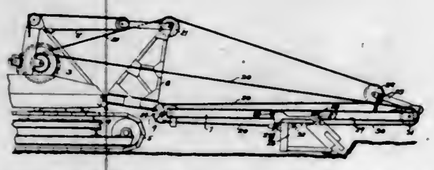
1. In a record-perforating machine, a punch for perforating a record, a substantially slidably guided bar freely, slidably, engageable with said punch, an actuator for said bar, means for moving said bar into co-operation with said actuator, said actuator being operable to move said bar out of cooperation with said moving means and means for restoring said bar to normal position.

1,812,660. THREAD CUTTING MEANS FOR AUTOMATIC SCREW MACHINES. JUDSON H. MANSFIELD and CHESTER F. PENROSE, Rockford, Ill., assignors to Greenlee Bros. & Co., Rockford, Ill., a Corporation of Illinois. Filed June 7, 1929. Serial No. 369,068. 30 Claims. (Cl. 29—37.)



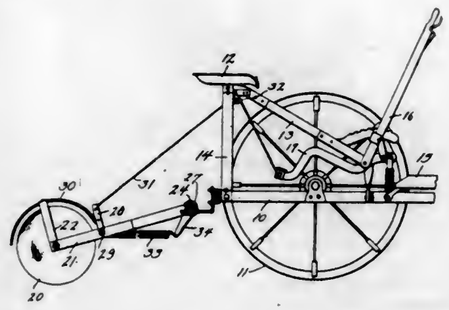
1. In a machine of the character described, the combination of one or more lead screws, one or more stock-

carrying spindles arranged to be disposed coaxial with the lead screws, means for driving the lead screws and stock-carrying spindles at the same speed, the tool spindles having nuts carried thereby threading on the lead screws, and means for driving the tool spindles and nuts carried thereby at the same speed as the lead screws to hold the same against axial movement, or slower than the lead screws to produce axial movement of the tool spindles in one direction, or faster than the lead screws to produce axial movement of the tool spindles in the opposite direction.



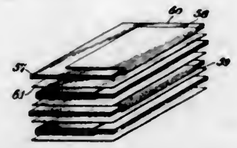
28. In a machine of the character deacribed, the combination with one or more tool spindles and one or more stock-carrying spindles disposed in coaxial relation with the tool spindles, the one kind of spindles being arranged to be driven at the same speed or faster or slower than the other kind of spindles and to be moved axially while driven faster or slower, of a shifter element associated with clutching means for determining the drive of the spindles and arranged to be moved in either direction, a reciprocable control shaft for operating said element, a dog actuated member arranged to move said shifter element through the medium of said shaft in one direction for low speed and in the opposite direction for high speed, stops on said shaft, a part movable positively in the axial movement of the spindles to engage the one stop at the end of the movement of the spindles to move said shaft for the operation of clutching means and to engage the other stop at the end of the return movement of the spindles to move the shaft in the other direction to again operate the clutching means, and means providing a yielding connection between said shaft and the dog actuated member permitting constrained movement of one part with reference to the other in either direction for the purpose described.

1,812,661. VEHICLE SPRING SUSPENSION. JOHN T. MCINTOSH, Chicago, Ill. Filed Dec. 15, 1928. Serial No. 326,167. 2 Claims. (Cl. 267—45.)



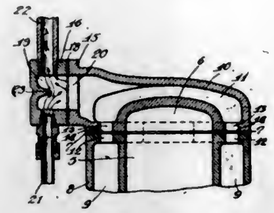
1. A suspension for attachment to the longitudinal frame member of a vehicle, comprising a main leaf spring supporting an axle of the vehicle, mountings for the spring ends, a supplemental leaf spring operatively associated with the first spring and connected thereto intermediate its ends, mountings for the supplemental spring, and coacting stop members on adjacent mountings of both springs.

1,812,662. EXCAVATOR. ARTHUR ORLOFF, Green Bay, Wis., assignor to Northwest Engineering Corporation, Green Bay, Wis., a Corporation of Wisconsin. Filed Mar. 23, 1928. Serial No. 264,260. 4 Claims. (Cl. 214—102.)



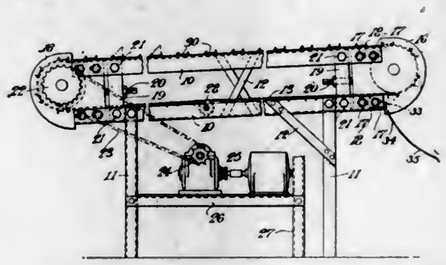
1. In an excavator, the combination with a boom mounted for up and down and lateral swinging movements, of a dipper mounted to travel back and forth along the boom, a cable operatively connected with the boom at a point forward of its mounting and at a point adjacent its mounting and then with the dipper for raising and lowering the boom and retracting the dipper, a cable for moving the dipper outwardly during digging, and means for controlling said cables including a brake to restrain the movement of said last named cable while raising the boom by first named cable.

1,812,663. ANTISIDE SLIP ATTACHMENT FOR CORN PLANTERS. CHRIST O. PETERSEN, Anthon, Iowa. Filed Dec. 21, 1929. Serial No. 415,642. 4 Claims. (Cl. 97—238.)



1. In a corn planter, a main frame, planter shoes, a foot lever to aid in elevating the planter shoes, a guide frame hinged to the main frame, projecting rearwardly and movable vertically, a flat disc journalled in the guide frame on an axis transverse to the planter's line of travel and adapted to travel in the ground behind the planter, exerting resistance to lateral movement of the planter, but not to forward movement, thereof, and means connecting the foot lever to the guide frame whereby depression of the foot lever will elevate the disc.

1,812,664. ELECTRICAL CONDENSER AND METHOD OF MAKING IT. WILLIAM H. PRIESS, Montclair, N. J., assignor to Wireless Specialty Apparatus Company, Boston, Mass., a Corporation of New York. Original application filed Dec. 5, 1921, Serial No. 519,868. Divided and this application filed Dec. 5, 1923. Serial No. 678,558. 9 Claims. (Cl. 175—41.)

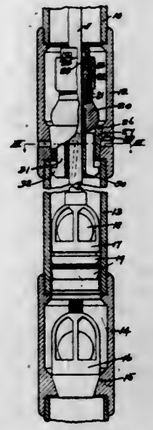


1. In an electrical condenser-stack of the type characterized by a plurality of sheets of dielectrics and metal foil armatures, the stack being separated by spacing sheets into a plurality of sections which are electrically connected in series for high potential service, the improvement which consists of folded foil-sheets around an edge of the section-spacing sheets, whereby the foil-folds constitute the series-connections between the successive stack-sections; the lengths of the folded foil-sheets being approximately twice the width of the spacing sheets; a foil-free margin being left at the ends of such folded foil-sheets and at the edges of the spacing sheets opposite to those around which the foil-sheets are folded; the folds of successive folded foils being spaced peripherally of the stack with respect to one another.

1,812,665. COOLING SYSTEM FOR INTERNAL COMBUSTION ENGINES. WILLIAM EDWARD RICHARD, Evansville, Ind., assignor to Sunbeam Electric Manufacturing Company, Evansville, Ind., a Corporation of Indiana. Filed Sept. 1, 1928. Serial No. 303,457. 7 Claims. (Cl. 123—170.)

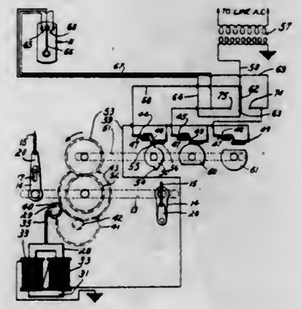
1. A fluid-cooled internal-combustion engine comprising a cylinder having a cooling-fluid jacket, means for supplying cooling fluid to said jacket substantially at the top thereof, means connected with said jacket substantially at the top thereof and substantially in alignment with said fluid-supplying means for conducting said fluid away from said jacket, and a deflector or baffle disposed between said fluid-supplying means and said means for conducting the fluid away from the jacket.

1,812,666. MACHINE FOR GLUING CARTONS. CHARLES G. G. SCHMIDT, New York, N. Y., assignor to Pinaud Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 28, 1928. Serial No. 302,497. 17 Claims. (Cl. 93—36.)



1. A machine for gluing triangular cartons formed from sheet material with three creases only and with one end of the sheet terminating at a corner and the other end folded beneath the first end and glued thereto, comprising retaining fingers between which two corners of a carton are gripped, one of said corners being the corner of the glued ends of the sheet material, said fingers acting to lightly urge the glued ends together while firmly retaining the carton therebetween without crushing.

17. A machine for gluing cartons comprising a belt, retaining fingers projecting from said belt, means for moving said belt, and means for removing the cartons from said fingers comprising a stop against which the carton strikes.

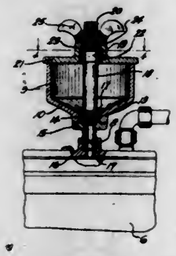


1,812,667. DEEP WELL PUMP. JOHN E. SHUTT, Stuttgart, Ark. Filed Apr. 19, 1930. Serial No. 445,577. 2 Claims. (Cl. 103—179.)

1. In a pump, which includes a casing, a pump rod, a pump barrel, a traveling valve therewithin secured to said rod, an annular tapered seat formed within said casing, and above said traveling valve, an annular thimble correspondingly tapered, seated therewithin, a sand valve slidably mounted on said rod, disposed above and seating on said thimble, a tubular sleeve slidably disposed around said rod, secured to and depending from said sand valve and below said thimble, and a plurality of blades integral

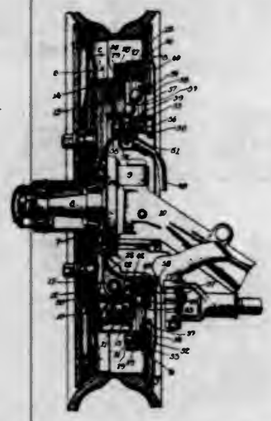
with said sleeve and radiating therefrom, said blades having projecting lugs adapted to engage the bottom of said thimble and limit the upward movement of the valve.

1,812,668. HEAT REGULATOR. DUNCAN J. STEWART, Rockford, Ill., assignor to Howard D. Colman, Rockford, Ill. Filed Jan. 12, 1929. Serial No. 331,985. 5 Claims. (Cl. 236—74.)



1. A furnace regulator having, in combination, an electric motor, a driving shaft arranged to be rotated thereby to operate the draft damper of a furnace, a control shaft, switching means controlled thereby and operable to determine the length of the operating cycles executed by the motor, a thermostat, a pair of switches governed in the rotation of said control shaft and cooperating with said thermostat to control separate starting circuits for said motor, manually operable means by which either of said circuits may be established independent of said thermostat, and means providing a normal driving connection between said driving and control shafts but permitting disconnection of the shafts for varying the operative relation therebetween.

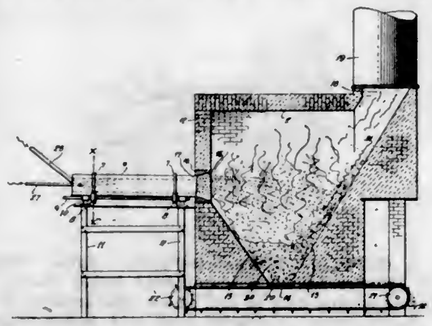
1,812,669. MONOBROM DERIVATIVE OF FLUORESCEIN. WILLARD L. VOGEL, Los Angeles, Calif., assignor of one-tenth to Paul W. Prutzman. Original application filed May 28, 1928, Serial No. 281,355. Divided and this application filed Sept. 24, 1929. Serial No. 394,926. 1 Claim. (Cl. 260—62.)



The herein described product: the monobrom derivative of fluorescein.

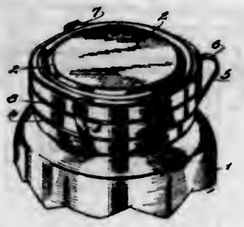
1,812,670. AUTOMOBILE VACUUM TANK FUNNEL. WILLIAM F. WAHL, Milwaukee, Wis. Filed May 18, 1929. Serial No. 362,619. 4 Claims. (Cl. 220—85.)

1. A funnel device, comprising a funnel shaped body portion having a depending bored stem lodgeable in the priming opening of a vacuum tank, a shank extending centrally into said body portion with its lower end portion seated in and closing said bored stem, a cover mounted on said shank and operatively engaging the same for turning purposes and seated on and closing the open end of said body portion, and a clamping member mounted on the outer end portion of said shank.



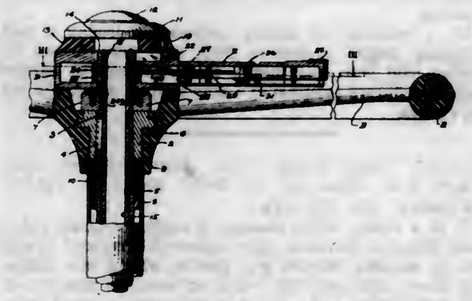
1,812,671. BRAKE. JOHN WHYTE, Beloit, Wis., assignor to Warner Electric Brake Corporation, South Beloit, Ill., a Corporation of Illinois. Filed June 11, 1928. Serial No. 284,288. 11 Claims. (Cl. 188—140.)

1. A brake of the momentum type for a dirigible vehicle wheel comprising, in combination, a drum carried on the inner side of said wheel, a non-rotatable member having a peripheral flange portion cooperating with said drum to define an annular space within the drum, said member providing a central inwardly opening recess receiving the steering knuckle of said wheel, braking means disposed in said annular space and having adjacent separable end portions, expanding means associated with said end portions including a crank arm disposed in and extending circumferentially of said annular space, an annular driving surface rotatable with said drum, an annular driven surface adapted for axial engagement with said driving surface, and means rigid with said driven surface and providing in said annular space two converging cam surfaces movable circumferentially in either direction away from a normal brake-released position to move said crank arm in one direction.



1,812,672. LIME KILN. ARTHUR ACKERMAN, New York, N. Y. Filed Jan. 24, 1928. Serial No. 249,018. 2 Claims. (Cl. 222—4.)

1. The method of calcining finely divided carbonate of lime, which consists in concurrently passing the material to be treated and combustible fuel through a rotary kiln in the same direction with the fuel in a state of combustion to effect a partial burning of said material, delivering the resulting solid and gaseous products from the rotary kiln into a settling and burning chamber to thereby permit the solids in suspension to settle out from the gases while said solids continue to burn, completing the

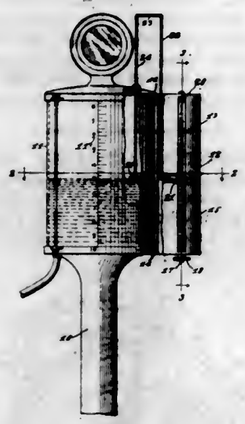


burning operations on the material in the chamber due to the residual heat of said materials and of the chamber, and permitting the exit of waste gaseous products from the chamber at a point sufficiently remote from the point of entry of the solid and gaseous products into the chamber from the rotary kiln to preclude the outgoing gaseous products from entraining and carrying off finely divided material entering the chamber from the rotary kiln.

1,812,673. JAR CLOSURE. ALBERT M. ALGEO, Washington, Pa., assignor to Hazel-Atlas Glass Co., Wheeling, W. Va., a Corporation of West Virginia. Filed June 6, 1928. Serial No. 283,298. 9 Claims. (Cl. 215—90.)

1. A receptacle, a closure therefor, means for securing the closure to the receptacle, said means being radially movable to increase in distinct steps the pressure on said closure.

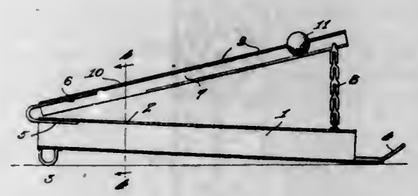
1,812,674. FRONT WHEEL POSITION INDICATOR. ANTON M. BACH, Palo Alto, Calif. Filed July 28, 1930. Serial No. 471,282. 5 Claims. (Cl. 116—31.)



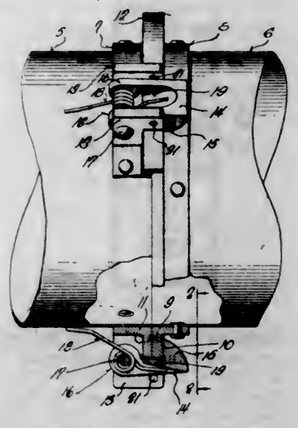
1. In a mechanism of the character described a steering tube having a steering wheel secured thereto, a stationary cap disposed above the steering wheel and spaced therefrom, a housing interposed between the steering wheel and the cap, means securing the housing with relation to the cap, a front wheel position indicator mounted on the housing, and means whereby rotary movement of the steering wheel and steering tube is transmitted to actuate the indicator.

1,812,675. MANUFACTURE OF VALUABLE PRODUCTS FROM LIGNIN SULPHONIC ACID (SULPHITE CELLULOSE WASTE). JAMES BADDILEY, ARNOLD SHEPHERDSON, and ANTHONY JAMES HAILWOOD, Blackley, Manchester, England, assignors to British Dyestuffs Corporation Limited, Manchester, England. Filed Sept. 9, 1927, Serial No. 218,569, and in Great Britain Dec. 7, 1926. 8 Claims. (Cl. 8—6.)

1. In combination a dyestuff paste or powder and the product of the moderated oxidation of sulphite cellulose pitch with nitric acid, the said combination being characterized by ready dispersibility in water.



1,812,676. COMPUTING ATTACHMENT FOR LIQUID DISPENSING DEVICES. JOHN BEALL, Caldwell, Idaho. Filed Jan. 23, 1928. Serial No. 248,883. 1 Claim. (Cl. 73—82.)

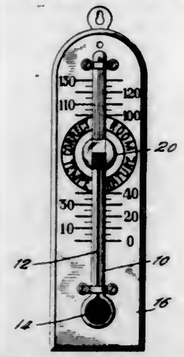


In combination with a transparent fluid dispensing receptacle provided with an opening in the upper end and a scale to indicate the amount of fluid therein and a support for said receptacle, a cylindrical casing secured to the support and extending parallel with the receptacle and having a sight opening arranged parallel with the scale, a cost computing drum journaled in the casing and having certain indicia thereof readable through the sight opening, a substantially U-shaped member including spaced parallel arms and having one arm extending into the receptacle by way of the opening therein and the other arm extending into the casing, a pointer carried by the arm extending into the casing and viewable through the sight opening, and a float carried by the arm in the receptacle to move the pointer over the indicia of the drum in rear of the sight opening in accordance with the level of the fluid in the receptacle.

1,812,677. GAME. ARTHUR E. BERGQUIST, Lindstrom, Minn. Filed Aug. 12, 1929. Serial No. 385,142. 2 Claims. (Cl. 273—96.)

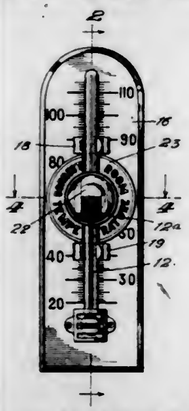
1. A toy sphere projecting toy including a hollow base, having a hollow platform arranged on the base, a spring hinge connecting the platform to the base for arranging the platform at an elevation with respect to the base, flexible means limiting the swinging of the platform away from the base, said platform being provided with a plurality of pockets to receive therein a sphere being projected and being provided adjacent its lower end with an opening, and said hollow base having an opening opposite the lower opening in the platform, whereby the sphere when projected through the opening in the platform will be received in the hollow base.

1,812,678. CONVEYER DUCT. GEORGE BERNERT, North Milwaukee, Wis. Filed Sept. 19, 1927. Serial No. 220,461. 2 Claims. (Cl. 285—187.)



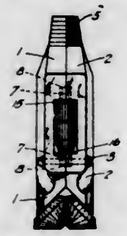
1. In a device of the character described, the combination with two longitudinally aligned conveyer duct sections having relatively thin walls, of means for readily detachably connecting the sections with their ends abutting and their inner walls substantially continuous, comprising a collar member carried by one duct section with its end substantially flush with the end thereof, a second collar member secured to the second duct section and having a part providing a seat in alignment with the end of the flange of the first collar member and having an annular flange overlying the joint between said flange end and said seat, and a latch member carried by one duct section and spring pressed to engage behind the collar of the other duct section at any point about its periphery.

1,812,679. THERMOMETER. HARRISON HURLBERT BOYCE, Jericho, Long Island, N. Y. Filed May 24, 1927. Serial No. 193,770. 10 Claims. (Cl. 116—114.)



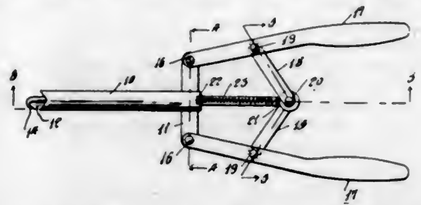
1. In a household thermometer for determining room temperature of the class described, the combination with

an indicating thermometer stem filled with a temperature responsive fluid, of a base provided with a scale, means



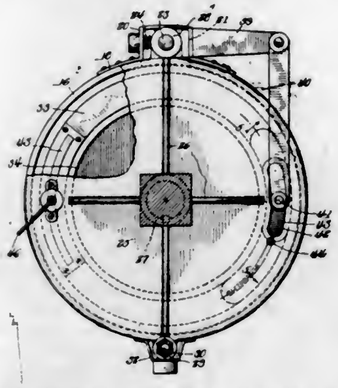
for affixing the stem to the base and a lens like element adjacent a certain restricted portion only of the scale to magnify the fluid at said portion.

1,812,680. THERMOMETER. HARRISON HURLBERT BOYCE, Jericho, Long Island, N. Y. Filed July 12, 1927. Serial No. 205,062. 10 Claims. (Cl. 116—114.)



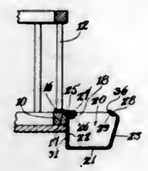
1. In a thermometer for particularly indicating a specified temperature comprising a thermometer stem having a uniform bore therein partially filled with a thermally responsive indicating fluid, a supporting back, a convex lens element permanently secured to said back and provided with an opening adapted to adjustably receive the thermometer stem and means on said back to adjustably secure said thermometer stem in position thereon, said means also permitting adjustment of said lens with respect to said stem.

1,812,681. KEY BUSHING FOR ROCK-BIT REAMER PINS. WALTER BRAUER, Seminole, Okla. Filed Feb. 13, 1929. Serial No. 339,623. 4 Claims. (Cl. 255—73.)



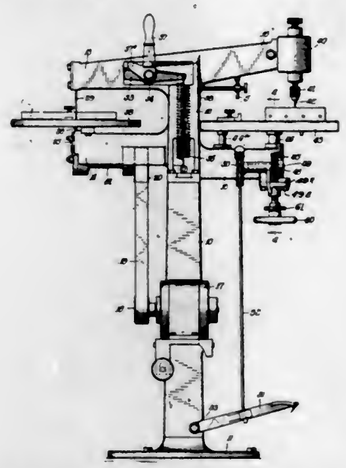
1. A device of the class described, comprising a bushing of suitable material, being adapted for use in alined pairs, each bushing having a bore for receiving and seating an end of a reamer pin, said reamer pin for carrying cutters thereon, one of said bushings having one end of said reamer pin securely fastened in the bore thereof, the other alined bushing adapted to fit and seat the other end of said reamer pin in the bore thereof, said bushings being adapted for seating one half each in alined grooves of the two body halves of a rock bit.

1,812,682. COTTER KEY PULLER. CARL H. BUCKLE and GUS R. MCPHAIL, Magnolia, Tex. Filed July 11, 1929. Serial No. 377,492. 2 Claims. (Cl. 29—86.1.)



1. An extractor of the class described comprising a tube, levers pivoted to the tube, an extractor member slidable in the tube and jointly with the tube adapted to directly engage a cotter, links pivoted to the levers and to said member, the pivotal connection with said member being normally rearwardly of a line passing through their pivotal conenctions with the bandles, said extractor having a book at the forward end, an enlargement on the extractor within the bore of the tube, and a contractile spring connecting the tube and said extractor.

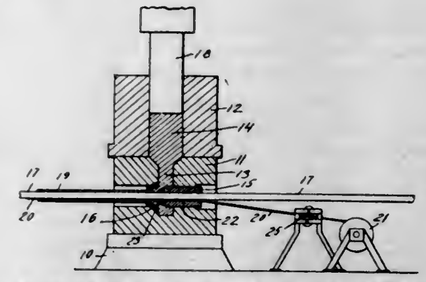
1,812,683. MOMENTUM ACTUATED BRAKE. ADDI BENJAMIN CADMAN and ALBERT C. WARNER, Beloit, Wis., assignors, by mesne assignments, to Warner Electric Brake Corporation, South Beloit, Ill., a Corporation of Illinois. Filed June 2, 1927. Serial No. 195,916. 3 Claims. (Cl. 188—140.)



1. The combination with a vehicle wheel, of a brake drum secured to the inner side of said wheel and having an external annular surface and an inturned flange at the inner edge of said surface, a flexible band encircling said surface, operating means associated with the ends of said band and adapted when actuated to tighten the band about said drum thereby controlling the motion of said wheel, a stationary support for said operating means, an annulus mounted on said support for movement axially of said member into frictional engagement with said flange, electromagnetic means to cause said engagement, and torque multiplying means connecting said ring and said operating means and adapted to transmit the movements of said ring to said operating means regardless of the direction of rotation of said wheel.

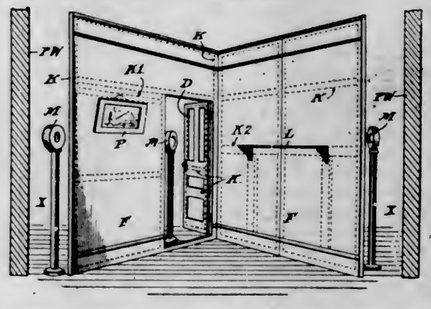
1,812,684. FEEDING AND DRINKING ATTACHMENT FOR BROODERS. OSE F. CARPENTER, Brightwood, Va. Filed Apr. 1, 1930. Serial No. 440,786. 1 Claim. (Cl. 119—18.)

In an adjustable chick feeding device, a feed container having the top portion of one of its walls angularly disposed with respect to the remaining portion of such wall, and one or more horizontally disposed and vertically adjustable container sustaining and coupling members, each having its outer end part angularly disposed with respect to its remaiping part, the said angularly disposed part coacting with said angularly disposed portion for suspending said container in feed holding position, and each member having its inner part apertured for connecting it to and providing for the vertical adjustment thereof relative to an anchoring means therefor, the wall of the aperture coacting with the anchoring means for maintaining said member in adjusted position.



1,812,685. COMPOSING ROOM MACHINE. EDWARD CHESHIRE, St. Petersburg, Fla. Filed June 8, 1927. Serial No. 196,196. 9 Claims. (Cl. 29—26.)

1. In a machine, in combination, a standard, an arm projecting therefrom, a vertically movable table carried by said arm, rack and pinion means for raising said table, and adjustable means for governing the movement of said table relative to said one arm, said adjustable means including a screw-threaded axially reciprocable shaft, screw-threaded means cooperating with said screw-threaded shaft for determining one limit of the axial movement of said shaft, said screw-threaded means including a spring-pressed toothed button radially movable therein and adapted to engage the threads of said screw-threaded shaft.

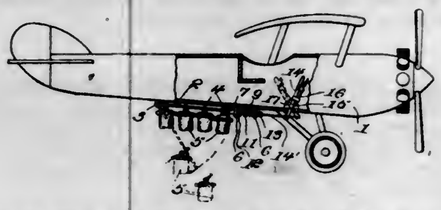


8. A router and jig-saw machine comprising, in combination, a base, a head mounted on the base, said head comprising a plurality of oppositely extending arms, one of which is provided with router mechanism and the other of which is provided with jig-saw mechanism, a plurality of supporting members extending from the base member outwardly beneath the oppositely extending arms of the head, and a plurality of work tables carried by the supporting arms for cooperation with the jig-saw and router mechanism, said latter mechanism being so constructed and arranged as to permit removal of the router tool and substitution therefor of a drilling tool.

1,812,686. PROCESS AND APPARATUS FOR MARKING RUBBER CORDS AND CABLES. GEORGE JACKSON CROWDES, Dorchester, Mass., assignor to Simplex Wire and Cable Company, Boston, Mass., a Corporation of Massachusetts. Filed May 8, 1929. Serial No. 361,318. 6 Claims. (Cl. 18—13.)

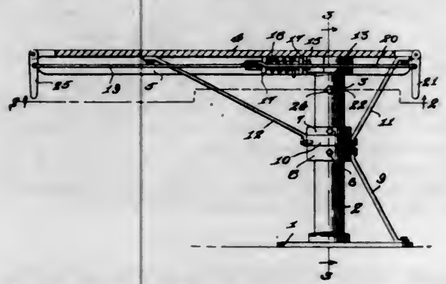
1. In the marking of rubber covered cords, cables, rubber hose and similar goods, the improvement which comprises forming a lead jacket on the rubber element with a groove in the inner side thereof and a marking ribbon therein, vulcanizing the jacketed rubber element and stripping the jacket from the vulcanized marked rubber element.

1,812,687. SOUND-CHAMBER AND SET-FRAME THEREFOR. LEE DE FOREST, New York, N. Y., assignor to De Forest Phonofilm Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 4, 1925. Serial No. 54,397. 5 Claims. (Cl. 181—30.)



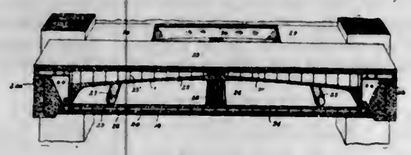
1. A sound-permeable motion picture background for use in the simultaneous photography of sound and motion, consisting of side-walls which include a skeleton support and a filling of a sheet of coarse-weave, open-mesh cloth mounted on said support, the holes in said cloth being in free communication with substantial air-spaces inside and outside the background; and an electrical sound-transmitter associated with said background and hidden thereby.

1,812,688. RELEASING DEVICE FOR MAIL BAGS. JULIUS LOUIS DE GIVE, Atlanta, Ga.; Henry L. de Give executor of said Julius Louis de Give, deceased. Filed Dec. 13, 1929. Serial No. 413,862. 2 Claims. (Cl. 244—1.)



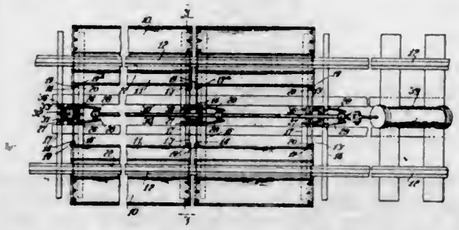
1. The combination with an aeroplane, of means upon the same for supporting a plurality of mail bags, the said means comprising a rod pivotally connected at one end to the aeroplane at the under side thereof, whereby supporting eyes upon a series of mail bags may be slidably fitted

onto the said rod, a member mounted upon the under side of the aeroplane body and having a socket, the member being movable into and out of position to receive and support



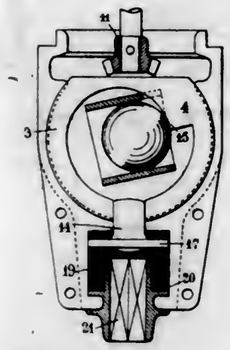
the free end of the said rod, a spring yieldably holding the socket member in active position, and manually operable means connected with the said socket member for retracting the same to release the said free end of the rod.

1,812,689. ADJUSTABLE ROAD STAND. JESSE H. FARRAR, Lubbock, Tex. Filed May 23, 1930. Serial No. 455,056. 1 Claim. (Cl. 248—1.)



In a device for the purpose set forth, a base having a hollow standard arising therefrom, a table top, a post disposed adjacent one end of the top depending therefrom and received in the standard, adjustable members on the standard, a brace element between one of the adjustable elements and the base, a ring member journaled on the standard between the adjustable members and the brace means between the ring member and the table top, a notched element fixed on the upper end of the standard and upon which the table top rests, a spring influenced slidable bolt on the table top to engage with the notches of the ring member, an offset finger on the bolt, pivotally connected handle members on the ends of the table and rods between said handle members and the finger, said standard having an arcuate slot therethrough of a length approximately one-fourth of the circumferential diameter of the standard and a stop lug on the post received in the slot and designed to contact with the end walls thereof, for the purpose set forth.

1,812,690. ARCH JOIST AND FLOOR CONSTRUCTION. HURXTHAL F. FREASE, Canton, Ohio. Filed Aug. 16, 1926. Serial No. 129,424. 6 Claims. (Cl. 72—71.)

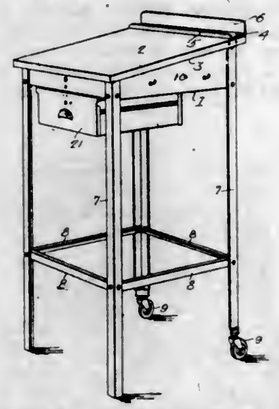


1. A structural member including an arch having outer bases, tension means connecting the outer bases of the arch and adapted to resist the end thrust thereof, end supports for the arch, the arch having a T-cross-section increasing in depth from the center of the arch to each base and the head of the T being above the stem and lying substantially in a flat plane.

1,812,691. RAILWAY CAR RETARDER APPARATUS. ERNST FRÖLICH, Essen, Germany, assignor to The Hannauer Car Retarder Company, Gibson, Ind., a Corporation of Illinois. Filed Dec. 20, 1926. Serial No. 155,923. 20 Claims. (Cl. 188—62.)

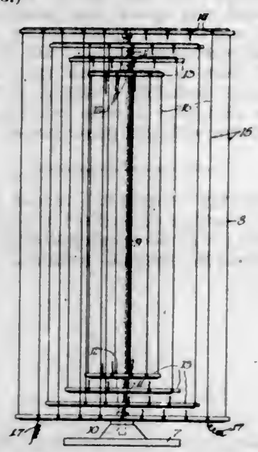
1. In apparatus for retarding the movement of railway cars, car wheel engaging members disposed on opposite sides of a track rail and adapted to be moved into engagement with the inner and outer side faces of a car wheel, one of said members being inclined upwardly toward the track rail and adapted to be depressed by the engagement of a car wheel therewith, pivoted means connecting said wheel engaging members and having capacity for movement about its pivot transversely of the rail, whereby the depression of said wheel engaging member moves said connecting member transversely of the rail and forces said wheel engaging members into frictional engagement with the side faces of the wheel.

1,812,692. CENTRIFUGAL HAMMER. NICOLAS GEORGEVITCH, Paris, France, assignor to Joseph Alfred Dahme, Paris, France. Filed Aug. 19, 1926, Serial No. 130,312, and in France Aug. 25, 1925. 1 Claim. (Cl. 78—34.)



A centrifugal hammer, comprising a rotatable retaining member having a cylindrical socket, the axis of which is radially disposed with respect to the axis of rotation, a cam track surrounding said retaining member, a spherical ball freely and radially movable in said socket and directed against said track by centrifugal force, and an anvil in the path of said ball, said cam track having a portion adapted to cam said ball inwardly of said socket and also having an abrupt change of contour for releasing said ball to centrifugal force at such a point as will cause said ball, when released, to be projected freely through space against said anvil.

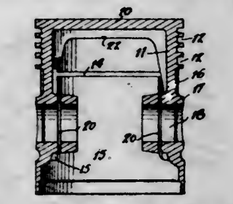
1,812,693. MANUFACTURE OF NEW DERIVATIVES FROM SULPHITE CELLULOSE WASTE. ANTHONY JAMES HAILWOOD, Blackley, Manchester, England, assignor to British Dyestuffs Corporation Limited, Manchester, England. Filed Sept. 26, 1927, Serial No. 222,212, and in Great Britain Dec. 21, 1926. 5 Claims. (Cl. 252—7.)



1. A process for the manufacture of new derivatives of ligninsulphonic acid (sulphite cellulose pitch) comprising the treatment of the same at temperatures above 110° C. with ammonia solution at pressure above atmospheric in a closed vessel.

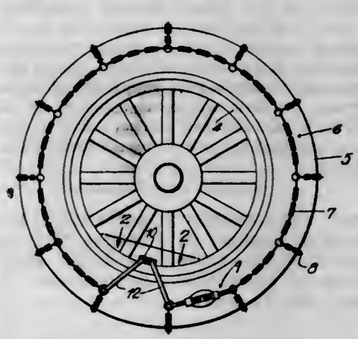
1,812,694. PORTABLE DESK. HOWARD T. HALLOWELL and FRANK BENNETT, Jenkintown, Pa., assignors to Standard Pressed Steel Co., Jenkintown, Pa., a Corporation of Pennsylvania. Filed Oct. 14, 1929. Serial No. 399,641. 4 Claims. (Cl. 45—69.)

1. The combination in a desk, of a body portion; a flanged top portion of greater width than the body portion; and hinges made of two sheet metal strips and bent so that the pivot portions of the hinge will be close together, while the two leaves of each hinge will be spaced apart, one leaf of each hinge being secured to the side of the body portion and the other leaf being secured to the flange of the top portion.



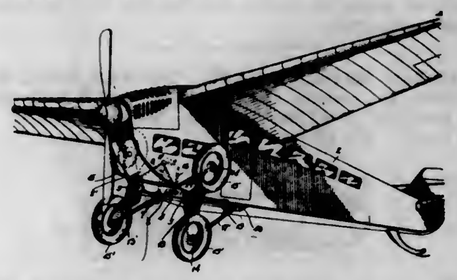
1,812,695. LOOP AERIAL. ALBERT G. HARMS, Chicago, Ill. Filed Apr. 12, 1926. Serial No. 101,325. 8 Claims. (Cl. 250—33.)

1. A loop aerial having more than two loops mounted successively one within another in decreasing size and each having a continuously extending coil winding with the coils thereof equidistantly spaced apart in parallel relation and supported on successively enlarged portions.



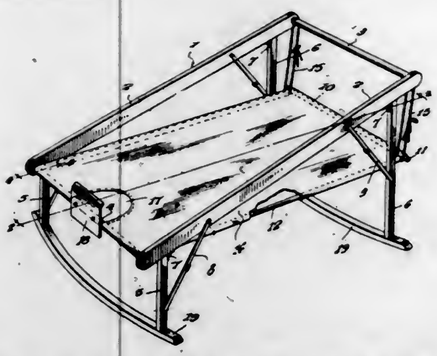
1,812,696. PISTON. STEPHEN D. HARTOG, St. Louis, Mo., assignor to Harry J. Hater, Cincinnati, Ohio. Filed Dec. 18, 1928. Serial No. 326,832. 9 Claims. (Cl. 74—108.)

1. A piston comprising a head, skirt and piston pin hubs, each of said hubs comprising spaced portions, one of said spaced portions of each hub being connected to the head and the lower portion of the skirt, and the other portion of



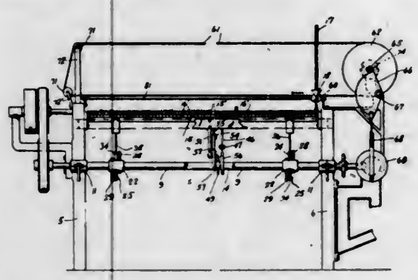
each hub being connected to the sides of the skirt, said skirt being separated by a slit inclined from the vertical on the non-thrust side thereof.

1,812,697. TIRE CHAIN FASTENING MEANS. RAY HATFIELD, Springfield, Ill. Filed July 6, 1929. Serial No. 376,454. 1 Claim. (Cl. 70—90.)



A fastening means for anti-skid chains of the type employing circumferentially extending side chains having free ends, and connected by cross links, said fastening means comprising a lock having four shackles projecting therefrom, said lock having a flat rear base adapted to rest upon the inner peripheral face of a wheel felloe, and a plurality of connecting links, connecting said shackles to the free ends of said circumferentially extending side chains, each of said links comprising a flexible member having a loop at one end for engagement with a lock shackle, and a loop at the other end for engagement with a free end of a circumferentially extending chain.

1,812,698. AEROPLANE LANDING GEAR. GEORGE E. F. HICKOX, Providence, and WILLIAM T. MITCHELL, Central Falls, R. I. Filed Dec. 17, 1929. Serial No. 414,768. 3 Claims. (Cl. 244—2.)

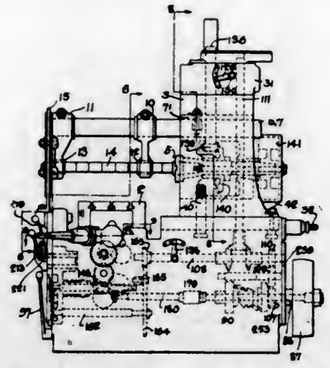


3. The combination with an aeroplane of duplicate pairs of starting and landing wheels, a rotatable structure carried by the plane on which said wheels are separately mounted, means for adjusting either set of wheels to a landing position by the rotation of said structure and means for locking said structure in either adjusted position.

1,812,699. CRADLE. RAYMOND M. HURSH, Warrensburg, Mo. Filed Oct. 9, 1929. Serial No. 398,529. 1 Claim. (Cl. 5—102.)

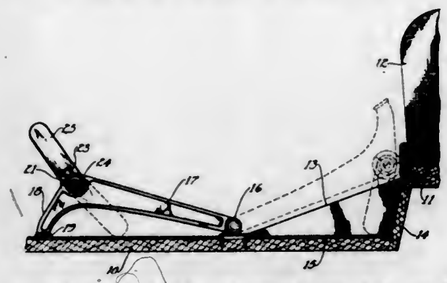
A device of the class described comprising a main frame, front and rear legs for supporting the frame, said legs being of unequal length to support the frame in an inclined position, a supplemental frame, means for pivotally and adjustably connecting the supplemental frame with the main frame, a fabric mattress supported by the supplemental frame, said mattress having a seat opening formed therein, and a guard supported by the main frame adjacent the opening.

1,812,700. ATTACHMENT FOR KNITTING MACHINES. CHARLES F. JOHNSON, St. Johnsville, N. Y., assignor to Walter S. Becker, Little Falls, N. Y. Filed July 12, 1928, Serial No. 292,226. Renewed Dec. 5, 1930. 7 Claims. (Cl. 66—84.)



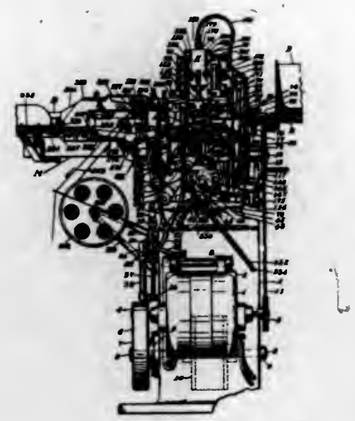
4. A machine for knitting padding comprising the combination with spaced needle bars, means intermittently moving said bars with respect to each other, a trumpet, and means for intermittently moving the trumpet back and forth to deposit roving in the space between said needle bars, of means for packing the deposited roving between said needle bars.

1,812,701. ERASER HOLDER. THOMAS H. JONES, Roanoke, Va., assignor of two-thirds to Paul B. Culp, Roanoke, Va. Filed May 31, 1930. Serial No. 458,747. 1 Claim. (Cl. 120—40.)



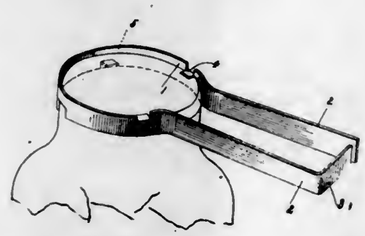
An eraser holder comprising telescopic tubular members adapted to receive the eraser, the inner tubular member having incisions leading in from its end and dividing said end into eraser clamping portions, said inner member being provided at opposite sides with parallel slots, and studs attached to the outer tubular member and slidably received in the slots and having heads extending into the inner member, the parts being so arranged and proportioned that the outer tubular member holds the studs in contact with the eraser and contracts the clamping portions of the inner member against the sides of the eraser when the same is projected beyond the ends of both of the tubular members.

1,812,702. MACHINE TOOL. EDWARD J. KEARNEY, Wauwatosa, and JOSEPH B. ARMITAGE, Milwaukee, Wis., assignors to Kearney & Trecker Corporation, West Allis, Wis., a Corporation of Wisconsin. Filed Feb. 17, 1928. Serial No. 254,970. 23 Claims. (Cl. 90—21.)



1. In a milling machine, the combination of a bed, a table reciprocable thereon, a head on said bed adjacent said table and having different portions upstanding above said table and spaced apart in the direction of table movement and a top portion rigidly connecting the corresponding ends of said spaced head portions, a carrier for spacing said spaced head portions at intermediate points, a spindle rotatably supported from said carrier, said carrier being movable between said spaced head portions for vertical adjustment of said spindle, a power source, a speed change mechanism supported from said head adjacent said top portion, a power train connecting said speed change mechanism and spindle including a vertical shaft splined for carrier adjustment, and a train connecting said speed change mechanism with said power source.

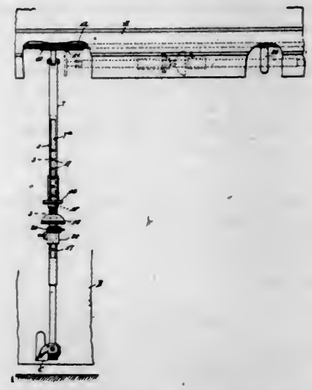
1,812,703. MOTOR VEHICLE. ARCHER L. KNAPP, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 6, 1926. Serial No. 146,599. 3 Claims. (Cl. 296—75.)



1. In a motor vehicle, the combination with the floor, the kick-up sills and the seat, of brackets secured to the floor in alinement with the kick-up sills, arms pivotally connected to the brackets, angular extensions on the ends of the arms providing supports, sleeves on the arms at the juncture between the arms and angular extensions, trunnions in the sleeves, cooperative stops between the sleeves and the trunnions, a foot board secured between the trunnions to operate as an adjustable foot rest when the arms are in an operative position and to swing down between the kick-up sills to provide a heel board for the seat when the arms are folded back over the kick-up sills.

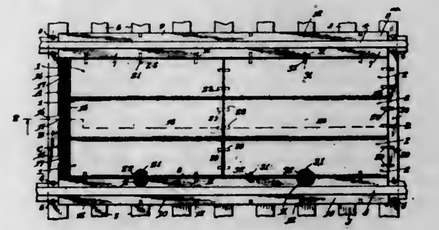
1,812,704. CIGAR BANDING MACHINE. FRANCIS X. MALOCSAY, Upper Saddle River, N. J., assignor to International Banding Machine Company, a Corporation of New York. Filed June 16, 1925, Serial No. 37,464. Renewed Nov. 29, 1930. 22 Claims. (Cl. 131—61.)

1. In a device of the character described having a band stack, a single means for removing a band from said stack and moving it to a position where said band is rendered adhesive and thence to a second position where said band is applied to a cigar.



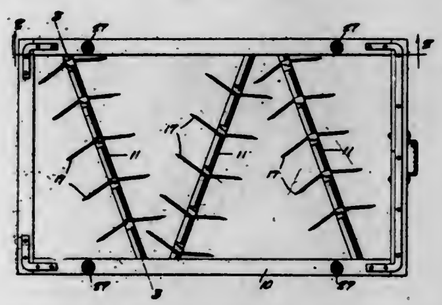
1,812,705. JAR WRENCH. ANTHONY RAGONESE FU MARIO, New London, Conn. Filed Nov. 2, 1927. Serial No. 230,607. 1 Claim. (Cl. 81—3.1.)

A jar wrench formed of a single strip of material and comprising a circular part having its ends extended to form handles, upper lugs extending inwardly from the circular part and lower lugs extending inwardly from the circular part, the lower lugs being oppositely arranged from the upper lugs, said lugs being integral with the strip from which the device is formed.



1,812,706. PIANO ATTACHMENT. NICOLAI MEDNIKOFF, Scarsdale, N. Y. Filed Dec. 12, 1929. Serial No. 413,664. 7 Claims. (Cl. 84—231.)

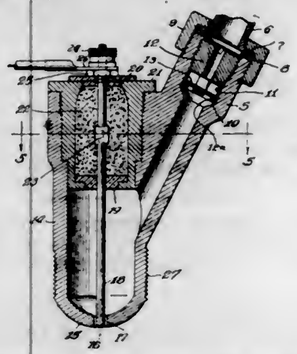
1. The combination with a piano of a pedal attachment therefor including pedal actuating means extending upwardly from the piano pedals and a member for supporting and guiding said actuating means, carried by and depending from the under side of the keyboard, and means for mounting said supporting and guiding member



for lateral upward swinging movement with respect to the keyboard to an out-of-the-way position substantially parallel to and underneath the keyboard.

1,812,707. RAILWAY CROSSING. GEORGE ERNEST NAGEL, Columbus, Ohio. Filed June 19, 1930. Serial No. 462,335. 18 Claims. (Cl. 238—8.)

3. In railroad crossings, a slab formed of a concrete under support and an armoring plate formed with side and end depending flanges, the flanges being of less height than said body, said plate encompassing the upper portion of said support and with the outer faces of said flanges flush with the side and end faces of said support.

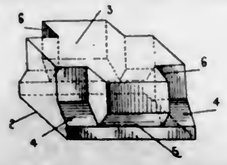


1,812,708. HARROW. RUDOLF NYGARD, AXEL FINNILA, and TORSTEN LINDELL, Sandwich, Ontario, Canada. Filed Aug. 10, 1928. Serial No. 298,729. 1 Claim. (Cl. 55—11.)

A harrow disk gang comprising in combination with a frame, a shaft of rectangular formation in cross section and having reduced threaded extremities, spindles threaded on said extremities and journaled in said frame, spaced ground engaging elements mounted on the shaft for rota-

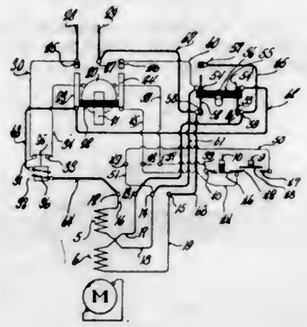
tion therewith, each element comprising an elongated member of uniform width, and including an intermediate portion having a squared central opening to receive the shaft, and relatively inclined blades extending from the opposite ends of the intermediate portion in opposite directions and terminating to provide ground penetrating points, and said ground engaging elements being alternately arranged in right angular relation to each other throughout the length of the shaft, and spacing sleeves mounted on the shaft and arranged between the said ground engaging elements.

1,812,709. IGNITION MECHANISM FOR INTERNAL COMBUSTION ENGINES. OLE ODBE and PAUL PATRICK EMIL RICHARDS, Batavia, Ill. Filed Aug. 1, 1927, Serial No. 209,920. Renewed Nov. 12, 1930. 1 Claim. (Cl. 123—169.)



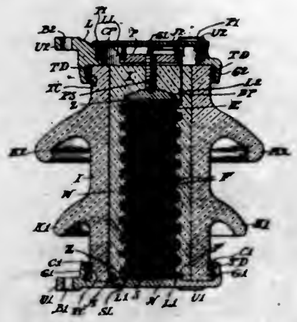
In an ignition device, a shell open at one end and having a passage in its other end, the open end of said shell being internally threaded and an internal shoulder being formed about the walls of the shell in spaced relation to its open end, a jacket screwed into said shell and having a reduced inner end portion forming a circumferential shoulder fitting against the shoulder of the shell, said jacket having an internal flange at its inner end and having its walls internally thickened toward its outer end, a plug of insulating material in the inner end of said jacket, bearing against said flange, a cap of insulating material for the outer end of said jacket extending into the same, an electrode extending axially through said jacket with its inner end portion extending through the shell and projecting through the passage in the inner end thereof and a cementitious filling for said jacket.

1,812,710. TIRE PROTECTOR. GEORGE H. PAPPAS, Baltimore, Md. Filed June 23, 1930. Serial No. 463,088. 3 Claims. (Cl. 152—18.)



1. A device of the class described comprising an open-ended metallic band, an envelope surrounding said band, said envelope provided with a pocket at one end, the opposite end of said band adapted to fit within said pocket, and means for facilitating the anchoring of said protector within a tire casing.

1,812,711. BLOCK FOR PAVEMENTS AND COVERINGS. LUIGI PESSIONE, Turin, Italy. Filed Aug. 20, 1928, Serial No. 300,824, and in Italy Aug. 27, 1927. 4 Claims. (Cl. 94—11.)

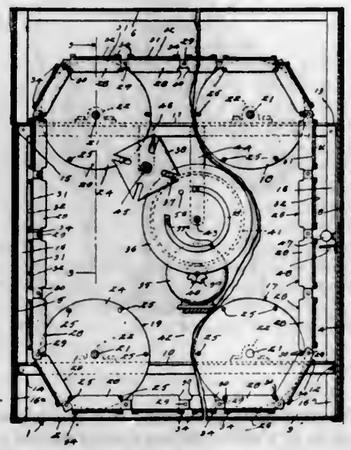


1. A substantially hexahedral pavement block having different upper and lower bed faces, two opposite plane side faces, and two end faces each formed so as to interlock with two adjacent equal blocks, characterized in that the interlocking form of each of the two end faces, as referred to the corresponding face of the fundamental hexahedron, consists of a central projection and a pair of corner depressions, starting from the upper bed face and reaching without undercuts at a distance from the lower bed face, the central projection resulting from the coupling according to a middle symmetry plane of two portions equal to the removed corner portions and rotated through 180° around a pair of axes lying on the face referred to of the hexahedron, at one-fourth of the width thereof.

1,812,712. MOTOR STARTING SWITCH. WALTER S. PFEIFER, Milwaukee, Wis., assignor, by mesne assignments, of one-half to Lynde Bradley and one-half to Harry L. Bradley, Milwaukee, Wis. Filed Dec. 30, 1927. Serial No. 243,687. 4 Claims. (Cl. 171—97.)

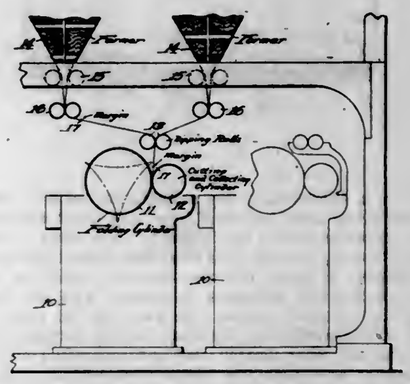
1. In combination with an electric translating device capable of operation from sources of electrical energy of different voltages and having a plurality of electro-responsive elements adapted to be connected in series and in parallel depending upon the voltage of the available source of electrical energy, an electric switch apparatus including a line switch adapted to connect the plurality of electro-responsive elements with a source of electrical energy and having an operating solenoid, said operating solenoid being responsive to a predetermined voltage and being at all times connected across one of the electro-responsive elements so that the voltage supplied thereto is no greater than that supplied said element, circuits including the electro-responsive elements and the operating solenoid, and an auxiliary switch connected in said circuits for connecting the electro-responsive elements in parallel or in series by the simple expedient of actuating the auxiliary switch.

1,812,713. ELECTRICAL CONDENSER. JOHN A. PROCTOR, Lexington, and WILLIAM M. BAILEY, Lynn, Mass., assignors to Wireless Specialty Apparatus Company, Boston, Mass., a Corporation of New York. Filed Jan. 23, 1925. Serial No. 4,150. 85 Claims. (Cl. 175—41.)



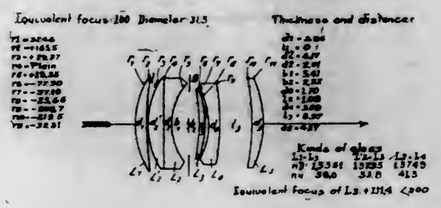
1. As a metal end-construction for a high potential sheet-stack electrical condenser enclosed in an insulating casing, a collar secured to said casing and formed with a central hole and with two inwardly projecting shoulders on diametrically opposite sides of the walls of said hole; and a plate located between the end of the stack and the said shoulders and transmitting clamping pressure from the stack to said collar and insulating casing.

1,812,714. METHOD FOR OXIDATION OF HYDROCARBONS. JAMES W. PUGH, Breckenridge, Tex., and ERNEST TAUCH and THOMAS E. WARREN, Cambridge, Mass., assignors to Standard Oil Development Company, a Corporation of Delaware. Filed Aug. 4, 1928. Serial No. 297,430. 6 Claims. (Cl. 260—116.)



1. An improved process for obtaining liquid oxygen-containing derivatives from hydrocarbon by oxidation with an oxidizing gas, comprising dissolving said gas in the hydrocarbon while in a liquid state, passing the mixture rapidly through a reaction zone heated, withdrawing and cooling the product.

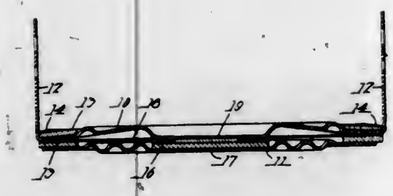
1,812,715. ADVERTISING DEVICE. OTTO I. QUILLIN and CLAUDE R. WRIGHT, Colorado Springs, Colo. Filed May 29, 1930. Serial No. 457,390. 2 Claims. (Cl. 40—32.)



1. An advertising device, comprising a casing having a window, a series of drums rotatably supported in the casing and each embodying a pair of heads and cross bars terminally connected to the heads, an endless chain mounted upon the drums between the heads thereof and embodying links having notches for engagement with the cross bars, means for securing advertising cards to the chain, and means for intermittently operating the drums to successively present the advertising cards to the window.

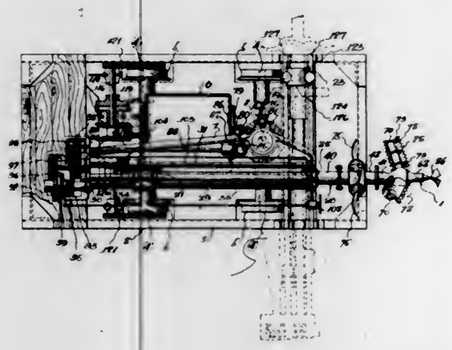
1,812,716. FOLDING UNIT. OSCAR CHARLES ROESEN, Brooklyn, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Sept. 17, 1927, Serial No. 220,161. Renewed Nov. 29, 1930. 10 Claims. (Cl. 270—42.)

1. In a newspaper folding machine, the combination with a pair of formers and their nipping rolls for receiving and directing two webs, of a folding unit located at one side of the center, a frame for said unit and a pair of nipping rolls carried by said frame independently of the formers and directly over the folding unit for receiving the webs from both of the pairs of nipping rolls on the formers.



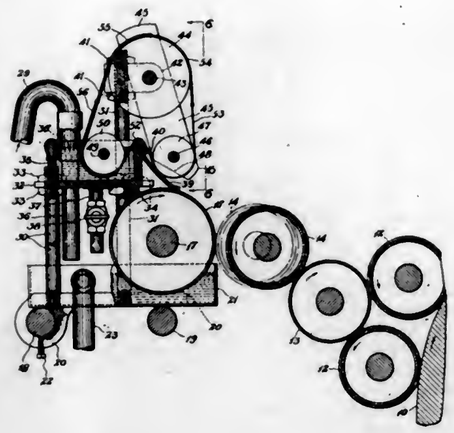
1,812,717. LENS SYSTEM. PAUL RUDOLPH, Grossbiesnitz, near Gorlitz, Germany. Filed Oct. 14, 1926, Serial No. 141,474, and in Germany Aug. 18, 1926. 1 Claim. (Cl. 88—57.)

A rapid five-lens system corrected for the spherical aberrations of the first and of the second order, containing in its interior a convexo-concave dispersive lens and a collective lens with an equivalent focus smaller than three times the equivalent focus of the entire five-lens system, which said two lenses bound a biconvex airspace that divides the entire five-lens system into two members both of which are collective; of which one member consists of (1) A collective lens, (2) An airspace of dispersive-lens form very thin along its axial line, and (3) A very thick dispersive lens itself consisting of a collective lens cemented to a dispersive lens; the other member consisting of



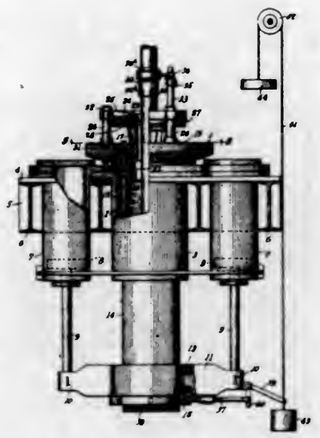
two collective lenses with a dispersive lens interposed therebetween and separated from the said collective lenses by air-spaces.

1,812,718. THERMOSTAT. ROBERT H. RUSSELL, Worcester, Mass., assignor to Rockwood Sprinkler Company of Massachusetts, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 27, 1928. Serial No. 250,052. 2 Claims. (Cl. 200—142.)



1. In a thermostat, the combination with a pair of flexible metal discs insulated from each other arranged to exert pressure toward each other so as to come in contact when released, the two discs constituting electric terminals to complete a circuit when in contact, a body of fusible alloy of material thickness in contact with one of said discs and located between the two and an imperforate disc of non-conducting material located between the alloy and the other flexible disc and separating them and of smaller area than the fusible disc, whereby when the alloy melts the insulating material will sink into the body thereof and permit the two flexible discs to be connected through the body of alloy around the edge of the insulating disc.

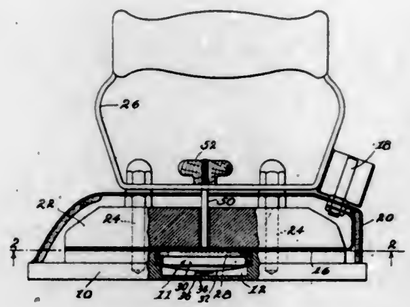
1,812,719. DRILLING MECHANISM. ROBERT E. SCHROEDER, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 19, 1928. Serial No. 313,445. 12 Claims. (Cl. 255—20.)



1. In a drilling apparatus, a support, a rotatable drilling arm, a pilot drill journaled within said drilling arm, a plurality of cutters extending radially outwardly from said drilling arm, and a cuttings clearing device on said drilling arm comprising a plurality of propellers rotatable with said drilling arm and rotatable on axes perpendicular to the axis of rotation of said drilling arm.

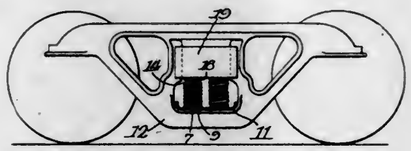
1,812,720. DAMPENING DEVICE. JOSEPH SCHULTZ, Cleveland, Ohio. Filed June 2, 1928. Serial No. 282,420. 26 Claims. (Cl. 101—148.)

1. Means for dampening in printing upon sheets carried upon a lithographic press, comprising a water reservoir, a roller, an appliance including a composite element adapted by capillarity to transfer moisture from said reservoir to said roller, and means for adjusting said element whereby to vary its function of utilizing capillary attraction.



1,812,721. WELL DRILLING APPARATUS. WALDO SHELDON, South Norwalk, Conn., assignor to Sheldon Machinery Corporation, New York, N. Y., a Corporation of New York. Filed July 9, 1927. Serial No. 204,446. 32 Claims. (Cl. 255—23.)

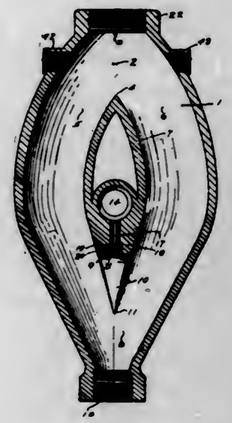
1. In well drilling apparatus, the combination with a rotary table, of a sleeve slidingly keyed therein and adapted to be unkeyed therefrom and to remain in non-rotating relation thereto, supporting means carried by the table, pipe grip means supported by said supporting means, grip



operating mechanism carried by the sleeve for closing and opening the grip means with respect to a drill pipe extending down through the sleeve and power mechanism for raising and lowering the sleeve to positively close or open the grip means.

1,812,722. TEMPERATURE CONTROLLED APPARATUS. JOHN A. SPENCER, Newtonville, Mass., assignor to Spencer Thermostat Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Apr. 3, 1925, Serial No. 20,455. Renewed Nov. 15, 1930. 20 Claims. (Cl. 236—7.)

1. Temperature controlled apparatus comprising a rotary element part of which is movable back and forth longitudinally of its axis as a result of changes in the temperature to which the apparatus is subjected, and means effective solely to rotate the element about said axis upon movement of part of said element longitudinally of its axis.

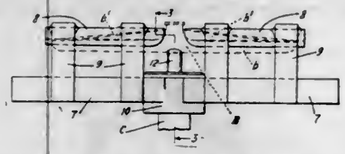


1,812,723. BOLSTER SUPPORT. DONALD F. SPROUL, Chicago, Ill., assignor to Cardwell Westinghouse Company, a Corporation of Delaware. Filed Oct. 30, 1929, Serial No. 403,421. Renewed Nov. 7, 1930. 8 Claims. (Cl. 267—9.)

3. In a bolster support in combination, a spring having the inner faces of its several turns flattened, a spring seat, a pair of segmental friction shoes engaging the inner face of the spring and each having an outstanding flange engaging the spring end, a pair of wedge shoes engaging the inner faces of the friction shoes and each having an outstanding flange engaging the opposite end of the spring and a forwardly and inwardly inclined wedge face, and a follower facing and spaced from the wedge shoe flanges and having a wedging stem cooperating with the wedge faces of such shoes, such stem being engageable with the spring seat as a limiting stop.

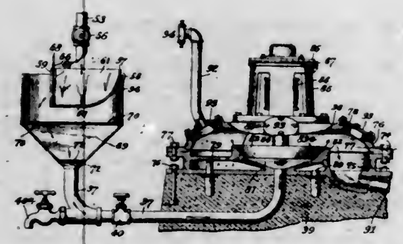
1,812,724. HYDRAULIC SUCTION DEVICE. JOHN G. STAMM, East Cleveland, Ohio. Filed Apr. 23, 1928. Serial No. 272,235. 3 Claims. (Cl. 230—92.)

1. In an air suction device, a hollow casing provided with a water conduit construction therein, an air-receiving passageway, and a discharge passageway for mixed air and water, the conduit construction communicating with the outside of the casing whereby water may be conducted thereto and terminating inwardly of the casing in a substantially planular surface disposed at substantially right angles to the direction of flow of air through the casing from the air-receiving passageway to



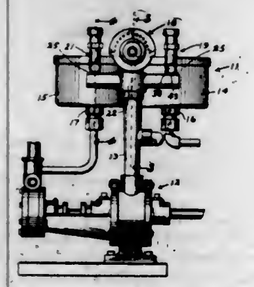
the discharge passageway, a removable nozzle piece in the conduit construction provided with a minute duct having an orifice disposed in said planular surface, whereby a jet of water emerging from the orifice impinges at right angles upon the air in the casing in contact with said surface and whereby air in motion toward said emerging water jet moves at right angles to said jet and into contact therewith, the discharge passageway being of smaller cross-sectional area than the air-receiving passageway, the discharge passageway being longitudinally spaced from and axially disposed relative to the said orifice and the casing being provided with lateral walls converging toward the discharge passageway from the orifice.

1,812,725. METHOD OF ATTACHING FILTER CLOTH. CARROLL M. STANLEY and FRANKLIN J. EVANS, Hazleton, Pa., assignors, by mesne assignments, to Oliver United Filters Inc., San Francisco, Calif., a Corporation of Nevada. Filed Aug. 27, 1927. Serial No. 215,810. 1 Claim. (Cl. 210—195.)



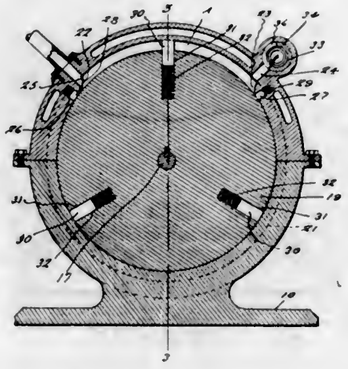
The method of tensioning and positively securing filter cloth over a backing screen to a segment of a filter leaf which comprises forming an inwardly flanged groove surrounding the opening in said segment forcing and stretching the filter cloth into said groove, the amount of cloth forced into said groove being substantially more than three times the width of the opening in said slot, subsequently forcing a soft metallic element into said groove and finally deforming the soft metallic element in said groove to an effective width substantially greater than the effective width of the groove.

1,812,726. PEENING APPARATUS. EDWARD W. STEVENS, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 17, 1927. Serial No. 240,674. 16 Claims. (Cl. 153—48.)



1. In apparatus of the class described, a member arranged to engage a grooved support, a percussive machine supported by said member and means on said member arranged to guide said machine for movement longitudinally of said support for peening the latter into gripping engagement with an elongate member received in the groove of said support.

1,812,727. APPARATUS FOR EMULSIFYING LIQUIDS AND FOR OTHER PURPOSES. HARRY L. SYMONS, Wimbledon, London, England, assignor to Roads Colloidal, Limited, London, England. Original application filed June 25, 1923, Serial No. 647,421. Divided and this application filed Feb. 29, 1924. Serial No. 695,886. 20 Claims. (Cl. 83—13.)



1. An apparatus of the character described comprising a mill for subjecting a liquid to the action thereof, means for continuously maintaining a constant head of liquid above said mill, means for continuously supplying liquid to said head, and means for preventing air locking in said mill.

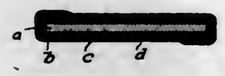
1,812,728. FLUID PROPORTIONING DEVICE. WILBUR TEALE and HERBERT F. MCLAUTHLIN, Oakland, Calif., assignors to Hydro-Oil Fire Corporation, Tacoma, Wash., a Corporation of Washington. Filed Sept. 25, 1928. Serial No. 308,309. 3 Claims. (Cl. 261—18.)

1. In a fluid proportioning device, a manifold, a reservoir for a liquid, and means providing a closed passage from the liquid in said reservoir to said manifold, said passage having riser and gravity discharge portions with the riser portion extending above the liquid level in said reservoir and with the discharge portion contracted to provide a drip orifice therein.

1,812,729. ROTARY GASOLINE MOTOR. WILSON J. TEETERS, Lyons, Nebr. Filed Oct. 21, 1927. Serial No. 227,799. 1 Claim. (Cl. 123—16.)

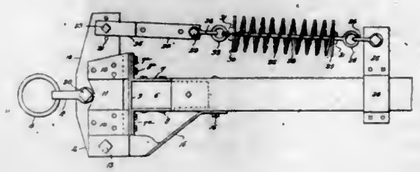
A rotary engine including a support, a pair of circular spaced casings mounted on said support and having spaced annular grooves adjacent the side walls and combined expansion and firing chambers in the upper portions thereof, a drive shaft journaled in said casing, rotors secured to the shaft within said casings, annular flanges on the periphery of the rotors and extending into the grooves, spring pressed pistons carried by the rotors, said casings having intake and exhaust ports located at opposite ends of the chambers, a valve mechanism for controlling the intake ports, apring pressed guard members adjacent the ends of the chambers and bearing against the rotors, fuel compressors located at the sides of the casings and connected to the intake ports and to a fuel supply, gears located between the casings and driven by the shaft to rotate the valve mechanism, and eccentric means at the ends of the shaft to operate the compressors.

1,812,730. ASPHALTIC MATERIAL AND METHOD OF PREPARING SAME. WILLIAM C. WEST, Louisville, Ky., assignor to West Process Pavement Co., Inc., Louisville, Ky., a Corporation of Kentucky. Filed Aug. 21, 1928. Serial No. 301,169. 3 Claims. (Cl. 106—31.)



1. The process of preparing for storage and shipment an asphaltic material suitable for lining ditches, canals and reservoirs or forming a waterproof protective surafce on dikes and levees, or placing a resilient waterproof protective surface on concrete streets, sidewalks and floors, the asphalts of which are adapted to be converted to an asphalt cement on the job by blending, which comprises mixing hard asphalt in a powdered form insufficient in quantity to provide the required percentage of asphalt cement with a part of the dry pulverized earth required to make a given batch while warm, said mixing being carried out at a temperature below that at which the hard asphalt blends with a soft asphalt, adding semi-liquid asphalt or asphaltic flux to bind the powdered asphalt particles to the particles of earth, the quantity of semi-liquid asphalt or asphaltic flux being sufficient to provide the desired percentage of asphaltic cement when blended with the hard asphalt by heating, and then adding the balance of the dry, pulverized earth at atmospheric temperature, thereby cooling the mixture.

1,812,731. ROTARY ICE SCORING MACHINE. FRANCIS CAMERON WESTMAN, Toronto, Ontario, Canada. Filed Feb. 20, 1928, Serial No. 255,769. Renewed Dec. 4, 1930. 12 Claims. (Cl. 125—13.)

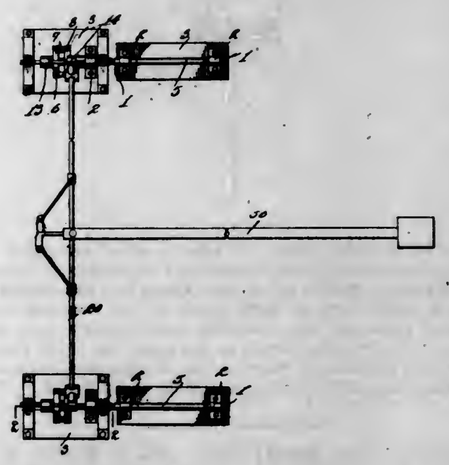


1. In an ice scoring machine, rotatory means operating to receive a cake of ice and rotate same about an axis, and scoring means positioned at right angles to said axis lowering to score the cake and rising to clear the cake after scoring.

1,812,732. PROTECTED METAL ARTICLE. JAMES HOWARD YOUNG, Pittsburgh, Pa., assignor to H. H. Robertson Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 20, 1929. Serial No. 393,956. 3 Claims. (Cl. 154—45.9.)

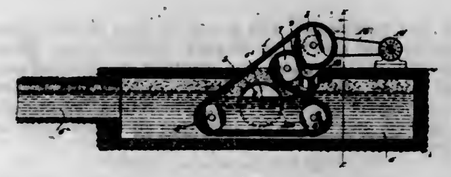
3. A protected metal article comprising a metal article provided with a protective layer of fire-resisting asphalt composed of asphalt and chlorinated poly-phenyl.

1,812,733. DRAWBAR. DONALD F. AINSLIE, Bishop, Calif. Filed Aug. 6, 1930. Serial No. 473,443. 2 Claims. (Cl. 280—33.9.)



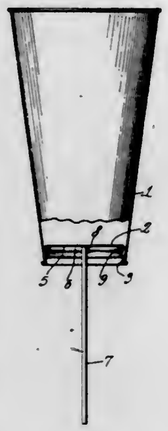
1. A draw bar construction of the type described, comprising a hollow tubular bar, a reduced extension telescoped in the outer end of the draft bar, means to secure the extension of said draft bar in said relation, angle brackets secured to the side of said extension, U-shaped members secured to the extensions on said brackets, plates secured to the inner side of the legs of said U-shaped members in lateral extension on said plate, a flat toggle bar adapted for movement between said plates, a pivot through the plates and an end portion of the toggle bar, said toggle bar having a series of bolt holes at its free end, a laterally projecting bracket on said bar, a double acting compressing spring mounted at one end to said laterally extending bracket, and having its further end attached to said free end of the toggle, and a U-shaped member to embrace the free end of the toggle in its bight secured to the other end of the spring, and a bolt through said U-shaped member and through a bolt hole in the free end of the toggle, and a draft ring pivotally mounted centrally of the forward edge of the toggle bar.

1,812,734. METHOD OF FAST-DYEING BONE. ELMER C. BERTOLET, Philadelphia, Pa., assignor to George K. Hale Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Original application filed Apr. 23, 1925, Serial No. 25,488. Divided and this application filed July 17, 1926. Serial No. 123,249. 5 Claims. (Cl. 8—5.)



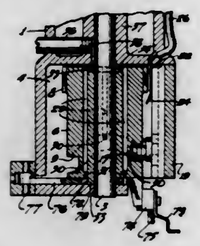
1. The method of coloring bone material consisting in subjecting it to a mixture of coloring matter and alcohol in the presence of fat for causing a penetration of the coloring matter to a substantial depth.

1,812,735. GATE OPERATING MEANS. HENRY L. BROWN, Chattanooga, Tenn. Filed June 9, 1930. Serial No. 459,972. 4 Claims. (Cl. 39—31.)



1. A gate operating mechanism comprising a crank shaft with the crank portion thereof located in the path of passing vehicles, a member fixed to said shaft, a co-operating member loose on said shaft, gate opening means connected with said loose member and interengaging elements carried by said members and so spaced as to provide lost motion between the members to permit one member to be moved relatively to the other after its first actuation without affecting said member, and means for holding said members in operative position.

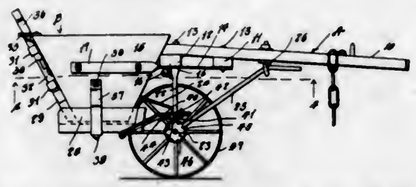
1,812,736. FILTERING DEVICE. JOHN H. BUTLER, Columbus, Ohio. Filed Sept. 17, 1929. Serial No. 393,252. 3 Claims. (Cl. 210—198.)



1. In a mechanical filter, a container for the liquid to be filtered having inlet and outlet ports, a pair of rollers disposed within said container, a second pair of rollers disposed upon the upper part of said container, means for moving said rollers, and an endless porous filter belt trained about said first two rollers and between said last named rollers for compressing said belt to discharge the fluid content of said belt.

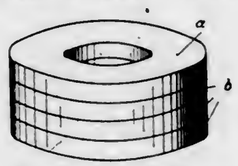
1,812,737. VASE. JAMES M. COUGHLIN, Wilkes-Barre, and OSCAR P. ROSS, Kingston, Pa., assignors to Wilkes-Barre Can Company, Wilkes-Barre, Pa., a Corporation of Pennsylvania. Filed Nov. 2, 1928. Serial No. 316,777. 3 Claims. (Cl. 47—41.)

3. In a flower holder or vase, a metal receptacle, a detachable prong device comprising a single piece of spring wire bent to provide an annular spring loop and having a prong device bent at right angles to the loop and connected therewith and extending longitudinally from the axis of the loop, and means on the lower end of the receptacle for providing a keeper recess to receive the annular spring loop portion of the releasable prong device.



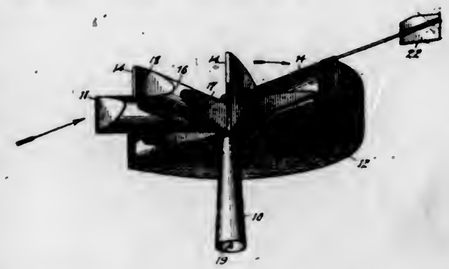
1,812,738. CAM MECHANISM. JOHN T. DALTON, Durham, N. C., assignor of one-half to Richard H. Wright, Durham, N. C. Filed Oct. 25, 1927. Serial No. 228,627. 2 Claims. (Cl. 184—1.)

2. The combination with a pair of cams having circumferential cam grooves, a member having rollers cooperative with the grooves of said cams and reciprocated vertically thereby, and a vertical slide supporting said member, of lips located above the respective rollers for dropping oil thereon, and means for supplying oil to the upper end of said slide.



1,812,739. FERTILIZER DISTRIBUTOR. BEN DREW, Ivor, Va. Filed Nov. 21, 1928. Serial No. 320,954. 2 Claims. (Cl. 275—2.)

1. A machine of the class described comprising a hitching frame, attaching bars disposable in parallelism against the under surface of the frame, means adjustably securing said bars to the frame, said bars having depending bracket portions integral therewith and terminating at opposite ends in axles, ground wheels mounted on said axles and adjustable therewith, a hopper attached to each bar, a distributing shoe carried by each hopper, a

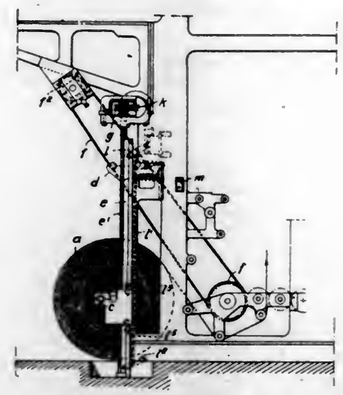


trip arm extending from each hopper, a trip wheel coacting with said trip arm and driven by each ground wheel.

1,812,740. MAGNET CORE. WALTHER EHLERS, Berlin-Copenick, Germany, assignor, by mesne assignments, to General Electric Company, a Corporation of New York. Filed June 26, 1926, Serial No. 118,742, and in Germany July 6, 1925. 4 Claims. (Cl. 175—21.)

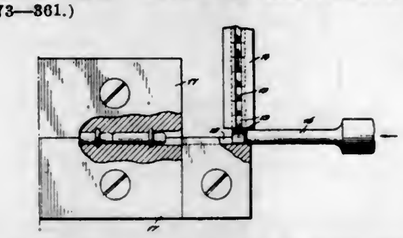
1. Magnet core composed of a plurality of superposed units offering an uninterrupted path to the magnetic flux and consisting of magnetic material having a marked permeability, one of said units differing from another unit in its magnetic properties.

1,812,741. WINDMILL. EDUARDO JIMÉNEZ ESPINOSA, Santiago, Cuba. Filed Jan. 31, 1930. Serial No. 424,881. 1 Claim. (Cl. 170—36.)



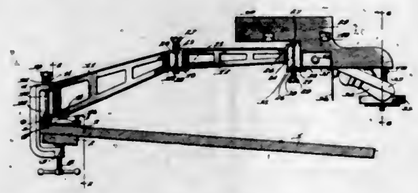
In a windmill, the combination of a wind-wheel mounted for rotation, said wind-wheel consisting of radially disposed vanes, each of said vanes being of dished construction closed at one side and fully open at the opposite side, and providing an outer and deflecting surface, a hollow windshield mounted to turn with respect to said wind-wheel and adapted to enclose substantially one-half of the upper and lower parts of said wind-wheel, and a rudder on said windshield to turn the latter in response to the pressure of the wind on said rudder.

1,812,742. MEANS FOR RAISING, CHANGING, AND DRIVING THE PAPER WEB ROLLS IN PRINTING MACHINES AND MORE PARTICULARLY IN ROTARY PRINTING MACHINES. ALFRED FALLOT, deceased, Plauen in Vokti., Germany, by Harry Priester, executor, Berlin, Germany. Filed Jan. 8, 1926, Serial No. 80,130, and in Germany Jan. 20, 1925. 4 Claims. (Cl. 242—58.)



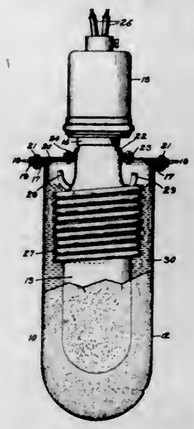
2. A paper roll changing and driving device for use in printing machines such as rotary printing machines,

comprising in combination, a paper roll spindle, traverse bearers for said paper roll spindle, traverse spindles in engagement with said traverse bearers, frictional endless driving means for rotating the said paper roll spindle with a paper roll on the same, during the upward move-



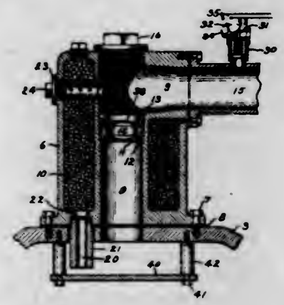
ment of the said paper roll spindle, means operated by the paper roll spindle for raising the said paper roll spindle and keeping the paper roll thereon in contact with the said frictional driving means and other means for adjusting the pressure of the frictional driving means against said paper roll.

1,812,743. TUBULAR PIN AND METHOD OF MAKING SAME. WILLIAM J. GAGNON, Bridgeport, Conn., assignor to The Bead Chain Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Sept. 11, 1928. Serial No. 305,296. 2 Claims. (Cl. 173—361.)



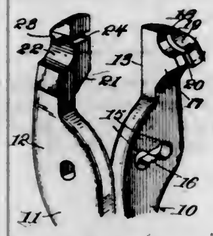
1. A tubular pin formed of sheet material comprising a shank having a longitudinal seam therein and an abutment shoulder intermediate of and unitary with said shank, said shank being necked down on one side of and next to said abutment shoulder, in combination with a cup closed over the end of the pin adjacent the necked down portion, substantially as described.

1,812,744. DRAWING BOARD ATTACHMENT. ROBERT S. GLENN, Cisco, Tex. Filed Feb. 13, 1928. Serial No. 254,099. 4 Claims. (Cl. 248—1.)



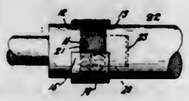
1. An attachment of the character described comprising a compartment having a pair of lugs, an arm supporting the compartment for swinging and having a pair of lugs, means fitting through the various lugs to compose a joint, and a button associated with one of the lugs engaging and being slidable upon an adjacent lug to compose a restricted but continuous bearing and to relieve the joint of strain.

1,812,745. LAMP. NEWELL T. GORDON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 2, 1929. Serial No. 396,779. 11 Claims. (Cl. 176—16.)



1. A lamp structure comprising a light source, spaced outer and inner envelopes, said inner envelope containing the light source, a fixed liquid in the space between said outer and inner envelopes, said liquid being capable of effectively absorbing undesirable heat radiation while transmitting visible radiation, and means for cooling said liquid.

1,812,746. ELECTRIC SWITCH. JOHN D. HILLIARD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 11, 1927. Serial No. 204,674. 8 Claims. (Cl. 200—150.)

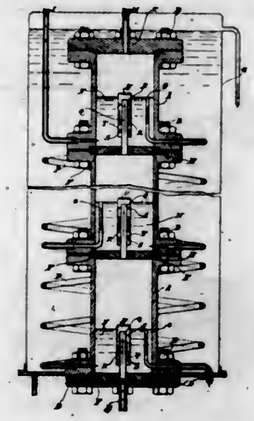


1. An electric switch adapted to interrupt a circuit beneath the surface of an insulating liquid, a closed vessel for said liquid, a hollow member secured thereto providing a large relief passage in communication with the interior of the vessel, a member normally closing said passage, said hollow member having a relatively small pressure escape passage therein also in communication with the interior of the vessel and in communication with said relief passage arranged to bypass said closing member, the member normally closing the relief passage being constructed to be blown bodily free from the passage in response to a predetermined pressure in the vessel.

1,812,747. TONGS. CHRISTIAN J. JORGENSEN, Dagmar, Mont. Filed Apr. 26, 1930. Serial No. 447,681. 2 Claims. (Cl. 29—86.2.)

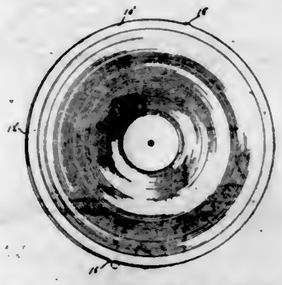
2. A tool for shifting links with relation to each other, comprising long and short jaws pivotally connected together and having link-engaging surfaces adapted to register with each other, the short jaw having a pocket adapted to receive the edge of one link, and a fin carried upon the long jaw adapted to engage the end of the other link.

1,812,748. DYNAMO ELECTRIC MACHINE. AUGUST KAYSER, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed Sept. 7, 1928. Serial No. 304,515. 6 Claims. (Cl. 171—252.)



1. A stationary member for dynamo-electric machines comprising an annular magnetic structure and a frame surrounding said magnetic structure, said frame having the edges thereof folded upon themselves and abutting said magnetic structure for retaining the same in said frame.

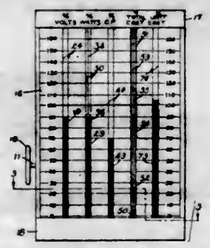
1,812,749. RESINOUS MATERIAL AND METHOD OF MAKING THE SAME. ROY H. KIENLE, Schenectady, and WILLIAM J. SCHREIBER, Troy, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Apr. 30, 1929. Serial No. 359,422. 13 Claims. (Cl. 92—21.)



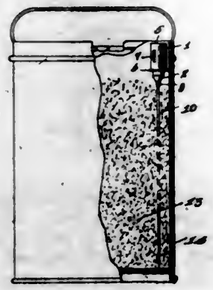
1. A sheet material comprising a fibrous substance which has incorporated with the fibres thereof the infusible condensation product of aniline and formaldehyde.

1,812,750. APPARATUS FOR ELIMINATING A SUBSTANCE FROM A GASEOUS MIXTURE. FRANCESCO LOPEZ, Padova, Italy, assignor to Società Anonima Industria Ammoniaca, Padova, Italy, a Corporation of Italy. Filed Nov. 30, 1928, Serial No. 322,902, and in Italy Mar. 26, 1928. 3 Claims. (Cl. 261—114.)

1. Apparatus for freeing a gaseous mixture from a component part thereof, comprising a series of vertically spaced chambers, means for admitting a liquid solvent of said component part to the upper chamber, means causing said liquid solvent to overflow when reaching a predetermined level within said chamber leading said liquid solvent to the next lower chamber, and so on, to the last chamber, means for admitting the gaseous mixture to the liquid solvent within the said last chamber, and means for successively admitting said gaseous mixture from said last chamber to the liquid solvent in the next and then the others higher in the series, finally discharging the treated gaseous mixture from the upper chamber, and the solution of said part in said solvent from the lower chamber, said means for admitting the gaseous mixture to each body of liquid solvent comprising a tubular inlet upwardly projecting within each chamber from the bottom thereof, and an inverted bell member inserted over said tubular inlet forming an annular chamber therewith, said inverted bell member being vertically movable in relation to said tubular inlet.

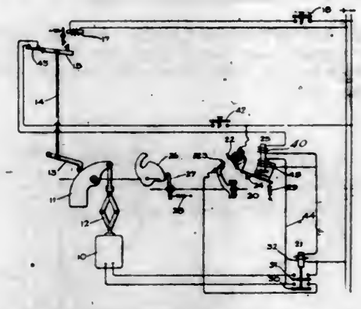


1,812,751. PHONOGRAPH RECORD. CHARLES J. MENSMAN, Washington, D. C. Original application filed Apr. 24, 1923, Serial No. 634,332. Divided and this application filed Nov. 19, 1927. Serial No. 234,526. 1 Claim. (Cl. 274—42.)



A phonograph record comprising a flat annular body, identifying indicia on a portion of the peripheral edge of the record, and stop means on said peripheral edge of the record whereby the indicia may be properly positioned and displayed when the record is stored.

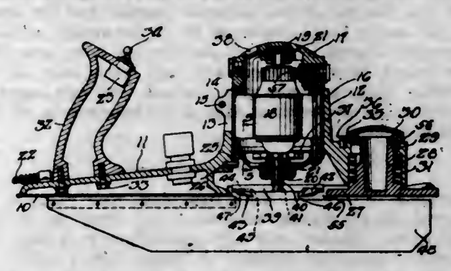
1,812,752. VARIABLE CHART. GEORGE S. MERRILL, Shaker Heights, Ohio, assignor to General Electric Company, a Corporation of New York. Filed Apr. 23, 1930. Serial No. 446,723. 2 Claims. (Cl. 116—135.)



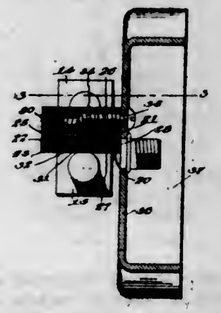
1. In a variable chart, the combination of a face board having a plurality of columns indicated thereon, indicating means disposed adjacent each of said columns comprising a marker movable to various positions in said column and interconnected actuating means for said indicating means comprising means for giving a predetermined relation to the positions of said markers.

1,812,753. COMBINED HUMIDOR, TAMP AND PICK. WADE MOSES, Cleveland, Ohio. Filed Apr. 5, 1930. Serial No. 441,799½. 7 Claims. (Cl. 131—59.)

6. A device of the character set forth comprising a receptacle having a restricted portion, a rod secured to the restricted portion, absorbent material in said receptacle, an annular flange formed on the receptacle above the restricted portion, a cap receiving the upper end of the receptacle and having its edge beaded to engage over the flange to detachably secure the cap to the receptacle, said cap having a plurality of slots arranged above the upper edge of the receptacle and the absorbent material.



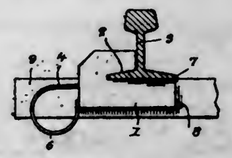
1,812,754. CONTROL OF ELECTRORESPONSIVE DEVICES. ROBERT PAXTON, Philadelphia, Pa., assignor to General Electric Company, a Corporation of New York. Filed Mar. 16, 1929. Serial No. 347,684. 6 Claims. (Cl. 172—239.)



3. In combination, an electroresponsive device, a plurality of electroresponsive switches for jointly controlling the connection of the device to a supply source, one of said switches having contacts in each supply connection, energizing means for controlling the closing of said switches, connections through which each switch upon closure thereof maintains the other switch closed, and means operated by the device for effecting the opening of one of said switches.

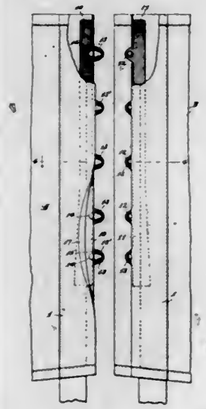
1,812,755. POWER DRIVEN PLANE. FRANK M. QUINELER, Chicago, Ill. Filed May 2, 1930. Serial No. 449,248. 7 Claims. (Cl. 145—5.)

1. In a power driven plane, a base plate, a body upon said plate providing a sleeve, a motor including a casing confined vertically within the sleeve, means providing vertical adjustment of said casing within the sleeve, a shoe yieldably supported by said body at the forward end thereof, and planing elements rotatably operable by said motor between the shoe and the forward end of the base plate in substantially a horizontal plane.



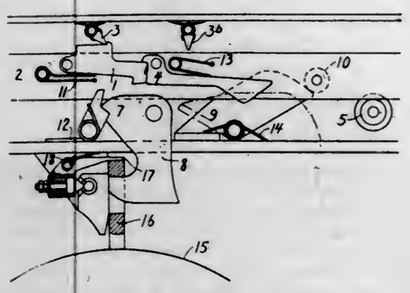
1,812,756. ADJUSTABLE BRACKET FOR BOXES. GREELEY R. RIGGS, Austin, Tex. Filed Mar. 19, 1930. Serial No. 437,191. 1 Claim. (Cl. 247—22.)

A supporting device for boxes carrying electrical equipment comprising a U-shaped bar, one leg of the bar having a depending flange, a second bar formed of a strip of metal folded upon itself and having depending flanges in contact with the first-mentioned depending flange, a U-shaped block receiving the pair of bars, one leg of the U-shaped block being shorter than the other leg with the depending flanges of the bars in contact with the end of the shorter leg, a box secured to the block in abutting relation to said other leg of the block and the depending flanges of the bars.



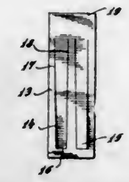
1,812,757. ANTICREEPER FOR RAILROAD RAILS. WILLIAM I. RUSSELL, Edinburg, Tex. Filed Apr. 30, 1930. Serial No. 448,684. 1 Claim. (Cl. 238—321.)

An anti-creeping device for railway rails comprising a metal member which is substantially U-shaped in cross section and which has its parallel sides from one of its ends cut away and notched, the upper walls of the notches being arranged angularly to contact with the upper sides of the base flange of a rail when such base flange is received in the notches and the distance between the notches and the cut away end of the member being substantially equal to the cross sectional width of the base flange of the rail, a two-arm spring designed to be inserted through the mem-



ber, both arms of the spring having their ends bent in opposite directions to provide hooks which frictionally contact respectively with the edge of the base flange of the rail and the end of the U-shaped member and the arms of the spring being connected by an outwardly rounded inwardly directed loop which provides the lower arm of a less length than the upper arm and which loop, at its juncture with the lower arm, contacts with and exerts a pressure against the inner edge of the base portion of the U-shaped member.

1,812,758. CORSET. YOLE SAYNISCH, New York, N. Y. Original application filed Nov. 15, 1928, Serial No 319,694. Divided and this application filed May 15, 1930. Serial No. 452,705. 1 Claim. (Cl. 2—263.)

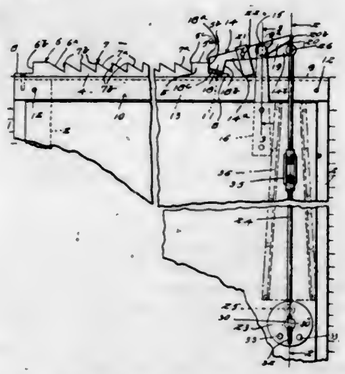


A corset including sections, removable corset steels for coupling said sections together, pockets extending longitudinally of said sections at the edges thereof for receiving said removable steels, coupling projections integrally formed on each of said steels, the projections of one of said steels having buttons thereon, the projections of the other of said steels having slots therein registering with the buttons on the projections of the other of said steels for receiving the same and coupling said steels together, and tongues struck out from the slotted projections, said tongues being bent and securing between the tongues and the coupling steels, a wall of the pocket at the marginal openings for each of said slotted projections.

1,812,759. DEVICE FOR RELEASING SHELLS IN AIRCRAFT. PER SLINDE, Kjeller, Norway. Filed Aug. 28, 1928, Serial No. 302,618, and in Norway Sept. 7, 1927. 16 Claims. (Cl. 244—1.)

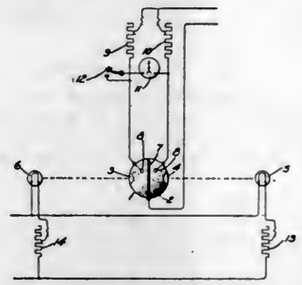
1. In a device for discharging loads from an aircraft, a load carrying hook, a trigger arranged in operative relation to said carrying hook, a slide, a hook for releasing the trigger and mounted on the slide, means for moving the slide from the operating place, and means for locking the releasing hook in the operative position in certain position of the slide.

1,812,760. SOUND ACTION FOR ACCORDIONS, HARMONICAS AND LIKE INSTRUMENTS. MARIO SOPRANI, Castelfidardo, Italy. Filed June 29, 1928, Serial No. 289,170, and in Italy Sept. 9, 1927. 5 Claims. (Cl. 84—363.)



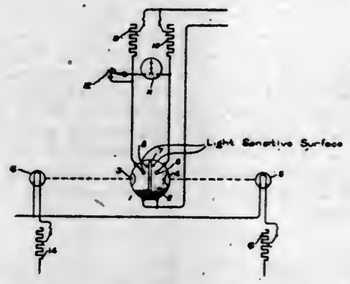
1. An action unit for musical instruments of the character specified, comprising a plate slit according to a predetermined outline, so as to form a vibrating element integral with said plate, both surfaces of said element being substantially even with the surfaces of said plate.

1,812,761. REMOVAL OF PHOSPHORUS FROM METAL BEARING SOLUTIONS. ROYALE HILLMAN STEVENS, GERALD CHAD NORRIS, and WILLIAM NELSON WATSON, Broken Hill, Northern Rhodesia, South Africa, assignors to Rhodesia Broken Hill Development Company Limited, Broken Hill, Northern Rhodesia. Filed Sept. 24, 1926, Serial No. 137,622, and in Southern Rhodesia Apr. 7, 1926. 8 Claims. (Cl. 23—22.)



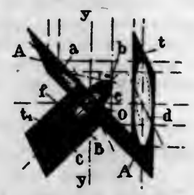
1. The process of purifying a metal-bearing acid solution containing phosphorus which consists in treating the solution to produce therein at least one part by weight of ferric iron for each part by weight of phosphoric pentoxide therein, further treating the solution to precipitate the phosphorus as ferric phosphate, and separating the solution from the precipitate.

1,812,762. SAFETY DOOR CATCH. SETH E. STEVENTON, Mount Carmel, and DAVID HARRISON WIGGS, Danville, Ill. Filed May 25, 1929. Serial No. 365,967. 2 Claims. (Cl. 292—96.)



1. A catch of the character set forth, comprising a rack bar, a bracket arm having a pivot fixed thereto, an angular latch dog rockably mounted at the juncture of its arms on the pivot, an arm fixedly secured to the pivot and having an angular relation with respect to one of the latch dog arms, a spring positioned between said last arms to hold the latch dog in active position, and a catch carried by the other arm of the latch dog.

1,812,763. PHOTO-ELECTRIC DEVICE. WILLIAM E. STORY, Jr., Worcester Mass., assignor to General Electric Company, a Corporation of New York. Filed Apr. 6, 1925, Serial No. 20,907. Renewed Dec. 17, 1929. 5 Claims. (Cl. 88—23.)

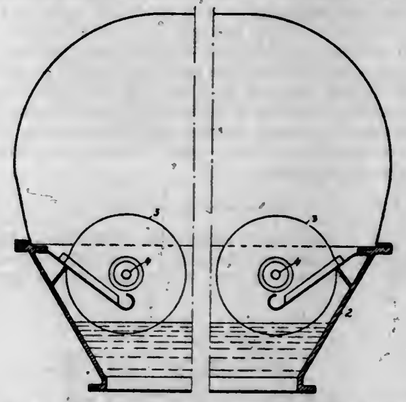


1. In combination, light sensitive means including a pair of photo-electric cells contained in a single envelope, means whereby a pair of oppositely extending beams of light, one of which may be varied, may be directed onto said light sensitive means, a single source of energy for said light beams, and means connected to said light sensitive means for indicating variations in the intensities of said light beams.

1,812,764. PHOTO-ELECTRIC DEVICE. WILLIAM E. STORY, Jr., Worcester, Mass., assignor to General Electric Company, a Corporation of New York. Original application filed Apr. 6, 1925, Serial No. 20,907. Divided and this application filed Apr. 25, 1929. Serial No. 358,070. 5 Claims. (Cl. 250—27.5.)

1. In combination, an evacuated envelope containing a plurality of photo-electric units, each comprising a light sensitive cathode and a cooperating anode, said cathodes being mounted on a common insulating material.

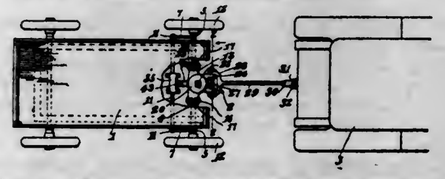
1,812,765. OPTICAL SYSTEM. MICHAEL ASTAFIEV, Chelsea, London, England, assignor, by mesne assignments, to Art Photogravure Company Limited, London, England. Filed Aug. 26, 1929, Serial No. 388,538, and in Great Britain Sept. 7, 1928. 8 Claims. (Cl. 88—1.)



1. An optical system comprising a pair of oppositely-facing reflectors disposed in and around the line of intersection of a pair of planes crossing each other at similar inclinations to a plane normal to the system and also including said line, which reflectors include an inner one passing through an opening in an outer one and provide edge regions situated at opposite inclinations with respect to said normal plane and respectively externally and internally defining a hollow image-forming beam of light rays emergent from said inner reflector, and means compensating for unequal rates of change of the effective sizes respectively of said edge regions with declension of incident light rays within a determined angle of vision, said means consisting of non-reflecting means in juxtaposition with that portion of the inner reflector which lies to one side of said normal plane and occupying an area within the parallel ray trace of the opening in the outer reflector upon the plane of the inner reflector, the ratio between which area and the area within said trace effective with respect to parallel rays of determined inclination varies progressively in the same sense as the angle at which said rays are incident to the plane of said inner reflector.

1,812,766. LUBRICANT. ARMAN E. BECKER, Newark, N. J., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed Nov. 28, 1923. Serial No. 677,512. 8 Claims. (Cl. 87—9.)

1. A process of preparing lubricants, which comprises distilling a residuum from cracking of petroleum, segregating cuts of the distillate and blending with another oil.



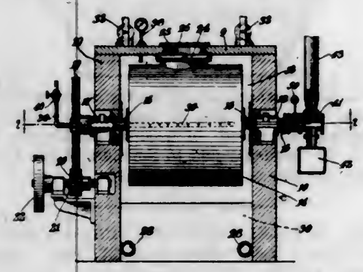
3. The method of making a lubricating oil from pressure distillation cracking residuum which comprises distilling such a residuum to segregate distillates therefrom having lubricating characteristics, adding sulphur to a distillate so segregated and heating until the sulphur dissolves.

1,812,767. GAS WASHER. KARL BEROFELD, Berlin, Germany. Filed May 16, 1928, Serial No. 278,225, and in Germany Nov. 26, 1926. 4 Claims. (Cl. 261—92.)

1. In a gas washer parallel series of rapidly rotating centrifugal disks rotatable in opposite directions; said disks dipping into a body of washing liquid; and irrigating means for feeding liquid to the sides of the disks at a point near the axis of rotation thereof.

1,812,768. TRAILER COUPLING. CHARLES EMIL BERGGREN, Wilcox, Nebr. Filed June 27, 1930. Serial No. 464,394. 1 Claim. (Cl. 280—33.55.)

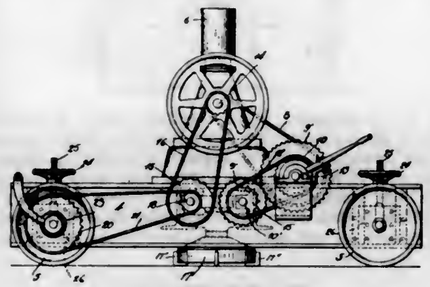
In a trailer coupling for connecting a trailer with a propelling vehicle, a cross bar for supporting the forward



end of the trailer, a pair of wheel supporting members swivelly connected with the cross bar, a tie rod having its ends pivotally connected with the wheel supporting members, a plate seated on and fixedly secured to the cross bar, a tapered boss projecting upwardly from said plate centrally of the latter, an annular rib projecting upwardly from the plate in concentric relation to said boss, a connecting element having an upwardly tapered recess to receive said boss, said connecting element having its lower face formed with an annular groove arranged concentrically of said recess to receive said rib, a coupling bolt extending through said boss and recess and having a washer bearing against the upper face of the connecting element to rotatably connect the latter, a clamp secured to the tie rod, means pivotally connecting tthe clamp and said connecting element, and a tongue having one end pivotally connected with said connecting element and having its other end pivotally connected with the propelling vehicle.

1,812,769. PAN LOAF BREAD AND METHOD OF MAKING SAME. DELMAR M. BINGER, St. Paul, Minn., assignor to Zinsmaster Baking Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Feb. 9, 1931. Serial No. 514,678. 3 Claims. (Cl. 107—54.)

2. The method of producing a loaf of bread consisting in forming a plurality of rolls of dough, entwining said rolls about each other, proofing the product, confining it in the direction of progression of the turns of said rolls during proofing, whereby the cellular structure is stretched in the turns of the rolls lengthwise of said turns and said turns reduced in pitch, in baking the proofed product, and in confining it, during baking, against spreading, to further the stretching of the cellular structure lengthwise of the turns of said rolls.



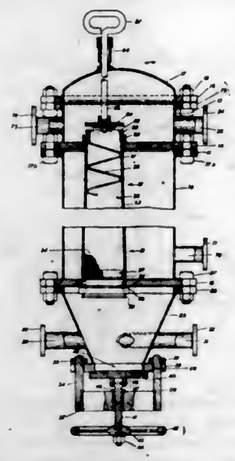
1,812,770. METHOD FOR DECOMPOSING SALTS. HOWARD B. BISHOP, Summit, N. J. Filed June 12, 1925. Serial No. 36,578. 4 Claims. (Cl. 23—153.)

3. A method of decomposing a salt with an acid which consists in agitating the salt and heating it above the boiling point of the acid to be volatilized and below the melting point of the solid constituents and then adding the acid and boiling off the volatile product at a balanced rate, the added acid being gradually sprayed on to the batch.

4. The method of decomposing calcium fluoride with sulphuric acid to form hydrofluoric acid and calcium sulphate, which consists in heating a batch of calcium fluoride to a temperature above the boiling point of the hydrofluoric acid and below the melting points of calcium fluoride and calcium sulphate, and while so heated and while the batch is being stirred, spraying the sulphuric acid over the surface of the batch, the acid being added so slowly that there is substantially no caking of the mass and the reaction being carried on at substantially atmospheric pressure.

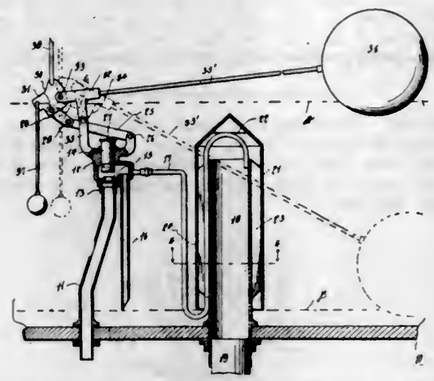
1,812,771. MACHINE FOR PLANING THE SURFACES OF PAVEMENTS. CHARLES R. BLOOD and HUBERT J. HUMBERT, Sacramento, Calif. Filed Oct. 24, 1929. Serial No. 402,202. 6 Claims. (Cl. 262—19.)

1. A machine of the character described comprising a main frame mounted on traction wheels, a driving motor carried by said frame, driving connections between the motor and traction wheels, a planing head carried by said frame and mounted for horizontal rotation on a vertical shaft, a member in which said shaft rotates, and which is arranged and adapted to be moved crosswise of the frame in opposite directions, and connections between the motor, the said shaft and its supporting member, for rotating said planing head and propelling it crosswise of said frame, said connections including a vertical shaft on which the planing head is mounted and to which is keyed a worm wheel; a pair of parallel shafts, one of which is a screw shaft engaging with and moving said supporting member, a worm splined on the other shaft and arranged and adapted to operate said vertical shaft and to move crosswise of the frame in constant engagement with said worm wheel.



1,812,772. NAIL POLISHER. MARCEL CADÉ, Paris, France. Filed Aug. 8, 1930, Serial No. 474,021, and in France July 9, 1930. 7 Claims. (Cl. 132—78.)

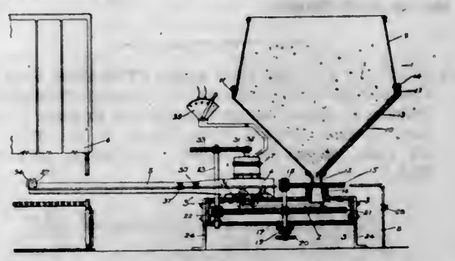
1. In a polisher, the combination of a skin folded on itself so as to form a small pocket with a frame having a handle and two uprights on which can be secured the edges of the said pocket, the spacing apart of the said uprights being slightly smaller than the width of the pocket.



1,812,773. TAPERED TUBE FILTER PRESS. HUGH HARLEY CANNON, Los Angeles, Calif., assignor to Cannon-Prutzman Treating Processes, Ltd., Los Angeles, Calif., a Corporation of California. Filed Oct. 2, 1929. Serial No. 396,898. 8 Claims. (Cl. 210—184.)

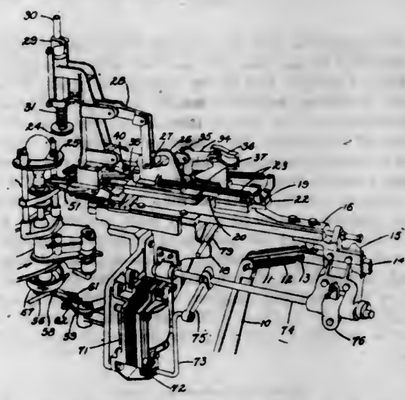
1. In a tubular filter having a plurality of filtering tubes lined with foraminous material: a valve disc axially placed over one end of each tube, said disc cooperating with a seat adapted to retain said foraminous material

in position and removably inserted in said end of said tube to close said tube against the passage of liquid therethrough.



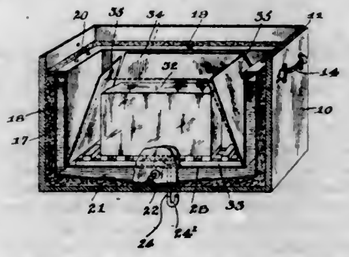
1,812,774. WATER CLOSET VALVE. WILLIAM J. COLLISON, Bakersfield, Calif. Filed Oct. 16, 1930. Serial No. 489,212. 3 Claims. (Cl. 137—104.)

1. In a device of the class described, a valve to control a water supply pipe, a lever engaging the valve, a link pivoted to the lever, a trigger plate to which the link is pivoted, a float valve means pivoted to the trigger plate and to the support for said lever, and a stop means limiting the relative movement of said link and trigger plate.



1,812,775. FUEL MIXER AND FEED. WILMOT A. DANIELSON, U. S. Army, Washington, D. C. Filed Oct. 10, 1927. Serial No. 225,319. 16 Claims. (Cl. 110—22.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

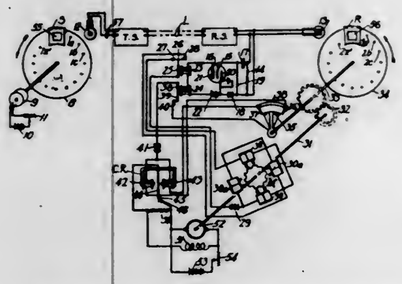
1. A fuel mixer and feed for furnaces or the like, comprising a mixing chamber, a hopper adapted to discharge pulverized fuel into said chamber, a suction pipe leading from said chamber, air inlets leading into said chamber, a fan adapted to draw a mixture of pulverized fuel and air from said chamber having an intake connected with said suction pipe and having a discharge, a furnace feed pipe connected to said discharge, burners arranged at the end of said pipe adapted to rest within a furnace, means within the mixing chamber for conveying fuel discharged



from the hopper to the suction pipe, means for enriching said mixture and driving means adapted to operate said fuel conveying means and said fan.

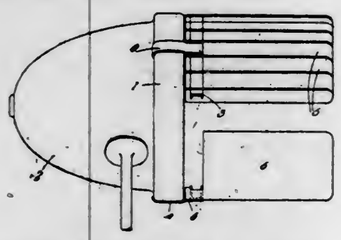
1,812,776. BULB SHAPING DEVICE. JOHN F. DONOVAN, East Cleveland, and FRANK J. MALLOY, Cleveland, Ohio, assignors to General Electric Company, a Corporation of New York. Filed May 11, 1929. Serial No. 362,420. 6 Claims. (Cl. 49—2.)

1. A device adapted to shape the neck of a bulb supported vertically in a movably supported holder and having a portion thereof in a plastic condition which comprises a vertically movable cup adapted to engage the top of said bulb, a set of pivoted centering jaws adapted to engage the neck of said bulb, a set of pivoted shaping jaws adapted to engage said plastic neck portion, means for moving said holder and means connected to said cup and to said jaws for reciprocating said cup and opening and closing said jaws in proper time relation to the movement of said holder.



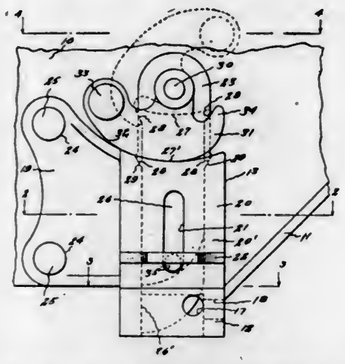
1,812,777. COMBINATION ICE-BOX AND WATER COOLER. SIDNEY W. FRECHOU, New Orleans, La. Filed Sept. 27, 1930. Serial No. 484,898. 2 Claims. (Cl. 62—79.)

1. In a combination ice-box and water cooler, an outer container, an inner receptacle for water having an ice



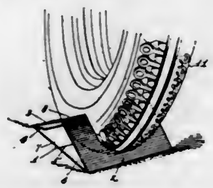
compartment, and demountable folding plates or leaves mounted in said compartment and adapted to rest upon the ice block therein.

1,812,778. METHOD AND APPARATUS FOR SYNCHRONISM AND AUTOMATIC PHASE CORRECTION. WILBUR F. FUNK, Midland Beach, and EDWARD T. KRUGLAK, Jackson Heights, Long Island, N. Y. Filed Nov. 16, 1928. Serial No. 319,926. 12 Claims. (Cl. 178—69.5.)



1. In apparatus for the transmission of pictures or for television or the like, the method of maintaining synchronism of motion and phase relation between the sending and receiving members which consists in increasing the intensity of the image impulse at the end of each analysis of successive line elements to produce increased primary current impulses, and in separating the increased primary current impulse produced at the end of a complete analysis of the picture from the increased primary current impulse produced at the next analysis of a successive line element to produce a secondary current impulse and utilizing said current impulses transmitting said current impulses to the receiving station to govern the speed of the receiving member, and automatically correct and maintain it in phase with the sending member so as to secure proper framing of the image at the receiving station.

1,812,779. ANTIGLARE OR ANTIDAZZLE DEVICE FOR LAMPS. ISAAC GEARY, London, England. Filed Jan. 4, 1929, Serial No. 330,248, and in Great Britain Jan. 9, 1928. 1 Claim. (Cl. 240—48.4.)

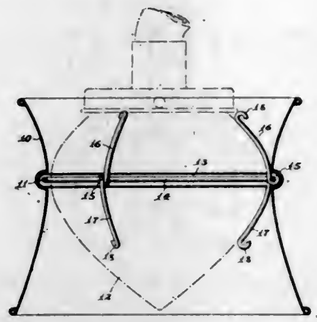


An anti-glare screen attachment for the outside forward portion of a lamp, comprising a series of blades arranged around the entire periphery of the lamp front, and projecting forwardly thereof, and substantially at right angles thereto, said blades having their inner opposite ends equally spaced apart throughout their entire length to provide an unscreened area of uniform circumference therebetween, said blades being radially spaced apart around the entire periphery of the lamp front whereby uniform unobstructed light passages are provided between said blades around the entire periphery of the lamp front to provide a large area of diffusion in the neighborhood of the lamp.

1,812,780. DUMP CAR DOORLOCK. ANDREW GERMEK, Edwardsville, Pa. Filed Mar. 12, 1930. Serial No. 435,252. 8 Claims. (Cl. 105—308.)

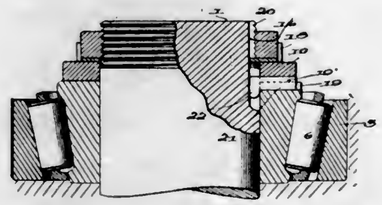
1. A car door securing device comprising a lock housing rigidly secured to the side wall of a car, a tongue slidably mounted therein, a keeper bar carried by and extending beyond the edge of said door and adapted to be engaged by said tongue, and means carried by said lock housing and adapted to lock said tongue in either its raised or depressed position, said lock housing comprising an integral vertical guide portion adapted to snugly and slidably receive therein said tongue, a vertical slot in said guide portion, a transverse pry bar support integral with said guide portion and extending across the bottom portion of said slot, an opening in said tongue registering with said slot, an enlarged head on said tongue having inwardly tapering faces, and similarly tapered faces on said guide portion on which said head is adapted to seat, the top edge of said tongue and guide portion being provided with a similar concave curvature.

1,812,781. COLLAPSIBLE TIRE STAND. HAROLD B. GIBBS, Bronxville, N. Y., assignor to Rusling Wood, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 30, 1930. Serial No. 492,317. 3 Claims. (Cl. 211—24.)



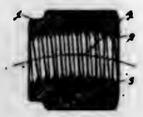
3. A tire stand comprising a base, and a pair of convergent side walls, said side walls being notched substantially to receive a tire so that the tire will engage the edges of the notch and will rest on said base.

1,812,782. ARTIFICIAL TROLLING BAIT. JOSEF GLUCK, Cleveland, Ohio. Filed Mar. 8, 1930. Serial No. 434,217. 9 Claims. (Cl. 43—45.)



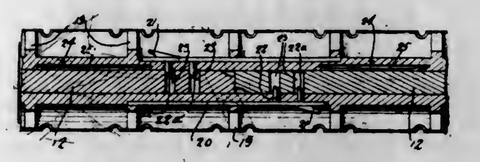
4. A spinner for a lure comprising an elongated piece of sheet metal slotted centrally in its longitudinal axis to form two integral connecting strips between the outer portions of said piece of metal, said connecting strips being bent in opposite directions with respect to each other in planes transversely to the general plane of said piece of metal, one strip forming a piercing front portion of V-shaped form and the other strip a rear pocket portion of W-shaped form.

1,812,783. LAMP SHADE. SAMUEL GOLDFINGER, New York, N. Y. Filed Dec. 18, 1930. Serial No. 503,311. 2 Claims. (Cl. 240—138.)



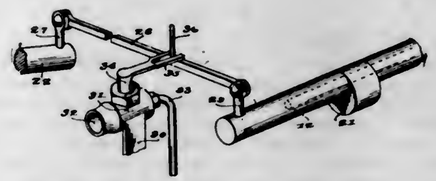
1. The combination of a lamp shade open at the upper and lower ends and having an annular groove in the inside thereof, and lamp globe engaging means to retain the shade in place on the globe, said means consisting of a resilient split ring to be sprung into said groove to connect said means with said shade within the same, and upwardly and downwardly projecting spring fingers on the ring to engage said globe.

1,812,784. BEARING LOCKING DEVICE. JOHN B. HAWLEY, Jr., Minneapolis, Minn. Filed Mar. 20, 1929. Serial No. 348,607. 2 Claims. (Cl. 308—236.)



1. In combination with a rotatable shaft extended through a raceway of an anti-friction bearing, a washer surrounding the shaft, and means locking said washer to said raceway and to said shaft, said means comprising a key extended through aligned slots axially formed in the washer and raceway, and into an aperture provided in said shaft.

1,812,785. CURVE THREADED NUT. ELIS HELIN, Stockholm, Sweden. Filed Feb. 21, 1929, Serial No. 341,589, and in Sweden Mar. 7, 1928. 4 Claims. (Cl. 151—14.)

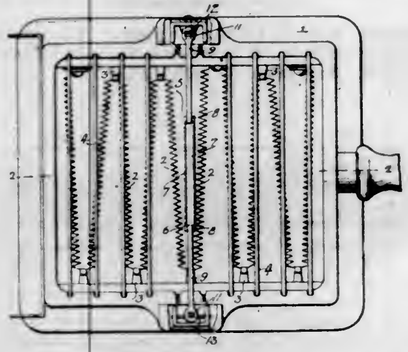


1. A nut having a threaded bore on an arcuate axis in which the angle between two consecutive spire-sides is constant throughout the whole thread and the cross-section of one of the spires in the plane of said axis is at one point of regular profile, whereas the other spires in said plane have the cross-sectional form of scalene triangles.

1,812,786. RAILWAY JOINT CHAIR. DRAGUTIN HERL, Niagara Falls, N. Y. Filed Feb. 19, 1931. Serial No. 517,034. 7 Claims. (Cl. 238—205.)

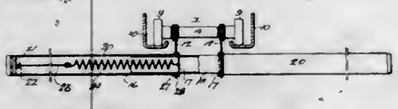
1. In a device of the character described, a railway chair, meeting rail ends seated therein and having openings in the webs thereof, spring arms carried by the sides of the chair, and pins carried by the arms adapted to be received in the rail web openings for the retention of the rail.

1,812,787. BRAKING ATTACHMENT FOR VEHICLE MOTORS. WILLIAM HASTON HEWITT, Cumberland, Md., assignor of one-half to Ora M. Doolittle, Cumberland, Md. Filed June 5, 1929. Serial No. 368,659. 2 Claims. (Cl. 123—97.)



1. An internal combustion motor having intake and exhaust valves, valve operating push rods, rocker arms connecting at their opposite ends with the push rods and intake and exhaust valves, a rocker arm shaft upon which said rocker arms are journaled intermediate of their ends, said shaft having those portions journaling the rocker arms of the exhaust valves formed as eccentrics effective in one position of the shaft to permit normal push rod actuation of both intake and exhaust valve rocker arms and valves, and effective in a rotated position of the shaft to permit normal push rod actuation of the rocker arms of the intake valves and inoperatively to position the exhaust valve rocker arms relatively to their push rods and valves, an air feed conduit communicating with the intake manifold of the motor and having a rotatable air inlet valve therein, and an operating member having connections with said rocker arm shaft and with said air valve effective in one direction of movement to rotate said rocker shaft to said exhaust valve closing position and coincidently to turn said air inlet valve to air intaking position, and reversely movable to turn said rocker shaft to normal valve operating position and coincidently to close said air inlet valve.

1,812,788. THERMOSTATIC ELEMENT. ALPHEUS O. HURXTHAL, Philadelphia, Pa., assignor to Proctor & Schwartz, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 24, 1928. Serial No. 256,648. 4 Claims. (Cl. 297—11.)

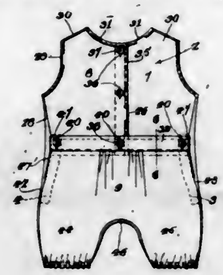


3. The combination in a thermostatic element made in sections, the central section being of a high expansive metal and consisting of two parallel bars and a cross-bar at each

end connecting the parallel bars; and low expansive sections having hooks which engage the cross-bars of the

high expansive central section, and having means by which they are attached to the mechanism to be controlled by the thermostatic element.

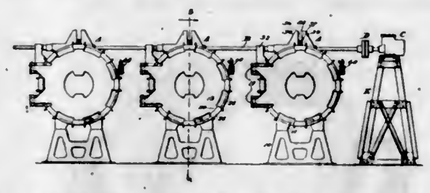
1,812,789. CONVEYER FOR SKEIN OR YARN DRIERS. ALPHEUS O. HURXTHAL and HERMANN BOGATY, Philadelphia, Pa., assignors to Proctor & Schwartz, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 24, 1929. Serial No. 402,257. 16 Claims. (Cl. 198—189.)



1. In a skein conveyer, the combination of a conveying element, a pole extending laterally from and supported solely and at one end only by said conveying element, and means constantly connecting the said end of said pole to said conveying element and permitting universal movement of the pole relative to the conveying element.

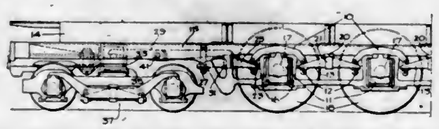
1,812,790. CELLULOSIC MATERIAL AND PROCESS OF MAKING THE SAME. OSCAR JAECK, deceased, Reinach, near Basel, by Wolfgang Jaeck, administrator, Basel, and FRITZ SCHÜTZ, Basel, Switzerland, assignors to the Firm of Society of Chemical Industry in Basle, Basel, Switzerland. Filed June 27, 1929, Serial No. 374,267, and in Switzerland July 13, 1928. 6 Claims. (Cl. 8—20.)

1. The process of making new cellulosic materials being immune to direct dyeing dyestuffs and having a strong affinity for basic dyestuffs, wherein the cellulose is treated with maleic anhydride.



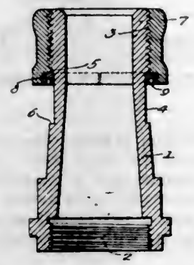
1,812,791. CHILD'S GARMENT. HARRY KATZ, Philadelphia, Pa., assignor to Moses Wertheimer, Philadelphia, Pa. Filed Dec. 21, 1929. Serial No. 415,811. 1 Claim. (Cl. 2—80.)

A child's garment of the romper type having a front and back, said front formed of a pair of oppositely disposed sections of like contour having the intermediate portion of their inner side edges secured together, each of said sections having its inner side edge formed of an intermediate squared portion, an inwardly curved upper portion and a lower portion having an inwardly curved upper part and a squared lower part, its outer side edge formed of an upper and a lower curved portion with the latter of greater length than the former, its bottom edge squared and its upper edge of less length than the bottom edge and inclining downwardly from its inner to its outer end, said back formed of a pair of upper sections and a lower section, each of said upper sections having a portion of its top edge secured to the top edge of a front section and the lower portion of its outer side edge secured to the outer side edge of a front section, said lower section having its side edges form continuations of the outer side edges of said upper sections and the lower part of its side edges secured to the lower part of the lower portions of the outer side edges of said front sections, said lower section centrally of its bottom formed with an inverted U-shaped cutout, means for securing the edge throughout of said cut-



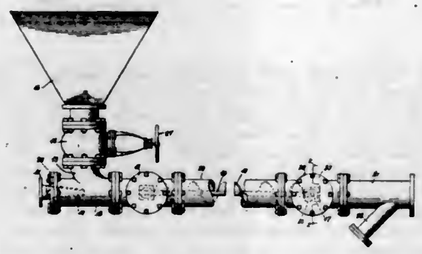
out to the lower portions of the inner side edges of said front sections to provide a crotch, means for detachably connecting the sections of the back together, and extension members in the form of rectangular strips having one end thereof positioned above said lower section, said strips having their outer lengthwise edges secured throughout to the curved lower portions of the outer side edges of said front sections, the lower part of the outer side edges of said upper sections and to the lower secured part of said lower section.

1,812,792. VULCANIZING APPARATUS. KARL B. KILBORN, Fairlawn, Ohio, assignor to Selberling Rubber Company, a Corporation of Delaware. Filed July 10, 1928. Serial No. 291,676. 6 Claims. (Cl. 18—4.)



5. A vulcanizer of the class described comprising a fixed mold section, a movable mold section hinged thereto, a locking ring rotatable about one of the mold sections and provided with lugs for engagement with portions of the other mold section, a rotatable screw disposed tangentially with reference to the locking ring, a nut threaded on the screw and held against rotation whereby to translate rotary motion into rectilinear motion, and means connecting the nut with the locking ring whereby to move the same to locking and unlocking positions.

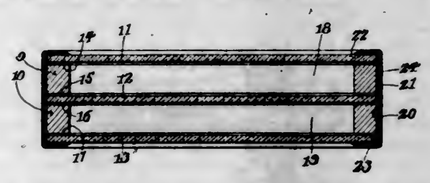
1,812,793. SPRING SUSPENSION SYSTEM. OLE K. KJOLSETH, Erie, Pa., assignor to General Electric Company, a Corporation of New York. Filed Dec. 12, 1930. Serial No. 501,918. 5 Claims. (Cl. 105—82.)



1. In combination with a locomotive or car having a platform structure, main drivers and an auxiliary truck, of a spring suspension system including means for distributing the weight of said locomotive or car between said auxiliary truck and said main drivers, said means including a side spring rigging having supports on which said platform structure is mounted, diagonally extending springs, connected to the ends of said side spring rigging, and a plurality of diagonal equalizers connected to said platform structure for supporting the same, said diagonal equalizers being mounted on said auxiliary truck at one end and connected at the other end in series with said diagonally extending springs and thereby directly to said side spring rigging.

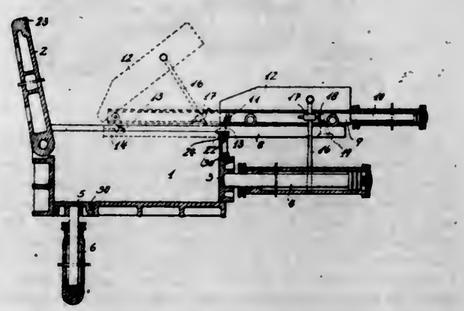
1,812,794. NOZZLE. JOHN T. LALLY, Wilmington, Del. Filed Apr. 17, 1930. Serial No. 445,006. 4 Claims. (Cl. 299—107.)

1. A nozzle comprising a body member having an externally threaded terminal portion, a sleeve having threaded engagement with said terminal portion and means permitting movement of said sleeve inwardly on the body portion to uncover at least a portion of the said terminal, an annular element threaded into the inner end of and normally carried by said sleeve, and a shoulder on said body member positioned to engage said element to limit the advance movement of the sleeve, said ring constituting also a lock nut for securing the sleeve in the advanced position.



1,812,795. SULPHUR BURNER. MICHAEL J. LEAHY, Muncy, Pa. Filed Jan. 18, 1930. Serial No. 421,786. 8 Claims. (Cl. 23—278.)

1. A sulphur burner comprising, in combination, a tubular member, a nozzle for introducing air under pressure axially of said member, a sulphur hopper arranged above and opening freely to the space about said nozzle to deliver sulphur to the injecting action of said nozzle and means to control delivery of said sulphur.

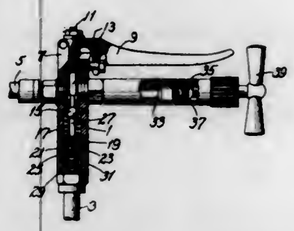


6. A sulphur burner comprising, in combination, a tubular combustion chamber, a spiral conveyor revolubly mounted in said tube, a three-way fitting having one branch connected to said tube, air blast means delivering to a second branch of said fitting and spiral conveyor feed means delivering to the third branch of said fitting, gear means housed in said fitting for actuation of said feed means by said first named spiral by revolution caused by said blast and a receptacle for supply of sulphur to said feed means.

1,812,796. TRANSPARENT PANEL UNIT. GEORGE LEIBE, New Orleans, La. Filed May 9, 1929. Serial No. 361,779. 3 Claims. (Cl. 20—56.5.)

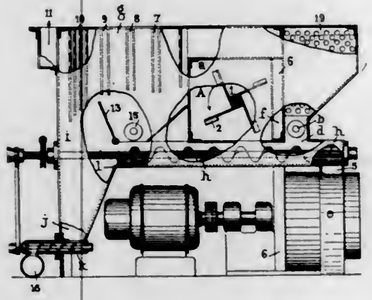
1. A removable transparent panel unit for closing an opening in a door or wall for the purpose set forth comprising a pair of moisture freed superposed frames, the members of each frame being rigid and solid throughout, a series of superposed moisture freed skeleton pads of cushioning material and corresponding in contour to that of the frame, one outer pad being positioned against the outer face of one frame, the other outer pad being positioned against the outer face of the other frame and the inner pads positioned against the inner faces of said frames, said pads flush with the inner and outer edges of the frames, an inner and a pair of outer moisture freed transparent panels, the outer panel being positioned against the outer pads and the inner panel being positioned between the inner pads, said panels having their edges flush with the outer edges of said pads and frames, said frames, pads and panels providing superposed chambers, a sealing element for said chamber secured to the edges of the panels, the outer edges of the frames and pads and upon the marginal portions of the outer faces of the outer panels, and a binder element for the panels, pads and frames secured to said sealing element.

1,812,797. BUNDLING PRESS. WALDEMAR LINDEMANN, Dusseldorf, Germany. Filed Aug. 16, 1929, Serial No. 386,309, and in Germany Oct. 26, 1927. 6 Claims. (Cl. 78—42.)



1. On a press of the described kind in combination with a press box, a lid, said walls of the press box having openings, pressure plate suitable for being moved through these holes into the press box, devices for moving these pressure plates, lines on said press box, a trolley on these lines, devices for moving this trolley, an auxiliary loading hopper on on this trolley, suitable for being tilted around the inside edge of the trolley, devices for tilting the auxiliary loading hopper above the press box, devices for holding this auxiliary loading hopper in a tilted position, and devices for bringing this loading hopper back into its horizontal position.

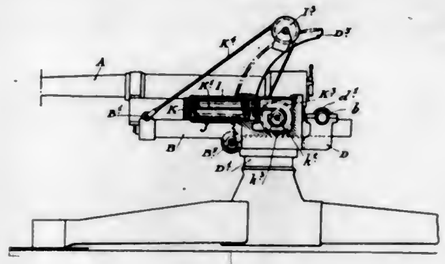
1,812,798. LUBRICATING APPARATUS. WILLIAM Z. LINDERS, Normandy, Mo., assignor to Lincoln Engineering Company, St. Louis, Mo., a Corporation of Missouri. Filed Sept. 26, 1930. Serial No. 484,582. 5 Claims. (Cl. 221—47.3.)



1. In lubricating apparatus, a body forming a passage for a stream of fluid, said passage having an inlet and an

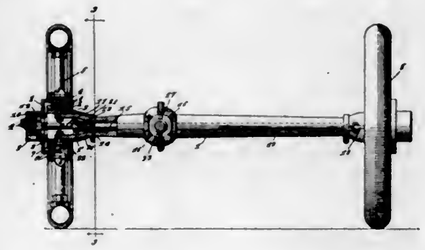
outlet, a valve seating downstream toward the outlet, a metering member extending toward the inlet and adapted to close said inlet upstream against pressure entering

the same, the area of said valve as projected against pressure from the inlet being greater than the similar area of the metering member when the metering member is closed against pressure from the inlet.



1,812,799. MEANS FOR THE MECHANICAL PREPARATION OF PULVERIZED SOLID MATERIALS. MAURICE MADORE, Alfort, France. Filed July 1, 1930, Serial No. 465,175, and in France Mar. 28, 1930. 16 Claims. (Cl. 83—11.)

1. Means for the mechanical preparation of pulverized solid materials, comprising, in combination, a drying device, means for admitting solid material to said drying device, a pulverizer, means for conveying dried solid material from said drying device to said pulverizer, a separator for the material pulverized by said pulverizer, means for conveying pulverized material from said pulverizer to said separator, a storage device for the fine material passing said separator, said storage device being adapted to be filled to a given level, means for withdrawing stored pulverized material from said storage device, and means for returning to said pulverizer coarse pulverized material rejected by said separator and also fine material conveyed to said storage device in excess of that required to maintain said given level in said storage device.

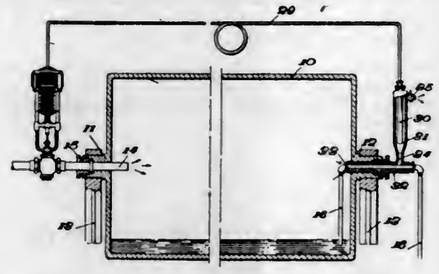


1,812,800. ARTILLERY GUN MORE PARTICULARLY APPLICABLE FOR FIRING AGAINST AIRCRAFT. NICOLAS EMILIEN METHLIN, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Filed Apr. 21, 1930, Serial No. 446,132, and in France Feb. 11, 1930. 4 Claims. (Cl. 89—37.)

4. In an artillery piece of the type having a gun carried in a cradle, the latter being pivotally mounted on a rotatable platform for oscillation about a horizontal axis, means for obtaining a static equilibrium of said piece by a symmetrical distribution of the masses on either side of the vertical axial plane of the oscillating mass comprising a pair of elevating sectors rigid with said platform and arranged symmetrically wtih respect to a vertical plane passing through the longitudinal axis of said gun, cable guiding means secured to each of said sectors, a shaft journalled in said platform, a pair of cable reeling devices mounted on said shaft, a pair of cables each secured at

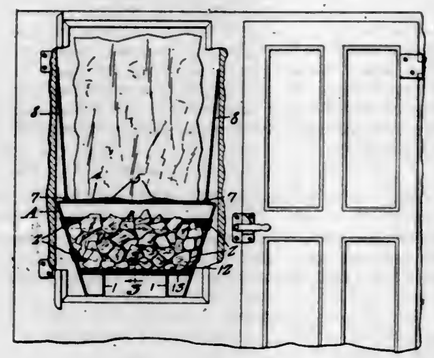
one end to said cradle, passing over said cable guiding means and secured at the other end to one of said cable reeling devices, a second pair of cable reeling devices secured to said shaft, a pair of balancing elements carried by said platform, and a second pair of cables connecting said balancing elements with said second mentioned cable reeling devices.

1,812,801. FRONT WHEEL DRIVE FOR AUTOMOBILES. GLEN F. NUS, Arlington, Iowa. Filed Mar. 25, 1929. Serial No. 349,749. 1 Claim. (Cl. 180—44.)



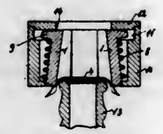
In combination with a hollow axle having a shaft journaled therein, a tubular member housing the end of the shaft and splined upon said shaft, a stub shaft, a universal joint connection between said tubular member and said stub shaft and movable in alinement with the first mentioned shaft, a head member having universal joint connection with the other end of the stub shaft, a cover member attached to said head member, a wheel having its hub attached to said cover member, a bearing ring pivoted upon the end of the axle, the hub of the wheel receiving said ring and journaled thereon, said stub shaft normally lying upon the center of the ring with the universal joint connections thereof lying beyond the opposite sides of the wheel.

1,812,802. TEMPERATURE REGULATOR FOR HOLLOW ROTATABLE ELEMENTS. LEWIS CAIAL PRICE, Boston, Mass., assignor to The Fulton Sylphon Company, Knoxville, Tenn., a Corporation of Delaware. Filed Mar. 11, 1929. Serial No. 346,220. 9 Claims. (Cl. 236—18.)



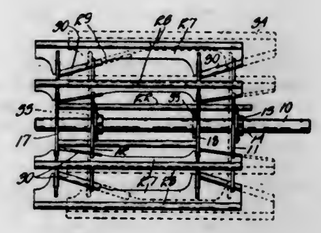
1. In a device of the type specified, in combination with a hollow rotatable element, means for rotatably mounting the same, means for supplying heating medium to the interior of said rotatable element and an exhaust for said

medium, a controller for the heating means, and means responsive to the temperature conditions within said element for actuating said controller, said means comprising a chamber disposed exteriorly of said rotatable element, means, separate from the exhaust, in communication with



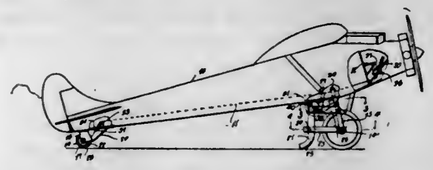
said chamber and in open communication with the interior of said element where the heating medium within said element may at all times flow to said chamber, and a temperature responsive element in said chamber operatively connected to said controller.

1,812,803. ICE RACK FOR REFRIGERATORS. FREDERICK B. RANNEY, Greenville, Mich., assignor to Ranney Refrigerator Company, Greenville, Mich. Filed Sept. 24, 1930. Serial No. 484,160. 5 Claims. (Cl. 62—69.)



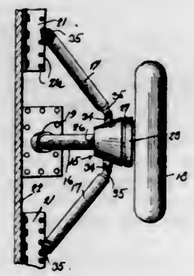
1. An ice rack for a refrigerator, comprising an openwork frame adapted to be placed in the ice chamber of a refrigerator, the top part of the frame supporting a block of ice and a plate extending across an intermediate portion of the frame for receiving chipped ice.

1,812,804. SEALING ATTACHMENT FOR MACHINES FOR APPLYING CROWN CORKS TO BOTTLES OR OTHER CONTAINERS. WILHELM OTTO PAUL RIECK, Hamburg, Germany. Filed July 14, 1928, Serial No. 292,833, and in Germany Aug. 15, 1927. 3 Claims. (Cl. 226—86.)



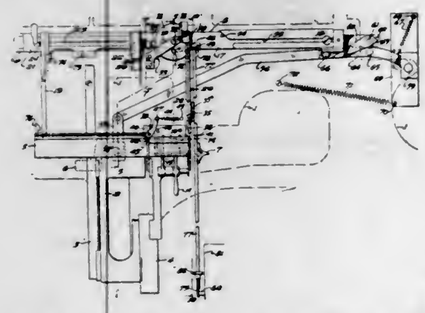
. In a machine for applying crown caps to containers, such as bottles, a casing, means within the casing for yieldably exerting pressure upon the top of a crown cap arranged upon the mouth of a container introduced into the casing, a sealing ring within the casing comprising an annular series of sections, the said casing having a cover member, the inner surface of which is substantially plane, and the end face of the sealing ring adjacent the cover member being rounded to rockingly engage with the said cover member in a radial direction, and an expansible spring encompassing said series of sections and yieldably resisting expansion of the sealing ring in a relative separation of the sections thereof, whereby the entry of the normally expanded rim of the closure cap into the sealing ring is facilitated and the rim compressed, circumferentially, upon full entry of the closure cap into the ring to a point where the compressive action of the spring about the sections of the sealing ring is equal for substantially the height of said ring.

1,812,805. REEL. JAMES A. RILEY, Johnson City, Tenn. Filed Aug. 21, 1929. Serial No. 387,519. 3 Claims. (Cl. 242—110.)



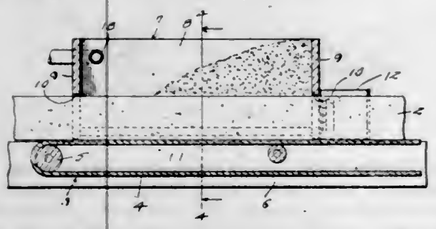
2. A reel comprising a shaft, a pair of disks mounted on the shaft and secured against axial movement thereon, a second pair of disks mounted on the shaft, but free to move axially of the shaft, the said disks having slots in their outer edges to receive blades, blades mounted in the slots, the blades having oblique inner edges in engagement with the stationary disks, the edges having a bead thereon co-operating with narrow portions in the slots on the stationary disks for holding the blades in position on the disks, the blades being movable radially in the slots on the movable disks and slidable axially in the slots on the stationary disks and a rod secured to one of the movable disks for adjusting the movable disks relative to the stationary disks for changing the size of the reel, substantially as set forth.

1,812,806. AIRCRAFT OR OTHER BRAKE. CORYDON W. SEXTON, Fayetteville, N. C. Filed Oct. 17, 1929. Serial No. 400,323. 9 Claims. (Cl. 244—2.)



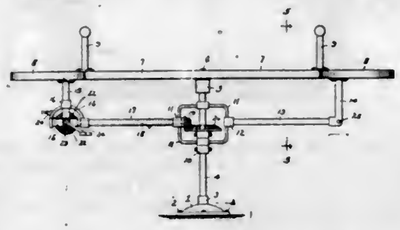
1. A brake mechanism in combination with a wheel, an upstanding brake shoe, means mounting said shoe for movement on an axis eccentric to that of the wheel for the purpose specified, and means engageable by said shoe above its pivot as it is applied to aid in relieving the wheel of the incidental strain.

1,812,807. DECKING DEVICE. CLIFFORD L. SNYDER, Detroit, Mich., assignor to Evans Products Company, a Corporation of Delaware. Filed Aug. 4, 1930. Serial No. 472,917. 21 Claims. (Cl. 105—36S.)



1. A decking device for motor vehicles comprising a floor brace, a pair of wall braces and a head to which the braces are attached, said wall braces and head embodying shock absorbing elements.

1,812,80S. MATRIX ASSEMBLING MECHANISM FOR TYPOGRAPHICAL MACHINES. SAMUEL E. SPERRY, Hollis, N. Y., assignor to Intertype Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Dec. 10, 1929. Serial No. 413,074. 20 Claims. (Cl. 199—31.)

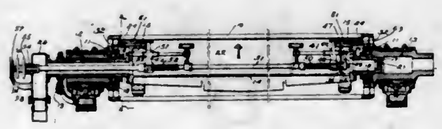


1. In a typographical machine, an assembling elevator movably upwardly from a matrix receiving position to a matrix discharging position, a slide for removing matrices from said elevator while the latter is lifted, means operative by movement of said slide in the matrix removing direction to store power to lift the elevator, and key-controlled means for setting said slide into operation.

1,812,809. BRICK SANDER AND METHOD. FLAKE F. STEELE, Winston-Salem, N. C., assignor to Pine Hall Brick & Pipe Co., Winston-Salem, N. C., a Corporation of North Carolina. Filed Nov. 7, 1929. Serial No. 405,450. 6 Claims. (Cl. 25—1.)

4. A device for sanding a brick clay column, comprising a receptacle of substantial depth having opposite walls provided with apertures for the passage therethrough of a formed clay column, the receptacle being of substantially greater width than the column and designed to contain sand covering the column, means in the receptacle above the clay column for flushing water thereon, means in the lower part of the receptacle at each side thereof for preventing the escape of material therein, and spring pressed wipers arranged to engage the sanded faces of the column to remove excess sand therefrom.

1,812,810. PEDAL WHIRL. JOHN I. STEWART, Houston, Pa. Filed Apr. 5, 1930. Serial No. 441,909. 1 Claim. (Cl. 272—33.)



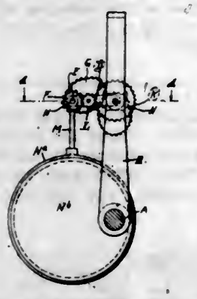
A pedal whirl comprising a vertical standard, a child supporting member journalled on the upper end of the standard and having the ends thereof shaped to provide integral seats, a frame journalled on the standard below the supporting member, oppositely disposed bearings carried by the frame, depending braces secured to the under faces of the seats, a horizontal brace secured to one of the bearings and to one of the depending braces, feet operating means carried by the other depending brace, a horizontal shaft journalled to the other bearing and geared to the feet operating means, gears connecting the shaft to the standard to cause the rotation of the supporting member about the standard by operation of the feet operating means, and handles secured to the supporting member adjacent the seats.

1,812,811. SINTERED HARD METAL ALLOY AND ARTICLES MADE THEREOF. BENNO STRAUSS, Essen, Germany, assignor, by mesne assignments, to General Electric Company, a Corporation of New York. Filed Apr. 14, 1927, Serial No. 183,899, and in Germany Oct. 25, 1926. 7 Claims. (Cl. 75—1.)

3. The method of forming a metal working tool which comprises ball milling a composition consisting mainly of finely divided hard metal carbide particles but containing an appreciable but minor quantity of a finely divided binder metal having a lower melting point than said carbide, said ball milling being continued until substantially each of said carbide particles are enveloped by a pellicle of said binder metal, pressing the milled material into shapes and sintering them at a temperature below the volatilization temperature of said binder metal.

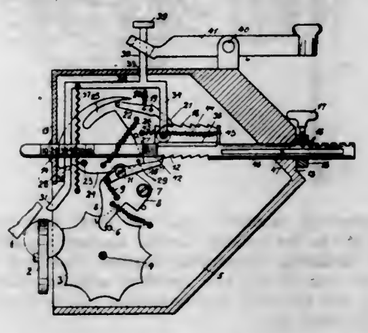
1,812,812. SUCTION ROLL. EDWARD TATUM STREET, Downingtown, Pa., assignor to Downingtown Manufacturing Company, Downingtown, Pa., a Corporation of Pennsylvania. Filed Oct. 24, 1929. Serial No. 402,049. 18 Claims. (Cl. 92—53.)

1. In a suction roll, an outer rotatable shell having an inner relatively stationary suction box, said box including



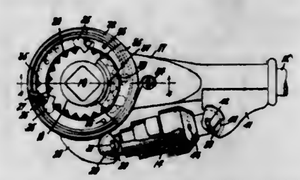
rigid arms, independently movable packing strip carriers carried by said arms and adjustable toward and away from the walls of the shell, a series of springs associated with the packing carrier of each arm and constantly urging said carriers toward the shell and a single means adjustable at the end of the roll for simultaneously adjusting the tension of both of said series of springs.

1,812,813. BULL BOARD FOR STOCK CAR DOORS. CHARLES H. THORNHILL, Presho, S. Dak. Filed July 31, 1928. Serial No. 296,455. 2 Claims. (Cl. 20—30.)



1. A stock car door, including a door-frame whose opposite jamb members are each provided with vertical guideways and also with keeper sockets inclining toward the outside of the jamb member and located at opposite ends of the guideways, a safety bar slidable in the guideways and adapted to be alternately placed in either one of said keeper sockets.

1,812,814. PROPELLER. WILLEM P. VAN LAMMEREN, Voorschoten, Netherlands. Filed Nov. 20, 1930, Serial No. 496,907, and in Great Britain June 18, 1929. 12 Claims. (Cl. 170—147.)

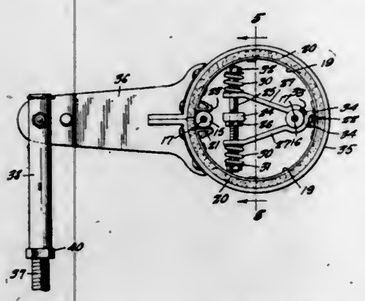


1. In a propeller for helicopters the combination with a blade support rotatable about an axis, of a blade on said support rotatable about a second axis, an arm movable about a third axis and connected by a link to said support to move in predetermined relation to said support when said support is rotated, said link being pivoted to said arm and to said support, a driving gear adapted to rotate in a predetermined direction at a speed proportional to the speed of rotation of said support and actuated by said support when the latter is moved, and a gear train between said driving gear and said blade for rotating said blade at a varying speed, said varying speed of said blade being such that the working surface of said blade during the working stroke is presented at substantially right angles to the direction in which the propeller as a whole moves and so that during substantially the first half of the non-working stroke the blade is at a very slight negative angle of incidence to the path of movement of said blade.

1,812,815. COIN COUNTING DEVICE. CURT VOGT, Berlin, Germany. Filed Apr. 7, 1930, Serial No. 442,156, and in Germany Jan. 28, 1930. 6 Claims. (Cl. 133—8.)

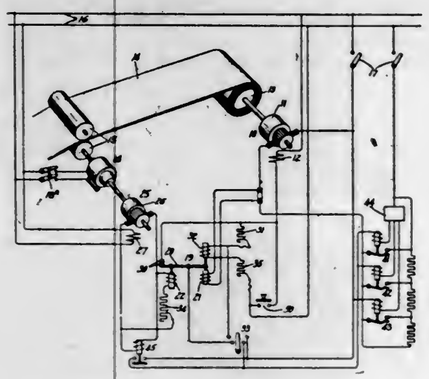
1. In a coin counting device, the combination of a slidable bar adjustable out of its initial position by the operator into different starting positions corresponding to the desired numbers of coins to be ejected, said bar being provided with a guide portion, a coin stop member adapted to be supported by said guide portion, means actuated by coins fed for starting said bar to move said guide portion relatively to said member towards its initial position, and means to permit said member to drop from said guide portion when the latter has reached said initial position whereby to stop the delivery of coins and lock said bar.

1,812,816. POWER WRENCH. CAIUS E. WEAVER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 24, 1930. Serial No. 447,063. 4 Claims. (Cl. 81—54.)



1. A power wrench comprising a lever, a rotary ratchet member mounted thereon, an oscillating member movable about said ratchet member, pawls mounted on said oscillating member and adapted to engage said ratchet member, and a hydraulic cylinder and piston pivotally connected respectively at their outer ends to said lever and to said oscillating member to actuate the latter.

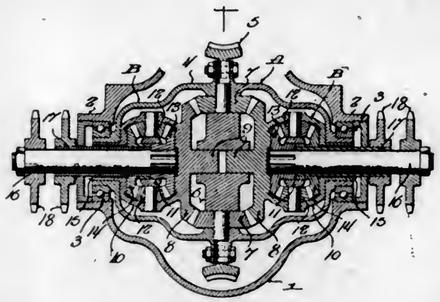
1,812,817. SHOCK ABSORBER. ANTHONY WELIKES, Rochester, N. Y. Filed May 31, 1930. Serial No. 458,404. 1 Claim. (Cl. 188—130.)



A shock absorber comprising a stationary disk having spaced diametrically opposed supporting members extended from one side thereof, a cover plate carried upon the other ends of the supporting members in confronting relation to the disk, a drum interposed for oscillatory movement between the disk and cover plate and about the supporting member, a shaft located within the enclosure defined between the several parts at right angles to the supporting members, brake shoes having the band sections therefor

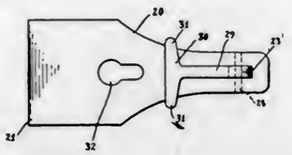
provided with portions upon the ends thereof positioned upon opposite sides of one of the supporting members to prevent synchronous rocking motion of the bands with the drum, fins carried upon the opposite ends of the band sections and arranged in staggered relation, arm mem-

bers adjustably mounted upon the shaft and curved at spaced points for rocking motion against opposite sides of the remaining supporting member, and ears formed upon the ends of the arm members adjacent the curved portions and disposed in intersecting relation for engagment with said fins.



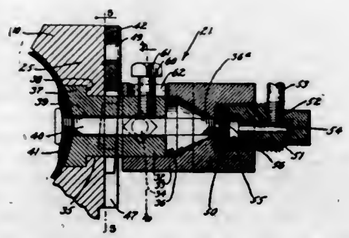
1,812,818. MOTOR CONTROL SYSTEM. HARRY A. WINNE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 16, 1928. Serial No. 278,248. 11 Claims. (Cl. 242—75.)

1. The combination with a winding reel for a strip of material to be wound thereon, of means for feeding said strip to said reel, an electric driving motor for said reel, a source of electrical supply for said reel driving motor having a substantially constant potential irrespective of the feed of said strip to said reel and means dependent upon a function of the feed of said strip to said reel and the driving motor current for regulating said driving motor so as to maintain a tension in said strip.



1,812,819. DRIVE FOR MOTOR VEHICLES. ARTHUR C. WOLLENSAK, Milwaukee, Wis. Filed Oct. 7, 1929. Serial No. 397,938. 2 Claims. (Cl. 180—22.)

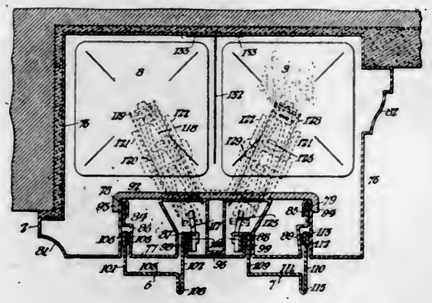
1. A driving mechanism for vehicles provided with four driving wheels comprising a transverse housing, a driven gear mounted within said housing, a main differential case connected with said driven gear and journalled in said housing, a differential mechanism carried by said main differential case, auxiliary differential cases positioned within said main differential case and connected with the differential mechanism carried thereby, differential mechanisms mounted within said auxiliary cases, a pair of shafts connected with each of said auxiliary differential mecha-



nisms, and driving connections between said shafts and said drive wheels, whereby the latter may rotate independently of each other.

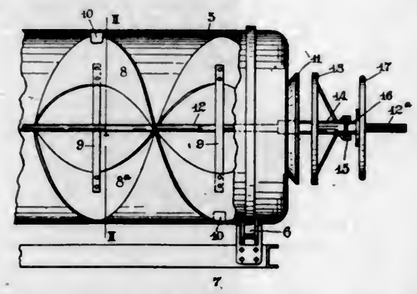
1,812,820. CLAMPING LEVER FOR PLANES. JAMES M. BUADICK, New Britain, Conn. Filed Mar. 15, 1930. Serial No. 436,062. 1 Claim. (Cl. 145—16.)

A plane comprising a plane body, a blade mounted on said body, a clamping plate between which and said plane body said blade is located, said clamping plate being reduced in width at its rear end, and a clamping lever pivoted to the rear end of said clamping plate and having a cam, said lever also having a flat T-shaped arm extending forwardly of the plane from its pivotal connection with the clamping plate and lying flat against the clamping plate when in clamping position, the stem of said arm being located in the medial longitudinal line of said clamping plate and the cross-piece of the arm extending across the reduced portion of the clamping plate and having its ends projecting beyond the sides thereof when the lever is in clamping position.



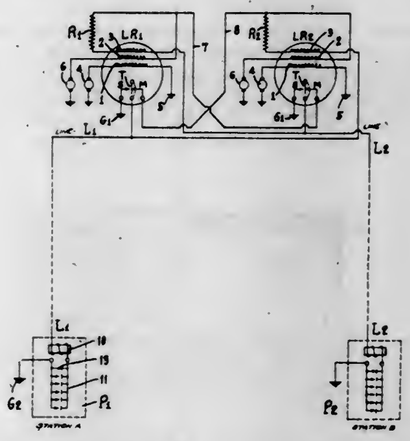
1,812,821. VULCANIZING MOLD FOR INNER TUBES AND THE LIKE. PETER DE MATTIA, Passaic, N. J., assignor to National Rubber Machinery Company, a Corporation of Ohio. Filed Aug. 29, 1928. Serial No. 302,710. 11 Claims. (Cl. 18—38.)

11. In combination with a vulcanizing mold having a mold cavity, a bushing extending through the wall of the mold and having its inner end substantially flush with the



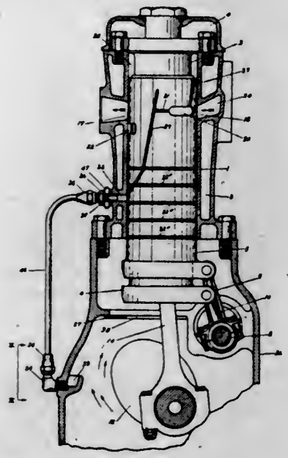
mold cavity, said bushing having a central longitudinal bore for receiving an endwise inserted inflation valve stem, means for detachably holding the bushing against longitudinal movement and against rotation, means for clamping an inflation valve stem in the bore of the bushing with its end extending beyond the bushing, and a coupling member mounted in fixed position with reference to the mold and the bushing, said coupling member having connection with a pressure fluid supply pipe and having a packing washer against which the end of the inserted valve stem is adapted to abut to provide a quick-detachable fluid-tight joint between the valve stem and the air pipe.

1,812,822. METALLIC WINDOW STRUCTURE. ALBERT LINDSAY DOERING, Germantown, Pa., assignor to J. S. Thorn Company, Philadelphia County, Pa., a Corporation of Pennsylvania. Filed Dec. 30, 1929. Serial No. 417,380. 14 Claims. (Cl. 189—72.)



1. In a window structure; the combination with a jamb frame formed of sheet metal and including a weathering groove with opposite faces extending parallel with the direction of movement of the sash; of a sash having a weathering flange fitted in said groove in weathering relation therewith; said flange having its edge in said groove bent back on itself to reinforce it; the bent portion of said flange being bent into symmetrical relation with the main portion of said flange so as to minimize the area of said flange which may come into sliding contact with the side walls of said groove; wherein the reinforced portion of the sash weathering flange is covered with a film of antifriction metal.

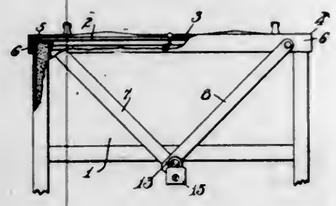
1,812,823. SELF CLEANING MIXING DRUM. JOSEPH EGGERT, Columbus, Ohio, assignor to The Jaeger Machine Company, Columbus, Ohio, a Corporation of Ohio. Filed July 5, 1929. Serial No. 376,109. 7 Claims. (Cl. 83—73.)



1. A mixing apparatus including a mixing vessel, a mixing member loosely contained in the vessel and resting on the lower wall of said vessel, and a lug on the wall of the vessel engaging the mixing member to rotate that member with the vessel.

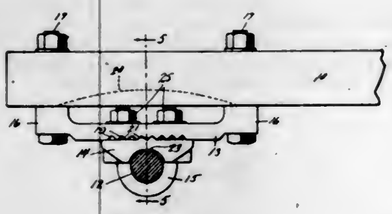
1,812,824. TELEGRAPH REPEATER. CYRUS C. FERGUSON, New York, N. Y., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Mar. 26, 1930. Serial No. 439,125. 9 Claims. (Cl. 178—71.)

1. In a signaling system, a line circuit, a receiving relay and a transmitting relay associated therewith, said transmitting relay being in an outgoing line circuit controlled by said receiving relay, means for maintaining a closed circuit through the operating winding of said transmitting relay and said outgoing line when the tongue of said receiving relay is on one of its contacts, means for reducing the current in said outgoing line when said tongue is away from both of its contacts and means for establishing a circuit for the winding of said transmitting relay, independently of said outgoing line and producing a unipotential condition for the opposite ends of said outgoing line when the tongue of said receiving relay is on its other contact.



1,812,825. LUBRICATION SYSTEM FOR SLEEVE VALVE ENGINES. CHARLES A. FLEMING, Pontiac, Mich., assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 16, 1927. Serial No. 175,728. 17 Claims. (Cl. 123—196.)

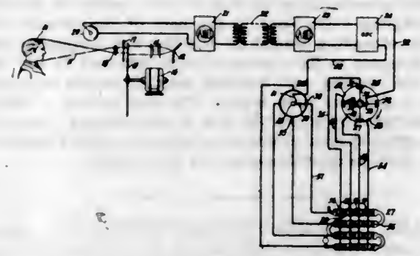
1. In an internal combustion engine, a cylinder having an opening therein, a crankcase, a reciprocating valve



sleeve within said cylinder having an intake port, and provided with a passageway communicating with said intake port and adapted to register with said cylinder opening, and a conduit between said cylinder opening and the interior of said crankcase for conducting lubricant to said opening.

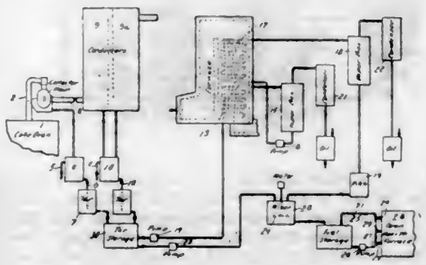
1,812,826. LOCK FOR BOTTLE REFRIGERATORS. CHESTER A. FRICK, Muncie, Ind., assignor to Glascock Brothers Manufacturing Company, Muncie, Ind., a Corporation of Indiana. Filed June 21, 1929. Serial No. 372,774. 2 Claims. (Cl. 292—1.)

1. A locking device for dispensing cabinets having hinged covers, comprising a rectangular frame adapted to lie on the cover of the cabinet, a pair of holding bars pivoted to each of two sides of said frame and adapted to extend downwardly to a point below the bottom of the cabinet, and a retaining rod adapted to be passed through the bottom ends of said holding bars.



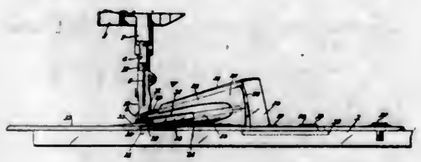
1,812,827. ADJUSTABLE AXLE HANGER. CHAUNCEY W. GANNETT, Wellington, Ohio, assignor to The Wellington Machine Company, Wellington, Ohio, a Corporation of Ohio. Filed May 4, 1928. Serial No. 275,172. 8 Claims. (Cl. 280—58.)

1. In a wheelbarrow, the combination with a wheel and axle, of a pair of saddle members each having an axle receiving recess therein, the sides of each recess flaring outwardly from the central portion thereof, said saddle members being also longitudinally slotted, a pair of longitudinally slotted hanger members to which said pair of saddle members may be adjustably secured, and a pair of U bolts passing through the saddle and the hanger members respectively and providing bearings for the opposite ends of said axle.



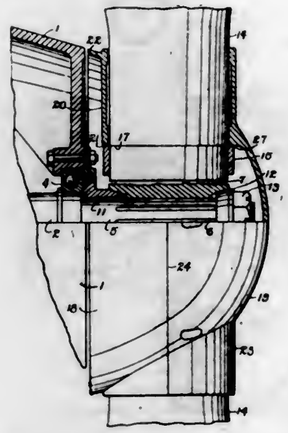
1,812,828. SWITCH OR COMMUTATING MEANS. FRANK GRAY, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 18, 1928. Serial No. 313,301. 13 Claims. (Cl. 178—6.)

1. Apparatus for the reception of images in television comprising a grid which is provided with a plurality of points each adapted to be made luminous when energized by a current of high frequency, a distributor for selectively



energizing groups of said points and a capacitive distributor for selectively energizing any point in any one of said groups.

1,812,829. PRODUCTION OF FUEL, ETC. STUART PARMELEE MILLER, Englewood, N. J., assignor to The Barrett Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 17, 1928. Serial No. 270,625. 13 Claims. (Cl. 196—76.)

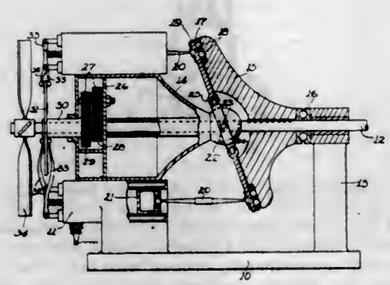


5. The improvement in the utilization of coke oven tar as fuel in steel plants which comprises subjecting part of the tar to distillation to give a distillate suitable for use for creosote oil and a pitch residue having a melting point in excess of about 250° F., blending the pitch residue while still hot and thinly fluid with coke oven tar with agitation to promote the formation of a uniform product, keeping the resulting mixture hot and thinly fluid and supplying it in a hot and thinly fluid condition as fuel to the open hearth or other furnaces of the steel plant.

1,812,830. BINDER FOR SEWING MACHINES. THOMAS O'NEILL, Brooklyn, N. Y., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Mar. 15, 1929. Serial No. 347,206. 8 Claims. (Cl. 112—138.)

2. A strip-reversing binder having an oblique delivery end, an inner fold-forming rib for doubling a binding-strip longitudinally, said rib being provided lengthwise of the binder with a recess in its front face terminating in the delivery end of the binder, and a yielding tongue disposed in said recess.

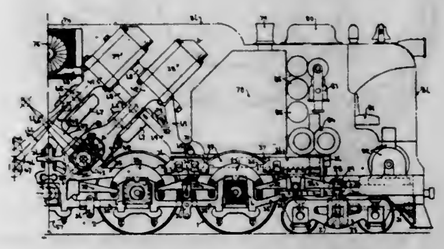
1,812,831. PROPELLER SPINNER FOR AIRCRAFT ENGINES. BEN G. PARSONS, Houston, Tex., assignor to Hurricane Motor Company, Houston, Tex., a Corporation of Texas. Filed June 6, 1929. Serial No. 368,966. 10 Claims. (Cl. 170—173.)



1. In combination with a forwardly curved crank case, a crank shaft therein projecting from said crank case, a propeller hub on said shaft, blades on said hub, and clamping rings on said blades; a spinner housing the forward end of said shaft, said spinner including outer and inner sections adapted to be secured together to enclose the said hub, and shoulders on said sections engaging and registering against said clamping rings.

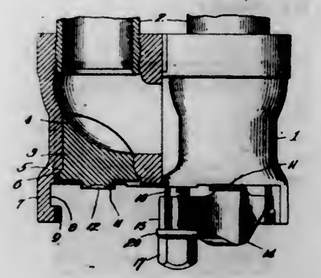
1,812,832. FILLED PULP AND METHOD OF MAKING THE SAME. HAROLD ROBERT RAFTON, Lawrence, Mass., assignor to Raffold Process Corporation, a Corporation of Massachusetts. Filed Dec. 11, 1928. Serial No. 325,405. 28 Claims. (Cl. 92—40.)

1. The method of preparing alkaline filler for shipment comprising combining in wet condition said alkaline filler with pulp



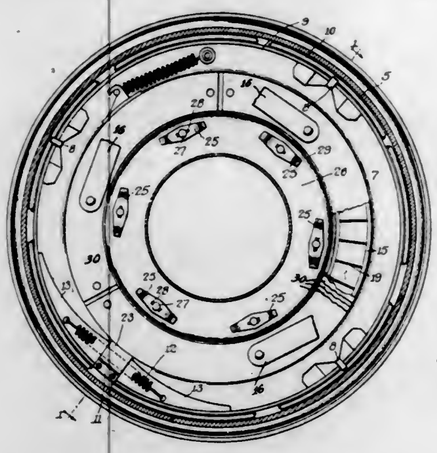
---

1,812,833. GAS ENGINE. WILLIAM D. SCHAEFER, Milwaukee, Wis., assignor to Motors Development Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed July 25, 1929. Serial No. 380,906. 4 Claims. (Cl. 123—58.)



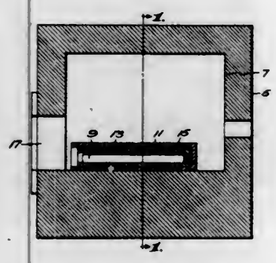
4. In a gas engine, a suitably mounted shaft, a swash plate thereon, cylinders arranged in a circular formation around the shaft, pistons in the cylinders, a thrust ring bearing on the swash plate, connecting rods connecting the pistons with the thrust ring, a sleeve mounted on the shaft, a reduction gearing connecting the shaft with the sleeve, a cam disk on the sleeve, intake and exhaust cams on opposite sides of the disk arranged concentrically for the several cylinders, and intake and exhaust valves for each cylinder having rocker arms bearing on opposite sides of the disk and engaging the respective cams for that cylinder.

1,812,834. INTERNAL COMBUSTION ENGINE-OPERATED LOCOMOTIVE. CLARENCE N. SCOTT, Houston, Tex. Filed May 13, 1929. Serial No. 362,558. 16 Claims. (Cl. 105—62.)



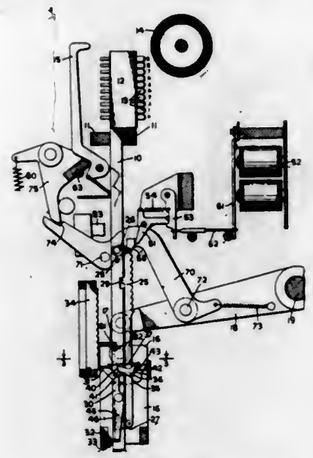
1. In a locomotive, a plurality of pairs of driving wheels, axles therefor, a driving shaft parallel with said axles, a forward engine-crank-shaft, a rear engine-crank-shaft, eight internal combustion power cylinders, four of them connected operatively with the two crank pins of the forward engine-crank-shaft and four of them connected to the two crank pins of the rear engine-crank-shaft, two of the four which are connected to the forward engine-crank-shaft and two of the four which are connected to the rear engine-crank-shaft being inclined upward and forward from their respective crank shaft axial centers, and two of the four which are connected to the forward engine-crank-shaft and two of the four which are connected to the rear engine-crank-shaft being inclined upwardly and rearwardly from their respective crank shaft axial centers.

1,812,835. PIPE COUPLING. ARTHUR J. SMITH, Kansas City, Mo., assignor to Smith Engineering Company, Kansas City, Mo., a Corporation of Missouri. Filed Oct. 22, 1928. Serial No. 314,086. 10 Claims. (Cl. 137—76.)



1. The combination with a body member having an opening, of a plug fitted in said opening, a clamping flange carried by said body, a clamping lug for exerting pressure on said plug and having one end cooperating with said flange, guiding means interlocking said lug and plug and preventing independent rotation of the latter, and means carried by the body for clamping the other end of said lug.

1,812,836. BRAKE. JOHN WHYTE, Beloit, Wis., assignor to Warner Electric Brake Corporation, South Beloit, Ill., a Corporation of Illinois. Filed May 18, 1929. Serial No. 364,034. 11 Claims. (Cl. 188—140.)

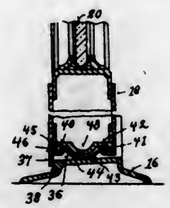


1. A friction brake of the momentum type combining a rotatable drum, braking means cooperating with a cylindrical surface of said drum, a non-rotatable plate mounted at the open end of said drum and supporting said braking means, a pair of friction rings adapted for axial gripping engagement, one of said rings being rotatable with the drum, the other being mounted on said plate for oscillatory movement about the drum axis, means for causing gripping engagement of said rings, means operable in the movement of said oscillatory ring away from brake-release position to actuate said braking means, spring means operable to restore said oscillatory ring to brake-released position when the gripping pressure between said rings is relieved, and spring means acting on said oscillatory ring at a plurality of annularly spaced points to press the ring in a direction toward said non-rotatable plate, whereby to produce a frictional force resisting but permitting the restoring movement of the driven ring.

1,812,837. MEANS FOR HEATING STEEL FOR HARDENING. MURRAY WINTER, Wrentham, Mass., assignor, by mesne assignments, to The Sentry Company, Taunton, Mass., a Corporation of Massachusetts. Continuation of application Serial No. 297,035, filed Aug. 2, 1928. This application filed May 16, 1930. Serial No. 452,978. 4 Claims. (Cl. 266—2.)

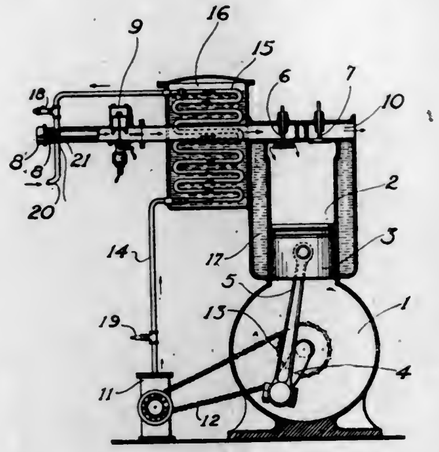
3. A protector for heat-treating high speed steel comprising a body of imporous material composed of a mixture of a quantity of graphite and a greater quantity of relatively hard carbon, said body having a chamber adapted to receive the steel, said chamber being of greater size than the article to be treated thereby to permit the maintenance of a neutral atmosphere about the same.

1,812,838. PRINTING MECHANISM FOR ACCOUNTING MACHINES. JAMES W. BRYCE, Bloomfield, N. J., assignor to The Tabulating Machine Company, Endicott, N. Y., a Corporation of New Jersey. Filed Mar. 27, 1929. Serial No. 350,379. 14 Claims. (Cl. 101—93.)



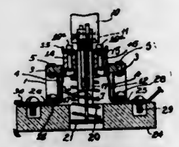
1. In a machine of the class described, a printing element movable to a plurality of printing positions, a driving element for the same having an invariable movement, latching means for positively coupling the printing element to the driving element for varying times to position the printing element in its different printing positions and electromagnetic means controlled by differentially timed electrical impulses for controlling the latching means to effect different durations of coupling between the printing element and its driving element.

1,812,839. PROCESS OF FLOTATION. IRA H. DERBY and ORIN D. CUNNINGHAM, Indianapolis, Ind., assignors to Peter C. Reilly, Indianapolis, Ind. Filed Mar. 19, 1926. Serial No. 96,061. 7 Claims. (Cl. 209—166.)



1. A process which comprises reacting on a mercaptolic substance with a phosphorus sulfide to form a reagent having collecting power in ore flotation.

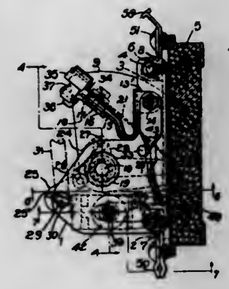
1,812,840. WEATHER STRIP APPARATUS. FRANK L. MICHAELS, Covington, Ky. Filed Sept. 10, 1929. Serial No. 391,524. 4 Claims. (Cl. 189—65.)



1. In combination with a door and door frame relatively movable, and one of which is provided with two spaced and substantially parallel channels, a weatherstrip of crowned resilient sheet material having one edge folded upon itself and resiliently engaged with one of said channels and its opposite free edge floating in the opposite channel, the intermediate crowned portion of said weatherstrip being in position to be engaged with the opposite member of said door and door frame when the door is closed to form a resilient weatherproof joint between said door and door frame.

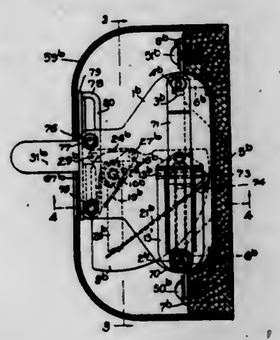
1,812,841. INTERNAL COMBUSTION ENGINE AND METHOD OF OPERATING THE SAME. RALPH A. VAN EATON, Corona, N. Y., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed May 6, 1926. Serial No. 107,133. 2 Claims. (Cl. 123—1.)

1. In combination with an internal combustion engine having a cylinder, a reservoir for compressed air, means for compressing air into said reservoir, means for cooling the compressed air in said reservoir, a communication between said reservoir and said engine cylinder, a valve for controlling said communication, means for opening said valve to introduce some of the compressed air from said reservoir directly into the cylinder and a relief valve to permit the remainder of the compressed air to escape, thus further cooling by expansion that introduced into the cylinder.



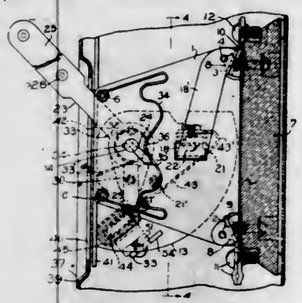
1,812,842. AUTOMATIC CIRCUIT BREAKER. JOSEPH SACHS, West Hartford, Conn. Filed Apr. 21, 1928. Serial No. 271,819. 32 Claims. (Cl. 200—88.)

1. An automatic circuit breaker comprising in combination, a movable contact member biased toward its open-circuit position, a movable actuating member normally adapted to move the contact member to open or close the circuit, and an electro-responsive means comprising an element inherently responsive to abnormal current conditions in the circuit and constituting at least a part of a mechanical connection between the said actuating and contact members normally operative to prevent independent circuit opening movement of the latter, the said element upon the attainment of an abnormal current condition in the circuit being relatively movable by reason of its own inherent electro-responsive characteristics so as to render the said mechanical connection ineffective and to thereby permit the contact member to move to its open-circuit position independently of the actuating member.



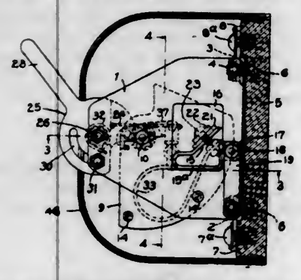
1,812,843. AUTOMATIC CIRCUIT BREAKER. JOSEPH SACHS, West Hartford, Conn. Filed Jan. 16, 1929. Serial No. 332,924. (Cl. 200—88.)

1. An automatic circuit breaker comprising in combination, a movable actuator, a movable contact member biased independently of the actuator toward its open-circuit position and releasably connectible with the actuator so as to be normally controlled thereby for movement to its closed-circuit or its open-circuit position, a restraining means acting independently of the contact member and normally serving to prevent movement of the actuator from its closed-circuit position as the result of the circuit-opening bias of the contact member, an electro-responsive means



serving upon the attainment of abnormal current conditions to release the contact member from the actuator for independent automatic circuit-opening movement and also serving to substantially simultaneously cause the release of the actuator from the control of the said restraining means, and means acting automatically upon the said release of the actuator to move it to its open-circuit position corresponding to the open-circuit position of the contact member.

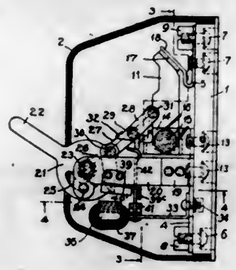
1,812,844. AUTOMATIC CIRCUIT BREAKER. JOSEPH SACHS, West Hartford, Conn. Filed Jan. 16, 1929, Serial No. 332,925. Renewed Feb. 26, 1931. 16 Claims. (Cl 200—116.)



1. In an automatic circuit breaker, the combination of a stationary support, an actuator pivotally mounted on the support, a contact member also pivotally mounted on the support and biased for movement independently of the actuator to its open circuit position, electro-responsively controlled means serving to effect operative mechanical connection between the actuator and the contact member and acting to release said mechanical connection under abnormal current conditions to permit the contact member to automatically move independently of the actuator to its said open circuit position, a manually operable slide carried by the stationary support and guided for rectilinear movement, and means connecting the slide with the actuator whereby movement of the slide to on or off position normally effects corresponding pivotal movement of the actuator and the contact member to corresponding on and off positions for ordinary switching purposes.

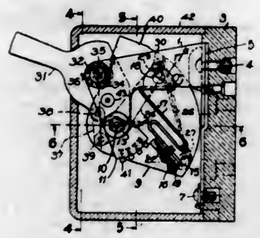
1,812,845. ELECTRORESPONSIVELY CONTROLLED MECHANISM. JOSEPH SACHS, West Hartford, Conn. Filed Feb. 7, 1929. Serial No. 338,514. 17 Claims. (Cl. 200—88.)

1. As an article of manufacture, an electro-responsive unit comprising a current-carrying electro-thermal element and a magnet coil included in the structure of the said element and electrically connected in circuit therewith.



1,812,846. AUTOMATIC CIRCUIT BREAKER. JOSEPH SACHS, West Hartford, Conn. Filed Apr. 6, 1929. Serial No. 353,052. 15 Claims. (Cl. 200—116.)

1. An automatic circuit breaker comprising in combination, a movable contact member biased for movement towards its open-circuit position, a pair of toggle links adapted when in their operative relationship to hold the contact member in its closed-circuit position, and an electro-responsive means comprising an element inherently responsive to abnormal current conditions in the circuit, the said element being bodily movable with the said contact member and serving upon the passage of excess current through the electro-responsive means to change the relationship of the toggle links so as to release the contact member and permit automatic movement thereof to its open-circuit position.



1,812,847. AUTOMATIC CIRCUIT BREAKER. JOSEPH SACHS, West Hartford, Conn. Filed Apr. 30, 1929. Serial No. 359,385. 5 Claims. (Cl. 200—88.)

1. An automatic circuit breaker comprising in combination, a movable contact member biased for movement to its open-circuit position, releasable means normally serving to hold the contact member in its closed-circuit position, an electro-responsive unit supported independently of the contact member and comprising a current carrying electro-thermal strip and a magnet coil carried thereby and electrically connected in circuit therewith, and means enabling the said unit upon the passage of excess current through the strip and magnet coil to effect the release of

the said releasable means and to thereby permit the automatic movement of the contact member to circuit opening position.

1,812,848. AUTOMATIC CIRCUIT BREAKER. JOSEPH SACHS, West Hartford, Conn. Filed May 23, 1929. Serial No. 365,419. 17 Claims. (Cl. 200—116.)

1. In an automatic circuit breaker, the combination of a rear support having a forward facing surface, two main side plates spaced apart and projecting forward from the rear member, a contact member pivoted to the main plates for movement about a transverse axis and comprising two spaced plates substantially parallel to the said main plates, the said contact member being biased for automatic movement in one direction and the said plates thereof being formed to directly engage a forward facing surface on the support to limit such movement, two stationary electric contacts, two movable electric contacts on the contact member engageable respectively with the stationary contacts and movable out of such engagement when the contact member is moved automatically as aforesaid, a manually movable actuator carried by the main plates, and an electroresponsively releasable mechanical connection between the actuator and the contact member normally enabling the former to move the latter.

1,812,849. SYNTHETIC DRYING OIL AND PROCESS OF MAKING IT. ARNOLD M. COLLINS, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Aug. 7, 1929. Serial No. 384,238. 18 Claims. (Cl. 260—170.

1. The process of polymerizing divinyl acetylene which comprises effecting the polymerization in the presence of an added solvent.
